Mitsubishi draws up product lines for U.S.

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Mitsubishi Motor Sales of America will offer three car lines and two truck models when it begins sale of 1983 models in October. That intro will mark the beginning of MMSA's retail operations in the U. S.

The entire car line was displayed at the Geneva Motor Show in March and includes the Starion 2+2 sport coupe, the Cordia two-door hatchback and the Tredia four-door sedan.

Two-wheel-drive and four-wheel-drive pickup trucks round out MMSA's product lineup. Truck options include a turbodiesel engine.

The Starion, which represents the top of Mitsubishi's line, will be powered by a fuel-injected turbocharged 2.6 liter four-cylinder engine.

MMSA will position the car against the Datsun 280-ZX and the Toyota Celica Supra. The rear-wheel drive Starion features a fully-independent suspension. The model displayed at Geneva also had four-wheel disk brakes with an anti-skid system.

• The Cordia, a sporty front-wheel-drive hatchback, will be powered by a normally aspirated 1.8-liter overhead-camshaft four-cylinder engine. The turbo 1.6-liter version shown in Geneva will not be available initially.

A choice of manual or automatic transmission will be offered, and the Cordia will be positioned in the youth-oriented specialty-car market. Cordia will compete with Toyota Celica, Datsun 200-SX, Honda Prelude and Volkswagen Scirocco.

The Tredia shares Cordia's front-wheel drive and will be MMSA's family sedan. Powered by a 1.8-liter four-cylinder engine, Tredia will also offer a choice of manual or automatic transmission.

In addition, MMSA will offer

Bad days for Peck continue as senator throws brickbats

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Safety Chief Raymond Peck now has had three key Congresmen jump all over him for not doing a proper job for NHTSA and its life-saving mission.

Missouri Republican Senator Jack Danforth, a proponent of air bags and sponsor of legislation to keep drunks off the road, ripped into Peck for replacing NHTSA's "can-do" attitude with an "un-do" spirit and said he couldn't think of a thing that Peck had done to save lives or make it easier for people to choose a safe car.

What did the taxpayer get last year for his $81.4 million, Danforth asked.

"We got a do-it-yourself safety program where we are told to go out and make purchasing decisions without any help from the government in gathering the information we need to make informed choices," Danforth said.

Next year, when NHTSA plans to pay off 100 persons, it still plans to spend $81.6 million.

Said Danforth: "I do not think it is in the best interest of the American people to spend $1.5 million unmaking rules, $6 million not enforcing rules, $32 million to do research and analysis on how not to make cars safer or $36 million for salaries just to make the highways less safe."

Eventually, Danforth asked former NHTSA head Joan Claybrook whether the Senate should just withhold money from Peck entirely. Claybrook said she felt there was a reservoir of goodwill and expertise within the agency that could use money wisely. She recommended giving Peck strong guidance on how to spend the money.

• Just a few days earlier, Peck was threatened with a budget written without his help. This occurred after Peck unsuccessfully tried to explain air-bag cost figures to a House Appropriations subcommittee chaired by Rep. Adam Benjamin Jr., Indiana Democrat.

Benjamin raised questions about the figures, refused to let Peck be sworn and then abruptly adjourned the hearing. Later, Benjamin said Peck was being "evasive, less than candid and was deliberately filibustering the subcommittee to avoid questions.

And just a few days before that Rep. Tim Wirth, Colorado Democrat, conducting oversight hearings for a House subcommittee, accused Peck of taking NHTSA back to the "safety mentlity" of the Fifties and Sixties.

Danforth, who has a tax proposal to encourage buying air-bagged cars, was highly critical of Peck's rescisison of Standard 208 and his failure to mount a fleet test of air-bagged cars.

Moreover, said Danforth, Peck has "scrapped" a proposal to eliminate major blind spots (direct field of view); "dumped" simple warning devices like low-pressure tire warnings and better brake lights; dropped a regulation preventing speedometers registering over 85 MPH and preventing tampering of odometers, and "abolished" the Car Book.

Now, Danforth went on, Peck wants an $8 million "media blitz" to get people to wear seat belts and so far all that has been offered is a "taxpayer-sup-

Showing off a Thoroughbred

Thoroughbred Motor Cars, Redmont, Wash., has finished its first 540-K show car and expects to begin producing kits for the neoclassic, styled after early Mercedes-Benzes. A structural steel tubular chassis can be used with running gear from Mustang II, Bobcat or Pinto. The $8,995 kit includes gauges, interior, hardtop, chrome, hardware, lights and a fiberglass gelcoat body. Wire wheels, spotlights, trumpet horns and chrome driving lights are optional.

Owners in Pennsylvania, Illinois go to court

2 more lawsuits on Cadillac V-8-6-4

By Marjorie Sorge

Lawsuits have been filed against General Motors by owners of Cadillac V-8-6-4 cars in Pennsylvania and Illinois charging that the cars are defective and are a safety hazard.

The Pennsylvania suit was filed in state court in Philadelphia, and the Illinois action in the Cook Circuit Court in Chicago.

Both suits allege the cars stall and surge in all modes and vibrate while in the six-cylinder mode. The engine was introduced by Cadillac in 1981 as a fuel-saving device which runs on either four, six or eight cylinders, depending on the power needed.

According to David Shrager, Shrager, McDaid and Loftus, attorney for the Pennsylvania plaintiffs, some owners have also claimed there is a burning smell in the car.

Both suits also charge that GM knew about the problems and failed to inform potential buyers.

A dealer service bulletin, issued by GM in mid-1981, advised dealers that these problems do occur in the V-8-6-4 engine and cannot be fixed. It said these actions are "normal" with the V-8-6-4 and told dealers not to attempt to fix them.

That engine was installed only in 1981 Cadillacs and was replaced in 1982 by a new eight-cylinder engine. The Cadillac limousines still have the V-8-6-4.

"The corporation knew it was only a one-year engine which is basically a death knell for a tradein," Shrager said.

A Cadillac spokesman said GM had no comment on the lawsuits because of the pending litigation. But, he said, GM has increased its warranty on the V-8-6-4 and fully backs the engine. Also, he said, the new standard V-8 engine is performing very well.

Cadillac extended the V-8-6-4 warranty to five years or 50,000 miles last July after much criticism of the engine.

Other lawsuits, which have been filed in New Jersey, Ohio and Texas, made similar charges against the Cadillac engine. So far, only the New Jersey suit has been certified a state class action. Plaintiffs in the suits in all states would like to see all the actions consolidated as a national class action.

Both the new lawsuits seek class-action certification. That would cover about 8,000 owners in Illinois and about 6,000 in Pennsylvania.

"We are confident we have a proper basis for a class action against GM," Shrager said. "There is a common thread of problems."

Both suits ask for punitive damages and that owners be reimbursed the difference between the current value of the V-8-6-4 and the price of a new Cadillac.

While no specific monetary amount has been named in either suit, Shrager said he will be demanding about $10 million in damages to be split among the owners as the court sees fit.

Service Index notches 12th consecutive gain

By Francis J. Gawronski
Service Editor

New-car dealers' service and parts business in February took a turn for the better and posted its biggest increase in eight months.

Dealership shop volume in the second month of the year amounted to 112.2 percent of the business recorded in the same month of 1981, according to the Automotive News Service Index.

February registered the biggest gain since June, 1981, when business was 16.6 percent above the year-ago figure. In January, the Service Index indicated dealers' service and parts business was 105.3 percent of the volume in the year-earlier month.

February also marked the 12th consecutive month in which shop business has shown an increase over the comparable period the previous year. In February, 1981, business amounted to 96.5 percent of the year-earlier volume.

As in January, all indicators, except repair orders written, which were down 3.3 percent, registered healthy gains in February.

The leading indicator in February was sales of all parts and P&A, up 19.8 percent over similar sales a year ago.

Shop parts sales (those used in dealer shops on both customer-paid and warranty repairs) were up 17.6 percent, while profit on all labor, parts and P&A sales—the most important indicator from a dealer's viewpoint — were up 15.1 percent. Total labor sales (both customer-paid and warranty) advanced 10.4 percent in February.

Figures used in the Service Index are averages compiled from dealer reports on shop operations from a cross-section of the nation's new-car dealerships.

For the first two months of 1982, service and parts business amounted to 108.9 percent of the business done in the same period a year ago.

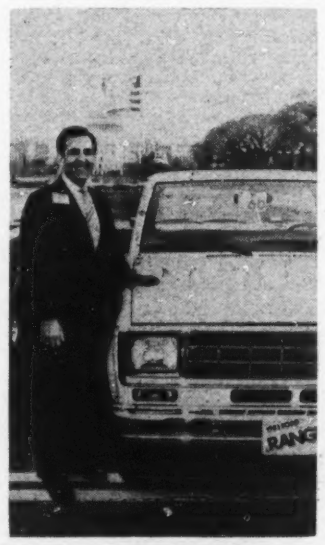
The leading indicator in the January-February period was sales of all parts and P&A, up 15.8 percent, followed by shop parts sales, up 14.7 percent, and gross profit, up 12.1 percent.

Labor sales were up 6.4 percent for the period, while repair orders written were down 5.5 percent.

SERVICE INDEX
112.2*

	Feb., '82 vs. Feb., 81	2 mos., '82 vs. 2 mos., '81
Gross Profit on All Labor and P&A Sales	+15.1%	+12.1%
Repair Orders Written	— 3.3%	— 5.5%
Total Labor Sales (Customer & Warranty)	+10.4%	+ 6.4%
Shop Parts Sales (Customer & Warranty)	+17.6%	+14.7%
Sales of All P&A	+19.8%	+15.8%

*—Survey by Automotive News shows that dealers' service and parts business in Feb., 1982, was 112.2 percent of business in Feb., 1981. Service business in the 2 months of 1982 was 108.9 percent of business in the corresponding period in 1981.



Challenges imports

"America Fights Back" was the theme of Ford Division's Ranger driveaway from the Washington Mall. Louis E. Lataif, Ford Division general manager, introduced the new compact truck to about 140 area dealers and several members of Congress before the fleet was turned loose.

Toyota-GM pow-wow surprises the Japanese

By John Hartley
Staff Correspondent

TOKYO. — Japan's auto makers admitted to more than surprise when Toyota announced talks with General Motors about joint manufacture. The only company where surprise was not strong was Isuzu. That firm's president had been told about the deal secretly.

Indeed, since GM and Isuzu have just concluded a deal under which the Japanese company would supply the replacement for the Chevrolet Chevette, it was to be expected Isuzu executives would be in the know. Also, GM owns 34 percent of Isuzu.

However, it has become clear talks between GM and Toyota did not start March 1, when Toyota's president Eiji Toyoda met GM chairman Roger Smith in New York.

Now, Toyota admits Seisi Kato, chairman of Toyota Motor Sales, met Smith last autumn at a tennis tournament to discuss the possibility of a joint venture.

Soon after the announcement, a Toyota executive declared that broad agreement would be reached in April — a firm indication that the two have been talking for many months.

In addition, the Toyota executive reportedly said that no problems would be encountered in the antitrust laws, further indication negotiations have been going on for a long time.

According to one source, firm discussions started over a year ago.

Initial reaction in the industry here was that the coopera-

CLEAN PROFITS FROM DIRTY WATER

Water in diesel fuel is deadly to pumps and injectors. It can't be stopped from getting in—it condenses out of the air in fuel tanks. Water causes rust, corrosion and sludge to form. In-line and spin-on filters aren't designed to get it out.

Racor can...and that means add-on sales and a real profit-opportunity for you.

Racor Fuel Filter/Water Separators remove virtually 100% of the damaging water and solid contaminants from diesel fuel. They are easy to install and maintain—no moving parts. Racor units have proven themselves on more vehicles over more miles and for a longer time than any other filter/separator.

Racor helps you sell—with ads, product displays, brochures and direct mail aimed at diesel car owners.

For details of this good, clean profit opportunity, contact Racor Industries, Inc., P.O. Box 3208, Modesto, CA 95353. 209/521-7860 Telex: 359-408

Imports take 28 pct. of '81 market

By Jenny L. King
Staff Writer

Registrations of new imported cars in December were down a few thousand units from 1980 levels, (184,282 vs. 187,745) but they accounted for a record 30.14 percent of the total market, up from 26.41 percent a year earlier.

New import registrations in 1951 totaled 2,431,680, down 1.52 percent from 2,469,180 the preceding year, according to figures compiled by R. L. Polk & Co.

Imported cars claimed a record 28.80 percent of the U. S. market in registrations in 1981, breaking the 1980 record of 28.18 percent.

Record penetrations were posted in eight of the 12 months last year. Only March, July, August and September failed to exceed the records, all set in 1980.

For the full year, six of the top makes improved their shares of the import market segment: Four Japanese makers and two European. Toyota was up to 23.28 percent from 22.68 percent in 1980; Honda was up to 15.04 percent from 14.23 percent; Mazda was up 0.62 of a percentage point to 7.09 percent from 6.47 percent; Subaru was up to 5.91 percent from 5.10 percent; Volvo climbed to 2.66 percent from 2.21 percent, and Mercedes-Benz was up 0.35 percentage points, to 2.44 percent from 2.09 percent.

Datsun lost the most ground in 1981, dipping 1.90 percentage points to 18.59 percent from 20.49 percent in 1980. Volkswagen was down 0.81 of a percentage point to 9.53 percent from 10.34 percent, while Fiesta and Champ dropped out of the top 10 group for the year.

• In December, Datsun was up 0.71 of a percentage point to 18.86 percent from 18.15 percent a year earlier. Subaru was up to 6.63 percent from 5.74 percent; Mercedes-Benz was up 0.77 of a percentage point to 3.11 percent from 2.34 percent, and Audi was up to 2.45 percent from 1.98 percent.

Toyota, Honda, VW, Mazda, Volvo, Colt and Fiesta were down in December compared with year-ago shares.

The top 10 imports in 1981 accounted for 88.31 percent of import registrations, compared with 88.58 percent in 1980. In December, the top 10 accounted for 88.58 percent, down from 89.99 percent a year earlier.

By country of origin, the Japanese makes accounted for 75.17 percent of import registrations in 1981, up from 74.10 percent in 1980. German-made cars dropped to 17.39 percent from 18.73 percent, while Swedish imports climbed to 3.24 percent from 2.73 percent.

Registrations by country of origin in 1981 compared with 1980 were:

	12 mos., 1981	12 mos., 1980
Japan	1,827,850	1,829,631
West Germany	422,926	462,394
Sweden	78,834	67,506
France	45,625	35,934
Italy	36,097	41,928
Britain	18,019	31,779
Ireland	2,329	.....
Other	.....	8

Registrations of imported cars by country of origin in December, compared with the year-earlier month, were:

	Dec., 1981	Dec., 1980
Japan	138,028	139,316
West Germany	31,906	35,701
Sweden	7,019	5,598
France	4,128	3,238
Italy	1,651	2,055
Britain	1,009	1,837
Ireland	541	.....

New imported-car registrations in 1981 were divided this way, by country of origin: Japan, 75.17 percent; Germany, 17.39 percent; Sweden, 3.24 percent; France, 1.88 percent; Italy, 1.48 percent; Britain, 0.74 percent, and Ireland, 0.10 percent.

In 1980 import registrations by country of origin were divided as follows: Japan, 74.10 percent; West Germany, 18.73 percent; Sweden, 2.73 percent; Italy, 1.70 percent; France, 1.45 percent, and Britain, 1.29 percent.

Registrations of imported trucks in 1981 totaled 485,875, down 7.17 percent from 523,386 in 1980.

Registrations of imported trucks in 1981, compared with 1980, were:

	12 mos., 1981	12 mos., 1980
Toyota	130,379	132,969
Datsun	112,383	108,384
Ford Courier	63,027	74,196
Chevrolet LUV	62,713	86,227
Others	117,373	121,610

The truck import total for December was 37,373, up 11.06 percent from 33,650 a year earlier. Registrations of imported trucks in December, compared with the preceding year, were:

	Dec., 1981	Dec., 1980
Toyota	10,765	7,610
Datsun	9,118	7,062
Ford Courier	4,337	4,707
Volkswagen	3,839	.....
Chevrolet LUV	.....	5,231
Others	9,314	9,040

Flxible gets bus pacts worth $23 million

St. Louis loses 2 Dodge dealers, gains 2 from GM

ST. LOUIS. — The dealership score is even: Two Dodge dealerships recently went out of business in the St. Louis area, but two General Motors stores opened.

Jung Chevrolet has opened in Clayton, a large commercial suburb. The dealer is Ronald L. Jung, 43, who had been in the labor relations department and was a Fisher Body plant supervisor here. His father, Elmer W. Jung, had operated Town & Country Ford, also in Clayton.

Pratt Buick opened in St. Louis. Greg Pratt, formerly associated with a Bloomington (Ill.) Lincoln-Mercury dealership, took over an existing facility.

The two companies that closed were Alton Dodge, Alton, Ill., and Dodge City, Ltd., Ellisville, Mo.

For April and second quarter

Production targets lowest since '61

By Patricia Hoffman
Staff Writer

Feeling the agonies of the current recession, the domestic auto makers are forecasting the lowest April and second-quarter production since the recession year of 1961.

The auto manufacturers are planning 480,593 units next month, down 26.44 percent from 653,306 last year and the lowest output for April since 1961 when only 447,343 cars were built.

For the second quarter, the makers are looking at 1,587,496 units, down 21.88 percent from 2,032,219 in 1981 and the lowest second-quarter output since 1,550,195 in 1961.

Checker Motors is the only company showing any gain for April with output scheduled at 340 units. Checker assembled only 55 cars in April of last year.

April projections by the other manufacturers are: General Motors, 280,000, down 29.66 percent from 398,073 last year; Ford Motor, 121,000, down 14.83 percent from 142,077; Chrysler Corp., 60,000, down 28.18 percent from 83,540; Volkswagen of America, 13,553, down 23.01 percent from 17,604, and American Motors, 5,700, down 50.66 percent from 11,957.

For the second quarter, Checker has slated 1,180 cars, compared with 440 last year.

For the larger companies, second-quarter schedules are: GM, 930,000, down 26.65 percent from 1,267,945 in 1981; Ford, 403,000, down 7.76 percent from 436,897; Chrysler, 195,000, down 19.47 percent from 242,140; VWoA, 43,516, down 6.11 percent from 46,350, and AMC, 14,800, down 61.51 percent from 38,447.

Production last week was targeted at 107,265 units, up 20.8 percent from 88,794 the previous week, but down 29.0 percent from 152,333 in the comparable 1981 week.

So far this year, the makers have finished 1,116,679 cars, down 32.67 percent from 1,658,584 in the comparable 1981 period.

Breakdown for the week by company is: GM, 67.50 percent; Ford, 21.22 percent; Chrysler, 9.79 percent; AMC, 1.40 percent and Checker Motors, 0.09 percent.

VWoA's Westmoreland facility was idle an additional week last week because of poor sales. The plant closed March 22, and operations were originally scheduled to resume last week. The facility is slated to return today, (April 5).

Chrysler's Belvidere point was idle last week for inventory control.

Also down last week were three GM and three Ford facilities. They were: GM Arlington, Lansing and Leeds, and Ford Atlanta, Lorain and Metuchen plants.

GM's Janesville and Oklahoma City points remain down for model changeover.

Saturday overtime was scheduled last week at GM's Tarrytown and Van Nuys plants.

Checker's Kalamazoo point will be idle starting today (April 5) for inventory adjustment.

April truck output slated to top last year by 22 pct.

The domestic truck makers are looking at April in a favorable light, with production expected to jump 22.02 percent over last year's. The total is slated to be the highest for April since 1979.

The truck manufacturers are planning 180,136 units this month, up from 147,628 built in April last year.

Second-quarter truck production is slated at 567,389 units, a 33.36 percent gain over 425,469 completed during the second three months of 1981. It would be the highest second-quarter total since 1979, but the projection is far below that year's 887,948.

Last week, the truck makers scheduled 42,890 units, down 2.67 percent from 44,071 the previous week, but up a substantial 22.56 percent from 34,995 in the comparable 1981 week.

So far this year, the truck manufacturers have built 481,349 units, up 4.83 percent from 459,163 in the same period last year.

Volkswagen of America extended downtime last week at its Westmoreland facility. The plant, which was idled March 22 due to poor sales, was originally scheduled to resume operation March 29 but will not be back until today (April 5).

Chrysler's Belvidere assembly point was idle last week for inventory control.

One line remains idle at International Harvester's Ft. Wayne and Springfield facilities. The partial shutdown is to control overstocked inventory.

Overtime was scheduled last Saturday at General Motors' St. Louis facility.

American Motors Toledo (Jeep) plant has scheduled a five-day Easter holiday. The facility will be idle April 8-12.

It's Century, again

For the third consecutive year, Century Motor Sales, Alhambra, Calif., was the top-selling BMW dealership in the country. Leon Peskin, left, dealer, accepts the highest-volume plaque from Jim Ryan, BMW of North America Western regional manager.

GM plant returns; car output rises 9 pct. in Canada

The return of General Motors' Oshawa (No. Two) facility boosted last week's Canadian auto production 9.66 percent from the previous week's output, but the total was 2.16 percent below that of the comparable 1981 period.

Last week, the auto makers scheduled 20,882 cars, up from 19,043 the previous week, but down from 21,343 in the comparable week last year.

So far this year, the auto manufacturers have finished 205,352 units, a 4.16 percent gain from 197,143 completed in the same period last year.

Truck production last week was estimated at 12,151 units, about even with 12,218 the previous week and 12,065 in the comparable 1981 week.

Year-to-date, the truck makers have built 123,605 units, down 16.97 percent from 148,860 in last year's comparable period.

GM's Oshawa (No. Two) facility resumed production last week after being idle one week for inventory control. The plant is scheduled to work two shifts daily through April 12, at which time it will halt second-shift operations. As a result, A-car production will drop to 360 units a day from the current rate of 768 units. The line rate will continue at 45 units an hour. Some 1,750 hourly workers will be put on indefinite layoff.

Also at GM, the St. Therese plant was idle last week for inventory control. The plant has been working only one shift since the end of February. Second-shift operations are slated to resume sometime this spring.

Sagging production trims car supply to 58½ days

By Richard A. Wright
Assistant Managing Editor

The domestic auto makers continued to hack away at their new-car inventories during March and they opened April with a healthy-looking 58½-day supply.

But the inventory reduction—from 70 days March 1, 97 days Feb. 1 and a record 107 days Jan. 1—was accomplished primarily through production cutbacks. The daily sales pace has climbed in each of the past four months, but the March rate was still anemic when compared with better years.

The domestic new-car inventory totaled 1,246,648 on April 1, down from 1,325,073 a month earlier. A year ago, the new-car stockpile totaled 1,236,074 April 1, only slightly lower than this year's but a 44-day supply at the then-current sales rate.

By size class, compacts continued in shortest supply, with the other segments in fairly close balance.

All corporate makers trimmed both days-supply figures and unit counts during March.

General Motors cut its inventory to a 59-day supply April 1, down from 71 days a month earlier. In shortest supply were the recently introduced Firebird-Camaro lines and the compact X-bodies.

Ford Motor Co. opened April with a 51-day supply, down from 59 days a month earlier and the lightest stockpile of the domestic makers.

Chrysler Corp. had a 62-day supply April 1, down from 76 days March 1. Volkswagen of America had a 97-day stockpile, down from 138½ days March 1, and American Motors had trimmed its inventory to 80 days from 88.

The April 1 domestic inventory was divided this way: GM, 61.27 percent; Ford Motor Co., 20.54 percent; Chrysler Corp., 13.34 percent; VWoA, 2.90 percent, and AMC, 1.95 percent.

Table on Page 8.

A month earlier, the domestic inventory was divided as follows: GM, 61.36 percent; Ford Motor Co., 20.51 percent; Chrysler Corp., 13.24 percent; VWoA, 2.90 percent, and AMC, 1.99 percent.

By size class, the industry trimmed its supply of compacts to 44 days from 54 a month earlier. Stocks of all other size segments were down also.

The industry had a 69-day supply of subcompacts, down from 74 days a month earlier; a 66-day supply of intermediates, down from 84 days; a 63-day stock of standards, down from 68 days, and a 60-day supply of luxury cars, down from 63 days.

The April 1 inventory was divided this way by market segment: Subcompact, 28.73 percent; compact, 20.38 percent; intermediate, 31.83 percent; standard, 12.45 percent, and luxury, 6.61 percent.

A month earlier, the inventory was divided as follows: Subcompact, 28.11 percent; com-

Chrysler offering 5/50 and free maintenance

By Joseph Bohn
Marketing Editor

Looking for an alternative to rebates which expired April 10, Chrysler Corp. came up with a new five-year, 50,000-mile free maintenance / warranty / rustproofing protection program.

(Imperial rebates run to May 31.)

The program covers all new domestically built '81 and '82 cars, purchased at retail after April 11. Fleet sales, Mitsubishi imports and trucks are excluded from the new program.

Significantly, perhaps, Chrysler's fleet marketers elected to keep the rebate program that has been in effect for fleet buyers rather than take the longer warranty. It has been extended through April 30.

Chrysler was expected to followup its truck rebates, which also expired April 10, with a new program, not available at presstime.

Chrysler Chairman Lee A. Iacocca, in announcing the extended warranty / maintenance / rustproofing program, said he hoped it would run indefinitely. But, he added, its continuance would depend on its effectiveness in stimulating sales.

"The next 30 days will tell," said Iacocca, leaving the door open for a return to rebates.

Some observers questioned whether Chrysler's new program was strong enough to compete against cash savings offered by General Motors' 12.8 percent financing and Ford Motor's 5 percent rebate / two-year free maintenance/warranty programs.

Extended warranties have long been considered a good closing tool, but not particularly

Chrysler signs Turin design house

TURIN.—Rayton Fissore, a Turin design house, reportedly has signed an agreement with Chrysler Corp. for assistance in designing and prototyping new models. The contract follows a preliminary order for the design of a 2-liter car, the full-scale model of which was delivered last year. The Chrysler contract is to last two years. Another full-scale model—believed to be an Imperial—is scheduled to be shipped to Detroit shortly.

UAW-GM contract OK'd by slim margin

DETROIT. — The new national agreement between General Motors and the UAW was ratified by 52 percent of the rank-and-file, according to UAW Vice President Owen Bieber. The total vote count was 114,468 to 105,090. Under the agreement, the union made economic concessions in exchange for job security. The contract takes effect today (April 12).

Here comes Ford's Tempo

Ford Motor takes the wraps off its new Ford Tempo and Mercury Topaz front-drive models in the spring of 1983. The Fairmont/Zephyr replacements will ride on a wheelbase of about 99 inches and will be powered by a standard 1.6-liter Escort engine. Tempo (above and middle) has unique six-window greenhouse design.

. . . and Mercury's Topaz

The 1983 front-drive Mercury Topaz has more conventional greenhouse styling. Note unusual decklid and tail lamp design. Topaz and Ford Tempo will be offered in two-door and four-door versions, with a wagon model in the planning.

In bid for more clout with factories

Chevy, Ford Dealer Alliances unite

By John A. Russell
New York Staff Writer

HACKENSACK, N. J. — In an unprecedented move, the Ford Dealers Alliance and the Chevrolet Dealers Alliance formed a coalition last week to fight for solutions to their common problems.

While both organizations said they would reserve their specific make difficulties for each organization, in national areas they will present a united front.

These areas include pricing, overdealering, product identification and financing.

Linking the two organizations comes at a time when both are feeling the crunch of the recession, but Chevrolet dealers have been traditionally considered among the more successful and more conservative of dealers.

The Ford Dealers Alliance, since its inception, has been considered a radical organization. However, in recent years the organization's membership roll has increased from a purely northeast regional group to one of nationwide impact, with 1,500 dealers as members.

Chevrolet Dealers Alliance, founded two years ago, is still in its embryonic stage, with approximately 125 member dealers. Most are concentrated in the New York metropolitan area.

Now, according to its president, Larry Tynan, it will be aggressively moving to increase its membership ranks. Tynan said that part of the problem over the past two years has been organization.

The organization agreed on the issues, but did not have the expertise in the organizational front to present its views, he said. From now on, CDA will be

Buyback and lease plans involve two firms

DeLorean negotiating for cash fix

By Edward Lapham
Financial Editor

NEW YORK. — John Z. DeLorean has constructed a new business plan which could provide $14 million in short-term operating cash, $40 million in long-term investment plus allow his U. S. DeLorean Motor Co. to reacquire the West Belfast assembly operation.

The first step in the plan involves the bulk sale of 1,191 DeLorean sports cars to Consolidated International, Inc., the Ohio-based company which two years ago acquired a fleet of unsold cars from Fiat. The sale is scheduled for April 20.

John DeLorean said the sale will raise $14 million which will be used to partially pay off the $19 million owed the Bank of America.

"We plan to do another one (bulk sale) in the East to pay the balance," he said.

DeLorean told AUTOMOTIVE NEWS he and his wife have put about $2.3 million into the company in the last several weeks to pay bills and allow the company to meet payroll. He said he will put in an additional $5 million of his own funds to pay off creditors and dealer warranty claims "100 cents on the dollar." Current estimates put warranty claims between $1 million and $1.5 million and debt for the U.S. company at about $5 million.

The former General Motors group vice president said he has lined up a "California financial institution" which will contribute $35 million, at least part of it in equity, to finance shipments from the plant.

• DeLorean said he has had to negotiate various plans with BoA, because of its secured interest in 1,979 cars, and the receivers of the Northern Ireland DeLorean Motor Cars, Ltd., unit. He said either party could veto the plan.

"The British have a direct lien on all the property we own in the world including this necktie," he told AUTOMOTIVE NEWS in an interview.

He said a key to his business plan is reacquiring the plant for $40 million with no interest payments for "three, maybe five years."

"There has to be realignment of expectations to fit the situation," DeLorean said. "All the investor groups have disappeared. Only a moron would invest the $50 million it would take to put the company on its feet."

DeLorean said the government must be realistic in its claims against the enterprise, which total about $130 million, if it wants the venture to succeed.

"It really depends on the government," he said. "If they don't want the company to be here, it won't be."

DeLorean said the receivership of the company has caused the British government to "write off" its investment, which has reduced the costs "by about $2,800 per car."

DeLorean said the deal with Consolidated and one still being negotiated with Budget-Rent-A-Car should not give the cars a "distressed merchandise" image.

• He said his current plan for a deal with Budget involves DMC dealers acquiring about 1,000 cars and putting them into their lease fleets and then leasing them to Budget outlets for six to 12 months.

He wants BoA to finance the sale to dealers but said they "wouldn't touch it with a 10-foot pole."

A Consolidated official confirmed its contractural arrangement but told AUTOMOTIVE NEWS it was "strictly a financial agreement" and would likely not involve taking physical possession of the cars.

Terms of the proposed sell-buyback agreement call for Consolidated to buy the cars for $14 million. DeLorean would then gradually repurchase the cars from Consolidated for delivery to dealers.

Budget "inched closer day-by-day" to a separate agreement with DMC to purchase 1,000 cars, according to Gerald Entman, the car rental firm's marketing executive vice president.

"We still do want the cars," he told AUTOMOTIVE NEWS. "We're still talking."

Robert Aprati, Budget's general counsel, said "the structure of the deal is complete" but that some details needed to be worked out because of the number of parties involved. "We want to make sure we have clear title to the vehicles," he said.

Aprati also said Budget has not been negotiating directly with the bank but that it appears BoA officials have been "flexible" in their approach to resolving the problem.

DeLoreans on the block

These DeLoreans are some of the 39 units waiting to be auctioned at the California Auto Dealers Exchange, a Manheim auction in Orange County. They are among 88 company cars leased back to DMC by CFR Leasing. All were repossessed when DMC failed to make payments during its cash crunch. Early attempts to auction any of the cars were unsuccessful.

Heavy stocks, thin management and money woes plague enterprise

Where DeLorean's dream faltered

By Edward Lapham
Financial Editor

The DeLorean sports-car enterprise is in trouble.

It has a number of problems.

The project began in 1974 when former General Motors Group Vice President John Z. DeLorean formed a company to develop "an ethical sports car." It progressed through various financing arrangements before finally securing about $160 million in financing from the British Government for its operation to build the stainless-steel sports car in Dunmurry, Northern Ireland.

To be sure, the vagaries of the depressed U. S. auto market have not helped the company. The car bowed in the U. S. market last summer at a time the industry was wallowing in a veritable auto depression.

News Analysis

Early sales seemed to build appropriate momentum, peaking at 720 units in October, but then in December and January, the bottom fell out of the DeLorean market, along with the rest of the sporty-car segment. March sales were 204 units.

The sales slump coupled with a production rate increase in November caused an inventory clog from which the company has yet to recover.

DeLorean Motor Co., the parent company in which John DeLorean has about an 84 percent interest, is strapped for cash and is looking for investors.

Its marketing unit, DeLorean Motor Cars of America, has had nearly 2,000 cars sitting around for two months with no place to sell them. Dealers have an additional 1,500 in stock.

DeLorean Motor Cars, Ltd., the Northern Ireland car-building unit, has been in receivership since February. It is working only one shift a week to produce about 35 cars and has sold a few units in Kuwait and Abu Dhabi.

John DeLorean himself has resisted pressure from British interests to withdraw from active participation in the company which bears his name; certain British officials believe it would be easier to find an investor to rescue the project if DeLorean were to step aside.

• Still, it is very clear that the problems of the DeLorean enterprise fall into one or more of three categories: Management, money and product.

John DeLorean, who put together what was considered a prime-talent management team, now stands virtually alone at the head of the enterprise. He is assisted by Thomas Kimmerly, corporate director, executive vice president and legal expert who has been instrumental in developing the enterprise's intricate financing structures from the beginning.

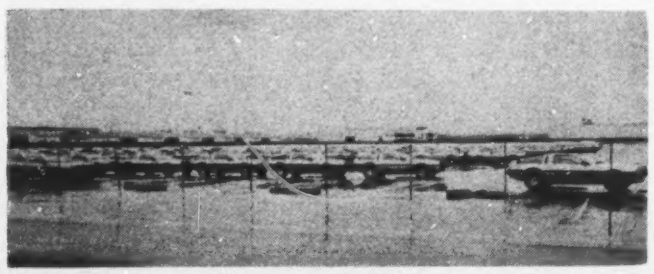
Roy Nesseth, a former car salesman and DeLorean confidant and associate in several other business deals, is an "executive assistant" to John DeLorean with a reported salary of $180,000.

This triumvirate is now the core of the management team. DeLorean is still the visible front man, while Nesseth handles much of the policy administration and implementation once handled by others, and Kimmerly is occupied with the legal intricacies of the current situation.

• Among the former top executives who are no longer with the enterprise are: C. R. Brown, former DMCA president; Eugene A. Cafiero, former DMC president; former chief financial officers Robert Dewey, Walter Strycker and James Stark; William T. Collins, original participant and design engineer; William Haddad, former public affairs vice president; Charles Bennington, former DMCL managing director; A. Lawrence Cobb, former DMC vice president and general manager of subsidiary Composite Technology Corp., and James Kjellberg, briefly director of European marketing plans.

There are other executives who are still with the enterprise, including some who have

Continued on Page 60, Col. 2



Waiting for the sun

More than 700 gull-wing DeLorean sports cars have been nesting in the rain and other elements at the company's Santa Ana (Calif.) Quality Assurance Center. These cars, all 1981 models, are part of the 1,979 landed units in which Bank of America has a secured interest. DeLorean Motor Co. last week was hoping for some sunshine and a chance to generate cash flow by shipping some of these cars to dealers or some other buyer.

Low interest loans score big in Florida

DeLAND, Fla. — Seven new-car dealers in this central Florida city sold what amounted to a month's worth of vehicles in a five-hour sale that offered low-interest loans to buyers.

Two thousand shoppers showed up for the Sunday afternoon sale, despite torrential rains, and purchased 185 cars and trucks.

Three banks agreed to participate in the promotion, aimed at proving the car dealers' thesis that low interest rates would unleash pent-up demand for new cars. The DeLand promotion preceded the latest General Motors offer of reduced interest rates.

The banks offered 24-month, 11.96-percent (APR) loans to qualified buyers for amounts up to $5,000. Buyers had to come up with a one-third downpayment, either in cash or trade.

Car loan rates in Florida have been running in the 16- to 18-percent range.

For those who wanted longer terms, the banks offered 14-percent (APR) loans for up to 48 months.

Participants in the promotion were Beau Chrysler, Bill Baker Volkswagen, Sheats, DeLand Datsun, DeLand Dodge, DeLand Ford, Kaiser Pontiac, Barnett Bank, Florida Bank and DeLand State Bank.

IMPA establishes award in memory of Robert Irvin

NEW YORK. — The International Motor Press Assn. has established a journalism award in memory of Robert W. Irvin. Mr. Irvin, editor-at-large of Automotive News, died December 1, 1980.

The $250 award and plaque will be presented for the best automotive story written under deadline and published during 1982.

Joe Oldham, IMPA president, said the first award will be presented in 1983 and entries will be confined to daily and weekly newspapers, wire services and weekly newsmagazines.

He said the purpose of the award is to honor the journalist who best typifies the standards set by Irvin during his career. Irvin was a member of IMPA.

Oldham also announced the Ken Purdy Award, which will have a $250 prize and a plaque for a story written and published in 1981.

Oldham said the awards will be made annually by IMPA to honor the memories of two of automotive journalism's most distinguished writers.

Washington word: No more aid for autos

DETROIT.—A Department of Commerce official has indicated that the Reagan Administration will do nothing more to aid the economically starved auto industry beyond what has already been done, according to Rep. John D. Dingell, Michigan Democrat. Dingell also said he hopes to have bill HR 5252, which revises the Clean Air Act, out of committee and on the House floor by the first week in May. Auto makers believe changes in that act could save up to $300 per car, he said.

Chevy truck sales in March highest since '79

DETROIT. — Chevrolet dealers sold 99,322 trucks in March, the highest total for any month since May, 1979, and 54 percent greater than last year's 64,501 units. First-quarter Chevrolet truck sales were up 35.4 percent over a year ago, from 173,869 in 1981 to 235,508 this year.

Record cash position for Chrysler

HIGHLAND PARK, Mich.—Chrysler Corp. ended March with $900 million in cash and marketable securities on hand, an alltime high even if the $350 million it received in selling Chrysler Defense weren't included, according to Chrysler Chairman Lee A. Iacocca.

Budd, Rockwell seek concessions from UAW

DETROIT.—Rockwell International Corp. and Budd Co. are seeking concessions from the UAW to help them recover economically. Rockwell presented UAW bargainers with a new proposal on April 2. The UAW represents workers in the company's automotive division. Early negotiations between the UAW and Budd were scheduled to begin today (April 12). The Rockwell contract expires Feb. 4, 1983, while Budd's runs out March 31, 1983.

As successor to rebates on U. S. cars

Chrysler offers 5/50, free upkeep

Continued from Page 1

strong tools for attracting showroom traffic.

Raphael Cohen, of the Independent Dealers Committee Dedicated to Action, said his group favored the program — particularly since it didn't require dealers to contribute or order more cars.

But Cohen thought that expecting it to ignite sales quickly was unrealistic.

He recalled that in 1963 — when Chrysler first offered a 5/50— "our market was not turned on by a snap of the finger. It took four to six months for the concept that Chrysler had a better warranty to sink into the public's mind."

Cohen saw the new program as a good, long-term marketing tool, but he felt that neither it, nor other companies' programs, could turn around a market in which consumers are basically lacking in confidence.

• Dealers generally had mixed reaction to the program.

Chrysler's dealer councils have long favored going back to a 5/50 warranty. They see it stimulating service business as well as restoring confidence in Chrysler's products.

But some dealers who have made a good profit selling aftermarket rustproofing and optional extended warranties saw the new program undercutting their profits.

One Chrysler dealer, for example, reportedly made $7,000 last month, selling the $250 optional extended warranty that Chrysler previously had, which had $100 worth of dealer profit in it.

In essence, the new 5/50 "Three-Way Protection Plan" is a limited warranty, covering engine, transmission, transaxle, drive axle and axle shaft.

The powertrain portion provides substitute transportation and towing. It requires a $25 deductible for each dealership visit after two years or 24,000 miles, to discourage nuisance claims.

All scheduled maintenance is free of charge for five years or 50,000 miles, and includes fluids, materials and labor.

The warranty and maintenance coverage is transferrable upon resale of the car, subject to a $25 fee.

The rust protection covers eligible vehicles that develop a hole through the metal due to corrosion.

• Chrysler's new program was launched last week, with newspaper, radio and TV advertising. The schedule also includes newsweekly magazines.

Chairman Iacocca is the spokesman in TV and radio commercials.

Full-page ads ran in 36 newspapers yesterday (April 11); 60-second Iacocca commercials are running in spot TV in 10 markets April 10 to 16, and 60-second Iacocca spots also are running in spot radio in 36 markets April 10-24.

Chrysler's network TV schedule has also been beefed up with additional buys during April 10-19, and there is a cable schedule on Ted Turner's Network News Cable.

Also, Chrysler is running three-page ads in all the newsweeklies, one page of black and white, two of color. The three-page ads run in Time, Newsweek and Sports Illustrated April 19 and People and U. S. News April 26.

Kenyon & Eckhardt is the agency.

Checker to halt taxicab output

KALAMAZOO, Mich. — Despite an upturn in production, Checker has announced that production of taxicabs will be halted in July.

According to a letter sent to Checker's union employes, "if the union and its membership are not willing to work with the company, as other unions and other companies have shown the desire to do, the future of the company can hardly be called bright."

Checker, which also makes automotive parts and components, will continue those operations after production of taxicabs is phased out. About 225 of the 800 unionized auto workers will be placed on indefinite layoff. There are no plans to resume automobile assembly in the near future.

Talks commence on Lada Niva plant for Canada

Discussions began last week between Russian export and trade officials and representatives from Lada Cars of Canada, Ajax, Ont., on the location and timing of the proposed Lada Niva assembly plant.

Vladimir Poliakov, director of AvtoLada, a division of Avto-Export (the Russian trading arm), met last week with officials of the Canadian-owned Lada Cars of Canada and representatives of the U.S.S.R. trade commission in Ottawa.

Poliakov last week visited one potential assembly site near the Autoport in the Dartmouth/Halifax area of Nova Scotia. Sites in southern Ontario are also being considered.

The Niva is a compact four-wheel-drive vehicle which Lada Cars of Canada has been importing since 1980. Canadian production of the vehicle would boost home sales as well as open potential export markets.

Meetings will continue this week. The Russian representatives are also expected to finalize plans for the Canadian introduction of the new 2105 and 2107 sedans, successors to the current model sold in Canada.

Those models will make their Canadian debut in January at the Montreal International Auto Salon, according to John Wright, Lada national sales manager. The Russians will also discuss progress on the new Lada 2109 front - wheel - drive subcompact, which eventually will be sold in Canada.

Alfa Romeo appoints Wilson marketing chief

ENGLEWOOD CLIFFS, N. J. —Ralph B. Wilson has joined Alfa Romeo, Inc., as director of marketing.

Wilson has served as a marketing consultant for Alfa Romeo during the past two years and has worked in dealer recruiting, market research and sales training. Prior to that, he was national marketing manager of Peugeot Motors of America, and earlier he had been national marketing manager for Saab-Scania of America.

Beaman buys deal

NASHVILLE, Tenn. — Nashville automobile dealer Lee Beaman has purchased Riverrate Datsun in Madison. Beaman is general manager of Beaman Pontiac-Toyota-Isuzu here. The name of the Madison dealership will be changed to Beaman Datsun.

A tradition in fiberglass

The Amish coach builder who makes this buggy remains anonymous for religious reasons. His description, however, sings the praises of fiberglass, its principal material. An end-grain balsa/fiber reinforced plastic structural sandwich gives a 20 percent savings in weight, low cost, strength, longer life and reduces horse fatigue. Shafts are glass and glass wheels are an option. "We save more than 90 pounds over the oak frame formerly used, which often rotted out after a year, and nine pounds by eliminating two steel side braces," the builder said. "This may sound unimportant, but a horse drawing a carriage 20 or 30 miles with a market load or six or seven people tires easily and weight savings is a blessing."

Moore Cadillac-Jaguar opens in Ellisville, Mo.

ELLISVILLE, Mo. — Moore Cadillac-Jaguar has moved into a 35,000-square-foot facility here.

Built on six acres, the showroom allows display of 12 cars. The service area has separate Cadillac and Jaguar departments, each with its own management, parts and technicians. Ron Moore is dealership president.

The emblem dealers look for.

To America's used car dealers, it's every bit as prestigious—and represents every bit as much profit potential—as the hood ornaments of the world's classiest cars.

It's the symbol of the Manheim Auctions System.

Why this universal respect? Because Manheim gives buyers the industry's best selection of cars, its most comprehensive support services, and its most proven skills. Because Manheim gives sellers unrivaled expertise and professionalism in the vital inventory regulation process.

Because Manheim has given everyone **fair and equal treatment** each and every sale day—for 37 years.

Look for the Manheim emblem. That's where you'll find your area's smartest dealers.

As first-quarter new-car sales dip 18 pct.

Imports, domestics share setback

By Jenny L. King
Staff Writer

New-car sales during the first quarter of 1982 were down 18.19 percent from year-ago levels, with the domestic auto makers plunging 19.17 percent and the imports not far behind at minus 15.55 percent.

Industry total for January through March was 1,942,131, down from 2,373,949 in 1981. Domestics added up to 1,400,690, compared with 1,732,792, and imports numbered 541,441, compared with 641,157.

March sales collapsed to 776,793 units from 962,756 a year earlier. The U. S. makers combined forces to retail 575,608 new cars for the month. This was down 19.98 percent from 719,367 the preceding year.

Import sales during March dropped 17.34 percent, to 201,185 from 243,389 last year. Import penetration of the U. S. market was 25.90 percent, up from 25.20 percent in 1981 and a record for the month. In 1980, imports captured 25.09 percent of the total, in 1979 it was 22.53 percent.

Japanese penetration of the import share was 80.82 percent, up from 79.40 percent in March of 1981. Japanese products accounted for 20.92 percent of the total March market, up from 20.07 percent a year earlier.

• All five major U. S. auto makers reported sales declines in March. Drops ranged from 14.69 percent at Ford Motor Co. to 39.68 percent at American Motors.

General Motors sales of 349,506 were down 20.18 percent from 437,884. There were 27 selling days this year compared with 26 in 1981, thus on a daily-rate basis GM sales were down 23.14 percent.

Ford Motor Co. dropped 14.69 percent to 135,210 from 158,487 in 1981 (down 17.84 percent daily rate). Chrysler Corp. reported sales of 72,627 domestic units, down 21.87 percent from 92,952 (down 24.76 percent daily rate).

Volkswagen of America U. S. Rabbit sales numbered 9,987, down 38.81 percent from 16,320 a year ago (down 41.03 percent daily rate), and AMC plunged 39.68 percent to 8,278 from 13,724 (down 41.83 percent daily rate).

GM earned 60.72 percent of the domestic market in March, down from 60.87 percent in 1981. Ford cornered 23.49 percent, up from 22.03 percent. Chrysler dipped to 12.62 percent from 12.92 percent. VWoA was pushed back to 1.73 percent from 2.27 percent, and AMC dropped to 1.44 percent from 1.91 percent.

Chrysler and Cadillac were the only U. S. makes to report sales gains in March. Chrysler leaped ahead 52.70 percent, to 15,991 from 10,472 last year, and Cadillac was up 11.46 percent, to 19,837 from 17,798.

In the final 10 days of March, domestic sales were up 23.53 percent over last year. It was the first period of 1982 in which there was an improvement (based on daily-selling rate), due probably to the culmination of the early-spring rounds of rebates.

During the March 21-31 period GM was up 52.96 percent, Ford was up 3.21 percent, Chrysler dropped 7.26 percent, VWoA was down 35.86 percent and AMC's estimated sales were down 16.28 percent. Market shares were: GM, 59.95 percent; Ford, 23.13 percent; Chrysler, 13.48 percent; VWoA, 1.92 percent, and AMC, 1.52 percent.

• Sales of imports in March showed the sales leaders (all Japanese products) cinching in their belts as a result of the first one-year restriction on imports which expired March 31.

Toyota sales for the month were down 21.69 percent from 1981; Datsun was down 3.49 percent; Honda was down 17.52 percent; Mazda was down 6.36 percent, and Subaru was down 14.04 percent.

Only seven of the major importers squeezed sales gains out of the inhospitable month. They were BMW, Isuzu, Jaguar, Lancia, Porsche, Saab and Volvo.

The March market class breakdown featured increases for U. S. subcompacts, standards, luxury models and imports, all at the expense of compacts and intermediates. Subcompacts climbed to 18.86 percent from 16.08 percent last year; standards claimed 9.21 percent, up from 7.83 percent; luxuries had 4.78 percent, up from 3.79 percent, and imports earned a record 25.90 percent compared with 25.29 percent in 1981.

Compacts slipped to 20.42 percent from 24.63 percent and intermediates dropped to 20.83 percent from 22.38 percent.

While March sales were down from the 1981 level, they did show an increase over the first two months of this year. The domestic trend was 368,138 in January, progressing to 456,942 in February, then to 575,608 in March.

Import sales in January were 166,110, climbing to 175,261 in February and 201,185 in March.

Where Auto Market was in March

GM and IUE agree on national pact

DETROIT. — The International Union of Electrical Workers (IUE) and General Motors have reached a tentative agreement on their national contract.

The proposed 2½-year settlement is parallel to one reached in late March by the UAW and GM. In that agreement, the union gave up annual raises and paid personal holidays and deferred cost-of-living adjustments for 18 months in exchange for job security.

The union's 22,000 GM working members and 9,000 members on layoff will vote on contract ratification.

3-month auto output was 1,087,000

Quarter's build dips to 30-year low

By Patricia Hoffman
Staff Writer

Once again, recession left its mark on the industry as domestic auto production for the first three months of 1982 was the lowest in 39 years and the total for March was the lowest since 1961.

Marred by slumping sales, the auto makers assembled only 1,087,000 units last quarter, a 30.57 percent drop from 1,565,531 in the comparable 1981 period and the lowest first-quarter output since 1952 when only 992,403 cars were built.

It was the lowest total for any quarter since the third quarter of 1961 when the makers produced 950,655 cars.

Last month, the makers turned out 481,578 units, down 22.77 percent from 623,571 built in March of 1981, and the lowest for that month since 1961 when 408,538 cars were assembled.

Of the six auto companies, only Checker Motors showed a gain for the first three months of 1982 with 860 units, up 36.16 percent from 549 built in the same 1981 period.

On a percentage basis, the largest first-quarter loss was suffered by Volkswagen of America with 24,267 units, down 49.26 percent from 47,830 in the comparable period last year.

American Motors was also down considerably from last year's quarter with 13,335 units, a drop of 40.53 percent from 22,423.

Ford Motor finished 211,862 units last quarter, down 34.87 percent from 325,273 a year ago; Chrysler Corp. produced 136,928 cars, down 28.78 percent from 192,270; and General Motors wrapped up first quarter production with 699,748, down 28.39 percent from 977,186 last year.

Breakdown for March by company is: GM, 306,423 units, down 19.11 percent from 378,828 in 1981; Ford, 102,251, down 21.39 percent from 130,070; Chrysler, 60,338, down 30.25 percent from 86,512; VWoA, 7,005, down 61.80 percent from 18,339, and AMC, 5,201, down 45.90 percent from 9,613.

Checker had the only gain last month with 360 units, up 72.25 percent from 209 a year ago.

Last week's production was targeted at 94,438 units, down 11.54 percent from 106,761 the previous week. The total was also down 37.27 percent from 150,553 in the comparable 1981 week. All plants were closed on Good Friday.

So far this year, the makers have finished 1,224,141 cars, down 32.44 percent from 1,811,855 in the same period last year.

Breakdown for the week by company is: GM, 62.02 percent; Ford, 21.98 percent; Chrysler, 11.44 percent; VWoA, 3.02 percent and AMC, 1.54 percent.

Checker was idle last week for inventory control. Ford's Atlanta facility was down for the same reason.

Ford's St. Louis plant increased its hourly line rate by 4 units last week. It now assembles 36 units per hour.

GM's Janesville and Oklahoma City points remained idle last week for model changeover.

GM's Lansing plant will be idle starting today (April 12) for inventory control.

Auto production in Canada rises for month, quarter

Canadian auto and truck production last month was considerably higher than that of the year-ago month.

The first quarter also proved favorable for the auto makers as output rose 11.92 percent above last year's, but truck production in the first three months of 1982 was the lowest for that quarter in seven years.

In March, the auto makers finished 89,197 units, up 22.78 percent from 72,649 in the comparable 1981 month. It was the most for that month since 1979, when 101,638 cars were assembled, and the highest total for any month since last June, when the makers built 101,919 cars.

The truck manufacturers assembled 55,505 units in March, a 24.28 percent gain from 44,663 in the comparable month last year. It was the highest total for any month since October of 1980 when the makers finished 55,943 units.

Auto production for the first quarter was 205,139, up 11.92 percent from 183,292 in the comparable 1981 period. It was the highest quarter since the fourth quarter of 1980 when the total was 227,352.

The truck makers built 121,139 units in the first three months of this year, down 8.95 percent from 133,048 in the comparable 1981 quarter. It was the lowest first quarter since 1975 when 91,290 trucks were produced.

Last week's auto production was scheduled at 13,360 units, down 27.56 percent from 18,443 the previous week. The total also was 36.57 percent below the 21,062 assembled in the comparable 1981 week. All car and truck plants were closed April 9 for Good Friday.

So far this year, the auto manufacturers have assembled 225,876 units, up 3.77 percent from 217,360 in the same period last year.

The truck makers targeted 8,818 units last week, down 24.07 percent from 11,614 the previous week, and down 2.68 percent from 9,061 a year ago.

So far this year, the makers have finished 134,603 trucks, down 14.82 percent from 158,030 in the comparable 1981 period.

The second shift remained idle last week at General Motors' St. Therese facility. The plant has been operating on only one shift since Feb. 1.

Also at GM, the second shift at the Oshawa (No. Two) facility will be idle indefinitely starting today (April 12). About 1,750 workers will be laid off.

Truck production tops last year for March, 3 months

Domestic truck production in March jumped 22.38 percent from that of the comparable 1981 month, and the total for the first three months of 1982 rose 6.13 percent from the comparable 1981 quarter.

In March, the truck makers finished 196,192 units, up from 160,312 a year ago. It was the highest output for March since 1979 when the makers completed 358,126 units, and the most for any month since October of that year when 227,853 trucks were built.

The makers built 451,406 trucks in the first quarter, up from 425,322 in the same period last year. It was the most for that quarter since 1980 when 487,507 units were assembled, and the most for any quarter since the second three months of 1981 when 481,392 trucks were built.

Last week's truck production was scheduled at 33,066, down 23.21 percent from 43,060 the previous week. Output also dropped 18.95 percent from 40,795 in the comparable 1981 week. The Good Friday holiday cut last week's total.

Year-to-date, the makers have finished 501,696 trucks, up a fraction from 498,666 in the comparable 1981 period.

General Motors' Lordstown (van) facility added a second shift last week and recalled 1,000 workers from indefinite layoff.

Ford Motor's Norfolk plant upped production last week from 30 units an hour to 40 units an hour.

American Motors' Toledo (Jeep) point was idled last Wednesday (April 7) for a five-day holiday weekend. The plant is slated to return tomorrow (April 13).

The fifth straight week of daily overtime was scheduled last week at Chrysler Corp.'s Warren plant. The point has been working a daily nine-hour shift.

Auto workers in Japan win pay increase

By Marjorie Sorge
Labor Editor

The Japanese auto companies and unions have settled on a new one-year agreement which provides a wage increase well above the increase in consumer prices.

According to UAW Vice President Donald Ephlin, Toyota workers settled for a 7.4 percent increase in the new contract while Nissan workers got a 7.2 percent hike. Consumer prices (CP) in Japan for 1981 rose 4.9 percent and Ephlin said predictions are they will decline in 1982. In 1980 it was 8.0 percent.

The Japanese unions hold their "Spring Offensive" annually with the auto companies. During this period, a new contract is negotiated.

In the U. S., the new contracts negotiated between the UAW and General Motors and Ford Motor Co. offer little increase in wages for 18 months because of the deferral of three quarterly cost-of-living adjustments (COLA) and the elimination of all annual improvement factors (AIF) for the length of the agreements which expire Sept. 14, 1984.

At both U. S. auto companies, the UAW anticipates a 2.7 percent increase in the first year of the contract (April, 1982 to April, 1983). The union is assuming 7.5 percent inflation.

Over the 30 months of the new GM contract there will be a 15.9 percent increase in wages while the Consumer Price Index will increase 19.6 percent, according to the UAW.

"In the U. S. we are not fully covered from inflation," Ephlin said. "But with normal AIF and COLA, it is close to 100 percent."

The AIF has been 3 percent per year in recent contracts while the COLA is figured on one cent for every 0.26 percent rise in the CPI.

According to Ephlin, the AIF is based on national productivity, but he said productivity is higher in the auto industry and in the past the excess has been used to pay for fringe benefits.

• Ephlin was in Japan recently attending the meeting of the U. S.-Japan Auto Study group. While there, he said he told the Japanese union leaders they should get more of the increase in productivity tied into paychecks or ask for better fringes like longer relief time. Currently, the Japanese get 10-minute breaks in both the morning and afternoon while in the U. S.

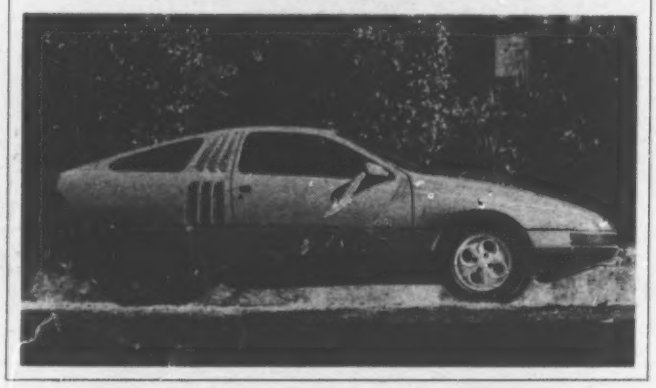
Ghia whiz

Brezza heads for Turin

Ford Motor Co.'s Ghia Operations' latest show car is the Brezza. It is based on production components of the North American Ford EXP. The car, which makes its debut this week at the Turin Auto Show, is a two-seater with engine and transmission in the center. Ghia says some of the Brezza's features could be incorporated into production vehicles, but the Brezza is not intended for production.



GAO says it will stay that way pending a better battery

Electric-car program called a flop

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The government's electric vehicle program has been a failure and will stay that way until a better battery is developed and at least one major auto maker is committed to make and sell electrics. So said the General Accounting Office, Congress' watchdog, in a report to House Energy Subcommittee Chairman Richard Ottinger, New York Democrat.

The GAO added that the Energy Department appears to be on target in dropping the electric-vehicle program except that Congress might consider spending some money on R&D leading toward an advanced battery, where support is essential if electrics are ever to become commercially competitive with conventional vehicles and if the federal government is to salvage its investment of $180 million.

In 1976, Congress passed an electric and hybrid vehicle R&D and demonstration law in order to provide a transportation alternative that would not be dependent on oil.

In April, 1979, GAO published its first report and found that electrics cost too much and did not perform well enough to become market-ready soon. In 1976, GAO suggested turning to research on advanced batteries. Now GAO's update, while finding some improvement, still sees little potential for widespread commercialization.

Gradual improvements have been made in range, speed and acceleration and even in such subjective measurements as appearance, quality and "overall level of refinement."

State-of-the-art electrics now have ranges between 30 and 70 miles before recharging; they can accelerate from zero to 30 MPH in about 12 seconds, and their top speeds are between 45 and 68 MPH. But they are not competitive with gasoline cars nor with diesels except in acceleration.

Because of the improvements, however, the Energy Department set higher standards for vehicles to qualify under its demonstration programs. Even so, said GAO, the typical electric today is still a "converted conventional vehicle with limited performance capabilities, unresolved safety issues and high cost."

Even though the range has improved on test tracks, in actual day-to-day driving by ordinary people the range is closer to 30-40 miles, and it takes between 8 to 10 hours to recharge

Imports' stockpile pared to 49 days; some lines run short

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. continued to decline during March, and importers and their dealers opened April with a shortage-marked 49-day supply, down from 51 days a month earlier.

The 49-day supply compared with a domestic new-car inventory, which was also on the way down, of 58½ days.

Importers and their dealers had 366,059 new cars in stock April 1, down from 371,553 a month earlier.

The inventory of new imported pickup trucks totaled 158,157 April 1, little changed from 158,972 a month earlier. A brisker sales pace, however, resulted in a 104-day supply of trucks, down from 118 days March 1.

The combined car and truck inventory was 524,216, a 58-day supply, compared with 530,525 units March 1, a 61-day supply.

Toyota, Honda and Mercedes-Benz were all carrying inventories lean enough to hold a lid on sales. Toyota very nearly lost its No. 1 sales slot to Nissan and had only a 21-day supply of new cars April 1. Nissan, on the other hand, had a stronger 54-day stockpile to back its sales surge.

Honda managed to build its inventory up to a 30-day supply from 20 days a month earlier, but its sales were affected by its short stockpile.

Mercedes-Benz had a slim 35-day supply of new cars April 1. Also on the lean side were inventories of Subaru, 40 days; BMW, 47 days; Mazda, 48 days, and Volvo, 52 days.

Isuzu had an 86-day supply of new cars and Chrysler Corp. had a 132-day stockpile of Mitsubishi-built cars.

The inventory of Japanese-built new cars in the U. S. totaled 254,368, up slightly from 252,095 a month earlier. But the April 1 supply was unchanged from March 1 at 42 days, reflecting the higher sales pace achieved in March.

• The stockpile of West German-built cars totaled 63,100 April 1, a 79-day supply, down from 70,984 a month earlier, which was a 93-day supply.

In addition to a 35-day supply of Mercedes-Benz and 47-day stock of BMW, the West German inventory included a 63-day supply of Porsche, a 107-day stock of Audi and a 125-day supply of imported Volkswagens.

New-car inventories of some other import nameplates April 1 included Volvo, 52 days; Jaguar, 67 days; Saab, 82 days; Renault, 86 days; Fiat, 88 days, and Peugeot, 109 days.

DeLoreans were in hefty 441-day supply, but more than half of the cars in stock were not yet in dealer hands, a fact which undoubtedly kept the sales rate low, thus kicking the days-supply figure up.

Days-supply figures for new imported pickup trucks in stock April 1 were: Toyota, 49; Mazda, 90; Datsun, 110; Chevrolet LUV, 128; Mitsubishi (Dodge Ram 50 and Plymouth Arrow), 134; Ford Courier, 188, and Isuzu, 214.

breaking news

Engines chosen for Mitsubishi pickup

LOS ANGELES. — Mitsubishi Motor Sales of America's turbodiesel minipickup, the first of its kind, will use a 2.3-liter Silent Shaft power plant when it is introduced this fall. The engine will be available on both two- and four-wheel drive versions and a five-speed manual transmission will be standard. MMSA will also offer a 2.6-liter gasoline engine (similar to that used in Chrysler-distributed Mitsubishi trucks) and a new 2.0-liter gasoline power plant.

GM lends Opel $530 million

FRANKFURT, West Germany. — General Motors has made a $530 million loan to Adam Opel A.G., its West German subsidiary. Opel had a loss of $245 million for 1981 and does not anticipate a profit for 1982. Opel also lost money in 1980 (its first postwar loss), so 1982 shapes up as its third straight year in the red.

For seat belts, against drunk driving

Two safety campaigns launched by Reagan

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — President Reagan has launched two national campaigns — one to "buckle up" and the other to keep drunks from driving—as a major effort to educate the public and reduce deaths and injuries from highway accidents.

Both are being backed strongly by NHTSA head Raymond Peck and Transportation Secretary Drew Lewis. Both are primarily educational, and both rely on voluntary efforts mostly from the private sector.

The 30-member President's Commission on Drunk Driving, chaired by former Transportation Secretary John Volpe, will work with state and local officials to attack the problem that is believed to be involved in more than half of all fatal auto crashes. It has a one-year life.

The national safety-belt campaign to educate and motivate the public "buckle up" also has the potential to save half the lives lost in highway crashes. Currently, only about 10 percent of car occupants wear belts. This is the campaign promised by Peck last October when he rescinded the passive-restraint standard.

• President Reagan described Americans as being "outraged" over the highway "slaughter" and said the "mood of the nation is ripe to make headway tc solving the problem.

The sunny meeting in the White House Rose Garden was attended by General Motors Chairman Roger B. Smith, Ford Chairman Phi'ip Caldwell, Chrysler Chairman Lee Iacocca and American Honda Executive Vice President M. Itabashi.

GM, which supports Michigan's proposal to mandate seatbelt use, plans an extended employe education campaign, using 140 publications that reach almost half a million workers and their families.

GM also plans to adopt a company belt-use policy, use GM's field speakers bureau to educate its audiences; develop ads for radio and the print media, seek new ways to tell the public it is both "socially acceptable and responsible" to wear belts and encourage all its unions, suppliers, dealers, etc., to support the NHTSA buckle-up campaign.

Smith also said GM will meet with the President's Commission on Drunk Driving to find ways to continue work GM has done for years to deal with alcohol and driving.

Caldwell said Ford has already given NHTSA 10,000 copies of a belt-use film for showing to high schools. Ford also plans to incorporate "buckle-up" messages in its ads, place "Get It Together" decals on Ford cars, use its speaker bureaus to carry the message and invite the press to view crashes that show effectiveness of belt use.

Ford also said that well-known race-car drivers will appear on major network and local talk shows to show the advantages of wearing belts. It also plans to use children in restraint devices in its sales catalogs.

Iacocca endorsed the dual program, noting that that's what Chrysler has been saying all along. The company will continue to promote belt use and require its employes to wear belts in company cars and its print ads will encourage "buckle up." Chrysler has just introduced a new line of child and infant restraint systems.

American Honda sees the selt-belt-use campaign as the "Honda philosophy in action"—combining engineering excellence with concern for social needs. Honda started its work with dealers and suppliers some weeks ago and plans to spend about $1 million in advertising this first year for a radio ad campaign in its six or seven major markets.

Goodyear — whose president Robert E. Mercer attended the White House ceermony—will use its three blimps and night signs during the summer to urge the public to "buckle up."

George Lyles, NADA president, plans a major program to be promoted actively by dealer members across the nation.

Other groups planning support programs include the American Seat Belt Council, the American Assn. of Motor Vehicle Administrators, and a long list of government, educational and consumer organizations.

The national drunk driving program was developed by Peck and Lewis after many Congressmen urged Presidential action. It plans public forums, meetings with state and local officials, gathering citizens' interest to support drunk-driving arrests and the use of sanctions.

The Princess as Ambassador

BL's domestic-market-only Ambassador is a development of the Princess two-box sedan. The latest model features a full hatchback, revised suspension and a realignment of trim and model designations. The company's target is 2 percent (29,000 cars) of the market segment.

But current bill will have to bc modified, he says

Dingell: Local content has a chance

By Marjorie Sorge
Labor Editor

DETROIT. — There may have to be some concessions in the local-content bill, currently in committee in the House of Representatives, if it is to win Congressional approval, according to Rep. John D. Dingell, Michigan Democrat.

Dingell told UAW Local 22 here that a local-content bill has a good chance of becoming law although "we may have to push it down the throats of those in the White House who don't want it."

And, he admitted, there may have to be some concessions to get the bill through. The bill will also face a test in the Senate where there is very little support for local-content legislation.

The current bill requires auto makers with annual sales over 100,000 vehicles in the U. S. to have at least 25 percent local content by 1985. It is then graduated by volume with manufacturers selling 500,000 vehicles in the U. S. annually required to have at least 90 percent U. S.-made parts by 1985.

Dingell told about 65 union members attending the meeting he is now a co-sponsor of the bill and will actively endorse domestic-content legislation. He said he has not previously endorsed the bill because he has been working on two trade proposals of his own and on revising the Clean Air Act.

• While the local-content bill is still in the hearing stage, Dingell indicated that H.R. 5252, a revision of the Clean Air Act, could be out of committee by the first week in May.

The auto companies have indicated that the proposed changes in that law could save up to $300 a car. According to Dingell, both General Motors and Volkswagen of America have promised to pass along that saving to the consumer. Ford Motor Co. has said it will be competitive.

A year ago, GM said revisions in the Clean Air Act could save between $160 and $300 per car, but a company spokesman said although those figures were good a year ago, as time progresses it reduces the amount prices can be lowered because the company becomes tied into specific programs.

In addition to easing CO and NOx standards for vehicles, that bill also modifies the sanctions put on states not in compliance with the Clean Air Act by the end of 1982 and extends the deadline to 1987. Under the current law, states not in compliance with the Act could lose highway, water pollution and sewage treatment funds from the federal government, Dingell said.

Already the EPA is considering cutting off millions of dollars in such aid, he said, indicating that Detroit was one of the major cities listed for noncompliance.

The UAW has endorsed H.R. 5252 and has said it will provide more jobs while maintaining and improving air quality levels.

H.R. 5252 also modifies the inspection and maintenance (I/M) program to apply to more seriously polluted areas, rather than mandating I/M for nearly all areas that have not met ambient air standards as is currently required, he said.

According to Dingell, it appears Michigan may be required to put an I/M into place and that could cost $500 million.

Transport fit for a Pope

Artists' impressions of the two vehicles which will transport Pope John Paul II on his visit to the UK this year feature the work of Ogle Design, based on BL products. One is on the chassis of a Range Rover (above) and the other on the Leyland T45 Constructor. Already they have been dubbed, colloquially, "Popemobiles."

Checker to continue as a major supplier

By Marjorie Sorge
Labor Editor

Checker Motor Co. may stop building taxicabs in July, but it will continue to be a major supplier to the auto industry, company officials said.

In a letter to its Allied Industrial Workers Union employes, Checker said it will "phase out the taxicab manufacturing operation" and has no plans for future manufacturing in Kalamazoo, where the cabs have been built since 1922.

But Marcia Schill, Checker's director of communication, said the supplier end of the business is lucrative. She indicated it will keep the company a strong concern even if the manufacturing operation is phased out.

While Checker lost $448,000 in 1981, the taxicab manufacturing plant lost $300 million, according to Schill. In 1980 the company made a $2.45 million profit.

To try to reduce the cost of the manufacturing operation, Checker asked its union employes to make concessions earlier this year and told them without the concessions the future of the Kalamazoo plant might be in jeopardy.

However, Local 682 of the Allied Industrial Workers of America refused to consider renegotiating the contract, which expires May, 1983.

In the letter sent to its 800 union workers in late March, Checker said "if the union and its membership are not willing to work with the company as

Luxury VW Vanagon debuts

Volkswagen of America has brought out a new luxury GL version of its Vanagon, both gasoline and diesel. The GL has velour upholstery, padded fold-down armrests for all seven seats, cut-out head restraints, map pockets, additional sound insulation and extra reading lights for rear passengers. Vanagon GL is rated at 29 MPG city/highway with a diesel engine, making it the most economical van sold in the U. S., according to VWoA. Price has not been announced.

In new study by NHTSA

Safety cost put at $370 per car

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Preliminary results from a new NHTSA study of costs of auto safety regulations estimate that the cost averages about $370 in 1981 dollars, or 4 percent of the price of a 1982 car.

Recently, the cost of safety standards has accounted for less than 2 percent of all new-car price increases, according to NHTSA.

NHTSA's Office of Plans and Programs used several factors to assess direct costs—variable costs, capital costs, R&D costs, engineering and launch costs, compliance testing costs and administrative costs — as well as secondary effects such as lost production and higher fuel usage.

The additional weight, for instance, meant increases of about 20 gallons per vehicle per year, costing the average consumer about $210 during a vehicle's 10-year lifetime.

But NHTSA said that insurance premium savings for personal injury insurance coverage because of safety improvements could be $3 billion annually, or $25 per car.

But if all safety standards were repealed, consumers would not recoup the entire $370 since many features might be retained because of consumer demand or because they have been accepted as common industry practice. Without safety standards, average vehicle prices might decrease by only $80, according to NHTSA.

NHTSA also figures that between 1966 and 1981, safety standards have saved over 83,000 lives and have prevented hundreds of thousands of serious injuries. As new cars replace older ones, NHTSA estimates that more than 10,000 lives per year are being saved.

• NHTSA noted that General Motors Chairman Roger B. Smith recently estimated that $425 of the average car's cost as due to safety standards. In 1977, the Center for the Study of American Business at Washington University in St. Louis said it was about $422 (in current 1981 dollars, this would be about $633).

The basis for much of this different data is the Bureau of Labor Statistics, and NHTSA explained at some length its different method. This includes:

1. Differentiation between a one-time cost and continuous costs. For example, seat-belt-interlock costs are still being used for some vehicles by BLS.

2. Separating first-year costs from costs of the same feature in future model years. Bumpers, for example, were expensive and heavy when "hung on" at the beginning, but became much lighter and cheaper when plastic was used for designed-in features.

3. Making sure the estimated price change was made on a representative vehicle. For example, costs are generally higher for large cars. Consumer preference recently has changed to smaller cars, but the BLS average may include too many large cars.

4. Realizing that the auto industry does not use strict cost-based pricing, that is, more cost may be recovered from vehicles that are not as price sensitive (luxury or specialty cars).

5. Knowing that some features will be retained regardless of standards (better brakes, for example).

Since BLS data is the best that is available, NHTSA uses it but makes adjustments. This includes adding two features — steering control impact protection and seat-back locks—which BLS apparently had forgotten.

• During the period when safety standards cost about 2 percent of the new-car price hike, emission controls cost about 14 percent of that total and the rest came from higher manufacturing costs affected strongly by inflation.

For example, between 1974 and 1980, prices for cold-rolled carbon steel sheet rose 77 percent; aluminum sheet prices rose 82 percent and industrial electric power rose more than 200 percent.

Between 1974 and 1979, average hourly earnings in the industry rose by 55 percent but productivity rose by only 17 percent. And the large investments for downsizing put extra pressure on car prices.

NHTSA's preliminary document is open for comment and NHTSA is especially interested in certain areas:

Does the size of the company make a difference in the regulatory burden? How does the mandated safety R&D spending compare with voluntary spending? Are there recurring capital spending costs for standards? How does the learning curve reduce costs?

Also, what is the effect of small price increases on sales? It there any cumulative effect on sales of higher car prices for safety requirements? Are regulatory costs higher for domestics than for imports? What is the nature and extent of administrative burden from safety standards? What is the effect of compliance testing costs?

And, further, do safety standards have any effect on employment? Have safety standards inhibited production efficiency or delayed design improvements? What is the extent of insurance cost reductions?

Early April tally dips 17.65 pct.

New-car sales slump continues

By Jenny L. King
Staff Writer

Early-month domestic new-car sales were no April Fool: They were a real disappointment, down 17.65 percent from the already depressed level of a year earlier and third lowest so far this calendar year. Many rebates had terminated at the end of March, and the party was over.

The five major U. S. auto makers retailed 133,402 new passenger cars April 1-10. With nine selling days, they averaged just 14,822 per day. This compared with sales of 162,001 in 1981 and a rate of 18,000 per selling day.

Year-to-date sales totaled 1,534,092, down 19.04 percent from 1,894,793 the preceding year.

It was the lowest early-April report since 1961 when 128,865 units were sold. Best for the period was 241,974 in 1973.

Chrysler Corp. was the only domestic maker to report improved sales. The corporation's 2.00-percent increase, pitted against losses at General Motors and Ford Motor Co. of 19.07 percent and 20.70 percent respectively, pushed Chrysler to a record market penetration for the year. Chrysler landed at 15.63 percent, up from 12.62 percent in 1981.

DOMESTIC SALES

	April 1-10, 1982	April 1-10, 1981

GENERAL MTRS.	76,093	94,023
VOLKSKAGEN	2,343	3,913
INDUSTRY TOTAL	133,402	162,001

†—Estimate.

Chrysler sales totaled 20,852, up a few hundred units from 20,444 last year. GM dropped 19.07 percent to 76,093 from 94,023. Ford was down 20.70 percent to 32,214 from 40,621. Volkswagen of America Rabbit sales numbered 2,343, down 40.12 percent from 3,913, and estimated sales of American Motors passenger cars were 1,900, down 36.67 percent from 3,000.

GM's share of the early-April market was 57.04 percent, down from 58.04 percent in 1981. Ford earned 24.15 percent, down from 25.07 percent. Chrysler soared to 15.63 percent from 12.62 percent. VWoA cornered 1.76 percent, down from 2.42 percent, and AMC had an estimated 1.42 percent, down from 1.85 percent.

Chrysler and Lincoln were the only makes to move ahead of year-ago sales platforms. Chrysler zoomed up 80.54 percent, to 5,010 from 2,775. Lincoln sales were up a healthy 47.92 percent, to 1,917 from 1,296.

At GM, Chevrolet was down 30.37 percent, Cadillac was down 15.89 percent, Buick was down 14.67 percent, Pontiac was down 14.06 percent and Oldsmobile was down 9.43 percent.

Plymouth dropped 11.83 percent, Dodge was down 7.95 percent and Imperial was down 51.53 percent.

Ford was off 22.28 percent and Mercury was down 25.00 percent.

GSA reduces lease rates for federal agencies' fleets

WASHINGTON. — Vehicle lease rates for federal agencies have been reduced by the General Services Administration, the government's purchasing agent.

This is the first instance of passing along cost savings, and GSA hopes to have additional reductions before the end of the current fiscal year on Sept. 30.

The across-the-board rollback is $6 per month for each of some 90,000 leased vehicles. The monthly charge for a subcompact sedan, for instance, will drop from $117 to $111. The savings for the Defense Department will total nearly $1 million less over the rest of this fiscal year.

The GSA attributed its savings to streamlined procurement enabling it to buy vehicles when market conditions are best, eliminating unneeded government requirements, replacing vehicles leased from commercial firms with government-owned ones and using capital saved because of low bid prices on other vehicles.

Other factors are reallocating owned vehicles from other uses, reallocating funds for improving facilities to vehicle procurement and extending leases for lease vehicles still in inventory for an extra 9 to 12 months thereby delaying the need for new leases at higher costs.

The $4 million rate reduction —making the government rates lower than most commercial ones—comes mostly from GSA's decision to extend a cost-favorable lease for 1979 vehicles and to replace 1,500 leased 1978 models with government-owned vehicles.

Some of the replacement vehicles were bought at prices as much as 30 percent below dealer cost.

GMAC appoints 2

DETROIT. — General Motors Acceptance Corp. has appointed two regional finance managers. They are Robert B. Zane, Dallas, and James D. Nelson, San Francisco.

Fraser to quit Chrysler board when he retires

DETROIT. — UAW President Douglas A. Fraser will step down as a member of the Chrysler board of directors when he retires as president of the union next year.

According to the Detroit News, Fraser said he is there as a "representative of the workers" and remaining on the board would "dilute" his reason for becoming a Chrysler director. However, he said there would continue to be a union representative on the board.

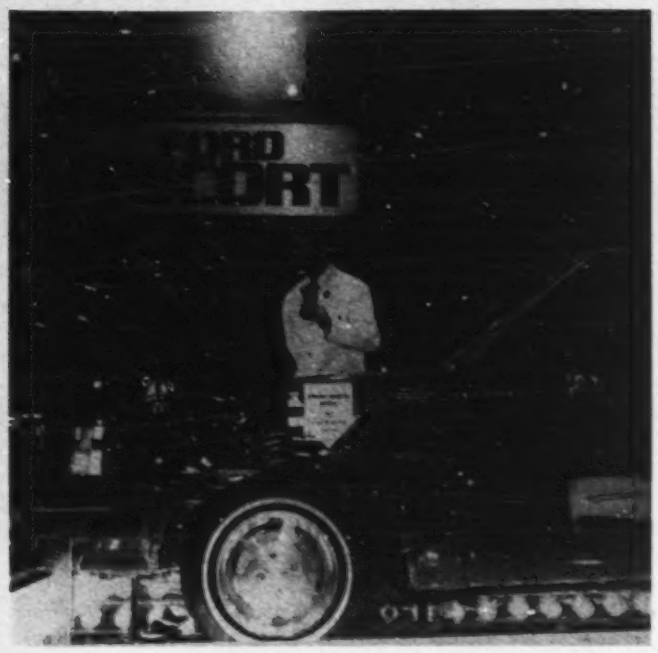
Fraser retires from his post as president of the UAW at the union's Constitutional Convention next May in Dallas.

Buy American

Lyn Nofziger, of the consulting firm of Nofziger & Bragg and adviser to President Reagan, places a Build America, Buy American bumper sticker on his new 1982 Lincoln Continental, purchased from Cherner Lincoln-Mercury, Vienna, Va. Nofziger's office is campaigning to encourage consumers to examine the costs of foreign purchases in terms of American unemployment and revenue losses.

Aluminum plant slated

ROXBORO, N. C. — Saramar Aluminum Co., Warren, O., which manufactures aluminum parts for automotive engines and railroad cars, is planning to build a new manufacturing plant on a 10-acre site here.



Inside the world car

Visitors to the World's Fair in Knoxville, Tenn., will get an inside view of technology incorporated in the Ford Escort four-door hatchback with this cutaway version of the world car. The World's Fair will run May 1-Oct. 31.

Cars and trucks of the future to be highlighted

Ford plans World's Fair display

DETROIT. — Cars and trucks of the future as well as current models will be featured attractions in Ford Division's exhibit at the 1982 World's Fair in Knoxville, Tenn., May 1-October 31.

Ford has been designated the official car of the 184-day international exposition located on a 70-acre site in the center of Knoxville — gateway to the Great Smokey Mountains.

It is the first World's Fair in the U. S. since 1974, and the first sanctioned by the Bureau of International Expositions in this decade for the U. S.

"Energy Turns the World" is the theme of the Fair and the Ford Division exhibit in the Technology and Lifestyle Center. The Ford display covers 2,600 square feet and will be open from 10 a.m. to 10 p.m. every day.

Displayed are the 1982 Escort four-door hatchback; the Ranger compact pickup truck; the new propane-powered Granada, and the Alternative Fuel Vehicle — a Ford concept car of the future capable of operating on natural gas or methane.

Also on display in the Ford Division exhibit is a one-third scale model of the INTELSAT V Communications Satellite — the largest communications satellite in existence — produced by Ford Aerospace & Communications Corp.

The vehicles in the exhibit are the "first signs of a new era for Ford and the domestic auto industry," said Louis E. Lataif, Ford Division general manager.

"They are prime examples of the high technology, quality, excitement and value for the money inherent in all Ford Division products, signifying a bright future for Ford as we move through the 1980s."

• The Alternative Fuel Vehicle (AFV) will lead a caravan of Ford vehicles making a seven-day, 1,500-mile journey from Dearborn to Knoxville. The caravan will leave Dearborn April 19.

The AFV runs on natural gas and, Ford says, it can be refueled at home with a special compressor unit.

Other vehicles in the caravan are a Ford Escort that runs on methanol (wood alcohol), a Mercury LN7 fuel by ethanol (grain alcohol) and a 1982 Ford Granada powered by propane (liquid petroleum gas).

En route to the Fair, the caravan will stop in Toledo, (4-19); Columbus, O., (4-19); Cincinnati, (4-20); Lexington, Ky., (4-21); Frankfort, Ky., (4-21); Louisville, (4-21); Nashville, (4-22; Memphis, (4-23); Chattanooga, Tenn., (4-23); Birmingham, (4-23), and Atlanta, (4-24), arriving in Knoxville on April 26.

Purpose of the caravan, according to Thomas J. Feaheny, vice president - Vehicle Research for Ford, is to help promote the Fair at which Ford is a major exhibitor, and to increase awareness of alternative fuels as a means of relieving the nation's dependence on foreign oil.

Propane-powered cars are being sold to fleet operators in Canada and the U. S., and will be offered to the public in the fall of 1982. The company estimates that first-year sales volume will be approximately 4,000 units, and that it could grow to 10,000 by the end of the second.

These are the first factory-engineered propane vehicles offered by a North American vehicle manufacturer. Ford has sold more than 40,000 ethanol-fueled cars in Brazil and is working with the State of California and Los Angeles County on a fleet of 40 Escorts that operate on methanol.

North American car sales plunge 29 pct. in Canada

Sales in Canada of North American-built passenger cars plunged 29.51 percent in February compared with the preceding year, and truck sales by the four major makers dropped 25.84 percent.

New-car sales totaled 35,244 this year compared with 49,998 in February of 1981. January sales were even more calamitous, off 44.20 percent. The year-to-date number was 60,820, down 36.53 percent from 95,830 for the first two months of 1981.

The smallest auto maker, Volvo, was the only one of the five major producers to report a sales increase for the month. And that was a modest one: Volvo was up 5.60 percent, to 641 from 607 units a year ago.

General Motors dropped 32.34 percent, to 18,365 from 27,994 last year. Ford of Canada reported sales of 7,766 new cars, down 26.82 percent from 10,612. Chrysler sales dropped 19.82 percent, to 6,881 from 8,582, and American Motors sales (which include Renault) stood at 1,591, down 27.78 percent from 2,203.

GM earned 52.11 percent of the February domestic market, down from 55.99 percent in 1981. Ford sales accounted for 22.04 percent, up from 21.22 percent. Chrysler cornered 19.52 percent, up from 17.17 percent. AMC earned 4.51 percent, up from 4.41 percent, and Volvo had 1.82 percent, up from 1.21 percent.

Truck sales by the four major companies totaled 13,647 in February, down 25.84 percent from 18,401 a year earlier. The sales figures include captive imports at Chrysler and Ford.

GM retailed 7,147 new trucks during the month, down 21.06 percent from 9,054 in 1981. Ford dropped 35.77 percent, to 4,244 from 6,608. Chrysler sales of 1,923 units were down 19.94 percent from 2,402. AMC Jeep sales totaled 333, down 1.19 percent from 337.

GM sales accounted for 52.37 percent of the domestic market, up from 49.21 percent a year earlier. Ford slipped back to 31.10 percent from 35.91 percent. Chrysler had 14.09 percent of the total, up from 13.05 percent, and AMC stood at 2.44 percent, up from 1.83 percent.

Truck sales for the first two months numbered 24,222, down 33.05 percent from 36,178 in 1981.

Aranyos is named to Legion of Honor

DETROIT. — Alexander S. Aranyos, chairman of Fruehauf International, Ltd., and a director of Fruehauf Corp., has been named a Knight of the National Order of the Legion of Honor by the president of the French Republic, Francois Mitterrand.

The honor was bestowed upon Aranyos for his contributions to the development of economic relations between France and the United States, and for his leadership in industrial development in France.

20 luxurious years

Jack Ingram, left, receives a plaque from Jere Garde, Mercedes-Benz of North America zone manager, marking Ingram's 20 years as a dealer at Jack Ingram Motors, Montgomery, Ala. The firm claims to be the oldest M-B dealership in the Southeast.

January total is 509,189; imports take 31 pct.

Registrations sink to 20-year low

By Jenny L. King
Staff Writer

New-car registrations in January were the lowest for the month since 1962. Domestics were down compared with both December, 1981, and with the preceding January, while imports bit off a record 31.21 percent of the total, according to figures compiled by R. L. Polk & Co.

Domestic registrations of 350,295 were down 18.01 percent from 427,238 in December of 1981 and were 24.22 percent below the 462,246 recorded in January a year earlier.

Import registrations of 158,894 were down 8.81 percent from 174,242 the preceding January, but they represented 31.21 percent of the market, up substantially from 27.38 percent in 1981.

Total registrations in January were 509,189, down 16.73 percent from 611,520 in December and down 20.00 percent from 636,488 in January a year ago. Back in 1962, the January total was 506,155.

The imports were the only segment to improve their market share in January. General Motors was down 0.70 percentage points to 43.44 percent from

Table on Page 55.

44.14 percent last year. Ford Motor Co. dropped to 15.38 percent from 17.55 percent.

Chrysler Corp. was pushed back to 8.36 percent from 9.10 percent. AMC earned 1.58 percent, down from 1.80 percent, and miscellaneous domestics were stable at 0.03 percent of total market.

• Excluding imports, domestic-only new-car registration shares in January were: GM, 63.15 percent; Ford, 22.36 percent; Chrysler, 12.15 percent; AMC, 2.29 percent, and miscellaneous domestics, 0.05 percent.

A year earlier, domestic-only registration shares were: GM, 60.78 percent; Ford, 24.17 percent; Chrysler, 12.52 percent; AMC, 2.49 percent, and miscellaneous domestics, 0.04 percent.

By market segments, imports were up almost four percentage points this year. Luxury models edged up and intermediates rose slightly. Compacts nosedived, and subcompacts and standards also were down.

Imports accounted for 31.21 percent of the month's total, up from 27.38 percent. Intermediates were 20.67 percent, up from 20.01 percent, and luxury models grew to 5.90 percent from 4.71 percent.

U. S. compacts dropped to 17.52 percent from 21.10 percent, subcompacts dipped to 14.39 percent from 15.11 percent and standards stood at 10.31 percent compared with 11.69 percent in 1981.

He cites 'enormous opportunities'

Benton describes auto revolution

BOULDER, Colo. — The auto industry is being altered from top to bottom by an industrial revolution, a Ford Motor Co. executive said here.

William P. Benton, Ford vice president - Marketing, made his remarks at the University of Colorado Business School.

He said the revolution now sweeping the auto industry is "creating enormous business opportunities" and Ford will use its new marketing strategy to win "a substantial share of that business."

The revolution, he said, has many dimensions, but he emphasized four which he said bear directly on Ford's marketing strategy.

The first major dimension of this revolution is the shift from a U. S.-based industry to a truly multinational business.

"In 1950, the United States accounted for three-fourths of the world's car and truck production," Benton said. "By 1980, U. S. vehicles accounted for only 20 percent of the world's car and truck volume.

"The basic reason for this shift, of course, is the emergence of Europe and Japan as major producers to satisfy booming demand for automotive products in their home markets and abroad."

• Benton said that Europe produced 1.5 million units in 1950, compared with about 13 million in 1980. Japan, which produced only 32,000 cars and trucks in 1950, accounted for 28 percent of world production in 1980 with a total of 11 million units, he said.

In Latin America, he said, cars were a luxury for the very rich in the post-World War II period. But, as the economies of these countries progressed, the purchasing power of an expanding middle class increased, and cars came within reach of a broader cross-section of the population.

"Naturally," Benton said, "worldwide producers took advantage of this growth. The U. S. became a large importer of these products."

A second major aspect of the revolution, he said, is a sharp reduction in the number of manufacturers competing for the world market. In the 1960s, there were over 110 car manufacturers worldwide; today there are about 30, he said.

"As world markets grew, the stronger manufacturers sought through expansion or merger to lower design and production costs, to build volume, and to increase exports," he said.

"For example, Willys, Nash and Hudson became American Motors; and Studebaker disappeared. In Europe, VW merged with Audi and Porsche; Chrysler and Citroen sold out to Peugeot, and British Leyland took over a number of British companies.

"Elsewhere," Benton said, "Ford, General Motors and Chrysler acquired minority interests in Toyo Kogyo, Isuzu and Mitsubishi in Japan. AMC's largest stockholder is now Renault of France, which has a 46 percent interest that could be expanded to 56 percent."

It is almost certain that global competition will shrink the number of independent producers to, perhaps, a dozen or fewer within the next 10 years, Benton said.

Another dimension of the auto revolution is the tremendous increase in the complexity of doing business in the worldwide auto industry, he said.

"Vehicle manufacturers have had to learn how to contend with trade protectionism, industrial development programs in emerging markets, government safety and emission regulations, and foreign exchange controls and movements," Benton said.

"Also, there are external factors beyond the control of the automotive manufacturers, such as the oil embargo in 1973, OPEC oil price-fixing and the Iranian revolt, all of which have had a great impact on the fortunes and the opportunities for auto companies.

"We have to contend with trade protectionism, in some form in almost every world market, outside of the U. S. Many countries require cars and trucks to have substantial local content — Australia, Argentina, Brazil and Spain, for example."

Some countries, or trade blocs, discourage outside imports by creating a complex series of special equipment or safety standards, or by creating restrictive trade barriers, Benton said.

"The U. S., on the other hand, is one of the few free-trade markets in the world — and by far the largest. That is a major reason why over 40 percent of Japan's vehicle exports are to this country — over two million cars and trucks in 1981 alone," he said.

"Japan, however, puts very difficult barriers in the way of importing cars and other American products.

"For example, in the U. S. once a product line has been certified, it can be imported by the millions. But in Japan, each car must be inspected and certified individually to ensure that it meets all of Japan's stringent emissions and other requirements."

• Benton said the most important change is the revolution in products.

Benton said Ford's worldwide marketing strategy is a response to the automotive industrial revolution.

"American cars in the 1950s, '60s and early '70s were considered 'Dreamboats,' and until recently they were known as 'Gas Guzzlers,'" he said. "Consumers of today demand small, fuel-efficient cars and trucks, and they are placing increasing emphasis on quality, high technology and overall value for money."

3 branch managers appointed by MIC

DETROIT. — Three control branch managers have been appointed by Motors Insurance Corp., a subsidiary of General Motors Acceptance Corp.

They are Alfred D. Minnis, New York, succeeding Robert D. Donahue who is on disability leave; Melvin F. Melick, Houston, succeeding Minnis, and Louis S. Carrio, Dallas, succeeding Melick. Carrio had been at MIC headquarters in Detroit.

Datsun tops Japanese auto sales in Europe

By Richard Feast
European Editor

Datsun importers in the United Kingdom are by far the most successful Japanese auto retailers in Europe, according to previously unpublished statistics acquired by AUTOMOTIVE NEWS from industry sources.

They indicate Nissan's role as No. 1 Japanese retailer in Western Europe — 216,083 cars out of a total of 917,881 shipped to the continent from Japan in 1981.

Datsun shipments to the UK were 76,380. Next largest volumes were to the West German market, to which Nissan exported 43,628 units, Mitsubishi 53,648, Toyo Kogyo 49,500 and Toyota 40,904.

Toyota's showing is untypical of Japan's leading auto maker. It placed third behind Nissan and Toyo Kogyo, and it shipped more units than its Japanese rivals to only one major country—Belgium.

Toyo Kogyo (Mazda) total shipments of 183,026 units are characterized by a reasonably strong presence in each of the major national markets.

Toyota's total of 166,527 is followed by Mitsubishi's 138,902 and Honda's 129,456. Between them, Daihatsu, Fuji (Subaru) and Suzuki shipments were less than 84,000. Isuzu has no presence in Europe.

To some extent the picture is distorted by restrictions placed on Japan's auto makers by European interests. Growth in West Germany, Belgium and Holland is restricted. France has a strict 3 percent import limit—although there is nothing in writing. The Italian market is in effect closed to the Japanese.

The UK has a gentleman's agreement between the British SMMT and its Japanese counterpart, JAMA. In effect for several years, it freezes Japanese market shares at levels when they came into existence.

• Separate statistics from JAMA indicate that on a worldwide basis North America, Europe, the Middle East, and Central and North America all lost volume as Japanese vehicle export destinations last year.

Southeast Asia, Oceania and Africa grew in importance, giving Japan another growth year overall for exports, which were up 1.4 percent to just over 6 million.

On a national basis the U. S. remained the No. 1 market for Japanese shipments with more than 2.3 million vehicles exported, a 4.3 percent decline from 1980.

West Germany (275,000) and Australia (267,000) each moved up a place to second and third, respectively, while Saudi Arabia (252,000) dropped to fourth. Canada moved up a place to fifth with 246,000.

Among the big gainers were Nigeria (up 10 places to No. 8 with 151,000 units), Chile (12th with 110,000) and Libya (17th with an almost three-fold expansion to nearly 70,000 units).

Japan's auto makers indicate their total vehicle output will rise by 4.6 percent this year to 11.69 million units. Most of the increase will be absorbed by the domestic market, say the makers, where sales are expected to rise by 9.6 percent to 5.58 million.

That leaves 6.11 million Japanese vehicles competing for overseas markets, an increase of 1.1 percent over last year.

Where Japan's vehicle shipments went

Area	1981	1980
North America	2,551,283	2,592,577
Europe	1,188,696	1,226,954

The Hyundai Pony is a key part of the South Korean company's European market expansion plans.

Pony's no horselaugh

By Richard Feast
European Editor

Europe's auto makers are sniffy about prospects for South Korea's Hyundai sedans, just launched in the UK after preliminary trials in Belgium and Holland. It is reminiscent of the attitude reserved for the Japanese in the 1960s.

There is no significant threat from Hyundai now or in the next few years. But after the Japanese experience, Western auto makers can't afford to be caught again with their noses in the air.

Hyundai Corp.'s latest annual report makes clear its ambitions for Hyundai Motor Co., producer of cars, trucks and buses.

"By 1985 Hyundai vehicles of all types will come off the assembly line at the rate of one million each year, a large proportion of which will head straight for markets in Europe, U.S.A., South America, Asia, the Middle East and Africa," it states.

That should send would-be importers in the U. S. scurrying off to Seoul.

At present Hyundai is in no position to export large numbers. It has production capacity of around 100,000, 70 percent of which remain in the domestic market.

However, according to the man who has just introduced the Hyundai Pony to the UK market, that will change in the second half of this decade.

Says Robert N. Edmiston, chairman and managing director of International Motors, Birmingham, England: "Hyundai's plan is that in late 1984 it will expand capacity to 400,000 a year. At that stage it will have to go to the U.S. market. Anybody with a 70,000 domestic market can't ignore the states."

Edmiston's plans for the UK include around 10,000 units a year by mid-decade. The four-door and three-door Pony sedans went on sale in February.

"We ordered 3,000 cars without having sold one. That's a $12 million commitment," he says. This year International Motors expects to sell 3,500 cars, and about twice that number next year.

The cars are not really competing with Japanese products which, with import restrictions, are moving up-scale. At prices ranging from $5,700 to $7,700, Ponys compete with imports from Eastern Europe, some Fiat and Citroen cheapies and other base-line models from major European makers.

The Hyundai is a medium-size, well-equipped sedan. It uses a 1.2-liter or 1.4-liter, four-cylinder engine mounted at the front and driving the rear wheels. Engines and transmissions are Mitsubishi designs manufactured in Korea.

The Pony is no spring colt. Designed by Giugiaro, it made its public debut at the 1974 Turin auto show.

It will get a face-lift next year, but the next generation model will wait until the opening of a new factory in 1984 or 1985.

Having forged the links with Giugiaro and Mitsubishi, Hyundai is expected to continue those associations.

International Motors arose from the ashes of the Jensen collapse in 1975. It is owned by Edmiston and one of U. S. businessman Kjell Qvale's companies. In addition to the Hyundai franchise it sells Subarus and Maseratis.

In the restricted UK market International sold 5,374 Subarus last year.

Citroen mum

Continued from Page 11

panies and the Japanese, have been doing for years."

But just who is No. 1 designer at Citroen remains unclear. Most of the unofficial news leaking from Citroen and PSA is that it is Olsen, a 46-year-old U. S. citizen.

He is a product of the Pratt Institute in New York, and worked for General Motors, Count Sigvard Bernadotte in Copenhagen and Stockholm, and twice for Ogle, whose Leyland T45 truck design won a Truck of the Year award.

Olsen was a tutor at London's Royal College of Design for 10 years. "It's a better place than the Art Center in California," he says.

Of his approach by Citroen, Olsen comments, "It's a great company, and I'm obviously flattered. I've always loved Citroens, and owned them. Maybe if it had been another company, I would not have been interested."

Fiore joined Citroen in September 1979 as head of styling. He reflects, "With PSA integrating its organizations, what I have been doing is 20 percent new product development and 80 percent administration."

Fiore adds, "It's politically untimely for me to talk about the changes, but I have to defend myself against rumors that I've been pushed out to finish my contract. I have to defend my 25-year reputation as a designer in the European industry."

Fiore likes his move from Paris to the south of France.

What is believed to be involved in the reluctance to make an official announcement is the delicacy of integrating Citroen styling within the Peugeot SA styling department, headed by former Chrysler Europe executive Art Blakeslee.

Blakeslee's headquarters are at Whitley, England, where he is understood to have overall control of PSA styling and special responsibility for Talbot Division. The Peugeot and Talbot arms are slowly but surely being interlocked, but Citroen's independence was strengthened last year by its relatively improved production and sales performance.

Last year Citroen production declined by only 0.5 percent to 534,000, while Peugeot dropped 6.2 percent to 569,000. The Peugeot advance was only 35,000 units; a year before it was twice that.

Moreover, Citroen overtook Peugeot in registrations in the vital domestic market. Citroen fell by 3.9 percent to 260,286, while Peugeot sank down 12.7 percent to 256,287.

In addition, Citroen sales will receive a major boost next September when it launches its XB.

West Germany rides out recession

By Richard Feast
European Editor

West Germany's vehicle industry has come through the recession so far without serious injury, says Horst Backsmann, president of the *Verband der Automobilindustrie* (VDA).

This is despite the country's highest unemployment — 1.7 million — and number of company bankruptcies in 30 years.

"The industry has succeeded in holding its own in the general recession and, above all, in international competition. Otherwise, the unemployment figures would certainly look even more dismal," notes Backsmann.

The 3,897,007 vehicles produced in West Germany in 1981 represent a marginal increase (18,500) over the previous year. But trends were divided. While car output rose by 1.6 percent to 3,577,807, commercial vehicle output decreased to 10.7 percent to 319,200.

Demand from abroad helped the recovery of car production, although deliveries leveled off towards the end of the year. They reached 1,949,535 — 4.1 percent more than the previous year—but below 1979.

While 1981 domestic registrations dropped 4 percent to 2.33 million, the country reduced its level of imports from 26.3 to 25.3 percent. It was, says the VDA, "half at the expense of the Europeans and half at the expense of the Japanese."

Registrations of diesel cars were up more than two-thirds over 1980, accounting for 14 percent of the market.

In the commercial vehicle industry, the segment for trucks up to six tons suffered the worst setback — by 22.8 percent to 144,540 units. "This sharp decline, which is still continuing, could not have been survived without placing employes on short time," reports the VDA.

The only truck production increases were in medium and heavy classes over 12 tons, solely attributable to sales in foreign markets.

The manufacturers' association says, "The domestic market for commercial vehicles was in a very poor state. The decline in sales of trucks was 17 percent, buses 18 percent and of semi-trailer tractors 24 percent.

"Trucks hardest hit by the sales decline were heavy vehicles — a result of greatly impaired building activity and a diminishing propensity to invest which, in view of high interest rates and low demand for transport services, also affected the freight transport business."

Although the Japanese were held in check in the car market, they made inroads with light-commercial vehicles. They sold 6,600 last year, increasing their share from one percent in 1979 to 2.5 percent in 1980 and four percent last year.

While employment in the industry increased slightly last year, profits went in the opposite direction. "They deteriorated progressively during the course of the year, and total profits before taxes were almost 60 percent below those of 1979," Backsmann says.

Product price increases have been necessary to avoid borrowing during periods of double-digit interest rates, and to maintain investments to stay competitive. Investments are projected at 8 to 10 billion deutschmarks annually ($3.4 to $4.2 billion) in coming years.

Backsmann lays particular emphasis on "exorbitant" price increases by European steel producers. The commercial vehicle and trailer industry, with their relatively high steel consumption, and high-grade-steel-processing component companies, have been particularly affected.

In the fourth quarter of 1981 list prices for all grades of rolled steel averaged 3?.8 percent higher than a year earlier. By the third quarter of this year they will be 56.2 percent higher than at the end of 1980.

Volvo starts getting it all together

By Richard Feast
European Editor

Volvo Car BV, of Holland, is well on the way to its 1982 sales target of 85,000 units. In the first nine weeks of the year it increased volume by 20 percent, or 2,500 cars, over the same period a year earlier.

According to Vice President Henk van Bussel, "Our primary objective is to obtain a market share of one percent in Western Europe, which amounts to about 100,000 cars."

Last year the company sold 78,500 340-series three- and five-door medium hatchbacks. "Of great significance, this represented an increase of 13 percent over 1980 in a total market that was reduced by 2.5 percent," declares van Bussel.

The company's shaky financial record in recent years led to restructuring of its finances a year ago. From being a majority shareholder, Volvo Car Corp.'s stake was reduced to 30 percent, and the Dutch state's interest raised to 70 percent.

Further losses are anticipated this year and the next two years, after which, in the words of president Andre Deleye, "costs and revenues would be in equilibrium."

However, the company is in danger of becoming too dependent on one market — the UK.

"We sell about three times as many cars there as in our No. 2 market, Sweden, and our No. 3 market, the Netherlands," notes van Bussel.

"We are running the risk of becoming too dependent upon a single market. That's why we are going to change this situation, by making Vikings and Dutchmen run a little faster.

"Our objective is to build up a strong home market for our product. We want to move up from 9,000 to 20,000 cars in the Netherlands within a few years."

Volvo Car registrations in the UK last year were 23,800 (for a market share of 1.6 percent) and 9,000 in Sweden (4.8 percent).

The company recently added a unique five-door van version of the 340 to the Dutch market.

Hints van Bussel: "We also have something up our sleeve for the general public next year, but do not want to disclose details yet."

This leads to speculation that the development is a replacement for 340, by today's standards a heavy, none too aerodynamic model. Volvo has developed the 340 about as far as it can, and the next move should be a replacement. Conjecture over its arrival time revolves around the company's lack of cash.

In an address to company employes about what he calls "Volvo Car BV New Style," Deleye boasts it is possible to match Japanese strengths.

"We often talk about the 'Japanese miracle' when we are faced with the not inconsiderable competitive force of the Japanese," he says. This refers to the great industrial strength the Japanese have managed to develop in the last few decades.

"It is too often assumed in the western industrial world that we cannot build up such strength, simply because our culture is totally different. This assumption is an implicit admission that we regard an unbridgeable gulf separating us from the Japanese industry as a normal matter.

"I, too, used to think this way, but after a number of visits to Japanese and American factories, I have changed my mind."

Spring debut for Jeep-Renault

Renault enters the European four-wheel-drive market this spring when it begins selling in France, Belgium and Luxembourg what will be known officially as the Jeep-Renault.

The model is American Motors' CJ7 Jeep, adapted to European needs by using 2-liter gasoline or diesel Renault engines and Renault gearboxes.

The company is cagey about numbers. "A few thousand," says Pierre Tiberghien, joint director general of the car division. Despite the volume, it will take Jeep into a new European league.

In the past four years, France's Jeep importer sold 173 CJ7 models. In the same period, 63 were sold in Belgium and Luxembourg.

In May the Jeep - Renault enters Renault's own dealer network that includes 500 main dealers in France and some 10,000 authorized service agents, and 187 main dealers and 305 service outlets in Belgium/Luxembourg.

In the past, Jeep sales have been handicapped by poor fuel consumption by European standards, limited dealer outlets and the upward trend of the dollar against the franc.

Renault now will at least be able to counter the mileage and service limitations. "The game is new," says Tiberghien.

Jeep-Renault will be positioned between the luxury Range Rover and utility Land Rover and Mercedes-Benz G-wagen. It will be like some of the Japanese offerings of Daihatsu and Suzuki, which sell in Belgium but not in the larger French market.

It seems likely Renault eventually will extend Jeep sales to other European markets over the long term, although it is noncommital. If it does, it is likely to find various Japanese four-wheel-drive makers are the main opposition.

Renault is aware of the difficulties facing a manufacturer moving into a new market. It watched the rather disappointing sales of the Mercedes-Benz G-wagen with keen interest.

A Renault executive observes, "Perhaps Mercedes-Benz were overenthused by the example of Range Rover, which has been a phenomenon. Most people buying a Range Rover very seldom use it off-road. They use it as a status automobile. Mercedes has a more utility approach.

"Jeep is different. It's neither the Mercedes nor the Range Rover. It has a good name and good tradition, so we are not starting from scratch."

The CR6 hits the London taxi market in 1984.

New London taxicab is on the way

Traditional London taxis — loved by customers, cursed by drivers — soon will be as scarce as they are at midnight when the last train has gone.

Carbodies, the Coventry, England, company which built 43,000 of the famous black cabs during the past 23 years, is working on a new next generation product.

Known as CR6, it is planned to replace the old FX4 starting in 1984. Like its predecessor, the CR6 uses many components from nationalized auto maker BL Ltd.

Unlike its predecessor, however, the CR6 is destined for export, including to North America.

Carbodies says, "The UK will continue its almost unrivaled position of using purpose-built taxies rather than standard or slightly modified motor cars.

"The nearest approach is probably that of Checker in the United States, who offer a fairly extensively modified motor car in taxi configuration."

FX4 was always regarded as a home-market vehicle, and only recently were left-hand-drive versions engineered. CR6 will be assembled for export six months after the start of production. It will be homologated for all EEC countries, says the company, adding that "hot climate and North American prototypes will be built shortly."

To keep costs down, CR6 will use engines, transmissions, suspension, electrical systems and some 30 percent of the body panels that already exist, largely on the Range Rover.

Carbodies is concentrating on driver comfort in the new model following complaints about inadequate heating, high noise levels and the "1950s feel" of the present machine.

The new vehicle, capable of accommodating invalid wheelchairs, has a welded box section frame with detachable metal body panels. Weight savings of 10 percent are achieved by use of aluminum rather than steel for 90 percent of the skin panels.

The base powertrain is BL's 2.25-liter diesel (62 HP), and manual five-speed transmission.

Proposed options include BL's 2-liter O-series gasoline engine or its 2.6-liter six-cylinder from Rover sedans. Other options include power steering and automatic transmission (Chrysler or Borg-Warner).

Ford's Deutz Cargo rolls in England

Production of the Ford Cargo powered by a Deutz air-cooled diesel has started at the company's truck plant in Langley, England. The V-6 engine is offered in 170 and 204-HP ratings. Deliveries of the truck to 11 countries began this month.

Aftermarket is target in Koni's U. S. program

By John Russell
Staff Correspondent

CULPEPER, Va. — A little known program for rebuilding truck and bus shock absorbers has been ongoing at Koni of America for over a year as part of an effort to increase its penetration in this area by appealing to the end user rather than the manufacturer.

Jan Zuijdijk, engineering director for the company, said 90 percent of the company's shock absorbers returned for service can be repaired at considerable savings to the customer considering the cost of a new set of Koni shocks for trucks and buses.

Koni is not a household word among truck and bus manufacturers in the U. S. although the company has attempted to make some inroads with OEMs. But Zuijdijk noted cost is a primary consideration at the manufacturer level and that his company's shock absorbers are not inexpensive.

In Europe, Koni is OE on certain models of Volvo, Scania, Mercedes and M.A.N. trucks. But in the U. S., he said, the concentration on shocks for trucks and buses is not as intense because legislation is different.

Yet, he noted, shock absorbers do make a difference in prolonging the life of the truck. Tire life can be extended, he said, cab structural integrity can be prolonged and steering damage prevented.

In approaching the aftermarket, the owner operator, this is part of the message the company delivers.

Jim Vance, sales engineer for Koni, said the shock-service program is an extension of the firm's existing passenger-car program and railroad-shock service.

Shocks are checked and if no repairs are needed, Vance said, they are adjusted and returned to the customer. The charge is $6 per shock absorber.

If repairs are needed, the company is prepared to recondition and replace the moving parts in the shock. Vance said it could cost approximately $40 for its 90 Series truck shock.

Bus companies, both men noted, appear to be taking advantage of the service on a more regular basis.

Zuijdijk added that M.A.N. and Koni now are working on an exchange program for the service of shocks, although details are still being developed and won't be available for about two months.

On an annual basis, he said, the company services about 200 truck and bus shocks per year. He expects this number to grow. But Zuijdijk admitted this hardly marks a penetration of the truck and bus market.

All-steel cover for Ford Ranger

Gem Top Mfg., Inc., Clackamas, Ore., is manufacturing a rust-proofed, fully insulated all-steel cover for the new Ford Ranger compact pickup. The Streamliner laps over the cab, providing a direct access between cab and cargo bed, the company said.

truck industry news

698,607 new trucks retailed

First-quarter sales rise 12.8 pct.

Franchised dealers and factory outlets retailed 698,607 new trucks in the U. S. in the first quarter of 1982, according to preliminary reports, an increase of 12.8 percent over the year-earlier 620,567 units.

It marked the first time since 1979 that January-March sales exceeded the previous year's total. In the first three months of 1979, retail sales for the period

Table on Page 58.

reached an alltime high of 965,096 in spite of a sharp decline in the March count.

Truck sales have been in a slump since the first quarter of 1979, with the downturn following the revolution in Iran, a drop in oil imports from the Middle East and a drastic increase in fuel prices in the U. S.

In the latest three-month period, light trucks were the only market segment to show an increase over a year ago. Mediums continue to dwindle at an alarming rate, while the heavies were off only slightly from last year.

Sales of light trucks, with strong support from the compact pickups, were 15.8 percent higher than last year in the first quarter. The total this year was 650,946 units, compared with 562,060 in 1981.

The compacts—both domestic and imports—accounted for 28.5 percent of the light truck total. Dealers sold 185,800 of these vehicles, up 44.6 percent from last year's 128,461 units. A year ago, the compacts — all imports except the Volkswagen pickup — accounted for 22.9 percent of the light-truck count.

Sales of mediums in the first quarter declined 52 percent from last year, plunging from 19,535 units in 1981 to only 9,374. Three-month sales of heavies were down 1.1 percent, from 38,079 vehicles a year ago to 37,666.

March sales were 22.4 percent higher than the same month a year ago, with light trucks the only segment to show an improvement. It was the third consecutive month in which sales topped those in the comparable year-earlier month.

During the month, dealers retailed 272,473 light trucks, an increase of 26.9 percent over last year's 214,766 units. The compacts accounted for 30.8 percent of the total. The small-pickup sales in March were 62.4 percent higher than last year, rising from 51,614 units in 1981 to 83,797.

Mediums were down 49.1 percent in March, falling from 7,191 units a year ago to 3,658. Heavies totaled 13,672 units during the month, a decline of 6.9 percent from last year's 14,693.

At the end of the first quar-

Carrier exchange will aid dealers, Rockwell claims

TROY, Mich.—A new carrier-exchange program to provide more sales flexibility for O.E.M. heavy-truck dealers has been announced by James F. Lambert, vice president of North American field sales and marketing for Rockwell International's Heavy Vehicles Components Operations.

He said the program, which covers five of the more popular Rockwell truck axles, will enable the dealer to match the axle ratio of a new truck in stock to the customer's specified requirements.

"This gives the dealer another sales tool which can help him cut down on possible lost sales because of an axle ratio that does not fit the needs of the customer," he explained.

"It also means the dealer can put the truck buyer on the road much faster because the waiting period involved in ordering and delivering a new vehicle with the correct axle ratio is eliminated."

Lambert said the dealer simply calls the Rockwell Service Parts Distribution Center in Florence, Ky., and requests the desired carrier with the axle ratio specified by the customer. The

Domestics fuel surge in sales of compacts

Retail sales of compact pickup trucks in the first three months of 1982 were almost 50 percent higher than a year ago, with the four new domestic versions providing the spark.

Through March, franchised dealers in the U. S. retailed 185,800 of the small trucks, an increase of 44.6 percent over last year's 128,461 units. Volkswagen was the only domestic compact on the market in the first quarter of 1981.

March sales of the compacts totaled 83,797 units, up 62.4 percent over the year-earlier 51,614. It also marked the first month in which the domestic pickups outsold those assembled in Japan.

During the month, 42,714 domestic compacts were retailed, accounting for 51 percent of the March total. The domestic nameplates include Chevrolet S-10, GMC S-15, Ford Ranger, Dodge Rampage, Jeep Scrambler and Volkswagen.

Sales of the Japanese-built compacts—Ford Courier, Chevrolet LUV, Plymouth Arrow, Dodge Ram 50, Toyota, Datsun, Mazda and Isuzu—totaled 41,083 units, off 14.4 percent from last year's 47,992.

In the first three months, dealers sold 101,285 of the imported compacts, a decline of 15.4 percent from the 119,706 retailed in the same period in 1981.

• First-quarter sales of the domestic compacts totaled 84,515 units, compared with only 8,755 a year ago—all of them Volkswagen pickups.

The imports' share of compact sales in the first three months dropped from 93.2 percent a year ago to 54.5 percent. The March share slipped to 49 percent, compared with 93 percent in the same month in 1981.

March sales of compacts by domestically franchised dealers —both domestic and imported makes—totaled 53,080 units, an increase of 18.6 percent over last year's 24,284.

The three-month count soared to 117,003 units, a gain of 91.7 percent over the year-ago 61,030.

Sales by non-captive dealers

Truck Dealer of Year gets award

Richard Scott, left, Business Week account manager, presents the award to James P. McNally, president, Archie Cochrane Motors, Inc. (Ford), Billings, Mont., the 1982 Truck Dealer of the Year. The award is presented annually by Business Week and NADA's American Truck Dealers Division.

698,607 new trucks retailed

First-quarter sales rise 12.8 pct.

Continued from Page 24

ter, there were 505,964 unsold new trucks of all types in retailers' hands, a decline of 13 percent from last year's 581,724 units. Light-truck stocks were down significantly from a year ago, while the supply of mediums and heavies was slightly higher.

Going into April, there were 447,612 light trucks in inventory, a decrease of 12.9 percent from last year's 513,727. Mediums were up 4.1 percent, from 23,490 last year to 12,174. There were 46,178 heavies on hand at the start of the month, 3.8 percent higher than the year-earlier 44,507 units.

The Motor Vehicle Manufacturers Assn. reported that domestic dealers and factory outlets retailed an estimated 248,720 new trucks in the U. S. in March, an increase of 31.8 percent over the previous year's 188,658 units.

The March count for domestic outlets was the highest for any month since October, 1979, when 281,213 units were retailed, according to the MVMA.

Through March, domestic retailers had sold 596,515 vehicles, an increase of 19.3 percent over the year-ago 499,968.

Big Three truck producers reported that their dealers and factory outlets sold 233,604 units during the month, up 38.6 percent over last year's 168,490. The three-month count was 24.6 percent higher, rising from 445,497 in 1981 to 555,169.

Chevrolet, No. 1 in both 1982 model-year and calendar-year truck sales, reported that March was its best month since May, 1979, and GMC said its sales during the month were the highest since August, 1979.

In March, Chevrolet dealers retailed 99,322 vehicles, a gain of 54 percent over the previous year's 64,501. The total included 3,146 Japanese-built LUV compacts, down two-thirds from last year's 9,595.

Through March, Chevrolet sales totaled 235,508 units, an increase of 35.5 percent over the year-earlier 173,869. LUV's three-month sales were down drastically, from 21,303 in 1981 to only 8,826.

During the month, dealers sold 25,046 of the new U. S.-built S-10 compact pickups, bringing the year's total to 54,046 units.

Ford dealers retailed 81,993 trucks during the month, up 14.9 percent from last year's 71,335. The imported Courier's total dropped from 7,234 a year ago to 2,584.

• First-quarter Ford sales were 6.5 percent higher than a year ago, rising from 180,077 to 191,839 units. Courier sales were down from 18,797 in 1981 to 10,411, March sales of the new Ranger compact pickup totaled 8,288 and the first-quarter count rose to 9,728 units.

Dodge and Plymouth dealers sold 24,409 light trucks in March, an increase of 40.5 percent over last year's 17,368. Sales of the imported Dodge Ram 50 compact were up from 2,895 units a year ago to 4,169. But the Plymouth Arrow total was down, from 938 a year ago to only 467 units.

Through March, the Dodge-Plymouth total was 37.9 percent higher than last year, from 47,825 units to 65,963. The Ram 50 count was up from 9,108 units to 11,268, while Arrow sales slipped from 3,067 in 1981 to 1,983 units.

Sales of the new Dodge Rampage compact in March totaled 2,172 units, bringing the first-quarter count to 4,457.

GMC dealers sold 27,880 trucks during the month, a gain of 82.4 percent over last year's 15,286. The three-month count was up 41.5 percent, from 43,726 units a year ago to 61,859.

Sales of the GMC S-15 compact pickup totaled 4,923 in March and the first-quarter count climbed to 9,939 units.

• Jeep dealers retailed 5,163 of the four-wheel-drive light trucks in March, up 12 percent over the year-ago 4,616. The first-quarter total also was 12 percent higher, from 12,748 units in 1981 to 14,323.

March sales of the Volkswagen compact pickup were down 55.9 percent, from 3,622 last year to 1,599. The three-month total of 4,020 units was off 54.1 percent from the year-ago 8,755.

Mercedes-Benz truck dealers retailed 247 medium and light-heavy vehicles during the month, down 22.6 percent from last year's 319. Through March, the total was 621, off 30.5 percent from the 893 units retailed in 1981.

In March, Toyota dealers sold 14,331 compact pickups, a gain of 21 percent over last year's 11,841. The three-month total was 33,239, up 3.9 percent over the year-earlier 32,001.

Datsun sales dropped 17.5 percent in March and were down 25 percent for the first quarter. During the month, 11,452 compacts were sold, compared with 13,885 a year ago. Through March, the count was 23,652, as against 31,941 last year.

Mazda dealers retailed 3,461 small pickups during the month, up 127 percent from the year-ago 1,525, and the three-month total was 139.1 percent higher, soaring from 3,400 units in 1981 to 8,130.

During the month, Isuzu dealers sold 1,473 compact pickups, compared with 79 a year ago. The three-month total was 3,776 units, as against 89 in the like period in 1981.

Carrier exchange will aid dealers, Rockwell claims

Continued from Page 24

carrier is immediately shipped F.O.B. to the dealer.

The dealer then replaces the existing carrier and returns it to Rockwell's Florence distribution center (freight prepaid) within 30 days. The only billing involved will occur either if the carrier is not returned within the specified time or if the carrier is not in satisfactory working condition, Lambert said.

The carrier exchange includes Rockwell's R-170 single rear axle and the SQHD, SQ-100, SQHP and SSHD tandem axles as installed in the major heavy-trucks manufactured in the U.S. and Canada.

Woody reaches 25

C. L. Woody Jr., right, dealer-operator, W & B Chevrolet Co., Inc., Bassett, Va., receives Chevrolet's 25-year dealer award plaque from R. L. Albinson, Richmond zone manager.

Police cruise in Eagle

Northampton (Mass.) police welcomed a new 1982 AMC Eagle to their fleet recently. The inspection committee includes, from left: Patrolman James R. Doolitle; Police Chief Henry A. Decker; Norman F. Cloutier, administrative aide to the selectmen, and Robert Cahillane, Cahillane Motors, Northampton, which delivered the vehicle. It will join the department's two Ford sedans in the line of duty.

BMW planning to expand remanufactured parts sales

MONTVALE, N. J.—BMW of North America's remanufactured parts exchange program has become a $1 million per month business, and the company is expanding its efforts in supplying these parts to its dealers.

According to Til Roemer, head of BMW's Parts Division, the company has always had an exchange program, but with the addition of a third parts distribution center in 1978, the program took off since distribution is a key.

The reason for getting into the remanufactured exchange program in the first place, he said, was to prevent the loss of customers to others in the aftermarket.

Roemer said that prices of new parts on some BMWs are too high for the owners, particularly the 2002 owners. If the company did not have the program, he said, it would have lost this market entirely.

And the parts availability covers all BMW models ever sold in the U. S. "We wanted a complete program," he said.

The parts manufactured by BMW in Germany, such as engines, are sent back to the parent company for remanufacture.

Other parts, such as starters and alternators manufactured by Bosch, are sent to Bosch which has a facility in Chicago. But Roemer stressed that the parts are remanufactured by the original manufacturer.

Two other keys to the system, Roemer said, are selling only through the dealer body and offering a better warranty than is currently available on remanufactured parts.

Roemer said that the warranty is six months plus labor while current aftermarket manufacturers do not offer labor.

Offering the program only to its dealers is a way for them to get into the wholesale parts business. "We want to reach the other markets," he said.

To accomplish this, Roemer said the company is planning a wholesale parts seminar for dealers to explain the investment needed, including the personnel and type of inventory.

In addition, he said the company is offering additional discounts for dealers on stock parts orders. The normal discount on parts is 35 percent, he said, but if it is a stock order there is an additional 12 percent subsidy and a 6 percent obsolescence credit for returns.

He added that to establish a wholesale parts business, the ideal situation is for the dealer to have a separate manager.

But will BMW ever sell to the aftermarket directly? Roemer said categorically no. The system will always be operated through the BMW dealers since it is beyond the capability of BMW of North America to market directly.

Auction opens

COLORADO SPRINGS.—Thursday will be weekly sale day for the Colorado Springs Auto Auction, which has opened at Interstate 25 and Exit 132 East.

Domestics fuel surge in sale of compact trucks

Continued from Page 24

during the month totaled 30,717 units, up 12.4 percent from last year's 27,330. The first-quarter count, however, was only 2 percent higher, moving from 67,431 units in 1981 to 68,797.

Chevrolet's S-10 pickup has firmly entrenched itself as the No. 1 compact, running far ahead of runnerup Toyota.

In March, Chevrolet dealers sold 25,046 S-10s, compared with 14,331 by Toyota dealers. Through March, the S-10 count was 54,459 units, as against 33,239 for Toyota.

The S-10's March and three-month sales accounted for almost 30 percent of the industry total.

In March, Toyota sales accounted for 17.1 percent of the total, compared with 23 percent last year when it was the No. 1 compact. Toyota's first-quarter share was 17.9 percent, compared with 25 percent a year ago.

SEVILLE "ROADSTER" CONVERTIBLE

"AMERICAN CUSTOM COACHWORKS, LTD."

Very sporty and very elegant. The Seville "Paris" Roadster Convertible is a personalized 2 passenger touring car designed and styled for individuality and excellent roadability. The top mechanism is fully powered for ease of raising and lowering. Base units can be drop shipped to one of several manufacturing plants, or there are open factory (pool cars) presently in build that are available.

250 recovered from 14 states

Sting operation nets stolen cars

ST. LOUIS. — FBI agents recovered more than 250 stolen cars and trucks from 14 states as a result of a sting operation that may result in indictments of 40 persons.

The sting operation — an auto salvage shop called "LeBlanc Motors" — had been set up in Scott County in Southeast Missouri in July, 1980, according to Glenn L. Young, special agent in charge of the FBI office here.

Some consumers, unaware that their vehicles were hot, had to give them up for evidence. Some had been purchased from legitimate auto dealers who also had been unaware they were dealing with stolen autos.

Between $3 million and $4 million worth of late-model cars and trucks were involved, Young said.

The sting operation started selling car parts to suspected auto thieves in an attempt to apprehend them and to put out of business St. Louis-area chop shops and retaggers.

In addition, the FBI agents bought 50 stolen vehicles from the suspects. Part of the money came from profits on merchandise sold in the salvage shop.

Young said some of the cars were set up to be stolen.

"These groups deal mostly with General Motors products," he said. "Some of those involved had worked for GM and knew what to look for."

Some were former GM hourly employes who were familiar with the confidential code.

Two men were arrested and accused of attempting to sell nearly half a million dollars worth of television and electronic equipment to undercover police at the sting operation. More arrests are expected.

Stolen vehicles were seized in Illinois, Kansas, Colorado, Louisiana, Nebraska, New Mexico, California, Wisconsin, Texas, Arkansas, Oklahoma, Tennessee, Kentucky and Missouri.

Local and county police were involved in the investigation, along with the FBI.

Japanese take smaller share of Norse sales

OSLO.--New-car registrations in Norway totaled 104,670 in 1981, compared with 96,550 a year earlier.

Japanese makes took a reduced share of the market, declining to 34.4 percent in 1981, down from 39.1 percent.

Registrations by make were:

12 mos., 1981		12 mos., 1980
2,654	Audi	2,948
1,491	BMW	1,038
1,479	Citroen	1,281

Coach Builders moves to larger Fla. plant

HIGH SPRINGS, Fla.—Coach Builders Limited, Inc., a firm that designs, prototypes and builds convertible conversions, has moved its headquarters to a plant here four times the size of its old one in Ft. Lauderdale. Capacity will now be more than 500 convertibles annually.

The new address is 1320 N. Main St., High Springs, Fla. 32643, telephone (904) 454-2060.

Duke joins Volvo in financial post

ROCKLEIGH, N. J.—Michael T. Duke has been appointed to the newly created position of senior vice president, Finance, and chief financial officer of Volvo North America Corp.

Duke comes to Volvo from F & M Schaefer Corp., where he served in a similar capacity.

Mitsubishi Australia unveils its new Sigma GJ models

SYDNEY, Australia. — Mitsubishi Australia has launched its first completely new vehicle since the Japanese company gained control of the former Chrysler operation.

The rebodied Sigma is the first of several newcomers which the company believes will boost its sales to the number-three spot in the country.

Mitsubishi will begin making the front-drive Colt during the third quarter of the year. It will also launch a fully imported luxury car (in the $16,000 price class) and compete for the first time in the growing four-wheel-drive market.

To make sure that all corners of the market are covered, Mitsubishi will announce a turbo version of the new Sigma later in the year.

In launching the Sigma GJ series, Doug Coleman, deputy managing director, predicted that new-vehicle registrations will reach a record of 621,000 units in Australia this year. He said the four-cylinder medium-size class will account for 35 percent of all passenger-car sales and that one in every three medium cars will be a Sigma.

Priced from $7,462 to $10,369 (Australian), the new GJ range consists of four sedan models and three station wagons, with a choice of three engines and three transmissions.

This is the first new body for the Sigma since it was launched in October, 1977. For the past three years, Sigma has been Australia's top-selling four-cylinder car.

To stave off a possible challenge from the local Datsun Bluebird, Sigma has been given an extended wheelbase, roomier body, revamped suspension and higher equipment levels.

An extended drive over several hundred kilometers of smooth and unsealed roads confirms the company's claims that the noise level has been reduced, the riding comfort enhanced and stability improved.

Mitsubishi claims that the interior noise level has been cut by 25 percent.

The engine range comprises the 2-liter Aston with its much publicized counter-balancing shafts, a bigger 2.6-liter unit and a revised version of the 1.6-liter Saturn engine.

Despite the strong family resemblance in the styling, Sigma GJ has a new body, with flush mounted single headlights, slanted nose and sloping hood. There's an air dam at the front and a small integral spoiler on the trunk lid.

Company engineers say that the drag coefficient has been reduced from 0.43 to 0.41 and the lift coefficient from 0.37 to 0.30.

Trunk space has been increased 13 percent over the previous GM model mainly due to relocation of the rear suspension springs.

The sedan is slightly longer, wider and higher than the GH.

The interior has reshaped seats which allow increased passenger legroom.

There is a new instrument cluster, and the manual gearshift and the handbrake have been relocated for easier use.

The equipment levels have been lifted in all models. Four-wheel disk brakes are standard on the SE and GSR models and optional on the GL.

New Sigma from Mitsubishi Australia

The Sigma GJ series is the first completely new vehicle from Mitsubishi Australia since it gained control of the former Chrysler operation. The GJ series consists of four sedans and three station wagons with a choice of three engines and three transmissions.

Mardikian makes cars street-legal

Importer of exotics finds a boom

NEWPORT BEACH, Calif. — At a time when a depressed market has thrown the domestic automotive industry into low gear, sales in the imported exotic-car field are going full throttle, according to an importer here.

"The exotic car market has never been as strong as it is today," said Albert A. Mardikian, one of the world's largest importers of high-performance European classics and president-founder of Trend Import Sales, Inc./Albert Mardikian Engineering. "The market is booming.

"Only a year ago we were converting two or three imports a week to make them 'street legal' in the U. S. under state and federal DOT and EPA requirements. Today, our engineering division legalizes 15 to 20 cars a week," Mardikian said. "Business is growing so fast that we're accelerating our long-range expansion plans both here and abroad."

With a busy showroom and sales outlet here, an engineering facility in Goleta, and with sales arms in Brussels and Cologne, the 36-year-old Mardikian also plans to establish sales outlets in Beverly Hills, Florida and Texas.

To accommodate the mushrooming demand for conversion of hard-to-get European classics, Mardikian has launched his first-stage expansion in Orange County, Calif.

He recently opened his new Division of Compliance Testing and Fabrication, a 50,000-square-foot facility in Costa Mesa. There his engineering experts convert and test European imports — Ferrari, Lamborghini, Mercedes Benz, Porsche, BMW, Citroen, Rolls-Royce and others — to meet government safety and omission standards.

Heading the Costa Mesa facility is Sam Agob, supervisor of testing and compliance. George Gemayel serves as chief of engineering and federal laboratory testing. Sarkis Kevork is chief of engineering and fabrication.

The recent appointment of Jean Gemayel as his assistant is another step in Mardikian's expansion program. Gemayel represented BMW and other European auto makers in 21 nations before coming to the U. S. two years ago.

Mardikian, who graduated from Northrop Institute of Technology in 1971 with an engineering degree, attributes the burgeoning growth of the automotive imports market to at least two major factors:

"For one thing, American motorists are getting fed up with all this emphasis upon driving small econoboxes. For another, they're buying European classics as a solid form of investment. These extraordinarily fine cars usually appreciate in value at a substantial rate."

To service this growing demand, Mardikian is hiring technical specialists away from the manufacturers of these European classics.

Exotics for U. S.

The twin-turbo Ferrari 512 Boxer, left, and the twin-turbo Lamborghini Countach SS are among the exotic European cars in strong demand in the U. S., reports importer-converter Albert A. Mardikian. Both of these cars produce over 700 HP and top speeds in excess of 225 MPH, Mardikian says.

*Lincoln-Mercury does not break out specific radio types with CB. All sound systems equipped with a CB are included in the AM/FM w/CB column.

**—Cimarron offered only AM/FM stereo with cassette tape during the abbreviated '81 production run. Some 39.4 percent of buyers chose to delete it, since it was billed as a delete option. Cadillac does not promote radios in its other lines as delete options, although it said customers always retained that prerogative. It didn't track deletes of radios on other lines, but guessed they were fewer than 1 percent. AM/FM stereo is standard on all Cadillac lines, except Cimarron.

Japan's imports exceed exports in know-how field

TOKYO. — It will surprise many Americans to learn Japan is a bigger importer than exporter when it comes to technical know-how, particularly in the auto field.

That fact was revealed in the Scientific and Technology Research Report, 1982 edition, published by the Statistics Bureau of the Prime Minister's Office.

In fiscal 1980, the most recent year for which figures are available, Japan paid out $42 million for imported technology and received $34 million for exported know-how.

According to the report, technical imports pertained to many car parts. For example, Jidosha Kiki was listed as acquiring turbocharger technology from Bendix Corp. and fuel injector technology from Robert Bosch of West Germany.

Mitsubishi Motors Corp. was cited as having received front-wheel suspension technology from BMW and Toyo Kogyo as getting suspension strut technology from BMW.

Honda Motor Co. was shown as having bought interior and exterior designs from Pininfarina of Italy and Isuzu Motors, Ltd., acquired electronic control technology from General Motors.

Cream of American design

High fashion and luxury car design combined in display at Fashion Island shopping mall, Newport Beach, Calif. Atlas Chrysler-Plymouth, Costa Mesa, provided LeBaron, Imperial and New Yorker models in conjunction with Harper's Bazaar magazine promotion "Fashion '82: American Design at its Best." Kathleen Lauren, left, director of advertising and promotion for Fashion Island, and Curt Davis, Atlas general sales manager, check out the display prior to opening.

After cutback in holiday week

Auto production climbs to 113,476

U. S. auto makers last week scheduled output of 113,476 units, a 25.88-percent boost from the previous work week when schedules were cut to four days because of the Good Friday holiday.

Last week's output was up substantially from the previous week's production of 90,147 but was still down 7.12 percent from the 122,173 assemblies of the comparable 1981 week.

The return to a five-day work week was enough to offset downtime last week at five U. S. assembly plants. General Motors closed its Framingham, Lordstown, Fremont and Leeds assembly points, while Ford Motor Co. shut its Lorain point.

All of those plants except GM Leeds were scheduled to return to work today (April 19). The GM Janesville and Oklahoma City plants are still down for changeover.

Last week's production was also boosted by Saturday overtime at the GM Tarrytown and Van Nuys plants. Tarrytown builds Skylark, Phoenix and Citation. Van Nuys is a source for Camaro and Firebird.

All Chrysler Corp. plants were reported open last week. American Motors also was open last week. An AMC spokesman said no downtime was expected until June, at which time Kenosha will close for two weeks for changeover to production of the new AMC/Renault Alliance model.

Breakdown for last week's production was GM, 56.42 percent; Ford, 25.55 percent; Chrysler, 13.66 percent; Volkswagen of America, 3.14 percent, and AMC, 1.23 percent.

Year-to-date automotive production trails last year's by 30.99 percent. At the end of last week, makers had assembled 1,333,326 cars this year, down from the 1,932,162 assembled during the equivalent period in 1981.

Japanese car shipments to U.S. post a decline

WASHINGTON. — Exports of Japanese cars to the U. S. in February were down 18 percent from the year-earlier month, but exports of trucks to the U.S. were up 29.7 percent, the Japan Automobile Manufacturers Assn. reported.

Trucks are not covered by the voluntary export limitations the Japanese makers adopted effective April 1, 1981. The agreement, which calls for a maximum of 1,680,000 cars a year, has been extended for another year.

Car exports to the U. S. for the month totaled 123,458, down from 150,517 a year earlier. On an annualized basis, the February figure would be about 1.48 million, well below the voluntary quota.

Industry sources suggested that difficulties encountered in shipping cars during the winter could be a factor. The January total of 131,498 was also below average.

For the first two months of this year, car exports to the U.S. were 254,956, down 19.8 percent from the 1981 total of 317,992. There were no restrictions during the 1981 period.

Truck exports to the U. S. in February were 50,578, compared with 39,006 last year. For two months, the truck total was 90,860, up 12.5 percent from 80,736 in 1981.

Combined car and truck exports to the U.S. were 174,036 in February, which was 8.2 percent below last year's 189,523. For two months, the total was down 13.3 percent, 345,816 this year and 398,728 in 1981.

• JAMA reported that Japan's motor-vehicle production, domestic registrations and overall exports were all lower in February than in the year-earlier month.

Car production was 560,291 in February, about the same as 557,791 a year ago, but truck output (313,513) was down 4.8 percent and bus production (5,919) was off 40.2 percent. Total production of 879,723 vehicles was off 1.9 percent from 896,981 in 1981.

Car registrations in Japan in February rose 5.8 percent to 209,752 from 198,251 in 1981. But truck registrations slipped to 82,004, down 18.7 percent, and bus registrations of 1,737 were down 14 percent from 1,524.

Total registrations for February were 293,493, down 2.4 percent from 300,691 in 1981.

Worldwide car exports were 307,305 in February, down 15.9 percent from 365,319 a year ago. Truck exports were up 2.9 percent at 161,514 vs. 156,917, but bus exports fell by almost half, to 4,162 from 8,216.

Hall of Fame to meet May 12

MIDLAND, Mich. — Automotive Hall of Fame, Inc. (formerly AOT, Inc.) will hold its fifth annual convention and dinner reception May 12 at the Hyatt Regency Hotel in Dearborn.

Main speaker will be Stanley W. Gustafson, president of Dana Corp.

The third annual award for young leadership and excellence will be presented during the meeting.

Truck production nears 40,000 on full work week

U. S. truck production increased 19.90 percent last week as assembly plants returned to normal scheduling following the previous week's holiday-shortened period.

Makers built 39,776 units last week, up from 33,173 built the previous four-day work week, and up 13.62 percent from the 35,008 assembled during the comparable 1981 week.

General Motors' St. Louis plant was scheduled to work Saturday overtime last week. The plant builds C and K series pickups. In addition, Chrysler Corp.'s Warren truck assembly plant worked a daily nine-hour shift last week, the seventh consecutive week of such overtime at the plant.

Ford's Kentucky Truck plant was closed last week. American Motors' Toledo assembly plant reopened April 13 following an extended holiday sojourn.

Year-to-date, U. S. truck manufacturers have assembled 541,579 units, up 1.16 percent from 535,358 built during the equivalent period last year.

Car-truck output climbs in Canada after holiday lag

Canadian car manufacturers last week slated production of 21,150 units, a 29.81-percent increase over the 16,292 built during the previous holiday-shortened week.

Last week's Canadian output also represented a 11.40-percent increase over the 18,984 cars built during the corresponding week in 1981.

All makers except AMC reported production increases. AMC output remained steady.

Year-to-date, Canadian makers have assembled 249,958 cars, up 6.22 percent from the 235,310 built during the comparable 1981 period.

Canadian truck production also posted a substantial increase last week. Truck builders assembled 12,469 units, up 38.43 percent from the 9,007 built the previous week and up 29.75 percent from 9,610 built during the comparable week last year.

Year-todate, 1982 truck production is running 12.26 percent behind last year. Makers have built 147,261 units this year, down from 167,834 built during the equivalent 1981 period.

Nissan's newest

Stingy Sentra bows in U. S.

The XE hatchback coupe is one of the new Nissan Sentra models debuting in the U. S. May 1. The 1982½ front-drive replacement for the 210 series is also offered in two-door and four-door sedans and four-door station wagon. Nissan said the Sentra MPG version is the highest-mileage gasoline-engine car sold in the U. S., yielding EPA ratings of 58 MPG highway, 43 MPG city and 48 MPG combined. Prices range from $4,949 to $6,899. Story and another photo on Page 8.

New-car sales inch ahead, stir cautious optimism

By Kathleen Hamilton
News Editor

Maybe it's the warmth of spring, or maybe it's the latest round of factory incentives, but domestic dealers surveyed by AUTOMOTIVE NEWS last week were cautiously optimistic in their short-term sales forecasts and many reported their business is inching ahead of 1981.

Ford Motor Co. dealers were happiest of the lot. Blessed with a rebate and an extended warranty and free maintenance package, dealers said Ford customers seem to be responding and shopping.

General Motors dealers unanimously agreed their 12.8-percent interest plan isn't generating the same degree of enthusiasm that a similar incentive did last year.

"We're having a better month than March—sales are up 10 to 15 percent — but last time, it doubled our sales," said John Carnahan, general manager of Woodfin-Smith Pontiac (and Isuzu), Baton Rouge, La.

Beyond that, reaction was mixed. GM dealers who specialize in the smaller cars that had been covered by the last round of rebates generally were unimpressed by the 12.8-percent program.

Others, like Harry Hollywood, president of Harry Hollywood Cadillac, Miami, reported that rebates on Seville and Cimarron—his top sellers—had already bled the market.

Del Richardson, vice president of Tom Naquin Chevrolet-DeLorean, Elkhart, Ind., said the 12.8-percent plan has been "no significant help."

Like several Chrysler Corp. dealers surveyed, Richardson explained that rebates worked better for his clientele.

Seventy percent used the rebates for downpayments. For many of those buyers, the rebate made the difference in whether they could qualify for a loan. But the other 30 percent of Naquin Chevrolet's customers in recession-hit Elkhart took the cash.

Perhaps this wasn't the most sophisticated thing to do, Richardson said, but the low-interest plan's savings of $900 or so over four years doesn't seem to have the impact of instant cash.

• Chrysler Corp. dealers reported business had slowed down in mid-April, when their free-maintenance/extended-warranty package was introduced. But many were loathe to knock the incentive.

Some theorized that Easter, tax time and bad weather conspired against sales. Others thought customers were confused by the variety of factory incentives. Others said Chrysler's plan didn't convey a sense of urgency to would-be customers to buy.

"There's a lot of enthusiasm for the idea of the new warranty and extra protection, but the customers aren't coming in as fast as they were," reported Lewis H. Goodman, president of Lewis Goodman (Chrysler-Plymouth), Syracuse.

"Customers have been pretty impressed by it, but I don't think it's going to draw them in," agreed Russell Macey Jr., general sales manager at Tate Dodge of Annapolis (Md.).

Chrysler dealers agreed the incentive is a bargain for customers. Many dealers welcomed

Financial pressures on industry seen continuing

Auto czar expects late-year gains

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The outlook for domestic new-car sales for the second quarter offers "little or no improvement," but the production outlook for the third and fourth quarters "shows promise."

This comes from the first Congressional testimony of Michael Driggs, the new coordinator of auto industry policy for the Reagan Administration.

Driggs, now on board as deputy assistant secretary for the Commerce Department, noted the "dismal 4.2 million unit annual rate" for the first quarter and said the second-quarter production is scheduled for only 5.8 million units — the lowest since 1961.

The output for the first 9 months of 1982 is predicted to trail that of 1981's comparable period by 16 percent.

Although production planning for the fourth quarter is "rather nebulous" and dependent on a reasonably strong economic recovery, Driggs projected an annual rate of 8 million units — making full-year production virtually the same as last year's 6.25 million units.

Driggs told the House Banking subcommittee chaired by Michigan Rep. James Blanchard, the truck outlook is somewhat more encouraging — an increase of 300,000 or 18 percent over last year and perhaps more if there is further improvement in the second quarter.

Even though 1982 will be a "slightly better year" for the industry than last year, Driggs said, he warned that higher production "will only partially alleviate financial pressures" and 1982 will likely be another year of negative cash flow. If so, then the industry's "financial resilience will be further weakened."

Even so, he said, 1982 might be a "turning point" so that if the economy improves, the companies can start to stabilize their finances and improve their competitive position.

Driggs repeated the Administration's position that its job is to reduce inflation, foster growth that generates new job opportunities and remove impediments; the rest is up to management and labor within the auto industry itself.

This includes the enacted tax package and regulatory relief (the only remaining major relief measure to be done—heavy-duty truck emissions estimated to save the industry about $100 million—is expected this summer).

Driggs reaffirmed the Administration's support of the leasing provisions whereby firms can trade tax credits, and the return of auto emission standards to 1980 levels, saving consumers between $100 and $300 per car and perhaps one MPG.

But Driggs repeated the Administration's opposition to setting local content requirements on cars and imposing import quotas.

"These proposals are well intentioned," he said, "but we believe they will harm the domestic industry in the long term."

• While complimenting the industry on its successful and expensive turnaround to more fuel-efficient vehicles, Driggs noted this was made possible only by higher debt and eroding working capital.

"Between 1978 and 1981, long-term debt of the companies increased from $3.4 billion to $9.1

World Congress to be opened by GM's McDonald

F. James McDonald, president of General Motors, will keynote the seventh annual Automotive News World Congress.

The World Congress will be held Aug. 22-25 in Detroit's Westin Hotel, in tandem with the Automotive News World Expo, scheduled Aug. 24-27 in nearby Cobo Hall.

F. James McDonald

McDonald is expected to deliver a "state of the industry" report to those attending the Sunday night opening of the 3½-day affair.

Used-car rule nears oblivion

By Miles Moore
Washington Staff Writer

WASHINGTON. — The FTC's proposed used-car rule took a step closer to oblivion last week as the House Commerce, Transportation and Tourism subcommittee voted 6-4 to approve a resolution to veto the measure.

The resolution now goes to the full Energy and Commerce Committee, which currently is embroiled in deliberations on the Clean Air Act. Rep. James J. Florio, New Jersey Democrat and chairman of the subcommittee, said he hoped the full committee would act on the resolution this week.

Florio said he was "committed" to bringing the veto resolution before the full committee despite his opposition to it.

In his opening statement, Florio said the FTC used-car rule would provide consumers with two things: A written statement of the warranty on a used car, and a written statement of any potential defects in the car of which the dealer knows.

"It is, plain and simple, a disclosure rule," he said. "Despite the rhetoric and tortured logic

breaking news

GM gives in to UAW on bonus plan

DETROIT. — After a daylong confrontation between top officials of General Motors and the UAW, GM announced that it would not put its proposed liberalized bonus plan into effect for the life of the renegotiated UAW contract, even if stockholders approve the plan May 21. The decision was announced after angry auto workers had urged a one-day protest strike and after 11 hours of company-union talks. Earlier story on Page 6.

New rebates, incentives on Dodge truck

HIGHLAND PARK, Mich.—Dodge is offering April 23-June 6 rebates of $300 on '82 Rampage and Ram Miser pickups; $500 on '81/'82 domestic pickups, excluding Royal SE, which gets $750; $1,000 on '81/'82 Royal SE wagons, and $2,000 on Ramcharger. Previous April 11-22 buyers get a "goodwill bonus" of half these amounts, plus vouchers equal

Job security, money are issues

UAW drafting demands for Chrysler contract

By Marjorie Sorge
Labor Editor

The UAW will demand a moratorium on plant closings and a further commitment from Chrysler Corp. to idle supervisory personnel in the same ratio as hourly workers when talks begin this July. The contract expires Sept. 14.

The union won a commitment from Chrysler in 1979 bargaining to idle supervisory personnel and hourly workers in the same ratio and to remove management personnel from bargaining units where there are a higher number of supervisory workers than hourly employes.

That problem still remains in certain employment pockets, especially the salaried areas where there are numerous job titles, the UAW said.

According to Marc Stepp, UAW vice president and director of the Chrysler department, the union wants a guaranteed income stream for high-seniority workers, a company prepaid legal services plan, a resumption of cost-of-living adjustments (COLA) and the annual improvement factor (AIF) and the reopening of some plants.

While both Chrysler and the UAW have indicated it is possible to restore COLA, they admit it might not be with the same formula as in previous contracts.

Stepp said the trigger mechanism might differ from Ford and General Motors where workers get one cent per hour for every 0.26 percent rise in the Consumer Price Index. The AIF has been a 3 percent annual raise.

According to a Chrysler official, the restoration of COLA payments and/or a wage increase might be possible in some form if the workers are willing to make cost-reducing changes in other demands.

• Both sides realize the workers want money since they have not received a raise in 19 months while their counterparts at GM and Ford have received both COLA and AIF benefits. Currently, Chrysler workers lag behind by over $2.00 an hour in COLA alone.

The workers made concessions worth over $1 billion during the last round of bargaining to help Chrysler qualify for federal loan guarantees.

Money in the paycheck seems to be the most important goal of the Chrysler hourly workers, and a Chrysler official said if the workers want more expendable income, then "we must look at areas where Chrysler is spending other money, such as pensions and health care."

Both those benefits will be major topics in the summer bargaining, and a Chrysler insider indicated that money could be diverted from those two programs into workers' paychecks if concessions were made in those areas.

Chrysler is also prepared for the UAW to make arrangements to continue its seat on the board of directors. The seat is currently held by UAW President Douglas A. Fraser, but he has said he will step down when he retires as union president in May, 1983.

It is expected that the union will want Fraser's successor to take over the seat if it wants to remain on the board, a Chrysler official said.

In addition, both the company and union are planning to introduce a plan to decrease absenteeism by tying excessive truancy to a worker's paycheck.

Chrysler's 1981 absenteeism rate was 5.6 percent, down from 6.0 percent in 1980. But Stepp said the union "cannot tolerate it as it is" and is planning an attack on absenteeism.

A plan was introduced in the new GM-UAW settlement which penalizes workers economically if they miss 20 percent or more of the scheduled work in a six-month period. Stepp said the Chrysler plan could be different.

The union is interested in tying absenteeism to peer pressure. That has worked well in plants using quality circle programs, Stepp said. At the Kokomo (Ind.) transmission plant, there is a 3-4 percent absenteeism rate, he said, and a quality circle program.

• Besides absenteeism, health care and pension costs are a major problem at Chrysler. There is currently one active worker for every retiree at Chrysler which raises the health care and pension costs.

According to a Chrysler offi-

Rising ride for a roadster

A giant forklift moved a restored 1930 Model A Ford roadster from a specially prepared transport vehicle up two floors of the Renaissance Center in Detroit to Anton's Gentlemen's Apparel Store for its grand opening in April. The Model A will remain on permanent display, according to the clothier, to demonstrate Anton's recognition of tradition and quality.

Calm annual meeting likely for Chrysler

By Edward Lapham
Financial Editor

Chrysler Corp.'s June 3 annual meeting in St. Louis should be a rather calm affair, based on the proxy statement mailed to shareholders last week.

Shareholders will be asked to approve a management proposal to alter the stock option plan, reappoint the auditors and elect directors. Only one shareholder proposal will be presented at the meeting.

The proxy disclosed that former Congresswoman Martha W. Griffiths, John H. Coleman and George B. Young are retiring as non-employe board members.

Lilyan H. Affinito, 50, president and treasurer of Simplicity Pattern Co., Inc., has been nominated as part of the management slate.

John B. Naughton, sales and marketing executive vice president; Stephen Sharf, manufacturing executive vice president, and J. Paul Sticht, chairman of R. J. Reynolds Industries, Inc., were elected to the board in September and will be elected at an annual meeting for the first time.

Shareholders also will be asked to reappoint Touche Ross & Co. as independent public accountants and auditors.

There is only one shareholder proposal included in the proxy, unlike recent years when dissident groups offered a multitude of proposals which often drew a fairly large percentage of the shareholders' votes.

The lone proposal, opposed by management, was submitted by Evelyn Y. Davis. If approved, it would prohibit use of corporate funds as contributions to charitable, educational or other similar organizations except where it directly benefits the company.

• The proxy also disclosed that Chrysler Chairman Lee Iacocca took a 1.6 percent pay cut in 1981 to $362,313, including all forms of cash and cash-equivalent compensation, from $368,321 in 1980.

For the first eight months of 1981, Iacocca and other Chrysler executives had a reduction of 10 percent of their base salaries as part of the Salary Reduction Program. Iacocca's base salary of $360,000 was restored Sept. 1, 1981.

Gerald Greenwald, vice chairman, and Harold Sperlich, North American automotive operations president, both received raises last April when they were promoted from their executive vice president positions. They, too, had their base salaries reduced 10 percent as part of the Salary Reduction Program.

Greenwald received total compensation of $234,403 last year, up 16.1 percent from $201,910 in 1980. Sperlich received total compensation of $238,686 in 1981, up 21.3 percent from $196,813 in 1980.

In 1981, all 56 officers and directors as a group received total compensation of $5,152,688, for a per-person average of $92,012. In 1980, all 50 directors and officers as a group received total compensation of $4,735,986, for a per-person average of $94,720. The per-person average declined 2.9 percent, again as part of the Salary Reduction Program.

The board of directors' proposal to re-adopt the stock option plan would extend the plan until 1992, increase the number of grantable shares by 3.5 million and allow options to be granted at "fair market value" below the $6.25 per share minimum established at the 1981 annual meeting.

Shareholders will be asked to approve the plan, in order to replace the old qualified and non-qualified plans which expired April 17, 1982.

For new 4-cylinder engine for 626, Topaz and Tempo

Ford, Mazda seeking diesel waiver

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Ford Motor Co. and Mazda are asking the EPA to see it their way on a new diesel engine the companies hope to bring to the U.S. market by the 1984 model year.

Ford owns 25 percent of Toyo Kogyo, maker of Mazda vehicles.

The companies want the EPA to grant the engine a waiver from the oxides of nitrogen standard of 1.0 grams per mile, a standard diesel engines are having trouble meeting.

Such waivers are available through the 1984 model year under provisions of the 1977 Clean Air Act amendments and have been given to all other diesel engine makers under previous waiver requests.

The TX1 engine, as it is designated by both Ford and Mazda, is an in-line 4-cylinder prechamber type displacing 2 liters. Mazda will use it in its revised 626 model, and Ford will make it available as an option in its Topaz and Tempo cars scheduled for introduction as '83½ models.

Ford Escort and Mercury Lynx are also to get the new engine.

The Ford Ranger truck is also to get a Mazda-made diesel engine, but this will be a 2.2-liter model that Toyo Kogyo now sells in the domestic market.

Dieselizing the Topaz/Tempo line would mark the first entry by Ford into the diesel market and would allow the company to advertise some substantial mileage numbers as the cars are expected to produce mileage figures in the high 30s.

Ford plans to offer a larger BMW/Steyr-produced diesel engine in its reskinned Lincoln Mark VII in 1984. EPA previously granted the company a waiver from the same NOx standard for that engine.

Highway Patrol opts for Mustangs

The California Highway Patrol has stocked up on 400 1982 Ford Mustangs with the new high-output 5.0-liter V-8 engine. Downtown Ford, Inc., of Sacramento, handled the transaction. Here, Sgt. Dick Rademacher stands beside one of the fleet, which is powered to accelerate from zero to 60 MPH in seven seconds.

Dodge ragtop paces Boston Marathon

BOSTON. — The official "pace" car for the 86th annual running of the Boston Marathon on April 19 was a 1982 Dodge 400 convertible.

It led 7,000 runners away from the starting line and preceded them along the 26.1-mile course. An electronic digital clock on the deck lid of the convertible told spectators the leader's exact time.

truck watch

By Jack Walsh
Truck Editor

Archie R. McCardell, chairman of financially troubled International Harvester, ruffled a few feathers in his keynote address at the recent convention of NADA's American Truck Division in New Orleans.

While McCardell was critical of a wide range of industry and government practices, there were many in the audience who thought that he was particularly rough on the suppliers of heavy-truck components.

First, he noted that although most U. S. truck manufacturers and dealers have seen a reduction in profits, the supplier industry, in general, "has maintained an acceptable level of performance."

Changes in some supplier marketing practices could benefit both the truck manufacturer and the dealer, he indicated, and he called supplier co-operation a "key to the improved performance of the truck industry."

McCardell took issue with what he called supplier claims that the Robinson-Patman Act requires that components be sold to all manufacturers at the same price.

He said suppliers could reduce the product prices and offer volume adjustments if they offered innovative manufacturing, selling or credit terms to manufacturers and if they eliminated the high cost of marketing their products direct to the users.

"The marketing of our products and their components should be the responsibility of the truck manufacturers and their distribution organization," he said. By approaching customers directly, he added, suppliers duplicate dealers' marketing efforts.

Suppliers' extra marketing and administrative costs, McCardell charged, are passed on to assemblers, "which further diminishes dealer profit margins and inflates the price paid by customers."

He also noted that component selection by customers leads to parts proliferation and requires

Liftgate designed for U. S. compacts

A liftgate designed for Chevrolet S-10, GMC S-15 and Ford Ranger compact pickup trucks has been introduced by DEL America Corp., Buffalo. The DL-10 has a capacity of 1,000 pounds, features chain drive and is 48 inches wide, 24 inches wide with a five-inch ramp. It bolts into the tailgate opening on the pickup box.

GM Worldwide Truck expanded on wide front

Truck manufacturing and assembly operations of GM Assembly Division, Chevrolet and GMC Truck & Coach will be merged into a single division within the Worldwide Truck and Bus Group, General Motors announced last week.

GM President F. James McDonald said the new division will have overall responsibility for all GM truck, bus and van manufacturing and assembly.

The division will be headed by Robert W. Truxell, currently GMC general manager and group manager of worldwide medium and heavy-truck and bus operations.

Detroit Diesel Allison Division also will become a part of the worldwide group, with responsibility for truck and bus diesel engines and heavy-duty transmissions.

As part of the consolidation, McDonald said a number of light-truck and van plants will be transferred to the worldwide group over the next few months.

These include GMAD plants at Shreveport, La., and St. Louis; Chevrolet plants at Indianapolis, Moraine, O. (both diesel-engine manufacturing and S-truck assembly), Detroit (truck chassis assembly) and Flint (truck assembly).

All related engineering activities also will be transferred to the worldwide group.

McDonald said the consolidation will not cause any realignment of current dealer franchises or changes in truck nameplates.

GM currently sells GMC, Chevrolet, Bedford (British) and Isuzu (Japanese) trucks and vans in various countries throughout the world, and buses in the U. S. and Canada.

"This consolidation will enable us to more effectively inte-

Datsun, Toyota offer incentives of up to $1,040

By Joseph Bohn
Marketing Editor

Truck marketers continue using big cash incentives to move their merchandise in a competitive market.

Recently, Datsun and Toyota were among those announcing new programs, with Datsun paying up to $1,040 per 2-wheel-drive diesel pickup and Toyota up to $1,000 on comparable models.

Datsun's new program is called "Trucks-Cash on Delivery." It runs from April 9 to May 31, and provides cash payments to dealers, sales managers and salespeople.

The program covers all new '81 and '82 2-wheel-drive gasoline and diesel engine trucks. Four-wheel-drive units may be counted toward attainment of objectives, but don't provide any direct payment.

Dealers have a two-unit qualifer before they begin earning money.

Thereafter, they earn $300 on every 2-wheel-drive gasoline model and $500 on every 2-wheel-drive diesel pickup.

If Datsun dealers exceed 35 percent of their objectives by April 30, they receive an additional $100 on every two-wheel-drive model, bringing their gasoline-engine-model earnings to $400 and diesel earnings to $600 per unit.

If they exceed 100 percent of their objective, they receive another $100 bonus, non-retroactively, bringing payments up to

Volvo White appoints Oliphant Autocar chief

Laurence E. Oliphant has been appointed director of Volvo White Corp.'s Autocar Division, with responsibility for operations at the firm's Ogden (Utah) plant and marketing activities for all Autocar products. He also will head Volvo White's International Sales Group.

L. E. Oliphant

Oliphant began his truck career with White Motor Corp. in 1962 and had been Great Lakes regional vice president and Autocar national sales manager before leaving in 1979 to join International Harvester. He was general manager of the IH Worldwide Parts Operation prior to joining Volvo White.

Ford shifts Rivard to light-truck post

Daniel L. Rivard has been appointed manager of light-truck product development for Ford Motor Co. Truck Operations. He had been chief engineer of the vehicle development engineering office, Car Engineering Group, since 1978.

D. L. Rivard

Rivard joined Ford in 1959, and held supervisory and managerial positions with the Product Development Group and Chassis Division prior to being named chief engineer for chassis structures in 1973.

In 1975, he was appointed executive engineer of the light-vehicle department and later of

truck industry news

2-month total off slightly from year ago

February registrations top '81 by 4.8 percent

Registrations of new trucks of all types in the U. S. were up in February for the first time since last September, with light trucks carrying the load. The two-month total, however, was down slightly from a year ago.

During the month, according to R. L. Polk & Co. statistics, 171,075 new vehicles were registered, an increase of 4.8 percent over last year's 163,195. Through February, the count was 326,674 units, off 0.6 percent from the year-earlier 324,703.

In February, light trucks showed an increase of almost 8 percent over a year ago, rising from 146,980 units in 1981 to 158,631. There were gains in all three weight groups in this segment of the market.

Medium trucks were down 28.7 percent during the month, from 4,287 units last year to 3,073. Heavies were off 21.4 percent to 9,371 tallies, compared with 11,928 a year ago.

Through February, light trucks were up 3.2 percent, with increases in two of the three weight groups. The total was 301,410, compared with 292,061 a year ago.

Group 1 registrations through February were 7.1 percent higher than a year ago. The total was 167,590 units, compared with 156,489 in 1981. The Group 3 count was up 12 percent, from 2,153 units a year ago to 2,411.

Group 2 tallies were off 1.5 percent to 131,409 units, compared with 133,429 last year.

Group 2 was the hardest-hit light-truck category in the nose-dive that started three years ago, but has been showing steady improvement since the start of the 1982 model year.

Registrations of non-captive light trucks in the first two months totaled 45,381 units, an increase of 16.3 percent over

Continued on Page 44, Col. 3

HD registrations for two months dip 17.1 percent

Two-month registrations of new heavy trucks in the U. S. dropped 17.1 percent below last year's level, with only two makes showing any appreciable increase in penetration.

R. L. Polk & Co. reported 19,598 Groups 7 and 8 truck tallies through February, compared with 23,648 in the like period in 1981. The February total was 9,371, down 21.4 percent from the year-earlier 11,928 units.

GMC's two-month registrations were almost 14 percent higher than a year ago, rising from 3,078 units in 1981 to 3,498. Its share of the industry total through February was 17.85 percent, 4.83 percentage points greater than last year's 13.02 percent.

Peterbilt tallies for the two

★—No Oklahoma registrations 1982 and 1981.

#—Memo units are trucks which are part of the total listed above each entry. Chevrolet memo units are Chevy-Van, El Camino and Blazer; Dodge, compact trucks; Ford, Econoline, Ranchero and Bronco; GMC, Vandura, Jimmy and Sprint; International Scout, Jeep, CJ-5, CJ-6 and Commando. *—Miscellaneous includes Imports, Divco, Hendrickson, Oshkosh, etc.

—Compiled from R. L. Polk & Co. data.

THE START OF THE '80s.

Now there's an automotive battery with more efficient starting power than the original Freedom Battery. The Delco Freedom II Battery. Designed to meet the demanding requirements of today's vehicles.

Freedom II's new plate and grid design helps produce efficient cranking power and reserve capacity. New grid guards and other features resist road shock and vibration.

The Delco Freedom II Battery—for powerful starts in the '80s.

Delco Remy

The leader under the hood

Supreme Spartan Truck Bodies

The kind of value the times demand.

Times are changing. Today's customer is demanding truck bodies that offer more value for the dollar. Like our new Spartan series. Built especially for any of the new mini truck chassis including the GM S-trucks or the Ford Ranger, the Spartan is true to its name. Compact. Lightweight. Tough. And designed to be very stingy with a tank of gas.

Then there's our hy-cube Iner-City. Engineered to big truck specs, the Iner-City features solid rivets and one-piece roof construction. And we have a large inventory of pool chassis for the Iner-City ready for immediate shipment.

Supreme also makes vans, reefers, cargo trucks and trailers. A full line of truck bodies designed with all the features and the extra value the times demand.

SUPREME CORPORATION

Supreme Corporation Dry Freight & Insulated Van Bodies.

RETURN ON INVESTMENT AND CASH FLOW

These vital ingredients are what Lo Kost Rent-a-Car was designed for. Rental vehicles costing $750.00 to $1,500.00 will gross $5,000.00 to $8,000.00 per year and ALL CASH! What other department can compare?
Lo Kost is not just another "rent-a-junker" fad, but a broad 8 department (optional) extra profit and traffic builder program designed for dealers to take advantage of inflation and depression.
Liability insurance $25.00/mo./vehicle is only 4 to 8% of sales. People will drive 25 miles to rent at $5.00 to $7.00/day. Think of the "ALL MAKE" traffic this will build for new and used sales.
Total early, one time sign-up $1,000.00; $1,500.00 or $2,000.00 depending on trade area size, only $200.00 down, balance in 24 monthly payments.

Feb. truck market tops '81 level

Continued from Page 14

last year's 39,015. Group 1 tallies were up 15.1 percent, from 38,656 in 1981 to 44,504. The Group 2 total was 877 units, 144.3 percent higher than the year-ago 359.

Medium-truck registrations through February were 37.1 percent lower than a year ago, dropping from 9,002 units in 1981 to 5,666.

The Group 6 count was 5,517 units, a decline of 37.1 percent from the year-earlier 8,766. There were 145 Group 5 tallies, off 38 percent from last year's 234. Only four Group 4 units were registered, compared with two in 1981.

Two-month registrations of heavy trucks dropped 17.1 percent to 19,598 units, compared with 23,648 a year ago.

Group 8 was down 14.7 percent, from 13,266 units in 1981 to 11,278, while the Group 7 total of 8,320 tallies was 20 percent lower than the 10,422 registered in the same period a year ago.

No. 1 Chevrolet, the leader in retail truck sales since last November, boosted its edge in registrations over runnerup Ford by more than 15,000 units in February.

Chevrolet's two-month total of 110,805 tallies widened its margin over Ford by more than 20,000 units. Through February, the Ford count was 87,651.

Chevrolet accounted for 33.92 percent of the industry's two-month registrations, an improvement of 2.14 percentage points over the year-ago 31.78 percent of the total on 103,188 tallies.

Ford, the leader a year ago, had more than 15,000 fewer registrations through February than last year, and suffered a loss of 5.68 points in its share of the industry total.

This year, Ford accounted for 26.83 percent of the two-month count, compared with 32.51 percent in 1981 with 105,562 registrations.

Registrations of Dodge and GMC trucks were up significantly over the first two months of 1981, and their penetration showed a marked improvement. The Dodge share was up almost two points, and GMC's was close to 1.5 points.

2 dealer groups endorse American Warranty

LOS ANGELES. — The New Mexico Automotive Dealers Assn. here has endorsed American Warranty Corp. after a review of service contract companies.

Earlier, American Warranty won endorsement from the Georgia Automobile Dealers Assn.

HD registrations for two months dip 17.1 percent

Continued from Page 14

months totaled 1,022 units, an increase of 24 percent over the year ago 825. Its penetration was up 1.73 points, from 3.49 percent of the 1981 total to 5.22 percent.

International lost a little ground in February, with No. 2 Ford narrowing the gap to only 61 units. International had 4,222 registrations, compared with 4,161 for Ford.

International's share of the industry total through February was down 4.44 points from last year. In 1981, it accounted for 25.98 percent with 6,144 tallies, compared with 21.54 percent this year with 4,222 units units.

Two-month registrations were down significantly this year in both Groups 7 and 8.

The Group 7 count was off 20 percent, from 10,422 units last year to 8,320. There were 11,278 Group 8 tallies this year, a decline of 14.7 percent from the year-ago 13,226 units.

Alfa Romeo adds electronics, holds price for Spider

ENGLEWOOD CLIFFS, N. J. —Alfa Romeo has added fuel injection and electronic ignition for its 1982 Spider Veloce, increased its price by five dollars and increased dealer margins.

The two-seat convertible gets Bosch L-Jetronic fuel injection. A color-keyed interior is also offered this year, with more colors available.

Standard equipment includes leather seats, power windows and mirrors, alloy wheels and ZF limited-slip differential. Optional Daytona-style wheels are new this year.

The Spider Veloce's list price is $14,990 — $5 more than for '81 models. Dealer discount has been increased to 17 percent from 15 percent.

Worldwide Truck gets bigger share of GM operations

Continued from Page 14

grate and strengthen the Truck and Bus Group to capitalize on the long-term needs of an expanding worldwide market," McDonald said.

"We have continued to be impressed with the potential for growth in the years ahead, particularly in the developing nations.

"In bringing together our expertise in design, engineering, manufacturing, sales and service on a worldwide basis, we will maximize the opportunity to provide the types of products needed to meet customer demands around the world," he said.

In addition to the U. S. operation, the worldwide group also will have operational responsibility for the Bedford truck operations of Vauxhall Motors, Ltd., and product design responsibility for the truck and bus operations of GM of Canada, Diesel Division of Canada and the North American Vehicles Overseas organization.

The worldwide group will continue to co-ordinate its activities with those of GM do Brasil, Isuzu Motors, Ltd., Tokyo, of which GM owns 45 percent.

ATTENTION: FORD, CHRYSLER, GM DEALERS

Thank you for the great response at the NADA Convention to our new term life insurance rates. $25 million in sales in 3 days reflects what you think about our life insurance program.

EXAMPLE

GM MAXIMUM AMOUNT: $400,000
Male, Age 50
Non-Smoker Rate: $ 933.00
GM Annual Premium: $2,400.00
SAVINGS OF: $1,467.00
Smoker Rate: $1,960.00
GM Annual Premium: $2,400.00
SAVINGS OF: $ 440.00

CHRYSLER MAXIMUM AMOUNT: $200,000
Male, Age 50
Non-Smoker Rate: $ 501.00
CHRYSLER Annual Premium: $1,800.00
SAVINGS OF: $1,299.00
Smoker Rate: $1,034.00
CHRYSLER Annual Premium: $1,800.00
SAVINGS OF: $ 766.00

FORD MAXIMUM AMOUNT: $300,000
Male, Age 50
Non-Smoker Rate: $ 706.00
FORD Annual Premium: $2,040.00
SAVINGS OF: $1,334.00
Smoker Rate: $1,470.00
FORD Annual Premium: $2,040.00
SAVINGS OF: $ 570.00

Still have life insurance, even if you sell your dealership. Renewable and Convertible to age 100, rather than to age 70.

Chevrolet signs Kehl

MECHANICSBURG, O. — Dave Kehl has been franchised here by Chevrolet.

Prostrollo's 25th

Jerry L. Prostrollo, right, owner of Prostrollo Motor Co., Madison, S. D., receives Chevrolet's 25-year dealer plaque award from Sherman F. Fortner Jr., Fargo zone manager.

Kaisers, Frazers to be displayed

OAKLAND, Calif. — About 50 Kaiser and Frazer autos will be displayed here May 8 at a meet organized by the Kaiser-Frazer Owners Club International. The meet is in conjunction with the opening of a Henry J. Kaiser exhibit at the Kaiser Center.

The exhibit will depict the life of Henry Kaiser through photographs and memorabilia. Kaiser headed the company that built Kaiser, Frazer and Henry J cars at Willow Run, Mich., from 1946 to 1955. The company produced about 750,000 cars.

Make a Smooth Shift.

Prices are rising—and your market is changing.

More and more, customers who once would have insisted on brand new automobiles are opting for the savings and satisfaction of quality late-model used cars. The kind that may be scarce on your lot.

How can you smooth this shift in market conditions? Regulate your used car inventory at a Manheim Auction. You'll find more of those front-line '78's, '79's and '80's you need—at profit-boosting prices. You'll find plenty of buyers for your real performers!

And you'll find something else equally important: fair and equal treatment—the Manheim way!

Make a smooth shift—at a Manheim Auction. Send for our free brochure today.

But output of 117,628 is far below last year's

Car production edges up for week

By Patricia Hoffman
Staff Writer

Downtime at Volkswagen of America's Westmoreland facility and the one-day closing at General Motors' Framingham point in observance of Patriot's Day were offset by the return of three car assembly points last week, and U. S. auto production rose 2.58 percent from the previous week's total.

The auto makers targeted production at 117,628 units, up from 114,664 the previous week, but down 26.49 percent from the year-ago total of 160,006.

With the return of Ford's Lorain facility, all of Ford's assembly points were reported working last week. Also operating last week were all Chrysler Corp., Checker Motors and American Motors plants.

Production resumed last week at GM's Fremont and Lordstown points. Both were idle one week for inventory control.

VW of A's Westmoreland plant began the first of a two-week shutdown last week to control inventory. The plant is slated to return May 3.

GM's Leeds facility remained idle last week for inventory control.

Also at GM, the Oklahoma City and Janesville plants remain down for model changeover. Janesville is scheduled to resume operations Tuesday June 1 (the day after the Memorial Day Holiday) with production of the Cadillac Cimarron. Cimarron assembly was dropped from the South Gate assembly point when the plant was mothballed March 23.

Saturday overtime was scheduled last week at GM's Tarrytown facility. It was the third consecutive week of overtime at the plant.

Breakdown for the week by company is: GM, 58.66 percent; Ford, 26.46 percent; Chrysler, 13.60 percent; AMC, 1.19 percent and Checker Motors, 0.09 percent.

UAW drafting its demands for Chrysler negotiations

Continued from Page 3

cial, it is estimated that it will cost the company $2,873 for the health care benefits of each active worker and $1,745 for each retiree in 1982. That is $2.22 an hour.

According to the official, that reduces the labor cost gap between Chrysler and Ford-GM, currently set at about $3.50 an hour, to about $1.50 an hour. While the Chrysler ratio of active to retired workers is about one to one, GM has a little over two active workers to each retiree and Ford has about two to one, he said.

Chrysler had 105,000 active hourly workers in the U. S. in 1979 compared with 44,400 today. There currently are 40,600 hourly and salaried retirees.

"The only way we are going to be able to increase the number of workers is if the Chrysler market penetration fairy comes along and sales increase," said a Chrysler official.

Because of the high cost of pensions, Chrysler and the union will look at the structure of pension plans, hoping to cut the ratio. Besides increasing the number of people working, it is also possible to cut the number of workers who "bail out early," a Chrysler official said.

With the high cost of health care programs, it could be possible that vast changes might be made in eligibility. One program which has some support in the union is requiring workers who elect to have private physicians co-pay while those who use HMO's get full coverage.

"If this came up, I would not fight the concept," Stepp said. "I would look at it objectively."

Other areas of price cutting could be in an expanded use of generic drugs.

"The health care costs are a burden to the company," Stepp said. "A tripartite discussion is needed, but the insurance companies, the manufacturers and the workers must come to the party."

Stepp said the union also is interested in getting a guaranteed income stream (GIS) for Chrysler workers, but he indicated that it might not follow the same pattern as those recently negotiated at GM and Ford where high-seniority workers get a minimum of 50 percent of their pay if they are permanently laid off.

A Chrysler official said the company cannot afford a GM or Ford GIS plan.

Neither side expects profit sharing to be a major part of negotiations although it was a demand in the 1979 talks. So far, Chrysler has not generated enough profit to share under the negotiated formula.

Truck production jumps to 46,370, highest in 2 years

Domestic truck production last week was the highest in more than two years as three plants worked overtime and all of Ford Motor's facilities were operating.

Last week's truck production was targeted at 46,370 units, up 14.88 percent from 40,364 the previous week and a substantial increase of 48.47 percent from 31,232 in the comparable 1981 period. It was the highest weekly output for the makers since they finished 47,541 trucks in the week ended March 24, 1980.

General Motors scheduled Saturday overtime last week at its Janesville and St. Louis plants.

Also working six days was Chrysler Corp.'s Warren truck point. The plant has been operating a daily nine-hour shift.

All Ford Motor, International Harvester and American Motors facilities were reported working last week. Ford's Kentucky plant resumed operations last week.

GM's Flint point and Volkswagen of America's Westmoreland plant were both idle last week. Westmoreland began a two-week shutdown to control inventory. Operations are slated to resume May 3.

Car production rises in Canada, but trucks dip

With all Canadian car assembly points reported operating, last week's auto production climbed 1.97 percent from the previous week's total, but output fell 7.30 percent from last year's comparable week.

Last week's car output was targeted at 21,259 units, up from 20,848 the previous week, but down from 22,932 in the comparable 1981 week.

So far this year, the manufacturers have finished 270,925 cars, a 4.34 percent gain from 259,653 in the same period last year.

Truck production fell 1.09 percent last week to 12,926 units from 13,068 in the previous week, but the total was up 1.73 percent from 12,706 in the comparable 1981 week.

Year-to-date the truck makers built 160,786 units, down 10.52 percent from 179,681 in the same 1981 period.

Ford Motor's St. Thomas car point operated on two daily nine-hour shifts last Monday through Thursday, returning to normal eight-hour shift operations on Friday. The facility began working the four-day-a-week overtime schedule April 12 and plans to continue it for "the immediate future," Ford said.

General Motors' Oshawa (No. Two) car facility continued on a one-shift operation last week. The second shift was idled indefinitely April 12.

All car and truck facilities were reported working last week.

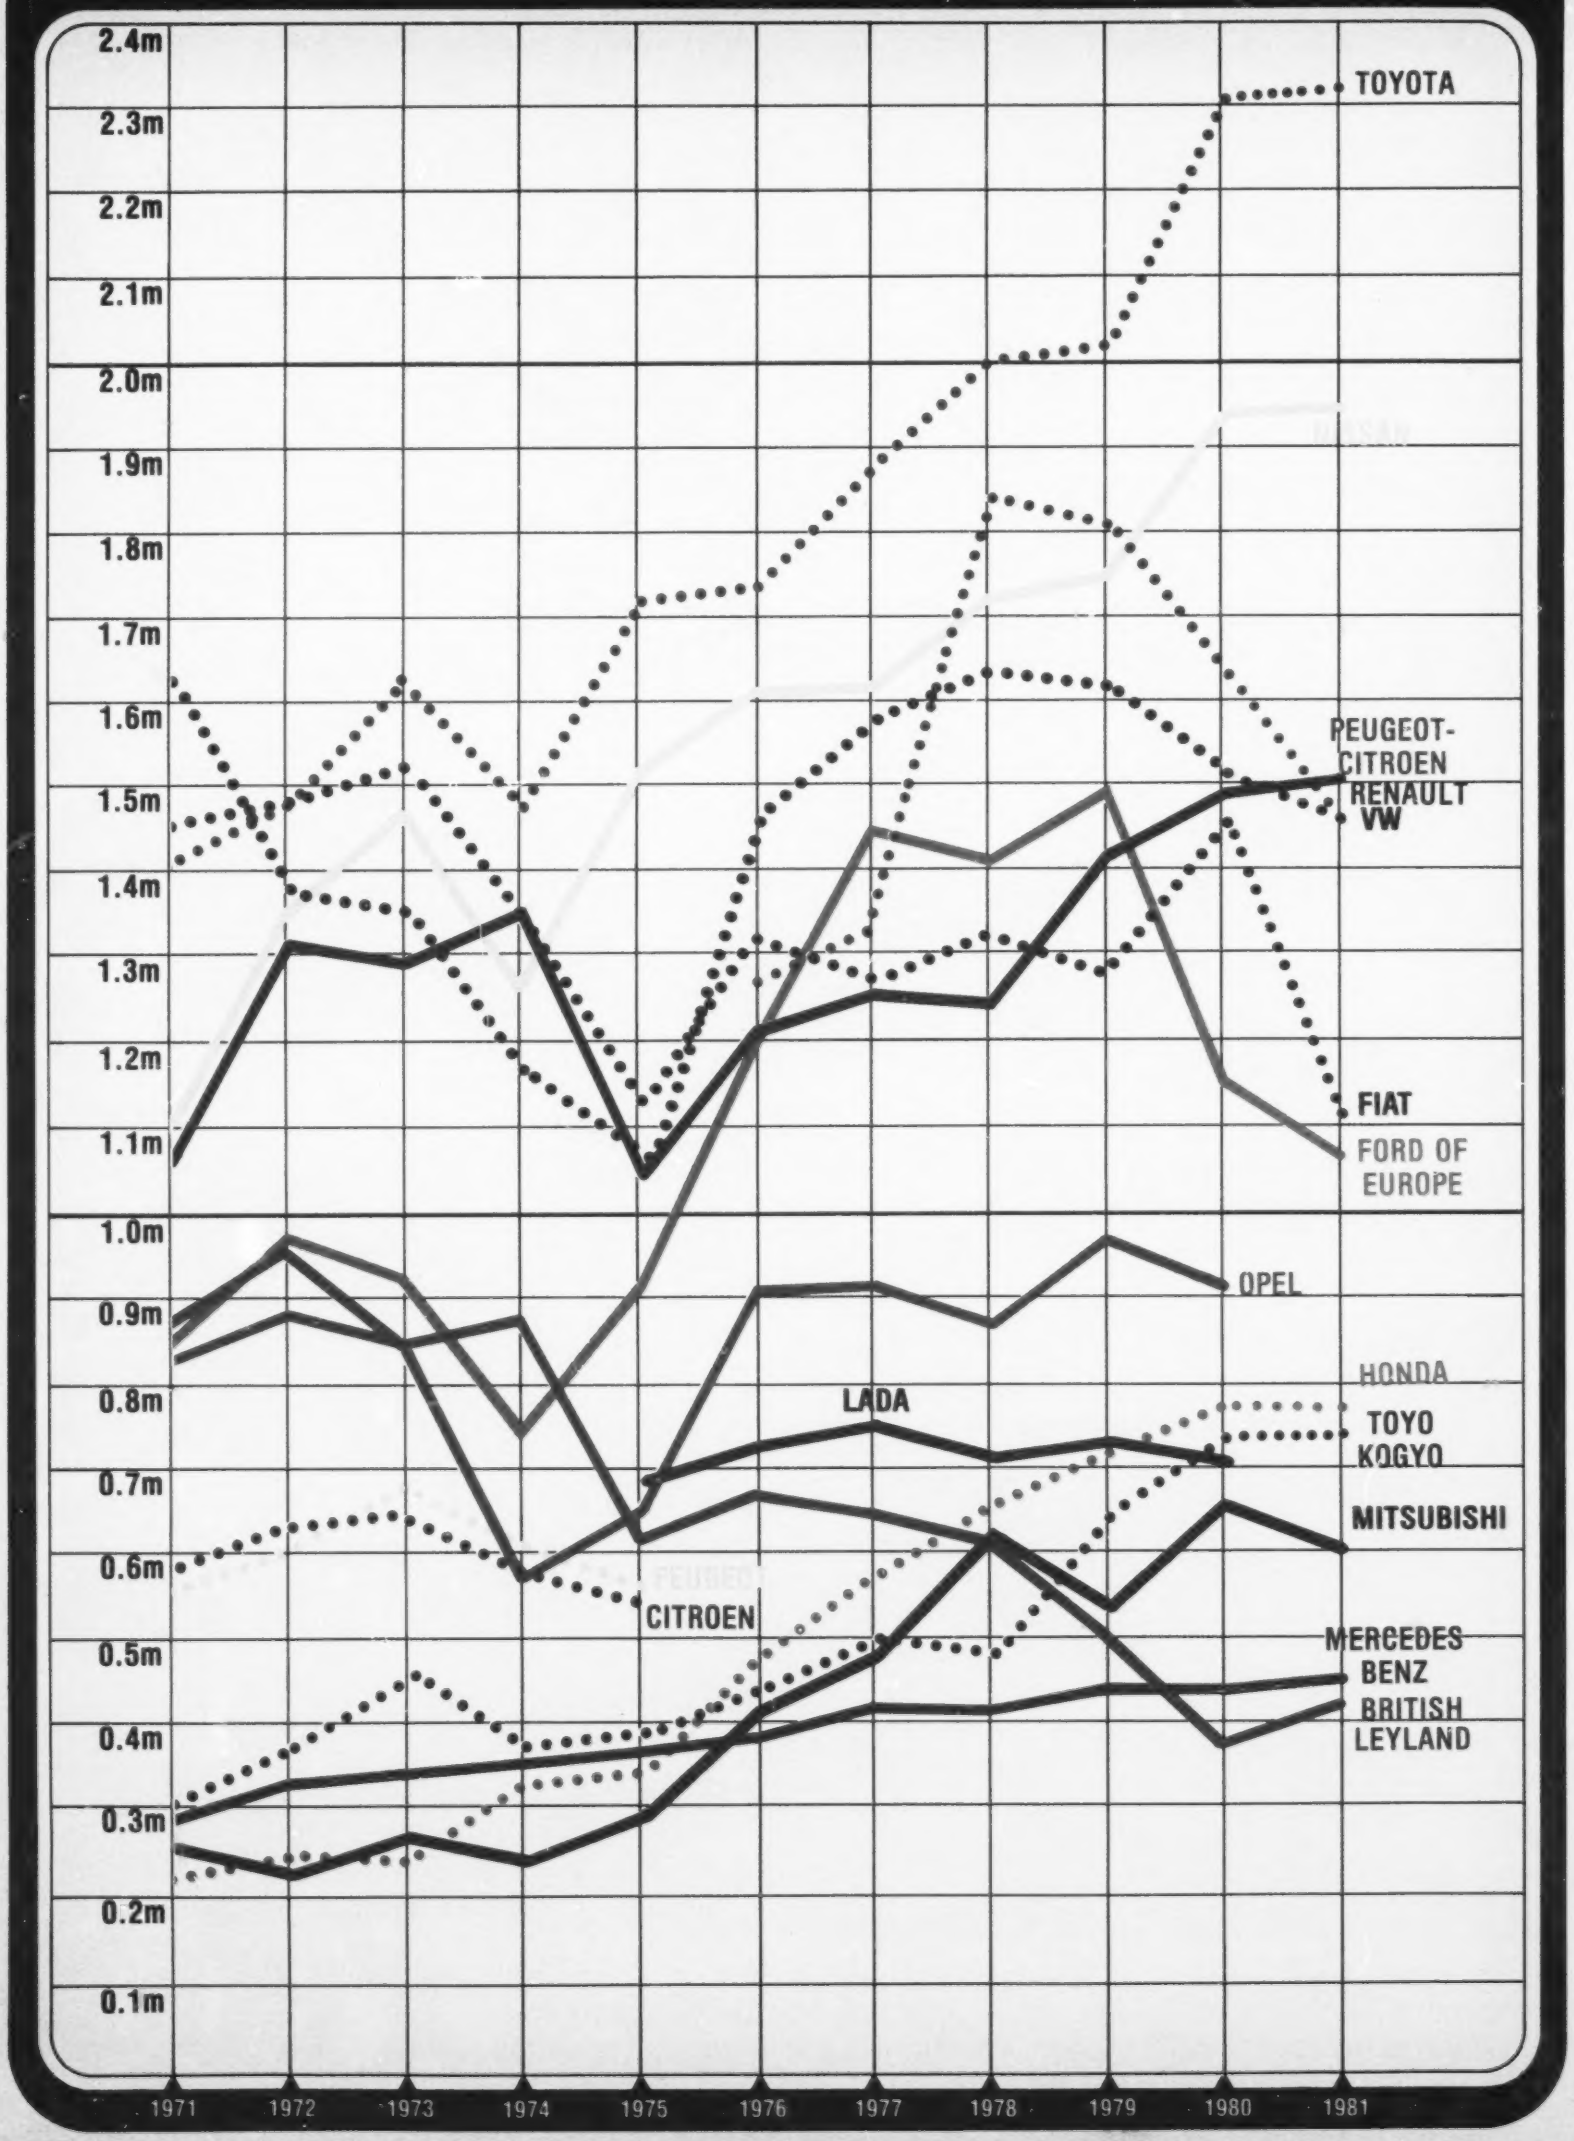
Car production by major makers outside North America



Car population getting older

New registrations dip and owners delay scrapping

DETROIT. — Americans are not only buying fewer new cars but they are holding on to their autos longer before sending them to the scrap pile, according to R. L. Polk & Co.

The result is an aging car population that has considerable significance for the aftermarket (replacement parts) industry and potentially pent-up demand for new cars.

Polk said the median age of the 106 million cars on America's highways has increased in a decade from 4.9 years to 6.0 years, highest since the 1950s. Polk's figures are compiled from registrations as of June 30, 1981, the latest available.

Polk's report showed that more than 9 million cars and trucks were not re-registered during the year ending June 30, 1981, and are presumed to have been scrapped during the previous year.

Of the 9,061,026 not re-registered, 7,542,480 were passenger cars and 1,518,546 were trucks.

The percentage of cars on the road as of June 30, 1981, that were scrapped during the year was 7.2, second lowest since 1958.

Total growth of the nation's motor vehicle car population was 2,076,463 during the period. Cars were up 1,274,801, and trucks by 801,662.

Total increase in the car population was 1.2 percent, same as the preceding year and the lowest rate since World War II.

*—Adjusted to reflect transfer of 1,310,918 passenger vans to truck total.

(1)—Each year many trucks are issued passenger car license plates due to their intended usage or local state laws. Beginning in 1968 VIN prefixes were utilized to achieve an accurate means of identifying these trucks in all states. The 1965 growth and scrappage figures have been adjusted to reflect the estimated 700,000 trucks which were selected from the passenger car file and properly counted as trucks.

(2)—Each year vehicles registered in one state to an address in a different state have been excluded from the count of vehicles in operation. Beginning in 1971 approximately 181,000 passenger cars registered to fleets at out-of-state addresses have been included.

Adjustments for the absence of Oklahoma and other states have been made where applicable.

R. L. POLK & CO. MOTOR STATISTICAL DIVISION

Production: Shaky start and abysmal finish result in lowest U. S. total since 1961

By Patricia Hoffman
Staff Writer

While domestic auto production held its own in the second and third quarters of 1981, a sluggish first three months and the worst fourth quarter in 22 years dragged car production down to its lowest point since the recession year of 1961.

The makers wrapped up 1981 with 6,280,045 units, down 2.13 percent from 6,416,885 in the comparable 1980 calendar year, and the lowest yearly output since 5,522,004 units were built in 1961.

Last year began on shaky ground as the auto makers put out only 1,565,531 units in the first quarter, a 12.99 percent decline from previous year's 1,799,171. It was the lowest output for that quarter since 1,300,972 units in 1973.

Production for the second three months fared considerably better with 2,032,219 units, a 23.74 percent gain from 1,642,293 in the same 1980 quarter, and the most for that period since 2,485,124 units were built in 1979.

It was the strong second quarter which helped boost the first six months total to 3,597,750 units, up 4.54 percent from 3,441,464 in the first half of 1980.

In the third quarter, the makers finished 1,373,521 units, up 8.64 percent from 1,264,276 in the comparable period last year, and the highest total for that quarter since 1,651,965 in 1979.

In the final period of 1981, the makers assembled only 1,308,774 units, down 23.51 percent from 1,711,145 completed in the last three months of 1980. It was the lowest fourth-quarter total since 1959 when 1,259,839 units were assembled.

Chrysler Corp., and Ford Motor Co. offered the only gains in production for 1981. Chrysler finished with 749,687 units, up a substantial 17.41 percent from 638,535 in 1980, and Ford completed 1,320,198 units, up 1.01 percent from 1,306,948.

Due to stabilizing gas prices towards the latter part of 1981, production of intermediate and luxury cars rose from that of the comparable 1980 period, as did that of subcompacts.

Lineup of U. S., Canadian assembly plants

WHERE '82 CARS ARE BUILT

United States

AMERICAN MOTORS

Kenosha, Wis. — Eagle, SX4, Concord, Spirit, *Alliance

CHRYSLER CORP.

Belvidere, Ill. — Omni, Horizon, 024, TC3
Jefferson (Detroit) — Aries, Reliant, LeBaron, Dodge 400 (4-door)
Newark, Del. — Aries, Reliant
St. Louis — Dodge 400 (2-door), LeBaron

FORD MOTOR CO.

Atlanta — Cougar, Granada, Futura, Zephyr
Chicago — Granada, Cougar
Dearborn — Mustang, Capri
Kansas City — Futura, Zephyr
Lorain, O. — Thunderbird, XR-7
Metuchen (Edison) N. J. — Escort, Lynx
St. Louis — Mercury
San Jose — EXP, LN7, Escort, Lynx
Wayne, Mich. — Escort, Lynx
Wixom, Mich. — Continental, Mark VI, Lincoln Town Car

GENERAL MOTORS

Arlington, Tex. — Malibu, Monte Carlo, Regal
Baltimore, Md. — Malibu, Monte Carlo
Bowling Green — Corvette
Detroit — Cadillac
Doraville, Ga. — Century, Cutlass Ciera
Fairfax, Kan. — Oldsmobile, Buick
Flint — Regal, Buick
Framingham, Mass. — Celebrity, Pontiac 6000
Fremont, Calif. — (Shutdown March 5, 1982)
Janesville, Wis. — (Shutdown Jan. 18, 1982. Will resume late spring with production of the J-2000 and Skyhawk-J)
Lakewood, Ga. — T-1000, Chevette, Acadian
Lansing — Cutlass, Oldsmobile
Leeds, Mo. — J-2000, Skyhawk-J, Firenza
Linden, N. J. — Eldorado, Seville, Toronado, Riviera
Lordstown, O. — Cavalier, J-2000
Norwood, O. — Firebird, Camaro
Oklahoma City — (Closed for model changeover, Jan. 18, 1982. Back sometime late spring)
Pontiac, Mich. — Bonneville-G, Grand Prix
South Gate, Calif. — (Closed March 23, 1982)
Tarrytown, N. Y. — Skylark, Phoenix, Citation
Van Nuys, Calif. — Camaro, Firebird
Willow Run, Mich. — Skylark, Omega
Wilmington, Del. — Chevette, Acadian, T-1000

VOLKSWAGEN OF AMERICA

Westmoreland, Pa. — Rabbit

CHECKER MOTORS

Kalamazoo, Mich. — **Checker (cabs)

*Production of the Alliance to begin at Kenosha June 2, 1982.
**Production of Checker Cabs is slated to end July, 1982 at Kalamazoo.

Canada

AMERICAN MOTORS

Brampton, Ont. — Eagle, Concord

CHRYSLER CORP.

Windsor, Ont. — Cordoba, Mirada, Imperial, Gran Fury, Diplomat, Caravelle, New Yorker.

FORD MOTOR

Oakville, Ont. — Ford, LTD

Lineup of U. S., Canadian assembly plants

WHERE '82 TRUCKS ARE BUILT

United States

GENERAL MOTORS

Arlington, Tex. — light Chevrolet and GMC trucks
Detroit — light Chevrolet and sport utility vehicles
Flint — light Chevrolet and GMC trucks, sport utility vehicles
Janesville, Wis. — light Chevrolet and GMC trucks
Lordstown, O. — Chevrolet and GMC vans
Moraine, O. — light Chevrolet and GMC trucks
Pontiac — light, medium and heavy duty GMC and Chevrolet trucks, buses
Shreveport — light Chevrolet and GMC trucks
St. Louis — light Chevrolet and GMC trucks

CHRYSLER CORP.

Belvidere Ill. — light duty Dodge
Warren, Mich. — light duty, Dodge, sport utility vehicles

FORD MOTOR

Kansas City — light trucks, super cabs
Kentucky — medium, heavy and extra heavy trucks
Lorain, O. — vans
Louisville, Ky. — light trucks
Norfolk, Va. — light trucks
Ohio — vans
Michigan — light trucks, sports utility vehicles
Twin Cities, Minn. — light trucks
San Jose — light trucks

INTERNATIONAL HARVESTER

Fort Wayne — heavy trucks
Springfield, O. — medium and heavy trucks, buses

MACK

Allentown, Pa. — heavy Mack trucks
Hayward, Calif. — heavy Mack trucks
Macungie, Pa. — heavy Mack trucks

JEEP

Toledo, O. — Jeep vehicles

AM GENERAL

South Bend — military and postal vehicles

VOLKSWAGEN OF AMERICA

Westmoreland, Pa. — light trucks

Canada

CHRYSLER

Windsor, Ont. — vans

FORD

Oakville, Ont. — light and medium duty trucks

GENERAL MOTORS

Oshawa, Ont. — light Chevrolet and GMC trucks
Scarborough, Ont. — Chevrolet and GMC vans
London, Ont. — buses

INTERNATIONAL HARVESTER

Chatham, Ont. — buses, medium trucks
Vancouver, B. C. — heavy, off-highway trucks

MACK

Oakville, Ont. — heavy trucks

Compact pickups could help a lot

Truck sales outlook iffy

By Jack Walsh
Truck & RV Editor

In spite of the persistent economic slump, total new-truck sales in the U. S. in 1982 could show a significant gain over last year, with light trucks—especially the all-new domestic compact pickups—leading the way.

Close to 700,000 units were retailed in the first quarter, and if this trend continues, the final count should be approximately 2.8 million vehicles. This would be almost 25 percent higher than last year's 2.25 million, and would be the best year since 1979.

Big-truck sales, however, are expected to remain flat most of 1982, with brightening prospects of a return to more nearly normal sales levels in 1983.

*—Adjusted to reflect transfer of 1,310,918 passenger vans from passenger car total to truck total.
1.—Each year many trucks are issued passenger car license plates due to their intended usage or local states laws. Beginning in 1966 VIN prefixes were utilized to achieve an accurate means of identifying these trucks in all states. The 1965 growth and scrappage figures have been adjusted to reflect the estimated 700,000 trucks which were selected from the passenger car file and properly counted as trucks.
Note: Adjustments for the absence of Oklahoma and other states have been made where applicable.

Registrations for the State of Oklahoma are not available.

Import registrations slip, penetration gains

By Richard A. Wright
ASST. MANAGING EDITOR

Registrations of new imported cars slipped a bit in 1981, but not as much as the entire U. S. market and, as a result, imports took 28.80 percent of new-car registrations in the U. S. for the year, compared with 28.18 percent in 1980.

The penetration gain was made despite the "voluntary" restrictions on imports into the U. S. agreed to by Japanese makers. While the restrictions probably had a lot to do with the decline in new-import registrations — to 2,325,235 in 1981 from the record 2,396,934 in 1980 —they only leveled off the growth in penetration, which had been climbing in a sharp upward curve.

The two new import nameplates made their debut in the U. S. in 1981, the DeLorean from the United Kingdom and the Isuzu, from Japan. Three venerable British nameplates are no longer imported—MG and Triumph, both import pioneers in the U. S., and Rover.

IMPORTED NEW-CAR SALES IN U. S. SINCE 1974

IMPORTED-CAR RETAIL OUTLETS

	Jan. 1, 1982	Jan. 1, 1981
Imported cars only		
Exclusives	2,703	2,937
Duals	1,320	1,624
	4,023	4,561
Import-domestic duals		
U. S. duals w/captive imports	4,431	9,019
U. S. duals w/other imports	3,563	3,101
	7,994	12,120
Total imported-car outlets	12,017	16,681

Note: VW was included in 1981 import totals, but is counted as a domestic line for 1982. If VW had been counted as an import in '82, it would have added 445 import outlets and made the total 12,462.

Captive-import duals are Dodge—Colt and Challenger, Plymouth—Champ and Sapporo and, for 1981 only, Ford—Fiesta.

1981 TOTALS (End of Model Year)	87	141	0	50		(278)

*—2-door total includes hatchbacks, which some makers list as 3-door models.
**—Revised 1981 totals.
***—The '82 New Yorker and Gran Fury are classified as intermediates. The '81 Gran Fury was the standard-size Plymouth. The '81 New Yorker was a standard-size Chrysler.
†—Volkswagen of America total includes only U. S.-built models.

RETAIL PRICES, U. S. MODELS

This table represents 1982 domestic prices in effect April 1, 1982, and rounded off to the nearest dollar. All prices are Manufacturer's Suggested Retail Prices. They do not include destination charges, state and local taxes, optional equipment or any other charges that may be passed on to the local buyer. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned.

Options: Quest for manufacturing simplification points to fewer extra-cost offerings in the future

By Joseph Bohn
Marketing Editor

There'll be fewer options offered in the future, predicts one domestic Big Three marketer.

The quest for simplification in manufacturing and downsizing of autos will continue to impact the variety of extra accessory items offered on cars, according to Allen K. Strunk, option programs manager—Ford Division.

"Some items that run very high rates will become standardized unless (consumer resistance to car) price gets to us . . . Some options that run very low rates will disappear from the market," Strunk said.

"One of the benefits of simplification (beside lowering costs) is that it assists in quality.

"We carefully evaluate low installation rate items . . . anything under 5 percent, though we still carry some for marketing considerations."

Ford had a 10-15 percent reduction of the options it offers in its total matrix system over the past year or so. Where it had three or four sizes of optional tires, for example, it eliminated some. Whitewalls were eliminated on some cars,

Note: Figures are generally based on U. S. production. However, Canadian-only sourced cars, such as Cordoba/Mirada and LN7, are included in some instances, also, some '82-only models, such as EXP/LN7 and Cimarron and Cavalier, built during the '81 model run.

Figures are based on production of 6,758,283 '81 models, including 4,204,064 GM cars, 1,503,946 Ford cars, 733,523 Chrysler models, 137,125 AMC and 179,835 Volkswagens.

GM's total includes 856,996 Buicks, 252,256 Cadillacs, 1,573,093 Chevrolets, 940,654 Oldsmobiles, and 481,065 Pontiacs. Ford's total includes 1,021,945 Ford Division and 482,001 Lincoln-Mercury models. Chrysler's total includes 421,525 Chrysler-Plymouths and 311,988 Dodges.

Continued from Page 74

as were optional upgrade trim packages.

Downsizing is having a great impact on optional equipment. Power door locks, for example, aren't as necessary on a smaller vehicle as previously larger ones where a driver had to reach 4½ feet across the car to lock a door.

Similarly, more people are content to take the base engine on cars today, rather than upgrading to a larger, more powerful one, Strunk said.

The same is true of tires. With radials standard in the industry there's less inclination to upgrade. And there's a great trend away from whitewall tires into blackwalls, Strunk added.

The Escort line, for example, has a very low rate of optional whitewall tires, he pointed out.

Vinyl roofs are rapidly becoming extinct, Strunk added. They're not offered on a number of new vehicles where the "character lines in the greenhouse shape doesn't lend itself to the vinyl roof style," he said. Also, they're not offered on many cars in combination with two-tone paints because of a clash in patterns.

Two-tone paint options themselves, of course, have sliced into the vinyl roof market. And people have been "thrifting themselves" out of vinyl roofs—one of the easiest non-functional items a shopper can save money on.

Strunk also noted that automatic transmissions are declining, as smaller cars come into vogue.

On the other side, he noted that traditional options, such as premium radios, electric defrosters and

Continued on Page 78

COST OF OPERATING CARS IN U. S. AREAS

Basing Point	Fixed Per Day	Running Per Mile
Portland, Oregon	$6.70	8.30c
San Francisco, California	7.53	9.35
Spokane, Washington	6.84	8.70
Sacramento, California	6.76	9.50
Boise, Idaho	6.34	8.70
Butte, Montana	6.20	8.60
Denver, Colorado	6.42	8.65
El Paso, Texas	7.22	7.90
Omaha, Nebraska	6.99	8.50
Dodge City, Kansas	6.56	7.30
Corpus Christi, Texas	6.96	7.20
Duluth, Minnesota	6.40	8.30
Des Moines, Iowa	6.38	7.35
Kansas City, Missouri	6.94	7.35
Joplin, Missouri	6.60	7.05
St. Louis, Missouri	7.27	7.45
Tulsa, Oklahoma	6.50	7.30
Ft. Smith, Arkansas	6.69	8.25
Houston, Texas	7.93	7.35
Jackson, Mississippi	6.44	8.80
New Orleans, Louisiana	7.15	8.55
Chicago, Illinois	6.98	7.75
Milwaukee, Wisconsin	6.61	7.55
Louisville, Kentucky	6.56	8.20
Nashville, Tennessee	6.06	8.45
Birmingham, Alabama	6.20	8.60
Traverse City, Michigan	6.39	8.30
Youngstown, Ohio	6.97	7.25
Syracuse, New York	6.95	8.20
Elmira, New York	6.78	7.45
Pittsburgh, Pennsylvania	6.73	8.50
Williamson, West Virginia	6.36	8.50
Chattanooga, Tennessee	6.37	8.55
Saratoga Springs, New York	7.04	8.40
New York, New York	8.23	8.50
Chelsea, Massachusetts	8.99	7.20
Bayonne, New Jersey	7.57	7.20
Norfolk, Virginia	6.41	7.45
Charleston, South Carolina	7.79	8.45
Miami, Florida	7.04	7.50

Footnotes:

1. Above costs are based on representative model 1982 Ford, Chevrolet, Plymouth compact cars, 6 cylinder engines, 4 doors, equipped with standard accessories, radio, automatic transmission, power steering and power disc brakes.
2. Fixed costs include depreciation, based on a 4-year trade-in cycle or 60,000 miles, whichever comes first, individual state license fees and taxes, individual state sales and user taxes, financing costs and insurance premiums based on a commutation category, where the vehicle is driven less than 10 miles to or from work and there is no youthful operator, $100 deductible comprehensive, $250 deductible collision, $100/300M bodily injury and $50M property damage.
3. The running costs include the cost of fuel (no-lead regular), oil, normal preventive maintenance, repair costs, washing, lubrication and tires.
4. If the mileage exceeds 15,000 per year, add a further depreciation allowance of 4.2c per mile.

*Lincoln-Mercury does not break out specific radio types with CB. All sound systems equipped with a CB are included in the AM/FM w/CB column.

**—Cimarron offered only AM/FM stereo with cassette tape during the abbreviated '81 production run. Some 39.4 percent of buyers chose to delete it, since it was billed as a delete option. Cadillac does not promote radios in its other lines as delete options, although it said customers always retained that prerogative. It didn't track deletes of radios on other lines, but guessed they were fewer than 1 percent. AM/FM stereo is standard on all Cadillac lines, except Cimarron.

Continued from Page 76

power assist items with functional value have been increasing on smaller cars. They have a secure future, Strunk added.

"Historically, compact and small-specialty models had lower installations," Strunk pointed out. "But these have been increasing on new small models."

Pinto, for example, only had about a 25 percent penetration of air conditioning; whereas Escort's rates had been running close to 50 percent in mid-'82.

While small cars don't carry the same kinds of equipment loads that traditional full-size models have had, the penetration rates of items like air conditioning, electric defrosters and premium radios have doubled over historical rates for these models.

In round numbers, the average equipped Escort carried about $1,500 worth of optional equipment in mid-'82. The figure, affected by the large numbers of base Escorts available, was down from '81.

At the other end of the spectrum, an average-equipped Thunderbird carried about $2,500 worth of options and the average full-sized Ford about $3,000 worth, Strunk said.

Within the next few years, he sees a big growth in graphic display and electronic-type optional equipment: Graphic readouts of fuel economy, elapsed travel time, etc.

Although they're not expected to be high-volume items, such packages will be up sharply from their current 5-10 percent penetration levels, he predicted.

Interestingly, the reduction in dealer inventories of vehicles helped boost optional equipment offerings to some degree in '82.

Power steering, tilt wheel

Meanwhile, Saginaw Steering Gear Div. of General Motors sees a fairly bright future for power steering and tilt wheel.

It expects power steering to be at about 90 percent by 1985 for General Motors cars, slightly below current levels, and tilt wheel to hit 65-70 percent.

Donald Schutt, marketing manager for Saginaw Steering Gear, said that through January, 1982, power steering had in fact been running at 64 percent on GM cars, "so that projection (for '85) is not as far-fetched as it may seem."

"Tilt wheel has been growing beyond our wildest imagination on small cars, doing particularly well with younger people," Schutt said.

Saginaw Steering has typically promoted tilt wheel as a way to facilitate entry and exit from a small

Total Cars, U. S.	2,486,775	36.80	319,792	4.73	2,518,705	37.27

Note: Figures are generally based on U. S. production. However, Canadian-only sourced cars, such as Cordoba-Mirada, are included in some instances; also, some '82-only models, such as EXP/LN7 and Cimarron and Cavalier, built during the '81 model run.

Figures are based on production of 6,758,283 '81 models, including 4,204,064 GM cars, 1,503,946 Ford cars, 733,513 Chrysler models, 137,125 AMC and 179,635 Volkswagens.

GM's total includes 856,996 Buicks, 252,256 Cadillacs, 1,673,093 Chevrolets, 940,654 Oldsmobiles, and 481,065 Pontiacs. Ford's total includes 1,021,945 Ford Division and 482,001 Lincoln-Mercury models. Chrysler's total includes 421,525 Chrysler-Plymouths and 311,988 Dodges.

*Includes SX-4.

Note: Figures are generally based on U.S. production. However, Canadian-only sourced cars, such as Cordoba/Mirada, are included in some instances; also, some '82-only models, such as EXP/LN7 and Cimarron and Cavalier, built during the '81 model run.

Figures are based on production of 6,758,283 '81 models, including 4,204,064 GM cars, 1,503,946 Ford cars, 733,513 Chrysler models, 137,125 AMC and 179,635 Volkswagens.

GM's total includes 856,996 Buicks, 252,256 Cadillacs, 1,673,093 Chevrolets, 940,654 Oldsmobiles, and 481,065 Pontiacs. Ford's total includes 1,021,945 Ford Division and 482,001 Lincoln-Mercury models. Chrysler's total includes 421,525 Chrysler-Plymouths and 311,988 Dodges.

Continued from Page 78

car, an inexpensive way to compensate for the size of the car.

Tilt wheel has been running about 50 percent on GM's smaller cars West of the Mississippi, and there's been good sales movement in the Midwest as well, with the Northeast the only area where the option does poorly, he said.

The telescope wheel option is only offered by GM, and will continue to have a limited market on select high-line models, like Cadillacs, Riviera, Toronado, etc., Schutt feels.

Meanwhile, power steering, he said, is getting increasing acceptance on small cars which will help offset the future decline in larger models where the item is standard.

Radios

James E. Cain, assistant general sales manager, Delco Electronics Division, General Motors, predicted a big trend toward "pre-recorded music" over the next several years.

Cassettes and new, still to be introduced, microcassettes, will be included in most car sound systems

*Cimarron power seats are for driver side only.

Note: Figures are generally based on U. S. production. However, Canadian-only sourced cars, such as Cordoba/Mirada, are included in some instances; also, some '82-only models, such as EXP/LN7 and Cimarron and Cavalier, built during the '81 model run.

Figures are based on production of 6,758,283 '81 models, including 4,204,064 GM cars, 1,503,946 Ford cars, 733,513 Chrysler models, 137,125 AMC and 179,635 Volkswagens.

GM's total includes 856,996 Buicks, 252,256 Cadillacs, 1,673,093 Chevrolets, 940,654 Oldsmobiles, and 481,065 Pontiacs. Ford's total includes 1,021,945 Ford Division and 482,001 Lincoln-Mercury models. Chrysler's total includes 421,525 Chrysler-Plymouths and 311,988 Dodges.

Continued from Page 80

in the future, Cain predicted.

"Young people today who will be the major buyers in the next five to seven years will all want pre-recorded music."

In the last four to five years the trend has been out of AM into AM/FM stereo. This will continue, with AM/FM stereo, including cassette, becoming the most popular combination over the next several years.

"A lot depends on how fast we can develop the technology to get costs out of the product," he added.

AM/FM stereos without tape will be the second most popular combination by then by 1985, Cain said.

Simple AM and AM/FM units will become passe, particularly when the Federal Communication Commission approves AM stereo, he predicted.

"We don't know when approval will come. But it will come because broadcasters have to have it. Then AM monaural and AM/FM monaural will become obsolete."

Delco has a new micro-cassette under development, along with other manufacturers, that will be introduced within a few years. It will compete with today's conventional size cassettes, leaving eight-track tapes behind.

Eight-track tapes, Cain added, are still popular with the older age group, and others who have money invested in libraries of such tapes. But, "without question," the market is moving "into cassettes and something smaller," he added.

Air conditioning

Michael K. Walsh, general sales manager for the Harrison Radiator Division, feels that air conditioning will "hold pretty steady to what we've seen in the past."

"As people downsize, those that have had factory-installed 'air' recognize the benefits of it and tend to order it in their new smaller cars," he said.

"As a composite, air conditioning will hold to the high levels of today. Implied in that forecast is an ever-increasing number of smaller vehicles with air conditioning," Walsh said.

Auto companies don't have the competitive problems with air conditioning that they've had with radios.

There is some aftermarket 'air' installed in vehicles, Walsh noted, but "it's a very small portion of the total market. The reason is the significant performance differential between aftermarket and factory air."

NOTE: Figures are generally based on U. S. production. However, Canadian-only sourced cars, such as Cordoba/Mirada, are included in some instances; also, some '82-only models, such as EXP/LN7 and Cimarron and Cavalier, built during the '81 model run.

Figures are based on production of 6,758,283 '81 models, including 4,204,064 GM cars, 1,503,946 Ford cars, 733,513 Chrysler models, 137,125 AMC and 179,635 Volkswagens.

GM's total includes 856,996 Buicks, 252,256 Cadillacs, 1,673,093 Chevrolets, 940,654 Oldsmobiles, and 481,065 Pontiacs. Ford's total includes 1,021,945 Ford Division and 482,001 Lincoln-Mercury models. Chrysler's total includes 421,525 Chrysler-Plymouths and 311,988 Dodges.

Dealers: Higher operating costs, soaring interest rates, declining sales—1981 was a tough year

By Francis J. Gawronski
Service Editor

For the franchised new-car dealers it was more of the same in 1981—declining new-car sales, high interest rates, a staggering national economy and increasing operating costs.

These factors and others helped make 1981 a year in which dealers were hard pressed to make ends meet. Many didn't solve the economic riddle and fell by the wayside.

With the new-car sales outlook still cloudy, dealers will continue to rely on other segments of the new-car dealership—service, parts, used-cars, leasing and daily rental operations—to help them make it over the current economic slump.

If developed properly, these operations can be converted into profit centers not only during the current crisis but also through the ensuing years.

As of Jan. 1, 1982, there were 21,680 franchised dealerships operating in the U. S., compared with 21,772 at the same time the year before, a decline of 0.41 percent. The decline in the number of dealerships between 1981 and 1980 decreased 6.87 percent.

Parts and service business written by new-car dealerships in 1981 amounted to $23,400 million, compared with $22,700 million in 1980 for an increase of 3.1 percent.

Including new-car dealerships, there were a total of 296,950 automotive repair facilities in the U. S.

*—GM's total expenditures in 1980 were $316,000,000, according to Advertising Age, down 2.29 percent from $323,395,900 the previous year. However, these included component divisions and other expenditures.

"Unmeasured" includes dealer association funds for Ford and Lincoln-Mercury, as well as other expenditures like sales promotion. In the case of Chrysler-Plymouth and Dodge, unmeasured refers solely to dealer association funds.

Volkswagen	21,708.6	19,434.7	12,953.6	4,949.4	.....	94.8	579.2	11,000.0	70,720.3	56,842.1
Mazda	6,296.3	20,335.1	2,760.0	573.4	.....	.....	151.2	9,000.0	39,116.0	35,308.1
Honda	9,354.0	12,471.0	.....	411.0	.....	50.0	.....	11,962.0	34,248.0	28,410.0
Subaru	5,000.0	6,500.0	2,000.0	500.0	.....	.....	.....	10,000.0	24,000.0	21,000.0
Fiat	3,900.0	.....	8,300.0	525.0	.....	850.0	.....	.....	13,575.0	12,900.0
Jaguar Rover Triumph	7,100.0	4,800.0	500.0	250.0	.....	.....	.....	.....	12,650.0	11,500.0

Toyota, Datsun, Volkswagen and Mazda figures are Advertising Age estimates, with the "unmeasured" portion of their expenditures supplied by industry sources.

Subaru's figures are based on direct company reports, although individual media breakdown is estimated. Subaru reported spending a total of $24 million last year, including $4-$5 million in shared advertising costs with its distributors and $4-$5 million in production costs and public relations. Actual media dollars spent were $14 million, according to Harvey Lamm, president.

Honda's figures are from direct company reports and do not include motorcycle advertising. Honda's unmeasured includes $7,606,000 for dealer advertising allowance. Dealers do not have to contribute matching funds to get this money. Other "unmeasured" includes $126,000 for yellow pages, with the remainder in brochures, shows and exhibits and production costs, etc.

Fiat is based on industry estimates. Jaguar Rover Triumph ad figures are based on company reports.

Riviera	23,994

Comparison of selected 1982 and 1981 domestic models by market class. Prices are Manufacturer's Suggested Retail Prices. The 1982 prices are those in effect April 1, 1982. The 1981 prices are those in effect at the end of the model year. No adjustment has been made for year-to-year equipment changes or for standard-equipment variations among competing models. If there is no entry in the 1981 column, it means the '82 model is new or had no direct counterpart in '81.

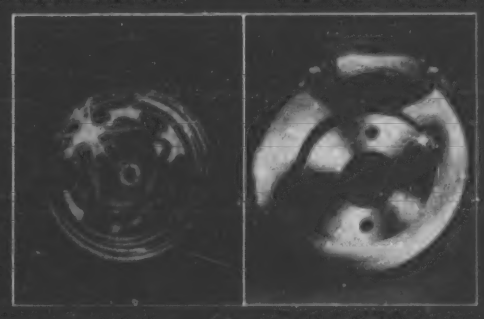
LIGHT-YEARS AHEAD...

Anticipating the demand for lighter-weight automotive components, Kelsey-Hayes has introduced several new products to meet the industry's challenges of the Eighties.

Highlighting recent developments are new, production-proven, lightweight fabricated aluminum wheels. They weigh up to 40% less than their steel counterparts ... less, too, than comparable forged or cast aluminum wheels. Taking advantage of the natural beauty and formability of aluminum, they can also be produced in many attractive designs that eliminate the need for traditional wheel covers.



Lighter, more compact, low-drag disc brake packages are another major Kelsey-Hayes contribution to automobile weight savings.

These new lightweight products reflect the same dedication to quality that has been a Kelsey-Hayes tradition for over seventy years. Kelsey-Hayes Company, Romulus, MI 48174. A subsidiary of Fruehauf Corporation.

Leading the way in weight savings

1st-quarter dip steepest on record

U.S. dealer total off 276

By John K. Teahen Jr.
Managing Editor

It's a new year, but there has been no letup in the attrition in the number of dealerships handling domestic makes of passenger cars.

In fact, the decline is getting worse.

The latest AUTOMOTIVE NEWS census finds that there were 21,404 outlets for U. S.-built cars on April 1, down 276 from the 21,680 counted on Jan. 1.

It was the steepest first-quarter decline in the 21 years AUTOMOTIVE NEWS has been compiling dealer totals on a quarterly basis.

This year's loss of 276 locations compares with dips of 221 in the first quarter of 1981 and 258 in the comparable period of 1980.

Back in the good old days of the U. S. auto industry, the declines were much lighter — 86 in the first quarter of 1979, 29 in 1978, 36 in 1977 and 51 in 1975.

Tables on Page 41.

All five of the major domestic manufacturers shared in this year's dropoff, but in widely varying degrees. The bigger they are, the bigger the fall.

American Motors and Volkswagen, the two smallest makers, fared best with dips of 12 and 14 outlets, respectively. Chrysler Corp. was down 29, and there were slips of 78 for Ford Motor Co. and 145 for General Motors.

That's a total of 278. A change in the number of intercorporate duals cut the industry's figure to 276.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

• GM's first-quarter loss was 10 times that of Volkswagen, but on a percentage basis they were about even. The GM dip of 145 outlets amounted to 1.36 percent of its dealer body; VW's 14 was 1.39 percent.

The first-quarter decline in dealer totals is simply another chapter in the saga of the depression gripping the domestic auto industry. A sharp upturn in deliveries and profits at the retail level is a must before the decimation can be curtailed.

Looking at franchise totals, Chrysler Corp. had the best record among the Big Three. Imperial and Plymouth each showed a gain of one franchise during the first quarter, while Chrysler was down five and Dodge car was down four. The franchise count was down less than the dealer total, indicating increased dualing among the corporation's four lines of cars.

The car franchise figures were down for each of the Ford Motor and GM lines. At Ford, the dips amounted to 66 for Ford cars, 34 for Mercury and 12 for Lincoln.

Chevrolet was down 65 franchises for the quarter, almost exactly the same as Ford. Elsewhere at GM, there were drops of 35 for Pontiac, 25 for Buick, 20 for Oldsmobile and 15 for Cadillac.

Chevrolet's 5,430 is the highest franchise total in the do-

'Gray-market' imports face tighter restrictions

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Lamborghini Countach, Ferrari Berlinetta Boxer, Porsche 930 Turbo, BMW M-1, Ferrari Mondial, Mercedes-Benz 500-SLC. To motoring enthusiasts they are the stuff of headspins, the vestal virgins of the auto kingdom, the epitome of what the most mundane of motoring vehicles could be, given enough money and freedom to conceive it. But, they are a headache, too, and, oddly enough, for the very people who make them.

Countachs, Boxers, 930 Turbos and the like are not sold here by Lamborghini, Ferrari and Porsche because the companies either could not or wished not to certify the cars to U. S. government standards on tailpipe emissions and safety.

The cars are, nonetheless, available here. Available from so-called, "importers for resale." These are entrepeneurs who, exploiting a loophole in the Clean Air Act, "certify" the vehicles to meet government tailpipe standards.

The "loophole" works as follows: Rather than running a full battery of emissions tests to certify that the vehicle will meet tailpipe emission standards for 5 years or 50,000 miles, as called for by the Clean Air Act, testing that costs on the order of $150,000 per engine family, importers for resale need pass only one test.

This test is a varied driving

breaking news

ASC and McLaren form joint firm

DETROIT. — Heinz Prechter's ASC, Inc., and McLaren Engines, Inc., have formed a new jointly held company, ASC/McLaren. Prechter said joining of the two companies provides a potential for the creation of "ultimate automotive specialty products" with unique design and powertrain characteristics. The new firm will be headquartered in Southgate, Mich.

AMC slaps release of Jeep rollover verdict

DETROIT.—American Motors Chairman W. Paul Tippett Jr. blasted a Reno (Nev.) judge for releasing his findings in favor of the plaintiff in a Jeep CJ-5 rollover suit after AMC had settled for $5 million. Tippett, at the AMC annual meeting, said the company won two previous rollover suits this year, but he refused to disclose how many suits were outstanding and how much settlements and awards cost AMC last year. The Reno judge released his opinion that the CJ-5 had faulty design despite AMC's attempts to quash the opinion by settling out of court. The opinion could be used as a precedent in other cases.

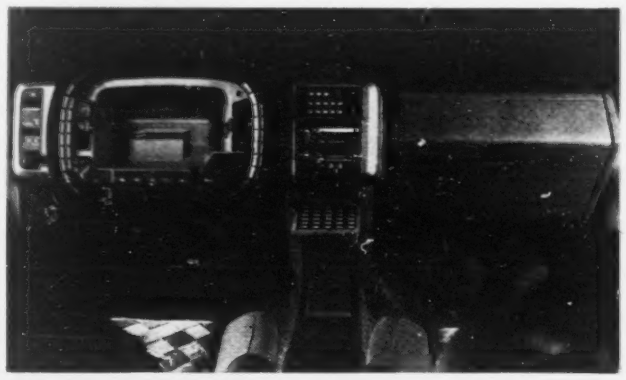
Turin toppers

New direction from ItalDesign

ItalDesign lends a classic shape to the 2-liter sedan with its Orca. The body features flush-fitted windows. Inside is a radically different instrument display replacing the speedometer and tachometer.



Space-age concept from Bertone

Bertone's Mazda MX-81 combines a wedge-shaped body with some radical features in the interior. Instead of a steering wheel, it has a crawler-track-type rack which rotates around a television screen. The screen displays information normally provided by dashboard instruments.

Striking Viking from Rayton Fissore

Rayton Fissore, Italian coachbuilder launched five years ago, turned out this version of a Saab Turbo for the Turin Motor Show. Rayton Fissore is also doing design work for Chrysler Corp.

But flair for design persists

Technology to the fore at Turin

By Richard Feast
European Editor

TURIN.—Everyone knows it—the Italians' reputation is for design flair, not as leaders of technology or production.

Everyone, that is, except the Italians. The domestic industry not only came up with its usual styling creations for the biennial auto show here, but it launched a major frontal attack on the areas of high technology and efficiency.

Not everyone is convinced, but the evidence is worth a closer look.

The vehicle technology involved two four-wheel-drive sedan developments, a Ferrari with a turbocharged engine, developments in engine cut-off systems, a production car with a mechanically driven supercharger, and the opening of a new research center by Pininfarina.

On the production front, Fiat Auto's managing director claimed efficiency improvements that put the company on a level with the rest of Europe. (It would be too much to expect favorable comparisons with the Japanese.)

Later, Alfa Romeo's chairman reported that his company's productivity has in recent weeks been "substantially aligned" with that of Fiat.

The public face of optimism may not be built of granite. But

Cimarron changes division's demographics

New types of buyers go for little Cadillac

By Al Fleming
Industry Editor

The little Cimarron is not just a big sales plus for Cadillac this year. It's also changing the division's owner profile.

In the 1982 model year through April 10, Cadillac sales were up 5,265 units over '81 model sales in the comparable period a year earlier. Virtually all the gain was accounted for by Cimarron, which wasn't introduced until last May.

Here are the Cadillac sales figures for the two model years through April 10:

	1982	1981
DeVille, Fleetwood Brougham	70,847	70,589
Eldorado	28,089	29,513
Seville	13,155	16,922
Cimarron	10,198	.....
Total	122,289	117,024

At a time when industrywide new-car sales are slumping along, Cadillac registered a 4.5 percent increase in the '82 model year through April 10 and a 4.6 percent improvement in its daily sales rate.

Cimarron is one of the smallest Cadillacs built since the Model D was introduced in 1905. It's the first Cadillac with a four-cylinder engine since 1914, and the first to feature a standard manual transmission since 1953.

The little four-door sedan is altering Cadillac's buyer profile, according to L. B. (Braz) Pryor, division general sales manager.

"It's changing our demographics," he said. "We used to attract mostly senior executives and professional people. Now the average age is coming down, and we're attracting young affluents and skilled trades people."

Pryor said Cadillac showrooms are pulling in young working couples with "a combined income of $45-$50,000," and that "80 percent of Cimarron buyers never owned a Cadillac before."

Cadillac's success reflects a resurgence in the full-size and luxury markets generally; their market share is up this year, while compact and intermediate cars are down.

Asked for a reason, Pryor said, "A lot of people prefer the passenger room and luggage space of a large car, as long as it's reasonably fuel efficient."

Cadillac's 1982 fleet averages 22 MPG on the EPA scale compared with about 10.5 in 1974. The full-size '82s also are about 1,000 pounds lighter and a foot shorter than the '74s.

"Now that fuel is readily available, and the public is convinced it isn't going to go to $2.50 or $3 a gallon, people are opting for full-size cars," Pryor surmised.

The recent drop in gas-pump prices is adversely affecting sales of diesel-powered Cadillacs, however, just as it is the diesel-car market generally.

Diesels accounted for 11.5 percent of Cadillac sales in the '82 model year through April 10 compared with 16.7 percent a year earlier. The fuel-efficient engine is offered as an option on all Cadillac models except Cimarron and Fleetwood Limousine.

Pryor maintains that introduction in '82 models of the division's new fuel-injected 4.1-liter iron/aluminum-block V-8 (standard on all '82 Cadillacs except Cimarron and Fleetwood Limousine) also is responsible for the diesel sales decline.

Cadillac's expanded line of cars is instilling hopes of an expanded share of the luxury-car market in the U. S. Pryor said the division's target is "31 or 32 percent" of the luxury segment this year, including domestic and import makes. Its share in the '82 model year through April 10 was 31.6 percent, up from 31.4 percent a year earlier.

He estimated that Cadillac will sell 228,000 '82 models compared with 226,000 '81s.

"Our guns are aimed right at the high-group imports," Pryor said. "Two years ago, led by Mercedes-Benz and BMW, they were taking about 10 percent of the luxury market; now it's 20 percent."

Market analysts contend consumers perceive that luxury-import quality, reliability and durability are superior to that of domestic makes, which increases the imports' value as used cars.

To this, Pryor responds: "Some foreign makes, such as Mercedes, have increased new-car prices in bigger chunks than domestics; that's had a salutary effect on their used-car prices, but the money difference (from year to year) is staggering when a customer goes to buy a new Mercedes."

• Pryor said Cadillac has "tremendously strong dealers," that the division ended 1981 with 1,600 dealers, the same as the year before.

They will not have an all-new product, such as Cimarron, to sell in the '83 model year, however. "It will be an evolutionary year for Cadillac," Pryor said. "We'll fine-tune our existing lineup."

Just as Cadillac's model lineup and owner profile are changing, so are its assembly operations.

Currently, deVilles and Fleetwood Broughams are built in Detroit, and Eldorados and Sevilles at a GM assembly plant in Linden, N. J.

Cimarrons were assembled at a GM assembly plant in South Gate, Calif., until the facility closed March 23. Starting June 1, the cars will be made at GM's Janesville (Wis.) plant.

But the future has Pryor excited. "GM is building three new plants, and Cadillacs will be assembled at two of them," he said. "That means we'll have the benefit of the company's very latest manufacturing technology."

Starting in the fall of 1983 with '84 model production, C-body Cadillacs (deVille, Fleetwood Brougham) move into a new plant in Lake Orion, Mich.

"Sometime in 1984, we're not sure of the exact timing," Pryor said, E-body (Eldorado) and K-body (Seville) '85 models go into production at a new Detroit-Hamtramck assembly plant.

Asked to forecast when the entire new-car market will recover, Pryor said indications are that sales will start picking up in the third quarter, sustain momentum in the fourth quarter and show substantial improvement in the last half compared with the first half of 1982.

He looks for continued improvement in 1983.

The everything vehicle

The 1982 version of the front-drive off-road Renault Rodeo has a new body. Much shorter than previous models, it features soft nose and side panels as well as soft-material removable roof, rear and rear side windows. The multi-purpose Rodeo is based on the Renault 4 GTL with 1.1-liter engine. It seats up to four.

Company won't implement changes during new UAW pact

GM bonus commotion winds down

By Edward Lapham
Financial Editor

The great 1982 General Motors bonus snafu was fairly well sorted out last week, although there was an aftermath of confusion among shareholders, analysts and labor officials.

The snafu began innocently enough, as GM announced in its April 16 proxy statement that it was revising its incentive program with a proposal for the May 21 annual meeting that would lower the profit threshold for executive bonuses, create a new stock option plan, broaden the number of executives eligible and create a new Performance Achievement Plan (AUTOMOTIVE NEWS, April 26).

News Analysis

GM now has agreed not to implement the new bonus and stock option procedures during the current UAW contract, which expires Sept. 14, 1984.

Although the proxy statement clearly stated that the Bonus and Salary Committee, comprised entirely of non-employe board members, had started its review of the incentive program in December, 1980, and recommended the changes on March 1, 1982, before the company went back to the bargaining table to work out concessions with the UAW, union officials were incensed by the plan.

The situation was exacerbated when an internal document informing salaried employes that merit raises were not included in the sacrifices expected under the equality of sacrifice letter of understanding attached to the labor agreement was made public.

• UAW dissidents who had opposed the union concessions and forced the narrow 52 percent to 48 percent approval of the new pact, seized upon the internal document and began calling for a one-day strike against GM to protest the "bad faith" move.

Last week both UAW and GM spokesmen confirmed that the merit raises were discussed during the negotiations and were in fact excluded from expected sacrifices in the letter of understanding signed by GM Chairman Roger B. Smith.

A GM spokesman told AUTOMOTIVE NEWS the revised incentive plan was not an attempt to undermine or violate the UAW agreement. "Like the profit-sharing program for UAW members, it was designed to create incentive for employes to make the corporation profitable," he said.

It seemed to many UAW members that GM, through the revised incentive program and the retention of merit-raise prerogatives, was undermining the new agreement.

As a result, UAW President Douglas Fraser and Owen Bieber, UAW vice president and head of the union's GM department, met with company officials for 11 hours and emerged with a letter from Smith declaring that for the life of the new contract, GM will not "award bonus in excess of the amount that would have been generated under the present formula and will restrict the number of stock optionees to the number of participants under the present plan" in the interest of "keeping with the spirit" of the new UAW contract.

Smith also said that for the duration of the agreement, GM will not make any awards under the new Performance Achievement Plan.

The negative response to the revised incentive program was not restricted to the UAW. Shareholders told AUTOMOTIVE NEWS they believe the plan was not warranted in light of the lack of dividend growth.

Wilma Soss, GM shareholder, long-time shareholder advocate and chairman of the Federation of Women Shareholders In American Business, agreed that the announcement of the plan was ill-timed and said it pointed up the need to restrict the terms of outside directors. She will present such a proposal at the annual meeting.

"This is the third blunder Smith has made this year," said one Wall Street analyst. "First, he promised price cuts through a UAW concession package he couldn't win. Then he tried to play around with the annual meeting, a stand from which he also had to back down."

While labor leaders, shareholders and others were trying to understand what caused the problem, others were more empirical in their analysis.

Arthur Davis, auto analyst for Prescott Ball & Turben, said the lower profit threshold for bonuses "was a clear signal GM expects drastically reduced earnings" for the next several years.

Davis also said it is now unlikely GM will be able to wring a needed $2.5 billion in concessions from local negotiations, making it imperative for the corporation to make an equity offering to raise capital, perhaps as soon as June.

There was little question that much of the brouhaha surrounding the revised incentive program was generated by the media, which in retrospect may have misunderstood the situation, been manipulated by UAW dissidents and in turn fed the controversy, thereby making it aimost imperative that Fraser and other UAW leaders, for political reasons, take a tough stand.

Still, it was a genuine snafu which could have ramifications beyond Smith's letter.

Said one shareholder: "It's going to be a very spirited annual meeting."

BMW deal opens

SPRINGFIELD, Mass.—Balise Motor Sales (BMW), headed by James E. Balise, has opened here.

Its total rises 15 pct.; industry climbs 6 pct. over 1981

GM paces mid-April sales upturn

By Jenny L. King
Staff Writer

Domestic new-car sales in mid-April were paced by a 15.53-percent gain for General Motors, plus a slight improvement at Ford Motor Co. The industry's total was up from its year-ago level and was higher than in the first 10 days of the month.

April 11-20 domestic sales totaled 158,824, 6.79 percent ahead of 148,726 for the corresponding period of 1981, and up 19.06 percent compared with the early-April period.

With eight selling days this year and last, the daily selling rate of 19,853 was up 6.79 percent from 18,591. The daily rate climbed 33.94 percent from the early-April average of 14,822, which was based on nine selling days.

Year-to-date sales of 1,692,916 were still far distant—17.16 percent—from last year's total of 2,043,519.

General Motors was chiefly responsible for buoying up the domestic total. GM sales climbed 15.53 percent, to 101,644 from 87,984 last year. Ford Motor Co. was up 1.18 percent, to 34,532 from 33,953.

Chrysler Corp. dropped 12.38 percent during the period, to 17,714 from 20,216 in 1981. Volkswagen of America dealers retailed 2,634 Rabbit sedans, down 30.19 percent from 3,773. Estimated sales of American Motors passenger cars numbered 2,300, down 17.86 percent from 2,800.

GM claimed 64.00 percent of the market for the period, up from 59.16 percent a year earlier. Ford earned 21.74 percent, down from 22.83 percent. Chrysler slipped to 11.15 percent from 13.59 percent. VWoA stood at 1.66 percent, down from 2.54 percent, and AMC had the remaining 1.45 percent, down from 1.88 percent.

All five GM makes, plus Mercury, Lincoln and Chrysler were up for the period. Chrysler, in fact, more than doubled its sales, shooting to 4,768 units from 2,361 last year. Lincoln was up 75.80 percent; Mercury was up 8.74 percent; Buick was up 12.26 percent; Cadillac was up 10.79 percent; Chevrolet was up 22.90 percent; Oldsmobile was up 11.91 percent, and Pontiac was up 9.77 percent.

*QUALIFIED DISTRIBUTOR POINTS ARE AVAILABLE AN-4

Chrysler offers incentives and rebates on truck lines

Continued from Page 12

applied toward any domestic Dodge truck purchased or delivered during the next 29 months.

Dodge is currently offering Prospector packages worth up to $1,000 in equipment savings on Ramcharger. It is amending its advertising campaign to combine Prospector package savings with cash rebate savings, calling attention to Ramcharger, for example, offering up to $3,000 in retail savings under the combined programs.

The Dodge and Plymouth import truck program is called "Move Fast for Cash." It runs from April 23 to June 30 and provides cash payments to dealers.

Dealers are assigned to one of four groups, based on their volume. Group 1 has a one-unit qualifier; Group 2 a two-unit qualifier; Group 3 a three-unit, and Group 4 a four-unit qualifier to become eligible for payments.

Each dealership has an assigned retail objective. Achieving 0-30 percent pays $250 per unit; 31-70 percent pays $500; 71-100 percent pays $750 and over 100 percent of objective pays $1,000, nonretroactively.

There is also a one-time fast-start bonus. Dealers who hit 40 percent of objective by May 15 or 80 percent by June 10 and 100 percent by the end of the program receive a one-time payment of $250 (Group 1), $500 (Group 2), $750 (Group 3) and $1,000 (Group 4).

If they hit both the 40 and 80 percent fast starts and achieve the 100 percent by the end, they collect double the amount.

Dealers are required to replace what they sell under the program on a one-for-one basis.

For truck sales ending May 15, they have to submit new orders by May 21; for sales ending June 10, new orders by June 18, and for sales ending June 30, new orders by July 9.

Replacement units will come first from import trucks still owned by Chrysler, sitting at ports; followed by consignment units and, when those are gone, from units en route from Japan.

Audi Quattro, new 4WD sedan, priced at $35,000

TROY, Mich. — Porsche Audi Division of Volkswagen of America has priced its 1983 Audi Quattro four-wheel-drive four-door sedan at $35,000.

Standard equipment on the Quattro includes a turbocharged 2.2-liter 160-HP five-cylinder engine, air conditioning, four-wheel disk brakes, power steering, power windows, power door locks, AM/FM digital stereo cassette radio, cruise control, five-speed transmission, light alloy wheels and steel-belted radial tires.

Another new 1983 model, the Audi 5000 Turbo Diesel four-door sedan, carries a sticker of $17,480. Automatic transmission, power steering, power disk brakes, power windows, AM/FM stereo cassette radio, air conditioning and cruise control are standard.

The division also announced a price increase of 3 percent on the 1983 Audi 5000-S and 5000 Turbo (gasoline engine) four-door sedans and a sales-weighted hike of 3 percent on the Audi 4000 and Coupe.

New prices are: 5000-S, $14,075 (up $410); 5000 Turbo, $19,045 (up $555); 4000 two-door sedan, $10,055 (up $300); 4000-S four-door sedan, $11,205 (up $340); 4000 Diesel four-door sedan, $10,855 (up $340), and Audi Coupe, $12,680 (up $310).

The division said a new Special Value Package for the Audi 4000 offers a customer about $800 worth of options for $250.

Strike named president of Hess & Eisenhardt

CINCINNATI. — Louis N. Strike has been named president of Hess & Eisenhardt Co. The 106-year-old firm makes armored passenger cars for world leaders, executive limousines and custom convertibles.

Strike had been vice president of finance for Hess & Eisenhardt since 1976. Before that, he was a vice president at Continental Illinois National Bank of Chicago.

Greater Chicago Auto Auction Expansion Celebration

$82,000 CASH GIVE-AWAY IN '82.

1982 will be a year to remember. Our one million dollar expansion program will be completed and we're going to celebrate the entire year by giving away $82,000 in cash.

$22,000 cash given away to 82 winners at our Anniversary Sale May 27, 1982.

All transactions from Jan 1, 1982 through May 27, 1982 will qualify:

1	$ 5,000.00 winner
1	3,000.00 winner
2	2,000.00 winners
4	500.00 winners
4	250.00 winners
70	100.00 winners
82	$22,000.00

$4,000 given away the last Thursday of every month in 1982.

1	$1,000 winner
2	500 winners
20	100 winners

$300 given away all other Thursdays in 1982.

2 ... $150 winners ... if present at the end of sale. If not, all money not claimed will be added to the next Thursday's cash give-away.

A year of celebration ... Get the Thursday habit ... You'll be richer for it.

Joe Lyng's
Greater Chicago Auto Auction
12055 South Cicero Avenue, Chicago, IL 60658 312/597-3600

Now ... 5 carpeted auction lanes • all transactions computerized • New larger restaurant • New larger dealer lounge & telephones • Large paved, lighted, fenced-in lot • 1000 to 1200 cars every Thursday ... Truly the Market Hub of America.

31.21 pct. of January registrations

Imports take record market share

By Jenny L. King
Staff Writer

Registrations of new imported cars were down in numbers in January compared with both year-earlier and December, 1981, levels, but they continued to make inroads into the total market, establishing an any-month penetration record of 31.21 percent.

According to figures compiled by R. L. Polk & Co., new import registrations in the first month of 1982 totaled 158,894, down 8.81 percent from 174,242 in January of 1981 and 13.78 percent away from 184,282 in December.

Import penetration of the January new-car market was an any-month record, 31.21 percent, striking from the record book the previous high of 30.58 percent set in May of 1981.

It demolished the former January peak of 27.38 percent established just one year ago and was up from a 28.80-percent penetration in December of 1981.

Of the top five imports, three increased their portions of the total import market. Honda was up 1.90 percentage points, to 18.42 percent from 16.52 percent a year earlier. Subaru was up to 6.47 percent from 5.40 percent, and Nissan (Datsun) inched up to 18.44 percent from 18.02 percent.

Top-import Toyota cornered 22.53 percent, down 1.25 percentage points from 23.78 percent in January of 1981. Volkswagen dropped to 7.73 percent from 9.62 percent.

Mazda, which yielded fifth place to Subaru this year, was down 2.17 percentage points, to 6.05 percent from 8.22 percent last year. Mercedes-Benz, Volvo and Audi all were up less than a percentage point from year-ago market-penetration levels.

• By country of origin, Japan continued to increase its influence, climbing to 77.29 percent of the import total in January from 75.94 percent a year earlier. Germany dropped to 15.85 percent from 17.78 percent. Sweden was up to 3.73 percent from 2.69 percent, France had 1.96 percent compared with 1.91 percent and Italy slipped to 0.56 percent from 1.08 percent.

Cars from England represented 0.36 percent of the import total in January, down from 0.60 percent, and Ireland supplied 0.25 percent of imports, with no year-ago figure.

Registrations by country of origin in January compared with the month in 1981 were:

	Jan., 1982	Jan., 1981
Japan	122,818	132,321
West Germany	25,193	30,972
Sweden	5,908	4,684
France	3,117	3,335
Italy	895	1,887
England	571	1,043
Ireland	392	——

Registrations of imported trucks in January totaled 32,452, up 2.74 percent from 31,587 in 1981.

Imported truck figures in the first month of 1982, compared with 1981, were:

	Jan., 1982	Jan., 1981
Toyota	9,681	7,995
Nissan	7,612	6,495
Ford Courier	3,651	4,613
Dodge Ram 50	2,816	——
Chevrolet LUV	——	5,134
Others	8,692	7,350

4,000 tire books stocked by U.S.

WASHINGTON. — The Government Printing Office has nearly 4,000 copies of Mechanics of Pneumatic Tires in stock, according to a NHTSA spokesman.

Mechanics of Pneumatic Tires, now in its second edition, is one of the few comprehensive treatments of the subject of pneumatic tires in English.

Copies of the book are available for $18 each from the U. S. Government Printing Office, Washington, D.C. 20402. The stock number of the book—which must be included in mail orders—is 050-003-00377-8.

U. S. firm puts greater emphasis on program

BMW European deliveries grow

By John A. Russell
New York Staff Writer

MONTVALE, N. J. — In one year, sales of BMW of North America's European Delivery Program have increased 178 percent, moving the company into the number three position for this type of program among European importers.

While the volume is low, Anthony Scelsi, manager of the program for BMW, said he expects this year's sales to double last year's 729.

The sales increase stems from concentrated effort. The company had this type of program for three or four years, Scelsi said, but there never was a strong emphasis placed on it until last year.

The key, he said, has been increased advertising and promotion as well as tours by the European Delivery staff to dealers in the major market areas.

In addition, forms for the program have been simplified and now the BMW training department has included instruction on European Delivery in some of its product knowledge sessions.

Sales have been evenly divided between the four-cylinder and six-cylinder models, Scelsi said, and all sales are made through the local dealer who receives a 10 percent commission.

Scelsi added that a few things have been added to make the customer's arrival at the Freihamm Delivery Center near Munich more pleasant, including food at the company cafeteria, use of rooms and maps with tours outlined.

The marketing department has created a special budget for this program, he added, which has helped in the creation of advertising.

Another element that has increased awareness of the program, he said, is a European Delivery desk at the BMW display at all major auto shows. Also, when dealers have mall shows, material can be distributed.

• BMW is encouraging its dealers to work with travel agencies in their areas to promote the program, and the company has become part of the American Society of Travel Agents.

Scelsi said the program is especially advantageous for the dealer since it can either be a sale or a lease and he has no floorplanning costs.

Another area that is showing some growth is diplomatic sales which reached 80 cars in 1981. Scelsi said 100 cars have been sold in this manner thus far in 1982.

While the sales are handled through the dealer, the company sends out three diplomatic mailings per year and the interested diplomats contact the company.

Those sales are considered house accounts, Scelsi said. The company has a diplomatic sales specialist who will demonstrate the cars to the prospective customer at his office by appointment.

Scelsi said there has always been such a program at BMW but this is the first time there is a "man on the road" demonstrating the cars.

While the company does not anticipate record growth in this area since it is limited by the number of diplomats in the country, there is a value in product awareness and company prestige. There is also some public relations value, Scelsi said.

He said diplomats can order a European model, which can be brought into the U. S. and used for up to two years. It then has to be taken back to Europe. But the usual case is for the diplomat to order a U. S. car and sell it when he is transfered.

Scelsi said he is looking forward to another good year for both programs.

Among the best

Bob Worthington, left, president, Royal Oldsmobile, Stone Mountain, Ga., receives his second consecutive "Elite 100" recognition plaque for being among the top 100 volume Oldsmobile dealers in the U. S. from Jim Schultz, Atlanta zone manager.

NAFA SHOW

Cost per mile tops 22 cents

By Francis J. Gawronski

The expense of keeping the average fleet car in operation increased more than three cents a mile in 1981.

According to the National Assn. of Fleet Administrators (NAFA) annual operating expense survey, per-mile expense for the composite fleet car was 22.2 cents a mile in 1981 compared with 18.9 cents in 1980, a rise of 3.3 cents.

NAFA says most of the increase resulted from higher new-car prices and interest rates—averaging $50 a month more in 1981 than in 1980. Actual operating expenses in 1981 remained fairly steady at less than 10 cents a mile.

A total of 72 fleets operating more than 56,000 cars participated in the survey; results are based on NAFA's Recommended Classification of Automobile Expenses.

Under the accounting system, NAFA says, fleet costs are divided into three major categories:

Operating expenses — all expenses directly related to operating a vehicle, such as fuel, oil, tires and tire repair, and normal maintenance and repair, which are computed in pennies.

Incidental expenses — licenses and taxes, accident repairs less recoveries, washing, parking, tolls and miscellaneous expenses, computed on a dollar per car per month basis.

Standing expenses — investment costs, depreciation and insurance, also computed on a dollar per car per month basis.

Subtracted from incidental and standing expenses, according to NAFA, are chargebacks or credits which are generally for personal use and optional equipment.

NAFA says the 1981 survey is the first in which data were acquired to determine operating expenses for front-wheel-drive and diesel-engine cars, in addition to the four basic size categories — subcompact, compact, midsize and large.

The largest segment of the survey response, according to NAFA, is in the composite fleet group which consists of fleets that report total expenses but do not break out expenses by size groupings.

Makeup of the composite fleet group is 3 percent subcompact, 43 percent compact, 51 percent midsize, 3 percent large.

Operating costs for the composite group increased from .0925 cents a mile in 1980 to .0958 in 1981. The bulk of the increase, NAFA says, resulted from the rise in the cost of gasoline from .0715 a gallon in 1980 to .0745 in 1981.

The average MPG for the composite fleet, according to NAFA, was 16.9 in 1980 and 17.8 in 1981.

Incidental expenses for this group climbed from $33.94 per car per month in 1980 to $39.69 in 1981. Single largest increase in this category was parking and toll charges, up from $11.50 to $16.48.

Standing expenses for the composite group escalated sharply from $174.66 per car per month in 1980 to $234.81 in 1981.

NAFA says a positive factor in limiting total expenses in the composite group "came from a significant increase in credits or dollar return to the company, particularly in personal use chargebacks." This credit increased from an average of $25.53 per car per month in 1980 to $43.63 in 1981.

Net expenses (incidental expenses plus standing expenses less credits) for composite fleet cars totaled $230.37 in 1981, compared with $183.07 in 1980.

Total expenses (total operating expense multiplied by average miles per month plus net expenses), for the composite-group cars, driven 1,897 miles per month, in 1980, were $358.54, or 18.9 cents per mile. According to the 1981 survey, total expenses for cars driven 1,822 miles per month, were $405.42, or 22.2 cents per mile.

NAFA says the 1981 survey also is the first in which sufficient data were acquired to determine operating costs of subcompacts. These vehicles are driven the fewest number of miles per month (1,525) and have the lowest cost (.0818 cents per mile). Based on an average price of $1.35 a gallon for gasoline, these cars averaged 22.9 MPG in 1981, according to NAFA.

Operating cost for a compact car, according to the survey, declined to .0911 per mile in 1981 from .0923 in 1980. While fuel costs increased slightly in 1981. (.0695 vs. .0725) as a result of higher prices, the per mile cost of tires and repair maintenance declined on a per-mile basis.

Small cars averaged 17.4 MPG in 1980, compared with 18.6 MPG in 1981, while the cost per gallon increased from $1.21 per gallon in 1980 to $1.35 in 1981.

Operating cost for midsize or intermediate cars increased from .0922 in 1980 to .0973 in 1981, according to the survey. The entire increase in the cost was attributed to the cost of fuel which rose from .0725 in 1980 to .0781 per mile in 1981. The cost of tires and tire repair and normal repair and maintenance remained practically level in 1981. Average MPG in 1981 was 17.3 as compared to 16.7 in 1980.

Operating cost of large cars increased a little more than one cent a mile in 1981 from .1111 in 1980 to .1213. Almost all of the increase is accounted for in the cost of fuel which climbed from .0659 cents per mile in 1980 to .0977 in 1981. Average MPG of the large cars dipped to 13.8 in 1981 from 14 in 1980.

Responses to the survey did not provide enough data to compute incidental and standing expenses for groups other than the composite.

The NAFA 1981 survey reveals, for the first time, operating costs for front-wheel-drive cars, which amounted to .0864 cents a mile for cars driven an average of 1,812 miles a month. The cars averaged 19.8 MPG calculated with gasoline costing $1.35 a gallon. Fuel cost was .0693 cents a mile.

According to the NAFA survey, diesel-powered cars were

Survey shows four-cylinder cars are strong

ROCHESTER, Wis. — A survey of fleet administrators indicates four-cylinder vehicles are as durable as cars with larger engines, according to Runzheimer Report on Transportation.

The publication says it surveyed 34 fleets across the U. S. and Canada with a total of 19,937 automobiles, leased or company owned, and a per fleet average of 665 vehicles. Sixty-five percent of the fleets contained four-cylinder vehicles, with the average size consisting of 26 percent of the fours.

The survey, according to Runzheimer, found that 73 percent of business car fleets encounter no more mechanical problems with four-cylinder cars than they do with six-cylinder and eight-cylinder units.

Sixty-eight percent of those surveyed reported they follow the same maintenance schedule for the four-cylinder units as they do for the bigger engines.

However, 32 percent of the fleet administrators said they believed that the smaller engines should receive more frequent routine maintenance.

As for leased units, Runzheimer said when its researchers asked if the company's lessors had recommended more frequent servicing, only 18 percent of the respondents said yes, while 82 percent said no.

Runzheimer found that 73 percent of these firms use their four-cylinder cars for both local and highway travel; 18 percent only operate them in the city; and nine percent allow highway travel only.

The publication said 82 percent of the fleets introduced four-cylinder cars one to two years ago, 14 percent had them three or more years, and 5 percent less than one year.

The survey also revealed that 82 percent of the fleet administrators indicated they plan to purchase more four-cylinder units when replacing current sixes and eights, 5 percent said no, and 13 said they didn't know.

Runzheimer analysts recommend that drivers who use four-cylinder cars avoid overloading, change oil regularly, accelerate smoothly and allow plenty of passing room.

Editors stated that "no apparent reason exists as to why the currently redesigned, four-cylinder cars can't be as durable and last as long in fleet use as the bigger ones, given they are properly driven."

Time in the automobile business can make you or break you. Using outdated, inaccurate auto values can send customers "down the street" because of poor trade-in allowances. Or send your profits down the drain because of overvaluation. That's why Black Book figures are *current, timely,* and *accurate.*

Every Monday you get an updated pocket-size report that shows current market valuations in four appraised conditions: from extra clean to rough. These figures reflect actual prices paid at major auctions in your area and the error-free tabulation Black Book's computer system assures. No guessing. All "no-sales" deleted, listing only sold units. Just current, timely facts only 7 days from the auction to your desk. That's precision you can rely on.

25 Year's Experience

We began professional reporting in 1955 because we recognized the need for actual auction transactions in assuring accuracy.

Black Book provides the most complete retail and wholesale coverage available in the market today. Black Books include complete coverage of the import market, specialty vehicles and lease vehicles. You can profit from that experience.

Silver anniversary

Lloyd McKee, right, owner-operator of Lloyd McKee Chrysler Plymouth, Inc., Albuquerque, celebrated his silver anniversary recently and received a birthday plaque from G. A. Novelly, Chrysler Denver zone manager. McKee sold more than 1,200 units in 1981, ranking among the top volume dealers in the Southwest.

Cost per mile

Continued from Page E-1

driven 2,895 miles per month and total operating expense was .0630 cents per mile, based on an average price of $1.25 per gallon of fuel. Total fuel costs for these vehicles was .0484 cents a mile. They averaged 25.7 miles per gallon.

The NAFA defines subcompact cars as those with a wheelbase of less than 100 inches.

A compact's wheelbase is 100 to 106 inches and curb weight is 2,300 to 2,799 pounds.

Midsize wheelbase is 106 to 114 inches and curb weight is 2,800 to 3,399 pounds.

Large cars have a wheelbase over 114 inches and curb weight over 3,400 pounds.

Buffalo spot not needed, rival dealers say

New Dodge outlet stirs up a storm

Continued from Page 10

years . . . They both went out of business. We need a Dodge dealer to replace the dealer that covered this northern part of the market for Dodge.

"The Delaware Ave. area is kind of declining, so our plan was to use the Pontiac dealer (Davis) who agreed to build a building and put Dodge in next door to Pontiac . . . We're going to get a showroom now for Dodge, and later he will build a service and parts facility.

There is a "complete void" for Dodge in the northern part of Buffalo, added Casement.

"All we're doing is replacing a dealer in a better location . . . the nearest (competing) Dodge dealer is way over here in Transitown (Herbert Sixbury, Transitown Dodge)," he said.

Casement said Chrysler does careful market studies in areas like Buffalo before putting in a dealer.

It takes new-car registrations and applies them as a percentage of U. S. sales to determine Buffalo's share, for example, and further carves up the Buffalo area into trading zones to determine what each part of the area is doing.

"We find that the Kenmore trading zone is 19.4 percent of the metro area in car (registrations) and 17.8 percent in truck (registrations)," said Civitello.

"So it's a sizeable portion, and we have nobody in that area. If you look at the whole area, and see the numbers, the planning potential will support the operation," he concluded.

• Chrysler officials recalled that Herb Sixbury, Transitown Dodge, had a Dodge dealership in Kenmore which he closed in 1979.

"He didn't think we should close it, but thought we should buy it from him and maintain it . . . So his marketing thoughts have changed since '79," said Civitello.

"The assumption is that Buffalo will deliver only so many Dodges, and that's heresy," add-Pappert. "If we don't have representation in that fair share portion of the market, they (customers) won't go to the other Dodge dealers and buy. They'll go to the competition."

Pappert said that if any new dealers are to be signed "in a point that's not provisioned, it must go to the marketing committee."

"If we sense confrontation, one of the decisions of the marketing committee is that surrounding dealers be made aware of it," he added.

"Now, if we have a point such as in Buffalo, where it is designated an open point, that sales agreement package doesn't even have to come to the marketing committee. The zones have a right to do it on their own.

"We try in all our metro areas to say to all the dealers periodically, 'Here's what our plans are.' In points already designated, as in this example, probably the Syracuse zone manager didn't call a Buffalo meeting, and say, 'We're going to open a point,' predicated on the fact that the world knew this was an open point.

"The world knew we were prospecting for a dealer in that locality . . . Do they take issue with the marketing—or the fact that we were successful in putting someone into the point?" Pappert said.

• Pappert added that Chrysler is always willing to listen to complaints and has adjusted plans on occasion, based on dealer reaction.

"If those dealers as a group want to come to Detroit, I promise you we have an absolutely open door," Pappert said.

"Out in Chicago recently, where we put a package together, the dealer committee came to see us . . . In that example, we absolutely backed away (from installing a new dealer). We got a commitment from those dealers to do the kind of job we needed done in that market, and they're doing it," added Casement.

Dodge dealer Bonadonna replied by saying that since dealers in his area had not received advance notification, they couldn't very well have objected.

"If they had let us know beforehand, we would have really raised hell. But all this was done before saying anything to anybody," said Bonadonna.

He added that after sending a telegram to Chrysler Chairman Lee Iacocca and Pappert, the only response area dealers got was from the zone manager.

Pappert concluded by saying that, as a matter of policy, Chrysler has turned down many requests for duals in recent years.

"We have resisted quadding (giving a dealer the full line of Chrysler car/truck models) and dualing in fair share metropolitan markets through the last three years, predicated on a down industry," he said.

"Our feeling is that we have the product capabilities to stand on our own two feet. Our feeling is this market will not stay at 5 to 6 million domestic rates forever. At that point, those competitive dealers who are currently overfacilitized will then need those facilities for their own operations. We will have lost our identity . . .

"For us to go into a market, and put in two dealers, where one or the other is financially unstable and in the long run we lose one or the other, take our sign down and lose our image in the marketplace, doesn't make sense."

Loan agreement amended; new committee formed

IH takes 2 major financial steps

Continued from Page 2

should cut costs and streamline operations. Following Hayford's March resignation, McCardell assumed the title of president although much of the job functions already had been parceled out to executive vice presidents.

"Hayford's pace was just too fast," said Wall Street analyst Arvid Jouppi. "McCardell's pace seems to be just right — two notches faster than (former IH chairman) Brooks McCormick."

Jouppi said part of the company's problem in trying to renegotiate its labor agreements to win concessions has been a fairly simple one.

"Harvester wasn't dealing with a single, homogenous union," he said. "It has many diverse elements including some very radical ones." This, he said, is what caused the devastating 5½-month strike two years ago.

The analyst said that using conventionally "pure balance sheet analysis" the IH situation looks "very, very negative."

However, he said, there are a lot of "off-balance-sheet items" which are really assets, including the leadership of McCardell, who joined IH in 1977 from Xerox Corp., where he had been a senior vice president, and the team he has put together since then.

"Chrysler, Harvester and Massey-Ferguson are all in the same boat," Jouppi said. "Everybody's a loser if they fold, so everybody wants to make sure they don't."

• There is no question that the International Harvester situation remains precarious, with most analysts, and even the company itself, agreeing that the state of the economy and the eventual advent and pace of the long-awaited recovery may well be the determining factor in the survival of IH.

Arthur G. Davis, Prescott Ball & Turben analyst, agrees that the economy, particularly the farm economy, are important to IH's future. Davis, however, is sufficiently pessimistic about the recovery to say that Chapter 11 is "almost inevitable" for IH.

He said IH's large inventory in farm equipment and trucks is potentially fatal.

"They're practically giving away their farm equipment inventory," Davis said, "and they may have to start auctioning it off. It's killing the market. With the increasing number of farm bankruptcies, they have nearly $1 billion in farm equipment inventories they're going to have to laugh off."

Davis said that if IH does go into Chapter 11 reorganization, it will mean a grave problem for the U. S. truck market because Japanese truck makers, who have dramatically increased their international penetration in the last few years, might decide to move into the U. S. heavy-truck market in a big way.

He said that Komatsu International Mfg. Co., in which IH had a 50 percent interest until it sold it for $51 million earlier this year to partner Komatsu, Ltd., would likely move into the U. S. construction equipment market.

He also said that Caterpillar might decide to move into trucks to fill the void.

"The International Harvester situation is a bigger problem for the economy than meets the eye because of the sector it's in," Davis said.

Still, International Harvester is not out yet. Last week's changes gave it some room to move. The company has cut costs, made as many capital improvements as it can afford and trimmed operations not essential to its three main areas of business, trucks, farm equipment and construction equipment.

The new financial committee will be looking for other operations to lop off in the hopes of paring back to the essentials. The new credit amendments were an indication that the lenders have not given up hope of a recovery, and McCardell has said the company can be profitable later in 1982 if its primary markets are revived.

"There's no doubt about it," said analyst Davis. "The story's going to be written this summer."

Gill buys Avery Pontiac

David P. Gill, right, makes no secret of his pleasure at acquiring one of the nation's oldest dealerships, Avery Pontiac, Columbus, O. Taking part in the new-dealer signing are Ronald C. Ewart, left, former dealer, and Richard J. Sherman, Pontiac's zone manager in Cleveland. The Avery dealership was founded in 1893 by Frank E. Avery as a bicycle repair shop, becoming an auto sales outlet in 1900. It became an Oakland dealership in 1923 and took on Pontiac when that car was introduced in 1926. The new name is Gill Pontiac.

AMC's new role in autos: Produce and sell Renaults

Continued from Page 2

staff and offices of Chrysler Credit. Cappy said the program increased sales particularly in Philadelphia, where the money supply has been tight.

AMC will encourage dealers who have successfully arranged for credit through their own sources to continue those ties, Cappy said. But there will be enough money available from the captive finance company to take care of all the new Alliances and other AMC products, he said.

Financing will be available to AMC, Jeep and Renault dealers.

Also in preparation for the Alliance debut, AMC and Renault have launched an intensive service training program. Sixteen trainers have been added, and two-day and five-day clinics are being staged in all 14 zones.

Sales training may prove even more important for AMC, whose dealership personnel are unused to dealing with the younger, more educated and more affluent import buyers who will be buying 60 percent of all new cars this decade.

Detailed video disks and zone seminars are planned.

• Cappy said one of the biggest enticements that AMC offered him to sign aboard (which he did in February) was the opportunity to "keep one foot on first base" with AMC's loyal customer base "while running around bases" trying to catch those young, affluent import buyers with a high-tech, European-looking car that will be priced competitively.

It will be the only domestically built car in its price range that will comfortably seat five passengers, Cappy said.

The real sports car of the Renault-AMC family will continue to be the Fuego, which was introduced in the U. S. one month ago and is expected to turn in first-month sales of 1,400—instead of the 1,000 originally projected.

"Since I've been here, we've increased production (headed for the U. S. this year) by 3,500 cars, and I think we could do even better than that," Cappy said. "It's hard to tell how big it can go."

Undaunted by the Japanese success story, Cappy predicted the Japanese will be unable to maintain their high degree of buyer loyalty once worthy alternatives are offered.

Current AMC and Renault dealership totals are about where the companies want to stay, he said. Altogether, the three marques — AMC, Renault and Jeep — have 1,928 dealers. There are 116 Renault dealers that aren't dualed with AMC or Jeep. More than 250 AMC and Jeep dealers don't carry the Renault lineup.

In a few major markets, AMC continues to pay rent on closed dealerships which it will reopen when economic conditions improve, Cappy said.

'Gray-market' import boom troubles official networks

Continued from Page 40

questions of product liability. As far as VWoA is concerned and from a technical point of view, the cars do not exist because they were not imported by Porsche-Audi, he said.

The spokesman for Mercedes-Benz said the M-B policy is simple: "A car not originally designed and engineered to meet U. S. regulations cannot be altered to meet it."

Even something as seemingly simple as bumper standards can prove difficult to meet, he said. Even though a U. S.-spec bumper may be added, the floorpan might not get strengthened.

The independent importers can buy the parts, he said, but there is some difference in chassis built for the U. S. and those for Europe.

Servicing the cars becomes another problem. In a prepared statement, John Cook, president of BMW of North America, said flatly that modified BMWs are not covered by warranty. Technical training and assistance are unavailable to BMW dealers, he said. Even English service manuals are not available, he said.

All three manufacturers agreed that service training is not available generally on European-specification cars.

In addition to service, there is the problem of parts. Parts peculiar to the European versions (such as the rear axle for the Mercedes 500 Series), are not stocked in the U. S. These parts have to be special-ordered from overseas. That takes time.

But, as Porsche-Audi's Fuller noted, people who buy these cars come to franchised dealers for service and then find the parts and technical service problems.

Domestic dealership total down 276 in first quarter

Continued from Page 1

mestic industry. Ford is second with 4,768.

AMC had 1,535 car dealers on April 1, little changed from its Jan. 1 total of 1,547. AMC currently has 755 duals with Big Three makes and 34 with VW. At the beginning of the year, there were 737 AMC-Big Three spots and 38 AMC-VW points.

Volkswagen dipped below 1,000 during the first quarter, winding up with 992 outlets for its U. S.-built Rabbits. The total was down from 1,006 on Jan. 1. VW has 98 duals with other U. S. makes, an estimated 64 of which are with Big Three lines. The 98 domestic duals compare with 114 on Jan. 1.

Chrysler Corp.'s April - dealer total of 3,655 was down 29 from 3,684 at the beginning of the year. It was the corporation's smallest first-quarter loss since 1978.

Franchise totals on April 1 were: Chrysler, 2,634; Plymouth, 2,538; Dodge, 2,449, and Imperial, 422.

In addition to its 3,655 car dealerships, Chrysler Corp. has eight that handle only Dodge trucks. They are not included in the corporation's car-dealer total or in the Dodge car-franchise total.

Ford Motor's first-quarter slip of 78 outlets cut its car-dealer total to 5,607 from 5,685 on Jan. 1.

Franchise totals at the beginning of April were: Ford, 4,768; Mercury, 2,629, and Lincoln, 1,453.

Ford Motor has 96 outlets that handle only Ford heavy-duty trucks. They are not included in the company's car-dealership total or in Ford Division's franchise total.

At GM, the car-dealer total was 10,510 on April 1, down 140 from 10,655 at the beginning of the year. The decline was less than the fourth quarter of last year (150), but it was considerably higher than the drop of 55 in the first quarter of 1981.

GM franchise totals on April 1 were: Chevrolet, 5,365; Oldsmobile, 3,170; Pontiac, 3,005; Buick, 2,925, and Cadillac, 1,580.

Going back a year, the current total of 21,404 domestic-car outlets is down 1,047 from 22,451 on April 1, 1981.

The 12-month comparison shows dips of 495 for GM, 291 for Ford Motor, 117 for Chrysler Corp., 111 for AMC and 26 for VW. That's an aggregate drop of 1,040. There are seven more intercorporate duals than there were a year ago, so the industry's net loss is 1,047.

Chevy for Sanford

BAY SPRINGS, Miss. — Tom E. Sanford has been appointed owner-operator of Sanford Motors, Inc. (Chevrolet) here.

124,660 assembled, up 5 pct. from previous week

Ford overtime hikes car production

By Patricia Hoffman
Staff Writer

Overtime schedules at four Ford Motor assembly plants boosted last week's auto production 5.91 percent above the previous week's total. Only three plants were dark last week.

Last week, the makers scheduled 124,660 cars, up from 117,703 the previous week, but down 22.72 percent from 161,311 in the comparable 1981 week.

General Motors, Ford Motor and Chrysler Corp. all showed production gains last week.

Volkswagen of America's Westmoreland plant continued down for inventory control. It has been idle since April 19 and is slated to return today (May 3). GM's Janesville and Oklahoma City points remained down last week for model changeover. All other car facilities were reported working.

Janesville is expected to resume operations June 1 with production of the Cadillac Cimarron. Oklahoma City is scheduled to be back later this spring.

Saturday overtime was scheduled last week at Ford's St. Louis facility. Also at Ford, San Jose, Wayne and Wixom plants all worked daily overtime last week.

Breakdown for the week by company is: GM, 59.55 percent; Ford, 26.65 percent; Chrysler, 12.59 percent; AMC, 1.12 percent and Checker, 0.09 percent.

So far this year, the auto manufacturers have built 1,576,877 cars, down 30.07 percent from 2,254,906 in the same 1981 period.

3 Detroit-area dealers honored by Cadillac

DETROIT. — Cadillac has named three Detroit-area dealers "Master Dealers" for 1981. They are Don Massey, of Don Massey Cadillac, Inc., Plymouth; Thomas S. Dreisbach, of Dreisbach and Sons Cadillac Co., Detroit, and Roger Rinke, of Roger Rinke Cadillac Co., Warren.

It is the ninth such award for Massey, the sixth for Dreisbach and the third for Rinke. Cadillac bestows the award on about 100 dealers each year. It is based on total dealership performance, from customer satisfaction to sales.

Domestic makers team up in giant Time auto section

DETROIT.—The biggest automotive advertising section ever carried in a major magazine appears exclusively in the May 10 issue of Time magazine.

Autorama U.S.A., a 44-page auto section worth $2,280,000, according to Publishers Information Bureau estimates, marks the first time four major auto makers—General Motors, Ford, Chrysler and American Motors—have advertised cooperatively.

Autorama was sponsored by the MVMA, but all ad money is from the domestic car firms and their divisions—each of which has ads. There are 22 pages of color ads and 22 black-and-white paid ad pages with an editorial format.

Themed "There's never been a better time to buy a new car," the section was researched and written by the staff of Automotive News.

In text, photos, charts and graphs, Autorama details engineering advances built into today's new domestic cars, with emphasis on fuel efficiency, safety and economy.

Automotive News will carry the entire 44-page insert in its May 10 issue, as part of Time's promotion.

Time is also promoting the section with ads in Time, Sports Illustrated and People magazines, as well as Advertising Age, Ad Week, Adcrafter and other trade publications.

Downtime at GM reduces week's truck output 3.7 pct.

A partial shutdown at the GMC Truck & Coach plant in Pontiac pulled last week's domestic truck production down 3.75 percent from the previous week's total.

Output last week was targeted at 45,010 units, down from 46,765 the previous week, but up 36.13 percent from 33,064 in the comparable 1981 week.

So far this year, the makers have assembled 633,942 trucks, up 5.65 percent from 600,042 in the same period last year.

The heavy-duty truck line and the coach line were both down last week at the GMC plant. The two-week partial shutdown is to control inventory. About 2,000 workers were on temporary layoff last week, and 1,000 will be idle this week. Normal operations are expected to resume May 10.

Volkswagen of America's Westmoreland point remained idle last week for inventory adjustment. The facility closed April 19 and is scheduled to return today (May 3).

For the ninth consecutive week, Chrysler Corp.'s Warren plant operated on daily overtime schedules last week. The facility builds light-duty Dodge pickups.

The General Motors Detroit facility (Chevrolet and GMC chassis) upped production last week by four units an hour. The single shift now builds 22 units an hour. This is the third increase in output in six weeks and has resulted in 100 employes being recalled from indefinite layoff.

Car production in Canada shows rise for week

Canadian auto production last week rose 2.78 percent from the previous week's output, but the truck total dropped 5.50 percent as Chrysler Corp.'s Windsor plant returned to normal five-day operations.

The auto makers planned 21,632 units the week of April 26, a slight gain from 21,046 the previous week, but down 7.71 percent from 23,438 in the comparable 1981 week.

Year-to-date, the auto manufacturers have built 292,334 units, up 3.83 percent from 281,562 in the same period last year.

Truck production for last week was targeted at 12,429 units, down from 13,152 in the previous week, but 5.48 percent above the 11,783 units in the comparable 1981 week.

So far this year, the makers have finished 173,441 trucks, down 9.63 percent from 191,919 in that same period last year.

Chrysler's Windsor truck facility operated on a normal five-day week last week following two weeks of Saturday overtime. A Chrysler spokesman said overtime schedules are expected at the facility again this month, but the dates have not been set.

General Motors' Scarborough (van) facility increased production last week from 23 units an hour to 26 units an hour.

Also at GM, the Oshawa (No. One) car plant operated an eight-hour shift last Saturday and is scheduled to work Saturday, May 15 and May 29. The plant builds full-size Chevrolets.

GM's Oshawa (No. Two) plant and its Ste. Therese facility continued on one-shift operations last week. Oshawa's second shift was idled April 2, and second-shift operations were dropped at St. Therese last Feb. 1.

Overtime continued last week at Ford Motor's St Thomas plant. The facility began operating on daily overtime April 12 with both shifts working 9 hours Monday through Thursday, and eight hours on Friday.

According to a Ford spokesman, there is no downtime slated for any Ford facility during May.

Restructuring continues at Harvester

By Edward Lapham
Financial Editor

International Harvester Co. last week continued its reorganization and restructuring by shaking up top management in a move to restore supplier-lender confidence in the beleagured Chicago-based manufacturer.

The company also announced last week that its UAW-represented employes had overwhelmingly approved a new contract which will save IH an estimated $200 million in labor costs over the next 29 months.

The UAW vote was announced shortly after IH said Chairman Archie McCardell had resigned at a special board of directors meeting and had been replaced as chairman by Louis W. Menk, IH board member and retired chairman and chief executive officer of Burlington Northern, Inc.

Menk one week earlier had been named chairman of the new Finance Committee, which will oversee the financial restructuring. He was replaced as chairman of that committee by William G. Karnes, who was also elected to the IH board.

Karnes, former chairman of Beatrice Foods Co., also has served on the boards of Continental Illinois National Bank and Trust Co. of Chicago, Borg-Warner Corp. and Stone Container Corp.

IH, which lost $390 million in fiscal 1981, another $300 million in first quarter ended Jan. 31 and is expected to report a $500-million loss for the second quarter which ended April 30, may be forced to seek further concessions from its suppliers and lenders if the economy does not improve and its financial condition continues to flounder.

• Menk and Karnes, with their close business ties to Chicago banks and other "Chicago old-boy network" companies, are generally thought to be in a better position to manage the restructuring.

Donald D. Lennox was elected president of IH at the same meeting. Lennox, part of the management team McCardell put together after coming to IH from Xerox Corp., had been an IH executive vice president and president of the Manufacturing Group. Lennox, also a former Xerox and food executive, fits in better than most of McCardell's team.

The management shakeup was made to try to re-instill confidence in suppliers and lenders who had lost confidence in McCardell and his "overly-opti-

It's a Jalpa

New sizzler from Lamborghini

Lamborghini Jalpa P-350 represents state of the art in ultimate Italian GTs. The car mates Lamborghini's dual overhead-cam 4-liter V-8 with a five-speed transmission. The Jalpa is expected to be marketed in the U. S. late this year as an '83 model at a price of about $60,000.

Will invite unions, governments, manufacturers

IMF seeking world auto summit

By Marjorie Sorge
Labor Editor

TOKYO. — The International Metalworkers' Federation thinks three heads are better than one.

In a three-day meeting here designed to promote further worldwide union solidarity, the IMF called for a tripartite world auto summit that would bring together the unions, governments and auto companies. Attending the Tokyo meeting were about 150 representatives of unions in 23 nations. They represent about four million automobile workers throughout the world.

Herman Rebhan, general secretary of the IMF, will contact all auto company presidents in the U. S., Japan and Europe and invite them to participate in the tripartite meeting.

The current slump in the automotive industry has been worldwide, and the IMF believes communal thinking could help solve some of the problems.

"We are not looking for world negotiations nor for world planning of the automobile industry," the IMF said. "But we are anxious to see an automobile industry that is viable in terms of jobs, wages and economic health making its way into the 21st century."

Representatives attending the meeting also agreed to continue to press for increased union participation in management decisions and job security; to encourage companies to invest in countries to which they export vehicles; to reduce the unequal labor costs and long working hours in some countries, and to step up organizing efforts in developing countries.

One major concern lately, especially in the U. S., has been lack of Japanese investment in the countries to which Japan exports. UAW President Douglas A. Fraser has made numerous demands that the Japanese auto companies invest in the U. S. by either joint ventures with U. S. companies or, preferably, by building their own plants in the U. S.

Nissan and Honda are building assembly plants in the U. S., and Toyota is talking with General Motors about a possible joint venture. But Fraser said

DEAC to aim clout at factory-dealer problems—Mullane

By John A. Russell
New York Staff Writer

NEW YORK. — The NADA Dealer Election Action Committee is going to bring its political clout to bear on factory-dealer problems as well as industry problems, according to Ed Mullane, treasurer and a trustee of the DEAC.

Mullane dropped that bombshell while addressing the convention of the North Carolina Automobile Dealers Assn. at Hilton Head Island, S. C.

He said that through DEAC "we've saved millions for the manufacturer. Isn't it time we stopped helping him until he starts helping us?"

Mullane also is president of the Ford Dealers Alliance and has long been a crusader for dealers' rights. In his speech, he called on all dealer organizations in the nation to unite to bring pressure on the factories and increase dealers' influence on factory decisions.

Mullane told AUTOMOTIVE NEWS that DEAC's role has been to raise funds for a lobbying effort that has aided the manufacturers. He said the manufacturers have not been able to do the same job because they lack credibility in Washington.

The message, he said, is that either the manufacturers start negotiating in good faith with the dealers or the dealers will stop lobbying for the manufacturers' interests.

He also said that the DEAC could bring its lobbying efforts to bear on such things as national franchise legislation.

In his speech, he said that the letter advising Ford Motor Co. dealers of this posture has the support of William E. Hancock Jr., chairman of DEAC.

• Mullane outlined his criticisms of the factory dealer councils and NADA's Relations Committee which, he said, have not been serving dealer interests effectively.

He said that "as long as the manufacturer retains the right to make the final decision unilaterally, the structure of the dealer council is designed to prevent change and stifle dissent."

He added that dealer councils have no funds, lawyers or staffs with which to operate.

As for the Industrial Relations Committee, he said "they do not take a militant enough posture to get anything done. In fact, they take a back seat to the dealer councils."

"It is my belief that Detroit has failed the dealer body," Mullane said. "They talk about pent-up demand, 60-day inventories, and the spring upturn just around the corner. We haven't had a spring upturn in three years.

"Our automotive companies have been captured by the financial men, the MBAs and the lawyers. Ford and General Motors lack creative marketing depth, and we are in deep trouble."

He said that American auto dealers have a combined $140 billion in annual sales yet they have no voice in their own destinies.

The UAW has bargaining power with the factories, he said, and the new contracts with Ford and GM will give the UAW access to the decision-making process.

He asked why dealers shouldn't have the same rights as the unions since the dealers are just as important to the success of the companies.

He added that the dealers may be more important "because the factories' success depends on us as much as ours on theirs." In fact, he said, "any

breaking news

GM says 'go' to Pontiac P-car

DETROIT. — General Motors' Executive Committee last week gave final approval to Pontiac's sporty P-car model, a mid-engined two-seater that will bow in the fall of '83 as an '84 model. Development cost is pegged at slightly over $250 million, a bargain when compared with J and X-car costs. Powertrain will be Pontiac's 2.5-liter four (with TBI) mated to a standard four-speed manual or optional three-speed automatic.

With plastic body, P-car weight will be about 2,200 pounds. Insiders say 0-60 MPH times of under eight seconds and highway economy figures of 40 MPG are obtainable. Target price is just under $10,000. The I-car (a name has not yet been chosen) will be a Pontiac exclusive, at least during its first year. It will be built at the old Pontiac home plant with a first-year run of about 100,000 units.

V-6 being fitted to J-car

DETROIT.—General Motors engineers are working on installation of a V-6 in the J-car. It is believed the engine option will be offered in the 1985 model year. The V-6 will be transversely mounted.

Production pact with Seat expected

VW closer to accord with Spanish maker

By Richard Feast
European Editor

MADRID. — Volkswagen has moved one step nearer to Seat, Spain's state-run auto maker, as discussions have progressed from an exploratory basis to a formal one.

A final agreement is not expected for one or two months, but talks are believed to be concentrating on the production in Spain of the baby Polo/Derby range and the mid-range Passat/Santana.

Volumes being discussed involve up to 130,000 units annually, many of which would be sold in Europe through the Volkswagen dealer network.

Seat has been looking for a commercial partner since the withdrawal of its Italian partner, Fiat, two years ago. Talks concentrated on two Japanese companies, Toyota and Nissan, and two European firms.

Volkswagen is without a significant presence in the Spanish market, the fifth largest in Europe after West Germany, France, Italy and the UK. It cannot achieve large sales volumes until it has some manufacturing operations in the country.

Last year, for instance, VW sold fewer than 3,000 units in a market that amounted to 506,000.

In the longer term, however, Spain's scheduled membership in the European Common Market — 1984 is the earliest likely date — will give auto makers a launch platform for the rest of Europe.

• The Spanish market was down 11.5 percent last year, but it is widely considered to offer the greatest growth potential in Europe.

Rivals like Renault, Ford and Peugeot S.A. have whittled away at Seat's traditional dominance of the market and will be joined this year by General Motors, which will begin producing its Opel-designed Corsa (S-car) in the fall.

Seat needs a car in the Santana/Passat class to replace the 132 model it used to build under license from Fiat. The sector is worth 60,000 units a year in the domestic market, and Seat dealers have nothing to offer in its place since production was rationalized and the 132 was axed.

At present Seat builds four Fiat-based designs — the baby Panda (which is also exported through the Fiat network in Europe), Fura (a 127 hatchback), Ritmo/Strada and Mirafiori.

Licenses to build those models expire in the mid-'80s, and since the withdrawal of Fiat as a partner, Seat has been searching for a replacement collaborator.

As an interim measure, it has commissioned a modified Ritmo, known until now as the Seat 22. When it debuts later this month, it will be called the Ronda.

But the domestic market cannot absorb planned Ronda production, and the Spanish company plans to export the model beginning next year.

In addition, Seat plans to introduce in about a year, the model it currently knows as Seat 1. This is effectively a replacement for the Fura and will feature Giugiaro styling and an exclusive, Porsche-designed engine.

Last year, Seat produced just under 205,000 units. Current plans call for 1982 production of around 320,000 — compared with a record of nearly 370,000 and a theoretical capacity of 400,000.

Part of Seat's short-term revival is based on the success of the revised 127/Fura. The model has become the number one seller in Spain, topping the Renault 5 and the Ford Fiesta.

New life for the Cheetah

Lamborghini has developed an updated version of its Cheetah, first shown five years ago. It uses a new Lamborghini 5-liter engine and 5-speed transmission. Called LM A or LM-002, the car has drawn keen interest from Middle East countries. Lamborghini is testing an aluminum V-12 turbocharged diesel in the vehicle, which would offer the advantage of using the same fuel as other military vehicles.

Other Rabbits, pickup, Jetta also reduced

Best-selling VW Rabbit cut $625

TROY, Mich. — Volkswagen has reduced prices $625 on its most popular domestic model— the Rabbit L — and has cut stickers $205 to $385 on other Rabbits, the U. S.-built pickup truck and imported Jetta sedans.

The reductions will be in effect through the end of the 1982 model year.

Dealers will be reimbursed for the difference between the old and new wholesale prices on models in inventory. The dealer discount also has been cut by an average of one percentage point on the models involved in the price reduction.

There is no change in the prices of the imported VW Quantum, Scirocco, Rabbit convertible and Vanagon models. Also unchanged are the Rabbit S, a five-speed two-door hatchback, and the Sportruck, the most expensive model in the pickup line.

Prices of optional equipment and diesel engines also are not changed.

The Rabbit L models, which received the $625 price cut, accounts for about two-thirds of Rabbit sales in the U. S. New stickers are $5,990 for the two-door hatchback and $6,200 for the four-door hatchback.

The base Rabbit two-door hatchback is down $300 and is now priced at $5,690.

The Rabbit LS models are down $275 and now are $6,790 for the two-door and $7,000 for the four-door. Jetta prices were cut $385 to $7,990 for the two-door sedan and $8,210 for the four-door.

The base pickup truck now is $6,450, down $325, and the LX pickup is $6,990, down $205.

In announcing the price reductions, James W. McLernon, Volkswagen of America president, said ". . . we believe that market conditions call for bold actions on the part of the business community to renew confidence in the U. S. auto industry."

VW's sales slump undoubtedly played a part in the action, too. For the first four months of this year, Rabbit sales totaled 32,012, down 45.1 percent from 58,300 in the same period of 1981.

McLernon referred to the recent $350 rebate on Rabbits and pickups and said, "We were never convinced that a rebate program was the best response to current market and economic climates.

"We want to demonstrate to customers that we're serious about doing something long-term to renew customer confidence and assist dealers who have been devastated by high interest rates.

"So instead of just offering temporary rebates which have a tendency to confuse the public, we've cut prices on our most popular vehicle and will maintain these lower prices until the beginning of the 1983 model year."

VWoA in black for '81 on Porsche-Audi gains

TROY, Mich.—Volkswagen of America operations generated a profit of 1.5 million D-marks last year, roughly $600,000, on sales of about $3.3 billion, according to figures released by Volkswagenwerk AG in Wolfsburg and confirmed by VWoA here. In 1981, VWoA lost about $38 million on sales of $2.5 billion.

The improved results were largely due to increased sales of big-ticket imported German-built vehicles and a favorable exchange rate.

Last year, sales of Audi cars, imported and marketed by VWoA, were up 19.6 percent over 1980, and Porsche sales rose 7.2 percent. Sales of U. S.-built Rabbits were down 8.3 percent while sales of imported VW vehicles fell 9.7 percent.

Financial results for the first quarter of this year were not available, but U. S.-built Rabbit sales were off 49.8 percent in the January-March period. In the same span, sales of imported VW models declined 20.2 percent. Audi sales fell 9.1 percent in the first quarter while Porsche sales rose 9.9 percent. Sales of the U. S.-built VW pickup trucks were down 54.1 percent.

Dean joins bank board

WATERBURY, Conn. — John C. Dean, former chairman of Ford Motor Credit Co., has been elected to the board of the Colonial Bank here.

Beauties and the beast

Sands Chevrolet, Glendale, Ariz., is trying a more forceful approach to selling with this beat-up buzzard billboard sign. Reluctant consumers may prefer to have the Buzzard calling on their daughters rather than themselves.

Sales famine continues; April total down 11 pct.

By Jenny L. King
Staff Writer

April new-car sales had even the most optimistic forecasters scratching their heads as the wait for a general buying spree continues. The domestic industry dropped 6.60 percent from 1981, imports were down 21.86 percent and the grand total for April wasn't at all grand: Down 11.01 percent.

Total sales for the month were 668,463, compared with 751,175 in 1981. The five major U. S. auto makers combined forces to retail 498,630 new units, down 6.60 percent from 533,841, and lowest for the month since 1961, when 460,139 was the sum. Import sales in April totaled 169,833, down 21.86 percent from 217,334.

The imports' market share slipped to 25.41 percent from 28.93 percent last year.

Year-to-date total for the entire U. S. market was 2,611,595, down 16.42 percent from 3,124,844 last year. For the domestic industry, year-to-date sales numbered 1,899,320, down 16.21 percent from 2,266,633 in 1981. The import total through April 30 was 712,275, down 17.00 percent from 858,211.

All five of the major U. S. auto makers reported sales declines for the month. General Motors nearly matched its year-ago level while American Motors was farthest away with a 42.15-percent dive.

GM dealers retailed 307,531 units during the month, down 0.69 percent from 309,666 last year. Ford Motor Co. was down 8.07 percent, to 113,815 from 123,807. Chrysler Corp. dropped 17.74 percent, to 59,101 from 71,843.

Volkswagen of America sales in April totaled 9,787, down 30.15 percent from 14,011, and AMC plunged 42.15 percent, to 8,396 from 14,514.

• GM earned 61.88 percent of the domestic market, up from 58.01 percent a year ago. Ford dipped to 22.83 percent from 23.19 percent. Chrysler sales accounted for 11.85 percent, down from 13.46 percent. VWoA had 1.96 percent, down from 2.62 percent, and AMC had 1.68 percent, down from 2.72 percent.

Only three of the 14 U. S. makes reported sales gains in April. Chrysler was up 73.66 percent, Lincoln was up 51.03 percent and Oldsmobile was up 3.71 percent.

The domestic daily selling rate for the month was 19,178, down 6.60 percent from 20,532 for April of 1981. There were 26 selling days each year.

Third-period domestic sales

From California air board, Center for Auto Safety

Smog decree gets strong support

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Relaxation of the 10-year-old "smog conspiracy" consent decree — proposed by the Reagan Administration and the domestic auto industry — has been opposed heatedly by the California Air Resources Board and the Center for Auto Safety in filings at the Justice Department's Antitrust Division.

After some years of government insistence on restrictions on meetings, joint statements and exchange of information by auto makers on emission-control systems, the Reagan Administration and its antitrust chief, William Baxter, almost succeeded in getting California Judge Jesse Curtis to relax key provisions of the consent decree.

But the Center for Auto Safety (CAS) garnered a stay at least long enough to file comments. It hopes to prevail on the court to retain the original decree that settled charges that the four domestic firms and their trade association delayed installing emission control devices on California cars in the 1950s.

CAS won its right to comment on a court action it did not know had taken place by claiming privilege under the Antitrust Procedures and Penalties Act.

CAS Director Clarence Ditlow III said the government's about-face on the decree indicates political considerations were involved. Until mid-1981, he said, the Antitrust Division "vigorously advocated" extending the two key provisions that were about to expire — the ones the Antitrust Division now wants to drop.

The government argued in 1979 they were still needed to preserve competition and to protect public health.

• Now the Reagan Administration says the decree's job has been done and many features of the decree are anticompetitive, given the decline of the industry.

But, according to CAS, the economic decline and loss of competitiveness started earlier. CAS claimed the decree has been effective in preserving competition and is still crucial to resolving serious public health problems.

The proposed changes, the California Air Resources Board (CARB) declared, threaten its ability to enforce controls on vehicles within the state. This affects the health of its citizens and its economy by degrading such industries as farming, forestry and tourism, CARB said.

If California cannot control vehicular emissions, then tighter controls must be placed on industrial smokestacks, CARB argued.

California said it does not know where the U. S. government got its belief that there has been an "erosion of support" for the consent decree from the agencies. The state said it has given "unwavering support" to an unchanged decree.

The U. S. government apparently believes that since fuel economy and emission control are related, an improvement in one always means an improvement in the other, CARB said.

But this is not true for heavier vehicles and diesel engines which are using more primitive controls, it said. Therefore, there is no market pressure for emissions improvement in these vehicles, according to CARB.

• Much of CARB's argument rests on the unsaleability of air pollution controls (unlike fuel economy) and the makers' unwillingness to make changes unless they save money or stimulate sales.

"Consequently, the stick of legal force has had to replace the carrot of corporate profits," CARB said.

Despite an industry position of "can't do," CARB said its separate meetings with firms and the availability of confidential data sometimes show what is in fact technically possible.

CARB staff now is working on a diesel particulates standard. If the makers are allowed to submit only joint statements on the proposed standard, CARB said it fears the only data it will receive will be "unduly pessimistic" and result in an "unnecessarily conservative standard."

Eventually, CARB warned, it may question the sincerity of industrywide positions and stop granting delays.

Easing patent right protections might discourage third parties from emission-control R&D, CARB said. This would be especially detrimental in control of diesel emissions of NOx and particulates, where work is being done by outside suppliers, CARB said.

These suppliers would be hurt by an agreement among defendants to acquire patent rights if they are available to other defendants on a most-favored purchaser basis, CARB said.

• CAS took issue with the Justice Department argument that the consent decree hinders the small domestic makers from making advances in emission control technology because of its cost and their limited resources.

Ditlow claimed this is "blatantly wrong," since companies even smaller have made the greatest advances. He cited Volvo, with its Lambda-sond system, Honda with its stratified-charge engine which he said the U. S. companies rejected in the '50s, Toyo Kogyo for its 1980 Mazda RX-7 rotary engine which he said met U. S. standards without a catalyst and Mercedes-Benz, which has been innovative in safety (air bags) and in emission control, especially with diesels.

Ditlow also quarrelled with the Justice Department finding that smaller firms spend proportionately more of their technical and R&D resources to meet regulations and thus have less to use for product development. He cited a NHTSA study reaching just the opposite conclusion.

Ford supervisor selected for Sloan fellowship

DEARBORN. — Martha E. Wallace, a supervisor in Ford Motor Co.'s Body and Assembly Operations, has been selected as an Alfred P. Sloan Fellow.

She is one of 57 persons from throughout the world chosen for this fellowship. Eight of those selected are women.

Martha E. Wallace

She will participate in a 12-month course of study leading to a master of science degree in management at MIT's Alfred P. Sloan School of Management.

The Sloan Fellows Program, started in 1931, was initiated by the late Alfred P. Sloan, Jr. former chairman of General Motors, and the late Professor Erwin Schell, of MIT. There now are more than 1,400 alumni and alumnae of the program.

Wallace joined Ford in 1977 as a Production Superintendent in the Metal Stamping Division.

Early in 1981, she became supervisor, parts control and scheduling section for the Manufacturing Planning and Material Control Office. She presently is supervisor, parts control and production scheduling section, Material Control and Distribution, Body and Assembly.

Chevrolet deal for Graves

Cecil M. Graves signs his sales and service agreement upon being named the new Chevrolet dealer in Clinton, La. On hand for the occasion were J. W. Croft, left, New Orleans zone manager, and G. J. Mitchamore, assistant zone manager-sales.

Honda agrees not to oppose UAW efforts at Ohio plants

By Marjorie Sorge
Labor Editor

American Honda Motor Co. will remain neutral during UAW organizing efforts at its Marysville (O.) motorcycle and auto plants, according to a joint company-UAW statement.

It also promised to help its associates (workers) understand the need for UAW representation and to withdraw its appeal against National Labor Relations Board unfair labor practice decisions. Honda refers to its workers as associates to further the team concept method of management.

Honda, the first Japanese auto maker to schedule the production of cars in the U. S., was found guilty of two unfair labor practices by the NLRB last year.

It had prohibited workers in the motorcycle plant from wearing UAW hats during UAW organizing campaigns and had refused to bargain with four employes in the company's powerhouse who had voted for UAW representation. No election has been held at the motorcycle plant.

Honda and the UAW reached an agreement on those two issues after the union threatened to begin a nationwide campaign urging Americans to boycott the company's products.

Under the settlement, Honda has agreed to modify the uniform rule, allowing its workers to wear hats with UAW insignias, and to begin negotiating a contract with powerhouse employes.

The company further promised to remain neutral when the UAW begins its organizing campaign at the motorcycle and auto plants. There will be about 2,000 workers at the car plant when it reaches full capacity a year from now and there are about 400 workers in the motorcycle operation. The auto plant is scheduled to begin production this fall.

Although the UAW maintains Honda was not neutral during the first round of organizing, the company said it has always given the workers the freedom of choice on a bargaining representative.

"We believe they will be neutral this time," said one UAW official.

Honda and Nissan Motor Mfg. Co. had both been concerns of the UAW because of what the union termed anti-union campaigns. Neither company has been ready to welcome the union with open arms.

Now, after Honda has agreed to neutrality, Nissan is left alone in its struggle to keep the UAW out. That company is building a new light-truck plant in Smyrna, Tenn., and company officials have already said they do not want the UAW organizing their workers. They are, however, quick to point out that the final decision rests with the workers. That plant comes on stream in the fall of 1983.

Mobility to star as auto engineers meet in Australia

MELBOURNE, Australia.— Five top-flight speakers highlight the program established for the XIX International Congress of FISITA to be held here Nov. 8-12.

FISITA stands for an organization of automotive engineering groups—Federation Internationale des Societes D'Ingenieurs des Techniques de l'Automobile.

Keynoters are: Walter Kirsten, chief executive, BP Oil International; Takashi Ishihara, president, Japanese Automobile Manufacturers Assn.; Umberto Agnelli, vice chairman, Fiat Automoveis and president of the Committee of Common Market Automobile Constructors, Italy; Hans Merkle, president, Robert Bosch, GmBH, and Gerald B. Mitchell, chairman, Dana Corp.

Theme of the congress is Energy and Mobility. It has been organized by the Society of Automotive Engineers, Australasia.

3 Subaru dealerships formed in Arizona

PHOENIX. — Three new Subaru dealerships have opened in Arizona.

They are Sun Subaru, Phoenix, owned by Jay Pinccinati, who combined Subaru with his Sun Pontiac outlet; Lamb Subaru, Prescott, owned by Ted Lamb, and Sierra Vista Subaru, Sierra Vista, owned by Wayne Culiver.

Harvester restructuring continues

Continued from Page 1

mistic forecasts," AUTOMOTIVE NEWS sources said last week.

IH's financial deterioration was exacerbated by a 5½-month strike in late 1979. McCardell bore the brunt of the anger of UAW members, whether or not he deserved it. As a result, labor relations, a key to the restructuring program, deteriorated.

Even though a new era in IH-UAW relations was widely trumpeted with the announcement of the new pact last week, many sources do not believe that labor relations alone were responsible for McCardell's demise.

"Even though Archie had trouble with the union, I don't think he was ousted to appease the UAW," said the officer of one of IH's banks.

The bank official said the background of Menk and Karnes make it "obvious" their jobs are to regain credibility for the company while they are restructuring it.

"Harvester went to successful outsiders who have proven track records," the banker said. "It also is likely they will be able to look at the restructuring more objectively than some of the old-line management. They will not be queasy about paring off part of the business, like tractors, if they have to."

Continental Bank is the lead bank in a group of 200 lending institutions which late last year replaced short-term borrowings with $1.5 billion in term loans to IH and $2 billion to its International Harvester Credit Corp. unit, and committed $750 million in additional funds to purchase receivables from IHCC if needed.

• The age of the new top managers—Menk is 64, Lennox is 63 and Karnes is 71—led to speculation that the new team is a "short-term task force" with a specific set of goals to insure IH's survival. It also raised some questions about from where the next generation of top management will come—inside or outside.

While the election of the new leadership did seem to have a calming effect on some bankers and suppliers, the approval of the new UAW pact, which covers 20,000 active and 10,000 laid-off workers, was generally viewed as a very positive factor and an indication of a new "environment of cooperation."

The pact was approved by 64.2 percent of the vote. UAW vice president Stephen P. Yokich said the agreement will provide a "first-dollar" profit-sharing plan which will allow union members to begin sharing profits as soon as the company returns to black ink. It becomes effective Nov. 1.

Yokich also said the pact includes a job security provision with a $1 million operating budget to launch training, retraining and outplacement of workers.

Among the other provisions, Yokich announced, were a "revitalized" Supplemental Unemployment Benefits program, safeguards against outsourcing, protections on potential plant closings, a master recall list with company-wide seniority protection and improved Christmas pay eligibility.

Benefits received by the company included deferred cost of living adjustments, elimination of 15 vacation days and 11 paid personal holidays, deferred pension contributions, elimination of a three percent annual improvement factor for 1982 and 1983 plus elimination of the 13-week paid preretirement leave.

Horvath promoted

CORAL GABLES, Fla.—Robert J. Horvath, general sales manager for Cooper Oldsmobile for the past six years, has been named general manager of the dealership.

IMPORT	169,833	25.41
TOTAL	668,463	100.00

Sales famine continues; April is down 11 pct.

Continued from Page 3

were down 6.08 percent, to 205,208 from 218,500. It was the lowest late-April total since 1961 when 166,398 units were tallied.

During the period, GM was up 1.67 percent, Ford dropped 4.40 percent, Chrysler plunged 34.15 percent, VWoA was down 23.95 percent and AMC was down an estimated 26.83 percent.

GM earned 63.25 percent of the late-month domestic market, Ford had 22.94 percent, Chrysler earned 10.01 percent, VWoA had 2.34 percent and AMC cornered 1.46 percent.

• For all but a few importers, April was a discouraging month for U. S. sales. Toyota reported a sales decline of 20.25 percent, Nissan was down 38.87 percent, Honda was down 8.90 percent, Mazda was down 12.02 percent and Subaru was off 6.73 percent.

It was the fourth consecutive monthly decline for imports this year.

Jaguar, however, had its best month ever in the U. S. and more than doubled its year-to-date sales compared with 1981. Saab reported record sales for April.

Imports accounted for 25.41 percent of the total market in April, down dramatically from 28.93 percent a year earlier. U. S. subcompacts held 15.48 percent, down from 15.68 percent. Compacts earned 17.96 percent, down from 19.62 percent. Intermediates took 23.14 percent, up from 20.10. Standard-size domestics represented 12.10 percent of the total, up from 10.54 percent, and luxury models had 5.91 percent, up from 5.13 percent.

And May schedule is slimmest since 1958

April car output lowest since 1961

By Patricia Hoffman
Staff Writer

Although domestic auto production last month was slightly higher than in March, the April total was the lowest for that month since 1961, and output for May is expected to be the lowest in 24 years.

Last month, the auto makers assembled 490,014 cars, down 24.99 percent from 653,306 in the comparable 1981 month, and the lowest for April since 447,343 in 1961.

For May, the makers are slating 522,513 cars, down 21.59 percent from last years' 666,389. The schedule is the lowest for May since 1958 when 349,613 units were assembled.

Of the six auto companies, only Checker Motors showed a gain in April, with 303 units, up from 55 built in the comparable 1981 month.

Volkswagen of America suffered the largest decline last month. It built 6,671 cars, a drop of 62.11 percent from 17,604 last year.

American Motors dropped 53.04 percent to 5,615 from 11,957; General Motors produced 291,388, down 26.80 percent from 398,073; Chrysler Corp., 62,389, down 25.32 percent from 83,540, and Ford Motor, 123,648, down 12.97 percent from 142,077.

The breakdown for May is expected to be: AMC, 5,400, down 54.99 percent from 11,998 last year; VWoA, 8,713, down 46.92 percent from 16,383; GM, 308,000, down 26.32 percent from 418,021; Chrysler, 65,000, down 13.12 percent from 74,816, and Ford, 135,000, down 6.83 percent from 144,890.

Checker plans 400 units, up from 281 last year.

Last week, production was targeted at 123,573 cars, down a fraction from 124,133 in the previous week, and down 14.10 percent from 143,849 in the comparable 1981 week.

So far this year, the auto makers have assembled 1,700,587 cars, down 29.64 percent from 2,416,967 in the same 1981 period.

Breakdown for the week by company is: GM, 62.03 percent; Ford, 25.53 percent; Chrysler, 8.66 percent; VWoA, 2.57 percent; AMC, 1.13 percent and Checker Motors, 0.08 percent.

GM's Janesville and Oklahoma City facilities remained idle last week for model changeover.

Ford's St. Louis and San Jose points were down last week for inventory adjustment.

VWoA's Westmoreland plant resumed production last week after a two-week shutdown to control inventory.

Saturday overtime was scheduled last week at GM's Van Nuys plant.

Also at GM, second-shift operations will resume at two assembly plants June 1. The GM Kansas City facility will resume the second shift on Buick LeSabre, Chevrolet Caprice and Oldsmobile 88 resulting in approximately 2,000 workers returning from indefinite layoff.

GM's Lansing plant will call back the second shift on the Oldsmobile Cutlass and Cutlass Supreme. About 2,200 workers will be returning to work at Oldsmobile and the companion Fisher Body plant.

11 states face loss of U.S. funds for inspection lag

WASHINGTON. — The EPA has warned 11 states that they may lose federal air quality planning funds for failing to adopt vehicle inspection and maintenance programs as required by the Clean Air Act.

The Clean Air Act requires implementation of I&M programs in urban areas if national ambient air quality standards for ozone and/or carbon monoxide cannot be met by the end of 1982.

EPA said North Carolina, Nevada, Michigan and Missouri missed the Dec. 31, 1981, deadline for fully implementing a decentralized service station emissions testing program.

Seven other states — Kentucky, Illinois, Indiana, Texas, Tennessee, Ohio and Wisconsin —were cited for apparent failure to implement certain critical commitments made in their state air cleanup plans necessary to have a state-operated, centralized emissions testing program in operation by Dec. 31, 1982. States planning centralized programs have an additional year to implement them.

The metropolitan areas where I&M programs are required are Charlotte, N. C.; Las Vegas; Reno; Detroit; St. Louis; East St. Louis; Louisville; Louisville suburbs in Indiana; Chicago; Chicago metropolitan suburbs; Houston; Nashville; Cleveland; Cincinnati and Milwaukee.

GMAC appoints Dann

DETROIT. — Robert C. Dann has been promoted to director of GMAC bank relations here. He had been regional finance manager in Philadelphia.

Truck production for April tops 1981 by 17 pct.

Overtime schedules are starting to pay off as domestic truck production in April rose substantially over the year-ago month. The makers are looking at another production gain in May.

Truck production last month totaled 184,990 units, up 17.88 percent from 156,934 in April of 1981. It was the most for that month since 256,090 trucks were completed in 1979.

The makers are slating 193,675 units for May, up 23.38 percent from 156,979 in the comparable 1981 month.

Last week, the truck manufacturers scheduled 43,501 units, down 5.43 percent from 46,000 the previous week, but up 19.50 percent from 36,402 in the comparable week last year.

So far this year, the makers have assembled 679,897 trucks, up 6.41 percent from 636,326 in the same 1981 period.

General Motors' Janesville and St. Louis truck points both worked last Saturday.

Chrysler Corp.'s Warren facility operated on a daily nine-hour shift last week. It was the 10th consecutive week of overtime at the plant.

GM's Pontiac (heavy-duty truck and coach) point is scheduled to resume production today (May 10) after a two-week partial shutdown to control overstocked inventories.

April production of cars, trucks dips in Canada

The Canadian auto makers produced 86,953 cars in April, down 7.78 percent from 94,293 in the comparable 1981 period, but higher than the 75,977 built in April, 1980.

Last week's auto production was targeted at 21,090 units, up a fraction from 20,999 in the previous week but down 9.47 percent from 23,296 in the comparable 1981 week.

So far this year, 313,182 cars have been assembled, a 2.07 percent gain from 306,816 units built this time last year.

Truck production last month totaled 52,110 units, down 16.31 percent from 62,266 in April, 1981.

Last week, the makers scheduled 12,939 trucks, up 2.27 percent from the previous week's 12,652, but down 3.89 percent from 13,463 in the comparable period last year.

Year-to-date, the truck manufacturers have finished 186,188 units, down 8.69 percent from 203,906 in the same 1981 period.

General Motors' Oshawa (No. Two) and Ste. Therese car facilities continued on one-shift operations last week (May 3).

Ford Motor's St. Thomas car point operated two nine-hour shifts Monday through Thursday last week, returning to regular eight-hour operations on Friday. It was the fourth consecutive week of overtime there.

GM's Oshawa (No. One) plant will operate Saturday (May 15). The facility is expected to resume a normal five-day schedule next week with overtime aagin slated for Saturday, May 29.

Partners AMC/Renault show '83 Alliance

The AMC/Renault Alliance, which bows as an '83 model this fall, had its first showing at the recent NAFA meeting. The Alliance has front and rear styling changes from its European counterpart, the Renault R-9. Initially Alliance will be offered only in this four-door sedan version, though two-door sedan and wagon models are in the works. It will be assembled at AMC's Kenosha plant. AMC hopes to sell 100,000 units during the first year. Standard Alliance drivetrain will be a 1.4-liter engine with four-speed, five-speed and automatic transmissions. Wheelbase is 97.2 inches. Overall length is 165 inches. The Alliance carries both AMC and Renault badges (below).

66-day supply on hand

New-car inventory climbs

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory climbed during April as the hoped-for spring selling surge failed to materialize and the industry opened May with a 66-day supply.

While the inventory situation was a vast improvement over that of just a few months ago—it reached a record 107 days on Jan. 1—there was not unalloyed joy in Detroit because of the continuing anemic sales pace.

The domestic new-car inventory totaled 1,260,633 on May 1, up slightly from 1,246,648 a month earlier. A lower daily sales rate in April contributed more to the increase in the days-supply figure to 66 from 58½ than the unit count increase. A year ago, the industry had 1,348,836 cars in stock May 1, a 66-day supply.

By size class, the distortion between the heavy supply of subcompacts and the other segments increased.

• Among the corporate makers, only American Motors and Volkswagen of America trimmed their supplies during April.

General Motors opened May 1 with a 63-day supply, up from a 59-day supply on April 1. The hot new Camaro and Firebird were in shortest supply.

Ford Motor Co. boosted its inventory to a 66-day supply, from 51 days a month earlier.

Chrysler Corp. had a 76-day stockpile May 1, compared with a 62-day supply April 1.

AMC trimmed its stockpile to a 73-day supply from 80 days a month earlier, while VWoA opened May with an 83½-day stock, down from 97 days.

The May 1 domestic inventory was divided this way: GM, 59.32 percent; Ford Motor Co., 22.61 percent; Chrysler Corp., 13.71 percent; VWoA, 2.49 percent, and AMC, 1.87 percent.

A month earlier, the domestic inventory was divided as follows: GM, 61.27 percent; Ford

Table on Page 62.

Motor Co., 20.54 percent; Chrysler Corp., 13.34 percent; VWoA, 2.90 percent, and AMC, 1.95 percent.

• By size class, the figures make it clear where the heaviest burden is, as the subcompact inventory ballooned to a 91-day supply, compared with 69 days a month earlier.

The supply of compacts rose to 57 days' supply from 44 days, while the larger cars were in shorter supply than a month earlier. The industry had a 65-day supply of intermediates, down from 66 days, a 48-day stock of standards, down from 63 days, and a 59-day supply of luxury cars, off from 60 days.

The May 1 inventory was divided this way by market segment: Subcompact, 29.23 percent; compact, 20.79 percent; intermediate, 30.89 percent; standard, 11.97 percent, and luxury, 7.12 percent.

A month earlier, the inventory was divided as follows: Subcompact, 28.73 percent; compact, 20.38 percent; intermediate, 31.83 percent; standard, 12.45

Gain in Service Index is biggest in 9 months

By Francis J. Gawronski
Service Editor

With all indicators except one tallying impressive advances, service and parts business at new-car dealerships in March registered its biggest gain in nine months.

According to the Automotive News Service Index, shop volume in March amounted to

Table on Page 2.

114.6 percent of the business recorded in the same month in 1981.

It was the biggest monthly gain since June, 1981, when dealership service and parts business showed a gain of 16.6 percent over the year-earlier figure.

In February, shop volume was 112.2 percent of the business recorded in February, 1981, while March, 1981, showed a gain of 4.9 percent over the year-ago figure.

March also marked the 13th consecutive month in which dealers' shop business has shown an increase over the comparable period the year before.

As in February, all indicators used in the Service Index, except repair orders written, posted gains in March. ROs dipped 2.7 percent.

The leading indicator in March was sales of all parts and accessories, up 25.5 percent over similar sales in the same month a year ago.

Shop parts sales, those used in dealer shops on both customer-paid and warranty repairs, were up 24.8 percent, while profit on all labor, parts and P&A sales—the most important indicator from the dealer's viewpoint — were up 15.3 percent.

Total labor sales, both customer-paid and warranty, were up 11.3 percent in March.

Figures used in the Service Index are averages compiled from dealer reports on shop business from a cross-section of the nation's new-car dealerships.

For the first three months of the year, service and parts business amounted to 110.9 percent of the volume done during the same period a year ago. The two-month, year-to-date volume was up 8.9 percent over the year-earlier figure.

The leading indicator in the January-March period was sales of all parts and accessories, up 19.0 percent, followed by shop parts sales, up 18.1 percent, and gross profit, up 13.3 percent.

Labor sales were up 8.1 percent for the period, while repair orders written were down 4.5 percent.

Program pays cash for sales if dealers order their quota

Chrysler begins push-pull buildout

By Joseph Bohn
Marketing Editor

Chrysler Corp. has launched its traditional buildout program, which it offers in lieu of a carryover allowance on prior-year models in stock on new-car announcement day.

It also extended the 5/50 warranty through Sept. 30.

The buildout program is a somewhat complicated push-pull, with retail dealer payments geared to wholesale orders.

Dealer payoffs are only on cars. Trucks are covered by a previously announced consumer rebate plan running through June 30 on import trucks and June 6 on domestic trucks.

However, trucks are part of the wholesale purchase objective which a dealer must meet to qualify for retail payments.

Dealers must place all wholesale orders on domestic cars and trucks by May 25 to qualify. They are paid for retail sales from May 11 to Sept. 30.

Import-car wholesale orders must be placed in the following way: 30 percent of total by May 25; 60 percent by June 25; 80 percent by July 25, and 100 or 120 percent (depending at what level the dealer wants to play) by Aug. 25.

Dealers can place wholesale orders at level 1, 2 or 3. Level 1 means a dealer accepts only 80 percent of his wholesale order objective.

At this level, a dealer earns flat non-retroactive payments based on hitting a retail objective: 0-25 percent pays nothing; 26-50 percent pays $50 per unit; 51-75 percent pays $100 per unit; 76-100 percent pays $150 per unit, and 101 percent and over pays $200 per unit.

• At level 1, dealers receive no payment on retail for the LeBaron and Dodge 400 convertibles and the New Yorker. They receive no import-car payments. However, they qualify for consumer rebates on import cars in the following amount: $300 on '81/'82 Sapporo/Challenger, $400 on '81/'82 Colt/Champ base and Deluxe models; $500 on '81/'82 Colt/Champ Custom models.

If a dealer plays at level 2, meaning he accepts 100 percent his wholesale objective, he is paid on a retail objective in the

Diesel-car bonanza turning sour; sales off 35 pct. for 1982

By Jim Plegue
Staff Writer

The diesel boom has become a bust.

After posting enormous increases during the last two calendar years, sales of diesel-powered automobiles in the U. S. have taken a nosedive during the first four months of 1982.

Domestic and import makers sold 113,126 diesel cars from Jan. 1 to April 30 of this year, a 35.38-percent plunge from the 175,617 sold during the comparable period in 1981.

"The appeal of the diesel engine is now being offset by the fact that gasoline prices are lower and diesel fuel is more expensive, and the fact that premium prices are charged for the diesel engine itself," said Maryann Keller, vice president and auto analyst for Paine Webber Mitchell Hutchins, New York.

The American Automobile Assn., in a recent report, said the average price for gasoline and diesel fuel at the end of April was the same — about $1.24 per gallon. The AAA said gasoline prices dropped about 11 cents per gallon during March and April, while diesel fuel prices came down only 5.4 cents per gallon during those months.

The result has been an abrupt about-face by American car buyers. During 1981, diesel sales topped a half-million units and were up 30 percent from calendar 1980, which was up 40 percent from calendar 1979. Now, diesel sales have slowed and already some overstocked dealers are cutting prices on diesel vehicles.

Diesel mainstays General Motors and Volkswagen-Audi took a beating during the first four months of 1982. GM lost the largest market share of all companies, while Volkswagen recorded the largest sales decrease.

GM's market share dropped 7.38 percentage points, from a 62.87-percent share during 1981 to 55.49 percent during 1982. Sales of diesel-powered GM vehicles during the first four months of 1982 totaled 62,778 units, down 43.14 percent from the 110,415 sold during the equivalent period in 1981.

All GM divisions reported sales declines during the four-month period. While Chevrolet, Cadillac and Buick sales were down, they increased their penetration of the diesel market.

Oldsmobile sales of 29,118 diesel cars during the four-month period of '82 represented a 47.61 percent drop from the 55,581 units sold during the equivalent period last year. Likewise, Oldsmobile's market share dropped substantially — down 6.91 percentage points, from 31.65 percent in 1981 to 24.74 percent in 1982.

Lynn C. Myers, manager of market analysis for Oldsmobile, said in a recent statement that Oldsmobile does not foresee a drop in repeat diesel sales "but conquest sales are rather slow."

Pontiac diesel sales tumbled 89.35 percent with the division surrendering 7.59 percentage points of its market share. The Pontiac losses are largely a result of that division dropping its standard-sized (B-body) cars, which had a 30-percent diesel installation rate.

• Volkswagen-Audi fared no better than GM. Total VW-Audi diesel sales from Jan. 1 to April 30 totaled 20,171 units, down a whopping 52.29 percent from the 42,280 sold during the comparable '81 period. VW-Audi market share declined 6.24 percentage points.

While Audi diesel sales remained steady (primarily because of the new 4000D model), sales of diesel-powered Volkswagen models were down by more than half. VW sold 18,082 diesel cars in the first four months of this year, down 55.10 percent from 40,194 sold during the 1981 period.

Of that total, VW sold 14,585 diesel Rabbits, down 57.63 percent from the 34,422 sold during 1981. Diesel installation rate in Rabbit models is now about 46 percent, compared with 60 percent during the first four months of 1981, a VW spokesman said.

Sales of diesel Mercedes-Benz models during the first four months of 1982 were down 2.27 percent but market penetration was up. The German maker collected 14.50 percent of the diesel market during the first four months, up 4.94 percentage points from the 9.56-percent share it held during the comparable '81 period.

Peugeot diesel sales were off 25.33 percent during the period but market share was up slightly. Volvo sold 2,689 diesel models but comparisons with last year are not valid since Volvo was unable to certify a 1981-model diesel engine. Figures for last year represent 1980-model diesels.

Datsun sold 4,121 diesel-powered Maxima models through April of this year while Isuzu sold 3,618 diesel-powered I-Mark models. Isuzu entered the U. S. market in March of 1981.

GM and Isuzu planning world marketing firm

TOKYO. — Isuzu Motors, Ltd. anl its U. S. affiliate, General Motors, are establishing a joint venture here to market Isuzu products around the world except for the U. S. and Europe.

Marketing efforts will be concentrated in Africa, the Middle East and Latin America.

Agreement on basic terms of the marketing program has been reached by Isuzu President Toshio Okamoto and GM Chairman Roger B. Smith, Japanese press reports said.

In Detroit, GM called those reports premature and said it is too early to discuss marketing plans.

The projected company will be 51 percent Isuzu-owned. The balance will be owned by GM Overseas Distribution Corp., a GM subsidiary. Vice president will be Joji Mizusawa, reports here said.

A total capitalization figure has not yet been arrived at and other details have not been made final.

GM Overseas Distribution Corp. has offices in Athens, Singapore and Panama. Those offices have handled sales of Isuzu cars and trucks in the past and that work will be transferred to a new Tokyo office. A GM office in London will remain independent.

Sales of diesel-powered new cars in the U. S.

More room for passengers, luxuries

Lahav Import & Export Agencies, London, now offers a stretched Mercedes-Benz 500 limousine. The coach building is done by Aston Martin and Panther Car Co., with all original Mercedes parts under the hood. A 500 Limousine was shown at the mid-May Los Angeles Auto-Expo. Lahav has U. S. offices in Fort Lauderdale, Fla.

Going beyond the regular 4WD market

Jeep seeks broader prospect base

By Joseph Bohn
Marketing Editor

SOUTHFIELD, Mich.—The 4-WD market is coming back, but not fast enough to suit Jeep officials.

They have launched a new phase of a marketing program that is designed to expand Jeep awareness and penetration beyond the 4WD market, while setting the stage for introduction of a new generation of downsized Cherokees and Wagoneers, code-named XJ.

"Why drive a car when you can drive a Jeep" is the new theme line of all ads, an effort to transcend the limited 4WD market and reach out to car prospects of all types.

A number of new ads, combining Jeep products are being run.

The first of the smaller, more-fuel-efficient XJs to be introduced will be Cherokee, tentatively slated to arrive in May, 1983. It is slated to go into production at Toledo next March.

Following Cherokee some months later will be the new Wagoneer, followed by a smaller pickup.

Cherokee is positioned more at the offroad, sporty side of the market; Wagoneer, more at the family wagon side. Their strongest competitors are Bronco and Blazer.

Jeep officials are tentatively planning to retain current, larger models for a time after the new, smaller versions are introduced, though for how long depends on market conditions.

Cherokee and Wagoneer are expected to retain 90 percent of current models' roominess, while boosting fuel economy to near 25-MPG city and 30-plus on the highway.

A turbocharged Renault diesel being planned for later will boost those economy numbers even further.

• Officials are laying ambitious plans for the new models, beginning with a 100 percent boost in Jeep's advertising for calendar 1983. They expect total Jeep sales to reach 140,000 by 1985, compared with less than 100,000 for 1982, and the XJ series alone to account for 100,000 by 1986.

Ambitious export plans are also in the works for the XJ series, described as "world vehicles."

But for the time being, officials are concentrating on shoring up Jeep awareness and purchase consideration.

The pricing problem was addressed in April, when CJ/Scrambler prices were cut to $6,765 to lure back traditional younger buyers — the "beer can" prospects — who had been priced out for varying reasons.

As a result, CJ's penetration climbed 15 percent in April, while the 4WD segment as a whole was off 28 percent, according to Raymond Avedian, man-

John Z. could inherit lesser role

Potential new investor lined up by DeLorean

By Edward Lapham
Financial Editor

The DeLorean sports-car enterprise last week took yet another step in its financial restructuring program, a step which could ultimately lead to a backseat role for enterprise progenitor John Z. DeLorean.

John DeLorean told Automotive News he would likely introduce one of the potential investors to the receiver in his office and "hopefully deliver something" in the way of a firm proposal to reacquire the Northern Ireland assembly plant to the receiver by last Friday.

The potential investor is Peter Kalikow, a principal in the Manhattan real estate firm of H. J. Kalikow & Co. He is considering an equity investment in DeLorean Motor Co.

DeLorean said that "depending on how much money" Kalikow "puts in, he's likely to take a dominant position, which, of course, he's entitled to."

DeLorean said he would not leave active participation in the company, however. "If he had a controlling position, he's said that he would want me to stay in charge of the thing," DeLorean said.

DeLorean said that "after we get a little further along and get the situation stabilized out" it might not be necessary for him to have such an active role in the organization he created "but at this time I think it probably is."

Kalikow was not available for comment.

In addition to the potential arrangement with Kalikow, which seemed to most insiders to be something DeLorean would like to avoid because of the likelihood of a diminished role for him personally, the auto executive is known to have

1.2 million shares going to bond holder

GM to use stock to retire debt

By Edward Lapham
Financial Editor

General Motors last week adopted a new tactic in its efforts to conserve cash by announcing it plans to trade nearly 1.2 million newly issued shares of its common stock for a portion of its outstanding debt. It is the first time in GM history it has redeemed debt with equity.

Richard Dugan, GM assistant treasurer, told AUTOMOTIVE NEWS there are three ways GM will benefit by the swap: A favorable effect on its balance sheet, a reduced tax effect and a "cheaper" redemption price for the sinking funds due soon on the debt issued in 1975 and held by Morgan Stanley & Co.

Dugan said it is the first time since 1954 that GM has been in the position to redeem debt.

He said no date has been set for the transaction. However, the preliminary prospectus filed by GM last week indicated the transaction will likely occur this month.

There will be no direct public offering of stock by GM, but Dugan conceded and analysts concurred that it is likely Morgan Stanley will in turn sell some or all of the nearly 1.2 million shares expected to be swapped for about $140 million aggregate principal of 8⅝ percent debentures due 2005.

The prospectus also said the exact terms of the agreement will be established at a pricing meeting, which could be held as early as this week and could involve GM paying some cash in addition to the stock.

Analysts generally saw the move as an effort by GM to conserve cash in order to finance its programs although Dugan, referring to the cash portion of the redemption price, said it is a way to use current "excess cash."

Arthur Davis, Prescott Ball & Turben auto analyst, said he believes GM will have to find other ways to generate needed capital, perhaps through a public stock offering.

"They've got a lot more to do," Davis said. "This is just a drop in the bucket. This is just scratching the surface of what has to be done by all of the auto companies to reliquify their balance sheets."

Dugan said there are no current plans for a public stock offering.

GM received what Dugan called a "fortuitous" advantage the day before the filing of the preliminary prospectus when one well-respected Wall Street analyst issued a report upgrading her analysis of GM's long-term prospects.

Maryann Keller, Paine Webber Mitchell Hutchins vice president and auto analyst, changed her opinion from a reserved cyclical trading recommendation to a "buy" recommendation.

In her report, she cited pending GM joint-venture agreements with car maker Toyota and robot maker Fujitsu as evidence of a new thinking at GM. Her report sparked rumors GM was about to announce an agreement with Toyota and prompted heavy trading on the New York Stock Exchange which resulted in the price of GM stock rising to a new high for the year. GM denied the Toyota rumor. The net result is that it is now likely GM will have to pay less to redeem the debt because its stock is worth more.

The practice of converting bank debt or redeeming debentures with stock has become popular recently as cash-strapped companies have struggled to simultaneously avoid insolvency and technical default on bank loan agreements or debenture requirements. GM, of course, is not in that position.

One of the most prominent examples of the practice was Chrysler Corp. which, as part of its financial restructuring and at the behest of the Federal Loan Guarantee Board, converted a portion of its bank debt to preferred stock.

It is likely that International Harvester Co. will attempt a similar arrangement with its 200 lenders as part of its restructuring.

Would-be car thieves fingered by dealer

DETROIT. — One Detroit-area Oldsmobile dealer has been reminded dramatically of the power of persuasive speaking. Awakened by noise of two youths breaking into his car on a darkened lot two floors below his apartment, he raised the window and extended his forefinger.

The dealer ordered the boys to spreadeagle and freeze flat. His wife tossed him pieces of clothing to put on as she phoned the police who collared the would-be car boosters. Cops said the two were amateurs, probably on their first job.

New Dart gets presidential inspection

Chrysler de Mexico officials show President Jose Lopez Portillo one of the first Mexican - built front - wheel - drive Dodge Dart station wagons. The Chrysler subsidiary started production of the new Volare and Dart K models last February. Production goal is 57,000 of the four-cylinder models through the remainder of the calendar year.

UAW slates new vote on contract with AMC

The UAW is going to make another attempt to get its new contract with American Motors ratified.

Local 12 at the Jeep plant in Toledo, which voted down the new pact May 3, will vote again on the agreement tomorrow (May 18).

Workers at the Kenosha and Milwaukee plants approved the new contract, which would provide an employe investment plan worth between $110 million and $115 million to be used for AMC's $1 billion new-product program. All three locations must approve the agreement before it can go into effect.

After the defeat, Richard T. MacCracken, AMC labor relations vice president, said the company's long-term new-product projects could be in jeopardy without the help of the hourly workers. He warned then that steps should be taken quickly to get the agreement ratified because changes have to be made now.

MacCracken said he is confident the contract will be ratified if the workers understand the new agreement. He emphasized that the new AMC pact is a "better deal for the employes than other contracts recently negotiated."

Jeep has been a very profitable segment of AMC's business. While the company does not break out Jeep results, sources inside AMC told AUTOMOTIVE NEWS last week that worldwide Jeep operations are expected to show a profit of more than $50 million in 1982 because of increased overseas demand.

Renault has started marketing Jeep vehicles in Europe and AMC's own efforts elsewhere have opened new markets and increased penetration in existing markets. Renault currently owns 46 percent of AMC.

AMC will introduce a new Alliance four-door sedan this fall and will bring out a new Jeep XJ about six months later. Without the approval of the new labor contract, MacCracken said future Alliance and Jeep models could be in jeopardy. AMC has been short of cash in recent months and has already tapped all available sources such as suppliers, dealers, banks, salaried workers and Renault.

According to the UAW, Toledo voted down the new contract because members were not notified properly of the vote; they were not allowed away from their jobs to vote; misinformation and rumors were circulated in the plant, and some workers did not receive a summary of the proposed agreement.

"We will work with the union to try and insure people have the opportunity to vote," MacCracken said.

Capping the bird

The Cleveland - based firm of Roman Chariot now offers a dress-up package for the '82 Firebird. Included is a stainless steel top band, chrome mouldings, pin-striping and bird emblems for hood, deck and sides.

Ford eyes sports car as Pontiac 'P' is OK'd

By Jim Plegue
Staff Writer

Pontiac's sporty P-car model, a mid-engined two seater with plastic body and Fiat X 1/9 styling, has cleared the last major hurdle on its way to market as a 1984 model in the fall of '83.

The General Motors Executive Committee recently gave the final OK to the project, a move that must have Pontiac officials breathing a sigh of relief. The P-car is a radical program by Detroit standards and had been put on hold numerous times over the last year while GM painfully counted its dwindling cash reserves.

Even as the P-car approval was being given, rumors were coming out of Dearborn that Ford Motor Co. is seriously considering its own mid-engined two-seat sports car based in part on the Ghia Brezza show car (AUTOMOTIVE NEWS, April 19, 1982).

Like the Brezza, the proposed Ford two-seater would use some EXP/LN7 componentry. Timing for the Ford car is not set, though some sources speculated its debut would be in 1985 or 1986. The Brezza-based sports car could be built in North America or assembled in Italy, where Ford Ghia is located (Turin).

Pontiac's P-car is being developed at an estimated cost of slightly more than $250 million, a bargain when compared with the $2 billion to $3 billion spent on the X-car and the sluggish-selling J-car.

Standard P-car powertrain will be Pontiac's 2.5-liter pushrod inline four-cylinder engine (with throttle-body fuel injection, added to all 2.5-liter engines in '82). It will be mounted transversely above and in front of the rear wheels and mated to a manual four-speed transmission. A three-speed automatic will be optional.

• The P-car will have fully independent suspension — a Chevette-derived system was being studied for the front, with a Chapman-strut-type-system in the rear. Curb weight will be about 2,200 pounds.

Pontiac is still shooting for a price tag of not over $10,000 when the P-car debuts in the fall of '83.

Pontiac engineers would like a five-speed transmission, but one source conceded, "When you're spending only $250 million, you can't tool up new drivetrains."

Still, with standard drivetrain, sources speculate that 0 to 60-MPH times of eight seconds or less and highway fuel economy of 40 MPG are obtainable.

And that's only first-year performance. Pontiac is eying turbocharging and other engines (the 2.0-liter J-car engine and even the 2.8-liter Chevy V-6) — as well as looking for a five-speed gearbox — with hopes of eventually getting 0-60 times of six seconds.

The car's styling is virtually locked in place. The P-car will not have a targa top during its first year, but the open roof is a possibility in subsequent model years.

The P-car does not yet have a name. "Sunfire," "P3000," and even "GTO" have been bandied about, but a decision will not be made until the car has undergone consumer clinic tests.

Although the other GM divisions are interested, the P-car will be a Pontiac exclusive during its first year of production. About 100,000 are expected to be built at the old Pontiac home plant during the '84 model year.

The P is a unique project in that it was developed primarily by Pontiac and Fisher Body, instead of as a corporate program. Pontiac has attempted several times during the last two decades to push a sports-car program through GM's corporate hierachy with no success.

They must be uncorking the champagne bottles in Pontiac.

McClure new president of Arizona dealers

PHOENIX. — Frank McClure, vice-president and general manager of Holmes Tuttle Broadway Ford, Tucson, has been elected president of the Arizona Automobile Dealers Assn.

Also elected were Dick Cunard, Cunard Motor Co., Yuma, president-elect; Frank Di Christofano, Broadway Volvo - Fiat, Tucson, vice president, and Ron Slyter, Sierra Toyota, Sierra Vista, secretary-treasurer.

Output down, sales up in Italy

TURIN.—Italian vehicle production last year fell by 11 percent to 1.43 million.

The main decline was car output, down 13 percent to 1.25 million. Commercial vehicle output improved nearly 6 percent to 176,400, mainly due to opening of the Sevel medium-van plant which contributed 16,000 units.

In the first two months of this year, preliminary figures indicate a further 14 percent decline in auto output (220,900) and 17 percent fall in commercial vehicle volume (27,000) compared to last year.

Domestic demand for cars slowed last year, but still advanced over the previous year. The increase in 1981 was 1.3 percent (to 1.74 million units) following a 19.7 percent leap in 1980 sales over 1979.

The Italian trend the past two years contrasted with the rest of Europe and three other major national markets. Italian sales in that span rose 21.3 percent compared with falls in West Germany (11.2 percent to 2.33 million), France (19.9 percent to 1.835 million) and the UK (13.5 percent to 1.485 million).

Indications from the opening quarter of this year are that Italian sales again have risen slightly (by nearly 2 percent to 485,800), in contrast to further declines in the other countries.

However, Italian producers anticipate sales for the year will run at about the same level as 1981.

While Fiat dominates the market with more than 51 percent, import penetration exceeds 40 percent—and that is without Japanese competition, whose restricted sales last year were 1,741.

The major importer was Renault (10.2 percent), followed by VAG (6.6 percent), Ford (5.3 percent) and Citroen (4.5 percent). Alfa Romeo stood at 6.5 percent.

Study of the figures shows remarkable growth rates by some importers—163 percent by BL over a two-year period, 84 percent by Volvo, 58 percent by BMW and 57 percent by VAG, compared with overall growth of just over one-fifth.

The Italian industry's weakness is car exports. They dropped 17.2 percent to 423,500 last year; however, there was 13.4 percent growth in commercial vehicle exports (91,100).

On a national basis, France was the country's No. 1 car export destination (86,400), closely followed by West Germany (84,300). The next most significant were the UK (36,400) and Switzerland (32,800). Four out of five export cars remained in Europe.

Only 4 percent of car exports found their way to the largest single national market in the world, the U. S.

The country's biggest penetration in export markets was in Switzerland (11.8 percent in a total market of 292,000). But in Germany it had 4.7 percent of 2.33 million, in France 6 percent of 1.83 million and in the UK 4.7 percent of 1.48 million.

Crucial changes

Continued from Page 12

Fireball technology pioneered in the V-12 — for standard and high-performance outputs.

The AJ6 will go into the XJS coupe initially. Indeed, it is unlikely to be seen in current sedans, and will make its sedan debut in the 1984 XJ40.

Next year the company will introduce the XJ sedan powered by a six-cylinder turbo-diesel from VM of Italy. It will be launched initially in the U. S.

However, Jaguar is not convinced about diesels for its cars. Egan reveals, "Our May head technology is now giving us thermal efficiencies — without the noise and smell — which are very similar to those of diesel engines. From a purely technical point of view we were not sure that it was necessary to do a diesel, but the fad in the market place might make it necessary."

Jaguar can content itself in the knowledge that without having to bear the enormous financial burden of developing its own diesel, it will become a comparatively low-cost risk.

The company is pleased at the public response to the V-12 with its May head combustion chambers which give considerable increases in gas mileage. "Two or three years ago," says a senior executive, "the V-12 was virtually unsaleable."

A decision was made to wind down its production. Now demand is so great that the Radford engine factory in Coventry — now in the process of being refitted in order to make the new AJ6 — is being refacilitized to enable it to make the V-12 as well.

Egan says of the V-12, "When you've done something that very knowledgeable people in the industry tell you is the best in the world, you don't easily get rid of it. I think our job is to make magnificent motor cars. If we go around making cars like everybody else's, we'll go out of business. We must stick to real excellence, which that V-12 engine is.

"We use it as an example to our suppliers. If we can make this big thing reliable, then surely you can make this little thing reliable," he says, holding thumb and forefinger two inches apart.

At the Browns Lane assembly plant, Jaguar is introducing a more rationalized process. This will be done by August, in preparation for introduction of the XJ40.

In the past, cars were made in what is called No. 1 factory, then given road tests before going to the No. 2 plant for a final coat of paint and finishing touches.

Jaguar decided this was a waste of time, and future cars will be completely assembled and roller-tested in No. 1 factory before going to No. 2 for customer validation. They will receive what amounts to a complete pre-delivery inspection before leaving the factory gates.

It is part of Jaguar's major drive on quality and reliability. Egan says his cars are now "in the ballpark" with Mercedes-Benz and BMW.

He gives wider background to how that was achieved. "Great Britain has been going through a revolution. If you were to prognose the future on the events of the 1970s, you would presume that there would be no more manufacturing of any kind of product in this country. But you would also know that countries with long histories seldom do that final act of self-destruction.

"I believe that accidently, Maggie Thatcher's put together the environment in which people can recreate their companies if they choose.

"I know many companies are doing that, and that we will have a newly learned lesson of survival which will stand us in great stead; but we cannot go back to the sloppy ways of the 1970s. We have to manage this company. At one stage the shop stewards ran it, and a bloody bad job they made of it. They couldn't deliver on time. They couldn't deliver a good quality product. They couldn't do anything well. It might have satisfied them, but it didn't satisfy customers.

"Now we run this place, and I would rather close it down than ever run the risk of surrendering management to the union," Egan stresses.

Paying tribute to the enthusiasm of the Jaguar workforce now and the quality they are achieving, he adds, "I think it's tragic that the workforce in this country spent a great deal of time being exploited, dating back to the old mill owners. Since the war the workforce has been exploited by the political objectives of the trades unions for purely political ends. They certainly haven't done the working man any good. The only way you can pay good and consistent wages and offer high employment is if you have a very productive company."

Alfa: Not so great expectations

By Richard Feast
European Editor

"The most important turn in productivity at Alfa Romeo in the last 12 years," is how chairman Ettore Massacesi describes the results of the company's major changes in the spring.

It results from Alfa Romeo's reduced expectations of 1982 sales—190,000 at most compared with an installed capacity of approximately 300,000.

The March 9 agreement calls for periodic shutdowns at the northern plant at Arese, Milan, and Pomigliano d'Arco, near Naples in the south. They are of 60 working days' duration in the north, and 80 days in the south, and involve the entire workforce of around 34,000.

The second agreement involves what the company calls "unemployment compensation at zero hours" for at least one year for 5,700 people.

"Over a suitable period," says Massacesi, "these instruments should make it possible to solve the company's problems without traumatic consequences."

The result will be a reduction in manpower of 13.7 percent to 29,700. Daily production targets are higher than last year's actual outputs by more than 28 percent—1,300 compared with 1,014. There will, of course, be fewer working days.

On a cars-per-worker basis, this year's target is set at 12, compared with 7.1 last year. The greater increase is scheduled to come from the south (15.3 compared with 8.2). In the north it is set at 9.7 compared with 6.2. This, says Massacesi, is without touching the line speed.

The chairman also reported a decline in absentee rates — a particular problem in the southern Alfasud factory. Last year it was approximately 13 percent in the north, and 16.5 percent in the south.

In the first two months of this year, he said, these were reduced to 10.5 percent in the north and 11.9 percent in the south.

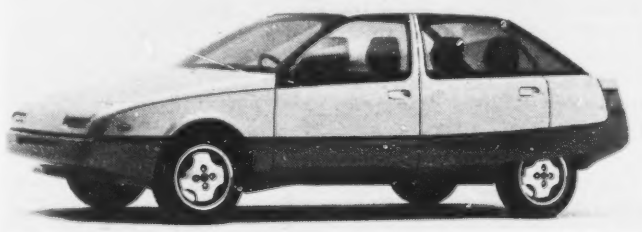
The reduced output this year —down from last year's 197,000 and the previous year's almost 220,000 — stems from Alfa Romeo's lower market expectations. The domestic market, for instance, it believes will decline by 5 percent, followed by a recovery no earlier than 1983.

Says Gianfranco Bellaudi, head of the company's marketing department: "We're a bit more optimistic about foreign markets. In that area we are forecasting an overall though moderate recovery of demand in 1982."

Part of the problem was the company's aged model line. Massacesi admits, "When I became chairman in June 1978 there were only two new models, the Giulietta and Alfa 6." A program of restyling and face-lifting was embarked upon, and the first of these will appear on the Alfasud next year.

Pre-production of the ARNA vehicle, to be built in conjunction with Nissan and to fill the gap below that of the Alfasud, should begin towards the end of this year. It will go on sale in 1983, and the following year will be made at the rate of around 60,000.

In the longer term, Alfa Romeo is planning to replace its Alfetta with a car developed jointly with its great private industry rival, Fiat. The two firms will use the same engineering and sub-assemblies and floors.



Aldo Sessano's Open Design showed off this Ipothesi at the Turin Motor Show. Based on Fiat Ritmo, the central pillar is the only visible element between roof and body. Windows cover the front and rear pillars.

world news briefs

MG lives

There was an emotive outcry in the UK when BL killed off the MG name recently. Now it has been revived, on a tuned version of the Metro hatchback (photo). With 72-HP (compared with 60-HP), the MG Metro is faster than the legendary Mini-Cooper. It is probable there will be an even faster Metro by the end of the year—with turbocharged engine and lowered suspension.

Fuel improvements in France

France's *Chambre Syndicale* reports French cars improved average fuel consumption by 13.7 percent in the five-year period to 1981. Last year's figure was equivalent to 33.6-MPG (U.S.). Over the same period, average power output of engines rose by 3-HP to 58-HP.

Volvo hoists target

Volvo Car Corp. decided in April to increase volume this year by 10,000 units to 220,000. Half the increase will be of the new 760GLE, 15,000 of which will be built this year instead of 10,000.

Citroen confirms stylists

It's official: Citroen confirms that Carl Olsen (48) is to head applied styling (covering a five-year period) while Trevor Fiore (45) takes charge of advanced styling, which covers models to be produced in seven to 10 years. The changes became effective May 1.

Auto prices rise in Germany

West Germany's major auto makers raised prices this spring, after upping them also at the end of December and beginning of January. They blame increasing steel prices and the latest round of wage negotiations. The domestic market remains depressed—down more than 7 percent to 613,000 in the first quarter of this year.

More red ink at PSA

Last year marked another financial loss for the Peugeot SA group—around $320 million, according to preliminary estimates. Automobiles Peugeot (incorporating Talbot) incurred a deficit of some $325 million and Citroen $88 million. Withdrawal from Argentina and a weak performance by Talbot were among the main reasons.

UK gets Australian Mitsubishis

Confirming a report in AUTOMOTIVE NEWS Feb. 22, Australian-built Mitsubishis will be sold in the UK—neatly sidestepping import restrictions on Japanese models. The cars attract more duty than Japanese makes, but new importer Londsale Car Co. (established by the Mitsubishi importer) talks of annual sales of 12,000.

Skepticism over academics

"The European motor industry is skeptical of the value of academic studies on the future of the automobile," according to the president of the liaison committee of Common Market vehicle makers (CLCA), Anthony Fraser. He said at a Berlin conference in connection with the Massachusetts Institute of Technology's examination of the future of the automobile: "Such academic studies have their merits in this respect, but only if they keep things in perspective and are not too ambitious in suggesting policy options."

Suzuki lands Indian deal

Suzuki has ended the decade-long search for a partner for India's Maruti auto company, against opposition from many European and Japanese makers. The $265 million deal calls for production of 20,000 small cars and commercial vehicles from 1984.

Peugeot gears up

The Peugeot group's highly automated $240-million gearbox factory at Valenciennes, northern France, has begun production. Output will be used in all future group products, with the ultimate aim of reducing the number of different gearboxes (nine) by half.

Tire makers agree

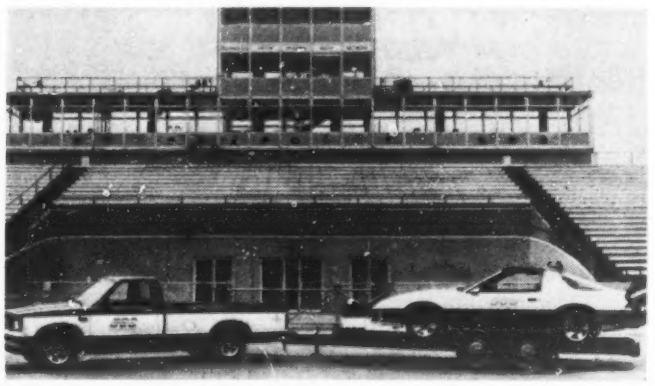
Michelin and Dunlop have agreed to proposals for an international standard for millimetric car tire and wheel sizes. The new range, to be known as TD, will feature Dunlop's Denloc bead-locking system and Michelin's TR rim configuration.

China buys diesels

Japan's Toyo Kogyo will supply 3,000 of its license-built Perkins diesel engines to China annually. The engines will be fitted to a four-wheel-drive vehicle currently being built at Peking.

Italy takes tough line on the Acclaim

BL's Triumph Acclaim, assembled from Honda components in England, is under attack by the Italian industry, which claims the car does not conform to local content standards. Italy, which limits Japanese sales to fewer than 2,000 annually, is finding ways of holding up shipments.



Indy 500 greets Chevrolets

Chevrolet's S-10 compact pickup and the Camaro Z28 will be on hand at this year's Indianapolis 500-mile race. The Camaro will be the pace car, and the S-10 will be one of 12 among the fleet of 75 trucks Chevrolet will provide for this year's event. The vehicles also include conventional pickups, vans, Suburbans and tow trucks.

Extensive service plan is introduced by Eaton

CLEVELAND. — An Extensive Service Policy designed to provide critical support to all Eaton component users has been announced by Eaton Corp.'s Truck Components Marketing (TCM) Division.

Jerry I. Warren, TCM marketing manager, said "increasing customer demand for greater service support, plus the fact that trucks are being kept longer, have prompted Eaton to develop this new policy."

Extensive Service includes three major programs at Eaton's seven TCM branch offices across North America. These are service assistance by phone, revised service training schedules and a new repair/rebuild/replace analysis.

Service assistance by phone is designed to help users shorten vehicle downtime by encouraging the use of Eaton TCM technicians as telephone consultants.

"Service people at all regions have received special instructions for phone diagnosis," said Warren, noting that the program will provide increased support to the dealer service network in addition to Eaton's regular offering of dealer service visits.

He also said special service lines have been installed in one of the largest TCM installations, the Great Lakes region office in Kalamazoo, Mich.

"This was done in response to a high volume of calls in that area," he said, "and other regions are being considered for similar lines."

Revised, comprehensive service training schedules include information on recently released Eaton components, including New Generation transmissions with Multi-Mesh gearing, high-torque highway tandem axles and air disc brakes.

New service programs on these components will be run continuously throughout the remainder of 1982.

Driver training is a related component service being offered free of charge by every region. Any driver may apply for instruction in methods of using any Eaton component, ranging from 15-speed Fuller transmissions with double reverse to 65,000-pound planetary double-reduction axles. Range and split-shifting two speed axles also is covered in these courses.

Through the repair/rebuild/replace analysis program, Eaton service technicians can recommend the most economical component repair or replacement schedule for virtually any truck

Eaton offering free driver training

Free driver training is a key feature of Eaton Corp.'s new extensive service policy to provide support to its truck-component users. Here a driver is taught to make range and split shifts with a 15-speed New Generation Fuller transmission and 65,000-pound Dual Range axle.

truck industry news

But total through April is up 12 pct. over last year

April dip ends 3-month sales rise

After three straight months of increases, retail sales of new trucks in the U. S. dipped slightly in April in spite of continued gains in the compact-pickup segment.

The four-month total, however, showed a good boost over the year-earlier count, with light trucks the only one of the three major market categories with an improvement over the 1981 results.

Table on Page 52.

During the month, according to preliminary reports, franchised dealers and factory outlets retailed 208,008 trucks of all types, off 2 percent from last year's 212,169 units.

Through April, the total was 874,242 units, an increase of 12 percent over the 780,461 sold in the like period in 1982.

With the domestic compacts leading the way, small pickups remain the hottest segment of the new-truck market.

In April, 57,910 of these vehicles, both domestic and imports, were retailed, an increase of 36.9 percent over last year's 42,313. The four-month total was up 42.8 percent, from 170,774 units in 1981 to 243,851.

• Sales of the imported compacts—the Japanese-built Chevrolet LUV, Ford Courier, Plymouth Arrow, Dodge Ram 50, Toyota, Datsun, Mazda and Isuzu—were down dramatically for both April and the four-month period.

During the month, dealers sold 26,458 of the imports, a decline of 33.8 percent from last year's 39,967 units. The total through April was down 19.4 percent from a year ago, 127,884 versus 158,673.

Monthly sales of Ford's domestically produced Ranger compact pickup, which was introduced more than five months after the Chevrolet S-10 compact, have nearly caught up with the No. 1 domestic rival.

In April, Ford dealers retailed 11,425 Rangers, compared with 13,363 S-10 sales. Together, the Ranger and the S-10 accounted for 42.8 percent of the compact pickups sold during the month.

The S-10, however, still has a big lead over Ranger for the year, 67,822 versus 21,153.

Sales of the non-captive im-

Rockwell adopts quality program for its suppliers

TROY, Mich. — To insure receipt of top-quality products from its suppliers, Rockwell International's Heavy Vehicles Components Operations (HVCO) is implementing a quality assurance program which it said has received enthusiastic support from all supplier companies.

"Rockwell Automotive is committed to producing nothing short of the best possible products for the transportation industry," said Arthur P. Ronan, HVCO president, "and to accomplish this, we must receive nothing but top quality from our own vendors."

The program, called SQA-80, for "Supplier Quality Assurance for the 80's," involves over 140 of Rockwell's major component suppliers, and focuses on statistical process capability at supplier locations.

It requires suppliers to manage their facilities systems and personnel to deliver products which meet Rockwell's superior quality requirements, Ronan said.

"This in turn requires the vendor to develop control plans

AM General delivers 11 'Hummers' to Army

DETROIT. — AM General Corp. has delivered 11 prototypes of its 1¼-ton High Mobility Multi-Purpose Wheeled Vehicle (HMMWV) to the U. S. Army for testing and evaluation under a development contract awarded last July.

AM General and two other manufacturers — General Dynamics and Teledyne—are competing for an Army contract to build a new high-mobility vehicle capable of performing various combat and combat-support roles on the modern battlefield.

In addition to providing an effective platform for the TOW antitank missile, the Army's plan is to replace selectively more than 50,000 older existing vehicles in the quarter to 1¼-ton-range with the more mobile and versatile HMMWV.

This initial procurement is expected to exceed $1 billion over a five-year period.

The vehicle, dubbed the "Hummer" by AMG, will undergo rigorous testing and evaluation along with the competitive vehicles.

"We expect that this vehicle will undergo more extensive testing than any other tactical truck ever procured by the Army because of the vital combat missions it must perform," said George W. Scharbach, AMG engineering and product development vice president.

"The vehicles will be tested in simulated combat operations such as driving over battleground terrain and launching TOW missiles under battlefield conditions," he added.

Tests will be conducted at Army test sites at Aberdeen, Md.; Yuma, Ariz.; and Hunter-Liggett near Monterey, Calif.

• Upon completion of the test program and following submission of production costs in late 1982, the Army will select one of the three competing entries for the initial production contract.

Scharbach said the Hummer was designed to exceed the expectations of the user.

"Our engineers designed an all-new combat vehicle from the ground up," he said. "Unique engineering solutions were developed to meet the demanding specifications for high ground clearance, low silhou-

Jeep delays startup of Selec-Trac option

SOUTHFIELD, Mich.—Introduction of Jeep Selec-Trac on senior Jeep vehicles, originally scheduled for this month, has been delayed until the start of production of 1983 models.

Selec-Trac, which enables the operator to go from four-wheel-drive to 2x4 via an instrument-panel switch, will be available on Jeep Wagoneer, Cherokee and conventional truck models. Currently, locking hubs are needed to move from full-wheel drive to 2x4.

AMG entry ready for Army testing

This is one of 11 prototype AM General "Hummers," a 1¼-ton High Mobility Multipurpose Wheeled Vehicle (HMMWV), delivered by the American Motors subsidiary to the U.S. Army for testing and evaluation. General Dynamics and Teledyne have developed similar vehicles in the competition for the Army contract.

Total is 545,746; domestics, imports both trail last year

Feb. registrations lowest since 1967

By Jenny L. King
Staff Writer

U. S. new-car registrations in February were down from the year-ago level and were the softest for the month since 1967. They were, however, up 7.18 percent from January when barely more than half a million units were recorded.

The February tally, according to figures compiled by R. L. Polk & Co., was 545,746, down 19.15 percent from 675,045 for the month in 1981, and up 7.18 percent from 509,189 in January of this year.

Registrations for the first two months of 1982 reached 1,054,935, down 19.56 percent from 1,311,533 a year earlier.

Table on Page 48.

Domestic registrations in February were down 19.59 percent from year-ago levels: 381,942 compared with 474,970. They were up 9.03 percent from January when 350,295 new U. S.-built cars were registered.

Domestic registrations for the first two months were 21.87 percent away from the opening months of 1981: 732,237 compared with 937,216.

Imports accounted for a record 30.01 percent of February registrations although in actual numbers they were down 18.13 percent, to 163,804 from 200,075 in 1981. For the two months imports accounted for 30.59 percent of the total, up more than two percentage points from 28.54 percent in 1981. The two-month import total was 322,698, down 13.79 percent from 374,317 last year.

In February, Ford Motor Co., General Motors and combined imports increased their shares of the total, while AMC and Chrysler Corp. yielded ground and miscellaneous domestics remained at 0.02 percent.

Ford edged up 0.99 percentage points to 17.11 percent from 16.12 percent last year. GM claimed 43.53 percent, up from 42.99 percent. Imports climbed 0.37 percentage points to 30.01 percent from 29.64 percent.

In February, Chrysler was down 1.32 percentage points, to 8.07 percent from 9.39 percent a year ago, and American Motors dipped to 1.26 percent from 1.84 percent.

Excluding imports, domestic-only registration shares in February were: GM, 62.19 percent; Ford, 24.45 percent; Chrysler, 11.52 percent; AMC, 1.81 percent, and miscellaneous domestics, 0.03 percent.

A year earlier, domestic-only registration shares were: GM, 61.10 percent; Ford, 22.91 percent; Chrysler, 13.34 percent; AMC, 2.61 percent, and miscellaneous domestics, 0.04 percent.

By market segment, subcompacts, standards, luxury models and imports were up over 1981, as compacts and intermediates lost ground. Imports claimed the single largest segment, 30.01 percent, up from 29.64 percent last year. Luxuries had 5.11 percent, up from 4.27 percent; standards were up to 9.36 percent from 9.19 percent, and subcompacts edged ahead to 17.02 percent from 16.33 percent.

Intermediates dropped to 19.43 percent from 19.73 percent, and compacts were down to 19.07 percent from 20.84 percent.

Of the domestic-only market in February, subcompacts accounted for 24.32 percent; compacts had 27.25 percent; intermediates had 27.76 percent; standards had 13.37 percent, and luxury models had 7.30 percent of the total.

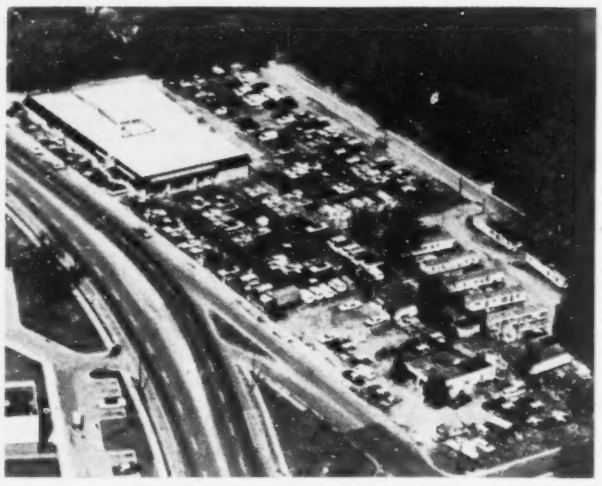
Three branch managers appointed by GMAC

DETROIT. — GMAC has named Robert L. Honneycutt Jr., F. Joseph McPartlin and Paul C. Wagner to manage field offices.

Honeycutt, who was dealer relations manager in Chattanooga, Tenn., becomes branch manager of the office. He succeeds Paul H. Steen, who is retiring. McPartlin, who was New York regional dealer relations manager, becomes control branch manager in Buffalo. Wagner, who was assistant control branch manager in Greensboro, N. C., becomes branch manager in Winston-Salem. He succeeds Robt. H. Mowers, who takes Wagner's former post.

FOR SALE



SUNNY FLORIDA

(where weather makes ideal living conditions year round)

Why *'Gamble'* when a proven location is available?????

In the city of cars, known as *"Little Detroit,"* Green Cove Springs on the beautiful St. Johns River, just minutes from 3 Naval facilities, 15 minutes from Jacksonville, a metropolis of 800,000 people centrally located within 30 minutes of 8 cities and one of the fastest growing counties in Florida is this *'Modern'* Chrysler-Plymouth-Dodge Truck dealership.

In 1965, it became the fastest growing Chrysler-Plymouth dealership in the nation, leading in sales against all competition including Chevrolet, and has been a continuous profitable Chrysler-Plymouth store for 19 years.

A Pentastar Dealer for 6 consecutive years, it was awarded in 1979 the # THREE POSITION NATIONALLY, and in 1981, was FLORIDA's ONLY Chrysler-Plymouth DEALER to earn the coveted and prized Pentastar Award Rating.

SD Turbo meant to crack Italian market

BL, VM team up for diesel Rover

BOLOGNA, Italy. — BL has launched its fifth model in the luxury sedan series that started with the Rover 3500 in 1976.

The new car is called the SD Turbo and is powered by a four-cylinder turbocharged diesel engine built by the Italian firm VM.

Styling and interior of the SD Turbo is precisely the same as other up-range models, such as the 2600, and the new car uses the same suspension system, rear axle and braking system.

The news is the turbo diesel engine—a must for any maker selling in Italy, France, Germany or the Benelux countries but hardly necessary in Great Britain or Switzerland.

The diesel's appeal is a matter of national fiscal policy. In Italy, for example, a liter of diesel costs 456 lira, compared with 960 for gasoline (equivalent to $1.31 a gallon versus $2.76).

In the last six months, the diesel trend has become evident in Italy: 40 percent of the cars sold in the upper-middle segment were diesels. Last year, diesels comprised 11.5 percent of all new cars sold in France, 13.7 percent of the German market and 14.4 percent of Italy's sales.

And 10-year forecasts indicate diesels will continue to take bigger shares of the markets.

• But in the United Kingdom last year, only 9,500 new diesel cars were sold—a mere 0.63 of a percent of the total market. Only 311 were sold in 1974. A study by BL indicates the diesel market share in the UK will increase to 4 percent by 1985 and to as much as 15 percent by 1990.

The 2.4-liter, 95-HP engine powering the new Rover is from the same family of modular HR (high revolution) units which VM produces in versions of one to six cylinders, with 500cc or 600cc per cylinder.

VM provides engines to Alfa Romeo for the Alfetta 2.0 Turbo Diesel and to BMW for marine application. Alfa, BMW, Rover and a number of other car makers, including some from Japan, are negotiating with VM to buy engines or to produce them under license.

The VM engine is protected by quite a few patents. One protects its unique design of the crankshaft housing, which is integrated into the cast-iron engine block just underneath the cylinders. The result is a compact and well-balanced engine.

Same look but new power

The new Rover SD Turbo is styled like the Rover 2600, with front spoiler and integrated foglamps, but is powered by a turbocharged diesel engine built by the Italian company VM. The SD Turbo promises to find its strongest markets in European countries like Italy, where diesel fuel is priced low. It bowed for $13,680 there.

The version in the Rover is only 24 inches high and required no modification of the hood. The four-cylinder inline engine is set at an angle to the rear. The gearbox mounting was revised and the differential twisted to accommodate the VM engine.

• VM will announce soon a new family of aluminum diesels which could save 55 pounds or more on a six-cylinder block. VM is believed to be developing an aluminum six-cylinder, 3.6-liter turbo diesel with an intercooler for one version of the Jaguar XJ-40 being developed.

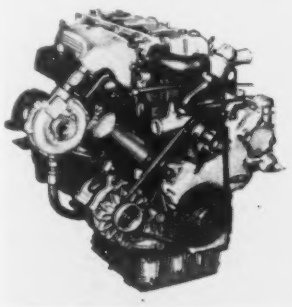
A three-cylinder aluminum engine is also believed to be under development for the next generation of Alfasuds, coming in 1984.

VM agreed to supply BL with 15,000 engines during the next three years, but quantities may be increased if demand warrants. VM has a total potential capacity of 40,000 units a year and is committed to building some 30,000 units, thus allowing for a prompt production increase.

Sergio Mia, managing director of BL Italia, was one of the active promoters of the turbo diesel program. He forecast 2,000 will be sold in Italy this year. It is priced at 18 million lira ($13,680) here, compared with 13 million lira ($9,880) for the Rover 2000, and has a high level of standard equipment.

The engine, code-named HR 492 HT, already meets U. S. requirements. It has also been approved by NATO for military application.

The SD Turbo is equipped with a manual five-speed gearbox, and in a test drive turned in a better top speed than the official 102.5 MPH. The engine's high torque—139 pounds-feet at 2,450 RPM—provides good acceleration, as well.



Engine by VM

Italian engine maker VM builds the diesel 2.4-liter inline four that powers the new Rover SD Turbo. Only 24 inches high, the 95-HP engine has a cast-iron block with integrated crankshaft housing underneath the cylinders.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report. Registrations for Oklahoma not available; delayed for Iowa.

April is down, but year's total is up 12 pct. over 1981

Three-month truck-sales rise ends

Continued from Page 26

ports — Toyota, Datsun, Mazda and Isuzu—were down 5.1 percent in April to 20,488 units, compared with 21,599 a year ago. But the four-month count was slightly higher, from 89,030 units in 1981 to 89,426 this year.

• The captive imports — LUV, Courier, Arrow and Ram 50—were down dramatically for both the month and the year, a trend which has grown steadily since the introduction of the domestic compact pickups.

During the month, only 5,970 of these captives were retailed, a decline of 67.5 percent from last year's 18,368. The four-month total was off 44.3 percent, dropping from 69,643 units in 1981 to 38,458.

April sales of the domestic compact pickups—S-10, Ranger, GMC S-15, Jeep Scrambler, Volkswagen and Dodge Rampage — totaled 31,452 units, bringing the four-month count to 115,967.

In April, dealers sold 189,192 light trucks of all types, a gain of 1.5 percent over last year's 186,479. The four-month count soared to 807,791 units, up 16 percent over the 696,264 retailed in the like period in 1981.

Medium trucks were down substantially for both the month and the January-April period. The April total was 4,009, down 55.8 percent from the year-earlier 9,076. Through April, dealers had sold only 13,818 units, off 52.7 percent from last year's 29,236.

• Heavy trucks retailed in April totaled 14,807 units, a decline of 10.9 percent from the year-ago 16,614. The four-month count dropped 4.3 percent, from 54,961 units in 1981 to 52,633.

Going into May, the number of unsold new trucks of all types in retailers' hands was down slightly from the same time a year ago, with declines in two of the three market segments.

On May 1, there were 535,713 units in inventory, a drop of 5.5 percent from the year-earlier 567,005.

During the month, 72,068 Ford trucks were retailed, an increase of 18.4 percent over the previous year's 60,846 units. The Chevrolet total was down 13 percent, from 67,215 units in April, 1981, to 58,493.

Through April, Chevrolet dealers had sold 294,001 trucks, an increase of 21.9 percent over the year-earlier 241,084 units. The four-month Ford count was 9.5 percent higher than a year ago, 263,907 units versus 240,923.

Dodge and Plymouth dealers sold 20,916 trucks during the month, an increase of 8.4 percent over the previous year's 19,297. The January-April total was up 29.4 percent, from 67,122 units in 1981 to 86,879.

GMC's retail sales were higher for both the month and the year to date. In April, 19,499 units were retailed, a gain of 1.1 percent over the year-ago 19,284. Through April, the total was 81,358 units, up 29.1 percent over the year-earlier 63,010.

Jeep dealers retailed 5,040 four-wheel-drive units during the month, down 12 percent from last year's 5,696. But the four-month total was 5 percent higher, from 18,444 units in 1981 to 19,363.

Sales of the compact Volkswagen pickup continue to slide. In April, 1,389 units were sold, down 58.5 percent from last year's 3,346 units. The January-April count was 5,409, off 55.3 percent from the year-ago 12,101 units.

Mercedes-Benz dealers sold 279 medium and light-heavy diesel trucks during the month, down 17 percent from the year-ago 336. Through April, the total was off 26.8 percent, from 1,229 units in 1981 to 900.

Sales of Toyota compact pickups, the leading non-captive import, were down 6 percent during the month, from 9,974 units in 1981 to 9,375. The four-month count, however, was up 1.5 percent, from 41,975 a year ago to 42,614 units.

Datsun dealers retailed 5,813 small pickups during the month, down 41 percent from last year's 9,853 units, while the January-April count was off 29.5 percent, from 41,794 units a year ago to 29,465.

Mazda sales during the month were 170.7 percent higher than the previous year, from 1,363 units in 1981 to 3,689. The four-month total of 11,960 units was 151 percent higher than last year's 4,763.

Isuzu dealers retailed 1,611 small trucks during the month, up 293.9 percent over the 409 units sold in April, 1981, the vehicle's first full month on the market in the U. S. The four-month total was 5,387 units, compared with only 498 last year.

John Z. could inherit lesser role

Potential new investor lined up by DeLorean

Continued from Page 2

been discussing other more palatable possibilities.

DeLorean said the "California financial institution" which at one point seemed likely to invest up to $35 million, was still interested. "We're working right now to see how and if it all fits together," he said.

"The arrangement could very well have several other people who have expressed very substantial interest," DeLorean said. "We're looking also at the possibility of appointing a North American distributor for the U. S. and Canada and that would, of course, take care of the financial situation immediately."

He said the company has "what would amount to tentative commitments" from a number of parties.

DeLorean said the company already had shipped about 200 cars from its Eastern depot, that car sales seem to be picking up and that he hopes to have sold enough cars to dealers to pay off the remaining Bank of America debt "in a short time."

He said the dealer sales from the East "should pretty well" pay off BoA. "Our obligation is that if we don't have BoA paid off by the 27th of this month, we have to do a bulk sale or something else," DeLorean said.

The company has not yet been able to ship any cars to dealers from the Western depot, however, because of the financial condition. The 1,191 cars in the West were refinanced by Consolidated International, Inc., last month by a technical bulk sale.

"We have orders," DeLorean said. "We're working on a mechanism for shipping cars from the West."

J. Bruce McWilliams, DMC marketing vice president, said a number of dealers are reporting a substantial increase in business and that with the additional cars being made available, he expects the May sales total to double the 157 units retailed in April.

"Many of the early depositors who remained depositors but just didn't buy when the economy went down and the early price estimates went up still have residual interest," McWilliams said. "Dealers are selling the car for considerably less than sticker and many of these folks can now afford it."

He said dealers should use their depositor lists for prospecting. He also said many dealers are now painting cars, which has helped sales.

McWilliams said he has created a new, "more ballsy" set of advertising slicks which will be sent out to dealers for them to use in local newspaper advertising, referring to the DeLorean sports car as the "possible dream" and the "stainless steal."

"There's been quite a ripple in dealer advertising," he said. "In every instance, the dealers who have had sales upturns have been advertising in the local papers."

One of those dealers, Rusty Evans, of R. O. Evans Pontiac-GMC-DeLorean in Dallas, said he still has a lot of faith in the product.

"It's one of the finest cars ever made," he said. "I sold six cars in the last four days and have ordered 14 more."

Evans said he has taken several Cadillac Eldorados in trade and it seems his customers are families buying the DeLorean for a third car.

Under the company's current effort to move cars, a dealer can order six or more of the 1981 models at a price of just over $16.000, considerably less than the earlier invoice of about $20,000. In addition, dealers can subtract up to $2,000 per unit for outstanding warranty claims.

"With the rebate they're giving us, I'm selling the cars for about $20,000 and still clearing $1,500 to $2,000 profit per car," Evans said. "I can't see where it's going to go any place but up."

Recall is ordered for Cadillacs with NOx problem

WASHINGTON. — General Motors has been ordered to recall approximately 50,000 of its 1978 Cadillac vehicles to correct a defect causing the vehicles to substantially exceed allowable levels of oxides of nitrogen emissions.

According to EPA, the EGR system used by Cadillac on the 5.7 liter fuel-injected gasoline engine that powers the Seville model is causing carbon-like deposits to build up in the EGR ports. Eventually the ports clog and EGR, the prime method of controlling NOx emissions, becomes ineffective.

This is the same problem that cropped up in 1976 and 1977 Cadillac Sevilles. EPA ordered these vehicles recalled in 1980.

NOx pollution can adversely affect persons with acute respiratory illness, causing difficulty in breathing, chest pains, and bronchitis in children. In addition, NOx emissions are a major constituent in the formation of smog.

California begins to crack down on uncertified cars

SACRAMENTO. — The California Department of Motor Vehicles has begun enforcing a new law and is refusing to register vehicles with fewer than 7,500 odometer miles if they have not been certified by the California Air Resources Board.

Gary Nishite, DMV registrar, said the law prohibits residents from registering non-certified vehicles.

Any resident who acquires, sells or assists in obtaining registration for vehicles not certified by the ARB is subject to a penalty of $5,000 per vehicle.

In addition, any dealer, in California or elsewhere, who sells a non-certified vehicle to a California resident becomes subject to prosecution.

The dealer involved in such a sale also becomes subject to contract recission action by buyers who cannot register the vehicle in California.

"Out-of-state dealers will also become the subject of much closer scrutiny by the ARB," Nishite said.

Silver Helmet Award to Murphy

Former General Motors Chairman Thomas A. Murphy, center, is presented with the Silver Helmet Americanism Award at a banquet in Arlington, Va., by Ted Leszkiewicz, left, Warren, Mich., and Donald R. Russell, Springfield, Ill., AMVETS national commander. This is the highest award bestowed by the 200,000-member organization, recognizing leadership in voluntary causes.

Chrysler launches cleanup with push-pull program

Continued from Page 1

following manner: 0-25 percent, nothing; 26-50 percent, $100 per unit; 51-75 percent, $200 per unit; 76-100 percent, $300 per unit, and 101 percent and over, $400 per unit. Payments are non-retroactive.

At level 2, dealers don't get paid for the convertibles and the New Yorker. However, they receive $100 per unit extra for Turismo 2.2 and Charger 2.2 deliveries. They also qualify for import consumer rebates. And import models qualify for the same $100, $200, $300 and $400 payoff level at retail as domestic models.

If dealers order at level 3, meaning they accept 120 percent of their wholesale objective, they are paid in the following manner: 0-25 percent of retail accomplishment, nothing; 26-50 percent, $200 per unit; 51-75 percent, $300 per unit; 76-100 percent, $400 per unit, and 101 percent and over, $500 per unit. Payments are non-retroactive.

At level 3, dealers do get paid on New Yorker (but not on convertibles). They receive $100 extra for Turismo 2.2 and Charger 2.2, plus the import consumer rebates and the dealer cash payments on import retails up to the same $500 level as domestics.

Dealers have separate wholesale objectives for domestic cars/trucks and for imports. They can play at one level for domestics and another for imports.

Chrysler to build FWD components at New Castle

NEW CASTLE, Ind.—Chrysler Corp. has selected its New Castle Machining Plant here to produce four new front-wheel-drive components for the company's 1984 passenger cars and vans.

The component selections are part of Chrysler's commitment to source new products into the New Castle operation after UAW Local 371 hourly employes voted to revise their local agreement with the company last February. The revisions helped to make New Castle a more cost-competitive operation.

The new components scheduled to be built by New Castle include the front-wheel hub, bearing support and shift tube for the E model passenger car (New Yorker and Dodge 600) and T-115 van/wagon. In addition, New Castle will produce rear-wheel spindles for all of Chrysler's 1984 front-wheel-drive models. Production of the four components will start in the spring of 1983.

New Castle plant officials estimate that the new components will involve an investment of $2.5 million in tooling and equipment. Approximately 110 employes will be needed to carry out the production programs.

Chrysler Engineering is also testing a New Castle ball joint design for the T-115 and E-model cars. If the tests are successful, this product will be sourced to New Castle for the 1984 model year.

GM announces transmission fix for some X-cars

DETROIT. — General Motors is extending its warranty to cover two transmission problems in 1980 and 1981 X-cars for five years or 50,000 miles.

GM said it expects problems will develop in "only a small percentage" — perhaps 5 percent — of the 1.35 million Chevrolet Citations, Pontiac Phoenixes, Oldsmobile Omegas and Buick Skylarks built in the 1980 model year and the 1981 model year through December, 1980.

It advised car owners to keep the notification with their owners manual. GM said it will reimburse car owners who already have made the repairs.

The first problem, involving both manual and automatic transmissions, is rough differential side gears, which can damage front-axle oil seals and cause transmission fluid to leak. The fix is to replace seals and gears.

The second problem, involving only manual-transmission cars, is premature wear of shifter forks, which results in hard shifting.

GM stands firm on plan to close Cleveland plant

DETROIT. — General Motors will close its Coit Road metal fabricating plant in Cleveland within 18 months as previously announced.

UAW Vice President Owen Bieber, director of the GM department, had been negotiating with the company to keep the plant open. Under the new UAW-GM contract, GM reversed its decision to close four other plants but offered only to transfer workers from the Cleveland operation.

Some of that work will be transfered to a stamping plant in Parma, O., and to a Fisher Body operation in Lordstown, O. Under the new contract GM also agreed to move work from Coit to other GM plants if the operation was not kept open.

Bieber said the GM decision "leaves us with profound disappointment" and said the union would monitor closely "the commitments given the UAW by GM that all work transferred from Coit Road will be retained by UAW-GM workers in the U. S."

About 1,150 hourly workers and 380 salaried workers at Coit Road and another 990 on indefinite layoff will be affected.

Domestic sales climb 18 pct. for May 1-10

With eight selling days in the early-May sales period, the U.S. auto makers combined forces to retail 159,312 units, an average of 19,914 per day. Sales were up 18.16 percent from the year-ago total of 134,823, also the product of eight selling days.

General Motors sales soared 30.62 percent, to 103,977 from 79,600 last year. Ford Motor Co. reported a 5.07-percent increase, to 35,048 from 33,356. Chrysler Corp. dealers sold 16,052 new cars, up 2.49 percent from 15,662. Estimated sales of Rabbits by Volkswagen of America were 1,635, down 37.24 percent from 2,605, and the American Motors sales estimate of 2,600 was down 27.78 percent from 3,600.

GM earned 65.27 percent of the May 1-10 market, up from 59.04 percent a year ago. Ford cornered 22.00 percent, down from 24.74 percent. Chrysler had 10.07 percent, down from 11.62 percent. AMC earned an estimated 1.63 percent compared with 2.67 percent, and VWoA stood at 1.03 percent, down from 1.93 percent.

Chrysler, Ford, Lincoln, Buick, Cadillac, Chevrolet and Pontiac had sales increases in early May.

Porsche rounds out line with 944

By John A. Russell
New York Staff Writer

COOPERSTOWN, N. Y. — The Porsche 944 was introduced to the U. S. market here last week and corporate executives anticipate that 7,000 will be sold during this model year. This model is the replacement for the 924 series and engine development is based on the 928.

James Fuller, outgoing vice president of Porsche-Audi Division, said at a press meeting here that pricing was a key factor in the marketing of the new model and base price for the 944 is $18,450. Fuller said the division did not anticipate any price increases, at least for this model year.

One of the criticisms of the 924 was its rapid escalation in price since its introduction in 1976. Fuller told the meeting the division felt a pricing strategy that would last several years was decided upon with this model. While he did not rule out future price increases, he said development of a strategy on pricing was a key because the division felt it could get significantly more volume with this tactic.

Fuller was appointed to head the Volkswagen Division of Volkswagen of America two weeks ago. His successor, Peter Fischer, who will head the Porsche-Audi division, was also on hand at the 944 introduction but neither would comment on their new assignments.

• Development of the 944 began shortly after the introduction of the 924 in the U. S. While utilizing some common features of the 924 Turbo, such as the transmission, the key innovation is in engine development. Paul Hensler, technical engineer in charge of engine development on this model, said the goal was to develop an engine based on the 928 powerplant.

For manufacturing purposes, he said, it was decided that the 944 powerplant must fit into the 928 family. Executives have commented that in some quarters it has been considered half a 928 engine. But Hensler said the 2.5-liter in-line four does have features of its own. The biggest plus from a manufacturing point of view is commonality of some parts as well as materials and production methods, which makes the process more economical. He said Porsche is "dedicated to the engine family concept."

The 944 engine incorporates a Digital Motor Electronic System to control fuel injection and ignition functions as well as internal shafts which give the engine the smoothness of an in-line six.

The 944 uses the drivetrain development of the 928 in that it is a front-mounted engine and a rear transaxle linked by a rigid driveshaft tube, resulting in 50-50 weight distribution.

Standard equipment on the 944 includes sunroof, power windows, air conditioning and leather sport steering wheel.

The 944 has rack and pinion steering and fully independent suspension as well as four-wheel vented disc brakes. The 944 has a drag coefficient of $.35.

Fuller said that part of the stress in the advertising for the 944 which will break this week in print campaigns, is that the 944 is a true Porsche.

One criticism of the 924 was that it not a "true Porsche," and Fuller said the 944 answers that criticism. While first-year sales, which will run only to December, are anticipated at 7,000, Fuller made it plain that more ambitious sales goals were anticipated in future years. Response to the 944 in Europe indicates the car is a success, he said, and in the U. S. high demand is anticipated.

• This model also plays a vital role for Porsche-Audi Division, he said and for the entire division it is estimated there will be 70,000 units sold in 1982. In 1981, the division sold 63,000 units.

As for the 944, production now is 56 units per day and this will pump in the fall to 80 per day.

Fuller said the 944 will be raced this season in "C" production SCCA. This represents a change from the 924, which made its racing debut three years after it was introduced in the market.

The 944 will be positioned against what executives feel is a new segment of the sports car market. It's a "step-up car" from those who have purchased sports cars in the $14,000 to $16,000 price range.

Fuller said this segment, which includes such competitors as the Datsun 280-ZX Turbo and the new Corvette, is not as crowded as other market segments.

The 944 powerplant does generate 143 HP and delivers 30 MPG at highway speeds.

The 944 rounds out the Porsche range in the U. S., according to Porsche executives here, joining the 911 Cabriolet and the 928, as well as the anticipated introduction of the 928S in the fall.

Derby darlings

Bernard D. Rosenthal, left, president of the Kentucky Derby Festival, takes the keys to a 1982 Eldorado, one of 25 Cadillacs that served as official cars of the 1982 Kentucky Derby Festival. Karlton W. Pierce, Cincinnati zone manager, brought the keys to Rosenthal in the infield of Louisville's Churchill Downs race track. The Derby fleet included deVilles, Fleetwood Broughams and Sevilles in addition to the Eldorado. It was Cadillac's ninth consecutive year as official Derby Festival car.

Jeep prepares for new line by trying to expand market

Continued from Page 2

ager of national advertising for Jeep.

D. Dean Greb, director of Jeep marketing, said he was hopeful of continuing the CJ/Scrambler price freeze through '82 with only a small increase for '83. But this depends on continued volume increases to offset costs, he added.

Meanwhile, under their new program, officials are seeking to "make the Jeep brand more appealing to more people," said Greb. "We want to make it stand for a complete line of vehicles, and we include everybody . . . Jeep wants to take on the world of ordinary cars."

"Why drive a car . . ." is the theme created to carry that out.

Officials want to emphasize they sell more than a CJ, the vehicle most readily identified with Jeep; that they are, in fact, full-line producers.

Thus, TV advertising, for example, combines several products into one commercial, with short vignettes to emphasize them.

In one commercial, a stranded motorist's girl friend hops into a CJ that passes by, while the motorist offers to get "rid of my car." Again, a Wagoneer commercial has the upscale owner saying he bought it as a second car "then I realized, what did I need the first one for?"

AMC kicked off the theme in a special print ad that asked: "Why drive a car . . . when you can drive a legend, Jeep CJ . . . when you can drive America's newest import fighter (Scrambler) . . . when you can drive America's versatile week-day, weekend vehicle, Jeep Cherokee . . . when you can drive the ultimate wagon, Jeep Wagoneer Ltd . . . (and) when you can drive the only truck built Jeep tough, Jeep pickup . . ."

Expanded network TV, as well as spot in 108 4WD markets, along with more magazine and newspaper is being used. Traditional 4WD upscale media are being retained. Compton Advertising, New York, is the agency.

New-car inventory climbs to 66 days, 1.2 million units

percent, and luxury, 6.61 percent.

The May 1 days-supply figures by market class were:

Subcompact—Lynx, 61; Eagle SX/4, 66; LN7, 67; Escort, 68½; Spirit, 71; Rabbit, 83½; Firenza, 86; Horizon, 89; Chevette, 89; Omni, 89½; T1000, 93; 024, 98½; TC3, 101; Skyhawk, 124; Cavalier, 130; EXP, 152, and J2000, 153.

Compact — Firebird, 25; Camaro, 31; Zephyr, 32; Omega, 57; Fairmont, 58; Reliant, 66; Concord, 73; Aries, 77; Capri, 77; Citation, 77; Eagle, 80; Mustang, 82; Phoenix, 86; and Skylark, 135½.

Intermediate — Cougar, 36; Malibu, 46½; New Yorker, 49; Cutlass two-door, 47; Cutlass four-door, 52; Granada, 53; Gran Fury, 56; Regal two-door, 56½; Regal four-door, 59; Diplomat, 59; Grand Prix, 61; Bonneville, 62; Monte Carlo, 63; LeBaron, 72; Cutlass Ciera, 82; Century, 86; XR-7, 87; Cordoba, 93; Thunderbird, 95; Dodge 400, 112; Mirada, 112; Celebrity, 137, and 6000, 149.

Standard — Olds 88, 34; LeSabre, 40; Olds 98, 40; Mercury, 46; Electra, 61; Chevrolet, 61; Ford, 62, and Pontiac, 63.

Luxury — Lincoln, 40; Toronado, 49; Riviera, 54½; Cadillac, 55; Mark VI, 60, Eldorado, 64½; Corvette, 70; Continental, 73; Imperial, 77; Seville, 85, and Cimarron, 108.

Millionth vanity plate is sold in California

SACRAMENTO. — The California Department of Motor Vehicles has sold its one-millionth personalized license plate in a program that began in 1970.

The sales have brought in $55.5 million.

obituaries

Eldred R. Crow

LAKEWOOD, N. J.—Eldred R. Crow, 89, who owned a Ford dealership in Westfield from 1920 until he retired about five years ago, is dead. He was a past president of the New Jersey Automobile Dealers Assn.

Joseph T. Hahn

MONTCLAIR, N. J.—Joseph T. Hahn, 75, owner of Clairmont Cadillac Co. in West Caldwell, N. J., and a champion squash player, is dead. He operated a dealership in Trenton, Mich., before moving to Montclair in 1959. He held 28 championship squash titles in the U. S. and Canada.

Robert J. Geisel Sr.

PLEASANTVILLE, N. J.—Robert J. Geisel Sr., 69, a Dodge dealer here since 1954, died recently. He had been an auto salesman for six years before becoming a dealer.

Edwin L. Stohlman Jr.

ALEXANDRIA, Va.—Edwin L. Stohlman Jr., one of this year's Time Magazine Quality Dealer Award winners and a former president of the Automotive Trade Assn. National Capital Area, died recently. He started in the family auto business at Stohlman Chevrolet in 1947 and formed Stohlman Oldsmobile in 1968. It was later expanded to include Saab and Datsun at the same Stohlman Plaza site here. He was chairman of the Oldsmobile National Dealer Council.

Stuart C. Holman

FT. LAUDERDALE, Fla.—Stuart C. Holman, 86, chairman of Holman Enterprises, an organization with seven New Jersey dealerships, a remanufacturing facility and a leasing company, is dead.

John A. MacPhee

NORWOOD, Mass. — John A. MacPhee, 65, president of Mac Moran Chevrolet here, died April 26. Mr. MacPhee and his late partner, Page Hansen, founded Hansen-MacPhee Engineering Co., Inc., in the early 1950s to distribute Volkswagens. He founded the Chevrolet dealership in the mid-'60s.

Vernon A. Dupy

LIGHTHOUSE POINT, Fla.—Vernon A. Dupy, a retired General Motors executive, died April 3. He was general sales manager of what is now GM's AC-Delco operation and was with GM 40 years.

But total of 127,047 is far below last year's 172,443

Week's car output highest of 1982

By Patricia Hoffman
Staff Writer

With six assembly points working Saturday, domestic auto production last week was the highest this year.

The makers scheduled 127,047 units last week, a gain of 3.95 percent over 122,214 the previous week, but down 26.33 percent from 172,443 in the comparable 1981 week.

So far this year, the auto manufacturers have finished 1,826,275 units, down 28.98 percent from 2,571,372 in last year's comparable period.

Breakdown for the week by company is: General Motors, 62.35 percent; Ford Motor, 25.63 percent; Chrysler Corp., 8.34 percent; Volkswagen of America, 2.50 percent; American Motors, 1.10 percent and Checker Motors, 0.08 percent.

Three GM and three Ford plants operated six days last week. They were GM's Tarrytown, Van Nuys and Wilmington points and Ford's Kansas City, San Jose and Wixom plants.

Idle last week for inventory control was Ford's Lorain facility.

Downtime continued last week at Chrysler's Belvidere plant. Operations were halted May 3 for inventory control and are scheduled to resume today (May 17).

GM's Janesville facility remained idle last week for model changeover. The plant is slated to return June 1 with production of the Cadillac Cimarron.

GM's Oklahoma City plant, which was idled Jan. 15 for model changeover, returned May 3 with production of both A-cars (Chevrolet Celebrity and Buick Century) and X-cars (Chevrolet Citation). Both types will be produced on a new "flex assembly line" which, according to a GM spokesman, is the company's only assembly line capable of building more than one type.

Oklahoma City is building 75 cars an hour on one shift on the flex line, and about 20 percent are A-cars. Approximately 2,300 workers have been called back from indefinite layoff.

Also at GM, on June 1, the second shift will resume at the Fairfax facility. The plant builds Buick LeSabre, Chevrolet Caprice and Oldsmobile 88. About 2,000 workers will be called back from indefinite layoff.

The second shift will also resume June 1 at GM's Lansing plant. The plant builds Oldsmobile Cutlass and Cutlass Supreme. About 2,200 workers will return from indefinite layoff.

VWoA's Westmoreland facility returned May 3 following a two-week shutdown to control inventory. Production resumed with output cut from 749 units a day to 633 units a day.

AMC's Kenosha point will be idled for two weeks starting May 31. When operations resume June 14, the plant will produce the new Alliance.

On June 21, GM's Willow Run plant will increase production of the Omega and Skylark from 50 units an hour to 70 on two shifts, recalling 1,800 workers from indefinite layoff.

Truck production advances to 51,138, highest of year

Overtime schedules at four U. S. assembly points and the return of two facilities upped last week's truck production to the highest point so far this year.

Output last week was targeted at 51,138 units, a 15.82 percent gain from 44,152 the previous week, and up 21.31 percent from the comparable 1981 period.

Year-to-date, 731,686 trucks have been assembled, an 8.24 percent gain from 675,965 units built through May 16 last year.

General Motors' Pontiac (S-truck) line and St. Louis facility both operated Saturday.

Working both daily and Saturday overtime last week were Ford Motor's Lorain (van) line, and Chrysler Corp.'s Warren truck facility. It was the 11th consecutive week of overtime at Warren.

The Ranger line at Ford's Louisville point resumed production last week after it being idle one week for inventory control.

Also back was International Harvester's Ft. Wayne facility.

Downtime has been extended until early June at GM's Pontiac (coach) plant. The partial shutdown at the facility began May 3 with operations originally slated to resume last week. The downtime has been extended to five weeks and will result in approximately 1,000 workers on indefinite layoff.

Production was cut at Volkswagen of America's Westmoreland facility when the plant returned from a two-week shutdown May 3, following inventory adjustments. Output at the point was cut from 107 units a day to 91 units a day.

Chrysler's Belvidere point remained idle last week for the second of a two-week shutdown to control inventory. Operations are scheduled to resume today (May 17).

American Motors' Toledo (Jeep) facility will be idle two weeks starting May 31.

N.H. sues dealer, alleging deceptive trade practices

CONCORD, N. H. — The state attorney general's office is suing a Salem dealership, charging that it refused to return customer deposits, stamped hidden terms on purchase agreements and followed other deceptive trade practices.

The suit was filed in Rockingham County Superior Court after the attorney general's office and the dealership, Fitzgerald-Hicks Toyota-Dodge, failed to negotiate a settlement.

The suit seeks a $10,000 civil penalty for each violation and restitution if the dealership loses its case. The state claims the dealership refused to return customer deposits when there were no valid purchase orders.

Saab 900 honored

ORANGE, Conn. — The Saab 900 sedan has been selected as the "Best Executive Car" by the editors of What Car? magazine in Great Britain.

Overtime at GM boosts Canadian auto production

Saturday overtime at General Motors' Oshawa (No. One) car facility helped boost last week's estimated auto production in Canada 2.82 percent from the previous week. Output was 7.97 percent above that of the year-ago week.

Estimated production last week rose to 21,711 units from 21,116 the previous week and 20,109 in the same week last year.

Year-to-date, the makers have finished 334,919 cars, up 2.79 percent from 325,833 in the comparable 1981 period.

Truck production last week dropped 2.92 percent to 12,582 from 12,961 the previous week, but output rose 11.58 percent from 11,276 in the comparable week last year.

So far this year, the truck manufacturers have built 198,792 units, down 8.09 percent from 216,292 at this time in 1981.

GM's Oshawa (No. One) facility operated six days last week with Saturday overtime slated for May 29.

GM's Oshawa (No. Two) and Ste. Therese car plants both continue to operate on one shift.

Daily overtime continued last week at Ford Motor's St. Thomas car point. The plant is operating on two nine-hour shifts Monday through Thursday, with both shifts resuming to normal eight-hour production on Friday.

Regular production schedules were reported at all other car and truck facilities last week.

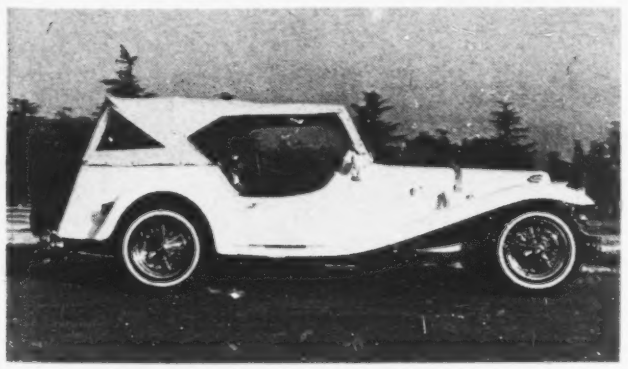
Piper on the way



New Rogue heads for marketplace

Piper Automobile Co. plans to build this front-engine V-8 Piper Rogue, making heavy use of Ford components, at Salina, Kans. Piper Automobile is the creation of William H. Piper, grandson of the founder of Piper Aircraft. The Rogue is priced at "under $30,000" and Piper says distribution will begin this summer.

Import inventory climbs as sales pace slips back

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. climbed during April, partly as a result of an increase in Japanese-built units, but mostly because of a decline in the selling rate.

The importers and their dealers opened May with a 56-day supply of new cars in inventory, up from 49 days a month earlier. The May 1 import supply compared with a 66-day stock of domestic cars.

Importers and their dealers had 368,113 new cars in stock May 1, up from 366,059 a month earlier.

The inventory of new imported pickup trucks totaled 171,097 May 1, a 168-day supply, up sharply from the 158,157-unit stockpile a month earlier, which was a 104-day supply. Again, the increase in supply was due more to lower sales rate than to the unit count increase.

The combined car and truck inventory was 542,710, a 72-day supply, compared with 524,216 April 1, a 58-day supply.

Although the general inventory trend was up, some shortages persisted. Honda, Toyota, Mercedes-Benz, BMW and Subaru were all carrying lean inventories May 1.

Sales leader Toyota had only a 29-day stockpile, although that was an improvement over its meager 21-day supply a month earlier. Shortest supply was the 24-day stock of Mercedes-Benz, followed closely by Honda's 26-day inventory.

BMW was on the lean side with a 37-day supply and Subaru had a 38-day stock.

• The inventory of Japanese-built new cars in the U. S. totaled 259,813, up from 254,368 a month earlier. But the days-supply figure jumped from 42 to 52 days during the month.

Other Japanese nameplates and their days-supply figures were: Mazda, 59 days; Datsun, 86 days, and Isuzu, 131 days. Chrysler Corp. had a 186-day supply of Mitsubishi-built Colts, Champs, Challengers and Sapporos.

The stockpile of West German-built cars totaled 59,600, down from 63,100 a month earlier. The May 1 figure was a 78-day supply, down from 79 days a month earlier.

In addition to the lean stocks of Mercedes-Benz and BMW, German inventory included a 52-day supply of Porsches, a 116-day stock of Audis and a 130-day supply of German-built Volkswagens.

New-car inventories of some other import nameplates showed that the monthly advance was mainly due to the Japanese buildup, as many European stocks were down.

Inventories of other lines included Jaguar, 47 days; Volvo, 54 days; Renault, 58 days; Saab, 78 days; Peugeot, 102 days; Fiat, 107 days, and Alfa Romeo, 114 days.

The over-500-day supply of DeLoreans was somewhat misleading, because a large percentage of the cars have not yet been shipped to dealers and sales have been held down.

Days-supply figures for new imported pickup trucks in stock May 1 were: Mazda, 93; Toyota, 103; Chrysler Corp./Mitsubishi, 110; Isuzu, 189; Datsun, 223; Chevrolet LUV, 226, and Ford Courier, 336.

House expected to follow same path

Senate votes to trash U.C. rule

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Flexing its newly acquired legislative veto muscle, the Senate bombed the proposed FTC Used Car Rule halfway out of the water last week.

With NADA executives watching from the gallery, it voted 69 to 27 to veto the rule that would have required dealers to tell potential used-car buyers what warranties were offered on used cars and whether the dealer knew of any major defects in the vehicles. Such disclosures would have been made by way of a window sticker.

The veto measure now goes to the House of Representatives where it is expected to pass. Should that occur, it will mark the first time Congress has vetoed an FTC rule under powers it gave itself in the FTC Improvement Act. More than 218 members have indicated they intend to support a veto of the rule, reliable sources told Automotive News.

At press time, the House Energy and Commerce Committee had passed the veto measure, and the full House is expected to take it up this week.

The vote must occur in the full House by the end of business this Wednesday or the rule goes into effect. Opponents of the veto, like Rep. Toby Moffett, Connecticut Democrat, allow that parliamentary maneuvering to keep the veto resolution from being voted on is within the realm of possibility, but "it doesn't look very hopeful," he said.

Car and truck dealers, who through the political action committees have given more than $450,000 over the past two years to those in the Senate and House who support their position and more than $800,000 to all office holders and candidates, object to the rule. They say it will force them to inspect every used car and open them to additional liabilities while raising the prices of all used cars.

• Proponents of the rule maintain it does no such thing; that it asks the dealer to tell only what he knows when taking normal delivery of a used car and thereby address a problem Congress specifically told the FTC to get into more than eight years ago; that is, putting the customer on the same footing as the dealer.

"The vote is a disappointment for the commission and a significant setback for the American consumer," said FTC Commissioner Patricia P. Bailey who has been leading the commission's fight in Congress to keep the rule.

"If you can't get through Congress a measure requiring used-car dealers to tell buyers what they know about the cars they sell, then the outlook is exceedingly troubled" for the rest of the FTC's actions, she said.

NADA Executive Vice President Frank McCarthy said the Senate action confirmed what his group has maintained all along: That the FTC exceeded its authority by in effect forcing dealers to inspect used cars.

"Last year, 51 Senators sent the agency a letter telling it so," he said. "It's clear to us the Senate vote is a reaffirmation of that. 'You've gone too far,' the Senate said."

Chief sponsor of the veto resolution, Senator Larry Pressler, South Dakota Republican, said it was a victory for consumers because the rule was so complicated as to be incomprehensible.

"It would have created a lawyer's paradise" because no one can understand the 50-page regulatory document that accompanies the rule and sets out its requirements and limitations, he said.

"It can't be understood by dealers, let alone consumers," he said.

Senator Robert Kasten, Wisconsin Republican and leader of

Chevrolet to market Isuzu small car

DETROIT. — General Motors and Isuzu have reached agreement under which Isuzu will supply 300,000 small cars a year to be marketed by Chevrolet under its own nameplate. The car will be smaller than a Chevette.

AMC cuts Le Car prices, adds incentives

SOUTHFIELD, Mich.—AMC lowered the sticker price of base three-door Le Cars by $200 to $4,795; of three-door Deluxe models by $300 to $4,995, and five-door Deluxe models by $300 to $5,295 for '82 models delivered between May

But majority are expected to sign up for program

Chrysler dealers unenthused by buildout plan

By Joseph Bohn
Marketing Editor

Chrysler dealers aren't exactly overwhelmed by the payoff numbers in the company's current buildout program, but the majority are expected to sign up for it.

The close-out is offered in lieu of a 5 percent carryover allowance. Dealers have until May 25 to make up their minds whether to get in.

The program drew opposition from some dealers because payoff levels didn't match what a 5 percent carryover allowance would have been worth.

Also, there was objection to having to order more units which, it was felt, would eat up incentive money in additional floorplan costs.

Even at the highest level, where a dealer orders 120 percent of his wholesale quota, it was pointed out, the payoff would only average $225 per unit for someone with a 100-unit retail objective.

(The figures work out to zero for the first 25 percent of objective; $200 a unit on the next 25, or $5,000; $300 on third 25 or $7,500 and $400 per unit on the last 25 or $10,000. The total $22,500, for example, would average $225 over 100 units.)

And, of course, payoff levels for dealers ordering only 80 percent or 100 percent of required wholesale fall below even that $225 average.

Reactions from dealers varied widely.

One Detroit-area Chrysler-Plymouth ad association member said his group "liked the numbers, so I guess they'll go for it."

Elsewhere, a Dodge dealer described it as "nothing overly exceptional, exciting. Not as good as last year's" (when Chrysler paid 3 percent on Omni/Horizon regular models and 5 percent on other cars and trucks).

Some Eastern and Southern dealers expressed outright hostility.

Chrysler lowered retail sales quotas for dealers last week, a move interpreted by some as intended to mollify ruffled dealers.

Officially, Chrysler said it had

A new Corvette, 4 trucks coming

Chevy to repackage, prune lineup for '83

By Jim Plegue
Staff Writer

Chevrolet will prune some models from its lineup and repackage a few others in an attempt to make its 1983 products more palatable to car buyers.

In addition, the Chevrolet lineup will have several new models for '83—four new trucks and the much-ballyhood redesigned '83 Corvette (which may debut this winter).

The new truck models are a four-wheel-drive S-10, an Extended Cab S-10, and two new S-10-based "junior" Blazers. The Extended Cab model will be available in two-wheel and four-wheel-drive versions with rear-quarter windows, two trim levels and optional rear jump seats.

The mini Blazers will be offered in two models--a two-wheel-drive and a four-wheel-drive version. Blazer will be built on a 100.5-inch wheelbase and will have two uplevel trim levels.

• Standard Blazer and S-10 engine for 1983 will be Chevy's new 2.0-liter four-cylinder J-car engine (with electronic fuel injection). An optional five-speed transmission will be offered on all 1983 S-10 and Blazer models, while an automatic overdrive will be available on selected models.

The current fullsize Blazer model will continue for 1983, available only with diesel engine and four-speed transmission.

Models being culled from the Chevy line for 1983 are the Caprice Coupe (there will be no two-door fullsize Chevy next year), the Impala wagons, the Malibu four-door (just a wagon will be offered in that series) and the price-leader Cavalier Cadet models.

Discontinuing the Cadet models is part of Chevy's major overhaul of its Cavalier series, which has never met sales expectations. The Cadet models were introduced early this year as a means of fighting price resistance to the J-car models.

For 1983, Cavalier will be offered in two trim levels—base and Cavalier CS. Coupe, sedan and wagon models are offered in both levels, but the two-door hatchback is available only in CS trim.

• In packaging terms, base Cavalier models for 1983 will be a step above Cadet but a notch below the current base Cavalier. Cavalier CS versions will be a step above the current base Cavalier but below the current Cavalier CL series, which will be discontinued.

Much of the equipment which was standard on base Cavalier will be optional in '83. These items include remote trunk/hatch/tailgate release, rear-window defogger and wheel trim rings. The locking fuel-filler door has been dropped entirely from the line.

Although the CL series will be dropped, an optional CL Equipment package will be available on Cavalier CS models.

At introduction time in the spring of 1981, Cavalier had much more standard equipment than domestic makers traditionally install on their cars. Consequently, it had a higher price tag. The moves for 1983 may allow Chevrolet to price the Cavalier competitively.

Cavalier standard engine for 1983 will be the Chevy 2.0-liter with electronic fuel injection. A five-speed manual transmission will be optional on all 1983 models.

In other powertrain changes, Chevrolet will drop the 4.4-liter V-8 engine option from its Chevrolet, Monte Carlo and Malibu/El Camino lines next year.

A 5.0-liter V-8 engine will be a new option in 1983 Monte Carlo. El Camino gets the Oldsmobile-built 5.7-liter V-8 diesel engine as a new option next year.

On its Citation model, Chevrolet will drop the X-11 Sport Equipment Package but will make a "Sport Decor" option available on the two-door hatchback model and will expand the high-output 2.8-liter V-6 availability to all models.

The new front-drive Celebrity will also be repackaged for 1983. The current CL trim level will be dropped while the CS trim will receive some upgrading and become the new CL trim. Several new stereos will also be added to the option list.

Most of the carryover 1983 Chevrolet models will receive little in the way of exterior changes, other than some new paint schemes. Monte Carlo will have a new grille next year, while Chevette will have color-keyed bumpers and a black finish on exterior trim pieces. Scooter versions of the Chevette will have upgraded interior/exterior trim levels.

Seville becomes limousine

When is a Seville not a Seville? When American Custom Coachworks, Beverly Hills, Calif., stretches it four feet, raises the roof two inches and adds hot and cold running water, color TV, electronic bar, dual window dividers and other luxuries. The stretched Sevilles retail for about $65,000.

New contract gives AMC product boost

By Marjorie Sorge
Labor Editor

The new UAW-American Motors contract has been ratified, giving AMC a boost in its new-product program.

In a second try by Local 12 officials and international UAW officials, the Jeep plant in Toledo last week voted by about 70 percent to approve the new agreement. It voted down the pact earlier this month because of local problems.

All AMC U. S. locals had to approve the new contract before it could go into effect and Local 12's "no" was able to torpedo the agreement. Locals 72 and 75 in Milwaukee and Kenosha approved the pact earlier this month on the first vote.

The new contract provides an employe investment plan from hourly workers worth between $110 million and $115 million. Salaried workers will also have a similar investment program for a total employe investment of $150 million to be used for AMC's new-product programs.

Richard T. MacCracken, AMC labor relations vice president, said the ratification "gives us a better opportunity to keep on schedule (for new products)." He said any slowdown in that schedule would not be due to a lack of resources.

AMC is planning to call back 1,200 workers at the Kenosha plant this fall when the new Alliance goes into production, MacCracken said. Others may be called back at Toledo when the new downsized Jeep XJ goes into production in early 1983.

• According to MacCracken, the Toledo workers were upset about certain local problems that were not solved during the international contract talks. Those included absenteeism problems and the summer downtime vacation schedule. This year, AMC plans to close the Toledo plant the weeks of June 7 and 14 for changeover. The normal time is in early July which the workers prefer.

MacCracken said AMC has told the Toledo workers it will take the vacation and the absenteeism program under consideration. The absenteeism program allows workers who are absent to be disciplined under a specific formula.

The new contract, which covers the 14,000 workers at AMC, also provides: A prepaid legal services program, equality of sacrifice by the salaried workers, a reopener, extended health care and insurance protection for laid-off workers, and a commitment from AMC to support auto content legislation.

It also provides that all money invested by the workers be repaid at 10 percent interest beginning in 1985. Those workers will invest six quarterly cost-of-living-increases, up to a maximum of $1.20 an hour; their yearly 3 percent increase in base wages and, either 21 or 28 days' pay, depending on the local.

Contract negotiations between the UAW and AMC have been going on for about seven months. It was the first time all three AMC locals had bargained together. Previously, Toledo and the two Wisconsin locals bargained separately.

Lawsuit charges engine is defective and a safety hazard

Class action filed against GM for Cadillac V-8-6-4

By Marjorie Sorge

A class-action lawsuit has been filed in Baltimore Superior Court against General Motors charging that the Cadillac V-8-6-4 engine is defective and a safety hazard.

The suit, filed by Stuart M. Salesbury and Max R. Israelson, of Israelson & Jackson, asks for a jury trial. It charges GM with strict liability, negligence, breach of warranty, violation of the Magnuson-Moss Warranty Act, misrepresentation and negligent misrepresentation.

It was filed on behalf of Bernard A. Band, Potomac, Md., and Kensington Veterinary Hospital, Kensington.

Salesbury said there are about 2,500 V-8-6-4 owners in Maryland.

According to the suit, the V-8-6-4-powered cars have a nozzle sticking problem which causes the engine to stall during normal operation, cutting out the power steering and brakes.

It further charges that the engine lags, surges, is imbalanced and shifts constantly between the 8-6-4 modes and has a variation in the power output. In addition, the suit says there is a vibration throughout the vehicle and there is spark plug knock.

It further charges that GM either "knew or should have known of the defects and failed to correct them, failed to warn . . . about them and failed to recall said vehicles which were and are unsafe and dangerous."

The suit asks for $100 million in compensatory damages, $100 million in punitive damages and for costs and expenses of the suit.

• There are seven other class-action lawsuits which make similar charges in New Jersey, Illinois, Texas, Ohio, Pennsylvania, New York and California. There is also a product liability case, filed in U. S. District Court in Dallas, which charges GM is liable for a death which allegedly occurred when a V-8-6-4-powered car surged forward.

In addition, a group of more than 50 Cadillac and GM diesel car owners have written a letter to GM Chairman Roger Smith and President F. James McDonald demanding a meeting by June 1, according to UPI.

The letter charges that GM sold the owners "lemon automobiles for thousands of dollars . . . automobiles that hesitate constantly and stall repeatedly."

It says that if the meeting is not held, the signers will join in a nationwide boycott of GM cars.

The letter was written by Russell Mokhiber, a former associate of Ralph Nader, on behalf of the GM car owners. While GM spokesmen said the company has not yet received the letter, Mokhiber said it was mailed on May 14.

He said he wrote letters to many Cadillac V-8-6-4 owners who wanted action taken. Some of those owners want to start an advertising campaign against GM, he said.

According to Gary Hunter, whose name is listed in the letter, Mokhiber's original correspondence asked for a $50 contribution to defray costs of advertising. He said he did not contribute any money and was "surprised" his name had been included in the letter to the GM executives.

Mokhiber said he has done some research on an advertising campaign but none has yet been started.

The V-8-6-4 was introduced by Cadillac in 1981 as a fuel saving device. It runs on either eight, six or four cylinders depending on the power needed. It was replaced in 1982 by a new V-8. Only the Cadillac limousines continue to have the V-8-6-4 as standard equipment.

A Cadillac spokesman said GM has no comment on the lawsuit because of the pending litigation. But, he said, GM has increased its warranty of the V-8-6-4 and fully backs the engine.

He also had no comment on the letter.

Corvair concours

A two-day Corvair convention in Phoenix attracted about 30 restored cars for a concours and race. The event was sponsored by the Cactus Corvair Club of Arizona.

truck watch

By Jack Walsh
Truck Editor

Pat Kaine, International Harvester Truck Group president, says company forecasts indicate that a unique opportunity has developed wherein the high end of Class 2 to Class 4 trucks will be the emerging market in the 1980s.

It was in anticipation of the expanding market for Class 3 and 4 trucks especially that International announced the new "I-Series" last January, he told the Private Truck Council of America recent annual meeting in Chicago.

These trucks, manufactured in Italy by IVECO B.V., the Fiat commercial-vehicle subsidiary, are being offered through selected IH dealers in the U. S. and Canada.

A five-cylinder Deutz air-cooled diesel and a six-cylinder Fiat water-cooled diesel, both warranted for 100,000 miles, are offered in the three I-Series models ranging from 9,995 to 14,880 pounds GVW.

The demise of the gas engine in Class 6 trucks is near and consumers will be seeking an economical alternative, Kaine said.

"The many and varied pickup and delivery operations and the cost of capital have made it common to find consumers using vehicles which only partially meet their needs of operation," he said.

"Thus, either a 'beefed-up' automotive product has been modified to suit their requirements, or a 'scaled-down' medium truck has been inefficiently used."

Kaine said deregulation of trucking will have an effect on the Classes 3 and 4 market, which he said has been neglected over the years by U. S. truck manufacturers.

"If a company that used to have common carriers move its goods decides to do its own hauling," he observed, "it is probably not going to need a Class 6 or 7 truck; but it will likely need a Class 3, 4 or 5 vehicle."

Kaine noted that the I-Series models, each a low-front-entry unit with either a chassis/cab or cab cutaway configuration, are ideal for a vast number of applications.

New type of cartainer

Sea-Land Industries engineers developed this cartainer to boost efficiency on the ocean run from the West Coast to Alaska. The new type can be placed directly from a ship onto a truck-trailer chassis. High-strength steel and fiberglass components will reduce corrosion damage and en-route harm to vehicles.

Car shipper redone to curb costs, damages

By Roger Rowand

SEATTLE. — Sea-Land Industries said it has found a way to ship vehicles to Alaska from the U. S. West Coast with a system that saves time, money and space and leads to a reduction in en-route damage.

The technique involves a modification of a long-standing method using what are called cartainers. Until a recent purchase of 121 new units, cartainers have been made of aluminum and steel.

New units are made of high-strength steel and fiberglass-reinforced plastic.

They can be plucked directly off the ship and placed with a full load directly on truck-trailer chassis for delivery to dealerships.

Each cartainer can hold four cars, pickups or vans. They meet international standards, are designed to last about 20 years and can be stretched by five feet to carry six vehicles, Sea-Land said.

The old type of cartainer suffered from galvanic corrosion where its aluminum components touched steel. Also, steel corroded quickly under Alaska-route conditions that include ocean-weather extremes.

Use of high-strength steel and plastic is expected to solve those problems, the firm said.

The new cartainers are made in Hong Kong.

Due to the previous unit's height, it could be used only for transporting cars from port to port, and could not be used on highways. Its awkward size also limited the areas where the unit could be stowed on a vessel.

By hinging end frames, Sea-Land engineers have been able to reduce the height of the container when empty or half full by some four feet.

This allows the new cartainer to be stowed either on or below deck. The new units, on the return voyage from Anchorage—empty or half-full — only displace one container slot, not two as the older equipment does.

Ford takes over lead from IH in HD registrations

Ford moved ahead of International in March to take over the lead in heavy-truck registrations at the end of the first quarter.

During the month, according to R. L. Polk & Co. statistics, 2,703 new Groups 7 and 8 Ford trucks were registered in the U. S., bringing the three-month total to 6,864 units.

International tallies in March totaled 2,511, with the January-March count rising to 6,733 units, 131 shy of the Ford figure.

International, however, remains No. 1 in Group 8 registrations with 3,901, almost 750 units more than runnerup Mack's 3,157 during the first three months of the year.

Ford is No. 1 in Group 7 tallies by a wide margin, winding up the first quarter with 4,895 units. Second-place GMC had 3,105 registrations, 1,790 fewer than Ford.

Total heavy-truck registrations in the January-March period were down 15.1 percent from the 1981 total, 30,416 versus 35,845. Groups 7 and 8 tallies also were off significantly from the year-earlier count.

Group 8 tallies through March were down 12.7 percent, from 20,046 a year ago to 17,506. There were 12,910 Group 7

Storage unit for compacts

The "Cap Man," a new truck cap and storage unit designed especially for compact pickups, has been introduced by Stahl, a unit of Scott Fetzer Co. Gullwing lids and customized compartmentation make Cap Man especially useful for utility firms, security systems, contractors, installers and foremen, the Wooster (O.) firm says.

truck industry news

Light trucks pace registration gains in first 3 months

Light trucks were the only winners as first-quarter registrations of new trucks of all types in the U. S. topped the year-earlier total for the first time since 1979, the year of the Iranian revolution, gasoline shortages and soaring prices.

The three-month total, according to R. L. Polk & Co. statistics, was 534,188 units, an in-

Table on Page 20

crease of 6.7 percent over last year's 500,730. There were gains in all three light-truck classifications.

In March, 207,514 vehicles were registered, an increase of 17.9 percent over the year-ago 176,027 units. It was the highest count for any month since July, 1980, when 222,249 trucks were tallied, and only the second month since that time that the total has topped the 200,000 mark.

Through March, 494,863 light trucks were registered, up 9.5 percent over the 452,061 units tallied in the same period in 1981. Medium trucks were down 30.5 percent, from 12,824 units a year ago to 8,909, and heavy trucks were off 15.1 percent to 30,416 units, compared with 35,845 in 1981.

The domestic compact pickup trucks, the hottest units on the market today, were mainly responsible for an increase of 11.8 percent in registrations of Group 1 vehicles.

The Group 1 total for the first quarter was 276,623 units, compared with 247,400 in 1981.

Registrations of the non-captive Japanese-built compact pickups in Group 1 were 7.4 percent higher than a year ago, 69,518 versus 64,757.

In Group 2, there were 214,108 tallies, a gain of 6.3 percent over the year-earlier 201,430 units. The non-captive Group 2 imports were up 79.6 percent, from 766 units in 1981 to 1,376.

Three-month Group 3 registrations totaled 4,132 units, an increase of 27.9 percent over last year's 3,231.

There were four Group 4 registrations in the first three months, two in January, two in February and none in March. Last year, there were three, two in January and one in March.

The Group 5 count through March was down 34.4 percent, from 349 units in 1981 to 229. The 8,676 Group 6 tallies fell 32.3 percent below the 12,472 units registered in the same period a year ago.

In Group 7, there were 15,799 tallies through March, a decline of 18.3 percent from the year-earlier 12,910 units. The Group 8 count was down 12.7, from 20,046 units in 1981 to 17,506.

Increases in penetration and unit registrations were scored

Chasing Camaro at Indy

Trackside billboard at the Indianapolis Motor Speedway proclaims "Even here they'll chase Camaro's shadow," emphasizing Chevrolet's marketing theme. A Camaro Z28 will pace this year's Indy 500 on Memorial Day. Driving the pace car will be Jim Rathmann, the 1960 Indy 500 winner. Rathmann is a Chevrolet dealer in Florida.

Chevy to sell 6,000 replicas of Camaro Indy pace car

DETROIT. — Chevrolet dealers and 6,000 of their customers will be able to share in the glamour that surrounds the Indianapolis 500-Mile Race.

A Camaro Z-28 will pace this year's Indy 500 on Memorial Day, and Chevrolet has produced 6,000 "Commemorative Edition" Z-28 models for sale through dealers.

The cars have silver and blue exteriors, Indy 500 accents and logos, sport mirrors and red-accented silver aluminum wheels with white-lettered Goodyear Eagle GT tires.

Inside, there is special instrumentation, AM/FM stereo, a leather-wrapped steering wheel, deluxe luggage compartment trim and a blue cloth and silver vinyl interior that features Camaro's adjustable LS Conteur driver's seat.

There's tremendous prestige attached to supplying the Indy 500 pace car, and Chevrolet is playing it to the hilt — as does every maker whose car is chosen to pace the event.

Chevrolet is supplying 160 vehicles. Blue and silver Camaros — the pace car's colors — are being driven by officials of the Indianapolis Motor Speedway and the 500 Festival.

The fleet also includes 36 Celebrity models, 12 S-10 pickup trucks, 12 Sportvans, 24 ¾-ton and one-ton pickups and Suburbans and 25 chassis-cab wreckers.

The Celebritys and Sportvans are silver with blue graphics. The trucks are predominantly red and white, and the chassis-cab wreckers are all white.

After the race, many of the Indy 500 trucks will go to the Michigan International Speedway, Cambridge Junction, Mich., where they will be used throughout the summer.

This is the sixth time a Chevrolet has paced the Indy 500, and the third time for Camaro.

The first Chevrolet pace car was a 1948 Fleetmaster convertible, and the next was a 1955 Bel Air convertible.

Camaro was introduced in 1967, and it was the pace car in its maiden year and again in 1969. Corvette was chosen in 1978.

Under the hood, the pace car is not exactly what Camaro fanciers will find at their local Chevrolet dealerships. The engine is a high-compression aluminum V-8 built mostly from heavy-duty Chevrolet components.

It's a 350-cubic-inch (5.7-liter) unit rated at 250 horsepower. The cylinder block is cast aluminum heavy-duty 356 alloy with cast-iron liners and 4-bolt main bearing caps. Cylinder heads are aluminum heavy-duty with 2.02-inch inlet valves and 1.62-inch exhaust valves.

Vince Piggins, Chevrolet product performance manager, calls it "a cross between the full-race stock-block Chevy engine found in some Indianapolis racing machines and the stock 5.0-liter engine available in the 1982 Z-28."

Speed, and lots of it, is vital in a pace car because it must get out of the way as the field accelerates toward the starting line. Chevrolet said it's "like a drag race . . . starting at 100 miles per hour."

Driving the Camaro pace car will be Jim Rathmann, the 1960 Indy 500 winner. Rathmann is a Chevrolet dealer in Florida.

The pace car was built at the General Motors Assembly Division plant in Van Nuys, Calif., in November and shipped to the Chevrolet Engineering Center in Warren, Mich., for preparation. It was delivered to Indy 500 officials March 15. A second pace car was built in January as a backup unit.

Ford takes over lead from IH in HD registrations

Continued from Page 14

registrations, a decline of 18.3 percent from last year's 15,799 units.

In March, 10,818 Groups 7 and 8 trucks were registered in the U. S., down 11.3 percent from last year's 12,197.

In the first quarter, only three nameplates — GMC, Peterbilt and Western Star — and the miscellaneous group had an increase over a year ago in unit registrations.

GMC had the biggest increase in penetration in the first quarter, boosting its share of total industry registration almost four percentage points over last year.

GMC's 5,136 registrations through March accounted for 16.88 percent of the total, a gain of 3.91 points over the previous year's 12.97 percent on 4,648 tallies.

International suffered the biggest loss in penetration. Through March, its 6,733 registrations accounted for 22.13 percent of the total, down 3.82 points from the year-ago 25.96 percent on 9,306 units.

Despite 18 pct. dip in February registrations

Import market share sets record

By Jenny L. King
Staff Writer

Registrations of new imported cars in February set a record for market penetration, topping the former peak for the month established in 1981, according to figures compiled by R. L. Polk & Co.

Import penetration of the U.S. market was 30.01 percent, up from 29.64 percent a year earlier, but down from the any-month high of 31.21 percent set in January of 1982.

New import registrations this February totaled 163,804, down 18.13 percent from 200,075 the preceding year. February registrations were up 3.09 percent over January's 158,894.

For the first two months of 1982, total import registrations were 322,698, down 13.79 percent from 374,317 a year earlier.

Imports accounted for 30.59 percent of total U. S. new-car registrations in the first two months, compared with 28.54 percent in 1981.

In February, first-place Toyota captured 23.12 percent of the import total, down 0.54 percentage points from 23.66 percent in 1981. Nissan was up to 18.04 percent from 17.29 percent. Honda climbed 1.45 percentage points, to 17.92 percent from 16.47 percent.

This year, Subaru rushed past Mazda into fourth place among the imports. Its 6.99-percent share was up 1.54 percentage points from 5.45 percent a year ago. Mazda earned 6.74 percent, down from 7.71 percent and Volkswagen dropped 2.81 percentage points, to 6.51 percent from 9.32 percent.

European imports Volvo, BMW and Audi appeared among the top 10 this February, replacing Fiesta, Colt and Champ.

Mercedes-Benz climbed to seventh place from ninth place and was up to 3.04 percent from 2.11 percent of the import total last year.

• The top 10 imports accounted for 89.89 percent of February import registrations, compared with 89.75 percent a year earlier. For the first two months, the top 10 grabbed an even 90 percent, up slightly from 89.57 percent in 1981.

Japan-built passenger cars accounted for 78.28 percent of the import segment in February, up from 76.97 percent a year earlier. Germany was the second-place country of origin, with 14.30 percent of the imports, down from 17.20 percent.

Swedish cars represented 4.05 percent, up from 2.46 percent; French products were 2.02 percent, up from 1.61 percent; Italy was next at 0.81 percent, down from 1.26 percent; England, 0.35 percent compared with 0.50 percent, and Ireland, 0.19 percent with no year-ago import comparison.

For the first two months, Japanese products accounted for 77.80 percent of import registrations, German products had 15.07 percent, Swedish had 3.88 percent, French had 1.99 percent, Italian had 0.69 percent, British had 0.35 percent and Irish had 0.22 percent.

Imported car totals by country of origin in February, 1982, compared with the previous year were:

	Feb., 1982	Feb., 1981
Japan	128,227	154,006
West Germany	23,424	34,414
Sweden	6,628	4,918
France	3,315	3,232
Italy	1,331	2,514
Britain	564	991
Ireland	315	.....

Registrations by country of origin for the first two months of 1982 compared with a year earlier were:

	2 mos., 1982	2 mos., 1981
Japan	251,045	286,327
West Germany	48,617	65,386
Sweden	12,536	9,602
France	6,432	6,567
Italy	2,226	4,401
Britain	1,135	2,034
Ireland	707	.....

Registrations of imported trucks were down in February compared with the total for the month a year earlier. Truck imports numbered 32,497, down 10.36 percent from 36,252.

Truck figures for the February, 1982, compared with 1981, were:

	Feb., 1982	Feb., 1981
Toyota	9,823	8,879
Nissan	6,778	7,377
Ford Courier	3,877	5,682
Chevrolet LUV	2,508	5,284
Others	9,511	9,030

Truck imports for the first two months of 1982 were down 4.26 percent, to 64,949 from 67,839. Totals were as follows:

	2 mos., 1982	2 mos., 1981
Toyota	19,504	16,874
Nissan	14,390	13,872
Ford Courier	7,528	10,295
Dodge Ram 50	5,256	.....
Chevrolet LUV	.....	10,418
Others	18,271	16,380

Independents elect officers in Colorado

DENVER.—Dan Terry, Lakewood, has been elected president of the Colorado Independent Automobile Dealers Assn.

Other new officers are Bob Halloran, Longmont, vice president; Paul Garrison, Westminster, secretary, and Wayne Hornbaker, Denver, treasurer.

Rolls-Royce rewards its best

Foreign Motors West, Rolls-Royce and Bentley dealership for the Boston area, recently was presented with two achievement awards. Thomas Mix, left, received the Order of the Silver Lady for his outstanding sales performance in 1981. The Parts Award of Achievement went to Joseph Warren, right center, dealer parts manager. Making the presentations are Roy Owen, right, regional manager, Rolls-Royce Motors, Inc., and Michael J. Hazelwood, zone manager.

Former dealer launches crusade

Taking on Japanese single-handed

ST. LOUIS. — An auto executive who lost three dealerships in nearly 20 years has launched a one-man crusade to halt the flood of Japanese products into the U. S.

John Schmackler, now a stockbroker with Smith, Moore & Co., told AUTOMOTIVE NEWS that "we continue to lose ground because American manufacturers and car dealers aren't as aggressive as the Japanese."

And here's a good example of "aggressive," Schmackler said. "The day after my story appeared in the Globe-Democrat, the bureau chief of the Mainichi Newspapers of Tokyo flew in from Washington and spent two hours interviewing me."

Schmackler believes that the American people are not fully aware of the soaring imports and should "put pressure" on Congress. He did get some help from Rep. Melvin Price, who obtained figures from the Commerce Department.

The statistics show that in 1970, Americans purchased 312,777 autos made in Japan while Tokyo bought 6,280 — a ratio of nearly 50 to 1. In 1980, Japan exported 1,905,968 cars and imported only 9,305 — a ratio of nearly 205 to 1.

"Those numbers are mind-boggling," he said. "I don't think the American people have any idea of the imbalance. We knew we were being hurt by the imports but had no idea the numbers were so dramatic."

He had been a partner in Vicart Motors, a Dodge dealership in South St. Louis from 1956-'61; in Bitzer-Schmackler Motors, a Dodge-Chrysler deal in nearby Collinsville, Ill., from 1961 to 1968 and in Granite City Dodge, from 1968 to 1977.

At his last location, Schmackler's dealership was only 100 yards away from the main gate of Granite City Steel, which had lost much volume to imports.

• Schmackler said that the imports also had adversely affected the glass and rubber industries and suppliers and parts makers.

The comparative figures, he asserted, were even worse in trucks. In 1970, the U. S. exported 83 trucks to Japan while importing 65,519. In 1977, American truck exports to Japan were 269. In 1980, Americans purchased 480,547 Japanese trucks and sold 89.

These comparisons have infuriated Schmackler and he charged that American industry, with that few being sold in Japan, "was being absolutely shut out at the marketplace."

Although Congressman Price's office obtained the figures from the Commerce Department, the lawmaker's spokesman explained that the problem was economic rather than political since the American cars aren't made for Japanese roads while the imports are designed for the lucrative Yankee market.

The spokesman said that $7,000 added to American cars' prices in Japan wasn't an "import duty but the cost of disassembling and reassembling the car correctly to meet the more stringent pollution and safety standards they have."

Price, a long-term Congressman and a leader in House defense activities, co-sponsored a proposal to require an increase in the percentage of American-made parts in imported vehicles as the total rises.

"Nothing will get done unless the grass-roots impresses on Congress the need for remedial action," Schmackler told AUTOMOTIVE NEWS.

'Unbelieveable' Lynx sale pays off for N. Y. dealer

KINGSTON, N. Y. — While the auto market in general is dismal, a dealer here is doing a booming business and he attributes it to his own campaign that brings customers into his showroom.

Tom Murphy Jr., president of Colonial Lincoln-Mercury started his "Unbelieveable Sale" on Mercury Lynx models in mid-January. In February he sold 79, and in March he added another 109 Lynx sales. In addition, he took 67 orders.

The key, he said, was price. A small down-payment and low monthly payments attracted the customers. And, he noted, most wanted basic transportation with 80 percent of the cars sold having manual transmissions.

He added a few of his own touches including a special stripe which the customer selected at no charge and dinner for two at one of six area restaurants.

Murphy said that while all will agree that the economy is not what everyone would want, getting business is still up to the individual dealer and if he puts in the effort he "can make his own business."

In Kingston, he added, there are dealerships for all the major competition for his lines. Yet, most of the Lynx models sold were to customers from his community and some from the fringe areas.

He now has 80 cars on order and is waiting for shipment.

Murphy is continuing the basic sales program with a slight modification and calls it the "Unbelieveable Package" though the same features of the promotion are still in effect.

Murphy also believes in advertising and said that he usually advertises in the newspaper four times a week.

This is combined with radio, though he does this in spurts because he finds it a more effective approach. For three to four days, he will run 30 to 40 radio spots then stop for two weeks.

Murphy sees the consumer swing towards basic transportation continuing, and he believes the public is drawn to it because of price. His own experience is that cars in the $9,000 to $11,000 range are soft while those models above and the basic transportation types are selling well.

Riggio opens its doors

Anthony J. Riggio, center, signs a franchise agreement for his new dealership, Tony Riggio Chevrolet-Olds, Inc., Pacific, Mo., with J. L. Branch, left, St. Louis Chevrolet zone manager, and J. J. Chrz, assistant zone manager, witnessing. The dealership was formerly Bill Wiest Chevrolet-Oldsmobile, Inc.

Hastings tool catalog

HASTINGS, Mich. — Hastings Mfg. Co. has released its 1982 catalog on machine shop, engine service, tuneup and special-use tools, including new items for 1982.

Cars down 28 pct., trucks dip 37 pct.

Canadian deliveries slide for fourth month

Sales of North American cars and trucks in Canada in April were down for the fourth consecutive month this year, with car sales off 28.66 percent, trucks down 37.70 percent and combined sales 31.16 percent away from April, 1981, levels.

New-car sales for the month totaled 52,447 compared with 73,521 a year ago. Sales were, however, highest for any month to date this year and the 28.66-percent decline from 1981 was the smallest drop on a year-to-year basis.

Truck sales by the North American-based companies—including their captive imports—totaled 17,502, down 37.70 percent from 28,093 in 1981.

Combined car and truck sales numbered 69,949 in April, down 31.16 percent from 101,614 a year earlier.

During April, General Motors reported a new-car sales drop of 39.42 percent, slumping to 27,429 from 45,280 last year. Ford sales slipped 18.97 percent, to 12,715 from 15,696. Chrysler dealers retailed 8,814 units, down 7.10 percent from 9,488.

Volvo sales were up 16.35 percent, to 861 from 740, and American Motors sales totaled 2,624, up 13.25 percent from 2,317. AMC sales include Renault models for both years; information on North American-only units is not available.

GM earned 52.30 percent of the passenger-car market in April, down from 61.59 percent a year earlier. Ford's share was up to 24.25 percent from 21.35 percent; Chrysler climbed to 16.81 percent from 12.90 percent; AMC was up to 5.00 percent from 3.15 percent, and Volvo expanded to 1.64 percent from 1.01 percent.

Year-to-date car sales totaled 158,227 through the end of April, down 33.49 percent from 237,911 last year.

Truck sales of 17,502 were the highest for any month so far this year, but their 37.70-percent decline was the second biggest drop. In January truck sales plunged 40.51 percent.

GM sales were down 39.71 percent, to 9,130 from 15,143 in 1981. Ford was off 37.81 percent, to 5,794 from 9,316. Chrysler retailed 2,426 new trucks in April, down 24.21 percent from 3,201, and AMC Jeep sales of 152 were down 64.90 percent from 433.

GM's share of the truck market was 52.17 percent, down from 53.90 percent last year. Ford cornered 33.10 percent, down slightly from 33.16 percent. Chrysler moved up to 13.86 percent from 11.40 percent, and AMC won just 0.87 percent, down from 1.54 percent.

Year-to-date truck sales of 58,448 were down 35.34 percent from 90,394 in 1981.

Cleveland Chevrolet dealer didn't heed Greeley's advice

CLEVELAND. — Jim Brown came East from San Diego to give a new twist to Horace Greeley's "Go West, young man."

Brown heads Classic Chevrolet which, for February, posted figures of $78,000 in body shop income (47 stalls), $175,000 in parts sales and $135,000 for the mechanical department.

Those figures are part of the reason why the 2½-year-old dealership with 90 employes recently received Chevrolet's "Quality Award." It was presented by Tom Shaver, the division's Cleveland zone manager.

Despite today's difficult market, Brown expects sales to increase, and he has begun a two-phase expansion program.

The first step is the addition of a 10-stall service unit at a cost of $180,000. The second move will be to increase truck sales potential with an enlarged sales area.

Brown does not believe in miracles or an "it will happen" philosophy to realize growth. Instead, he cites team operation, hard work, follow-up service as the keystones of his growth pattern.

Brown is a graduate of nearby Kent State University, thus he knew this area's potential. When a dealership location became available, he left San Diego "and its climate" to come to the Cleveland area.

"My first consideration was location," he said. "I wanted to be near a freeway with excellent visibility. A dealership needs to be seen. High traffic count is vital."

He added that personnel, hard work and service will make the difference.

Hertz promotes Werbe

NEW YORK. — Thomas C. Werbe has been appointed staff vice president, market research and planning, for Hertz Corp. He formerly was director of market research and planning.

Award from Chevrolet

Jim Brown, president of Classic Chevrolet, Cleveland, receives an award from Tom Shaver, Chevrolet's Cleveland zone manager.

Total is 135,405; six plants work Saturday

Overtime boosts week's car output

By Patricia Hoffman
Staff Writer

Saturday overtime schedules at six U. S. assembly points helped boost last week's auto production above the previous week's total, but output remained below that of the comparable 1981 period. Last week's production was the highest of 1982 for the second week in a row.

The auto makers targeted production last week at 135,405 units, up 6.0 percent from 127,746 the previous week, but down 16.67 percent from 162,485 in last year's comparable week.

So far this year, the car manufacturers have finished 1,962,379 units, down 28.11 percent from 2,729,857 in last year's year-to-date.

Breakdown for the week by company was: General Motors', 58.72 percent; Ford Motor, 25.94 percent; Chrysler Corp., 11.89 percent; Volkswagen of America, 2.34 percent; American Motors', 1.03 percent and Checker Motors, 0.08 percent.

GM's Janesville facility remained idle last week for model changeover.

Six days of production were scheduled last week at three GM and three Ford facilities. There were: GM's Doraville, Tarrytown and Van Nuys points, and Ford's Kansas City, San Jose and Wayne plants.

AMC has scheduled vacation downtime at it's Kenosha plant beginning May 31. The facility will be idled two weeks with production of the new Alliance slated to begin when the plant returns June 14.

All other car facilities were reported working last week.

Truck production exceeds 52,000; overtime helps

The domestic truck makers last week upped production 6.0 percent over the previous week's total as only one line at General Motors' Pontiac truck facility remained idle and overtime was scheduled at six assembly plants.

Last week, the makers targeted output at 52,526 units, up from 49,552 the previous week and a 40.20 percent gain over 37,464 units in the comparable 1981 week.

So far this year, the truck manufacturers have finished 782,626 units, up 9.41 percent from 715,345 in last year's year-to-date. Last week's total was the highest of 1982.

GM's Pontiac (coach) line remained idle last week, for inventory control. Assembly of coaches, originally scheduled to resume this month, will remain down until sometime in June.

Daily overtime continued last week at GM's St. Louis facility.

Also operating on overtime schedules was Chrysler Corp.'s Warren point. The plant worked a daily nine-hour shift.

Three GM facilities and one Ford plant operated six days last week. GM's Janesville, Moraine and the S-truck line at Pontiac worked Saturday, as did the van line at Ford's Lorain point.

Operations resumed last week at Chrysler's Belvidere plant. The facility was idled May 3 for inventory control.

American Motors' Toledo truck plant has slated two weeks of vacation time next month. The facility will be idle the weeks of June 7 and June 14.

EPA issues new standard for battery-plant emissions

WASHINGTON. — The EPA has issued a final rule limiting atmospheric emissions from new, modified and reconstructed lead-acid battery plants, effective immediately.

Those facilities are required to control lead emissions within specified limits for lead oxide production, grid casting, paste mixing, three-process operation, lead reclamation and other lead-emitting operations.

The reductions can be achieved through the use of the best demonstrated system of continuous emission reduction, EPA said.

A new reference method for determining compliance with lead standards also was issued.

EPA estimated that the average incremental costs associated with the new standard will be about 30 cents per battery, or about 1.6 percent of the wholesale price of a battery.

EPA said the total capital costs of installing the necessary emissions control equipment will be about $8.2 million for the first five years, with the total annual cost of operating the equipment about $3.9 million in the fifth year.

New and modified lead-acid battery facilities would emit about 104 tons of lead in the atmosphere in the fifth year, EPA said, if their emissions were controlled only according to the current state requirements.

The new standard, the agency added, will reduce potential lead emissions to about 3.4 tons in the fifth year.

Exempted from the standard are battery manufacturers whose daily capacity for producing batteries represents a lead content of under 6.5 tons.

As originally written, the standard exempted manufacturers with the capacity to produce fewer than 500 batteries a day. Several persons commenting on the standard, however, made the point that the size of batteries produced is a more accurate indication of potential lead emissions than the number of batteries produced.

Industrial lead-acid batteries, for instance, account for 7 percent of U. S. lead-acid battery production and can be as much as 50 times larger than automotive batteries.

In the preamble to the standard, EPA said it did not plan to propose standards for sulfuric-acid mist emissions from lead-acid battery manufacture, although this decision may be reconsidered when the standard is reviewed four years from now.

Hurst promotes Grob

WARMINSTER, Pa. — Hurst Performance, Inc. has appointed David W. Grob vice president, sales and marketing. He formerly was Automotive Division marketing manager.

Holiday downtime at GM reduces Canadian output

Holiday downtime last Friday at General Motors' car and truck facilities pulled Canadian production below the previous week's total, but output remained above that of the comparable 1981 period.

Auto production last week was targeted at 19,999 units, down 5.30 percent from 21,118 the previous week, but 20.39 percent ahead of the 16,612 built in the comparable week last year.

So far this year, the makers have finished 354,325 cars, up 2.90 percent from 344,323 in the comparable 1981 period.

Last week's truck output was slated at 11,136 units, down 10.95 percent from 12,505 the previous week, but up 5.64 percent from 10,541 in last year's week.

Year-to-date, the truck manufacturers have assembled 209,851 units, down 7.21 percent from 226,145 in last year's comparable period.

Downtime was scheduled last Friday at all GM car and truck points as part of the Victoria Day holiday which will be observed today (May 24) by all Canadian assembly plants.

Daily overtime continued last week at Ford Motor's St. Thomas plant. The plant has been operating on two nine-hour shifts Monday through Thursday with regular assembly resuming on Friday. The overtime schedule has been in effect since April 12.

Chrysler Corp.'s Windsor van facility will work next Saturday (May 29).

Plant closed; DeLorean says funds coming

By Edward Lapham and Richard Feast

The wolves were at John DeLorean's door last week as the entrepreneur struggled to keep his sports-car enterprise alive following announcement that the West Belfast assembly plant would be closed today (May 31).

The announcement was made by the two receivers who have controlled the plant since the car building unit, DeLorean Motor Cars, Ltd., went into voluntary receivership Feb. 19.

In the U. S., John DeLorean told AUTOMOTIVE NEWS late last week he still had hopes of salvaging the enterprise with additional financing totaling more than $40 million.

DeLorean once again said he will announce the terms of the current financial restructuring this week. He declined to identify any of the parties involved.

However, he did tell AUTOMOTIVE NEWS the restructuring involves a $12 million cash investment in the company "for a substantial share of the stock, maybe more than 50 percent," plus commitments for $25 million in export financing.

In addition, DeLorean said a British company will likely make a strictly financial deal with the U.K. subsidiary which will bring the Belfast unit "between $5 and $8 million."

While many sources in the U.K. viewed the plant closing as a very ominous sign, John DeLorean remained hopeful. "It's really like an inventory adjustment closing for U. S. plants," he said. There are currently about 1,000 DeLorean cars in inventory in the U.K. waiting for shipment and more than 3,000 in the U. S. in company and dealer inventories.

An official at the plant in Belfast told AUTOMOTIVE NEWS that a three-month shutdown might work wonders for the inventory situation. "With just a little bit of good news, I think we could really start selling some cars," he said.

• In addition to the arrangements John DeLorean is trying to make in the U. S., Sir Kenneth Cork, one of the receivers, held out some hope for a rescue by a U.K. consortium. He declined to name the parties involved but said, "It is from people I know and understand."

However, he added that he was "not too optimistic."

The decision to suspend production at the plant came three months after appointment of the receivers. Said one insider, "I

Olds dealers get own ragtop

Not content to see Buick dealers walking away with all the GM convertible sales, Oldsmobile dealers in the Chicago and New York areas contracted with Cincinnati's Hess & Eisenhardt Co. to put a ragtop on the sister car to the Buick Riviera. A company spokesman said about 40 of the new convertible Toronados have already been shipped. They retail in the range of $27,000.

UAW tries to organize GM white-collar staff

By Marjorie Sorge and Edward Lapham

The UAW is moving to organize white-collar workers at eight General Motors plants.

Campaigns to organize salaried workers are gaining speed at Lordstown, Flint, Saginaw, Pontiac, Lansing, Grand Rapids, Warren (Mich.) and St. Louis. So, far the drive in Lordstown is leading the way. There are about 100,000 salaried workers at GM eligible for union representation.

The UAW has been trying to make inroads into the salaried workforce for years without much success. But the recession and the resulting massive layoffs may have changed that.

UAW Vice President Owen Bieber, director of the union's GM department, told AUTOMOTIVE NEWS two years ago that the union's shrinking membership, brought about by the heavy layoffs, would cause the union to step up its organizing efforts among the salaried workers. That effort has been on the back burner when compared with blue-collar organizing drives.

On May 19, the UAW asked the National Labor Relations Board to schedule an election in Lordstown to see if the workers want to be organized. More than half of the clerical workers there have signed cards indicating their desire to be represented by the UAW.

According to a UAW spokesman, the drive in Flint is gaining momentum. He said a local salaried employe, William Hopper, is the major force behind the drive.

Hopper held a meeting in Flint May 17 which was attended by more than 200 persons. According to the UAW spokesman, they represented workers in at least three plants and included some supervisory personnel. Supervisory workers cannot be organized under the National Labor Relations Act.

But, according to Norm Bissell, UAW organizer, those workers are trying to form an association and the union is giving them some advice.

Hopper has scheduled a mass rally for all GM salaried workers nationwide at the IMA Sports Arena in Flint on June 26. Bissell said the UAW expects between 5,000 and 6,000 persons to participate.

Meetings were held in Pontiac last Tuesday (May 25) and in Saginaw May 27. A meeting is scheduled for June 6 in Lansing. Others will be forthcoming in Grand Rapids, Warren and St. Louis

"The UAW definitely is will-

Detroit Grand Prix —big-time racing attracts big money

By Joseph Bohn and Kathleen Hamilton

Domestic-car companies' advertising dollars are bringing the Grand Prix to Detroit this weekend, even though foreigners will be getting the glory on the track.

Unlike the other two Grand Prix races held in the U. S.—the Toyota Long Beach and Datsun Las Vegas races—no car maker has stepped forward with the nearly half-million dollars a year and a long-term commitment that it would take to get its name tied to the event.

So, it remains the Detroit Renaissance Grand Prix, named for the nonprofit, corporate-funded booster group here. And 32 European-built cars will vie for 26 starting posts. It looks as though only one will be driven by an American, Eddie Cheever, and he lives in Europe.

Even two of the three support races will shine the light on Europe. There will be an invitational Renault Koni Cup, in which 35 qualifying Le Cars will race for 25 miles and $12,500.

Another 35 starters will compete for a $20,000 purse in the Robert Bosch-VW Super Vee Championship race. Super Vees look like small Formula 1 cars and are powered by modified 1.6-liter Volkswagen engines — built in Germany, Mexico or Brazil.

The third supporting event is a vintage-car race, in which 30 open-wheel racers that predate 1960 will compete for fun. There is no purse.

• Domestic car makers are playing a major role behind the scenes of this first Detroit Grand Prix. They've also picked up well over half a million dollars of TV commercials for the event. It will air on ABC Sunday (June 6) beginning at 2 p.m.

Detroit Renaissance officials believe that next year, when leadtime is longer and perhaps sales are better, Detroit's car makers will play an even bigger role.

Domestic makers declined to supply identical cars for a celebrity warm-up race similar to the one run at Long Beach with Toyota Celicas.

Domestic makers also turned down opportunities to supply an official track car — the Grand Prix equivalent of a pace car—that dealers could sell in slightly different form.

Detroit makers decided there

All-new model to embody latest technology

'83 Corvette to be GM showpiece

By Jim Plegue
Staff Writer

Chevrolet's redesigned Corvette, the first all-new version of the sports car in more than 15 years, is a technological showpiece for the division that may debut as early as January at a special West Coast preview.

Although national introduction is tentatively planned for spring (probably March), Chevrolet is said to be preparing an earlier preview in Southern California, presumably to stir initial interest among car-happy Californians, a source speculated.

As those introduction dates draw nearer, more technical and performance information about the long-awaited Corvette is leaking out of Chevrolet.

One new nugget of information: An insider said Chevrolet engineers have recorded a phenomenal 0.95 Gs during skid-pad testing (a measure of cornering performance) with a 1983 Corvette prototype shod with 255VR16 "unidirectional" tires.

• Performance versions of the new-for-'82 F-body (Camaro Z-28 and Firebird Trans Am) models which are considered good cornering cars, have logged skid-pad results of 0.83. Although the 0.95 recorded in the prototype Corvette may not hold up in production versions, it does give some idea of the handling target that Chevrolet is aiming for with the new car.

The unidirectional tires, which have specific tread patterns for each side of the car, are made by Goodyear and will be optional on the 1983 Corvette. It will be the first production-car usage of those tires.

Goodyear Eagle GT tires will be standard on the '83 Corvette. Tires will be mounted on new cast aluminum-alloy wheels with a flat-polished center surrounded by a turbine-fan (like a pinwheel) design.

The new Corvette will be powered by the same 350-CID (5.7-liter) V-8 "crossfire" engine with throttle-body fuel-injection that is standard on the '82 model.

Two transmissions will be

Chrysler challenge

Chrysler is taking its cars and competitive makes to 600 locations this summer for direct "hands-on" consumer comparisons. The $2 million merchandising event, handled by Ross Roy, Detroit, will be supported with heavy local advertising.

Comparison shopping is urged by Chrysler

By Joseph Bohn
Marketing Editor

DETROIT. — Chrysler will be asking car prospects to compare its products with the competition's this summer in one of its most aggressive merchandising programs yet.

If the program proves as successful as anticipated, it will provide the basis for Chrysler's fall cleanup campaign.

More than five million people are expected to perform "hands-on" comparisons of Chrysler and directly competing vehicles during the next 90 days.

From June 1 through August, Dodge and Chrysler-Plymouth teams around the country will set up in high-traffic pedestrian areas, inviting passers-by to rate their cars on comfort, convenience and styling.

Dodge calls it "The Dodge Driving Machine Challenge" (a reference to its ad theme), and at Chrysler-Plymouth it will be known as the "Chrysler-Plymouth Value Showdown."

The $2 million promotional event is being coordinated by Ross Roy, Detroit, in conjunction with Chrysler.

Aside from merchandising costs, the event will be supported by local association advertising. No national ads will be run.

There will be five-person teams, one for C-P and one for Dodge, in each of the 20 zones. Four of the team members will

U. S.-car sales climb 2nd straight period

By Jenny L. King
Staff Writer

Mid-May domestic new-car sales made it two in a row: That is, two consecutive periods in which a sales increase was reported. It was the first 20-day spree this year and the first time that has happened since Sept. 1-20, 1981.

Hard work on the part of dealers and their staffs produced the second-best sales total so far this year and the third-highest daily-selling-rate average as the U. S. industry tried once again to shake loose from the tight grip of a three-year recession.

The five major U. S. auto makers retailed 215,381 new cars during the May 11-20 period, up 12.31 percent over 191,778 recorded a year earlier and only one step below the 1982 top of 236,959 reached the third period in March.

The mid-May daily selling rate was 23,931, up 12.31 percent from 21,309 in 1981, and the third best of this year after 26,329 March 21-31, and 24,579 February 21-28.

Year-to-date sales totaled 2,274,013, down 12.31 percent from 2,594,225 through May 20, 1981.

General Motors and Chrysler Corp. posted sales gains during the period, while Ford Motor Co. narrowly missed its year-ago level. Estimated sales of Volkswagen of America Rabbits and American Motors passenger cars were down.

• GM sales climbed 23.03 percent, to 144,032 from 117,074 last year. It was GM's best 10-day total this year. Chrysler sales

U. S. bid to drop action against Mercedes-Benz touches off debate

Parts case raises storm of issues

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The Justice Department is finding that dismissing its three-year-old antitrust case against Mercedes-Benz of North America may not be as easy as it sounds.

At presstime, in a Federal court in California, lawyers for the government, MBNA, several public interest groups and for plaintiffs who are suing the German-owned importer are arguing whether the government can dismiss its action without allowing public notice and comment and without fuller explanation of its reasons.

The Mercedes case bears some similarities to the IBM and IT&T cases — also dismissed by the government—and the whole issue has become the center of a flurry of legal concern and activity.

The hearing on the applicability of the Antitrust Procedures Act (the 1974 Tunney Act) was called by Federal District Judge Marilyn Petal in response to the Justice Department's dismissal without prejudice of a civil case against MBNA, wholly owned U. S. distributor of Mercedes-Benz cars in the U. S. The 1979 government case charged that MBNA conditioned its sale of cars to its franchised dealers on their purchase of replacement parts from MBNA — an illegal tying arrangement.

Current Antitrust Chief William F. Baxter announced last March that "tying" in the luxury car market did not have anti-competitive consequences and that even if the government were to win its case, Mercedes-Benz could achieve the same results by merely raising the prices of its cars and lowering its parts prices.

In other words, even though the Mercedes dealer market for repair parts after warranty might be opened to independent aftermarket suppliers and distributors, the factory could decide to exclude them by using a different method — price undercutting.

In August, 1979, the Justice Department charged MBNA under the Sherman Act with a per se antitrust violation of "tying" between cars and repair parts in the franchise agreement between MBNA and each of its dealers. After discovery, both filed motions for summary judgments.

Last May, the federal district court in San Francisco denied both moves, but said that two facts of major importance to the government's case were not really controversial. One was that Mercedes cars and replacement parts were tied in terms of the franchise. The other was that the tie-in affects a not insubstantial amount of interstate commerce.

This left only one point of the government's case not addressed — that MBNA had enough economic leverage in the replacement parts market to restrain competition in that area. If the government proved that, then the burden of showing there was enough business justification (including quality) would shift to MBNA.

What happens in the Mercedes case has broad ramifications for the industry and considerable philosophic interest in legal circles. It is linked in issues as well as theory with the IBM case which the Justice Department has also dismissed. It is being challenged by a New Jersey district judge. The MBNA case is linked as well with the AT&T dismissal, which involved changing of an early consent decree, and with the auto industry "smog conspiracy," also in a California district court.

Because a consent decree was involved in the former, the Justice Department has allowed the use of the Tunney Act procedures (although it says it did not need to). In the "smog conspiracy" case, those same procedures — public comment and publication of a competitive impact statement — were forced on the government by the decision made by California federal Judge Jesse Curtis in response to a motion to intervene by the Center for Auto Safety.

As a result of the IBM and AT&T dismissals, Senator Arlen Specter, Pennsylvania Republican and Rep. Peter Rodino, New Jersey Democrat,

New-car registrations lowest in 19 years

By Jenny L. King
Staff Writer

Total U. S. new-car registrations plunged in March to their lowest level since 1963 and were down 26.30 percent from year-ago March standings. They were up, however, from February and January of this year, according to figures compiled by R. L. Polk & Co.

Registrations of new domestic and imported cars numbered 625,694 in March, down 26.30 percent from 848,967 the preceding year and worst since the 624,158 recorded 19 years ago in 1963. March figures were up 14.65 percent over 545,746 tallied in February and up 22.87 percent from January's 509,189.

Of the March total, 175,575 were imported cars, representing a record 28.06 percent. A year earlier, imports took 26.59 percent of the market based on 225,733 units. This year's total was down 22.22 percent.

Domestic registrations of 450,119 were down 27.78 percent from 623,234 recorded in March, 1981, but were up 17.85 percent from 381,942 in February, 1982.

For the first three months of 1982, new-car registrations totaled 1,680,629, down 22.21 percent from 2,160,499 in 1981. The domestic first-quarter figure was 1,182,356, down 24.28 percent from 1,560,449.

Six-millionth Opel Kadett

Six-millionth Opel Kadett rolled off the General Motors Continental assembly line in Antwerp, Belgium. The Antwerp plant turns out about 300,000 Kadetts a year.

Antwerp plant assembles six millionth Opel Kadett

ANTWERP, Belgium. — Six million Opel Kadetts have been built since 1962 and the six millionth came off the assembly line at the General Motors Continental Number 2 assembly plant here recently.

A few weeks earlier, the one-millionth front-wheel-drive Opel Kadett had been assembled at the Opel plant in Bochum, West Germany.

The Antwerp Number 1 assembly plant is unique in that it assembles on the same line and in a mixed batch LHD and RHD front-wheel-drive Opel Asconas and rear-wheel-drive Opel Mantas.

General Motors Continental employs 12,000 workers and white-collar staff, including those at the distribution center for GM cars in the Benelux countries.

Domestics down 27 pct. for March; imports dip 22 pct.

Registrations drop to 19-year low

Continued from Page 3

imports and miscellaneous domestics increased their shares of the total this March compared with year-ago standings, as American Motors, Chrysler Corp. and General Motors gave ground.

Ford was up 0.94 percentage points, to 17.51 percent from 16.57 percent. Imports climbed to 28.06 percent from 26.59 percent, a difference of 1.47 percentage points, and miscellaneous domestics were up to 0.04 percent from 0.02 percent of the market.

GM dropped back to 44.28 percent from 46.19 percent; Chrysler slipped to 8.82 percent from 9.18 percent, and AMC was off 0.16 percentage points, to 1.29 percent from 1.45 percent.

• Excluding imports, domestic-only registrations in March were divided this way: GM, 61.55 percent; Ford, 24.34 percent; Chrysler, 12.26 percent; AMC, 1.80 percent, and 0.05 percent for miscellaneous domestics.

A year earlier, domestic-only registrations were divided as follows: GM, 62.92 percent; Ford, 22.57 percent; Chrysler, 12.50 percent; AMC, 1.98 percent, and miscellaneous, 0.03 percent.

By size segments, subcompacts, standards, luxury models and imports increased their market shares compared with a year earlier, while compacts dropped dramatically, and intermediates were down as well.

Imports accounted for the largest slice of the pie, at 28.06 percent, up from 26.59 percent. U. S. subcompacts were up to 17.78 percent from 15.68 percent; standards climbed to 9.06 percent from 8.03 percent, and luxury models were up to 4.78 percent from 3.93 percent.

Compacts dropped to 20.18 percent from 23.90 percent, and intermediates were down to 20.14 percent from 21.87 percent.

Registrations by size class in March were: Subcompacts, 111,224; compacts, 126,233; intermediates, 126,032; standards, 56,710; luxuries, 29,920, and imports, 175,575.

Silver award

Oldsmobile Division presented a 25-year dealer plaque to Donald M. Page, right, president, Riverton Motor Co., Riverton, Utah. Representing Oldsmobile is Charles J. Bretz, Denver zone manager.

McAlpin saluted

Pontiac dealer W. E. McAlpin, McAlpin Motors, Inc., Red Oak, Ia., is presented with his 25-year dealer plaque by Kenneth S. Dady, Pontiac Midwest zone manager.

Congratulations!

Paul Hudiburg, right, dealer/operator, Hudiburg Chevrolet, Inc., Midwest City, Okla., receives his quarter-century award plaque from R. X. Sarvis, Oklahoma City zone manager.

McKinley reaches 25

Avon Motor Sales owner William C. McKinley, left, Avon, Ill., is presented with his silver anniversary plaque by James F. McDonald, Peoria zone manager for Chevrolet.

Auto makers worked to get Grand Prix in Detroit

Big-time racing draws big bucks

Continued from Page 1

wasn't enough time to do either promotion properly this year, and money was short, too, Grand Prix sources said.

But a turbocharged specially equipped Mustang will lead the Formula 1 cars around a pre-race lap. All the domestic companies, including Fruehauf Corp., are donating support vehicles and safety equipment.

Detroit's depressed economy had many Grand Prix watchers wondering whether this conservative spending approach would show up in ticket sales, as well.

But sales are running ahead of projections.

With two weeks left until the green flag, a Detroit Renaissance official reported 40 percent of the grandstand seats—priced at $35 and $65—had already been sold. That represents $1 million. Breakeven point for the race is 65,000 viewers on race day.

• Despite their conspicuous absence in sponsorship roles, it was the domestic makers who actually were responsible for getting the Grand Prix here in the first place.

Obtaining international television coverage was particularly important when Detroit was negotiating to get the race. It wanted to trade away any money it could get from sponsors to FOCA (Formula One Constructors Assn.) in exchange for an agreement to bring the cars to town without an up-front payment.

ABC was at first reluctant to televise the 2½-hour race — especially since it followed by one week the Indianapolis 500, which ABC also televises in total.

But Detroit Renaissance, Inc., has the heads of the Big Four and Detroit's major automotive suppliers on its board. It guaranteed ABC that all of its commercial slots would be filled.

So ABC agreed to televise the race, and FOCA President Bernie Ecclestone was able to find five sponsors — all he says he wants — whose signs will go up along the 2.59-mile course.

Besides their considerable advertising clout, employes of all five U. S. auto companies will help staff the race.

In addition, both General Motors and Ford Motor Co. are major financial contributors to Detroit Renaissance. It will have to pick up the cost of whatever isn't covered by revenue from TV rights, ticket sales, concessions and programs. The race is expected to cost $3.5 million, including a purse of $800,000 to $1 million.

Domestics are also taking the lion's share of ABC advertising for the race, turning it into a hometown advertising vehicle. Auto ads will account for more than half the commercials for the Grand Prix.

Some 18 domestic-car-company ads will air, according to an AUTOMOTIVE NEWS survey, with a 30-second spot going for around $31,000. Companies also are referencing the Grand Prix in buff book ads, along with running print in the Grand Prix racing program schedule.

On TV, the Grand Prix is expected to get a 6.0 rating, worth about 7.5 million domestic viewers.

Examples of Detroit's ad involvement include:

Ford Division: Two 30-second spots feature the 5.0-liter Mustang under the theme, "The Boss is Back." The commercials show Mustang out-accelerating Camaro and Firebird in the desert.

Ford also has 34 outdoor posters around Detroit, a spread in the Grand Prix souvenir program, plus spreads in several buff books which include references to the Grand Prix.

"We look at the Detroit Grand Prix as a kind of special event, directed to the buff audiences," said Robert Gillooly, national ad manager, Ford Division.

Lincoln-Mercury: The division will have two spots, one featuring Capri under the headline "White Lightning," aimed at the performance audience. Another commercial for Lynx is a regular product ad, according to John Vanderzee, ad manager for L-M.

Chrysler Corp: There will be six spots. One features Horizon versus Chevette. Another, entitled "Only Chrysler," features LeBaron and the extended warranty/free maintenance offer.

A Charger commercial (to be run twice) uses the theme, "Charger unchallenged" to talk about performance. A "Rampage dialog" commercial features it operating like a truck. A final ad features Charger and Rampage together, one the sporty car and the other the sporty truck.

Chrysler also bought an "100 showing" of outdoor billboards around Detroit and has a variety of merchandising tie-in events, such as a free jazz concert, Dodge Five-Mile run, etc.

American Motors: There'll be two TV spots on Renault Fuego. One touts the non-turbo Fuego under a "racy" headline, while the other talks about "The civilized turbo." Both hearken to Renault's Grand Prix heritage.

AMC also has special ads in a buff book and in the Grand Prix racing program. It will have ads in special Grand Prix sections in Detroit's two major daily papers (local TV insert spots were sold out), plus TV spots on pre-race Grand Prix shows nationally.

Also, it will stage promotional tie-ins, such as bringing all Michigan AMC dealers to Detroit for the race and a get-together at a special hospitality tent.

Cadillac: The division will run a couple of spots featuring the Eldorado touring coupe, under the theme "A different breed of Cadillac."

Ads talk about the spirited handling, precise cornering and other performance-oriented characteristics of this luxury model, noted Frank Cadicamo, assistant national director of merchandising.

Cadillac also has bought space in the official Grand Prix catalog of racing events.

Pontiac and Oldsmobile: These two GM divisions didn't buy any TV, but have ads in the Grand Prix racing program schedule.

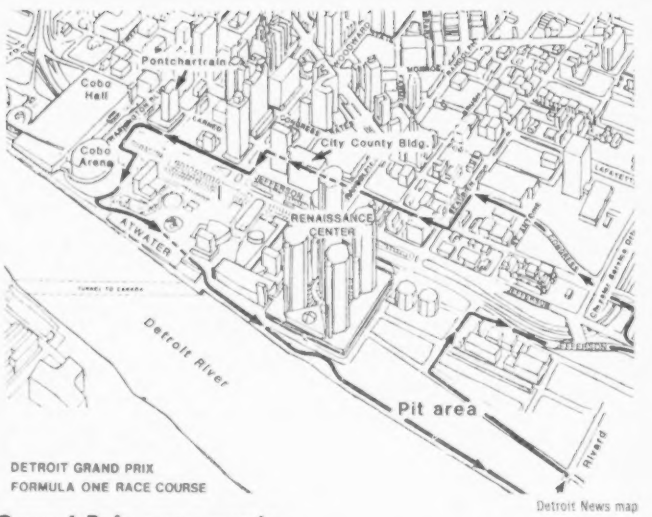
Buick: The division has two spots. Riviera and Regal coupes will be featured. A Riviera commercial, entitled "The school of performing arts," features that car on the road, with a musical background. It is a kind of mood commercial.

The Regal commercial, entitled "Bicycle," features racing bikes to make a statement about Regal's aerodynamics.

Chevrolet: The division has two 30-second spots on TV, featuring the Camaro, with primary emphasis on the Z-28. Ads will use "The Shadow" (its only competition), or a variation of it, as the theme.

Chevrolet also has a four-page unit in the Grand Prix racing program.

Volkswagen of America: VWoA does not have any TV advertising on Grand Prix and has lately shifted more dollars from TV to newspaper in stressing the price/value ads for Rabbit.



Detroit News map

Grand Prix race route

This is the course race cars will follow during a speed-filled weekend in downtown Detroit. Formula One cars will be whipped over the streets June 6 at speeds that will vary almost immediately from the 200-MPH range down to 25 MPH as sharp left and right turns are made.

European-style racing boosts U.S. Motor City

By Roger Rowand

DETROIT. — If any city and any industry needed a recharge, it is this city and the industry headquartered here. Surprisingly, a much-needed boost is coming from an unexpected direction—from European style auto racing.

The Detroit Grand Prix is scheduled for June 6. It is expected to put this town back in the automotive forefront with elan as some 126 million people in 34 countries watch the event via satellite-TV transmission.

Unlike other big happenings that have sparked this depressed community in the recent past—the 1980 Republican National Convention and the 1982 Super Bowl for example — the grand prix street race is a total global activity with intense worldwide interest.

There will be 15 Formula One grand prix races in 1982 with three in this country, in Long Beach, Las Vegas and Detroit.

The 181.3-mile, 70-lap race here will be the first through streets lined with tall office buildings, hotels and public structures. The course includes the canyons of downtown Detroit, the Renaissance Center and a stretch of riverfront.

Cars will make a sharp U-turn to the left than a quick right-angle turn to the right and then to the left on streets the AUTOMOTIVE NEWS headquarters is on.

Other such races are run in rural locations or through the streets of smaller towns. Noise, always a crowd-pleasing part of motor racing, will be a much-talked-about facet of the run for the money here.

The big-buck international glamor and excitement that permeate grand prix racing seemed to take Detroit gradually and by surprise. Enthusiasm was slow to build outside the relatively thin ranks of Formula One regulars.

But once it caught fire, the city's traditional optimism and love of sports exploded with all their historic strength.

Detroit long has been known as a sports town.

World popularity of grand prix racing has burgeoned in recent years. As race day here approaches, residents are joining the international swing. They've become new followers of Formula One machines with enthusiasm and intensity formerly reserved chiefly for Indy open wheelers, NASCAR Grand National super sedans and, of course, Tigers, Lions, Pistons and Red Wings.

Early estimates of trackside crowd size range between 65,000 and 100,000.

The Formula One street race will cap three days of race activities. Other events include the Robert Bosch/VW Super Vee Championship, a short vintage car race and the Renault Cup race of Renault Le Cars.

The domestic auto makers and their suppliers, while avoiding sponsorship of grand prix races or race cars, are taking advantage of race activities. They are holding parties and helping people important to them enjoy the race-filled weekend.

General Motors is taking advantage of the fact that many members of the international racing press corps will be here. The company is holding a day-long meeting at which it will show its latest developments and give reporters a look into the future.

Other firms are holding parties for the newsgatherers.

One local angle Detroiters leaped at enthusiastically is the fact that most F1 cars are powered by Cosworth Ford engines.

Those are Ford engines converted to racing power plants in England by Cosworth Engines. In a way, therefore, Detroiters have something from close to home to root for.

U.S. car sales increase 2nd 10-day period in row

Continued from Page 3

were up 5.51 percent, to 21,341 from 20,226.

Ford dealers sold 44,748 units, down 0.56 percent from 45,001. Estimated sales for VWoA of 1,660 were down 62.92 percent from 4,477, and estimated AMC sales of 3,600 were down 28.00 percent from 5,000 a year earlier.

GM claimed its biggest share of the domestic market to date this year, a whopping 66.87 percent, up from 61.05 percent in '81. Ford slipped to 20.78 percent from 23.46 percent; Chrysler was down to 9.91 percent from 10.55 percent; VWoA earned only 0.77 percent, down from 2.33 percent, and AMC sales accounted for 1.67 percent, down from 2.61 percent.

All five GM divisions plus Chrysler and Lincoln recorded sales increases during the period. Chrysler more than doubled its numbers, going to 5,847 from 2,365 last year. Lincoln was up 58.90 percent; Chevrolet was up 37.11 percent; Cadillac was up 36.37 percent, thanks to its best sales (8,365) of the calendar year; Buick was up 21.33 percent; Oldsmobile was up 10.70 percent, and Pontiac was up 7.45 percent.

Negative percentages were reported by VWoA, down 62.92 percent; Imperial, down 62.24 percent; AMC, down 28.00 percent; Plymouth, down 13.66 percent; Dodge, down 11.40 percent; Ford, down 3.86 percent and Mercury, down 2.25 percent.

Thomas Estes sentenced on bank fraud charge

DETROIT. — Thomas P. Estes was sentenced to three years in federal prison last week after pleading guilty to one charge of fraud in connection with obtaining $900,000 in bank loans.

Estes, son of former General Motors President Elliott M. Estes, first faced 10 charges of fraud and interstate transportation of money obtained by fraud.

Milestone reached May 25; it was April 22 last year

Two-millionth car is a month late

By Patricia Hoffman
Staff Writer

It's been an unusually slow climb for domestic auto production this year. The two-millionth automobile was assembled last Tuesday (May 25), more than a month later than in 1981.

Production so far this year is 2,093,802 units, down 27.20 percent from 2,875,956 units built through May 30, 1981. Last year, the makers reached the two-million mark on April 22, which was also later than usual.

Year-to-date totals by company are: General Motors, 1,306,432; Ford Motor, 468,534; Chrysler Corp., 252,705; Volkswagen of America, 40,018; American Motors, 24,550, and Checker Motors, 1,563.

Last week, the makers targeted output at 129,739 units, a drop of 5.36 percent from 137,089 the previous week, and down 7.35 percent from 140,027 units in the comparable 1981 week, which included the Memorial Day holiday. This year, the holiday will be observed today (May 31) and all plants will be closed.

Downtime continued last week at GM's Janesville facility. The point, idle since Jan. 18 for model changeover, will return tomorrow, (June 1) with production of the Cadillac Cimarron.

For the second consecutive week, daily overtime was scheduled last week at Chrysler's St. Louis facility. The plant has been operating on a daily nine-hour shift.

Second-shift operations will resume tomorrow at GM's Fairfax and Lansing facilities. Approximately 2,000 workers will be recalled at Fairfax, which builds LeSabre, Caprice and Oldsmobile 88. About 2,200 workers will return at Lansing on Cutlass and Cutlass Supreme.

Also starting tomorrow, GM's Willow Run plant will increase production of Omega and Skylark from 50 to 70 units an hour. About 1,800 workers will be recalled.

AMC's Kenosha point began a two-week shutdown last Friday. The facility, idle for vacation, is slated to return June 15.

Checker Motors announced that its final Checker Cab will be built July 7. The company said the line rate of 20 units a day will continue until production ends. The Kalamazoo facility will remain as a parts plant after final cab assembly.

Light-truck waiver extended for few high-altitude units

WASHINGTON.—EPA is going to extend through 1983 an exemption it now gives for light-duty trucks sold in high-altitude regions.

The exemption applies to truck makers' lowest-power and/or lowest-selling light-duty trucks. The so-called 30 percent exemption allows makers to exempt 30 percent of their projected light-duty truck sales from high altitude standards.

It was instituted in 1982 to address the problems of lead-time and the difficulties and costs of certifying certain low power / high-fuel-economy models. EPA thought at the time the exemption would be needed for only one year.

Ford petitioned the agency to extend the waiver provision. It cited the high cost of developing and certifying high-altitude calibrations for light-truck configurations with very low sales volumes—50-100 units for many vehicle types.

Ford said that without the waiver, it would have to develop 10 new calibrations to certify that 10,000 vehicles would comply with the high altitude proportional tailpipe standards.

That would translate into $2 million for Ford. That would be a particularly large sum to invest because standards change again for the 1984 model year, Ford said.

EPA agreed, and it extended the exemption effective June 21, 1982. It said the change will save the auto industry money so that makers can concentrate on certifying vehicles for the 1984 model year when standards will not differ according to altitude.

Only 5.5 percent of annual light-duty truck sales occur in high-altitude areas; therefore, the exemption will apply to less than 2 percent of the 1983 light-duty truck fleet.

Weisman named

BALTIMORE, Md.—Frederick R. Weisman, owner and president of Mid-Atlantic Toyota Distributors, Inc. has been appointed to the Professional Advisory Council of the College of Business and Management of the University of Maryland.

3 plants down, truck production slips for week

Downtime at three U. S. truck assembly points last week pulled production down 17.76 percent from the previous week, but output was 23.93 percent above that of the comparable 1981 week. The 1981 period included the Memorial Day holiday.

[illegible]t week's truck production was targeted at 43,102 units, down from 52,413 the previous week, but up from 34,780 units built the same week last year.

Year-to-date, the makers have finished 825,615 units, a 10.15 percent gain from 749,561 in the same 1981 period.

The heavy-duty truck and coach lines at General Motors' Pontiac facility were down last week for inventory control.

Also idle last week for inventory adjustment was Volkswagen of America's Westmoreland plant. It is slated to return tomorrow (June 1).

Ford Motor's Louisville point was idle last week due to parts shortage.

For the 13th consecutive week, Chrysler Corp. scheduled daily overtime at it's Warren truck facility. The plant has been working nine-hour shifts.

All U. S. truck facilities are idle today, (May 31) in observance of Memorial Day.

Victoria Day trims output in Canadian plants

Canadian auto makers operated only four days last week due to the Victoria Day Holiday, and production dropped 12.06 percent below the previous week's total. Truck production, aided by Saturday overtime at Chrysler's Windsor truck facility, fell only 4.49 percent.

The auto makers targeted output last week at 17,503 units, down from the 19,904 cars assembled during the five-day previous week, and the total dropped 16.17 percent from 20,880 units built in the comparable 1981 five-day week. (Victoria Day was celebrated the previous week last year.)

So far this year, the car manufacturers have completed 371,733 units, up 2.00 percent from 364,429 at this time in 1981.

The truck makers scheduled 10,562 units last week, down from 11,059 the previous week, and down 17.98 percent from 12,877 in the comparable 1981 week.

Year-to-date, there have been 220,336 trucks assembled, down 7.88 percent from 239,179 last year.

All Canadian car and truck facilities were idle last Monday (May 24), in observance of Victoria Day.

Only Chrysler Corp.'s Windsor truck facility operated five days last week with overtime scheduled Saturday.

Overtime continued last week at Ford Motor's St. Thomas car point. The plant has been operating daily nine-hour shifts since April 2, with normal eight-hour shifts resuming Friday.

Chrysler's Windsor car facility has slated vacation time for two weeks in July. The plant will be idle the weeks of July 19 and July 26.

Starion rising

Mitsubishi slates U. S. fall debut

Mitsubishi's new dealer network in the U. S. will get a fast start with this high-performance, rear-drive turbocharged Starion. Now being marketed in Japan and Europe, the Starion will be introduced in the U. S. this fall. Mitsubishi is positioning the Starion to compete with the Toyota Celica Supra, Datsun 280-ZX and the Porsche 924.

Hot Mitsubishi Starion to debut here in fall

By John Hartley
Staff Correspondent

TOKYO. — Mitsubishi Motors has launched the Starion coupe in Japan. This new rear-drive coupe was first shown at the Geneva Motor Show, and is already on sale in Europe. It will come to the U. S. in the fall.

Different in concept from anything produced by MMC before, the Starion is to be the flagship of the company both in Japan and elsewhere. It is a two-plus-two coupe, built on an underbody with a wheelbase of 95.9 in., and with an overall length of 173 in.

MMC used the Porsche 924 as inspiration in designing this new coupe, which in Japan is powered by the two-liter turbocharged Sirius engine developing 145 HP at 5,500 RPM. The suspension and steering are the same as on the Sigma and Sapporo models — independent by struts all round and recirculating ball steering.

To match the high performance of the Starion—the name is a combination of 'star' and 'Arion'—MMC has modified the suspension and steering. Castor is 5 deg. 20 min., and the recirculating ball steering, which is a bit out of place on a car of this type, has been strengthened. There is also anti-skid braking on the rear wheels only.

The main feature of the Starion is the new body, an aggressively styled coupe with retractable headlamps and a deep inclined chin spoiler beneath the nose which has a front grille that is hardly noticed.

There are very heavy B-posts, and doors with very wide window frames owing to a worthwhile innovation — a seat belt that is mounted in the door instead of in the B-post. The advantage of this design is that the belt does not get in the way of people struggling to get into the limited rear seat space.

MMC hopes to sell 2,500 Starions monthly in Japan, and 1,000 in export markets. This seems a very ambitious target, since in April, Toyota sold 2,200 Soarers, and 2,000 Celicas, while Nissan sold only 1,250 Leopards, and Isuzu 1,200 Piazzas. Clearly, if MMC is to hit its sales target, some of these others must lose sales. Owing to its limited number of dealers, MMC is selling the Starion through its two dealer chains.

In the U. S. the Starion will be sold through MMSA dealers, not Chrysler Corp. It will be equipped with the 2.6-liter turbocharged engine, which should develop over 180 HP with massive torque. Thus the Starion will be a major competitor for the Toyota Celica Supra, Datsun 280ZX and also for the Porsche 924.

Passive restraints revocation set aside by court; NHTSA ordered to reconsider rule

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Three federal appellate court judges have unanimously reversed NHTSA head Ray Peck's revocation of the passive restraint standard and remanded it to the agency for further consideration.

The court ordered NHTSA to report within 30 days on a schedule for answering questions it raised, and said NHTSA could then decide whether to modify standard 208, order it carried out, delay it, suspend it, or even revoke it.

But the thrust of the opinion is that whatever the agency does, it must base its decision on evidence and reasoning, and act according to its Congressional mandate to save lives and reduce injuries.

The decision can be appealed to the full nine-judge U. S. Circuit Court for the District of Columbia and even to the U. S. Supreme Court. But the 76-page opinion by Judge Abner Mikva, a former liberal Democrat Congressman from Illinois, was concurred in by Judge David L. Bazelon and by Judge Hardy T. Edwards, who said only that certain options presented by Mikva may be correct but he would not use them as a basis for the decision.

• The 76-page opinion flayed Peck's decision to rescind the standard as a "paradgm of arbitrary and capricious agency action." It was a clear victory for State Farm and the National Assn. of Independent Insurers, who brought the case and were joined by such public interest groups as the Center for Auto Safety and Public Citizen.

In defending the revocation, the government was joined by the Motor Vehicle Manufacturers Assn. and the Automobile Importers Assn.

Throughout the opinion, the court made it clear that it will not make any decision about the use of passive belts or air bags. Congress can do whatever it wants and so can NHTSA, but the agency must support whatever it does by reasoned evidence relating to technology and its action must be objective, practicable and must meet the needs of safety.

The agency must also consider seriously Congressional statements, actions, and its refusal on three separate occasions to kill the standard or end the use of air bags.

Neither of the two opinions pulls any punches in criticizing Peck's decision-making. Edwards calls it "long on words and short on reasoned decision-making." He adds:

"Indeed, the agency decision appears to be nothing more than a determined effort to achieve a particular result without regard to the facts at hand." Mikva throughout stresses what Peck might have considered but did not.

• The complex history of the passive restraint standard is almost as long as the existence of NHTSA. It started at the request of the first safety chief, Dr. William Haddon Jr., with

GKN to become DeLorean investor

LONDON. — GKN Group, a major British OEM supplier, will be one of the primary investors in the $30 million restructuring of DeLorean Motor Cars, the Belfast car-building operation, AUTOMOTIVE NEWS sources said. GKN is one of DeLorean's major suppliers and is a creditor, as well. Earlier story on Page 2.

Nissan Pulsar to replace Datsun 310

LOS ANGELES. — The Nissan Pulsar will replace the Datsun 310 in the U. S. this fall. Two coupes will be offered. The premium model, Pulsar NX, will use Garrett AiResearch's T-2 turbocharger on its 1.5-liter fuel-injected engine. Nissan hopes to position the Pulsar NX as the lowest-priced turbo car on the U. S. market with a sticker price in the $8,000 range.

Datsun offers cash incentive on trucks

CARSON, Calif. — Datsun launched a June 1 - July 31 "Truck Cash-A-Rama" on all new '81 and '82 trucks sold and delivered during the period. Dealers get $200 per unit for 0-50 percent of their objective, $300 for 51-100 percent and $500 for over 100 percent, nonretroactively. There is also

New-car announcements will again be staggered

'83 intros to begin Sept. 22 and run into '84s

By Joseph Bohn
Marketing Editor

It looks like another fun year for new-model announcements, with plenty of indecision, staggered intros and lots of huffing and puffing on ad strategy.

Along with the "new" '83s this fall, there will be winter, spring and summer models introduced by Detroit which really represents most of what's new.

A couple of next year's contenders, in fact, may come on stream so late as to be the first of the 84s.

But with the slow economic recovery being predicted, time may be on Detroit's side: The later the car, the better its chance of debuting in a robust market.

For the time being, here's how '83 intros shape up.

American Motors: Traditionally the first to announce its fall products, '83 AMC cars, Jeeps and Renaults officially go on sale Sept. 22.

That includes the AMC-Renault Alliance, which will be built in Kenosha.

Meanwhile, AMC is planning to introduce the first of its Jeep XJ models, a slimmer, trimmer Cherokee, next May, to be followed by Wagoneer toward the fall.

Ford Motor Co.: Ford, along with General Motors, is tentatively slating Sept. 23 for introduction of most of its carryover products.

Ford is now looking at Nov. 1 for its Mustang convertible introduction.

And Thunderbird/XR-7, along with Tempo/Topaz (replacements for Fairmont/Zephyr) announcements continue getting stretched out.

It now looks like a late March/early April intro for the '83 Thunderbird/XR-7, with Tempo/Topaz slated to bow in May.

There's a good chance of Ford's new front-drive compacts debuting as '84s, particularly if more engineering delays occur. Generally, companies find it more economical just to certify a car as part of the forthcoming year, '84 in this case, if they arrive late enough.

General Motors: Although it has a Sept. 23 intro date on most lines, GM will hold back official introduction of Camaro and Firebird, as well as the dramatically restyled Corvette, for late 1982/early 1983.

Chrysler Corp.: The company is planning to officially announce its product line Oct. 1. However, a new superstretched E-body, called Dodge 600 and tentatively named Gran LeBaron in the Chrysler version (officials are still debating pos-

Hickman and his Indy car

You can buy a car from this man. He's Datsun dealer Jim Hickman from Atlanta, who drove in his first Indy 500 race May 30 and placed seventh in a field of 33. Hickman was behind the wheel of the March/Cosworth-built Stroh's Firebrewed Special, sponsored by Premium Beverage, Inc., Atlanta. Hickman completed 189 of the 2.5-mile laps

Indy Rookie of Year is a Datsun dealer

By Jenny L. King
Staff Writer

DETROIT. — Jim Hickman was away from his Atlanta Datsun dealership a lot in May. He was spending time in the Indiana town of Speedway preparing to qualify for and drive in the 1982 Indianapolis 500.

Just four days before the big race and shortly after he had qualified at 196 MPH in his March/Cosworth Stroh's Firebrewed Special, Hickman was on the move again, this time up to Michigan where he spoke to members of the Detroit Sports Broadcasters Assn. at the Detroit Press Club.

"Any driver's success depends on the people behind the scene. So much depends on support, financial support," said Hickman, a former Navy pilot whose car was sponsored by Premium Beverage, Inc., Stroh Brewery distributor in Atlanta.

"Without strong financial backing it's difficult to be competitive," said the man who willingly described himself as "aggressive."

Hickman was one of nine rookie drivers at this year's Indy 500. He said he had driven his first Indy-car-type race earlier this year, and that work on the Firebrewed Special was almost last-minute.

"We started six weeks ago," said Hickman. "We're still putting the team together."

Hickman predicted driver

Mustang GT, Capri RS prices raised by $89

DEARBORN.—Ford Motor Co. last week boosted prices $89 on high-performance Mustang and Capri models and raised prices of optional equipment throughout its car lines.

The company said the equipment hikes amounted to $29, or 0.3 percent, per average car.

Destination charges on cars were raised an average of $15.

The $89 increases were applied to the Mustang GT and Capri RS. The GT now is $8,397 and the RS is $8,196. A 5-liter (302-CID) V-8 engine is standard on both models.

The GT is currently accounting for about 25 percent of Mustang sales, and the RS is taking about 15 percent of Capri sales.

The 5-liter engine package, standard on the GT and RS, is also available on other Mustang and Capri models. The price went up $92 last week and now is $544. The package includes (in addition to the engine) handling and suspension items, four-speed manual transmission, Traction-Lok axle and hood scoop.

The engine package is ordered on about 20 percent of Capri models.

The price hikes on optional equipment included a number of popular features. Some examples:

Air conditioning for Ford LTD and Mercury Marquis rose $12 to $707. AM/FM stereo radio for Ford Fairmont Futura and Mercury Zephyr went up $21 to $106 (AM radio is standard equipment). Power steering for Ford Granada and Mercury Cougar climbed $12 to $207. White sidewall tires and Granada and Cougar jumped $6 to $72.

The Ford price hike was the second by a domestic maker in recent weeks. In May, Chrysler Corp. boosted 12 models $59 to $366. Chrysler did not increase optional equipment prices or destination charges.

Advanced electronics concepts unveiled

Ford shows cars that talk—and hear

By Al Fleming
Industry Editor

DEARBORN, Mich. — Ford Motor Co. took the wraps off its advanced electronics products and concepts at the company's new diversified products technical center.

Displays ranged from a new "fourth generation" electronic engine control, called EEC-IV, to a satellite navigation system that pinpoints a location on a map displayed on a cathode ray tube. Using data from a navigation satellite, the system can locate a car with accuracy within 1,000 feet anywhere in the world.

EEC-IV, which Ford calls "the world's most advanced electronic engine-control system," will be used on 1.6-liter electronic fuel injection engines for the 1983 Ford Escort and EXP and Mercury Lynx and LN7.

Other advanced concepts and prototype designs included multi-colored liquid-crystal displays, a voice-recognition system that activates vehicle functions through voice commands, a hand-held transmitter that helps locate a car in a parking lot by blowing the horn and flashing the lights, a micro-cassette tape deck and a remote-control radio that uses a fiber-optic cable for tuning.

Also shown were Ford's "communications concept car," which offers worldwide telephone service without a conventional telephone, and electronic transmission and suspension controls.

Frederick Z. Herr, general manager of Ford's Electrical and Electronics Division, said the news briefing marked a departure from the way Ford's electronics story has been told in the past, because the company wanted to establish its claim as "the leader in electronics among car makers worldwide . . . by taking off the wraps and showing you our electronics future."

According to Jerome G. Rivard, chief engineer for the Electrical and Electronics Division, the company's budget for advanced engineering programs was increased more than 50 percent for 1982.

Major new facility commitments, he said, include an integrated circuit development center to be built near Colorado Springs, to serve Ford's automotive and aerospace needs.

Rivard said the company also is expanding its computer-aided design capabilities at the diversified products technical center.

Among upcoming electronic innovations is a "talking car" option for the redesigned 1983 Ford Thunderbird and Mercury Cougar.

Called "voice alert," it produces reminder messages through synthesized speech. An electronic voice tells the driver if the door is ajar or, when leaving the car, if the key is in the ignition or the headlights are on.

Another new feature — automatic control of display brightness—will be added to the electronic instrument cluster for Thunderbird and Cougar.

An electronic eye measures the amount of light in the passenger compartment through a window beside the speedometer display and maintains brightness of readouts under conditions of bright sunlight, overcast skies and darkness.

Ford's Tripminder computer, currently available on standard-size Ford and Mercury cars, will show up on the '83 Thunderbird

Continued on Page 62, Col. 1

Electronic downsizing at Ford

Jerome G. Rivard, chief engineer for Ford Motor Co.'s Electrical and Electronics Division, compares the size of the company's original Electronic Engine Control (EEC-I), right, with the new fourth-generation EEC-IV. While EEC-I used seven custom large-scale integrated circuits for limited control of engine functions, EEC-IV achieves greatly expanded control with only two devices—a custom high-performance microprocessor and a large-capacity memory — each on a chip less than a quarter-inch square, Ford said.

Dealer shop business gains again in April

By Francis J. Gawronski
Service Editor

Service and parts business in new-car dealerships across the nation continued to increase in April, but the rate of growth declined sharply from that recorded in both March and February.

According to the Automotive News Service Index, shop volume in April amounted to 104.9 percent of the business recorded in the same month of 1981.

In March, service and parts business was 114.6 percent and in February it was 112.2 percent of the volumes registered in the same months the year before.

Although April's service and parts business dipped somewhat, it was the 14th consecutive month in which volume has shown an increase over the year-earlier month.

As in previous months, all indicators used in the Service Index except repair orders written showed increases in April. ROs dipped 11.4 percent, marking the fifth straight monthly decline.

The leading indicator in April was parts and P&A sales, up 14.2 percent, followed by shop parts sales, those used on customer-paid and warranty repairs, up 11.3 percent from the year-ago figures.

Gross profit on all labor, parts, and P&A sales, the most important indicator from the dealers' viewpoint, was up 7.6 percent, while total labor sales, both customer-paid and warranty, were up 0.5 percent. Gross profit was up 15.3 percent in March and 15.1 percent in February.

Figures used in the Service Index are averages compiled from replies on shop business from a cross-section of the nation's new-car dealerships.

For the first four-months of the year, dealers' shop volume amounted to 108.7 percent of the business for the same period a year ago.

The leading indicator for the January-April period was sales of all parts and P&A, up 17.7 percent, while shop parts sales increased 16.3 percent and gross profit climbed 11.9 percent.

Labor sales jumped 6.0 percent in the period, while repair orders written dipped 9.6 percent.

Astro-Lighter totes generators

The Astro-Lighter tractor is a heavy-duty option package developed specifically for the motion-picture industry by GMC Truck & Coach Division. It is designed to carry self-contained, 800-amp turbodiesel-powered generator plants.

Special Astro designed for film-making role

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—GMC Truck & Coach Division has introduced a new tractor equipped with twin generators intended specifically for use in the motion-picture industry.

Called the Astro-Lighter, the new unit is capable of safely and legally carrying two generator plants and pulling a 40-foot trailer.

Joe Coffer, GMC project engineer on the Astro-Lighter program, said the tractor incorporates specific front-axle capacity, frame strength, wheel and tire combinations, wheelbase length, fuel-tank location and capacity, and fifth-wheel placement to accommodate the two Engine & Equipment Co. 800-amp turbodiesel generating plants.

The Astro-Lighter features a 75-inch BBC aluminum-tilt sleeper cab, Rockwell 18,000-pound capacity front axle, Hendrickson 38,000-pound rear suspension with Rockwell SQHD tandem axles and a reinforced frame.

All other regular production GMC options are available, Cof-

Fruehauf, Alcoa see healthy gains in trailer sales

DETROIT. — Fruehauf Corp. and Aluminum Co. of America looked into their separate crystal balls for an idea of how truck trailer sales will be doing in the years ahead.

They saw gains coming in each of the next few years.

Alcoa predicts 1982 sales of 141,000 trailers, while Fruehauf sees a total of 136,000. Alcoa pegs 1985 sales at 205,000 units, while Fruehauf predicts 230,000.

Ownership/operating expenses 198 pct. higher than in '72

'81 truck costs up 15 pct., Hertz says

NEW YORK.—Typical truck-ownership - and - operating costs rose almost 15 percent in 1981, bringing total increases in commercial-vehicle expenses to nearly 198 percent since 1972, Hertz Corp. reported in its yearly estimate of truck outlays.

"The new figures indicate truck operators buying new tractor - trailer combinations in 1981 can expect to spend more than $520,000 to run these units a typical 100,000 annual miles over the next five years of their normal use-life," said a spokesman for the car-and-truck leasing and renting company.

The study noted that because of the key distribution role trucks play in the nation's economy, their continuing, above-inflation expense increases can have a "ripple" effect on prices consumers pay for all goods and services.

The newest cost rise puts the advance in typical truck - fleet per-mile outlays since the Arab oil embargo at almost double the 107 percent surge in the nation's overall living costs in the same nine-year (1972-81) period, the Hertz report pointed out.

The 1980 increase was 20 percent and 1979 and '78 rises each were 15 percent, the Hertz data shows, while 1977's advance was 11 percent, the '76 surge was 5.2 percent, 1975's climb 4 percent, and 1974 and 1973 boosts 25 percent and 7 percent respectively.

• The Hertz truck-expense survey lists ownership and running expenses for a typical 18-foot city-suburban pickup-and-delivery unit, for an 18-wheel over-the-road tractor-trailer combination unit and for 12 to 15 passenger commuter/cargo vans, often used in transportation pools.

The 1981 study reflects higher expenses in every truck cost category, with interest expenses jumping 36 percent and truck purchase prices themselves between 10 to 14 percent higher, the spokesman said.

For a typical over-the-road 55 to 65 foot, five-axle diesel tractor-trailer, average per-mile costs over a five-year, half-million mile use-life reached 82.34 cents in 1981, compared with 72.45 cents in 1980.

In 1971, the cost was 27.38 cents and in 1972 it was 27.94 cents. The 1980-81 rise was 13.7 percent and the total for the decade was 201 percent for tractor-trailer combinations.

"Even if expenses should stay at present levels, these figures mean a typical tractor - trailer will cost some $411,700 to run for the next five years—and this excludes driver compensation and fringe benefits which could

Side-loader chassis added to Mack MR line

ALLENTOWN, Pa. — Mack Trucks, Inc., has introduced a new version of its MR low-cab-forward series chassis specifically designed to accommodate side-loading refuse bodies.

The MR side-loader drop-frame chassis, under development by Mack engineering since early 1981, is modified to Mack design specifications by Phoenix Mfg. Inc., Nanticoke, Pa., and is marketed and warranted by Mack.

The new vehicle was unveiled at the International Waste Equipment and Technological Exposition recently held in St. Louis.

Mack said market studies of side-loader chassis potential, initiated in 1980, revealed significant growth opportunities — particularly in larger municipalities where the advantage of one - person operation result in labor, insurance and time savings.

The side-loader market has grown by nearly 7 percent annually since 1975, the firm noted, and industry forecasts project 5 to 10 percent annual growth through 1985, predominantly among drop-frame chassis. Side-loaders accounted for approximately 32 percent of all residential refuse collection in the U. S. in 1981.

The Mack MR side-loader is designed to accommodate bodies from all major manufacturers.

The chassis incorporates a special deep-section drop-frame configuration of high - yield-strength steel constructed with body-bound bolts which the firm said delivers an excellent frame safety factor.

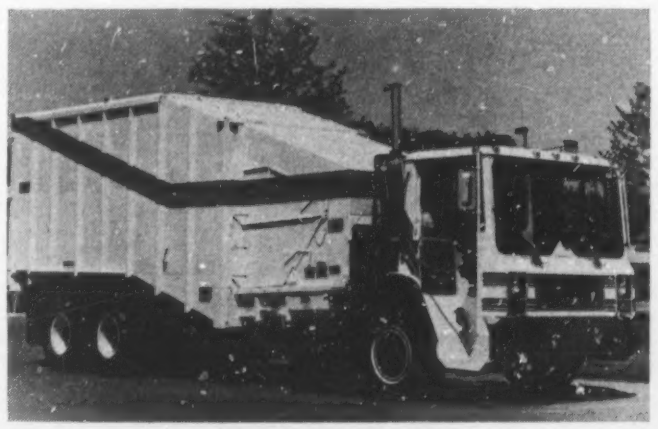
The 60-degree tilting, all-galvanized steel cab features dual controls with left-hand drive and a right-hand, stand-up operating position, including dual steering, throttle, service brakes and transmission selector controls.

A sliding glass cab divider separates the drive and operating segments, and Mack said the large window areas afford superb visibility. Available cab equipment includes integral power steering, integral air conditioning and a full range of other options.

Powertrains offered on the Mack MR side-loader include Mack diesel engines of 200 to 285 HP, as well as the Mack/Scania E4-210 and Cat 3208, all teamed with a choice of Allison automatic transmissions.

Mack front axles of 18,000 or 20,000-pound ratings are offered, along with single or tandem rear axles from Mack (23,000 pounds to 44,000 pounds, dual-reduction), Eaton or Rockwell.

Other features include a comprehensive warranty, covering the frame (full coverage: 12 months or 25,000 miles, pro-rated coverage: 36 months or 300,000 miles) and cab (full coverage: 12 months or 25,000 miles, pro-rated coverage: 12 months or 100,000 miles.



Mack chassis features dual controls

The new Mack MR side-loader chassis is designed specifically to accommodate side-loading refuse bodies from all major manufacturers. The vehicle features an all-galvanized steel cab with dual controls and a right-hand, stand-up operating position for efficient one-person use.

GM truck/bus group names 4 to key posts

General Motors Worldwide Truck and Bus Group has announced the appointment of four key executives. They are:

James C. Salrin, finance manager with responsibility for all truck/bus analysis and financial control. A 30-year GM veteran, he had been Chevrolet finance manager since 1974.

John D. Rock, vehicle sales and service manager. He had been executive director for GM Holden's in Australia since 1979.

Wallace W. Edwards, international staff manager with responsibility for coordinating Truck and Bus Group activities with GM of Canada, Diesel Division of Canada, GM do Brasil, GM de Mexico, North American Vehicles Overseas and international joint ventures.

D. Dean Forester, engineering staff manager with design and engineering support responsibility for worldwide trucks, buses and vans.

Rutherford heads IH manufacturing unit

Jack D. Rutherford has been promoted to president of International Harvester's Manufacturing Group. Formerly the group's senior vice president for operations, he succeeds Donald D. Lennox, who last month was named president of the firm.

Rutherford joined the company in 1978 as senior vice president, North American oper-

Registrations for the state of Florida temporarily delayed; not available for Oklahoma.

But market share sets record for March

Import registrations down 22 pct.

By Jenny L. King
Staff Writer

Registrations of new imported cars in the U. S. in March were down 22.22 percent from their year-ago level but notched a record penetration figure of 28.06 percent. It was the sixth consecutive month in which a penetration record was set, beginning last October.

According to figures compiled by R. L. Polk & Co., March registrations totaled 175,575, down 22.22 percent from 225,733 a year earlier. Registrations for the first three months of 1982 were down 16.69 percent, to 498,273 from 600,050.

Registrations in March were up 7.19 percent from 163,804 in February, and up 10.50 percent from 158,894 in January.

Record market penetration this March of 28.06 percent was up more than one percentage point from 26.59 percent for the month in 1981.

First-place importer Toyota slipped to 40,453 units from 55,178 last year and lost 1.40 percentage points along the way. Its 23.04-percent penetration was still considerably ahead of second-spot Nissan's 18.81-percent share. Nissan was up 1.52 percentage points from 17.29 percent.

Third-place Honda was up 2.38 percentage points, to 16.85 percent from 14.47 percent a year ago, and Mazda leapfrogged over Volkswagen to claim fourth place with 7.16 percent of the import market. VW, in fifth place, was down 2.10 percentage points, to 6.93 percent of the market from 9.03 percent.

Subaru was up 1.13 percentage points, to 6.61 percent from 5.48 percent and Mercedes-Benz was up 0.53 percentage points and up from ninth into eighth place. Volvo, BMW and Audi replaced Fiesta, Colt and Champ among the top ten imports.

The top ten represented 89.66 percent of the import market, up from 88.35 percent last year.

• Japanese-built cars accounted for 77.61 percent of the March import market, up from 75.83 percent in 1981. German cars captured 14.53 percent, down from 17.27 percent a year earlier. Swedish products had 3.94 percent, up from 2.74 percent; France built 2.38 percent, up from 1.78 percent; Italian products were 1.05 percent, down from 1.57 percent; Britain had 0.35 percent, down from 0.81 percent, and Ireland stood at 0.14 percent.

For the first quarter of 1982, Japanese imports claimed 77.73 percent; German, 14.88 percent; Swedish, 3.90 percent; French, 2.13 percent; Italian, 0.82 percent; British, 0.35 percent, and Irish, 0.19 percent.

Imported-car totals by country of origin in March, 1982, compared with the previous year were:

	March, 1982	March, 1981
Japan	136,261	171,163
West Germany	25,508	38,993
Sweden	6,925	6,201
France	4,180	4,008
Italy	1,846	3,544
Britain	620	1,824
Ireland	235	.....

Registrations by country of origin for the first three months of 1982 with their year-ago comparisons were:

	3 mos., 1982	3 mos., 1981
Japan	387,306	457,490
West Germany	74,125	104,379
Sweden	19,461	15,803
France	10,612	10,575
Italy	4,072	7,945
Britain	1,755	3,858
Ireland	942	.....

Registrations of imported trucks were down in March compared with the total for the month a year earlier. Truck imports numbered 36,176, down 19.13 percent from 44,736.

Truck figures for March, 1982, compared with March, 1981, were:

	March, 1982	March, 1981
Toyota	11,194	10,212
Nissan	7,654	10,950
Dodge Ram 50	4,302	.....
Mazda	2,816	.....
Ford Courier	.....	6,769
Chevrolet LUV	.....	6,724
Others	10,210	10,081

Truck imports for the first three months of 1982 were down 10.17 percent, to 101,125 from 112,575. Totals were as follows:

	3 mos., 1982	3 mos., 1981
Toyota	30,698	27,086
Nissan	22,044	24,822
Ford Courier	10,309	17,064
Dodge Ram 50	9,558	.....
Chevrolet LUV	.....	17,142
Others	28,516	26,461

Supreme Court lets stand ruling on ad's warranty role

WASHINGTON. — The U. S. Supreme Court, in refusing to review a lower court decision, has left standing a ruling that advertising and sales materials do not constitute a "written warranty" within the meaning of the Magnuson-Moss Act.

At issue is a class action brought in Illinois concerning General Motors Type 200 transmissions installed in cars that were advertised as having Type 350 transmissions or "transmissions of similar quality and performance."

This case—Skelton vs. GM—concerned alleged deception. It differs from other GM transmission class actions and the case brought by the federal Trade Commission, which allege premature failure of the Type 200 GM automatic transmissions.

In Skelton vs. GM, the district court held that advertising and sales material do not come within the definition section in the 1975 law, but it refused to dismiss on grounds that the Magnuson-Moss Act should reach "beyond the four corners of the formal warranty" to "any written representations made in connection with the sale of the same product which is covered by a formal warranty . . ."

The Seventh Circuit Court reversed, holding that the act must be read with the definition provided, and the Supreme Court, by denying certiorari, lets the Circuit Court view prevail.

25-year award

Robert E. Poland, right, owner-operator, Poland Pontiac-Buick, Inc., Effingham, Ill., is honored by H. T. Ridsdale, St. Louis zone manager, on behalf of Pontiac, for his 25 years as a dealer.

WHY THE PROTECTOR?™

NUMBER 1 IN A SERIES.

We offer the only program so complete it protects your customer's entire car, benefits your entire sales force, and covers the entire country.

The Protector Program goes far beyond the usual chemicals and sealants. It includes an array of electronic and aftermarket items, as well as the advertising, training and marketing support to sell them. It is an all-encompassing program that makes it simple and easy for you to profit from the fast-growing aftermarket protection industry.

Warranties with one source and no inspections.

The Protector provides a lifetime warranty with its rustproofing, fabric and sound shields. Our exterior paint shield is warranted for a full 3 years. All of these warranties require no inspections. And for additional protection for both consumer and dealers, all our chemical products are backed by an independent insurance policy. Another example of the totality of The Protector Program is our 50-state service network. From now on, a dealer in Atlanta won't get headaches from a warranty on an item sold in Fairbanks.

We'll make your salesmen aftersale specialists.

The Protector Program lets you sell the customer everything he needs to protect his car from the inside out, from bumper to bumper, from coast to coast, under one brand name, in one close.

There is nothing complicated about The Protector Program. To make certain that it works for you, we provide complete training. Our own staff will provide all the materials and in-dealership training that is necessary. We even follow up on a continuing basis with refresher sessions and a constant input of new product information. Once you decide to let The Protector work for you, we take over.

You may make bigger profits on The Protector than on the new car it's protecting.

Remember the days when your customers would look at a sticker price and automatically start bargaining at a figure ten per cent lower? Well, today's conditions don't allow for the kinds of margins that used to be built into the sticker. But The Protector gives you new margins to work with. Bigger margins than our competitors. The kinds of margins that provide larger profits per car than you thought were possible. Profits that make a really good looking bottom line.

Plenty of support to help you sell.

The Protector's total program includes heavy consumer advertising in television, radio and newspaper. Your customers will know about The Protector before they walk in your showroom. They'll see T.V. commercials in prime time shows. We also provide a full range of materials for showroom use, including brochures, signs and wall displays that presell the need for protection before your salesman ever mentions it.

We specialize in new product innovations. The Protector is the only source for Dana's excellent dash-mounted cruise control. Now we have a new device that promises to be just as popular and profitable an item.

New products, new programs.

It's The Protector RCS-1000. A remote computer starter. It lets the driver start his car from as far away as 500 feet. From inside the house. The RCS-1000 can make the vehicle cool in the summer or warm in the winter before the driver ever gets into it.

These are only some of the facts that have sold thousands of new car dealers on The Protector Program. For a detailed look at what The Protector can do for you and your profits, mail in the coupon below. It's actually all you will ever need to do.

THE PROTECTOR™

We protect your bottom line.

Excellence times eleven

For the 11th time in its 55-year history, Bill Luke Chrysler-Plymouth, Inc., Phoenix, has won Chrysler Corp.'s award for excellence, which recognizes outstanding performance in all phases of dealership facilities and operations. Principal and cofounder of the firm Bill Luke, center, is joined by Clark J. Vitulli, right, Los Angeles zone manager for Chrysler, and Luke's son, Don, general sales manager at the dealership.

Outstanding service, dedication

A special honor plaque in recognition of outstanding service and dedication to the public and Chrysler Corp. is presented to Pol Raynal, right, by Tom Pappert, Chrysler sales vice president. Raynal recently retired after 48 years as a Chrysler Corp. dealer in Detroit.

Martin men are Cadillac's best

Three salesmen from Martin Cadillac, West Los Angeles, recently were cited for their sales efforts with cash awards and certificates recognizing them as the top 1981 Cadillac sales people in the Los Angeles zone. Tony Fercano, center, closed deals on 292 cars to win the No. 1 plaque. Second was Laurie Murphy, left, with 246 sales to his credit, followed by Sonny Sonnenberg, at 221 Cadillacs. Combined sales of the winners were more than $13 million, according to a Martin Cadillac spokesman.

Ford ordered to pay $821,375 in Mustang fire

BOSTON.—A jury in federal court here has awarded $821,375 to the driver of a 1972 Ford Mustang that burst into flames when it was hit in the rear by another vehicle five years ago.

The jury in U. S. District Court found Ford Motor Co. was negligent in locating the gasoline tank under the trunk without a protective shield. Later Mustang models have such a shield.

James D. Elias, 34, of Derry, N. H., who was badly burned in the accident, testified he was traveling 55 MPH on Rte. 495 in Merrimac, Mass., at the time of the accident. But Ford witnesses testified their analysis indicated Elias was parked on the highway at 2 a.m. with the headlights out.

Elias earlier had settled a claim against the driver of the other car, Joseph A. Iannacci, 35, of Woburn, Mass., for $5,000.

Jack Ridenour, a Ford Motor Co. engineer, testified that in his opinion the Mustang was stopped at the time of the accident. Inspection of the vehicle after the accident, he said, showed that the ignition switch and the headlights were off and the gearshift lever and transmission were in Park position.

Ridenour also cited the extent of damage and the distance the vehicle moved after impact.

A Ford lawyer indicated an appeal was being considered.

U.S. petitioned to end tax credit on Japanese tools

WASHINGTON. — A petition asking for an indefinite suspension of the investment tax credit for Japanese-made machine tools has been filed by Houdaille Industries, Fort Lauderdale, Fla.

The 1971 Revenue Act allows the President to take such action if the foreign country has trade restrictions which burden U. S. commerce in ways inconsistent with trade agreements or engages in discriminatory conduct or restricts U. S. commerce.

Houdaille claims Japan has formed a machine-tool cartel and shields its members from competition by allocating markets and by other anti-competitive agreements and practices.

Houdaille also charges Japan with promoting the cartel by giving it tax advantages, concessions, loans, research grants and other subsidies.

The petition affects numerically controlled machining centers and numerically controlled punching machines.

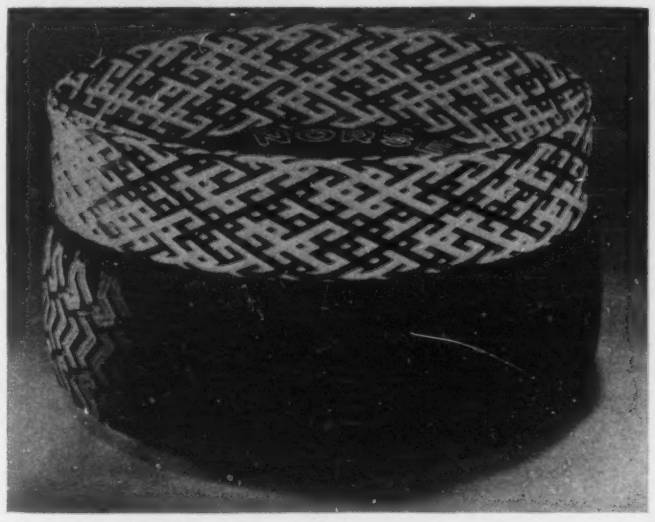
Houdaille also asks for a Presidential review after five years.

The Office of the U. S. Trade Representative will coordinate an interagency review and make a recommendation to the President. The Trade Policy Committee will also issue a report. Comments from interested parties are requested by the end of June.

Phoenix Chevy dealers elect Black to council

ALBUQUERQUE.—Ed Black, president of Ed Black's Chevrolet Center here, was elected by Chevrolet dealers in the Phoenix zone to represent them on the Pacific Coast Regional Dealer Council.

Ed Black's Chevrolet Center has been in business since 1949.



New tire belt

Armstrong Rubber Co. is introducing this new woven belt on its Norseman RV tire line. The belt shown atop the tire here was woven with contrasting strips to make visible the belt's interwoven pattern.

Armstrong unveils RV tire it calls far more durable

NEW HAVEN, Conn. — Armstrong Rubber Co. unveiled what it called a revolutionary manufacturing technology resulting in tires which consistently test better in durability than comparable products.

A new woven tread reinforcement process registered under the trademark Tredloc employs duPont Kevlar fiber to produce a light, tough belt totally different from those typically used on conventional radial tire manufacturing, Armstrong said.

Tredloc strengthens belt edges and prolongs belt edge integrity, reducing a common cause of tire failure.

Tests show that tires reinforced with the Tredloc belt outperform other similar conventional belted tires under high load laboratory wheel tests at 60 MPH and overload vehicle tests at 70 MPH, the company said.

DuPont conducted a stepped decreasing inflation pressure wheel test at 60 MPH with Tredloc running 100 percent farther than similar tires with standard cut belts, Armstrong said.

The Tredloc woven belt in comparison with other radials: Has better edge integrity; does not readily come apart since it is a single entity; establishes a superior bond to other tire components, due in part to its woven structure; wears better in the shoulder area of the tread; withstands low pressure abuse, and delivers a soft and more uniform ride, Armstrong said.

The first application of the new process is in Armstrong's Norseman tires for recreational vehicles. Tredloc-reinforced Norseman tires will be on the market soon, according to John Breslin, vice president of marketing at Armstrong. It is planned Tredloc will be integrated into other Armstrong radial lines in the future.

"Armstrong is determined to become an increasingly important participant in the tire industry," Breslin said.

Car market rises in Norway in first quarter

OSLO.—First-quarter new-car sales in Norway totaled 28,841, an increase of 16.9 percent over the year-earlier total of 24,365.

Renault sales declined sharply because Volvo has taken over Renault marketing in Norway and sells only the Renault 5, having withdrawn other Renault models from this market.

Sales by make were:

June production also due to trail 1981

May car output lowest since 1958

By Patricia Hoffman
Staff Writer

Auto production in May was the lowest for that month in 24 years, and the June outlook is not bright.

Last month, the makers built 515,913 cars, down 22.58 percent from 666,389 in the comparable 1981 period. It was the lowest total for May since 1958 when only 349,613 units were assembled.

Breakdown for May by company is: General Motors, 60.67 percent; Ford Motor, 25.98 percent; Chrysler Corp., 10.40 percent; Volkswagen of America, 1.76 percent; American Motors, 1.11 percent and Checker Motors, 0.08 percent.

Another decline is expected for June as the makers forecast 584,642 units, a drop of 17.95 percent from 712,524 in the comparable month last year.

For second quarter, the auto manufacturers are looking at 1,590,569 units, down 21.73 percent from 2,032,219 units built the second three months last year, and the lowest for that quarter since 1,550,195 units were built in 1961. This would bring the total for the first half of 1982 to 2,677,569 cars, down 25.58 percent from the 3,597,750 built during the first six months last year.

Due to the Memorial Day holiday last week, the makers scheduled only 111,938 cars, down 14.53 percent from the 130,964 units built during five days the previous week and down 29.25 percent from 158,211 in the comparable 1981 week.

So far this year, the car manufacturers have finished 2,204,865 cars, down 27.37 percent from 3,035,743 at this time in 1981.

Production of the Cadillac Cimarron began last Tuesday (June 1) at GM's Janesville facility. The plant is scheduled to produce 1,638 Cimarrons before it suspends operations for 1983 model changeover on July 30.

Cimarron assembly was halted at GM's South Gate plant on March 23.

Downtime was scheduled last week at VWoA's Westmoreland facility. The point has been idle since May 24 for inventory control.

American Motors' Kenosha plant remained idle after the Memorial Day holiday last week, starting a two-week vacation. The plant is slated to return June 15 with production of the new Alliance.

Saturday overtime was scheduled last week at four GM and three Ford facilities. They are GM Doraville, Flint, Tarrytown and Van Nuys, and Ford Kansas City, St. Louis and Wixom.

Daily overtime continued last week at Chrysler's St. Louis plant. It has worked a daily nine-hour shift since May 17.

Truck production increases in May; gain seen in June

Domestic truck production in May fared considerably better than in the comparable 1981 month, and the upswing in output is expected to hold through the second quarter.

The truck manufacturers built 190,832 units last month, a 16.90 percent gain from 163,237 in the same period last year. It was the highest output for that month since only 338,961 units were completed in 1979.

The June forecast shows another gain for the makers as 199,716 units are slated, up 10.77 percent from 186,857 trucks in the same 1981 month.

The outlook for second quarter is 567,138 units, up 16.24 percent from 507,028 in last year's quarter. That would bring production for the first six months of 1982 to an estimated 1,018,544 units, compared with 958,168 in the first half of 1981.

With all operations idled last Monday in observance of Memorial Day, the truck makers scheduled output of 42,006 units, down 4.05 percent from 43,779 the previous week, but up 3.15 percent from 40,724 in the comparable 1981 week.

So far this year, the makers have finished 869,234 units, a 9.85 percent gain from 791,288 in last year's year-to-date.

Volkswagen of America's Westmoreland facility was idle last week for inventory adjustment.

Downtime began today (June 7) at American Motors' Toledo point. The facility will be idle two weeks for vacation.

Saturday overtime is scheduled this week at four General Motors points and one Ford Motor facility. They are GM Janesville, Lordstown, St. Louis and the S-truck line at Pontiac—and Ford Michigan Truck.

For the 14th consecutive week, daily overtime was scheduled last week at Chrysler's Warren truck plant. The facility has been on a daily nine-hour shift.

Ad agency quits AMC Canada to try for Mazda

PICKERING, Ont. — Mazda Canada, Inc., was expected to pick the winner from among five contenders for its $4 million advertising account late last week, but American Motors of Canada's selection will take a while yet.

American Motors lost an agency, and Mazda picked up a fifth contender when McKim Advertising, Toronto, decided to go after the Mazda Canada account.

The other four contenders are: incumbent McConnell Advertising, Foote, Cone & Belding (Mazda's U. S. agency), F. H. Hayhurst Advertising and The Jerry Goodis Agency.

McKim had had AMC's Canadian account for 50 years, but was seeing it slip increasingly away as a result of Cossette Communication-Marketing's doing all English and French ads for AMC's steadily growing Renault line.

So AMC is looking for a replacement agency to handle some $1.7 million worth of billings (1981). It invited Cossette and several others to compete.

Canada in May: Car output up, trucks down

Canadian auto production in May rose 3.35 percent above the comparable 1981 period, but truck output fell 20.05 percent from the year-ago month.

The auto makers wrapped up May production with 88,129 units, up from 85,274 built the same month last year. It was the most for that month since 99,878 units were finished in 1979.

Truck production last month totaled 51,837 units, down substantially from 64,837 in the comparable 1981 period, but higher than the 44,069 units completed in May, 1980.

Returning to normal five-day operations last week, the auto makers scheduled output of 21,230 units, up 16.30 percent from the 18,255 built in the previous shortened holiday week (Victoria Day). But the total was 6.37 percent below the 22,675 assembled in the comparable week last year.

The truck manufacturers targeted 12,726 units last week, a 19.94 percent gain from 10,610 trucks in the previous four-day week and up 3.08 percent from 12,346 in the comparable 1981 week.

So far this year, the makers have finished 401,451 cars, up 4.13 percent from 385,521 in last year's comparable period.

Year-to-date, the truck manufacturers have assembled 237,812 units, down 5.67 percent from 252,098 built through June 6, 1981.

Saturday overtime was scheduled last week at Chrysler Corp.'s Windsor car and truck facilities.

Starting July 19, the Chrysler Windsor car point will begin a two-week vacation with operations slated to resume Aug. 2.

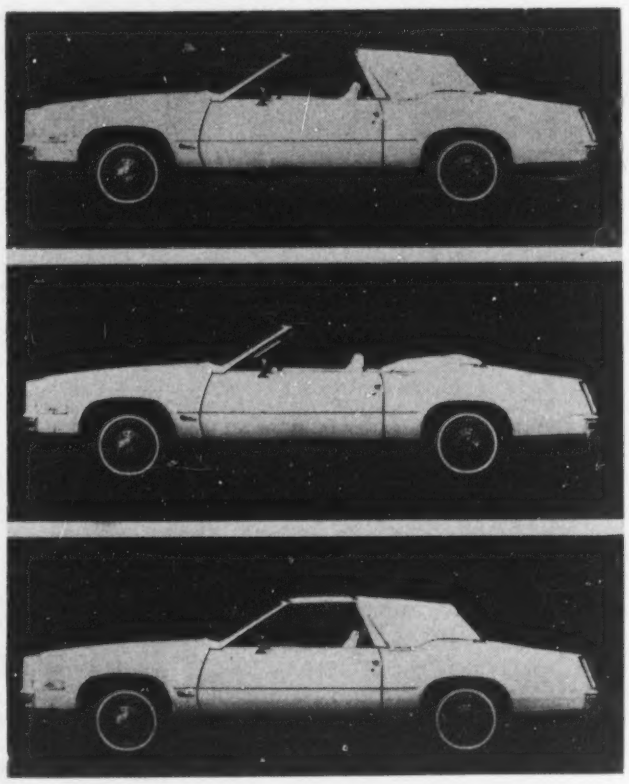
Versatile convertible



Any way you like it

Cabochon, a three-position-top Cadillac Eldorado convertible from Chicago Coachworks Ltd., Chicago, has two convertible choices (half and full) to accompany a hardtop option. The fully lined power top is made of Haartz OEM three-ply material with a power-tinted and heated rear window of glass. Cadillac's factory paint job and interior are undisturbed with no loss of passenger space. Price tag reads $30,930 FOB Chicago.

Supply of new U.S. cars pared to healthy 52 days

By Richard A. Wright
Assistant Managing Editor

Prudent production schedules during May and a mild but welcome upturn in the daily selling rate resulted in a substantially lower domestic new-car inventory June 1.

The domestic new-car inventory totaled 1,212,727 June 1, a 52-day supply, compared with 1,260,633 a month earlier, a 66-day supply. A year ago, the domestic stockpile totaled 1,471,656 cars on June 1, which was a 70-day supply.

The relatively light inventory of new cars bodes well for the industry as a number of car lines are in short supply and will have to be bolstered through increased production.

While the long-awaited sales turnaround has not yet clearly begun, the industry's inventory is the leanest and healthiest it has been in several years.

In shortest supply are General Motors' hot-selling new Camaro and Firebird, both at 18-day-supply levels. But a number of other lines are also short, mainly among the bigger cars. By size class, subcompacts continue to be the heaviest segment.

Among the corporate makers, GM accounted for most of the inventory cutback. In fact, Chrysler Corp., Ford Motor Co. and Volkswagen of America all increased their unit counts. Only VWoA opened June with a larger days' supply than it had a month earlier, however.

GM had a slim 44-day supply June 1, down from 63 days a month earlier. In addition to Camaro and Firebird, GM was short of Buick and Oldsmobile full-size models and generally short of rear-drive intermediates. The subcompact J-cars and intermediate A-cars were still in relatively heavy supply.

Ford Motor Co. opened June with a 64-day stockpile, down from 66 days a month earlier. Small cars were in heavier supply than big cars at Ford.

Chrysler Corp. had a 68-day supply June 1, down from 76 days a month earlier. Shortest at Chrysler were its luxury Imperial and the hot-selling conventional rear-drive New Yorker.

American Motors trimmed its inventory of new cars from 76 days May 1 to 66 days June 1. Only VWoA opened June with a higher days-supply figure than

1982 sales forecast downgraded to 8.38 million cars

By Edward Lapham
Financial Editor

A finicky U. S. economy that does not want to recover at an acceptable pace has reduced the 1982 U. S. new-car sales forecast to 8.38 million units, according to the AUTOMOTIVE NEWS WORLD OUTLOOK.

It marks the second consecutive quarterly forecast which has downgraded expectations for an auto industry recovery from the slump of the past three years. The 1981 sales total was 8.6 million cars.

In December, the AUTOMOTIVE NEWS WORLD OUTLOOK, a joint undertaking by AUTOMOTIVE NEWS and Data Resources, Inc., forecast 1982 U. S. new-car sales at 9.1 million. Just three months ago, that forecast was reduced to 8.7 million units.

The current reduction in the U. S. car outlook coincides with a general stagnation in the economic recovery which was supposed to have accelerated at mid-year. Consequently, the 1983 forecast also was reduced, to 9.54 milion cars from the earlier 9.78 million unit outlook.

Otto Eckstein, DRI chairman, cited the "budget fiasco," that is the inability of the U. S. Congress and the Reagan Administration to approve a new federal budget, as an underlying cause of the stalled recovery.

"Recent data do not show signs of economic revival, so the second quarter is likely to be another minus for aggregate activity," Eckstein reported.

He said, however, that the July 1 tax cut coupled with Social Security benefit increases should give "at least a small boost to consumption" in the third quarter.

"Consequently a mild upturn at mid-year is still the most likely scenario, with the second-half recovery very mild by any historical standard," he said.

It is that expected increase in consumption which the forecast indicated will lead the auto industry out of the slump.

In fact, the current AUTOMOTIVE NEWS WORLD OUTLOOK projects that it will be large U. S. cars which will pace the auto industry, which will in turn spur consumer spending and lead the entire economy down the road to recovery.

Although the outlook for the entire U. S. market this year was dowgraded, the current report actually boosted the forecast for sales of large and intermediate size cars to about 5.2 million units from the 5.01 million units projected three months ago.

At the same time, sales of smaller, more-fuel-efficient models were forecast at 3.19 million units, down from 3.69 million units in March.

One particularly ominous note for U. S. producers was included in the forecast, however. Import penetration for the year was projected at 26.31 percent, up from the 25.11 percent share forecast three months earlier. This makes it clear that the reduction in anticipated total U. S. sales in 1982 will come from the domestic small-car segment.

The latest AUTOMOTIVE NEWS

With new models, new engines

Ford armed for '83 sales battle

By Jim Plegue
Staff Writer

Ford Motor Co. will be a product powerhouse next year with no less than eight new vehicles and several new engines to show consumers during the 1983 model year.

In its most ambitious — and likely its most expensive — changeover ever, Ford Motor will reshape nearly half of its product line. Introductions will start with carryover models in late September and run through next summer.

Here's a summary of Ford's new products:

Ford Tempo and Mercury Topaz: These new front-drive compacts, due late next spring as 1984 models, will be star attractions in Ford's lineup. Available in two-door and four-door sedans, their standard engine will be Ford's 1.6-liter CVH four-cylinder engine mated to a four-speed manual transaxle.

Optional Tempo/Topaz powertrain will be Ford's all-new 2.3-liter High Swirl Combustion (HSC) four-cylinder engine and a new five-speed manual transaxle. A three-speed automatic will be optional.

Tempo/Topaz wheelbase will be 99.9 inches, overall length will be about 176 inches and curb weights will range from 2,280 to 2,350 pounds. Fully independent suspension — MacPherson struts at front and new four-link strut design at the rear—as well as rack-and-pinion steering will be standard.

Tempo/Topaz styling is highly aerodynamic, with limousine-type doors and concealed drip moldings. The five-passenger cars will be offered in at least three trim versions, including a sport package using Michelin TRX tires and special aluminum wheels.

Tempo and Topaz will be built in at least two plants — Oakville, Ont., and Kansas City —with tentative Job One dates in late January.

• Ford Thunderbird and Cougar XR-7; Ford's new compacts will be sharing the limelight with these new downsized personal-luxury cars, which will probably debut in January. T-Bird/XR-7 wheelbase will be 103.8 inches with overall length of

Ford, Toyota, AMC launch programs

Sales incentive plans abound for summer

By Joseph Bohn
Marketing Editor

The pace of new marketing programs continues hot and heavy, with Ford Motor, Toyota and American Motors being the latest to offer a mixed bag of summer incentives.

At Ford Division, there's a June 7-July 31 dealer incentive on cars, called "Dealer's Choice."

This non-retroactive program pays dealers on eligible new and unused '81/'82 Mustangs and Granadas, with their choice of a third incentive line being either Thunderbird or Fairmont.

Dealers receive nothing on 0-19.9 percent of their three-car objective, $300 per unit for 20-59.9 percent and $600 per unit for 60 percent and over.

Ford Division also extended the 5 percent rebate and the 24-month/24,000-mile Ford Care on '81/'82 Escort and '82 EXP models. (The '81 Escort gets a flat $250 rebate, rather than 5 percent.)

Sales people also receive $100 on every '81/82 Escort and every '82 EXP they sell from June 8 to July 10, with a one-unit qualifier, under a contest called "Bet on the Best."

Ford is also running an "Ace-in-the-hole" truck contest. This non-retroactive cash payment program covers '81 and '82 F-100 to F-350 pickup trucks. It runs from June 7 to July 31.

Dealers get nothing for 0-19.9 percent of objective, $100 for 20-49.9 percent, $200 for 50-89.9 percent, $400 for 90-99.9 percent, $500 for 100-109.9 percent and $700 for 110 percent and over.

There is a June 1-30 fast start, with a separate Ranger objective. Dealers who hit this receive $75 additional payment in each F-100 to F-350 category, except the first (0-19.9 percent) for which they still earn zero. There is no payment on Ranger itself.

• Finally, there is a June 1-July 31 "Vegas Venture" trip contest for Ford dealership sales managers.

It includes all car lines. The larger dealerships compete against a certain objective and the rest compete in groups among themselves for high-over-objective.

About 900 trips will be awarded to winning managers for the Sept. 1-3 new car showing in Las Vegas.

There is a June 1-30 fast-start on Escort/EXP.

Managers who hit it get a bonus $500 cash to spend in Las Vegas.

At Lincoln - Mercury, sales managers, instead of a trip, get cash, based on selling Lynx and LN7 cars.

Under a June 8-July 31 contest, part of L-M's "Summer Sales Drive" program, sales managers receive $20 on every '81/82 Lynx and every '82 LN7 they sell. If they hit a June 8-30 fast-start, they receive an additional $20, retroactively. If they hit their total objective, they get another $20 retroactively, bring total possible earnings to $60 per car.

Lynx and LN7 also continue to receive a 5 percent rebate and 24/24 free maintenance and warranty from June 7 to July 31. (The '81 Lynx gets a flat $250, rather than 5 percent.)

L-M dropped the 5 percent rebate on Lincoln, Continental and Mark VI, though it continues to offer 36/36 warranty free-maintenance coverage on those models through July 31.

Continentals retailed and de-

1st Grand Prix a solid success in Motor City

DETROIT. — Sponsors of the Detroit Grand Prix run through the streets here June 6 called the event a success — financial and otherwise.

Receipts from a weekend of racing still were being counted late last week. Robert McCabe, president of the sponsoring Detroit Renaissance, Inc., said the breakeven point probably was reached.

"If so, ours is the first Grand Prix to start in a city that didn't lose money," he said. Other Grand Prix events in this country are in Long Beach, Calif., and Las Vegas. Police estimated the Detroit crowd at 100,000.

There was general agreement the three days of competitive activity aroused a high level of enthusiasm in this depressed area.

Grand Prix winner was John Watson, a Briton, driving a McLaren powered by a Cosworth-Ford engine.

Grand Prix draws 100,000 race fans

British driver John Watson in his Marlboro McLaren-Cosworth car No. 7 won the first Detroit Grand Prix, which was held June 6. About 100,000 fans viewed the race.

Lutz to executive VP for Ford International

Robert A. Lutz is moving up to one of the top jobs in Ford Motor Co. He will become executive vice president, International Automotive Operations on Aug. 1, succeeding John McDougall, who will retire after 47 years with the company.

Lutz, 50, has been chairman of Ford of Europe since 1979 and was president of the European subsidiary for two years before that. He joined the company in 1974 as general manager of Ford of Germany, coming from BMW, where he was sales vice president.

This will be Lutz's first U. S. job with Ford. He entered the auto industry in 1963 with General Motors and served with GM's Opel operation in West Germany and with GM of France before going to BMW.

The Lutz-for-McDougall move and the July 1 retirement of Harold C. MacDonald, 65, vice president of engineering and research, triggered a series of personnel changes at Ford last week.

Herbert L. Misch, 64, will succeed MacDonald, a 34-year Ford veteran. Misch has been vice president of environmental and safety engineering since 1972.

Edward J. Blanch, 56, succeeds Lutz as chairman of Ford of Europe. Blanch is a Ford Motor vice president.

James A. Capolongo, 47, replaces Blanch as president of Ford of Europe. Capolongo, a Ford Motor vice president, has been general manager of Truck Operations for Ford North American Automotive Operations.

Edson P. Williams, 58, succeeds Capolongo in the truck post. Williams, a Ford Motor vice president, has been president of Ford Asia-Pacific, Inc.

Sir Brian Inglis, 58, becomes acting president of Ford Asia-Pacific. He has been operations vice president there and also is chairman of Ford of Australia.

L. Lindsey Halstead, 51, was elected a Ford Motor vice president and was named to succeed Robert C. Graham as head of Latin American Automotive Operations. Graham is on medical leave of absence.

Robert M. Gerrity, 44, succeeds Halstead of director-president of Ford Brazil. Gerrity has been director-vice president there.

Helen O. Petrauskas, 38, has been appointed executive director of environmental and safety engineering. She has been director of the automotive emissions and fuel economy office.

Former exec sues GM for $69 million

By Roger Rowand

PONTIAC.—George G. Spaulding, former general sales manager for Pontiac, has filed suit here against General Motors. He is seeking some $69 million for defamation of character and breach of contract and good faith.

The suit asks for unspecified additional damages for age discrimination. It also charges violation of the federal pension security law.

Spaulding, 62, claims he was pushed out of GM in June, 1981, because Pontiac General Manager William E. Hoglund wanted to bring in a younger executive of his own choosing.

GM had no comment on the suit. However, a Pontiac spokesman said Spaulding was replaced "as part of a management reorganization designed to bring a fresh approach to our marketing effort. He was offered a sales manager's position with another GM division which he declined to accept."

The suit was filed in Oakland County Circuit Court and gives a good measure of insight into some of the inner workings of the big corporation.

Spaulding said he joined the company in 1958 at Buick on special assignment to the general sales manager. Positions he held included manager of retail operations in Flint for Buick and director, Opel sales, for Buick in Flint.

While manager of Chevrolet's retail store in New York, he took over one Chevrolet-Pontiac dealership and within one year had it profitable and selling 11,000 units in a year, he said.

He told the court he was assistant regional sales manager for Chevrolet responsible for fleet sales and developing sales campaigns. He also was national director of service for Chevy and served as director of sales for Adam Opel in Germany.

While in the latter position, he developed a 2,200-dealer organization in 13 Western Europe

Stempel terms current market situation an anomaly

Big cars dying hard; Chevy asks for second shift

By Roger Rowand
Engineering Editor

Chevrolet has requested a second work turn for big-car assembly at the Fairfax (Kans.) assembly plant because of what Robert Stempel, division general manager, calls an anomaly.

The big Chevrolet (Impala-Caprice) is out of synch. It is selling well.

"There is a lot of talk about fuel, its availability and pricing, yet that car is enormously popular," Stempel told the Detroit Auto Writers Group last week.

"Our dealers literally are going to sell out of it this year," he said. "Given the situation two years ago, you would have said that by now volume would be decreasing and be down substantially. But it looks as though it is going to do about 230,000 units. That's sizeable in anybody's book."

That figure represents annual selling rate rather than an actual total.

"With that volume, it's in the lineup," Stempel said. "I'm glad our dealers can sell it and make a profit on it. It's helping keep some of our dealers afloat right now.

"It's certainly a good car, but with where we think we're going in this busines, it's an anomaly. It's not the way we think we're going."

He said the full-size car of the future "might be a tad bigger than the Celebrity but certainly in that category. It will have that wheelbase, 16 or 17 cubic feet of luggage and room for five or six people.

"I think that's the kind of car we're talking about as we start to talk about 30-MPG sedans. A full-frame, V-8 car doesn't fit in that category," he said.

"I use that figure of 230,000 current selling rate, but two years ago I would have told you we'd be selling 150,000 Caprices. Talking about 230,000 on an annualized basis is certainly off the trend line. I've got to think it's an aberration.

"I cannot believe we're going to be—as a country—out of line with the rest of the world on gasoline prices this much for much longer," he said.

"Once the consumer saw gasoline in a range he felt comfortable with, he began to revert to some of his older buying habits. Clearly, our planning is not based on that. Our planning is based on energy that's got a fairly realistic cost. Our product line is aimed at a much more fuel-efficient mix," he said.

Stempel said industry annual sales are at a rate of 8.5 million instead of a trendline rate of 10 million.

"We're seeing an aberration in the market because a great chunk of our volume is not there," he said. "Of people who are buying, an awful lot are not affected by the recession. You have a lot of people in there who are almost insulated from it.

"To take a prediction of where we're going in the future based on what we're selling today is very, very risky. You have to remember a great many of those 2 million buyers that I don't think are in the industry mix are in our — Chevrolet's — mix. That may be as many as one third.

"I'd like them to come back into the marketplace so I can see what they're going to choose," Stempel said.

• Stempel said he is one of the few at General Motors who have managed three divisions. He has headed Pontiac, Adam Opel in Germany and Chevrolet.

In ranking his priorities at Chevrolet, where he assumed command in February, he listed getting people back to work as first. That is followed closely by getting them back to work productively, he said.

Ranking high, too, he said, is the health of the dealer body

May total up for first month since September, 1981

U.S. makes spearhead sales gain

By Jenny L. King
Staff Writer

New-car sales in May by the domestic auto makers were up for the first full month since September of 1981, while sales of imported cars were down for the ninth consecutive month.

Optimists predicted that the domestic industry was at last beginning a serious recovery from its three-year-long sales depression. Detractors reasoned that customer incentives, price breaks on certain models, corporate employe sales plans and the like were behind the gain and warned that the bubble will burst in June.

Domestic sales climbed 11.46 percent over the year-ago month, largely on the strength of General Motors totals which were up 22.00 percent. Domestic sales were up all three reporting periods in May, the first time that phenomenon has occurred since August, 1981, when customer rebates pumped life into the market.

Domestic sales totaled 584,074 for the month, up 11.46 percent over 524,021 a year ago. In 1980, the total for the month was 498,474. Best May was in 1978 when 962,985 new U. S.-built cars were retailed.

Year-to-date domestic sales of 2,483,394 were down 11.01 percent from 2,790,654 last year.

Import sales were down 9.54 percent in May, to 189,790 from 209,794 in 1981. They have been on the decline since last August. Year-to-date sales for imported cars were down 18.46 percent for the five months, to 871,123 from 1,068,304.

Industry total for the month was 773,864, up 5.46 percent from 733,815 in 1981. Year-to-date sales numbered 3,354,517, down 13.07 percent from 3,858,958.

General Motors enjoyed a 22.00-percent increase in sales for the month, climbing to 384,015 from 314,764 last year. Ford Motor Co. was running in place, its sales up 1.34 percent, to 123,987 from 122,343. Chrysler Corp. sales of 61,603 units were up 4.78 percent from 58,791.

Volkswagen of America plunged 56.48 percent, to 6,299 from 14,475 last year, and American Motors domestic sales were 8,170, down 40.14 percent from 13,648.

GM earned 65.75 percent of the domestic market in May, up from 60.07 percent last year. The 12.8-percent interest program initiated by the company earlier this spring ran through the end of May and probably was responsible for the successful sales report.

Ford sales accounted for 21.22 percent of the May market, down from 23.35 percent in 1981. Chrysler slipped back to 10.55 percent from 11.22 percent. VWoA cornered 1.08 percent, down from 2.76 percent, and AMC had the remaining 1.40 percent, down from 2.60 percent.

All five GM makes plus Chrysler and Lincoln were up during the month. Chrysler more than doubled its sales compared with May of 1981, climbing to 15,748 from 6,859. Lincoln was up 39.80 percent, to 8,701 from 6,224. Buick notched a record for the month, 80,925, and was up 36.74 percent from 59,182.

Cadillac was up 36.19 percent, Chevrolet was up 27.46 percent, Oldsmobile was up 13.20 percent and Pontiac was up 1.44 percent.

Domestic makes missing their year-ago sales levels were: VWoA, down 56.48 percent; AMC, down 40.14 percent; Imperial, down 35.57 percent; Plymouth, down 16.82 percent; Dodge, down 4.90 percent; Mercury, down 0.83 percent, and Ford, down 0.68 percent.

• Imports down as a group fell 9.54 percent in May, and included a mixed bag of successes and failures. Second-place Datsun was up 13.08 percent from 1981 while top-selling Toyota was down 13.35 percent. Honda was down 5.28 percent, Mazda was off 18.75 percent and Subaru was down 19.83 percent.

BMW reported record sales in May, up 11.42 percent, to 4,167 from 3,740 last year. Competitors Mercedes-Benz and Audi had different stories to tell: Mercedes was even with its year-ago sales, 5,684 compared with 5,695, while Audi was down 26.67 percent, to 3,593 from 4,900. Volvo was up 5.64 percent, Saab was up 30.65 percent, Peugeot was down 30.42 percent, and Jaguar had a record month, up to 791 from 374.

Imports captured the single largest chunk of the month's market, 24.52 percent, down substantially from 28.58 percent a year earlier. U. S. intermediates cornered 24.09 percent, compacts had 17.78 percent, subcompacts had 16.04 percent, standards had 11.63 percent and luxury models had 5.94 percent.

In May, 1981, imports won 28.58 percent, intermediates had 20.06 percent, compacts had 19.04 percent, subcompacts had 17.20 percent, standards had 10.32 percent and luxury cars had 4.80 percent.

Of the domestics-only market in May, intermediates had 31.91 percent, compacts had 23.56 percent, subcompacts had 21.25 percent, standards had 15.41 percent and luxuries had 7.87 percent.

Late-May domestic sales were up 6.80 percent, to 211,013 from 197,572 in 1981. With eight selling days this year and last, the daily rate of 26,377 was up 6.80 percent over 24,697. It was the best daily selling rate so far this year, just beating out the 26,329 average posted March 21-31.

Market shares for the five major domestic auto makers for the May 21-31 period were: GM, 64.46 percent; Ford, 20.94 percent; Chrysler, 11.47 percent; VWoA, 1.71 percent, and AMC, 1.42 percent.

During the last period in May, GM sales were up 15.17 percent from 1981, Ford was up 0.47 percent, Chrysler was up 5.71 percent, VWoA was down 51.22 percent and AMC was off an estimated 42.30 percent.

*—AMC does not issue a nameplate breakout for a 10-day periods.

Slow economic recovery downgrades projections

'82 sales forecast: 8.38 million cars

Continued from Page 1

WORLD OUTLOOK did have some good news in the truck market, with light truck deliveries forecast at 2.36 million units for the year compared with the 2.24 million forecast in March. The 1981 total was 2.04 million.

The heavy-truck sales projection remained unchanged at 240,000 units. The 1981 heavy-truck tally was 230,000.

The good news in the light-truck forecast was tempered, however. John Hammond, manager of DRI's U. S. automotive service, told AUTOMOTIVE NEWS the increase is due to a "stronger than expected response to the rebate programs by consumers."

The DRI official said the increase in the large-car forecast represented "a change in terms of magnitude, not direction." He said that gasoline prices fell faster than expected and the large-car segment strengthened faster than expected.

"Fundamentally, the large-car segment remains the strongest segment in the current forecast period," Hammond said.

The situation in Europe, overall, was roughly analagous to the U. S. market condition.

Geoff Skipper, manager of DRI's international auto industry services, said that the market for large cars in Europe also looks relatively good.

"The large-car market is definitely beginning to grow," Skipper said, "and this will help the German manufacturers."

"Overall, the manufacturers who will do well will have to have strength in the medium-car and large-car markets," Skipper said. "The future looks good for even some of the smaller companies like Volvo and Saab, although I have mixed feelings about BMW because they have financial problems but a good product program."

Ford, Toyota AMC launch sales programs

Continued from Page 3

livered through July 31 qualify for $1,500 dealer cash incentives. Cars ordered for post-July delivery qualify for the $1,500, if orders are received in the zone offices by June 22.

Under a separate contest, running June 8 to July 10, sales people receive $100 per unit for every '81/82 Lynx and every '82 LN7 they sell, subject to a one-unit qualifier.

Also, there is the dealer cash incentive on Cougar/Capri, with dealers having a choice of Zephyr or XR-7 as their third sales objective car. Dealers earn nothing for 0-19.9 percent of objective, $300 per unit for 20-59.9 percent and $600 per unit for 60 percent and over, non retroactively.

• Toyota's new truck incentive is called "Best of the best—'82 Truck Challenge." It runs from June 2 to Sept. 1 and covers all new and unused '81 and '82 trucks.

Although there is only one total truck objective, dealers get paid differently on two-wheel-drive and four-wheel-drive units. There is a separate two-unit qualifier for 2WD and 4WD units before dealers get paid.

Payments are as follows: 0-50 percent of objective pays $50 on 4WD and $200 on 2WD units; 51-75 percent pays $100 on 4WD and $250 on 2WD units; 76-100 percent pays $150 on 4WD and $300 on 2WD units; 101 percent and up pays $250 on 4WD and $600 on 2WD units.

Payments are non retroactive.

Finally, American Motors extended its price cuts on '82 Jeep CJ-5, CJ-7 and Scrambler for as long as the inventory lasts.

AMC originally reduced the advertised delivered price of these vehicles to $6,765 (and the dealer price to $5,750 to maintain the discount, the difference refunded by check) for the April 1-June 30 period.

Although the program hasn't run out yet, it has been extended until the last of the '82s are sold.

Edgar R. Molina dies; retired Ford VP

DALLAS. — Edgar R. Molina, retired Ford Motor Co. vice president, died May 28 at his home near here. He was 65.

Mr. Molina joined Ford's Latin American Operation in 1957. He was elected a vice president of Ford Motor Co. in 1968 and was named vice president of sales for Ford of Europe. He served as chairman and managing director of Ford of Latin America from 1974 to 1978 and then became vice president-consultant for Ford International Automotive Operations. He retired from Ford in 1979.

Continued from Page 1

fall. The program will enable an hourly worker to purchase demand notes from Ford Motor Credit Co. with a minimum investment of $50.

More on '83 Ford intros

DETROIT.—Ford Motor clarified an AUTOMOTIVE NEWS article on '83 introductions. Essentially, its regular Thunderbird/XR-7 V-6-powered models debut in January, but a new four-cylinder Thunderbird turbo coupe won't bow until late February or early March. A turbo four-cylinder XR-7 will bow in the fall of 1983 as an '84 model.

Union vote a draw at GM Anaheim

ANAHEIM, Calif.—Last week's UAW representation vote at the General Motors' Delco-Remy battery plant here was a tie (136-136) with four challenged votes. The National Labor Relations Board is examining those ballots.

Note: Units stated in millions. Totals may not add, due to rounding.

But light trucks are only winners

5-month truck sales top the million mark

Continued from Page 10

The Ford Ranger moved ahead of Toyota during the month — 13,205 versus 12,152 — but the latter's five-month count was higher by more than 20,000 units —54,766 versus 34,358.

Through May, dealers had sold 156,220 of the domestic compacts — S-10, Ranger, GMC S-15, Dodge Rampage, Jeep Scrambler and Volkswagen. A year ago, when Scrambler and VW were the only domestics, the total was 16,967 units.

• Five-month sales of medium trucks were down 48.3 percent from a year ago, 18,540 units versus 35,017. The Class 6 count was off 49.6 percent, from 35,017 in 1982 to 17,634.

Through May, the heavy-truck total was 64,977 units, down 3.1 percent from last year's 67,031. The Class 7 count, however, was up 30 percent, from 24,082 a year ago to 31,304. Class 8 was off 21.6 percent to 33,673 units, compared with 42,-949 a year ago.

At the end of the month, the number of unsold new trucks in retailers' hands totaled 544,904 units, a drop of 4.2 percent from last year's 568,755.

Going into June, there were 486,714 light trucks in stock, a decline of 3.4 percent from the year-earlier 503,973 units. Mediums were down 40.6 percent, from 23,429 units a year ago to 13,924. Heavies were up 7 percent, from 41,353 units in 1982 to 44,266.

The Motor Vehicle Manufacturers Assn. estimated that dealers and factory outlets sold 207,617 new trucks in May, a gain of 31.4 percent over last year's 158,054 units. The five-month count was 933,762, up 21.2 percent over the year-earlier 770,193 units.

• No. 1 Chevrolet reported that its dealers retailed 83,746 units during the month, an increase of 31.8 percent over last year's 63,536. The January-May total was 24 percent higher, from 304,620 units in 1981 to 377,747.

In May, Ford dealers retailed 78,883 units, a gain of 22.9 percent over the year-earlier 64,194. Through May, the count was 342,790 units, 12.3 percent higher than the 305,117 sold in the like period in 1981.

GMC Truck & Coach reported a 71.6 percent increase in truck sales in May, from 13,763 units a year ago to 23,655. The five-month total was 105,013 units, up 36.7 percent from the year-earlier 76,793.

Dodge and Plymouth dealers sold 21,333 light trucks during the month, an increase of 29 percent over the year-ago 16,-541 units. The total through May was up 29.3 percent, from 83,663 units in 1981 to 108,212.

Sales of four-wheel-drive Jeep vehicles were down in May but up slightly for the first five months. The May total of 5,713 units was off 6.4 percent from the year-ago 6,104. Through May, the count was 25,076, a gain of 2.2 percent over the previous year's 24,548 units.

• May sales of Volkswagen compact pickups were down 72.5 percent from a year ago, 883 units versus 3,208. The five-month total was 6,292 units, a decline of 58.9 percent from the 15,309 sold in the like period a year ago.

Mercedes-Benz dealers sold 284 medium and light-heavy trucks in May, down 9 percent from last year's 312 units. Through May, the count was 1,-184, a drop of 23.2 percent from the previous year's 1,541 units.

In May, Toyota dealers sold 12,152 compact pickups, a gain of 1.5 percent over the year-earlier 11,972. The five-month total also was 1.5 percent higher, from 53,947 units in 1982 to 54,-766.

During the month, sales of the Datsun compacts dropped 19.5 percent to 7,014 units, compared with 8,710 in 1981. The count through May was 37,479, compared with 50,504 last year.

Sales of the Mazda compacts were up dramatically for both the month and the year. The May total was 3,122 units, 130.4 percent higher than last year's 1,355. The five-month count was 15,082, up 146.5 percent from the year-ago 6,118.

Isuzu dealers retailed 1,687 small pickups during the month, up 50.2 percent over the year-earlier 1,123 units. Through May, the total of 7,074 sales was 197.7 percent higher than last year's 2,376 units.

North Carolina to begin vehicle emission checks

CHARLOTTE, N. C.—Yielding to federal pressure, North Carolina officials announced that a vehicle inspection program designed to reduce carbon monoxide air pollution in the Charlotte-Mecklenburg County area will begin in mid-October.

The EPA had told the state either to begin the emission checks or face possible loss of federal funds. The inspections will affect only gasoline-powered vehicles built after 1971.

"Why do I sell CLI vans? Because CLI cares about the dealer first. And they make a quality product that sells fast." —Ken Behlmann, President Behlmann GMC Florissant, MO

"I've been dealing with CLI for at least 6 years now. They're a good company. For one thing, they see the dealer as their biggest strength. They know their profits are tied directly to the dealer's profits. So they take extra pride in the vans they make.

"That's why my customers are proud to own CLI vans. The quality shows. And the price is right. A CLI van is the best value for the money of any van in the industry. It holds its resale value much better than other vans.

"I find CLI to be a thoroughly professional company. Their service is always personal. They take a sincere interest in the dealer's needs.

"What else could a company supply a dealer? With CLI's concern for quality, value, and service, it's no wonder CLI vans are consistently the number one sellers on my lot."

Find out how CLI can help increase *your* sales and profits. Call collect: Consolidated Leisure Industries (219) 262-4521.

CONSOLIDATED LEISURE INDUSTRIES

Suddenly the road comes alive again!

Mild sales upturn, prudent production levels team up

Domestic stocks pared to 52 days

Continued from Page 1

a month earlier, 127 days, compared with 83½ days.

The June 1 domestic inventory was divided this way: GM, 55.75 percent; Ford Motor Co., 26.02 percent; Chrysler Corp., 13.81 percent, VWoA, 2.64 percent, and AMC, 1.78 percent.

A month earlier, the domestic inventory was divided as follows: GM, 59.32 percent; Ford Motor Co., 22.61 percent; Chrysler Corp., 13.71 percent; VWoA, 2.49 percent, and AMC, 1.87 percent.

• By size class, all segments were in shorter supply than a month earlier, with subcompacts still the heaviest and standards the leanest.

The industry had a 75½-day supply of subcompacts, down from 91 days, but much heavier than the 36-day stock of standards, down from 48 days.

There was a 49-day supply of compacts June 1, down from 57 days; a 48-day stock of intermediates, down from 65 days, and a 45-day supply of luxury cars, off from 59 days.

The June 1 inventory was divided this way by market segment: Subcompact, 31.10 percent; compact, 21.80 percent; intermediate, 29.57 percent; standard, 10.70 percent, and luxury, 6.83 percent.

A month earlier, the inventory was divided as follows: Subcompact, 29.23 percent; compact, 20.79 percent; intermediate, 30.89 percent; standard, 11.97 percent, and luxury, 7.12 percent.

The June 1 days-supply figures by market class were:

Subcompact—Horizon, 49; Omni, 54; Chevette, 55½; Spirit, 61½; Eagle SX/4, 62; TC3, 70; Cavalier, 71; 024, 73; Escort, 74; Lynx, 74; T1000, 81; LN7, 83; J2000, 96; Skyhawk, 100; Firenza, 112; EXP, 123, and Rabbit, 127.

Compact—Camaro, 18; Firebird, 18; Zephyr, 30; Skylark, 36; Omega, 45; Fairmont, 56; Citation, 60; Concord, 64; Phoenix, 64½; Reliant, 76; Eagle, 77; Aries, 79½; Mustang, 82; Capri, 85.

Intermediate — Cutlass coupe, 28; Malibu, 35; Regal coupe, 36; Grand Prix, 36; Cutlass four-door, 36; Cougar, 41; Regal four-door, 41; Monte Carlo, 42; Gran Fury, 43; Bonneville, 43; New Yorker, 44; Diplomat, 49½; Granada, 53; Cutlass Ciera, 54; Century, 55; Celebrity, 65; Mirada, 67; Cordoba, 71½; LeBaron, 72; XR-7, 76; Thunderbird, 84; 6000, 101, and Dodge 400, 147.

Standard—Olds 88, 23; Olds 98, 28; LeSabre, 28; Mercury, 41; Electra, 42; Chevrolet, 42; Ford, 54; and Pontiac, 61.

Luxury—Imperial, 36½; Toronado, 37½; Riviera, 38; Lincoln, 39; Cadillac, 41; Eldorado, 44; Mark VI, 54; Continental, 59; Corvette, 63; Seville, 72, and Cimarron, 87.

Senate bill would change product liability rules

Continued from Page 2

knew or should have known and one which used technology for which there was sound support in the scientific, technical or medical community.

In a related area, of special delight to the car companies, but possibly not acceptable to Waxman, the section on punitive damages says that a "negligent choice among alternative product designs or warnings, when made in the ordinary course of business, does not by itself constitute 'reckless disregard.'"

In other words, auto makers could save a bundle by having punitive damages assessed only on negligence in choosing a design or in warnings, but not on a "conscious, flagrant indifference" to personal safety.

The section on failure to warn rests on what a maker knew or should have known and what a "reasonably prudent" manufacturer would have done.

Warnings or instructions would have to be given to the user unless provided to a certain class of persons—suppliers to further manufacturers, for example. But a manufacturer would be off the hook for failure to warn about obvious dangers, and the results of misuse, alteration or modification. But a manufacturer would be strictly liable for breach of express warranty.

In the case of lawsuits involving vehicles, dealers would also usually not be included unless it could be shown by a preponderance of the evidence that lack of reasonable care in handling the products—prepping for example—or the seller's own breach of express warranty was the proximate cause of injury.

Another section says comparative responsibility does not bar recovery for third parties, but does reduce compensatory damages proportionate to responsibility.

Domestics' prices climb again, but slowly this time

Continued from Page 2

Corp. vehicles at this time is an unconscionable act and a betrayal of the dealer body. After committing dealers to a heavy ordering of vehicles during closeout to participate in a highly questionable incentive, you engineer a method whereby the dealer and the consumer pay the bill."

In reply, a Chrysler Corp. spokesman said: "We are having our national Chrysler-Plymouth and Dodge dealer council meetings in Detroit this week, and that is where this kind of matter is discussed with the elected representatives of our dealer body. We will not comment on the views of self-appointed critics."

Ford's price hike (Automotive News, June 7) was $89 on the Ford Mustang GT and the Mercury Capri RS. Options went up an average of $29 per car.

Ford also raised destination charges an average of $15. The new range is from $308 on Ford Escort and Mercury Lynx to $524 on Lincoln, Mark VI and Continental.

The engine hikes by GM and Chrysler and the increase on Ford performance models is an attempt to cash in on the improved sales of such cars and options during the current period of plentiful gasoline and rather stable fuel prices.

While car and option prices have risen this spring, the boosts are a far cry from the tornado-like blasts that the makers unleashed a year ago.

As noted, the GM hike averages $36 per car this year. Ford's is $29 plus a few dollars more when the Mustang GT and Capri RS increases are spread across the line, and Chrysler's is $91 plus whatever the engine boosts add to the full spectrum.

In 1981, GM prices jumped an average of $351 per car in April. The other two companies held off until May 1, when prices went up $178 and Chrysler's rose $194.

There were increases in destination charges both years. Chrysler's bump last spring was only $1, but Ford's was $16 and GM's was $25.

R&D continues on electrics, as GM eyes $2 gas

Continued from Page 2

members of the international racing press corps who were here for the Detroit Grand Prix.

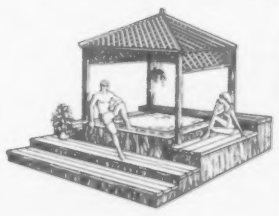
The latest electric-powered GM development cars use the Chevette body and are powered by nickel-zinc batteries.

General specifications of these vehicles are: A top speed greater than 55 MPH, an acceleration rate of 0-30 MPH in less than eight seconds, a range of 85 miles during highway speeds and 60 miles of city driving and eight hours to recharge a discharged battery pack.

Nickel-zinc batteries, on a pound per pound basis, can store two to two-and-one-half times as much energy as conventional lead-acid batteries, GM said. It added that development engineers predict the nickel-zinc battery pack will have a useful life of at least 40,000 miles.

The latest series of electric-powered test vehicles are expected to have logged over 250,000 test miles by mid-summer.

A new industry offers a great opportunity for automotive, owner-dealers, G.M's and sales managers



• SALES! • PROFIT!! • FUTURE!!!

Proven retail portable spa and entertainment packages. Our Los Angeles and Orange County dealer will do in excess of $12,000,000 in 1982. He says "it is better, it's easier, it's more profitable" than the automotive business while using the same techniques and personnel.

6 plants idle; week's total is 116,126 cars

Downtime shackles U.S. auto output

By Patricia Hoffman
Staff Writer

Marred by downtime at six U. S. car assembly points, last week's production was only slightly higher than that of the previous shortened holiday week.

Returning to normal five-day operations last week, the auto makers scheduled output at 116,126 units, up 3.79 percent from 111,881 built during four days the previous week, but down 30.52 percent from 167,125 units in the comparable 1981 week.

So far this year, the car manufacturers have assembled 2,320,934 cars, down 27.51 percent from 3,201,534 completed at this time last year.

With downtime scheduled at three of Chrysler Corp.'s four assembly points, the company built only 2.41 percent of last week's total.

Shares for the other companies were: General Motors, 66.17 percent; Ford Motor, 27.40 percent; Volkswagen of America, 2.72 percent; American Motors, 1.21 percent, and Checker Motors, 0.09 percent.

Idle last week were Chrysler's Belvidere, Jefferson and Newark facilities. The plants, down for inventory control, are scheduled to return today (June 14).

Chrysler's St. Louis point operated a daily nine-hour shift last week. It was the fourth consecutive week of overtime at the facility.

Two GM J-car plants were idle last week to control overstocked inventory. They were Framingham and Leeds. Framingham is slated to return today, and Leeds is scheduled to resume operations June 28.

AMC's Kenosha point, which was idled May 28 for vacation, is slated to return tomorrow (June 15) with production of the new Alliance models.

Saturday overtime was scheduled last week at GM's Linden point and Ford's Kansas City facility.

VWoA's Westmoreland plant resumed operations last week after a two-week shutdown to control inventory.

Peck's NHTSA begins 35-MPH car crashes

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — NHTSA contractors have begun high-speed crash testing on 1982-model cars.

Its resumption was promised by NHTSA head Raymond A. Peck in February, 1981, when he decided to drop the pass/fail rating system used by NHTSA under the Carter Administration. Instead, Peck's NHTSA will use charts showing comparisons.

He also announced previously a plan to test for repeatability of results of the 35-MPH crash tests—an issue raised persistently by the auto makers. The U. S. requires only that cars meet 30-MPH crash standards.

Last February, a 1982 Volvo was tested with spectacular crashworthiness results. NHTSA has decided to use Chevrolet Citations for repeatability tests, although those are not yet underway.

But 1982 models for the 35-MPH frontal barrier tests and windshield and fuel-tank tests have been acquired. NHTSA has also chosen most of the contractors for the tests, including Calspan, Dynamic Sciences, Transportation Research Center and National Technical Systems, West.

Up for testing are a Chrysler LeBaron convertible, Dodge Omni four-door hatchback, Dodge 400 coupe Dodge Colt four-door hatchback, Ford Escort four-door hatchback and Ford Granada four-door sedan.

Others scheduled to be crashed: Ford LTD four-door sedan, Lincoln Continental four-door sedan, Chevrolet Chevette four-door hatchback, Chevrolet Camaro coupe, Chevrolet Cavalier two-door hatchback and Chevrolet Celebrity four-door sedan.

Also, Chevrolet Impala four-door sedan, Honda Accord four-door sedan, Mazda 626 four-door sedan, Nissan Sentra four-door sedan, Nissan Stanza four-door hatchback, Renault Fuego coupe and Saab 900 four-door.

Also, Toyota Celica coupe, Toyota Corona four-door sedan, Volkswagen Quantum four-door sedan and Volkswagen Scirocco coupe.

Some of the 1981 models—notably General Motors J-cars (Chevrolet Cavalier, Pontiac J 2000, Cadillac Cimarron) — remain untested because of a dispute with the California testing firm Minicars.

Canadian makers build 21,600 cars, up a bit for week

Canadian auto production last week rose a fraction above the previous week's total, but output was below that of the comparable 1981 period.

The auto makers targeted 21,600 units last week, up slightly from 21,387 the previous week, but down 5.94 percent from 22,965 in the same week last year.

Year-to-date, the manufacturers have assembled 423,208 cars, up 3.39 percent from 409,312 at this time in 1981.

The truck makers estimated 13,145 units last week, a 4.01 percent gain from 12,638 the previous week and up 6.88 percent from 12,299 in the comparable week last year.

So far this year, there have been 250,869 trucks completed, a drop of 5.13 percent from the 264,426 units built by June 13 last year.

Chrysler Corp. has announced plans to end production of 1982 cars and trucks at its Windsor facilities on July 16. Assembly of 1983 vehicles is slated to begin Aug. 2.

American Motors' Brampton plant will resume second-shift operations July 19 with a production rate of 15 units an hour slated on each shift.

All car and truck facilities were reported working last week.

3 plants down, truck production holds at 43,000

With three plants idle and a one-day partial shutdown at General Motors' Moraine facility, U. S. truck production last week rose only slightly above the previous holiday week.

The truck makers scheduled 43,138 units last week, up 0.35 percent from 42,987 built during the previous four-day week and a 5.21 percent gain from 41,003 units in the comparable 1981 week.

Year-to-date production totals 913,353, up 9.75 percent from 832,200 in the same period last year.

Idle for inventory adjustment last week were Ford Motor's Louisville point and Chrysler Corp.'s Belvidere facility.

American Motors' Toledo truck point began a two-week vacation shutdown June 4. Operations are scheduled to resume June 21.

The S-truck line at three GM plants operated on daily 10-hour shifts last week. They were: Shreveport, Pontiac and Moraine. The Moraine plant cut S-truck production to six hours on Friday (June 11) to take inventory.

Chrysler's Warren facility worked a daily nine-hour shift last week. It was the 15th consecutive week of overtime at the plant.

Ford's Michigan truck point worked last Saturday.

Operations resumed last week at Volkswagen of America's Westmoreland plant after a two-week shutdown to control inventory.

57th year—$40 per year, $1.00 per copy

It appears, at this point, that it won't fly

Supercar plan gets a super panning by Administration

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The contest for the multimillion-dollar government-sponsored contest for a clean, safe, 100-MPG Supercar—an idea developed by Battelle Memorial Institute and backed enthusiastically by Rep. Bob Shamansky, Ohio Democrat—is going nowhere during this Congress.

In July, 1981, a House Science subcommittee held hearings in Detroit where the idea was panned by Ford and General Motors. Last week, the same subcommittee heard the Reagan Administration blast it both for philosophical reasons and for its unworkability.

A companion bill, introduced by Senator Ted Stevens, Alaska Republican, has seen no action so far.

The "supercar" bills offer prizes to American companies that develop very high mileage passenger cars—80-85 MPG for gasoline versions and 100 to 105 MPG for diesel. The car would have to carry four people and luggage, meet existing safety and emission standards and sell for $6,500 in 1982 dollars.

The big prize would be $140 million to the winner who would have to develop six prototypes and show feasibility of manufacturing and selling at a rate of at least 100,000 units per year for a minimum of three years.

Consolation prizes for the four runners-up would be $20 million each.

According to Shamansky, even if the project did not reach the prototype stage, it would be worthwhile to know that the technology exists and is available.

Battelle Chairman Dr. Sherwood L. Fawcett designed a vehicle to meet the demanding specifications using current and state-of-the-art technology. It would be about the size of a General Motors X-car or a Chrysler K-car but would be somewhat narrower, highly streamlined and would use aluminum, plastic and steel.

It would have an engine with or without a flywheel; have intermittent supercharging and a continuously variable transmission, regenerative braking, reduced rolling resistance tires and a lower accessory load. To achieve safety, it would have passive restraints and would be long enough to absorb crush.

Battelle officials have taken this idea to three domestic auto makers, four major oil companies, three auto suppliers, three insurance companies, a national car rental company, two investment bank houses and two major foundations.

All have said, in effect, what a good idea, but no thanks. Battelle says it would do the car itself but it does not have the money.

Last July in Detroit, Ford and General Motors — although deferring politely to subcommittee member Rep. Tom Harkin, Iowa Democrat, in his idea for joint government-industry cooperation on basic research — said industry itself could design

Due in September

Citroen pins hopes on BX

Citroen has released these pictures of the BX, a car to be introduced in Europe in September which is expected to add considerably to Citroen's sales volume. It will compete with such vehicles as the Renault 18, Opel Ascona (J-car) and Nissan Stanza. Peugeot has denied reports that the BX will be sold in the U. S. by Peugeot dealers, but Citroen has said the BX was designed to meet U. S. regulations.

52½-day stockpile of imports is on par with domestic level

By Richard A. Wright
Assistant Managing Editor

For the first time in recent memory, the inventory June 1 of new imported cars in the U. S. was heavier than the domestic stockpile — not much heavier, 52½ days compared with a 52-day supply of U. S.-built cars, but an indication of how rapidly situations can change in the volatile auto industry.

In fact, the import stockpile was down from 56 days a month earlier and was riddled with shortages.

Importers and their dealers had 399,030 new cars in stock June 1, which was up from 368,113 a month earlier. The lower days-supply level was the result of a stepped-up sales pace in May.

The inventory of new imported pickup trucks totaled 171,655, little changed from 171,097 a month earlier, but the pickup supply was also lower because of stronger sales, at 142 days. Trucks were in 168-day supply May 1.

The combined car and truck inventory was 570,685, a 65-day supply, compared with 542,710 May 1, a 72-day supply.

• Toyota and Honda continued to carry very lean stockpiles, both with 23-day supplies June 1. A month earlier, Toyota had a 29-day stock, while Honda had a 26-day supply.

Mercedes-Benz continued to be very short of cars with a 24-day supply. Also on the lean side was Porsche at 37 days.

The inventory of Japanese-built new cars in the U. S. totaled 270,651, up from 259,813 May 1. But the June opening figure represented a 44-day supply, down from 52 the preceding month because the increased sales pace more than offset the gain in unit count.

Japanese nameplates and their car days-supply levels were: Toyota, 23 days; Honda, 23 days; Subaru, 49 days; Mazda, 58½ days; Nissan, 62 days, and Isuzu, 187 days. Chrysler Corp. had a 147-day supply of Mitsubishi-built Colts, Champs, Challengers and Sapporos.

• The stockpile of West German-built cars totaled 80,729 new cars, up from 59,600 a month earlier. Most of the increase was accounted for by Volkswagen and Audi, which had 187-day and 163-day stocks, respectively, on June 1. VW also had a 127-day supply of U. S.-built Rabbits.

The other three German nameplates were in shorter supply — Mercedes-Benz, 24 days; Porsche, 37 days, and BMW, 51 days.

Inventories of other European lines included: Jaguar, 53 days; Volvo, 57 days; Renault, 70 days; Saab, 71 days; Peugeot, 113 days, and Fiat, 127 days.

Inventories of new imported pickup trucks June 1 were: Toyota, 78 days; Mazda, 104 days; Isuzu, 170 days; Chevrolet LUV, 178 days; Nissan, 189; Chrysler Corp. (Mitsubishi), 213, and Ford Courier, 311 days.

12.5 pct. financing for July; dealers spared depreciation loss

GMAC drops leasing bombshell

By Joseph Bohn
Marketing Editor

General Motors Acceptance Corp. is launching a new retail lease program, with a special 12.5 percent finance rate, that is certain to stir dealer interest and competitive controversy.

"Independent lessors are going to become unglued," when the program hits, predicted one leasing expert, noting the high rates which many are currently paying for their money.

On the other hand, GM dealers are enthused about the plan. Some are paying 17.5 percent for lease money right now and feel the GMAC program will inject new life into their business.

Novice lease dealers will find the program a "good way to get their foot in the door without a lot of risk," predicted the lease manager for one large GM dealership.

Under the program, GMAC retains title to the vehicle, and the dealer has no obligation to buy it back at the end of the lease period.

GMAC declined comment. However, it was learned the financial giant will begin advertising its program in trade and upscale consumer and business publications June 28.

Industry sources said the program is actually a re-introduction of a previous one, first offered about six or eight months ago, at a much higher finance rate. At that time, it failed to get much support.

This time around, though, GMAC seems determined to put it across.

Aside from the July introductory offer of 12.5 percent (plus $5.50 separate charge per vehicle; the rate reverts to 15.5 percent after July), GMAC began holding lengthy seminars with dealers last week to explain the program in depth.

It also is allowing dealers who write five leases within 60 days of signing up to keep a free computer, which they get up front to assist in calculating contracts, as a further incentive premium.

GMAC has not previously offered any kind of lease program that protects dealers against possible loss in estimating depreciation. (Unlike Ford, the company has never guaranteed the resale value of its vehicles.)

Essentially, the dealer and the lessor, depending on whether it was an open or closed end lease, assumed responsibility for depreciation. The dealer had to estimate residual value to handle the lease, and the responsibility to make up any difference went to him, for example.

Under its new program, GMAC removes this risk.

Near the end of the lease period, dealers inspect the vehicle in the presence of the lessee and make out a report on any liability for excess mileage or abnormal wear.

GMAC then appraises the ve-

V-8-6-4 case in New Jersey Supreme Court

DETROIT.—The New Jersey Supreme Court has granted General Motors permission to appeal the class-action status of a lawsuit filed against its Cadillac V-8-6-4 engine. The lawsuit filed by Adrian Karp 18 months ago was given class action status by Trial Court Judge Arnold M. Stein on Jan. 29, 1982. Both sides are scheduled to argue before the Supreme Court this fall. The suit charges that GM's Cadillac V-8-6-4 engine is defective and a safety hazard.

Lada pays if buyer loses job

AJAX, Ont.—Lada Cars of Canada, Inc., is offering a free one-year car-payment insurance plan that pays $200 per month for up to 12 months if buyers of Lada and Niva 4WD vehicles lose their jobs through involuntary layoffs. The program, offered in conjunction with a free 24-month/50,000-

IIHS cites public support for 5-MPH standard

Campaign to overturn bumper ruling begins

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The first move to overturn the weakened bumper regulation has been made by the Insurance Institute for Highway Safety.

IIHS is headed by William Haddon Jr., who was the first chief of NHTSA, now headed by Raymond A. Peck. In filing a petition for reconsideration with NHTSA, IIHS cited new evidence of overwhelming public support for 5-MPH bumpers.

The rollback — promised by the Reagan Administration and found by Peck to be cost-effective last May 18 — becomes effective July 6. That is too late for many companies to make changes in some '83 models.

IIHS, whose president has consistently criticized "eggshell exteriors" for autos, said the rollback from 5 MPH to 2.5 MPH means bumpers will be 75 percent weaker because crash forces increase with the square of the speed.

The new IIHS opinion survey was conducted by Opinion Research Corp. after the rollback announcement. Questions reflected cost and benefit figures given to NHTSA by the auto and insurance industries.

Its major findings:

1. Told that 2.5-MPH bumpers would lower the cost of new cars $20 to $40 and would improve fuel economy 2 to 6 gallons a year, 71 percent of those surveyed still preferred 5-MPH bumpers. Twenty-two percent chose 2.5-MPH bumpers, and the rest made no choice.

2. When the 78 percent of respondents who chose 5-MPH bumpers or who had made no choice were asked for their preference if 2.5-MPH bumpers "reduced car prices by $100," 82 percent still chose the 5-MPH bumper.

3. When the 22 percent who initially preferred the 2.5-MPH bumper and the ones who had no preference were asked what choice they would make if they knew the 5-MPH bumper would reduce premiums on collision insurance 10 to 20 percent, more than 40 percent said they would then prefer the 5-MPH bumper.

Taken altogether—lower new-car prices and gas savings but higher insurance costs — more than 75 percent of those polled preferred 5-MPH bumpers.

The poll, taken between May 28 and June 3, had 1,003 respondents.

The poll was designed so that about half were prospective new-car buyers.

They were asked whether the government should mandate that bumpers protect against damage up to some minimum speed. Of the 76 percent who answered "yes," 31 percent set the speed at 5 MPH and 57 percent thought it should be greater than 5 MPH.

This is the second Opinion Research Corp. poll taken for IIHS. The first was criticized by NHTSA, which said the "structure and specific questions asked did not compensate for the public's general lack of detailed information concerning the costs and benefits of bumpers."

In the new questions, ORC

Skoda gets new steering

The latest versions of the Czechoslovakian-built Skoda now arriving in West European markets feature one major change: Rack and pinion steering in place of worm and nut. In other respects, the rear-engined car is largely unchanged and sells primarily because of its low price. One unusual and longstanding feature is its aluminum cylinder block topped by a cast iron head.

But decline is only 1.02 percent to 173,648

June 1-10 U. S. new-car sales slip

By Jenny L. King
Staff Writer

Early-June domestic new-car sales narrowly missed their year-ago mark and ended the winning streak of three consecutive periods begun the first of May.

With General Motors' 12.8-percent financing program expiring at the end of May, it was no surprise that the biggest auto maker was down in sales; the surprise was that total sales weren't down substantially, and that Ford Motor Co. and Chrysler Corp. kept ahead of their 1981 levels without new consumer incentives.

Total for the June 1-10 period was 173,648, down 1.02 percent from 175,435 a year earlier. Two years ago sales dipped to 140,851 in early June, which was the worst total since 1958.

GM sales in early June dropped 6.58 percent, to 100,967 from 108,082 last year. Compared with the final May period, they were down 25.76 percent from 136,006, and they were down 29.90 percent from mid-May's total of 144,032, GM's best period this calendar year. The 12.8 financing was in effect during the May period.

Ford was up a healthy 18.57 percent the first June period, with sales of 47,881 compared with 40,383 a year ago. Chrysler sales climbed 4.77 percent, to 20,622 from 19,684.

Volkswagen of America, its sales down every period this year, suffered a 38.39-percent sales decline, to 1,778 from 2,886 in 1981. Estimated sales of American Motors passenger cars were 2,400, down 45.45 percent from 4,400.

• GM slipped to 58.14 percent of the market from its year-ago chunk of 61.62 percent. It was the corporation's smallest share since early April when GM sales accounted for 57.04 percent of the market.

Ford earned 27.57 percent, up from 23.02 percent. Chrysler was up to 11.88 percent from 11.22 percent. VWoA stood at 1.03 percent, down from 1.64 percent, and AMC had an estimated 1.38 percent compared with 2.50 percent a year earlier.

Six of the 14 U. S. makes reported sales increases during the first June period. Chrysler more than doubled its total, going to 5,174 from 1,913 last year. Lincoln, too, far exceeded last year's sales, up 135.55 percent, to 3,425 from 1,454.

Ford was up 17.20 percent, Mercury was up 5.63 percent, Buick was up 16.84 percent and Cadillac was up 24.68 percent.

On the minus side were: Plymouth, down 18.54 percent; Imperial, down 36.35 percent; Dodge, down 4.35 percent; Chevrolet, down 18.36 percent; Oldsmobile, down 18.85 percent; Pontiac, down 12.03 percent; VWoA, down 38.39 percent, and AMC, down 45.45 percent.

With nine selling days in the period this year and last, the daily-selling rate was down 1.02 percent, to 19,294 from 19,493.

Year-to-date domestic sales totaled 2,657,042, down 10.42 percent from 2,966,089 in 1981.

Small-truck price war heating up

By Matt De Lorenzo
Los Angeles Reporter

LOS ANGELES. — A price war in the compact-truck market is heating up with Nissan Motor Corp. in U.S.A. undercutting Mazda's $5,895 B-2000 with a $5,858 price tag on its Li'l Hustler.

The move forced Mazda to pull its television campaign touting the B-2000 as the lowest priced truck on the market.

Rod Hayden, senior vice president and general manager for Mazda Motors of America (Central), Inc., said his firm is studying the situation.

The $291 price cut by Nissan on its lowest-priced standard truck is part of an effort to combat the company's sagging sales in this market segment.

Through May, sales of Datsun trucks were down 25.8 percent, numbering 37,479, compared with the year earlier pace of 50,504.

Mazda, on the other hand, posted a 146.5 percent increase over the same period, moving 15,082 trucks, up from 6,118 units a year earlier.

Nissan's lowest - priced - truck campaign broke through a series of print ads which will be followed by television and radio spots in 61 major markets.

Although the L'il Hustler's price had been cut by almost $300, a company spokesman said the content level on the vehicle remains the same.

The truck is equipped with a 2.2-liter four-cylinder engine, four-speed manual transmission, power front disk brakes, maintenance-free battery and one-hand tailgate release.

• Mazda's entry has a 2.0-liter four-cylinder engine, five-speed manual, carpeting, tinted glass, steel-belted radial tires and one-hand tailgate release.

Part of the low prices on small trucks at both Nissan and Mazda may be attributed in part to tighter dealer margins.

Nissan's discount is about 11 percent, while Mazda's is in the neighborhood of 10 percent. Isuzu, which does not have a

Nissan's financing unit opens 1st U. S. branch

CARSON, Calif.—Nissan Motor Acceptance Corp., financing subsidiary of Nissan U.S.A., has opened its first branch office. The branch is at 2050 W. Chapman Ave., Orange, Calif.

NMAC was formed the first of this year by Nissan U.S.A. and its parent company, Nissan Motor Co., Ltd., of Japan, to provide wholesale and retail vehicle financing for Datsun dealers.

It is the first wholly owned financing subsidiary established in this country by an import automobile company, Nissan said.

Initially, the finance company is concentrating its efforts in Southern California and will expand to serve Datsun dealers nationwide as rapidly as its resources allow.

NMAC issued $5 million in commercial notes on May 10 through brokers A.G. Becker, Inc. The authorized capital of the financing company is $50 million.

In addition, NMAC announced the signing of three Datsun dealers: Brea Datsun, Brea, Calif.; Coast Datsun, Long Beach, Calif., and La Puente Datsun, La Puente, Calif.

Mileage rankings inaccurate, report finds

Energy Dept. rips EPA numbers

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—In the long-running battle over just how accurate EPA fuel-economy numbers really are, another peg has been added to the side saying "not very."

The discrepancy between real and measured economy is highly dependent upon the fuel delivery and drive system in a vehicle, according to the latest study from the Department of Energy.

In it, researcher Barry McNutt and aides suggested 1981-model vehicles on average are likely to provide 18 to 24 percent less mileage than measured by the EPA.

This shortfall is likely to be greatest (29 percent) for cars with rear-wheel-drive and automatic transmissions and lowest (9 percent) for front-wheel-drive cars with diesel engines and manual transmissions, according to the study.

For consumers this means there is still no certainty in the EPA Fuel Economy Guide, and

For a more benign view of ratings, see Page 20.

counting on it to rank vehicle fuel economy accurately is nearly hopeless, McNutt said.

In order to rank the on-road fuel economies of two vehicles with a 90 percent probability of success, they must be separated by 4.8 MPG or more, McNutt said. He said an adjustment for technologies might help but would lower the MPG spread only to 4.1 MPG.

The new findings by McNutt refined his earlier work which had indicated that the difference, particularly in highway driving, could be as high as 5 MPG between EPAs measured figure and actual driving results.

McNutt had said at that time the discrepancies undermined consumer confidence in EPA's fuel-economy labeling program and U. S. efforts to reduce fuel consumption.

In response, EPA undertook an analysis of its fuel-economy program and instituted changes, not the least of which was a requirement that manual-shift vehicles must be shifted at certain speed increments.

Those changes led to a decline in the mileage discrepancy in the 1979 model year, McNutt said. But the shortfall then began to increase again and the discrepancies for 1980 and 1981 were "significantly above 1979 levels," he said.

McNutt said he is a little

Rumbleseat Roadster

Johnson Motor Cars, Ltd., Inc., Fort Lauderdale, Fla., is producing, at four units a month, the Johnson Rumbleseat Roadster. Powered by a Cadillac engine and drivetrain, each roadster is equipped with functional rumbleseat, power steering and brakes, automatic transmission, cruise control, hardwood dash and trim and removable hardtop plus a convertible top. Available through a special dealer network, the roadsters retail for $54,900 each.

Local-content and reciprocity bills debated

House-Senate tug-of-war on trade

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Trade legislation has started to move as the 97th Congress goes into its final stretch.

Two weeks ago, a House Commerce Subcommittee reported a UAW-backed local-content automobile bill with such extraordinarily high content and such a short leadtime that it drew adamant opposition from the Administration.

The full House Energy and Commerce Committee, chaired by Rep. John Dingell, Michigan Democrat and a supporter of the measure, is not expected to address the bill until after the July 4 recess.

Meanwhile, last week, the Senate Finance Committee reported to the floor a watered-down trade reciprocity bill that received Administration endorsement.

Numerous similar measures to try to open foreign markets to U. S. products and services exist on the House side. But there is nothing that is sufficiently careful not to violate the General Agreement on Tariffs and Trade (GATT) or offend the Japanese before the November "ministerials" in Geneva as to be acceptable to the free-trading Reaganites.

• These two trade bills — one vehemently opposed by the Administration and the other accepted — are in a very general way mirror images. The UAW-backed bill — replete with 214 sponsors in the House but only 14 on the Senate side—is strong medicine.

The reciprocity bill, pushed mostly by Republican Senator John C. Danforth, up for election in Missouri which has both Chrysler and General Motors plants, is so weak as not to be of special concern to the auto industry.

The local-content bill that is strong in the House would exclude imports or force them to build plants in the U. S. The weak Senate reciprocity bill might to some extent open the Japanese market to American firms exporting or operating there.

The local content bill would require that 1983-model cars and light trucks sold in the U. S. have 8.3 percent local content for companies which sell more than 100,000 units. The percentage would rise in increments to 30-percent local content for companies selling more than 500,000 units.

The bill calls for increased local content in the 1984 and 1985 model years, so that companies selling 100,000 units would eventually be required to have 25-percent local content. Those selling 500,000 would have to have 90 percent local content.

Violation would result in a stiff import quota the following year. The bill would also mandate that auto makers certify U. S.-made parts as replacement parts for their vehicles.

The Senate reciprocity bill differs in its replacement-parts section and would include Canadian labor — but not Canadian parts in its definition of "domestic."

The reciprocity bill would give the President authority to negotiate lower trade barriers but would require attempts to open a foreign market before the U. S. retaliates. The language was considerably weakened from earlier versions which could have allowed an emotional Congress to react in hopes of reducing high unemployment at home.

It would apply to all countries—not just Japan.

To hamper the local-content

Aluminum casting plant is first scheduled shutdown since new UAW pact

Ford to close Sheffield plant in '83

By Marjorie Sorge
Labor Editor

Ford Motor Co. will close its Sheffield (Ala.) aluminum casting plant in the fall of 1983, laying off about 1,000 hourly and salaried workers.

It is the first plant closing scheduled at Ford since the new contract was signed with the UAW in February. In that contract, Ford promised to do a feasibility study on the continuing operations at Sheffield. Last November, the company announced the plant was to be closed in a two-year phaseout.

Those laid off at Sheffield will benefit from the new Guaranteed Income Stream (GIS) negotiated in the UAW - Ford agreement.

It gives laid-off hourly workers with 15 years seniority at least 50 percent of their hourly rate until age 62 or retirement. The rate of payment increases one percentage point for each year of seniority over 15 years up to either 75 percent of the weekly wage or 95 percent of the weekly after-tax base, minus $12.50.

Under the GIS, life and health insurance benefits are continued and laid-off workers receive pension and other retirement benefits they would have earned to the day of retirement had they continued working.

The average seniority of workers at Sheffield is 18-19 years.

According to company insiders, Ford had to weigh the cost of the closing, specifically the GIS program, and the lower cost of continuing the operations because of the concessions made in the international agreement.

Sheffield is currently Ford's sole U. S. aluminum casting operation. Company insiders say some of that work will be transferred to the Ford Windsor Essex casting plant, which is about one-fourth the size of Sheffield. The rest will be outsourced to suppliers such as General Motors and Doehler-Jarvis.

Sheffield makes aluminum castings for transmission cases, pistons, intake manifolds and engine front covers and is the sole supplier of the front-wheel-drive transaxle cases for the Escort and Lynx.

Last fall, Ford asked the 940 production workers at Sheffield to take a 50 percent cut in wages and benefits in exchange for profit-sharing in order to keep the plant open. The local union rejected that proposal.

Later, Ford told the production workers they could buy the operation under an Employe Stock Ownership Plan (ESOP), rather than see it closed. The workers rejected that proposal.

A phase-out was scheduled to begin in early 1982, but that was postponed when contract talks started and was put on the back burner while the study was being conducted.

Ford has said the Sheffield plant has lost money every year since 1974 and has wages and benefits that are higher than those of competitive firms. The company said those benefits, along with contractural work rules, caused the plant to lose $3 million a month.

There are 29 skilled trades classifications at Sheffield, compared with two at Essex, sources said.

GM orders tools for CVT line at French plant

DETROIT. — General Motors has placed an order with a local machine-tool firm that could put a continuously variable transmission for small cars into production in about two years.

A spokesman for Joseph F. Lamb Co., Warren, confirmed that GM placed a preliminary order for a line for its Strasbourg (France) plant, which produces transmissions for Opel cars. Production in the U. S. is also being considered by GM, he said.

The Lamb line would cut metal for the transmission housing.

The engineering is expected to start soon at Lamb, he said.

It generally takes Lamb 12 to 18 months to engineer and build a line. Actual production of the housings in France, therefore, could begin in about two years.

The CVT is expected to improve fuel economy in the range of 15 percent. It replaces today's system of gear shifting with a belt that adjusts ratio to torque, thereby providing smooth acceleration and improving efficiency.

Apocalypse soon? Auto analyst says maybe this fall

By Edward Lapham
Financial Editor

While many Wall Street analysts are at least mildly optimistic about the sales and profitability outlook for U. S. auto makers, one voice in the wilderness continues to warn of a "potentially cataclysmic" collapse later in the year.

Arthur G. Davis, auto analyst for Prescott Ball & Turben, Cleveland, believes that the May sales upturn was a false recovery, with the possibility that domestic sales could collapse again in the fall.

Davis, who has been consistently more bearish than most of his colleagues, said he believes there are several key factors in the market which could presage another downturn in sales, and that enactment of import restrictions could give the domestic makers some room to raise prices and bolster profits but would significantly delay the real auto industry upturn.

In his June report on the industry, Davis acknowledged that there has been a "significantly improved perception of the U. S. auto industry by investors" due to reduced inventories, rebate-improved sales, stronger large-car sales and cost-cutting labor agreements, which have led some analysts to raise their earnings projections.

"We believe estimates for 1983 will be reduced significantly in the months ahead as a result of significant worldwide price cutting in the small-car market, higher costs resulting from reliquification of balance sheets, lower production estimates for 1983 as a result of higher import penetration and reduced U. S. demand," Davis said.

• He told AUTOMOTIVE NEWS last week he believes some upper-income buyers, who can best benefit, will come into the market after the July 1 tax cut goes into effect, just as the lower-income buyers bought in the spring during the rebate period.

"The response to the GM 12.8-percent finance program shows the upper-income buyer has been worried about the financial markets," he said. "These are buyers who never gave a damn about finance interest rates before."

Davis said there is a chance that some of the upper-income buyers "pre-spent" their tax cuts during the GM program, meaning demand could be less than anticipated. He also said that rapidly rising gasoline prices in the summer could dampen large-car sales.

On the small-car side of the market, Davis said he sees more difficulty.

He said potential buyers of small cars, currently about two-thirds of the market, will not create a substantial upturn in sales until "new products are perceived to be good values and that prices are not going to go lower, a massive reliquification of personal balance sheets takes place or interest rates have been substantially reduced and/or gasoline prices increase significantly again."

The analyst said there is still price resistance in the small-car segment and that the intermediate car segment has fallen off in recent months. He said this is important because "Detroit's newest offerings" are in this segment.

"We believe there is a distinct possibility of a third dip in auto sales in late-1982 or early 1983, caused by the lack of consumer and business liquidity and an expected collapse in used-car prices in mid-1982," he said.

The gloomy sales scenario could be further darkened by a "world trade war" in econobox markets, Davis said. He assumes President Reagan will veto any import-restriction legislation and the U. S. market will be a "free market" after the current voluntary restrictions lapse next April.

Using that assumption, Davis has reasoned that the Japanese will gear up for that date in the small-car segment by readying new high-technology products and moving to cut prices and reestablish clear price leadership. This would put renewed pressure on the domestic makers to cut their small-car prices.

• He said he believes "upper-end" prices at '83 model introduction will be raised an average of about $500 but that small-car pricing action will be delayed until after the import-restriction matter is resolved.

"The U. S. car makers will wait to see if the imports get shut out before cutting prices,"

Is there a Bedford in GM's future?

By Richard Feast
European Editor

Delivery of Bedford's 1.5 millionth export vehicle in mid-May came at a time when the British firm's role within General Motors' new worldwide organization is being decided.

How it will pan out has not been revealed, but John Fleming, Vauxhall Motors Ltd.'s new chairman and managing director, stresses that his company's Bedford Division will play a major role.

GM's worldwide medium and heavy truck and bus operations will have input from GMC Truck & Coach and Chevrolet Divisions in the U. S., Bedford in Europe and Japan's Isuzu Motors Ltd., in which GM has a 34.2 percent financial interest. It is expected to result in international designs and maximum use of common components.

Fleming, an American whose background includes sales and marketing positions at GM's Oldsmobile Division in the U. S., characterizes Bedford's 50 years of experience as a heavy truck manufacturer and exporter as "ensuring" its contribution to the rationalized future of the world's largest producer of motor vehicles.

GM currently sells GMC and Chevrolet (U. S.), Bedford (British) and Isuzu (Japanese) trucks and vans in a number of countries.

Bedford's export earnings during the past decade—which includes boom year 1978 as well as the recent recession—totaled over $2.1 billion.

The 1.5 million exports—approximately 1.25 million trucks and 250,000 vans—represent almost half of Bedford's total production of commercial vehicles.

The milestone truck was one of a $3.6 million order for 60 TM 4x4 units received from Abu Dhabi in the United Arab Emirates. The truck is a civilian four-wheel-drive derived from a military version developed by Bedford, a large defense contractor.

The Bedford commercial vehicle operation traditionally has been the strength of Vauxhall Motors; its most recent losses are attributed to passenger car operations.

However, tremendous improvement in Vauxhall car sales this year—based on the success of the locally assembled Astra (Opel Kadett) and Cavalier (Opel Ascona)—may change this. It coincides with a continued slump in worldwide demand for heavy trucks, which has hit Bedford the same way it has other truck makers.

In the immediate future, therefore, it looks as though Vauxhall's promised drive back to profits will be centered on passenger car operations.

The commercial vehicle business has been thin. In the past two years domestic demand dropped by 25 percent. More recently, Bedford's largest single export market, Nigeria, was hit by a fall in the price of its oil exports, and the impact has not yet been fully felt.

But the company is fighting back. General Export Sales Manager David Butlion reports two new international zone offices have been established in key export areas, Dubai and Singapore.

It is in less developed areas of the world such as those that European truck makers are meeting the Japanese challenge.

Diminished demand has taken its toll on production levels at England's Dunstable truck factory. The TM (16 to 44 tons) is being made at the rate of eight a day compared with single-shift capacity of 32. A senior executive says he would be "happy" to see output of 20 a day.

In a separate area, other models are being produced at a rate of 48 a day compared with single-shift capacity of 120. This section is concerned mainly with production of the TK and TL, which account for around 80 percent of output, plus knock-down kits for the TJ and bus production.

Bedford export vehicle 1.5 million comes off the line at Dunstable, England. On the podium is Vauxhall Motors chairman and managing director John Fleming, second from left. On his left is Abu Dhabi dealer Omeir Bin Youssef, and on his right is general manager Fathi Elwan. At the microphone is Norman Lamont, British industry minister.

The TK and TL have broadly similar weight limits (5.7 to 16.5 tons), the TK being an older, less sophisticated vehicle. The TJ, into its fourth decade, has been the mainstay of much of Bedford's export business.

Bedford light vans and pickups are made at passenger car assembly facilities at Luton. In what is a sign of the times, Bedford sources its light and four-wheel-drive pickups from Isuzu in Japan.

The return of the sporting Bentley

Mulsanne Turbo sales will begin in September.

By Richard Feast
European Editor

Deliveries of the new Bentley Mulsanne Turbo, announced at the Geneva auto show in March, start in September.

British manufacturer Rolls-Royce Motors Ltd., forecasts sales of 100 this year, and double that in 1983.

At prices in its country of origin of about $105,000, the Mulsanne Turbo should contribute handsomely toward its upkeep in the Rolls-Royce stable.

It is priced $11,700 above the regular Mulsanne, a Bentley equivalent of the Rolls-Royce Silver Spirit which was introduced at the 1980 Paris auto show.

The Mulsanne Turbo will be sold in all but four of the company's export markets. Those four are the U. S., Canada, Australia and Japan.

It is hard to understand why Rolls-Royce should ignore North America which last year accounted for 37 percent (1,197 units) of the company's total sales and brought in $77 million in revenue.

The initial answer is that the turbocharger system is on the carburetor engine. It is not on fuel injection engines which sell well in the four countries.

Still Rolls-Royce is trying to generate North American interest. It went to the trouble and expense of flying U. S. reporters to preview the car in the Le Mans area of France in May.

Le Mans was chosen because of Bentley's historic connections with the race track. The legendary "Bentley Boys" won five 24-hour races there in the 1920s and '30s.

Mulsanne is the name of the long straight which is the fastest part of the Le Mans circuit. In driving the Bentley Mulsanne Turbo, it is easy to whisper up to the car's maximum speed of 135-MPH on this section.

The Turbo represents a return to the sporting Bentley, last marketed 30 years ago with the R-type Continental. Since then Bentleys have been simply badge-engineered Rolls-Royces.

The Turbo blows away any cobwebs which might have gathered on that image. It is extremely fast, with performance to match the best Mercedes-Benz or Jaguar V-12. Yet it is quiet and smooth—a sports sedan for a gentleman rather than a macho machine for a hairy chested brute.

A Garrett AiResearch turbocharger and other engine and transmission modifications add 50 percent power output, the company says, without quoting horsepower figures.

Speed governed down to 135-MPH, acceleration from zero to 60 in 7.4 seconds and from 50 to 70 in 5.5 seconds indicate the 2.5-ton Mulsanne is propelled by considerable power and torque output.

However, statistics from a West German source indicate the regular carburetor Mulsanne V-8 produces 198-HP and the turbocharged version 298.

Apart from raising the final drive ratio, little else was done to the Turbo version. Suspension, brakes and steering are the same, and the only visual differences are the emblems and radiator grille, which is painted the same color as the body rather than chrome-plated.

Another new feature is high speed-rated Avon Turbosteel radial tires specifically developed for the car.

There are small improvements to gasoline economy too. Overall, there is a 5 percent gain over the normal Mulsanne, to the equivalent (in U. S. gallons) of 12.9-MPG. There are gains at constant speeds, but a small decrease on the urban cycle.

Fuel consumption never has been a Rolls-Royce strength. In the past it has not mattered, but now the company is moving in the direction of gas saving. The next advance will come in the mid-'80s, when a revised version of the current model appears.

Toward the end of the '80s, an all-new generation of Rolls-Royce models will appear. Because they will be much lighter weight, it is unlikely that they will be powered by the current 6.8-liter V-8. A six-cylinder, possibly turbocharged, is more likely.

Although current models are very heavy, it will be hard for Rolls-Royce to shed weight the way other auto makers have. Rolls engines, gearbox casings, back axle housings, doors, trunk lids and hood already are made of aluminum.

Weight reduction will be achieved, says Jack Read, project engineer responsible for the Turbo, by "more detailed calculation at the design stage."

Auto sales bombed out before Falkland war

The Falkland Islands conflict in the South Atlantic cannot have done much to generate auto sales in Argentina, already at their lowest level in recent times.

In the first quarter of 1982 registrations plunged by almost 63 percent to 23,216. On an annual basis that would result in fewer than 100,000 units, compared with 175,526 last year and a record 249,150 in 1980.

The recession, collapse of the local currency and rampant inflation have taken their toll.

A government decision to eliminate tariff barriers between 1976 and 1980 also led to a thinning out of local industry and growth for imports.

Citroen and General Motors pulled out of manufacture in the country, and Chrysler sold out to Volkswagen. More recently (1981), Peugeot abandoned the joint manufacturing deal with Fiat that had been formed only a year earlier.

The result is just four domestic auto manufacturers in Argentina—Ford, Fiat (which still assembles some Peugeots), Renault and Volkswagen. Despite the small market, they have had to concede about 20 percent of sales to imports.

Political considerations aside, Argentina's immediate automotive future does not hold much hope, and European makers are quick to point to performances of their Argentine and Brazilian subsidiaries for much of their current financial problems.

First-quarter new car registrations in Argentina were:

	1982	1981
Fiat	5,513	11,010
Ford	7,050	17,484
Renault	6,944	16,212
Volkswagen	2,059	16,277
Imports	1,650	11,119
Total	23,216	62,102

Japanese car sales slip in W. Germany

Has West Germany done what most nations around the world have failed to do—stem the increase in Japanese registrations without blatant resort to tight quotas?

First-quarter 1982 returns from Germany's *Kraftfahrt Bundesamtes* indicate Japan's market share was sliced by nearly 2.5 percent compared with last year. At the same time the Japanese lost their leading importer status in West Germany to the French.

West German motor industry officials say it is too early to be sure the Japanees tide has turned, pointing out that preliminary figures for April show a rise for Japanese makes.

In the first three months of this year, combined Japanese registrations were 49,105, a market share of 8 percent and a fall in volume from the same period last year of 28.6 percent.

Total registrations in West Germany last January - March were down 7.3 percent from last year.

Registrations of French cars fell by 9.9 percent (to 51,385 and 8.4 percent market share). The Italians managed an 8.4 percent volume improvement to 31,769 (5.2 percent market share).

Imports in West Germany took 24.1 percent of the market, four points lower than the opening quarter of 1981.

Alliance is part of a grand plan

By Richard Feast
European Editor

Pierre Tiberghien, recently appointed joint director general of the Renault car division, is philosophical about the French firm's 1981 loss of $112.5 million.

"It boils down to one thing," he declares. "We lost 240,000 vehicles compared with the previous year, and 11 percent of production in a big company makes a lot of difference.

"Some years we make profits. Some years we have light losses. Some years we just break even. But we are constant in our investments.

"Investment, in the past year, represented seven percent of our total turnover. Good year, or bad, it's the same, so that our muscle will still be the same, regardless of the good and bad."

Production totaled 1,811,626, after hitting two million for the first time in 1980. Renault's figures indicate 84 percent of its 1981 production was in France —a situation which will change considerably next year with the start of Alliance (R9) output in the U. S. this year.

Of total production, Renault 5 accounted for 37.9 percent (587,000), and the R18 22.1 percent (342,000).

From introduction in August, nearly 74,000 R9s were made in 1981 or 4.7 percent of production.

The 9 recently went into production at Palencia, Spain, with volume prospects of up to 70,000 a year.

Production of the Alliance—pronounced *Alley-arnce* by the French—begins this month in the U. S.

Tiberghein reveals that Alliance will differ from the 9 in bumper size, trim and in having a fuel injection engine. He also notes a difference in spare wheel location — underneath the trunk on the outside in Europe, and inside the trunk in the U. S. It also will be inside the trunk for models sold in Canada, Mexico and Venezuela.

Tiberghien stresses the 9 will not cause the demise of the R14, a two-box hatchback of similar proportions: "Sales of the R14 may have dropped on account of introduction of the R9, but this middle-class segment is very big — the only one in Europe that has increased.

"We had only a two-box model to offer. We now have achieved our goal with a three-box style. We want to stick with this advantage."

A colleague cites a precedent. "We had the R4 that for 21 years was rather successful. We planned, at a certain time, a Renault 6 to follow the R4. But the R4 outlived the R6. We are spoiled. We can't imagine a car can be obsolete in nine or 10 years."

• The move into manufacturing in North America is another step in a process of moving outside France which began for Renault in the early 1950s when it licensed Hino, of Japan, to build a Renault car, and took a minority interest in a Spanish maker.

While the Japanese deal has long ended, Spain has blossomed, to the extent that it is now fully part of the Renault group and the leading manufacturer in Spain.

In the late '50s and early '60s Renault moved into Argentina, Brazil (later sold to Ford in 1967), Chile and Mexico.

Renault recognizes its absence in Brazil. "It's more a gap in the possibility of doing anything there. Certainly it will be important for Renault. We know it's necessary to be in Brazil," says Tiberghien. "It would cost a lot of money."

Business prospects in South America are not good at present. In Argentina, where Renault recently overtook Ford as market leader, it has suspended production at the Cordoba factory because of the recession's impact on new car sales.

A senior Renault executive notes, "One of the strengths of Ford and General Motors in South America is based, in great part, on their truck business. It's another type of operation we would love to develop in the future."

Renault also reveals that when viewing possible bases for assembly in Asia it looked at Taiwan (where the 9 will be assembled) and Korea.

Says Tiberghien: "We tried to have an agreement with (Korea's) Hyundai but did not succeed. They wanted a replacement for the Pony, and we discussed the possibility of them producing the R9. But, because of political and economic crisis, they stopped conversations with us." The contract with Hyundai apparently went to Mitsubishi.

• Tiberghein, a technical man by background, was a director of research and design at Renault before moving into a senior management role. He is taking a special interest in the vehicle Renault is designing in a government-sponsored project to produce a car capable of running 100 kilometers on three liters of fuel.

That is the equivalent of 78.4-MPG (U. S.) and is based on a one-third mix for the ECE urban/56/75-MPH test cycle. The delivery date is 1985 for the car, known as the Vesta. (Peugeot is working on a model known as the Economy.) The work is financed 50/50 by the auto makers and the government. Renault's vehicle features a small diesel engine — probably turbocharged, if Renault's recent record is an indicator.

Output drops, Renault sees red in 1981

PARIS. — Renault Group has reported a net loss of $112.5 million for 1981 compared with net income of $106.4 million in 1980. Total revenues for the 1981 rose 10 percent to $14.6 billion.

Renault said the loss for 1981, which is called "one of the most difficult years for the world auto industry," was the result of decreased volume, increased competition in world markets and a sharp rise in financing costs.

The company said 1981 production of passenger cars and light commercial vehicles declined 11.8 percent to 1,811,626 from the record total of 2,053,000 in 1980.

Renault also said its net loss for 1981 reflected its share of the $137 million net loss posted by American Motors, in which Renault has a 46.4 percent equity interest.

In 1981, total revenues from the automobile division rose 7.9 percent to $10.3 billion. French home market sales accounted for 49.4 percent of the total while export sales accounted for 50.6 percent.

Renault said its RVI industrial vehicle unit incurred a trading loss of $17.6 million and a net loss of $51.3 million, due to extraordinary expenses, despite an 11.8 percent increase in sales to $2.1 billion.

The French auto maker said its financial subsidiaries realized a net profit of $39.1 million compared with $36.3 million in 1980. Total revenues for the finance units were $1.4 billion last year compared with $1.1 billion in 1980.

Renault said that despite the negative results for 1981, it expects to maintain a "record level" of investment. The company said its 1981 capital expenditures totaled $1.3 billion and should total $1.5 billion this year.

Rover moves in new directions

Launch of the High Capacity pickup and County station wagon is the third stage of Land Rover's 200-million-pound ($360 million) investment program by BL Ltd.

Later this year the British company's Range Rover will be offered for the first time with an automatic transmission option.

Subsequently there will be another model to fill the gap between the utilitarian Land Rover and more luxurious Range Rover. Details are secret, but insiders say it will be built around a Land Rover with the coil springs Range Rover.

Towards the end of 1983 the company will start production at Acocks Green of a V-8 diesel Perkins is developing as part of a $20 million project.

Earlier stages in the Land Rover product development program included a V-8 gasoline Land Rover in 1979 and four-door Range Rover in 1981.

The automatic to be introduced this year reportedly is a Chrysler unit with a lock for first gear — vital for off-road work.

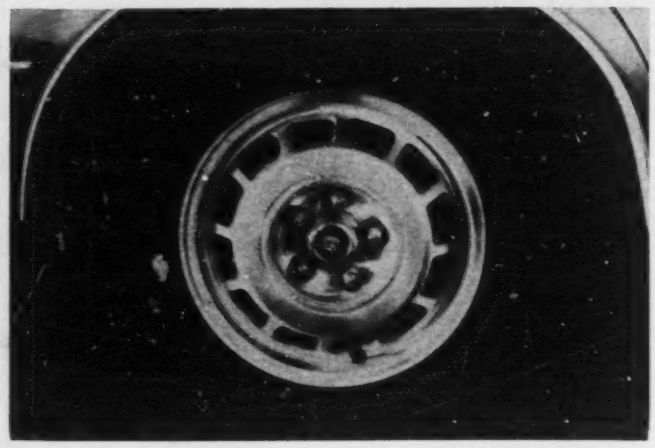
Last year the off-road division of BL made 10,441 Range Rovers — up from 9,684 the previous year — and 41,060 Land Rovers (51,378 in 1980).

Those figures reflect a worldwide downturn in demand for vehicles. More importantly, says the company, its output per worker has improved, with a manpower reduction of more than 20 percent to 10,800.

At present Land Rover works a single shift plus Saturday mornings. Increased demand could raise the prospect of double-shift operation — a radical step until it is known for certain that demand could be sustained.

Fully committed engineering resources mean that the earliest Land Rover could contemplate an entry in the U.S. market — the largest in the world — would be 1984. Canada, however, could provide an earlier stepping stone.

Less bounce in rubber market



Radial tires and smaller cars are helping to slow the growth of world rubber demand.

Market and product changes in the automotive business are affecting the worldwide rubber industry.

Forecasts by the International Institute of Synthetic Rubber Producers Inc. (IISRP), however, indicate moderate increases in demand for that material in both North America and Western Europe throughout this decade.

That's the gist of a long range industry forecast for synthetic rubber consumption says M. J. Rhoad, managing director of the IISRP, whose estimates are compiled by statistical committees in North America and Europe.

Projected is a 2.8 percent average annual growth rate for synthetic rubber in the U.S. and Canada from 1981 to 1990. Total rubber consumption (synthetic plus natural) matches this growth rate, with synthetic rubber continuing to hold approximately a 75 percent share.

During this decade the percentage of total rubber going into tires and tire products will decrease from 63.3 to 62.4 percent in North America, it's predicted. Longer wearing radial tires, along with smaller tires for smaller cars, contribute to the projected slower growth rate in tire rubber demand.

Steady recovery of both the U.S. and Canadian economies after poor showings in 1981 fourth quarter and 1982 first quarter is expected to result in a gain in rubber consumption of 4.9 percent in 1982 over 1981. After 1982, moderate growth is projected to 1990 for both tire and non-tire segments of the industry.

In its 10-year forecast for rubber consumption in Western Europe, the IISRP notes that since its last study, the recession in Europe "has deepened both in terms of effect on the market and time span." The longer term forecast consequently has been reduced from previous 1.8 percent annual growth rate for total rubber consumption to 1.4 percent for the period 1980-1990.

An additional factor in the European forecast for particular polymers is the changing pattern of use in the automotive industry, expected to be effective by the middle of the decade.

The IISRP is an international industry association headquartered in Houston.

Space at Pininfarina (Industrie) SpA's research and study center was more than doubled early this year with opening of a new premises at Cambiano on the outskirts of Turin. The Italian producer of special and deluxe bodies retains its wind tunnel operation at Grugliasco, about a 20-minute drive away. The Cambiano building (top photo) is pictured before landscaping took place. The special Jaguar (bottom photo) will be housed in the facility's museum. Pininfarina was founded in 1930.

More plastic in Europe's cars

Western European automobile manufacturers are forecast to build their consumption of plastics from some 600,000 metric tons at present to nearly 915,000 tons in 1985 and just under 1.5 million tons by 1990.

Total value of the market will increase—in constant 1981 dollars—from $1.2 billion at present to some $3 billion by 1990, according to a study by Frost & Sullivan Inc.

The driving force behind this growth is the expanding role of plastics in automotive manufacturing. The average weight of plastics in European cars is expected to rise from 60 kilograms (132 pounds) in 1980 to 75 kg (165 pounds) by 1985 and 100 kg (220 pounds) by 1990.

At the same time, the automotive industry is expected to recover from its current depression, with production seen increasing from 10.4 million vehicles in 1981 to 12.5 million in 1985 and 14.8 million in 1990.

Growth of plastics in the smaller commercial vehicle market will be somewhat slighter over the decade, with consumption projected to rise from some 53,000 metric tons at present to 79,000 tons in 1985 and 111,000 tons by 1990.

While the commercial sector will remain a considerably smaller market for plastics than automotive, some developments are under way to increase demand. For example, consumption of plastic trim is on the rise as truck cabs become less spartan. Additionally, complete all-plastics cabs have been developed in the last 10 years, prodded by lower tooling costs for metals—particularly in large trucks with short production runs.

• The principal competition for plastics in automotive applications will come from steel and aluminum sheet, and aluminum and zinc castings, F&S says: "In the case of sheet form components, i.e., large body panels, non-structural items are governed chiefly by total cost considerations. For mass production of these components, plastics are more expensive than steels on raw materials cost and take longer to process.

"Aluminum alloys fall between most plastics and steels on both costs. In the case of doors, which have a side intrusion legislation requirement, metals have the added advantage of better energy absorbtion on sudden impact. Hence, the prospects for plastics coatings over large body panels are not good."

On the other hand, plastics are expected to continue to take over from metal castings and pressings in such "three-dimensional" parts as inlet manifolds and headlamp components.

Also, the move to improved aerodynamic styling on cars and trucks, to spur fuel savings, is making spoilers and wind deflectors important new markets for plastics, the report adds. F&S speculates the next major development in aerodynamics styling could be complete underbody shells, which could boost consumption of plastics in cars by about 25 kg (55 pounds).

Current applications of plastics in automobiles principally are divided between such established uses as seating and interior trim and the newer metal replacements. As demonstrated by the variety of bumper systems found on European cars, the competition between different plastics materials is intense.

Under - the - hood applications have been another significant growth area for plastics in recent years. For example, nylon has displaced pressed copper alloys in radiators and tanks, while a variety of plastics have replaced steels in heater boxes, air filter housings and ducts.

Analyzing the market by materials, F&S says polypropylene, nylon and polyurethane are expected to be the dominant materials and should enjoy the greatest growth during the decade. Thermosetting polyester, acetal, polycarbonate, modified polyphenylene oxide and polyethelene also are forecast to significantly increase their market shares.

Of the national markets, West Germany and France will maintain their dominant positions in the automotive industry and, with it, the largest markets for automotive plastics, F&S says.

IVECO adds water-cooled light 'Z' diesel

BLUE BELL, Pa.—A water-cooled light diesel has been added by IVECO Trucks of North America, Inc., to its line of light-duty "European-class" Z-Series vehicles.

The new model, the Z-110, is powered by an in-line, six-cylinder, 110-HP IVECO diesel which is teamed with a five-speed manual transmission. The vehicle has a GVW rating of 9,995 pounds.

The water-cooled diesel joins the Z-100, an air-cooled, five-cylinder, 108-HP Deutz diesel model introduced late in 1980. Both models are produced in Brescia, Italy, using components from IVECO plants throughout Europe.

Like the Z-100, the Z-110 is aimed at the emerging Class 2-through-5 markets in the U. S., according to James R. Bostic, IVECO/North America president.

Applications include leasing, for-hire transportation, agriculture, utilities, air-cargo delivery and construction and wholesale/retail trades such as contractors, automotive parts suppliers, florists and bakeries.

• In these applications, Bostic said, the Z-110 is expected to provide similar economy—up to 18 MPG—as the Z-100, with actual mileage varying by user.

Rated at 110 HP at 3,000 RPM, the Z-110's 333.5-cubic-inch engine develops a maximum 214 foot pounds of torque at 1,800 RPM, and has a 17-to-1 compression ratio, 4.06-inch bore and 4.33-inch stroke. It is equipped with a Robert Bosch direct fuel-injection pump.

"The engine, unlike many light-duty diesels, is fully rebuildable," said Bostic. "The crank is regrindable and the valve seats and inserts can be replaced. Dry-sleeve liners are standard.

"The engine carries a 100,000-

Cummins' first diesel installation

Cummins Engine Co. installed its first truck diesel in this vehicle in 1932. The truck was owned by a California firm, Purity Food Stores. With the truck are Clyde Tatman, left, Purity driver who drove the vehicle from Columbus, Ind. (Cummins headquarters) to California, and Jay Chambers, Cummins service manager.

Diesel longest in use is sought by Cummins

COLUMBUS, Ind.—The longest-running Cummins engine still in active service is the target of a search by Cummins Engine Co. to commemorate the 50th anniversary of diesel trucking in America.

In 1932, Cummins and a California food-store operator cooperated in what the engine manufacturer calls the nation's first commercial installation of a diesel truck engine.

At that time, Cummins worked with the transport division of California's Purity Food Stores to install a six-cylinder diesel producing 125 HP. A few months later, Savage Transportation of San Francisco (now P.I.E.) purchased four Cummins-powered trucks.

From then until World War II halted civilian production in 1941, Cummins concentrated on truck diesels, with sales rising from 133 units in 1933 to more than 4,700 engines in 1941.

"We hope we can find some of those early engines still running," said Roger Howsman, Cummins vice president for North American field sales and service.

• Eligible entries in the hunt for the longest-running engine, according to Cummins, must still be used in daily or periodic commercial transport and carry verifiable information about the engine's age and serial number.

No museum or antique trucks are eligible, the company said, and all engines entered must have been sold originally for use in an on-highway licensed truck or tractor.

First prize in the search is a

Inspecting new Cummins diesel

Inspecting a new Cummins L-10 diesel engine at International Harvester's Louisville foundry are, from left, Joe Booker, president, UAW Local 817; William Salzmann, foundry manager; Jim Gardner, raw materials director, Cummins Engine Co.; J. Thomas Ley, foundry sales manager, IH Manufacturing Group, and R. W. Dunham, the group's manufacturing operations vice president.

IH will produce engine blocks for Cummins

CHICAGO.—International Harvester will provide engine-block castings for Cummins Engine Co.'s NH line and the new L-10 heavy-duty diesel engines, according to J. Thomas Ley, foundry sales manager, IH Manufacturing Group.

The blocks will be produced at the IH foundry in Louisville, where thin-walled, high-technology diesel-engine block and head casting has long been a mainstay, he said.

"Our Manufacturing Group is emphasizing a buildup in OEM sales and this agreement with Cummins is one of the results," Ley said. "It is indicative of our capability as a service-oriented supplier of iron castings."

The Cummins NH line block displaces 14 liters, or 855 cubic inches, and accommodates in-line six-cylinder designs ranging from 300 to 475 HP. The engines are applied primarily in heavy trucks and a variety of construction, agricultural, marine and industrial power applications in worldwide markets.

The compact, lightweight L-10 represents Cummins' latest advancements in diesel design and technology and displaces 10 liters, or 611 cubic inches. Harvester is a major source for blocks for the new engine.

Ley estimated that production of Louisville foundry blocks for the L-10 and NH line engines will result in multimillion-dollar annual sales.

truck industry news

Light trucks continue big gains

Registrations in April highest since July, '80

April registrations of new trucks of all types in the U. S. were the highest for any month since July, 1980, and the April total was the greatest in two years.

During the month, according to R. L. Polk & Co. statistics, there were 218,651 new-truck

Table on Page 33.

registrations, an increase of 17.6 percent over last year's 185,927. The best previous month—July, 1980—saw 222,249 tallies.

The current April total was about 2,000 units short of the 220,595 vehicles registered in the same month in 1980. The all-time April high was achieved in 1978, when 319,622 trucks were tallied.

The four-month total also was the highest in two years. Through April, the count was 752,839, up 9.6 percent from the year-earlier 686,657, but down 14.6 percent from the 881,327 units registered in the same period in 1980.

Through April, light trucks were the only market segment to show a gain over last year. Mediums continue to lose ground, but the heavies rebounded slightly as a result of a surge in Group 7 tallies in April.

There were 696,949 light-truck registrations over the four-month span, with significant gains in all three weight classifications. The total through April was 12.5 percent higher than last year's 619,493.

Group 1 tallies in the January-April period climbed to 388,429, up 13.5 percent over the year-earlier 342,355 units. Registrations of the non-captive imports totaled 96,798 units, 5.9 percent higher than the year-ago 91,381.

Through April, the Group 2 count was up 10.9 percent, from 272,874 units in 1981 to 302,519. There were 1,936 import tallies, 53.9 percent higher than last year's 1,258 units.

In Group 3, the four-month total was 6,001 units, an increase of 40.7 percent over the 4,264 tallied in 1981.

Through April, medium-truck

GMC's '82 share boosted 8 points by Group 7 surge

A surge in Group 7 GMC registrations in April resulted in a sharp increase in the four-month heavy-truck penetration by the General Motors truck builder.

During the month, 3,324 Group 7 GMC trucks were registered, more than triple the 950 units tallied in the same month a year ago. It helped boost the GMC Groups 7 and 8 total for the five months to 9,135 units.

Through April, GMC heavies accounted for 21.02 percent of the industry total, a gain of 8.01

With consignment selling

Car Exchange taps private-party market

Continued from Page 26

of America employe, said that dealers participating in the program would have facilities available to do such work and, as a consequence, service for consignment vehicles would become another profit center.

When a car is sold through the Car Exchange, the seller must pay a daily storage fee of about $2 a day, plus an 8 percent commission on the sale price, as well as a service fee of $175.

The Car Exchange advertises locally in the San Diego area on television and in print ads. If the seller wants his or her car specifically mentioned in the standing Car Exchange ad, the seller shares the advertising cost with Car Exchange. That charge, according to Pieri, typically is about $20 to $30 for a weekend run.

In its first year, the Car Exchange posted $1 million in gross sales, according to Pieri. This year it is rapidly approaching the $2 million mark, and Pieri estimates that at any given month the firm has at least $1 million in inventory or approximately 200 cars on the lot.

Pieri said there are many advantages for both the buyer and seller. The buyer can come to one location and look over a number of cars in many different price ranges. The seller does not have to go through the hassle of advertising and showing the car to prospective buyers.

In addition, the car is on display seven days a week and the Car Exchange has salesmen on hand to show the cars.

Pieri and Riggs said they plan to offer the franchises to dealers for $25,000 each, plus a royalty based on each location's sales. Any national advertising will be funded from the royalties, and Pieri said they plan to offer commercials to the local dealers that will allow them to plug in their names and locations.

Their target is to have at least one dealer in each of the 208 major television markets in the U. S. By the end of their first year, they hope to have at least 125 dealers.

"Our program lets the dealer tap into a new segment of the market," Riggs said. "It gives him an inventory for which he pays nothing and at the same time he receives a fee for storing that inventory, plus commission."

Quarterly profits up 50 pct. for Subaru America

PENNSAUKEN, N. J.—Subaru of America, Inc., said its second-quarter net income for the period ended April 30, 1982, rose 49.8 percent to $9.531 million ($1.58 a share) from $6.364 million the previous year, despite a drop in total revenue.

Net sales for the period declined 3.8 percent to $234.7 million from $243.8 million.

The company said "a number of factors" led to the improved profitability. Subaru cited an increased contribution from its distributors, "optimum utilization" of accumulated working capital and growth from increased sales of Subaru replacement parts and accessories.

The strong second-quarter results brought net income for the first six months of the company's fiscal year to $20.3 million ($3.35 a share), up 65 percent from $12.3 million ($2.04 a share) the year earlier. Net sales in the half rose 8 percent to $503.9 million from $466.7 million.

Truck registrations in April highest since July, 1980

Continued from Page 22

registrations were down 26.5 percent, from 16,927 vehicles last year to 12,434. Heavies were off 13.5 percent to 43,456 units, compared with 50,237 a year ago.

Registrations declined in four of the five big-truck weight classifications in the January-April period.

The Group 4 count was unchanged from last year, with four tallies each year. Group 5 was down 19.3 percent, from 481 units in 1981 to 388, while Group 6 slipped 26.8 percent to 12,042 tallies, as against 16,442 in 1981.

• Through April, there were 19,969 Group 7 registrations, a decline of 8.3 percent from the year-earlier 21,779. In April, however, there were 7,059 Group 7 tallies, up 18 percent from last year's 5,980. It was the best month for these trucks since April, 1980, when 8,299 units were registered.

In Group 8, there were 23,487 registrations in the four-month span, a decline of 17.5 percent from last year's 28,458.

No. 1 Chevrolet accounted for 33.24 percent of total industry registrations through April with 250,246 tallies. A year ago, Chevrolet was in second place with 211,907, good for 30.86 percent of the total.

Runnerup Ford's share of the four-month count was down 3.42 percentage points from a year ago. In 1981, Ford's 220,085 tallies accounted for 32.05 percent of the total. This year, its count dropped to 215,522 units, or 28.63 percent of the total.

Lakeland sale aids Florida independents

LAKELAND, Fla.—More than 3,000 cars were sold at the third annual Florida Independent Automobile Dealers Assn.-Lakeland Auto Auction dealers' sale.

FIADA President Oscar Houchins reported that the special membership promotion brought the association a net profit of about $17,000 and 44 new members.

Week's total up 16 pct., but it trails last year's 160,000

Auto production climbs to 134,400

By Patricia Hoffman
Staff Writer

Operations at all but one General Motors facility helped boost last week's domestic auto production from the previous week's total, but output was far below that of the comparable 1981 period.

The return of four assembly points and overtime schedules at three facilities brought last week's estimated car production to 134,400 units, a 16.18 percent gain from 115,680 the previous week, but the total was 16.05 percent below the 160,103 units built the same week last year.

Breakdown for the week by company is: GM, 61.45 percent; Ford Motor, 23.67 percent; Chrysler, 11.53 percent; Volkswagen of America, 2.23 percent; American Motors, 1.04 percent and Checker Motors, 0.08 percent.

Production resumed last week at Chrysler's Belvidere, Jefferson and Newark facilities, following one-week shutdowns to control overstocked inventory.

Also back last week was GM's Framingham point. Leeds was the only GM plant that did not work last week.

Saturday overtime was scheduled June 19 at GM's Doraville and Ford's Kansas City plants.

Chrysler's St. Louis plant worked a daily nine-hour shift last week.

Year-to-date, the auto makers have built 2,454,888 cars, down 26.86 percent from 3,356,232 in the comparable 1981 period.

Yanase signs pact to import GM cars, trucks into Japan

DETROIT. — General Motors and Yanase & Co., Ltd., have signed an agreement under which Yanase will import and distribute GM North American-source vehicles to dealers in Japan.

Yanase is Japan's largest imported-car dealer organization. In 1981, it sold 58.1 percent of the imported autos retailed in that country.

The firm imports Volkswagen, Mercedes-Benz and Audi vehicles in addition to GM lines. It is headed by Jiro Yanase, 65, a second-generation auto importer. His father started importing American cars into Japan in the early 1900s.

Last year, GM sold about 5,000 North American cars and trucks in Japan, and Yanase accounted for "a little more than half of them," GM said.

The GM vehicles were imported by 23 Japanese dealerships, nine of which are owned by Yanase.

Last week's agreement was announced by John F. Beck, president of General Motors Overseas Distribution Corp., and Jiro Yanase.

They said, "The new arrangement will enable GM products to compete more effectively in the Japanese market by centralizing the import distribution functions in a local distributor."

Previously, GM vehicles were imported into Japan by individual dealers.

Beck and Yanase said existing GM dealers will be given the opportunity to continue to retail GM vehicles in association with Yanase.

GM said that since the new setup relieves dealers from performing the import distribution function, they will be free to concentrate on marketing vehicles.

The Yanase importing organization is involved with much more than automobiles. Jiro Yanase imports high fashion into Japan from Paris, Rome, Milan and London and retails these items through his own fashion boutiques throughout the country.

He also imports Hatteras Yachts, Johnson Outboards, OMC stern drives and Seagull boats from the U. S.; Continental tires, Mercedes-Benz diesel engines and Unimogs from West Germany and Aktiv six-passenger snowmobiles from Sweden.

He is involved in automobile credit, financing, franchise restaurants, television production and phonograph record production.

Early this year, AUTOMOTIVE NEWS asked Yanase whether there is a disadvantage in marketing cars with the steering wheel on the left side in a country that has everyone driving on the left side of the road.

His answer pointed up his practical approach. He said that since most American and Mercedes-Benz cars are chauffeur-driven, it is much easier for the driver to exit and open the door in busy Tokyo traffic since he doesn't have to run around the car.

Olson heads Bison Motor

GREAT FALLS, Mont.—Dick Olson, son of one of the founders of the 45-year-old Bison Motor Co. (Ford) here, has acquired additional interest in Bison Motor Co. and Bison Leasing, and has been elected president and general manager. Former president Bob Solberg has retired.

Truck production tops 50,000, up 16 pct. for week

The return of two U. S. truck assembly points helped boost last week's production from the previous week's total, and output was well ahead of the year-ago period.

Last week, the makers scheduled 50,540 trucks, up 16.87 percent from 43,245 the previous week and up 20.32 percent from 42,006 in 1981.

Year-to-date production totaled 964,000 units, up 10.27 percent from 874,255 in the comparable 1981 period.

Production resumed last week at Ford Motor's Louisville facility and Chrysler Corp.'s Belvidere plant following one-week shutdowns to control inventory.

Three General Motors' plants worked last Saturday (June 19). They were Janesville, Lordstown and St. Louis. The St. Louis point also worked a daily nine-hour shift.

Chrysler's Warren plant operated a daily nine-hour shift last week. It was the 16th consecutive week of overtime at the facility.

Week's assembly of Canadian cars shows slight gain

Canadian auto production last week rose 1.77 percent from the previous week's total, but output fell 7.07 percent below that of the comparable 1981 period.

The auto makers scheduled 21,838 units last week, up from 21,459 the previous week, but down from 23,499 units in the same period last year.

Year-to-date, the manufacturers have built 444,905 cars, a 2.78 percent gain from 432,853 in the comparable 1981 period.

Truck production last week was targeted at 12,717 units, down 6.27 percent from 13,568 the previous week, and down 2.44 percent from 13,035 in the same week last year.

So far this year, the makers have assembled 264,009 trucks, down 4.70 percent from 277,034 at this time in 1981.

Ford Motor's Oakville car facility operated on daily overtime schedules last week for the second consecutive week. The plant is working eight additional hours per week on each of its two shifts.

Chrysler Corp.'s Windsor car and truck plants will be idle starting July 16 for model changeover. Production of the 1983 cars and trucks is slated to begin Aug. 2.

The second shift is scheduled to resume July 19 at American Motors' Brampton car plant. Output will be upped from 122 units a day on one shift to 244 units a day on two shifts.

DeLorean plant could reopen in September

By Edward Lapham
Financial Editor

The Northern Ireland DeLorean sports-car factory could reopen as soon as September, rehire about 1,000 workers and begin output of '83-model cars.

John Z. DeLorean late last week said he had signed a letter of intent to "take over" the Dunmurry operation from control of the receivers, if the receivers are unable to put together a consortium of British buyers by July 31.

DeLorean told AUTOMOTIVE NEWS that the U. S. company is committed to take over the factory "by providing $25 million in export guarantees and $10 million in cash."

DeLorean said the capital was raised in the U. S. through a variety of financial institutions and existing dealers, and that as part of the financial restructuring his ownership of the U. S.-based DeLorean Motor Co. would be diminished.

"It's clear the majority interest will be in the hands of the new investor group," DeLorean told AUTOMOTIVE NEWS.

He said the Northern Ireland company also expects to have a commitment soon on the sale of a UK tax-loss credit. Such a transaction could net another $5 million to $8 million.

The Northern Ireland company, originally DeLorean Motor Cars, Ltd., but reconstituted as DMCL (1982), has been in voluntary receivership since Feb. 19. The factory ceased production entirely last month fol-

Swiss movement

Electric Carville improved

The Swiss electric Carville is equipped in its latest version with a four-speed gearbox from Citroen. The motor is located between the rear wheels, as is the battery box. Top speed is 50 MPH and range is up to 60 miles. The Carville is a luxury electric, priced at about $17,500 U. S. in Switzerland.

breaking news

GM bringing work back inside

DETROIT.—General Motors is planning to bring some outsourced work back into its network soon, according to Owen Bieber, UAW vice president and director of the GM department. While he would not name the plant involved, Bieber said announcement could be made within two weeks. It would be the first work brought back to GM under the current agreement with the UAW.

Sporty Century, Skyhawk models due in '83

DETROIT.—Buick will add sporty T Type models to its front-drive Skyhawk and Century lines for 1983. Century T Type coupe and sedan models will have a standard 3.0-liter V-6 engine, touring suspension and blacked-out exterior trim. Standard powertrain in the Skyhawk T Type (coupe only) will be the Brazilian-made 1.8-liter overhead-cam engine and new five-speed manual transmission. Buick will also give the T Type name to its Regal and Skylark sport coupes for '83.

Lessors trying out new finance ideas to boost business

By Edward Lapham
Financial Editor

It was only a matter of time. The push to find creative, attractive financing alternatives in diverse areas like housing and retail auto sales has spilled over into auto leasing.

Just as the General Motors Acceptance Corp. 12.5 percent retail lease finance rate program (AUTOMOTIVE NEWS, June 21) has stirred new interest in a sleepy lease market, some new programs by independent financial institutions and lease companies could have the same effect.

The GMAC program, which lowers the retail lease finance rate to 12.5 percent for July, isolates the dealer from title concerns because GMAC is the titled lessor and allows small-volume lease dealers to take their profit "up front." It should make GM dealers very competitive in retail leases through the end of the current model year.

At the same time, some of the new programs being offered by independents could help to permanently expand the entire lease market.

One of the most creative leasing finance ideas was developed not to help prospective customer with limited financing alternatives, but rather to appeal to a segment of well-heeled prospects.

Generally known as "lease investment financing," the concept is rather simple. A lessee makes a security deposit, or investment, in a financial institution and the "interest payments" are used to make the lease payments.

The only catch is that the security deposit must be large enough to generate sufficient "interest" to meet the payment schedule. The deposit is often more than twice the selling price of the vehicle being leased.

One of the first lease investment financing programs, and the most successful to date, was started by Dry Dock Savings Bank, of New York. The idea for the program is generally attributed to Robert Steel, Dry Dock president.

The Dry Dock program began March 23. The savings bank first approached Location Auto Leasing Co., a wholly owned and autonomous subsidiary of Genway Corp., based on Long Island.

With the lease company in place, Dry Dock then began advertising. The response was overwhelming. LAL President Mike Smith told AUTOMOTIVE NEWS he received 10,000 responses to the advertising and his company has given 600 customer quotes. Neither Smith nor Dry Dock Vice President John Mullady would say how many actual leases have been sold, however, for "competitive reasons."

"It's been a terrific program," Smith said. "The lease rates are

No announcement planned on power loss; EPA waiver sought

GM replacing failing catalysts in '81, '82 cars

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — General Motors has a problem with as many as 735,000 of its 1981 and early 1982 models — a problem that could cost it as much as $150 million to correct — but it is not telling anyone except the EPA and some of its dealers about it.

According to information provided to the EPA, 1981 and early-1982 GM cars equipped with 3.8-liter, 4.4-liter and 5.0/5.7- liter engines, can experience sudden losses of power and, in extreme cases, stop altogether because of a breakdown of the catalytic converter.

The engines are used in 1981 A, B and F-body cars and 1982 B, F and G-body cars.

Pellets in the upper bed of its dual-bed converter are disintegrating and clogging the lower bed, GM said.

"We don't know why, but the end result is a sudden loss of power and even complete engine stop," it added.

Through December, 1981, GM had replaced approximately 28,000 of the faulty converters under emission - control - system warranties, but GM noted the rate of replacement is picking up with as many as 11,000 projected for January of this year — the last month for which figures are available.

The replacements are costing GM about $200 per unit.

Under the requirements of the Clean Air Act, GM would normally need to replace the failing converters for up to five years or 50,000 miles. In GM's case that could be an expensive proposition, given that the converters are failing at an average of 17,700 miles.

To avoid that expense, GM is replacing the dual-bed catalysts with single-bed, three-way-catalysts, and that is why it is talking to the EPA.

The replacement three-way catalysts fix the plugging problem, but they do not provide the same level of emission control. The cars will not meet the 1981 carbon monoxide standard using the three-way catalyst.

To get around that problem and the need to replace the catalyst twice, GM wants a waiver from the 1981 CO standard of 3.4 grams per mile to the higher 7-gpm level permitted under waiver provisions of the Clean Air Act that expire with the 1983 model year.

EPA previously granted the company such a waiver for 1982 versions of the cars in question, but for different reasons.

On the face of it, GM's request seems reasonable enough, particularly since EPA has already granted it a waiver for 1982 versions of the cars. But there is some question as to whether the Clean Air Act allows "retroactive waivers." Indeed, the Center for Auto Safety and its director, Clarence Ditlow, believe the act does not. CAS has indicated it will sue the agency if it grants the waiver GM wants.

"The act never contemplated rewarding someone for failing to comply with its requirements," Ditlow said.

California is concerned, too, particularly about GM car owners not being told of the problem. (GM said in correspondence to the EPA that it plans no general announcement of the catalyst-plugging problem and that it will handle any complaints through its normal emission - control - system warranty claims procedures.)

The state is afraid car owners might eliminate the catalyst altogether to solve the problem. As a consequence, California said it would prefer to negotiate a separate agreement with GM.

Meanwhile, replacement of the failing dual-bed converter with a single-bed three-way catalyst is boosting fuel economy in the cars in question by approximately 0.6 MGP and also lowering oxides of nitrogen emissions approximately 0.2 to 0.3 gpm.

GM said that is not a bad tradeoff for a slight increase in CO emissions.

A final decision on GM's request is expected sometime in July unless EPA cannot get over the legal hurdle of whether retroactive waivers are permitted.

Meanwhile, owners of 1981 GM A, B and F-body cars and early-1982 B, F and G-body cars should keep in mind that a sudden loss of power in the car could well be the result of the catalyst plugging and that replacement of the catalyst is covered under GM's emission-control-system warranty.

UAW's Bieber discusses negotiations, industry outlook

GM assembly-plant changes eyed

By Marjorie Sorge
Labor Editor

Fisher Body Division of General Motors almost sabotaged local negotiations in its stamping plants when it took a Sears-Roebuck approach to bargaining, according to Owen Bieber, UAW vice president and director of the GM department.

He said Fisher Body put too much on the table and wanted too many concessions for the talks to be successful.

But, he said, top Fisher Body and UAW officials met earlier this month and were able to iron out the problems, changing the approach. He said this proves that management and the union can work together cooperatively for "positive results."

In an AUTOMOTIVE NEWS interview, Bieber also said GM will build the front-wheel-drive Cadillac Eldorado, and Seville, Oldsmobile Toronado and Buick Riviera in its new Hamtramck assembly plant that is scheduled to open in 1985.

However, that will take all the work away from the Linden (N. J.) facility which currently builds all GM's FWD luxury cars.

Consequently, GM is scheduled to introduce a new line of FWD G-cars into the Linden plant when its current production is shifted to Hamtramck. Current G-cars are the intermediate-size Chevrolet Malibu Classic and Monte Carlo, Pontiac Bonneville and Grand Prix, Oldsmobile Cutlass and Cutlass Supreme and Buick Regal.

Work from GM's present Detroit Cadillac facility will be shifted to the new Orion Township (Mich.) plant in 1983. That would leave the Detroit workers without jobs for two years since they are scheduled to be transfered to the Hamtramck facility in 1985.

However, Bieber said, GM is planning to put a rear-wheel-drive intermediate car into the Detroit plant, keeping the facility open until the new Hamtramck plant is completed. Hamtramck replaces the Detroit Cadillac plant and its companion Fisher Body facility. It was originally scheduled to open in 1983, but has been delayed twice. No plans have been announced by GM for the old Cadillac plant.

GM will spend $4 billion for a five-year capital expenditure plan which began in 1980. Like all the U. S. makers, GM has been in a cash crunch and has delayed the opening of all three of its new assembly plants.

• GM's new 29-month agreement with the UAW is estimated to save the company between $2.5 billion and $3 billion over its lifetime. GM had hoped to pick up additional concessions during local talks by modifying costly work rules.

But Bieber said the announcements of improved executive bonuses and an agreement with the Japanese auto company, Isuzu, have angered the rank and file, hindering local negotiations. Under pressure from the union, GM has said it will not implement the new bonus guidelines during the length of the current UAW agreement, but local officials are still angry.

"It's true that with the market the way it is, it wouldn't have generated anything under the new or old (bonus) system, but that's not the point," Bieber said.

"The point is that the auto industry is in trouble . . . if you ask the workers to make adjustments, which we did, then it certainly isn't fair for the executives to turn around the next day and say they are going to cut themselves a bigger piece of the pie. That has a very bad effect on not only the UAW leaders, but on the rank and file members of our union."

Bieber also said he believes

Job one for Alliance

American Motors Chairman Paul Tippett, left, and President Jose J. Dedeurwaerder shake hands across the first Renault Alliance off the final assembly line at AMC's Kenosha plant. The Alliance goes on sale in September.

Lowest total on record for the period

Mid-June sales collapse to 117,795

By Jenny L. King
Staff Writer

Mid-June domestic new-car sales set all the wrong kind of records. The total was lowest since AUTOMOTIVE NEWS began charting 10-day figures in 1953. Sales declines were double-digit percentages compared with a year ago, and that 1981 total was the lowest since 1961.

The Big Three all dropped to their softest levels since the early January period. American Motors' estimated sales were the worst this year and only Volkswagen of America had several poorer showings in '82.

Sales of new U. S.-built cars numbered 117,795, down 31.58 percent from 172,170 a year earlier. There were eight selling days this year compared with nine in 1981, so on a daily-rate basis, sales were off 23.03 percent. The daily rate was 14,724, compared with 19,130, and was lowest since Jan. 11-20 when the average was 14,433.

General Motors tumbled 33.71 percent during the period, to 68,498 from 103,331 last year (down 25.43 percent daily rate). The company seemed to be suffering the effects of its current no-rebates, no-interest-break marketing. Its 12.8 percent interest rate program expired at the end of May. Sales were off 6.58 percent in early June, followed by the mid-June collapse.

• Ford Motor Co. sales of 30,781 units were down 26.09 percent from 41,644 in 1981 (down 16.84 percent daily rate). Chrysler Corp. dropped 23.30 percent, to 14,734 from 19,210 (down 13.70 percent daily rate).

Estimated sales of AMC passenger cars were 1,600, down 63.64 percent from 4,400 a year ago (down 59.08 percent daily rate), and VWoA slipped 39.14 percent, to 2,182 from 3,585 (down 31.41 percent daily rate).

Of the mid-month domestic market, GM earned 58.15 percent, down from 60.02 percent. Ford climbed to 26.13 percent from 24.19 percent. Chrysler sales accounted for 12.51 percent, up from 11.16 percent. AMC had an estimated 1.36 percent, down from 2.55 percent, and VWoA earned 1.85 percent, down from 2.08 percent.

On a year-to-year basis, only two U. S. makes had sales increases during the period: Chrysler was up 148.31 percent, to 4,030 from 1,623, and Lincoln was up 13.35 percent, to 1,528 from 1,348. Cadillac was up on a daily-rate basis by a fraction, but its sales dipped to 5,001 from 5,624.

On a year-to-year scale, Plymouth was down 46.61 percent; Imperial was down 56.36 percent; Dodge was down 29.10 percent; Ford was down 25.16 percent, and Mercury was down 33.82 percent.

Buick was off 38.08 percent; Cadillac was down 11.01 percent; Chevrolet was down 38.14 percent; Oldsmobile was down 31.52 percent, and Pontiac was down 32.99 percent.

Year-to-date sales through June 20 totaled 2,774,837, down 11.58 percent from 3,138,259 last year.

Cal Worthington Ford settles false ad suit

By Matt De Lorenzo
Los Angeles Reporter

LOS ANGELES.—Cal Worthington, a Long Beach Ford dealer who has become almost a cult figure here through his television commercials, agreed last week to pay $50,000 to settle a false advertising suit brought four years ago by California.

Worthington, who in his commercials parades around an array of animals ranging from elephants to lizards and identifies them as his dog "Spot," admitted no wrongdoing in signing the judgment that cost him $25,000 in civil penalties and $25,000 in court costs.

Maintaining his innocence, Worthington said the settlement was "a form of extortion," and that state attorneys told him it was either $50,000 to settle the suit or $200,000 to battle the charges.

"You do the economic thing and pay up," Worthington said.

According to Deputy Attorney General Sanford Feldman, the suit accused Worthington of falsely advertising that his dealership sold Fords at prices below those of other Ford dealers, gave better tradein allowances and had better financing rates and lower payments than other dealers.

• The suit alleged that "in fact, (Worthington Ford) has a higher gross profit from the sale of new Fords than almost all other Southern California Ford dealers."

In addition, the suit said Worthington Ford inflated the price of new cars by posting a "dealer delivered price" or "Worthington price" in excess of the vehicle's manufacturer's suggested retail price.

Feldman said consumers were led to believe that the higher price resulted from the addition of equipment or services performed by Worthington Ford.

The suit contended "the alleged increased value does not represent the value of additional equipment added by Worthington Ford on the unreimbursed value of services performed by Worthingtcn Ford, but instead represents an inflated basis from which fictitious discounts can be offered to prospective buyers."

Other charges against Worthington Ford included:

1. Not all automobiles advertised were available for purchase.

2. Dealership personnel engaged in "bait and switch" tactics by disparging advertised cars or reluctantly showing those vehicles to prospective purchasers.

3. Advertised vehicles were not "beautiful, clean and sharp" as advertised, but rather were "in generally poor condition and have exceptionally high mileage."

4. The dealer's "free 10-day trial exchange" constituted an unfair business practice by placing "purchasers who attempt to take advantage of said exchange offer in an unfair bargaining position with respect to negoti-

Honda trying to halt FTC paint investigation

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — American Honda, already burned by the Federal Trade Commission in a consent settlement that required it to replace the rusting fenders on 1975 through 1978 Honda Civic and Accord models, is trying to keep the commission from rubbing salt in the wound.

According to FTC records, Honda is trying to quash a commission investigation into alleged paint bubbling and peeling problems in 1975 through 1981 Honda cars. Such alleged peeling and bubbling is occurring in areas other than the fenders, complaints on file at the commission indicate, with the most prevalent area being the doors.

While an investigation is no indication of fault, the commission has in the past held that firms can be held liable for defects they could reasonably be expected to know about.

In the case of the rusting fender problem, Honda agreed to replace the fenders and/or reimburse owners who had already had the work done.

Honda sold approximately 700,000 Civic and Accord models during the 1975-1978 model years, but not all of them are expected to have the rusting fender problem. It is most prevalent in the so-called "salt-belt states," although Honda said it would fix the fenders wherever the cars might be.

Honda's attempts to kill the present investigation have thus far been rejected by the commission. That is obviously troublesome to the firm which has prided itself on building a quality product.

Another problem occurred in 1980 when the firm announced a free repair program to take care of a defective cylinder head gasket that was allowing cooling fluid to enter the combustion chamber. In some instances, this involved an engine rebuild.

Honda began that program as the FTC had it under investigation for alleged "secret warranty coverage" of the problem.

• Meanwhile, the FTC also has on file a number of complaints of Honda engines breaking down because of alleged defective connecting rod bolts which separate and cause the engine to seize.

It is also now beginning to get reports of braking problems on 1979-1980-1981 Civics and Accords. These are described as a slight to moderate shimmy of the front wheels under braking.

According to dealer sources, the alleged problem is attributable to rotor "run out" or a peculiarity of the Honda rotor which requires that it be "turn-

Neoclassic builder finds success with conservative business approach

Zimmer's flashy cars swimming in almost-dry market

By Kathleen Hamilton
News Editor

POMPANO BEACH, Fla. — There's real financial and sales trouble afoot among the small companies that manufacture neoclassics — the cars reminiscent of the 1930s, with their flared fenders, trumpet horns, etched glass and lots of chrome.

One startling exception is Zimmer Motor Cars Corp. here, builder of one of the flashiest neoclassics of them all.

The reason the $59,500 Zimmer Golden Spirit seems to be succeeding where its competition is stalling are many.

Where other specialty-car firms are often headed by a stylist-turned-businessman, Zimmer headquarters here is staffed by both auto and business experts.

The company — listed on the American Stock Exchange — is solidly capitalized.

If others in south Florida's specialty-car business came to Florida for the low wages paid in the fiberglass industry, Zimmer didn't. This was the headquarters of the parent firm, Zimmer Homes Corp., builder of mobile homes and RVs.

The auto types drafted from Detroit and England are paid above scale, get such fringes as a company motor home to share for family vacations—but of course are subject to layoffs without a S.U.B. fund when the production schedule needs to be trimmed.

Zimmer's strong dealer network is buttressed by wholesale financing from Finance America, a Bank of America subsidiary.

• Robert P. Zimmer, 31-year-old son of the parent company's founder, heads the car operation. And quite an operation it is: With production now running at a rate of about 300 cars a year, Zimmer has surpassed the yearly output of the better-known California neoclassic, Clenet, and the industry founder, Excalibur.

The Zimmer Golden Spirit starts life as a Mustang. In the factory here, it undergoes a metamorphosis that takes 680 work hours. First, all but the Mustang rollcage is cut away with hand tools. The wheelbase is extended 39 inches.

Hand-laid fiberglass panels—formed out-of-doors, in the Florida sunshine — are mated to steel. Inner fenders, made by the chopper-gun method of fiberglassing, give a finished look to show off the wire wheels.

The Golden Spirit body gets 14 coats of lacquer — each sanded — during a two-week-long painting process. Even the gold pinstriping is done by hand.

Sunshine for Golden Spirit

Newest addition for the Zimmer Golden Spirit is a T-roof—the same one installed by Cars & Concepts in the Mustang, on which the Golden Spirit is based. The T-roof option adds $1,600 to the Zimmer's base price of $59,500.

The Golden Spirit — a $376, 24-karat-plated eagle — is mounted atop a chrome grille and competes for attention with four oversized headlights, a spotlight, four air horns, a massive stainless steel bumper and chrome side pipes. And that's just the front view.

• Inside, there's the mandatory leather and burl walnut plus a gold-plated Nardi steering wheel, crystal vases with silk flowers and two supremely functional luxuries: Electrically operated leather Recaro seats and a top-of-the-line Blaupunkt radio.

The latest improvement to the Zimmer is incorporation of the Mustang T-roof into Zimmer production. But that factory T-roof actually is installed in the Mustang by another customizing firm, Cars & Concepts.

The Mustang's brakes are modified to accommodate the 3,600-pound Zimmer. Tire size is increased. Front disks and rear drums have a 4-wheel lock-up feature. The MacPherson-

Division chief Fuller explains shift in market strategy

VW reorganizes, begins drive to be more German again

By John Russell
New York Staff Writer

ENGLEWOOD CLIFFS, N. J. — Faced with consistently declining sales, Volkswagen of America has shifted its gears and is beginning a drive to re-establish itself in the marketplace. It's a drive that marks a break with policy the past few years since the company began manufacturing in the U. S.

When the company began manufacturing its Rabbit at its Westmoreland, Pa. plant, it identified itself with the domestic market. It wanted to be domestic. But now, it is moving back toward stressing its German heritage.

The beginning of this shift in strategy started with reorganization of the company nearly two months ago, when Volkswagen Division was formed.

James R. Fuller was appointed to head the division, coming from his post as vice president in charge of the Porsche-Audi Division, a job he held for over two years. There he was charged with pulling that division back together and creating a strong identity for the product lines. Now, he is charged with the same task.

In an interview with AUTOMOTIVE NEWS, Fuller said bluntly that VW Division, as part of an overall strategy now being developed, is going back to its roots. "We're a German company that happens to build cars in the United States," he said flatly.

A new thrust, at least for the summer, has also emerged and is breaking in major media now. The company will put most of its emphasis on its imported cars — the Jetta, the Scirocco and the Quantum. Fuller said this move was to capitalize on the stronger segment of the market, the upscale rather than the economy car, where there appears to be some movement.

He said this is a tactical move to take advantage of the market, but it "will also reaffirm the German character of our company." He added that in the market, when "you say German there's a whole list of attributes," including quality, handling and performance.

While the division will continue to promote the Rabbit and the price reduction put in place two months ago, a goal of the current campaign is to show that "our U. S. cars" have the same personality as cars built in Germany.

Fuller said the image shift has the total support of both Volkswagen of America and the German parent company.

In the emerging framework, this image identification is playing a key role. Fuller said over the past six weeks "we have redefined our marketing priorities" and stressed that the division has to "build up a sense of what Volkswagen stands for."

• A divisional position is emerging for Volkswagen which will be more brand-oriented than model-oriented. It will be held together under an umbrella presenting the Volkswagen image and a new image is also emerging — one of performance rather than fuel economy, but performance in terms of all around performance, a European definition of performance.

There is another attribute to this shift to performance and all around handling of the cars, according to Fuller, in that this can be demonstrated.

He noted that a company really can't demonstrate styling, since the consumer either likes it or does not. On price, it is either too high or not. And fuel economy today is a given. But performance can be demonstrated by dealer sales people and in advertising.

For the dealers, the division has launched a training effort for sales staffs showing them what the Rabbit can do against its competition. These are called Rabbit Rallies and is a similar technique that was used at Porsche with the Porsche Caravan.

In its television commercials, Fuller had laid down an apparent dictum: The commercials will not be static. This is coming to the forefront with two new commercials for the Jetta and the Scirocco. Both show handling under various conditions and stress the German heritage of the cars.

The European approach may be further reinforced on the dealer level. For the past six weeks Fuller has been on the road, involved in a series of dealer meetings, explaining where the division is going and what they can expect. But, dealers are no longer "dealer principals" in the division mentality; they are "dealer partners."

Fuller said that was a "more European approach" but said if there was another balance sheet that could measure the most valuable elements of Volkswagen, it would be its dealers and its heritage. "We're doing nothing more than stressing those points."

Much of the current effort to stress the import cars in the lineup is paving the way for the 1983 introduction.

Fuller said when the '83 model launch occurs, the division will put more stress on the Rabbit. And, he added there will be a new Rabbit "to talk about."

He would not go into any detail on the new model Rabbit. However, indications are strong it will be the GTi. It has long been rumored that Volkswagen would introduce this performance version Rabbit to the U. S. market. It is now available in Europe.

Volkswagen has a six-product lineup ranging in price from the Rabbit at $5,990 to nearly $13,000 for the Quantum sedan. Included are pickups and the Vanagon.

Quantum is in effect being fully introduced. While the introduction of the car was held last fall, it was incomplete because of lack of availability. The Quantum Coupe and Wagon were introduced, but not the sedan. Now, the sedans, which Fuller termed the "bread-and-butter car" of this luxury sedan market are here and the push on Quantum started within the last 60 days.

Scirocco, Fuller claimed is "crying" for redefinition. It is not a coupe, he said, but a sports car.

And the move by the division is to define the car as such, particularly in its new television commercial.

Jetta will also be getting a

Cars & Concepts to acquire Hurst

BRIGHTON, Mich. — C & C, Inc., parent company of Cars & Concepts, special-vehicle firm, and Allegheny International, Pittsburgh, have reached an agreement in principle under which Cars & Concepts, Inc., will acquire the assets of Hurst Performance, Inc., a subsidiary of Sunbeam Corp.

Richard R. Chrysler, chairman of C & C, said Hurst will continue to operate from its present location in Warminster, Pa., and with its present management.

He said the acquisition will add an important dimension to C & C's aftermarket business, and strengthen existing specialty vehicle product lines.

Congratulations from the top

James L. Burke, center, newly elected chairman of the Ford National Dealer Council, is congratulated by Donald E. Petersen, left, Ford Motor Co. president, and Philip Caldwell, company chairman. Burke heads Jim Burke Ford, Bakersfield, Calif.

Leaders express anger at meeting not sanctioned by UAW

No concessions, say GMAD locals

By Marjorie Sorge
Labor Editor

DEARBORN. — Leaders of UAW locals in the General Motors Assembly Division say they will not make any concessions at the local level.

Representatives of UAW subcouncil 7A and 7B, which represents, 50,000 workers at GM nationwide, held a meeting at the Hyatt Regency Hotel here to "describe their efforts to combat systematic management attacks on local agreements and practices." The meeting was not sanctioned by the International UAW, but was attended by about 75 officials representing 15 UAW locals.

A UAW spokesman said the union has no comment on the meeting but said the sanctioned subcouncil meeting will begin today in Denver. Owen Bieber, UAW vice president and head of the GM department, will attent the meeting.

"Sentiment is strong nationwide," said Ed Parker, bargaining chairman of Local 595, Linden, N. J. "We've given enough at the national level. At the local level, we're standing firm."

While the disgruntled leaders would not say they would go on strike at the local level to stop concessions, Parker did say they "could picket Solidarity House (UAW Headquarters in Detroit), not GM."

It was estimated that the UAW-GM national agreement would save GM between $2.5 billion and $3 billion over its 29-month life. GM had hoped to make local changes that would also cut costs.

According to a GM spokesman, the only GM assembly plants that have signed new local agreements are Shrevesport, La.; Buick, Flint, and Tarrytown, N. Y.

The workers are angry that GM is making changes in relief time and has combined several job classifications.

Subcouncil leaders are also afraid of the outsourcing agreement in the national contract. They say it could lead to a bidding war between locals which are faced with either providing GM cost-saving proposals or possible plant closing.

The outsourcing agreement requires that GM give the UAW 60 days' notice on outsourcing which will result in the layoff of 10 percent of a plant's workers, or 100 employes. The union can then attempt to make changes in the plant which could cut costs and make the facility more competitive.

The leaders were also critical of the changes in the bonus plan for GM executives (the changes have not been implemented) and are angry about the company's deal with Isuzu to import 200,000 of the Japanese cars to the U. S.

"GM's only flag is the dollar," said Richard Debs, President, Local 1776 (Ypsilanti).

The local leaders charged that those two plans violate the intent of the national agreement.

They were also critical of the international union officials who were invited to attend the meeting but declined because it was not sanctioned.

Seeing red in Martinsville, Va.

Forty Pontiac Washington zone dealers participated in a colorful drive away of new 1982 Trans Ams at the Grand National Race at the Martinsville (Va.) Speedway. During the parade laps, 40 identical red Trans Ams circled the track before 30,000 NASCAR race fans.

Carrigan named to manage GMAD Lakewood plant

WARREN. — Patricia M. Carrigan, 53, has been appointed manager of the GM Assembly Division plant in the Lakewood District of Atlanta.

Patricia M. Carrigan

Carrigan, who has been resident comptroller at the division's plant at Ypsilanti, Mich., succeeds Victor P. Sutt, who has retired after 43 years with General Motors.

She becomes the first woman plant manager of any General Motors domestic operation.

Carrigan joined GM in 1976 as executive administrator of employe relations at the division's central office at Warren.

The following year, she was named an executive in training at the Ypsilanti plant and in 1979 was promoted to general superintendent of production, a position she held until becoming resident comptroller in 1981.

She received her bachelor's degree in education from Michigan State University and her master's degree in educational psychology and her doctorate in clinical psychology from the University of Michigan.

Auto loan ceiling raised to 18 pct. in Pennsylvania

HARRISBURG, Pa. — Gov. Richard Thornburgh has signed legislation providing for automobile loan interest rates of 18 percent for new cars and used cars not more than two years old.

It replaces a previous formula that had held interest to about 15 percent and had caused the loss of many auto sales to out-of-state retailers.

The bill was pushed through the legislature by the Pennsylvania Automotive Assn. The 18 percent interest level is similar to earlier increases on other types of consumer credit.

An amendment to the bill sets up a procedure for giving buyers 21 days' notice of what steps must be taken to cure payment defaults before a car can be repossessed.

The PAA said the change in repossession procedures affects banks and finance companies more than it does dealers.

But April total is 10 pct. below last year's

Month's registrations highest of '82

By Jenny L. King
Staff Writer

Total new-car registrations in the U. S. in April were at their highest level so far this year but tumbled 10.59 percent compared with the same month of 1981, according to figures compiled by R. L. Polk & Co.

New-car registrations in April totaled 672,253, up 7.45 percent from 625,649 in March, and down 10.59 percent from 751,845 a year earlier. It was the lowest for the month since 1975 when only 581,304 new cars were tallied.

Domestic registrations during the fourth month numbered 485,992, up 7.97 percent from 450,119 in March, down 7.22 percent from 523,821 in April of 1981.

Imports accounted for 27.71 percent of the April total, with 186,261 units. That was down from 30.33 percent a year earlier, based on 228,024 registrations.

Registrations for the first four months of 1982 totaled 2,352,882, down 19.21 percent from 2,912,344 in 1981. Domestic year-to-date registrations numbered 1,668,348 through April 30, down

Lincoln-Mercury

Thomas F. O'Hare has been appointed Eastern regional sales manager for Lincoln-Mercury. He succeeds **B. J. Coughlan,** who now is L-M marketing manager.

Thomas F. O'Hare

Thomas D. Mignanelli succeeds O'Hare as New York district sales manager, and **Richard D. Poole** replaces Mignanelli as Boston district sales manager. Poole had been assistant sales manager in Boston.

O'Hare joined L-M in 1967 and held field sales posts in Boston, Philadelphia, New York and Chicago before becoming national business management manager for the division in 1977. He was named Boston district sales manager in 1978 and moved to New York in 1980.

Mignanelli joined Ford Motor Co. in 1969. He was with L-M from 1969 to 1975 and with Ford Division from 1975 to 1980 when he returned to L-M as Boston district sales manager.

Poole has been with L-M since 1968 and has been assistant district sales manager in Boston since 1980.

T. D. Mignanelli

Richard D. Poole

Bobbie S. Koehler has been appointed assistant district sales manager for Lincoln-Mercury's Washington office in Falls Church, Va. She succeeds **William R. Bruce Jr.,** who resigned.

Koehler formerly was general field manager in the division's Chicago district sales office. She joined Ford Motor Co. in 1972 in Ford Division's Pittsburgh district sales office and transferred to L-M in 1979.

Ford Motor Co.

Robert W. Hefty, director of International and Diversified Products Public Affairs for Ford Motor Co., will retire Aug. 1 after 30 years with the company. He will be 62 on Aug. 17.

Hefty was with United Press before joining Ford in 1952. He has held a wide range of public relations posts with the company, including public relations manager for Ford Division, corporate director of public information and director of the public relations office for Ford North American Automotive Operations. He was appointed to his present position in 1981.

Porsche-Audi deal sold

PHOENIX. — Lee Maas has purchased Camelback Porsche Audi from Robert Bazzoni, who owns a dealership in California and plans to return there. Maas is a Porsche-Audi dealer in Dallas.

On ways to deal with car manufacturers

Mullane offers tips to radio makers

CHICAGO.—In their relations with auto manufacturers, both auto dealers and suppliers have a certain common ground, according to Ed Mullane, president of the Ford Dealers Alliance.

He urged members of the Custom Automotive Sound Assn. to use many of the methods the alliance has adopted in its dealings with manufacturers.

Speaking at the annual meeting of the association here, Mullane reminded CASA members that open competition is the cornerstone of the U. S. economic system.

The moves by auto makers to include sound systems as standard equipment on new cars subverts the concept of an economy in which the consumer has freedom of choice, Mullane charged.

CASA has been involved in battles to stop this procedure by auto makers. It filed suit against General Motors and won concessions.

But Mullane explained in one of his rare appearances before non-auto-dealer groups that litigation is only one method, and perhaps the most extreme and costly method available to them.

He urged CASA to fund studies and publicize the results to prove their points.

"An independent study could show that if there is not freedom of choice, how severely the customer can be had. Other studies could show how your product is being technically excluded and suggest ways to overcome this," Mullane said.

Publicizing the results is another link in the chain, Mullane said.

• "All factories are gun shy of public criticism," he said. He added: "If honest negotiations fail, I have no problem going public with our problems."

Unfair practices also can be attacked on the legislative level, particularly on the state level where suppliers could muster support easier than on the federal level, he said.

Negotiations with the auto makers is the final approach, Mullane said. This should be the final approach, because unless the other three actions are taken, auto makers are less willing to negotiate, he said.

CASA was also in line for criticism from Mullane.

He noted auto dealers "will welcome any proposition that increases our chance to make a profit. But here is where I think you've failed us from a merchandising and marketing angle.

"You have to change dealer mentality," he said. "Show us the profit potential. Give us the quality of product and installation and follow-up to keep customers happy."

But April total is 10 pct. below last year's

Month's registrations highest of '82

Continued from Page 4

19.96 percent from 2,084,270. The import total was 684,534, down 17.33 percent from 828,074.

General Motors, Chrysler and Ford all increased their shares of the market this April compared with a year earlier. GM climbed 1.92 percentage points, to 44.16 percent from 42.24 percent. Ford was up 0.48 of a percentage point, to 17.20 percent from 16.72 percent, and Chrysler edged ahead 0.69 of a percentage point, to 9.75 percent from 9.06 percent.

Imports slipped to 27.71 percent from 30.33 percent, American Motors was off 0.45 of a percentage point, to 1.15 percent from 1.60 percent and miscellaneous domestics dropped to 0.03 percent from 0.05 percent.

• Excluding imports, April registrations were divided this way: GM, 61.09 percent; Ford, 23.79 percent; Chrysler, 13.48 percent; AMC, 1.60 percent, and miscellaneous, 0.04 percent.

A year earlier, domestic-only registrations were divided as follows: GM, 60.62 percent; Ford, 24.00 percent; Chrysler, 13.01 percent; AMC, 2.30 percent and miscellaneous, 0.07 percent.

By size segments, U. S. subcompacts, intermediates, standard models and luxuries gained, while U. S. compacts were down as were imports.

Subcompacts jumped to 16.22 percent from 13.96 percent of the April total; intermediates stood at 21.74 percent, up from 20.96 percent; standards had 9.99 percent compared with 9.30 percent a year earlier, and luxury cars grew to 5.25 percent from 4.48 percent.

Compacts dipped to 19.09 percent from 20.97 percent in April of last year, and imports gave up 2.62 percentage points, to 27.71 percent from 30.33 percent.

Total units by market class for the month were: Subcompact, 109,017; compact, 128,357; intermediate, 146,159; standard, 67,150; luxury, 35,309, and import, 186,261.

One of the best

Donald D. Lannoye, right, president of Lannoye Motor Co., Port Angeles, Wash., receives Chrysler Corp.'s Award for Excellence, citing his accomplishments in all phases of retail dealership facilities and operation. Making the presentation is Gordon Winship, Portland zone sales manager.

Bill to restore 5-MPH bumper is introduced

WASHINGTON. — A bill to restore the 5-MPH bumper has been introduced by Charles E. Schumer, New York Democrat, who considers it to be a test of this Congress' will to protect the consumer.

Schumer noted the 1972 law which requires bumper protection improvement and the 1979 study which found the 5-MPH bumper more cost effective than the 2.5-MPH one — the opposite of the new NHTSA finding used by NHTSA head Raymond Peck when he announced the rollback last May, effective in early July.

Schumer added that Peck's recent decision — which may be tested in court, perhaps by State Farm, which recently won its case against rescission of the passive-restraint standard — "is neither cost effective nor acceptable to the average car buyer whose insurance premiums will skyrocket as 'fender benders' take their toll."

NHTSA removes design restriction on lamp retainer

WASHINGTON. — The safety standard dealing with lamps and reflective devices will no longer have dimensional requirements for retaining rings.

This final change grants a petition for a change in Dimension K, specified in an SAE standard. Thus NHTSA is removing a design restriction.

Toyota Motor Sales, USA, had told NHTSA that it developed a new retaining ring for a four-lamp rectangular headlamp mounting ring. The ring is lighter and easier to replace than the earlier ring, but in order for it to be acceptable under the standard, the size limitation had to be removed.

NHTSA, after being assured the design does not interfere with the use of a mechanical aimer, granted the petition, and in fact, went beyond it to delete all retaining-ring requirements.

Year-to-date total down 26 pct. from 1981

Week's car output slips to 132,448

By Patricia Hoffman
Staff Writer

As operations continued at a fairly stable pace, last week's domestic auto production was only slightly below that of the previous week, but output was down substantially from the comparable 1981 period.

Last week's production was targeted at 132,448 cars, down 3.06 percent from 136,630 the previous week, and down 19.27 percent from 164,073 units built in the same period last year.

For the year-to-date, the makers have assembled 2,586,766 units, a 26.52 percent decline from 3,520,557 units finished in the comparable 1981 period.

Breakdown for the week by company is: General Motors, 61.20 percent; Ford Motor, 23.34 percent; Chrysler Corp., 11.93 percent; Volkswagen of America, 2.39 percent; American Motors, 1.06 percent and Checker Motors, 0.08 percent.

GM's Leeds facility remained idle last week to adjust overstocked inventories. The plant, idle since June 7, is slated to return today (June 28).

GM's Fairfax plant worked last Saturday (June 26).

Daily overtime continued last week at Chrysler's St. Louis facility. The point operated a daily nine-hour shift.

Taxicab and car production is scheduled to end at Checker Motors' Kalamazoo plant on July 7.

GM has slated downtime for model changeover starting July 19 at its Detroit (Cadillac) and Linden (Eldorado, Seville, Toronado, Riviera) facilities. A start-up date for 1983 models has not been set.

Rhode Island panel to fight auto theft

PROVIDENCE. — Rhode Island Gov. J. Joseph Garrahy has appointed a special commission to deal with the escalating car theft problem in the state.

It is estimated that cars worth some $23 million were stolen last year and, for the most part, taken to out-of-state "chop shops." Few were recovered. State Police Supt. Walter E. Stone was named head of the investigative panel.

Millionth truck a month earlier than last year

U. S. truck production for the year-to-date hit the one-million mark last week (June 24) about one month earlier than that total was reached in 1981.

So far this year, the makers have produced 1,011,158 trucks, up 10.67 percent from 913,635 at this time last year. In 1981, the millionth truck wasn't assembled until July 21.

Last week's estimated production rose 2.39 percent from the previous week's total due to the return of American Motors' Toledo (Jeep) facility. Output was slated at 50,437 units, up from the prior week's 49,261, and up 26.35 percent from the 39,920 units built the same week last year.

Operations resumed last week at AMC's Toledo point following a two-week vacation shutdown.

Saturday overtime was reported last week at General Motors' St. Louis plant.

Operating on daily overtime schedules last week were Ford Motor's Kansas City, Lorain, Michigan and Twin Cities points.

GM-Toyota decision due in fall, Smith says

General Motors' negotiations with Toyota Motor Co. on building one of the Japanese company's small cars at an idle GM assembly plant — possibly in California — will reach the decision stage this fall, GM Chairman Roger B. Smith said last week.

Smith, while inaugurating GM's joint robotics venture with Fujitsu Fanuc, Ltd., of Japan, also said his company will design and build in the U. S. a replacement car for the aging Chevrolet Chevette (and T-1000).

That announcement apparently was in response to speculation by analysts that GM was easing its way out of the small-car business, a theory that seemed to be supported by GM's agreement with Isuzu Motors, Ltd., to purchase up to 200,000 front-drive subcompact cars per year to sell in the U. S., starting in 1984.

Smith indicated that negotiations with Toyota were running smoothly but said no decision would be forthcoming until the fall. GM and Toyota negotiators have toured a number of assembly plants but the most attractive sites are GM's idle South Gate and Fremont plants in California.

The proposed Toyota car is said to be the company's front-drive replacement for its Corolla line, one of the fastest-selling cars in the world.

Owen Bieber, UAW vice president and chairman of the union's GM council, said he expected a positive decision by GM and Toyota in September.

GM's robotics venture with Fujitsu Fanuc, Ltd., calls for GM to sell robots built both in the U. S. and Japan under the name GMFanuc Robotics Corp. Painter robots will be assembled at a location near Detroit. Headquarters will be in Troy, Mich., and will employ about 100 workers the first year.

Israeli firm offers speed-control device

TEL AVIV. — An electronic speed-control system is being offered by United Traders Co. for export from Israel and/or production abroad under license.

The SafeSpeed system allows a vehicle to travel at any speed up to a chosen one without interfering with normal driving procedures.

Canadian output down for week; 22,150 cars built

Canadian auto production last week fell 2 percent from the previous week's total, and 5.39 percent below the comparable 1981 week, but year-to-date output remained above that of last year.

Last week's car production was estimated at 22,150 units, down from 22,602 the previous week, and down from 23,412 in the comparable 1981 week.

So far this year, the makers have assembled 467,819 cars, a 2.64 percent gain from 455,796 finished in last year's year-to-date.

The truck makers targeted 12,307 units last week, down 5.61 percent from 13,039 the previous week, and down 6.03 percent from 13,097 units in the comparable 1981 week.

For the year-to-date, there have been 276,638 trucks completed, a 4.64 percent decline from 290,101 units built in the same 1981 period.

Ford Motor's St. Thomas car assembly point will halt production for one week starting today (June 28) to control inventory. Operations at the facility will remain down for a three-week vacation which begins July 5. The plant is scheduled to resume production July 26 for two weeks with downtime slated again for the week of Aug. 9.

Chrysler Corp. has scheduled vacation downtime at its Windsor car and truck facilities beginning July 16. Production of '83 models is slated to begin Aug. 2.

The second shift will return at American Motors' Brampton plant on July 19. Output will be upped from 122 cars a day on one shift to 244 a day on two shifts.

All car and truck facilities were reported working last week.

Quotas take toll on Japanese importers, dealers

By Kathleen Hamilton
News Editor

Although the recession has softened the blow, the export quotas imposed on Japanese makes have begun to take a heavy toll on dealers and importers and—to hear them tell it—on U. S. consumers, too.

The effects of the quotas have recently begun to glare out from the pages of otherwise gray statistics. Car sales for the first five months of 1982 plummeted for every major Japanese make, while inventories for most are at uncomfortably low levels.

Sales and stocks were particularly low in May; industrywide sales climbed, but Japanese sales teams had little left to sell —their pipelines hadn't refilled since March 31, when the first year of quotas came to a close and exports were cut in order to meet the deadline.

One year ago, dealers were still living off inventories stocked in the U. S. before the Japanese government imposed the so-called "voluntary" quota of 1.68 million units.

So the year-to-year sales drops experienced by the Japanese looked terrible in May (Toyota down 20 percent for the year, Datsun down 10 percent, Honda down 25 percent, Mazda down 9 percent, Subaru down 7 percent).

When June's tallies come in, the year-to-year gap is expected to lessen. Although the recession has depressed the market — thereby reducing the impact of quotas—it has eliminated some potential sales.

The recession seems to have stemmed projections, made during 1980 and 1981 debates on trade restrictions, that prices of both imports and domestics would rise as a result of such restrictions.

But Robert McElwaine, president of the American International Automobile Dealers Assn., stuck to his guns, citing a soon-to-be-released study by the Boston research firm Harbridge House, that will show all his dire predictions on quotas have indeed come true.

In March, 1980, he testified before a House subcommittee that restraints could cost $4 billion a year.

If the counting starts on the day the Japanese government announced the quotas—the same day General Motors led the domestics to major price hikes — consumers paid $4.5 billion more for their new cars during the first 12 months of quotas than they had in the 12 months before the quotas, McElwaine said in quoting the Harbridge

Jeep XJ

AMC readies mini-4WDers for spring launch

American Motors' all-new Jeep XJ four-wheel-drive series will bow next spring starting with two-door and four-door (shown in unofficial photo) models sold under the Cherokee name. An upscale Wagoneer type will debut several months later. A pickup truck version is also in the works. AMC's new 2.5-liter four will be standard with the Chevrolet-built 2.8-liter V-6 engine as an option. A Renault-made four-cylinder turbodiesel may be added as a 1984 option. The current "senior" Jeeps will eventually be replaced by the XJ series.

Agency responds to court's order on passive restraints

NHTSA asks advice on belts or bags

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — NHTSA's response to a court order on the passive restraint remand is to ask whether the agency should: (1) Mount a campaign to collect usage rates on passive belts; (2) require the use of spool-out or non-detachable belts, or (3) mandate air bags.

This responds to a federal appellate court's request for a schedule to resolve questions — largely lack of sufficient evidence of projected use of passive belts to justify a rescission and consideration of options other than rescission.

The move is not a compromise or a retreat from the rescission of the standard announced last fall by NHTSA head Raymond A. Peck. It is not a proposed rulemaking. It is not a decision on whether to appeal en banc to the appellate court or to ask for certiorari at the U. S. Supreme Court.

Rather, it is a seeking of advice on options to which plaintiffs State Farm and the National Assn. of Independent Insurers may respond within 15 days, which then allows another 15 days for NHTSA's answering response. The circuit court then can approve, reject or amend.

Publication of any agreement presumably would then appear in the Federal Register as a proposed rulemaking with a 30-day comment period, and NHTSA would then have 45 days to make a decision—presumably ending its 12 years of controversy over mandated passive restraint for passenger cars.

NHTSA also filed in court a review of three ways that evidence can be gathered to determine usage rates of four types of passive belts: Two-point and three-point, detachable and non-detachable. It would involve at least 2,000 actual observations of usage.

Options include: (1) A large number of vehicles used over the road, with passive belts either bought or provided free, (2) rental cars at an isolated location, possibly an airport, or (3) a corporation or interested party fleet. All have advantages and disadvantages.

Broad safety plan brewing at NHTSA; new focus expected

By Roger Rowand
Engineering Editor

ANN ARBOR, Mich.—NHTSA is undergoing a self-appraisal. It has stepped back, looked hard at itself and is drawing up a broad and sweeping Safety Plan.

One result may be some dramatic shifting of emphasis away from car design to human elements in highway safety.

The agency has analyzed mountains of accident reports and said it now will focus its attention on where statistics indicate the action is.

Diane Steed, deputy administrator of NHTSA, sketched the proposed reevaluation at a regular quarterly meeting with industry technical representatives.

She labeled it "a major effort."

She said, "For the first time, the agency sat back and said, 'We really need a practical plan for going about our job. Where should we be devoting our research and our rulemaking energies in the future?'

"We had our Plans and Programs Division go back and take an in-depth look at the accident statistics—what's really going on out there in the real world according to the accident reports," Steed said.

NHTSA researchers spent about four months going over data from the Fatal Accident Reporting System (FARS), the National Accident Sampling System (NASS) and other accident statistical source material.

"They came up with what we view as the biggest problems on the road," Steed said.

Research workers, she said, have learned answers to such questions as: Where is the greatest harm done to the individual in the car? What's the cause?

"We've done that by looking at the accident statistics. We've done it across the board looking at where the problems lie," she said.

There are about 70 problem areas. In the first 15 priority recommendations drawn up by the NHTSA staff, eight deal with human factors and not vehicle design.

NHTSA has three avenues it can follow as it sets its rules. It

Chrysler cuts Colt/Champ to $4,995

DETROIT. — Chrysler Corp. has reduced the price of the base Dodge Colt/Plymouth Champ three-door hatchback to $4,995, a cut of $448, and also is offering a $400 consumer rebate. California dealers had asked for such a model to compete with the $4,949 Nissan Sentra. For '83, the Champ will be renamed Colt for ad efficiency.

Chrysler to make its own diesels

DETROIT.—Chrysler Corp. directors last week approved production of turbocharged six-cylinder diesel engines for 1985 models, and the company announced that an engineering program is under way to manufacture turbocharged four-cylinder diesel engines for 1986 models. These will be the first Chrysler-engineered-and-manufactured diesels. The six is a 3.7-liter (225-CID) units and the four is a 2.2-liter (135-

Shultz joins long line of auto officials to hold high government posts

Newly appointed Secretary of State is a director of GM

By John K. Teahen Jr.
Managing Editor

George P. Shultz, whom President Reagan has chosen to succeed Alexander Haig as Secretary of State, has a direct tie to the automotive industry. He's a director of General Motors.

Shultz is a relative newcomer to GM, having been elected to the board last July. But he has had an influential role. He has been a member of the Finance Committee, the most powerful entity in GM's vaunted committee system.

That's the group that decides how GM will spend its money. And even in bad years, GM has some $60 billion to spend.

When he isn't watching over GM's dollars, Shultz has served as president of Bechtel Group, Inc., San Francisco, an international engineering, construction and management services firm. He will, of course, relinquish both his GM board seat and his Bechtel job upon becoming a member of the cabinet.

This will not be Shultz's first go at government service. He was Secretary of Labor in 1969-70, director of the Office of Management and Budget from 1970 to 1972 and Secretary of the Treasury from 1972 to 1974.

Down through the years, a long line of automotive executives and outside directors have served the federal government in important positions.

High on that list is William S. Knudsen, who left the presidency of GM to direct the nation's war production effort in World War II.

Knudsen's successor as GM president was Charles E. Wilson, and Wilson, too, later became a government official. He was appointed Secretary of Defense in the Eisenhower Administration in 1953.

Roger M. Kyes accompanied Wilson to Washington as deputy Secretary of Defense. Kyes was general manager of GMC Truck & Coach Division. He returned to GM in 1954 to serve on the board and become an executive vice president.

John T. Connor, one of GM's outside directors, was named

Measure will require refund on trouble-plagued autos

California OKs new-car lemon law

By Matt De Lorenzo
Los Angeles Reporter

SACRAMENTO. — Legislation that would require auto manufacturers to replace or refund money on trouble-plagued cars still under warranty has been passed by both houses of the California Legislature. Gov. Jerry Brown is expected to sign the so-called lemon law.

The amendment to California consumer protection laws requires manufacturers to replace or refund the cost of cars that have been taken back repeatedly during the first 12 months or 12,000 miles of ownership.

The replacement-or-refund provision applies to cars taken back four or more times for work on the same substantial defect or cars out of service 30 or more calendar days as a result of those repair attempts.

"I can't say we're delighted—it's more regulation," said Jay Gorman, executive vice president or the Motor Car Dealers of Southern California.

However, Gorman and Stephen F. Snow, executive vice president of the Northern California Motor Car Dealers Assn., did work closely with the bill's sponsor, Rep. Sally Turner, an El Monte Democrat, to make the language in the bill acceptable to the dealer position.

"We're satisfied that the bill is most beneficial to both consumers and dealers," Gorman said.

The association took a neutral stand on the bill during debate in the legislature.

• Patterned after a measure enacted recently in Connecticut, the new law defines a substantial defect as one that affects the use, value or safety of the car, such as a faulty engine or electrical system. Smaller items, such as defective moldings or power accessories, would not be covered.

Perhaps the most important provision is that the consumer must take his or her case to a third-party arbitration board before the car is determined a lemon.

The arbitration would be binding on the manufacturer;

It's so long . . .

Ultra-Limo, Inc., LaPalma, Calif., got into the Guiness Book of World Records with its six-wheeled, 33-foot-long 1967 stretch Cadillac, equipped with hot tub, seating for eight and rear rumble seat. The company has since begun to stretch new Cadillacs. Minimum stretch is 60 inches. The six-wheel feature is optional.

Despite industry's doubts, many autos are surpassing EPA standards

Car makers doing better on emissions than they expected

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Five years ago, when Congress rewrote the landmark Clean Air Act of 1970, the U. S. auto industry argued mightily that tailpipe standards then under consideration were well beyond its reach.

Now, it seems that the industry grossly underestimated its engineers and the wonders of the learning curve.

Where Detroit once argued that it would be nigh onto impossible to build cars that could meet emission standards of 0.41 grams per mile HC, 3.4 gpm CO and 1.0 gpm NOx — much less the 0.41/3.4/0.41 standards that were contemplated in 1977 — there are now cars that are nearly, as one industry wag observed not so long ago, putting out cleaner air than they're taking in.

Leading the pack are some of the cars of the Volkswagen-Porsche-Audi group. By utilizing Bosch K-Jetronic fuel injection, three-way catalysts and an oxygen-sensor feedback system, Volkswagen of America is sellcars cars with tailpipe emission levels as remarkably low as 0.2 gpm HC/2.0 gpm CO/0.07 gpm NOx.

The clean Audi is a five-speed Audi 4000. The VW Rabbit is a four-speed that produced numbers of 0.12/1.6/0.09. A VW Scirocco managed 0.17/0.99/0.08 when fitted with a three-speed automatic. The best Porsche was a five-speed 924 that managed 0.11/1.6/0.24.

Other makes coming in with impressively low emissions were the Alfa Romeo GTV with 0.33/2.9/0.09; the Fiat X1/9 with 0.19/2.2/0.059, and the Renault 18i with 0.19/2.5/0.07.

A Volkswagen emissions specialist cautioned that the cars in question are light and that the systems were designed to allow for some degeneration during their 50,000-mile lifetime, so the numbers must be low. But he did allow that the numbers were "impressive."

Indeed, the emissions specialists at EPA's Ann Arbor (Mich.) testing facilities were so taken aback by the development that they rechecked the figures, sources at the agency said.

Normal engineering practice when dealing with emission control systems is to shoot for numbers slightly below the standards to compensate for any slippage that might occur between prototype and production vehicles and wear in the system over 50,000 miles. Thus, the target for today's NOx control standard of 1.0 gpm would be approximately 0.7 gpm.

VWoA and some of the others have gone impressively below this target. Many other makers have not done badly, either. Numbers in the 0.2 and 0.3 gpm NOx range were very common and have minimal deterioration factors to boot.

It's only fair to say that many of these are foreign car makers, but the domestics have their share of low emissions vehicles, too, even though many, if not most, are operating with waivers from the carbon monoxide standard in 1982. Such waivers allow them to meet a standard of 7 gpm CO instead of the statutory 3.4 standard.

• In the case of Chrysler Corp., it is producing cars with emissions as low as 0.17/1.9/0.56 (an Omni four-speed) and 0.19/1.3/0.81 (a Reliant three-speed automatic with the large four-cylinder engine).

The smaller Fords are coming in with numbers in the 0.30/2.0/0.6 range, and the smaller GM cars are coming in with numbers in the 0.20/2.2/0.65 range.

The domestic makers, unlike their foreign counterparts, use feedback or open-loop carburetor systems which do not give them the cylinder-by-cylinder

Recounts corporation's history, explains current problems

PBS to air balanced TV special on Chrysler

By Edward Lapham
Financial Editor

DETROIT.—The Public Broadcasting System will air a one-hour documentary on Chrysler Corp. which deals with historical and contemporary material, using the auto maker's successful quest for $1.5 billion in loan guarantees as the backdrop.

The program, titled "Chrysler: Once Upon a Time . . . and Now," was produced by the Detroit PBS affiliate WTVS/56. It will be aired by PBS affiliates at varying times and dates. The Detroit showing is scheduled for 8 p.m., Thursday (July 8).

"Chrysler" has a good historical perspective and includes film footage of early Chrysler executives like K. T. Keller and Walter P. Chrysler.

It takes a hard look at some of the turning points in the company's history which led to the serious financial crisis of the late 1970s and ultimately to the company's trek to Washington in search of relief.

The program has good balance in dealing with shortcomings, apparent mismanagement and problems encountered by Chrysler executives since the beginning. It is woven together roughly in chronological order and successfully presents a "feel" for the company's situation.

Although the program shies away from finger-pointing, by implication "Chrysler" designates current Chairman Lee Iacocca a hero and former chairman Lynn Townsend and John Riccardo as active participants in the company's malaise.

"Chrysler" develops the company from the early days through the "arsenal of democracy" days through postwar styling decisions and the critical 1950 UAW strike to the more contemporary areas of worldwide empire building and internal financial policy.

It also candidly presents much of the vitriolic anti-Chrysler sentiment which surrounded the loan guarantee legislation, although it does not completely present the full depth and breadth of the warlike strategic campaigning waged by Chrysler and its allies in pursuit of the legislation.

One aspect which would have made for a more complete look would have been a wrap-up with a more concise prognostication about the company's future, rather than just the broad summation of free enterprise issues and imminent changes in the U. S. economic system involved in the situation.

Several Wall Street analysts, two reporters who have written books about Chrysler plus a Chrysler vice president and UAW President Douglas Fraser were interviewed. "Chrysler" also features comments by many other participants in the loan guarantee campaign.

It is generally a very good production, and one which dispassionately puts the Chrysler situation into easily-understood perspective.

Lawsuit charges it's a safety hazard

Ninth class action filed against Cadillac V-8-6-4

By Marjorie Sorge

The ninth class-action lawsuit has been filed against General Motors, charging that its Cadillac V-8-6-4 engine is defective and a safety hazard.

The suit, filed in Third Circuit Court in Brookings, S. D., charges that the V-8-6-4-powered cars stall during normal operation, cutting out power brakes and steering. It also claims the engine surges unexpectedly, is imbalanced and experiences delays in response unanticipated downshifting and spark plug knock.

The suit was filed on behalf of Marvelyn E. Kessler by James E. Kessler, of Erickson & Kessler.

Eight other class-action lawsuits which make similar charges have been filed in New Jersey, Illinois, Texas, Ohio, Pennsylvania, New York, Maryland and California. There is also a product liability case in U. S. District Court in Dallas, which charges that GM is liable for a death which allegedly occurred when a V-8-6-4-powered car surged forward.

The V-8-6-4 was introduced by Cadillac in 1981 as a fuel-saving device. It runs on either eight, six or four cylinders, depending on the power needed. It was replaced in 1982 by a new V-8. Only the Cadillac limousines continue to have the V-8-6-4 as standard equipment in 1982.

The South Dakota suit charges that GM knew the engine was defective, dangerous and not able to be repaired before the car was marketed and advertised. It further alleges that GM misrepresented the operating characteristics of the V-8-6-4 engine and that the "intentional, deliberate and deceptive concealment of its defective design and defective operating characteristics violates the South Dakota Deceptive Trade Practices and Consumer Protection Act."

• A dealer service bulletin, issued by GM in mid-1981, advised dealers that some of the problems occurred in the V-8-6-4 engine and cannot be fixed. It said these actions are "normal" with the engine and told dealers not to attempt to repair them.

The South Dakota suit further charges GM with fraud and deceit; breach of implicit, implied, express and express limited warranties, and violation of the Magnuson-Moss Warranty Act. It also asks for a jury trial and seeks class-action certification.

It asks that members of the class be paid back the purchase price of their 1981 Cadillacs and that the sales be rescinded. The average cost of a 1981 V-8-6-4-equipped Cadillac was between $19,000 and $20,000.

Alternately, the suit asks that the members of the class be paid for the decrease in saleability of cars with the V-8-6-4, approximately $10,000. It also asks for punitive damages in an undisclosed amount and for attorney fees and court costs.

A Cadillac spokesman said GM has no comment on the lawsuit because of the pending litigation. But he said GM has increased the warranty on the V-8-6-4 and fully backs the engine.

The warranty on the V-8-6-4 was extended to five years and 50,000 miles a year ago after much criticism of the engine.

IMPORT REGISTRATION SHARES IN U. S.

Registrations for the state of Florida temporarily delayed; not available for Oklahoma.

April total down 18 pct; market share also dips

Import registrations again trail '81

By Jenny L. King
Staff Writer

Registrations of new imported cars lost ground both in numbers and in market share in April compared with year-ago figures. It was the fourth consecutive month this year that totals have been down, but the first time that market share has been anything but a record penetration.

According to figures compiled by R. L. Polk & Co., new import registrations accounted for 27.71 percent of the April market, down from a record 30.33 percent a year ago. This April, 186,216 registrations were counted, down 18.32 percent from 228,024 in 1981. Total for the first four months was 684,534, down 17.33 percent from 828,074.

April registrations did, however, continue the pattern of steady growth from month to month in 1982. They were up 6.09 percent over 175,575, in March; up 13.71 percent over 163,804 in February, and up 17.22 percent over 158,894 in January. January, February and March registrations were market-penetration records, in spite of low numbers.

Toyota held on to its first-place position among U. S. imports, earning 23.84 percent of the April import market. That was down 1.02 percentage points from 24.86 percent a year ago. Nissan gained 0.42 of a percentage point, climbing to 19.45 percent from 19.03 percent.

Third-place Honda was up 1.13 percentage points, to 15.83 percent from 14.70 percent in 1981. Volkswagen slipped to 7.08 percent from 8.93 percent, Mazda claimed 6.69 percent compared with 6.92 percent a year earlier, and Subaru climbed to 6.12 percent from 5.40 percent.

Seventh-place Volvo was up to 3.53 percent from 2.60 percent, followed by Mercedes-Benz at 3.07 percent, up from 2.33 percent. BMW earned 2.21 percent, and Audi was up to 2.00 percent from 1.66 percent. Fiesta slipped from the top-ten chart, and joined all "other" imports which had the remaining 9.94 percent.

• Japanese-built cars registered 76.84 percent of April imports, up from 75.20 percent last year. Imports from Germany dropped to 14.96 percent from 17.10 percent, while Sweden's share climbed to 4.32 percent from 3.20 percent.

For the first four months, Japanese products claimed 77.49 percent of the total, up from 75.95 percent in 1981. German products claimed 14.90 percent, down from 17.32 percent, and Swedish automobiles jumped to 4.02 percent from 2.79 percent a year earlier.

Imported-car totals by country of origin in April, 1982, compared with the previous year were:

	April, 1982	April, 1981
Japan	143,141	171,464
West Germany	27,857	38,990
Sweden	8,054	7,323
France	4,445	4,171
Italy	1,725	3,820
Britain	801	2,255
Ireland	238	1

Registrations by country of origin for the first four months of 1982 with their year-ago comparisons were:

	4 mos., 1982	4 mos., 1981
Japan	530,447	628,954
West Germany	101,982	143,369
Sweden	27,515	23,126
France	15,057	14,746
Italy	5,797	11,765
Britain	2,556	6,113
Ireland	1,180	1

Registrations of imported trucks were down in April compared with the total for the month a year earlier. Truck imports numbered 35,503, down 21.19 percent from 45,046.

Truck figures for April, 1982, compared with April, 1981, were:

	April, 1982	April, 1981
Toyota	12,030	10,847
Nissan	8,269	10,461
Mazda	3,152	—
Dodge Ram 50	2,477	—
Chevrolet LUV	—	7,960
Ford Courier	—	6,055
Others	9,575	9,777

Truck imports for the first four months were down 13.32 percent, to 136,628 from 157,621. Totals were as follows:

	4 mos., 1982	4 mos., 1981
Toyota	42,728	37,933
Nissan	30,313	35,283
Ford Courier	12,183	23,119
Dodge Ram 50	12,035	—
Chevrolet LUV	—	25,048
Others	39,369	36,238

DEAC founder calls NADA a mighty force in politics

SAN DIEGO.—NADA is the fifth most influential political force in the U. S. today, William E. Hancock, chairman of the Automobile and Truck Dealers Election Committee (DEAC), told San Diego County Motor Car Dealers at their annual meeting.

The NADA influence is outranked only by (in order): The White House, the Supreme Court, television and Congress, he said.

He attributed the strong influence exerted by the dealer's organization to the fact that "we're in every community. We see more people than any other group and we know more people in politics than any other groups know."

He warned that dealers can't afford to coast along on their reputation.

"Dealers must wake up," he said. "The dealer body must be strong. We must get involved and see that every other dealer does his part."

He acknowledged that some dealers are unable to contribute because of the poor economy, but he urged all dealers who are able to contribute to DEAC to do so.

Hancock founded DEAC in 1975 when he was president of NADA. He explained that NADA carries on a successful lobbying campaign in Congress, and that dealers contribute to the NADA's election-action program through DEAC.

• He maintained that NADA won "70 percent of the challenges we supported in Congress," and helped defeat 16 bills that would have been costly to dealers had they been enacted into law.

They included proposed legislation concerning air bags, clean air and fuel economy, full warranty, class-action suits, a consumer protection agency, a new labor law and the used-car rule.

In picking a candidate to support, he urged dealers to select one who possesses three qualifications: Name, recognition, constituency and money.

"Money is the most important. Your contribution is your calling card," he said.

He disclosed the name of a California congressional candidate DEAC is supporting: Hal Phillips, a Burbank auto dealer, in the 26th District.

Hancock is a Buick-BMW dealer in Columbia, S. C., and is a past president and director of the South Carolina Automobile Dealers Assn. He formerly practiced law.

Dealer service business shows solid upturn in May

By Francis J. Gawronski
Service Editor

After a sluggish performance in April, service and parts business recorded by new-car dealerships rebounded in May to register its third best showing of the year, according to the Automotive News Service Index.

As measured by the Service Index, May shop business amounted to 108.5 percent of the volume for the same month in 1981. In April, service and parts business dipped to 104.9 percent of the year-earlier volume after recording an increase of 14.6 percent in March.

May marked the 15th consecutive month that the Service Index has shown a gain over the same month a year earlier.

All indicators except repair orders written showed good growth in May, with sales of all parts and P&A leading the way with an increase of 15.4 percent. Repair orders were down 7.1 percent from the year-ago figure.

Gross profit, the most vital indicator from the dealers' viewpoint, was up 13.5 percent over dealership profit for May, 1981, while shop parts sales, those used on customer-paid and warranty repairs, advanced 12.3 percent. Total labor sales (customer-paid and warranty) were up 6.5 percent in May.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealerships.

For the first five-months of 1982, the dealers' shop business amounted to 108.6 percent of the volume for the corresponding period a year ago.

Sales of all parts and P&A was the leading indicator for the January-May period, up 17.3 percent, followed by shop parts sales, up 15.5 percent.

Gross profit was up 12.2 percent for the period, while labor sales increased 6.1 percent. Repair orders written were down 9.1 percent.

SERVICE INDEX
108.5*

	May, '82 vs. May, '81	5 mos., '82 vs. 5 mos., '81
Gross Profit on All Labor and P&A Sales	+13.5%	+12.2%
Repair Orders Written	− 7.1%	− 9.1%
Total Labor Sales (Customer & Warranty)	+ 6.5%	+ 6.1%
Shop Parts Sales (Customer & Warranty)	+12.3%	+15.5%
Sales of All Parts and P&A	+15.4%	+17.3%

*—Survey by Automotive News shows that dealers' service and parts business in May, 1982, was 108.5 percent of business in May, 1981. Service business in the five months of 1982 was 108.6 percent of business in the corresponding period in 1981.

Anglo American Auto buys Nashville

The first U. S. acquisition contract by newly formed Anglo American Auto Auctions Inc. is confirmed with a handshake in Nashville by David Wickins, right center, chairman of AAAA's parent company, British Car Auction Group, and seller Tom Beasley, left center, of Nashville Auto Auction Inc. Mike Richardson, left, executive vice president, Nashville Auto Auction, and Peter Warman, British Car Auction vice president for finance, join them. Initial purchase price of the U. S. auction was some $5 million.

Japan auto sales continue their yo-yo course

TOKYO. — Car sales in May were up again in Japan after a dismal April which, in turn, followed a buoyant March. Registrations of normal vehicles were up 5.3 percent at 286,899 units, while midget sales grew 10 percent to 98,770.

Sales of cars with engines of less than 2.0 liters were up 16 percent at 198,000 but, as usual, sales of larger cars dwindled—this time by 26 percent to only 5,000 units.

Toyota's Corolla reasserted itself as the best-selling car with 16,300 units, although the total was 4.5 percent below the same month last year. The Mazda GLC continued its good run with 13,700 sales (up 12 percent), while the Nissan Sentra continued to gain ground with 11,800 sales (up 53 percent).

Among cars in the 1.5-2.0-liter class, the Datsun Bluebird (810) was the best seller at just under 10,000 but, like the Corolla, it was below last year—in this case by 10 percent.

Significantly, though, in that class the new front-drive cars are not living up to expectations. Nissan's Stanza accounted for only 1,500 sales, Mitsubishi's Tredia for only 1,124 and the Toyota Camry/Vista for 3,437.

Clearly, the Japanese have not yet accepted the front-wheel-drive 1.6-1.8-liter sedan as a worthwhile alternative to the established rear-drive models.

4 Ford plants and VWoA are idle

Downtime trims week's car output

By Patricia Hoffman
Staff Writer

Domestic auto production last week dropped from the previous week's total as four Ford facilities and Volkswagen of America's Westmoreland point were down for inventory control.

The makers scheduled 122,125 cars last week, down 8.41 percent from 133,344 the previous week and down 16.17 percent from 145,685 the comparable 1981 week.

Breakdown for the week by company is: General Motors, 70.46 percent; Ford Motor, 15.78 percent; Chrysler Corp., 12.53 percent; American Motors, 1.15 percent and Checker Motors, 0.08 percent.

VWoA's Westmoreland facility began a two-week shutdown last week (June 28) to control overstocked inventory. The plant will resume operations for three weeks beginning July 12 and then will be idle again for six weeks for model changeover. Production of 1983 models is scheduled to begin Sept. 13.

Ford's Lorain, Metuchen, San Jose and Wayne facilities were all idle last week for inventory control.

GM's Leed's plant resumed operations last week following a three-week shutdown to control inventory.

Daily overtime continued last week at Chrysler's St. Louis point and at Ford's Dearborn, Kansas City, St. Louis and Wixom facilities.

Taxicab production is scheduled to end at Checker Motors' Kalamazoo point this Friday (July 9).

All car facilities will be idle today (July 5) in observance of Independence Day holiday.

So far this year, the auto manufacturers have assembled 2,709,787 units, a 26.09 percent decline from 3,666,371 units completed at this time last year.

Truck production declines 9 pct.; 3 plants down

Downtime at three plants pulled last week's domestic truck production down 9.04 percent from the previous week's total, but output was up 26.06 percent from that of the comparable 1981 week.

The makers scheduled 46,766 trucks last week, compared with 51,412 the previous week and 37,098 a year ago. The 1981 week included the July 4 holiday.

Year-to-date, the truck manufacturers have assembled 1,058,899 units, up 11.43 percent from 950,247 built through July 4 last year.

Volkswagen of America's Westmoreland facility went down last week for model changeover. Production of 1983 models will begin Sept. 13.

A three-week shutdown to adjust inventory began last week at International Harvester's Ft. Wayne and Springfield facilities.

General Motors' Pontiac point operated one-hour of overtime last Monday (June 28). Normal eight-hour operations resumed on Tuesday.

Also at GM, the Detroit, Moraine and Shreveport facilities worked five days of daily overtime last week.

Overtime was also scheduled last week at Ford Motor's Lorain, Michigan and San Jose facilities and at Chrysler Corp.'s Warren point.

All U. S. truck facilities will be idle today (July 5) in observance of Independence Day.

Canadian holiday cuts production of cars, trucks

Holiday downtime last Friday (July 2) dragged last week's Canadian auto production down 37.13 percent from the previous week's total, but output for the year-to-date remained above that of the comparable 1981 period.

The auto makers scheduled 14,004 units during four days of production last week, down from 22,274 units finished during five days the previous week and down 27.13 percent from 19,218 in the comparable week last year.

So far this year, the car manufacturers have finished 481,947 units, a 1.38 percent gain from 475,395 units built in last year's comparable period.

Last week's truck production, also for four days, was estimated at 8,149 units, down 34.64 percent from 12,468 the previous week. Output dropped 17.36 percent from 9,861 units built the same week last year.

Year-to-date, the truck makers have completed 284,948 units, down 5.17 percent from 300,472 built in the same 1981 period.

Ford Motor's St. Thomas car facility began a four-week vacation shutdown last week. The plant is scheduled to resume the week of July 26, but will be idled again starting Aug. 9.

Also at Ford, the Oakville car and truck facilities will be idled for vacation starting today (July 5). Car production at Oakville is scheduled to resume July 26, and the Oakville truck plant is slated to return July 19.

American Motors' Brampton facility will be idle two weeks starting today.

Volvo profits rise for year; car division leads the way

GOTHENBERG, Sweden. — Volvo profits topped 1.39 billion Swedish kronor in 1981 ($232 million U. S.), up 35 percent from 1.00 billion kronor ($168 million) in 1980, a profit largely attributable to the company's improved car business, according to Volvo's annual report.

Volvo not only sells cars and trucks, but is also involved in airplane, marine and industrial engines; oil drilling and trading; energy; food production; batteries; construction equipment, and steel processing.

Volvo Car Corp. increased its sales volume and market share last year. For the second consecutive year, the U. S. was Volvo's biggest export market. Volvo executives expect more of the same in 1982.

Volvo Car Corp. made a profit of 525 million kronor (about $87 million) on sales of 298,700 cars last year. During 1980, the company lost 195 million kronor ($32 million) on sales of 270,300 cars. That's a 720 million kronor (nearly $120 million) turnaround in one year.

Volvo's other strong car markets last year were Canada, Great Britain, France and Italy. Exports accounted for 83 percent of all Volvo passenger car sales.

Volvo's truck group did well in export markets outside of Europe. Volvo truck sales climbed to a record 28,300 units last year. During 1980, Volvo sold 26,300 trucks.

The 1981 truck record does not include 1,500 heavy trucks built in the U. S. during the last four months of the year by the Volvo White Truck Corp.

Volvo Energy AB lost money last year, but profits on all trading through Volvo's recently acquired Beijerinvest trading company increased last year.

Total profits of the combined Volvo and Beijerinvest activities were 1.42 billion kronor ($238 million U. S.) last year.

Market research group elects Ryder president

TOLEDO.—Paul R. Ryder, of Echlin Mfg. Co. has been elected president of the Automotive Market Research Council.

Other 1982-83 officers are Joseph C. McCourt, Union Carbide Corp., vice president; Robert P. Fohl, U. S. Steel Corp., secretary, and Hugh W. Sloan Jr., Budd Canada, Inc., treasurer.

Two turbos, two tops

Design study for Maserati

Italian coachbuilder Embo S.p.A.'s first prototype of a convertible for the new Maserati Biturbo was displayed at the Turin Auto Show. Maserati has since ordered up a second prototype—with only two seats and a longer rear deck—which is expected to be offered first in Europe, then in the U. S. in late 1983. Embo will convert the cars for Maserati.

Domestic sales hit skids; June total worst since '58

By Jenny L. King
Staff Writer

New-car sales in June veered abruptly from an earlier pattern of slow domestic-car growth and sharp imported-car decline.

The major U. S. firms reported their second-worst month this year, the lowest June since 1958 and the worst first half of a calendar year since 1961.

June sales of imported cars were down 3.15 percent from the year-ago level but carved out a record hunk of the total market and their second-best-ever penetration on a monthly basis, 30.61 percent. It was their smallest monthly sales decline this year.

Without the aid of consumer bait such as lower interest rates and generous rebates, the five major domestic auto makers sold 451,430 new cars in June, down 12.82 percent from 517,815 the preceding year and second only to January's 368,138 as the poorest month of 1982.

The June total was less than half the record for the month of 949,849, set four short years ago, in 1978. The last previous lower total was 384,519 in 1958.

Import sale in June numbered 199,093, down 3.15 percent from last year's record total of 205,562, but they captured a record share of the smaller '82 June market: 30.61 percent compared with 28.41 percent in 1981.

Domestic first-half sales did what optimists and fans of the U. S. industry hoped they wouldn't — they dropped from the weak 1981 level to an even softer position. Sales for the first six months totaled 2,934,824, down 11.29 percent from 3,308,432. It was the lowest first half since 1961 when the figure was 2,751,460.

Import sales for the six-month period were down 13.56 percent, to 1,101,165 from 1,273,863. They accounted for 27.28 percent of the market, down slightly from 27.80 percent in 1981.

The industry total was 650,523 in June, down 10.07 percent from 723,377 a year earlier. Combined total for the first six months was 4,035,989, down 11.92 percent from 4,582,295.

• There was no good word from the domestic industry in June; some news just wasn't as bad as other news. Ford Motor Co. and Chrysler Corp. reported sales declines of less than 5 percent, while General Motors was down 16.67 percent, American Motors was down 20.14 percent and Volkswagen of America crept along 32.46 percent below its 1981 level.

GM sales numbered 259,056 for the month, down 16.67 percent from 310,886 last year. Ford was down 4.90 percent, to 120,947 from 127,173. Chrysler was down 4.47 percent, to 55,842

Shay Motors granted Chapter 7 liquidation

By Edward Lapham
Financial Editor

GRAND RAPIDS, Mich. — Shay Motors Corp. is in liquidation.

A U. S. Bankruptcy Court judge last week granted an application by the Battle Creek-based quickie replicar maker to convert its status under the U. S. Bankruptcy Code from reorganization under Chapter 11 to liquidation under Chapter 7. The company filed for Chapter 11 status on March 29. The company built Model A and '55 Thunderbird replicas.

The application was made in open court just prior to scheduled hearings on creditors committee petitions to appoint a trustee and reduce executive salaries and objections to certain members of the creditors committee by debtor-in-possession Shay Motors.

The application for conversion caught all parties by surprise, including Judge David E. Nims Jr., who granted the application and appointed Lloyd Kellum, of Battle Creek, as interim trustee.

The creditors committee was prepared to press its petition and had subpenaed former Shay Motors Vice President/Treasurer John E. Kyees to testify about company management procedures and practices.

Prior to the formal application, Shay Motors President

breaking news

Domestic new-car inventory jumps to 78½ days

DETROIT. — The domestic auto makers had 1,364,214 U. S.-built new cars in inventory July 1, a 78½-day supply at the current depressed selling rate. A month earlier, the domestic new-car stockpile totaled 1,212,727 units, a much healthier 52-day supply. Detroit can take some solace, however, in the fact that the July 1 inventory was not quite as burdensome as it was a year ago, when 1,644,871 units in stock represented an 83½-day supply.

Chrysler sets '83 fleet price protection at 2 pct.

DETROIT. — Chrysler Corp. late last week sent price-protection letters to its dealers setting base '83 fleet price increases at 2 percent. Small-car prices are likely to remain unchanged. The letter indicated Chrysler will retain current fleet incentive programs to insure an aggressive launch for '83-model fleet sales.

Maker's delays focus attention on wide range of Japanese-European issues

Is Nissan having second thoughts on UK assembly plant?

By Richard Feast
European Editor

LONDON. — Reports from Japan in the last few days have done nothing to counter the growing feeling in Europe that Nissan will renege on its proposal to build a major car manufacturing plant in the United Kingdom.

Officially, the project is "still on," according to Nissan's UK adviser, Lord Marsh.

But Nissan's protracted delay in making a decision has had the inevitable effect of suggesting that the company is looking for a way out—especially after some remarks attributed to President Takashi Ishihara in the Japanese daily, Asahi Shimbum.

"There is strong opinion within our company that the project is very risky. We cannot push a project for which we cannot obtain company consensus," he is reported as saying.

The remarks were immediately interpreted in Europe as a softening-up process before Nissan officially made its announcement that the project had been taken off the front burner.

For diplomacy's sake, it would be going into the freezer. In reality, it would be destined for the trash can.

Lord Marsh, a former Labor Party transport minister, described all this as pure speculation.

He believed that Nissan would invest in the UK "in some form or another."

Nissan is now expected to make its decision by the end of this month. But it is a cry that has been heard many times.

• In January, 1980, a decision was expected within six months. At that time the factory being discussed was expected to be on stream in the mid-'80s. It was to have a capacity of 200,000 units annually, employ around 5,000 people directly and, at $500 million, amount to the largest foreign investment ever made in the UK.

While those figures seemed like good news in the first flush of enthusiasm over the project, doubts began to creep in.

They centered on local content. The proposal was for 60 percent local content at first, rising to 80 percent. This would be by value rather than weight.

One of the sticking points in Anglo-Japanese discussions was components. Nissan expressed doubts about the quality and availability of European products and clearly wanted to source much from Japan.

The components industry lobby insisted on use of European parts—and this led to further delays.

Ford, for instance, estimated that in order to compete with a Nissan assembly operation in the UK it would need to source its components from Japan, too, with a consequent loss of some 30,000 jobs in the component sector in the UK.

At the same time BL was already in trouble with exports of its Triumph Acclaim, assembled in the UK from Honda components. According to BL the local content is 60 or 70 percent.

Italian authorities are not convinced and have held up deliveries of Acclaim exports to the country, which limits Japanese new-car sales to around 2,200 annually.

The development did not go unnoticed by Nissan, which believes a manufacturing base in one Common Market country should provide free access to the markets of other member states.

• Neither were French authorities very enthusiastic about the original Nissan announcement. France limits Japan's share of the new-car market to 3 percent. The industry minister at the time accused Britain of a lack of community solidarity in trying to entice a Japanese manufacturer into an area where there was already excess capacity.

It is anti-Japanese feelings such as these which have con-

Jeep line also was in jeopardy, Majerus says

UAW pact called savior of AMC-Renault link

By Marjorie Sorge
Labor Editor

The American Motors-UAW agreement saved the AMC-Renault marriage and the Jeep line, according to UAW Secretary-Treasurer Raymond Majerus, director of the union's AMC department.

And, Majerus said, it's a more lucrative contract for the workers than the new pacts at General Motors and Ford.

That contract provides an employe investment plan worth between $110 million and $115 million earmarked for AMC's $900 million new product program. But, Majerus said, without the agreement AMC's major investor, Renault, would not have put any additional capital into the company and would have become "just a stockholder" telling AMC to "make its best deal somewhere else."

Renault owns 46.4 percent of AMC and has invested about $350 million in the company to jointly produce vehicles. The first of those cars, the Alliance, will go on sale in September.

"That's the impact of this whole contract," Majerus said. "Renault got the confidence (in the workers) it wanted. They made an investment and it was in jeopardy. Now it has been saved and their product will go on the market. Once the car is on the market, the emphasis is not on the workers or on the plant. It is on how well the vehicles are designed and engineered and how well they are built. That's up to them (AMC-Renault)."

While the AMC-Renault marriage is no longer on the rocks, some analysts feel that Renault will continue the present relationship for only two or three years. They say once the dealer network is in place and the Renault-designed cars are in production, Renault will exercise its option to buy up to 59 percent of AMC's outstanding stock, thereby taking over the company.

• The new AMC-UAW agreement does give AMC working capital for most of the contract's lifetime. The contract is rear-ended so workers get a big jump in pay toward the end of the pact. It is estimated that when the agreement ends in 1985, AMC workers will be making more an hour than those at Ford and GM.

Even so, getting the contract ratified was no easy job. While workers at the Kenosha and Milwaukee plants ratified the pact in the first vote, those in the Toledo Jeep plant rejected it and a second vote there was required. The contract required ratification from all three locals.

Majerus said workers in Toledo came to realize that their jobs were in jeopardy even though the Jeep operation had been supporting AMC for quite awhile. Without the Renault capital, the new Jeep XJ, a downsized version of the current CJ model, was in danger of cancellation as were other future products.

"You can't market only one line and sell only one line, so Jeep has to be compatible with the cars built in Kenosha," he said. "They build parts for Jeep in Kenosha." In other words, Jeep couldn't make it on its own.

When the ratification first

Cooling off hot cars

Convertible Concepts, Ltd., Blaine, Wash., says it turns a Firebird (foreground) or Camaro into a Spyder Convertible for $6,500 in three to five days at its four U. S. facilities. Designed by Richard Straman, Costa Mesa, Calif., the conversion provides access to the trunk through the rear seat and a small trunk lid. Production is expected to run about 500 this model year.

Tenn. firm gets Nissan computer pact

By Roger Rowand
Engineering Editor

An Oak Ridge (Tenn.) firm has been picked to design and install a computerized production control and monitoring system for the $500 million Nissan pickup truck plant being built in Smyrna, Tenn.

The system, known as NEMAC (Nissan Energy Management, Maintenance / Monitoring and Communications/Control), will be used for energy management, control and monitoring of manufacturing processes, fire alarm, maintenance monitoring, maintenance dispatching and preventive maintenance, Nissan said.

ORFMA, the computer supplier, will use a distributed computer network called OPTONET, a product of Phoenix Digital Corp. The OPTONET network will transmit signals by fiber optics cable to robots, programmable controllers, computers and other equipment at the Nissan operation.

"When Nissan selected Tennessee as the site for its first U. S. manufacturing venture, the company made a commitment to hire Tennessee residents as employes and to do business with Tennessee companies whenever possible," said Marvin T. Runyon, president, Nissan Motor Mfg. Corp.

The computer company is named Facility and Manufacturing Automation, Inc., but is called ORFMA. Incorporated this year, it is a spin-off of Foster-Miller & Associates, of Massachusetts. The firm's nickname, ORFMA, is a federalese acronym for Oak Ridge Foster & Miller Associates.

It is owned chiefly by an Oak Ridge - based high - technology conglomerate, The Nucleus. That company's activities are concentrated in government classified programs and in designing and making controls for the petrochemical industry.

Oak Ridge is the site of a highly advanced manufacturing complex.

Product line in Mexico under consideration, UAW official says

AMC, Renault look south of border

By Marjorie Sorge
Labor Editor

American Motors and Renault are eying the Mexican market for future products, according to Raymond Majerus, UAW secretary-treasurer and director of the union's AMC department.

Majerus told AUTOMOTIVE NEWS, the makers would be interested in expanding beyond AMC's three assembly plants—Toledo; Kenosha, Wis., and Brampton, Ont.

Renault already has an engine plant in Mexico. That would qualify the pair to sell cars in Mexico.

It is also possible that Renault could make another agreement with a U. S. company and expand its operations in the U. S., he said.

The Canadian market already is open to Renault because of its joint venture with AMC. Under the Auto Pact, Renault can ship cars to Canada — built either in France or in the U. S. — tariff-free because AMC builds cars in Canada.

Workers at Brampton, however, refused to go along with the new U. S. UAW-AMC contract which provides an employe investment program. Under the contract, AMC pledged to put all new product programs into existing facilities at Kenosha, Milwaukee and Toledo.

Brampton is working double shifts to build the AMC Concord, Eagle and Spirit and is producing large fleet orders for those cars. Workers don't negotiate a new agreement until 1983.

It is unlikely that AMC will close the Canadian plant, since companies must build in Canada to sell there tariff-free.

"The Canadian market is a very lucrative, desirable market, and in order to protect that market for Renault and also for AMC, we've got to build cars up there," Majerus said.

That same problem will exist in Mexico if Renault and AMC begin selling cars there.

To accompany worldwide markets and the world-car concept, the UAW has planned a world union. Is it possible it is thinking about a North American union, which includes not only Canada, but Mexico?

"Victor Reuther spent a great deal of time in Mexico when he was on our payroll," Majerus said. But International Metalworkers Federation (IMF) and World Auto Council are very involved in Mexico, and there is a Mexican union. There has been no discussion about the UAW working in Mexico like we do in Canada — but that's not outside the realm of possibility. It certainly is something that needs to be thought about.

"If we ever get back to a 10-million-car sales year . . ."

Four firms are foreign, highly visible and losing money

Argentine makers feel heat of Falklands war

By Megan O'Reilly
Crain News Service

BUENOS AIRES.—The Falklands crisis and ensuing nationalistic fever have placed Argentina's four auto makers, all foreign and losing money, in an uncomfortable and highly visible position. The four are Ford, Volkswagen, Renault and Sevel, which produces Fiat and Peugeot cars.

But once the fervor dies down and postwar reconstruction of Argentina's battered political and economic system gets under way, auto makers are optimistic that the market will be reactivated, pulling them out of the worst sales slump in 12 years.

While auto executives are reluctant to say that the war did the country some good, they admit that a return to protectionism is likely after a disastrous six-year experiment with open-market policies.

They say import restrictions and lower interest rates would enable them to return to full production capacity, now averaging under 40 percent, and increase sales, down sharply from 1980, the industry's peak year when 281,793 cars were sold.

Ford, the market leader, was producing 9,000 cars a month last year. That figure is now split between all four auto makers.

Louis Melnik, director of public relations and advertising at Volkswagen, said the sag in sales was a symptom of a major shift in wealth which saw the middle class lose its purchasing power during the past six years of military rule, leaving only the rich to buy cars.

During the war, anti-foreign sentiment was running high. Ford became the victim of a bizarre campaign by the country's largest labor organization which issued a damaging statement that was widely reprinted in the nation's press.

It demanded that the government explain why "the Industry and Mining Secretariat authorized Ford Motor Argentina on May 5, 1982, to import from England 70 percent of car components for cars built here while Argentine workers are unemployed and our sons are dying on the Malvinas (Falklands)."

Ford was furious and canceled its advertising for one month in the papers which carried the story. A company spokesman dismissed the charges as a sham.

The 70 percent import figure angered Ford since Argentina's local - content requirements are 88 percent for cars, 82 percent for light trucks and 75 percent for medium and heavy trucks. In other words, imported content cannot exceed 12 percent, 18 percent and 25 percent, respectively.

Ford did make a routine request last October to import a small shipment of parts from England for Taunus cars built in Argentina, but a Ford spokesman in Detroit said English parts account for only 0.1 percent of the Argentine Taunus models.

A Ford of Argentina spokesman felt that the announcement of that request in the middle of the war "clearly was meant to hurt us and the government."

• In general, the companies tried to keep a low profile during the war, although "the employes" of Ford, Volkswagen, Renault and Sevel were all conspicuous contributors to the Malvinas Patriotic Fund, which helped finance the country's war effort.

The country's instability has always made company headquarters nervous. And just after the Argentine surrender in Port Stanley and the resulting political chaos, Fiat sold 60 percent of the local company to a group of Argentine businessmen, a

Total sags as incentive programs phase out

June new-car sales worst since '58

Continued from Page 1

from 58,454. AMC sales of 7,767 were down 20.14 percent from 9,726, and U. S.-built Rabbits from VWoA dropped 32.46 percent to 7,818 from 11,576.

GM earned 57.39 percent of the domestic market in June, down from 60.04 percent a year ago and GM's smallest monthly share to date this year.

Ford sales accounted for 26.79 percent, up from 24.56 percent in 1981. It was Ford's best month in terms of market share. Chrysler had 12.37 percent, up from 11.29 percent; AMC stood at 1.72 percent, down from 1.88 percent, and VWoA earned 1.73 percent, down from 2.23 percent.

Chrysler and Lincoln were the only U. S. makes to post sales gains in June. Chrysler sales almost tripled, climbing to 14,746 from 5,351, and Lincoln sales leaped 67.74 percent, to 6,874 from 4,098.

The June daily selling rate for domestics averaged 17,363, down 12.82 percent from 19,916 in 1981. There were 26 selling days both this year and last.

Third-period domestic sales were down 8.79 percent, to 158,420 from 173,684 a year ago. The late-June daily selling rate was 17,602 based on nine days, down 18.92 percent from 21,711 based on eight days in 1981.

All the major U. S. car builders were down for the first half of 1982, from Ford's 7.62-percent decline to VWoA's 45.29-percent plunge.

GM dealers retailed 1,799,035 units during the first six months of 1982, down 9.93 percent from 1,997,376 last year. Ford dropped 7.62 percent, to 693,697 from 750,951. Chrysler sales of 349,978 were 12.66 percent below 400,717 a year earlier. AMC dropped 38.75 percent, to 45,985 from 75,074, and VWoA tallied 46,129 sales through June 30, down 45.29 percent from 84,314.

GM earned 61.30 percent of the first-half domestic market, up from 60.37 percent in 1981.

Ford claimed 23.64 percent of the market, up from 22.70 percent. Chrysler slipped to 11.92 percent from 12.11 percent; AMC had 1.57 percent, down from 2.27 percent, and VWoA had 1.57 percent, down from 2.55 percent.

Three U. S. makes managed to better their first-half sales compared with 1981 levels. Chrysler was up 70.16 percent, to 82,239 from 48,329; Lincoln was up 31.92 percent, to 43,684 from 33,115, and Cadillac was up 6.43 percent, to 116,295 from 109,269.

The daily selling rate for the first half of 1982 was 19,182, down 11.29 percent from 21,624 a year ago. There were 153 selling days both years.

Second quarter domestic sales totaled 1,534,134, down 2.63 percent from 1,575,560 the preceding year.

• Imports are an anomaly. Import sales have been down every month this year as well as the last four months of 1981, yet they remain the largest segment of the U. S. market and a constant threat to the domestic companies. Imports claimed 30.61 percent of the June market and 27.28 perecnt of the six-month market.

Japanese-built cars accounted for 80.01 percent of June imports, up from 79.91 percent a year ago; Japanese products were 80.64 percent of the first-half import total, up from 79.72 percent in 1981.

Japanese products represented 24.51 percent of the total market in June, up from 22.71 percent the preceding year. They had 22.00 percent of the first-half total, down slightly from 22.16 percent in 1981.

In June, Datsun scored an 11.62-percent sales increase and missed Toyota's total by some 200 units (46,747 vs. 46,977); Toyota dropped 9.16 percent. Toyota, the top import was down 19.11 percent for the first half, while second-place Datsun was down 6.59 percent.

Honda was down 6.95 percent for the month and 7.44 percent for the first half. Mazda dropped 14.40 percent in June and 18.21 percent in the first half, and Subaru was down 4.03 percent for the month and 6.84 percent for the half.

Picking up the slack were several European car makers, including manufacturers of some of the most expensive cars on sale in the U. S. BMW reported its best month ever in June; its sales of 4,605 were up 16.11 percent from 3,966 last year. Jaguar had a record June and best first half; Saab boasted its best month ever; Volvo was up 13.54 percent for the month and 11.96 percent for the first half, and Porsche was up 58.60 percent in June, 20.13 percent so far this year.

The market class breakout in June was as follows: Imports, 30.61 percent; intermediates, 21.47 percent; compacts, 16.68 percent; subcompacts, 15.13 percent; standards, 11.19 percent and luxury models, 4.92 percent.

First-half market class segments were: imports, 27.28 percent; intermediates, 21.57 percent; compacts, 18.46 percent; subcompacts, 16.81 percent; standards, 10.56 percent, and luxuries, 5.32 percent.

Ford sales include Fiesta; VWoA includes VW and Porsche-Audi; Plymouth includes Champ and Sapporo; Dodge includes Colt and Challenger; Fiat includes Lancia. Jaguar-Rover-Triumph includes MG.

Honda sales dip was overstated

Things aren't as bad at Honda as they appeared in the July 5 issue of Automotive News. Honda five-month sales were mistakenly reported to be down 20 percent; in fact, they were down 7.54 percent.

The same issue showed the number-three importer down 1.74 percentage points in its share of import registrations through April, 1982, compared with the first four months of 1981. In fact, Honda was up 1.74 percentage points, to 17.19 percent from 15.45 percent. Honda sales through June 30 totaled 189,620, down 7.44 percent from 204,871 last year.

Recession over in Europe? First-quarter sales stir hope

By Richard Feast
European Editor

Has the long-hoped-for end of the recession in auto sales arrived in Europe?

Early returns for the first quarter of this year indicated a modest upturn after two consecutive years of serious decline.

Optimism is heightened by the fact that the January-to-March figures were recorded before what is traditionally a peak buying period — from April through to the beginning of the summer holidays.

Total sales in western Europe's 15 national markets (excluding Greece) amounted to some 2,689,300, an increase of 2.2 percent over the opening quarter of last year.

If the trend continues throughout the whole year, it would suggest a year-end European total of 9.87 million sales. This would compare with the 10.33 million achieved in the peak year of 1979 and the two subsequent totals of 9.97 million and 9.66 million.

There are no official, European-wide sales statistics compiled. Instead, each national trade association collates sales returns and obtaining a clear overall picture of trends is difficult.

However, top European manufacturers maintain a close watch on the markets to enable them to monitor their progress alongside that of their rivals.

Some of the details in the statistics acquired by AUTOMOTIVE NEWS from one of them could be disputed, but they provide a good general guide to the shifting patterns.

From them, for example, it is easy to identify a substantial weakening of the Japanese presence and a substantial jump in General Motors' share of the business.

The western European market is dominated by four countries, West Germany, France, Italy and the UK, which between them account for three-quarters of all new car sales.

And it is the advance in one of them that largely accounts for the overall increase in sales.

In the first quarter of this year sales in France rose in unit terms by 77,900 compared with the same period last year. It was an expansion of more than 17 percent, and one of the largest swings on the continent.

But in overall terms the increase in units amounted to only 57,400, or 2.2 percent more than last year.

The reason lay in Germany, where sales dropped back by 7.4 percent, or 47,600 units.

Of the other "big four" countries, Italy managed a modest 4,200 unit improvement (0.9 percent) and the UK fell back by a further 7,800 (1.9 percent).

The continued expansion of the Italian market since the second oil crisis has confounded and delighted European makers. While total European sales dropped by nearly 6.5 percent between 1979 and 1981, Italian sales soared by 30 percent to nearly 1.73 million.

The upward curve has flattened considerably this year, though, and sales this year are expected to run out around the same level as last year.

On a smaller scale, Finland, Norway, Switzerland and Portugal have also each managed annual increases since 1979. And each registered a small increase in the opening quarter of this year.

The Republic of Ireland looked to be following a similar pattern, though its opening quarter sales slipped into reverse this year.

On the other hand, this year's increase in French demand has been mirrored over the border in Belgium and Spain, and in two Scandinavian countries, Denmark and Sweden. What they all have in common is an opening quarter improvement after two years of generally falling sales.

The real weaknesses continue in Germany, the UK, Holland and Austria.

As the dominating influence on the large French market, Renault's overall position in Europe has been strengthened, according to these statistics. In the first quarter it accounted for 14.4 percent of all sales.

Renault is also No. 1 in Spain, a market which has been sluggish but in the January to March period exhibited some of the long-expected expansion. It also improved its standing on the large Italian market, which compensated for some of its lost share in the declining German and UK markets.

The Peugeot group, Ford and Fiat Auto stood next in this analysis. Fiat and PSA (12.9 and 13.2 percent respectively) improved, and Ford (13.1 percent) marked time.

However, the Volkswagen-Audi Group slipped slightly to 11.8 percent. It was handicapped by the overall decline in demand in the vital domestic market, and a drop in its penetration on the Italian market. But it recorded good successes in France and the UK.

General Motors' greatly improved standing was as a result of its improvements on its two main domestic markets, Opel in Germany and Vauxhall-Opel in the UK. And this has been largely attributable to the arrival of the front-drive J-car last fall.

With the recent introduction of diesel versions of the Kadett and Ascona, and the arrival towards the end of this year in certain markets of the new small Corsa, GM's European passenger car representation is set for further improvements.

But perhaps it is the erosion of Japanese representation which is the most noteworthy feature of these statistics. In no small part it stems from the decline of that country's products in West Germany, where the local makers have met—seemingly successfully — the Japanese challenge.

In the first quarter, Japan's market share fell by 3 points to 7.4 percent — in a market that declined by 7.4 percent.

It contributed to the overall fall of 2.1 percent to 8.2 percent in Japan's presence in Europe.

Of course, many markets have erected trade barriers against the Japanese, and their presence will always be an artificial one. The most notable are in Italy (a mere 2,300 units) and France (a strict 3 percent market share).

But there is a much more confident feeling among European auto executives that they are now better equipped to meet the Japanese challenge.

However, there are no such restrictions on sales of cars from Comecon countries. If the opening quarter trend in sales of the Soviet-made Ladas is continued, Communist bloc imports may become the next cause for concern among the western Europeans.

It is estimated that Lada sales increased by 10 percent in the first quarter of this year. It is believed they account for around one percent (or 24,000 units) of the markets in which they are sold.

In the past 18 months there have been significant volume increases in Belgium/Luxembourg and France. These add to the good business Ladas have traditionally enjoyed in Finland (around 10 percent) and Norway (around 3 percent).

Satra Industrial Corp., of

European auto makers define western Europe differently, depending on whether they sell in a given national market. This unofficial listing, compiled from industry sources, is based on the 15 major national markets but excludes Greece.

Talbot Horizon EXD from Automobiles Peugeot is powered by a new 1.5-liter diesel engine said to be very quiet and faster than Volkswagen's.

Pizzazz, new models propelling Peugeot into decade of the '80s

By Richard Feast
European Editor

There is more pizzazz at Automobiles Peugeot these days.

That is to say, it is moving into the '80s as are its rivals. For them it was a natural progression from the '70s. For Peugeot it meant moving from the '50s.

Peugeot has just launched the snappy little Talbot Samba convertible on the domestic market. It is coming out with a revised range of Talbot Horizons, including some diesel-powered versions.

From September until next March it is coming out with almost a fresh model a month, culminating with the arrival at next spring's Geneva auto show of the all-new Peugeot 205.

Peugeot's profile will be much, much higher, in a gallant bid to win back some of its lost market share.

It was a decline which stemmed back to the Peugeot group's acquisition in 1978 of the former Chrysler Europe interests in France, the UK and Spain.

Peugeot overnight became a major force in the automobile world, having taken control of Citroen a few years earlier. The plan was to create a three-pronged thrust on the new car market, particularly in Europe where it became No. 1 with practically 18 percent of the market.

But that share dwindled over the years, and was little more than 13 percent last year — behind its great French rival, Renault.

One of the Peugeot group prongs has been lost in battle. Talbot (Chrysler) is no more than a brand name within Automobiles Peugeot. Automobiles Citroen remains a separate organization, but there is an increasingly strong movement towards commonality of components.

Peugeot's strength lay in its products. They had a fine reputation for quality, and appealed to the European bourgoisie. They were worthy but dull — products which almost sold themselves to a solid brand of repeat-order citizens.

Then came the big sales freeze of 1980 and 1981.

Peugeot, in the middle of absorbing Talbot, began losing sales to rivals from a tougher commercial world. These rivals pushed hard, an aspect of the real world with which Peugeot had not before contended.

At the same time its unique reputation as a quality producer began to suffer.

It was a hard lesson for the Peugeot generals in the Avenue de la Grande Armee in Paris. And while they may have been slower to react than some rivals, the change has come.

The turnaround could have come with the introduction at the end of last year of the small Samba, a super-mini adapted from the Peugeot 104. It created enormous showroom traffic and, at the same time, introduced potential customers to the larger Horizon.

The convertible Samba is out, at least in France. It is a smaller-volume model, but important

This snappy little Talbot Samba convertible is representative of Automobiles Peugeot's move into the '80s.

Imports taking bigger bite of car sales in France

By Richard Feast
European Editor

In the opening five months of 1980, imported vehicles accounted for 20.1 percent of the French new-car market.

In the same period one year later, the importers' share stood at 26.1 percent.

At the end of May this year the proportion of foreign-made cars going on to French roads since January amounted to 28.6 percent. In May itself the figure was 32.3 percent.

The clear trend has caused considerable soul-searching by the French auto industry, which by tradition had always been able to rely on the patriotic buying habits of its citizens.

French officials had always regarded 20 to 25 percent as a perfectly normal penetration in a healthy industry. But the rising trend — on a rising market — has cast doubts on the industry's ability ever to win back its losses.

The question being asked now is, "Where will it end?"

An independent analyst, Jean-Claude Brauda, of Peat, Marwick, Mitchell's Paris bureau, does not think imports will go beyond 35 percent.

"If it is higher it will have reactions on the employment by the French car manufacturers. Politically, that could be very difficult," he warns.

There is no doubt that the car unions — and all unions — carry more clout since the arrival at the Elysee Palace of President Mitterand. Already this year, Renault, Citroen and Talbot have been hit by protracted strikes — which, ironically, are one of the many reasons for the higher levels of sales being achieved by foreign manufacturers.

This round of strikes left domestic manufacturers short of stock when demand was buoyant after long periods of stagnation.

Inevitably, the industrial action led to speculation that it was politically inspired and coordinated. Whatever the reasons, domestic manufacturers were unable to take advantage of the year's main buying period, from the spring through to the start of the summer vacations in mid-July.

To the end of May, new car sales were up nearly 9 percent to more than 873,000. There had been larger gains earlier in the year, and it looked as though the turn-around in French demand had arrived.

"As a customer, if you can't get the car you want you turn to another one. If that one is more attractive, if it is cheaper, if you have more dealers to sell it to you, the result is inevitable," comments Brauda.

It highlights some of the other reasons why imports have done so well.

Most of the big gains were by the West German auto makers, the Volkswagen group, Ford, BMW and, more recently, GM's Opel. Fiat of Italy also benefitted considerably.

With inflation in France around 14 percent, and around only 4 percent over the Rhine in Germany, the German makers strengthened their competitiveness. They were able to mak their products more cheaply, and, because of the artificially high exchange rate of the French franc against the German mark, they were able to export them very competitively.

Not that the German makers undercut their French opponents. Instead, they priced their cars at similar levels and made more profits along the line.

Some of that extra revenue went into their pockets. But they also invested heavily, loaded their cars with more equipment and engaged in additional advertising, publicity and dealer support.

At the same time, the only really new product from French manufacturers to stimulate demand was the Renault 9. Their importer rivals were able to counter with cars like the VW Polo, VW's Formul E (for economy) versions, the Ford Escort, Fiat Panda, Opel Ascona and diesel versions of the Ritmo and Kadett.

The recent revaluation of the franc by 10 percent against the German mark (and Dutch guilder) is seen by the French industry as a positive move, though it continues to believe it should have been by 15 percent.

It will make German products more expensive—and enable the French to export more competitively to Germany.

Just what effect the French government's other anti-inflation measures will have on the market place is less certain. In an effort to reduce inflation by the end of the year to 10 percent, it placed a four-month freeze on prices and wages.

Most domestic makers had increases in the pipeline — though they welcomed the block on wage increases.

It did, however, complicate the dispute at the Talbot Poissy plant in June. The (largely immigrant) work force was demanding substantial wage increases, improvements in social conditions and the facility to take their five-week holidays all at one go.

Towards the end of June, with the strike costing around 1,400 units a day, there was no end to the dispute in sight.

Most observers also believe that the other major reason for the rise in imports was caused by the decision by Peugeot to amalgamate its Peugeot and Talbot dealer bodies.

Those dealers dissatisfied, or those rejected by Automobiles Peugeot, were quick to pick up franchises from importers or from Renault.

"That is probably the most important reason why Volkswagen is so strong in France right now," reports one.

But it is a charge emphatically rejected by Peugeot's commercial director, Victor Dial.

"There's a lot of nonsense written about that. It bugs me everytime I read it," he declared.

According to Dial, a total of 188 dealers was lost in France. Forty-three became service points or used car dealers; 26 gave up the automobile business; 47 went to Renault; 29 went to Volkswagen; six to Citroen; and 37 went to other manufacturers like Ford, GM, Fiat.

How imports in France are climbing

Manufacturer	1982	1981	Change (%)
BL	11,573	7,908	+ 46.3
Fiat Auto	40,426	31,998	+ 26.3
Ford	51,399	43,111	+ 19.2
General Motors	19,983	13,046	+ 53.2
Peugeot SA	284,662	260,770	+ 9.2
Citroen	118,772	113,138	+ 5.0
Peugeot	111,382	111,523	— 0.1
Talbot	54,508	36,109	+ 50.9
Renault	337,553	329,795	+ 2.4
VAG	53,625	53,776	— 0.3
Japanese (all)	21,991	18,350	+ 19.8
Imports (all)	249,377	209,326	+ 19.4
Total sales	873,377	802,245	+ 8.8

These unofficial early returns for the opening five months provide indicators of the shifting demands on the French market. The main loser in terms of market share is the No. 1 retailer, Renault, with a share of 38.6 percent compared with 41.1 percent one year earlier. In the same period the importers' combined slice rose from 26.1 percent to 28.6 percent.

"The dealers that went to importers represented 3.7 percent of our potential sales volume. And that represents very much less than one percent of the French market," he maintains.

One aspect which has accompanied this upheaval in the French market is discounting. It is by no means as widespread as it is in the UK, in Belgium or the U. S., but it has become a factor.

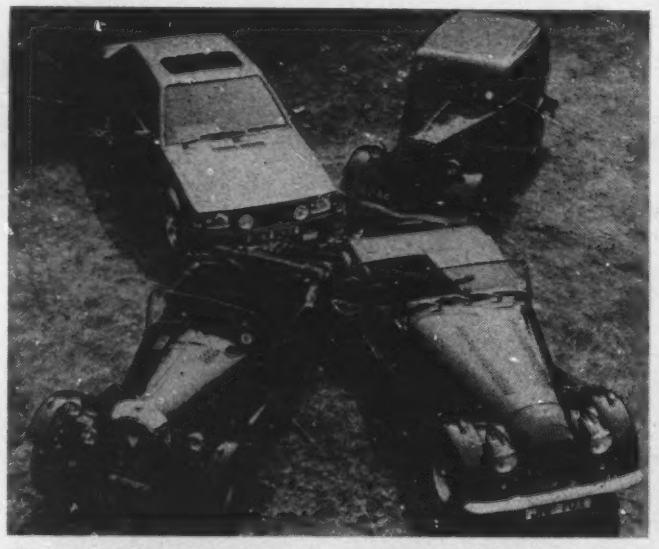
Of course, even when sales boomed, there were small discounts for regular customers with large orders. Now, almost any customer can obtain a discount of three to five percent on almost any car—including some of the super-economy models.

Publicity about the aspect is actively discouraged, and it is extremely hard to obtain more —and then only on larger cars.

French new car sales rose by 8.8 percent in the opening five months of this year compared with the same period one year earlier. They amounted to 873,377 units.

But imports increased by twice as much, by 19.4 percent to 249,377 units.

Japanese importers, restricted to 3 percent of total sales, are not a factor on the French market. They reached only 2.5 percent, and there is a feeling that the Japanese are playing a diplomatic game and do not even want to breach their limits.



The latest Morgan 4/4 sports car (front right) can be equipped with Ford's CVH engine which powers the front-drive Escort (rear left). In the English sports car it drives the rear wheels via a Cortina gearbox. Morgan, established in 1910, first used Ford power in 1933 in its F4 three-wheeler (front left). That engine was from the Model Y Ford (rear right).

Volvo Bus Corp., of Sweden, is claiming an entry in the Guiness Book of Records with its Across Australia Coaches B58s. The two buses are continuously on the highway covering the 2,800 miles between Perth in the west and Sydney in the east, the longest regular bus service in the world. Between them they cover 1.25 million miles a year and carry about 10,000 passengers.

Peugeot

Continued from Page 12

in rebuilding the company's staid image.

Now Peugeot has revealed details of its diesel-engined Horizon. But because of the strike at Poissy, in mid-June Peugeot officials had not decided whether to launch on schedule or wait until September.

The planned launch date was July 1, but if there were insufficient stocks, Peugeot was going to postpone its public offering until after the summer vacations, when sales are traditionally slack.

There are other improvements to the Horizon range, too, including better rear knee space and slightly larger trunk space. There is also a more sporty version, and options on most models of power-assisted steering — unusual in a car of this category from a European maker.

Later this year there will be a spate of model revisions and additions from Peugeot. Undoubtedly some will center on diesel engine variations of other models, as well as more sporty machines.

The cake will be iced next March by the 205, a model which will fit between the baby 104 hatchback and the 305 sedan.

There has been a slight improvement in AP sales already, mainly from the Talbot side. According to commercial director Victor Dial, the company's latest forecast is to capture an 8 percent share of the European market this year.

This would amount to around 784,000 in a market expected to reach 9.8 million.

Last year Peugeot did 7.8 percent of a 9.7 million European market, or around 756,000 units.

The company's improvement is centered on the big French market, which is expected to finish at around 1.97 million this year compared with around 1.83 million last year. "I don't think the market will be any higher, and there's every risk it will be lower," comments Dial in a reference to the economic uncertainty which exists in France at present.

He traces Peugeot's share of the French market. "We've had a steady evolution. In the first quarter of 1981 it was 18.3 percent. In the second quarter it was 18.6 percent, in the third 18.8 percent, and in the fourth 19.6 percent.

"In the first quarter of this year we had 19.8 percent. In the second quarter I suspect we're going to fall back with a tough June. Because of shortage of stocks — on account of the strike — I look for a third quarter that's going to be difficult.

"However, assuming everything else works out and we get back to normal stock levels, in the fourth quarter we're looking at well over 20 percent.

"So, for the year, we'll probably have a share of around 19.3 percent, which compares with a share of 18.8 percent in 1981. But we'll be finishing the year at a level of about 21 percent and I think our running level for 1983 will be at that level or higher," he forecasts.

Despite production difficulties, Dial believes Samba will go beyond the expected target of 100,000 for the year. The build program for May, he points out, was 14,000.

He also credits the car with creating better demand for the Horizon.

"We're going to sell around 150,000 Horizons in Europe this year. With the addition of the diesel we'll be shooting for 200,000 next year," he said.

But Peugeot acknowledges that the car is in an extremely competitive sector, with diesel versions of the Golf, Ritmo, Kadett and (shortly) the Renault 9 to contend with.

There are also signs that diesel demand, at least in France, is tapering off. "I'm sensitive to that," comments Dial, "because I've seen what's happening in the U. S."

The collapse of the diesel market has left Peugeot with large stocks of unsold diesels in the U. S., and not enough gasoline cars. While it is convinced the trend is short-lived, it has caused the company to revise downwards its sales expectations for the year—15,000 from 20,000.

But while Peugeot is introducing new products and freshening old ones, it has begun tackling one of its major problem areas — the surfeit of models. The hatchback Talbot 1510 is being deleted in France and most of Europe, though it will continue to be made in the plants in the UK (as the Alpine) and Spain. The sedan Solara version will continue in production in France.

It is just the start. "If you have too many products—even though there was a good reason for making them in the first place — you stop making them, little by little," Dial said.

"In future, when we bring out new cars we may be replacing more than one old car.

"We have 12 products today between Peugeot and Talbot. I'd like to get that down to five or six. That's what all our competition has. That's what Peugeot and Talbot had before.

"It takes a long time, maybe four or five years, because you can't do it overnight."

Sales

Continued from Page 12

New York, controls the UK and German concessions — worth around 5,600 units in the first quarter of this year.

The various European concessionaires, who obtain their supplies from Avtoexport in Moscow, are gradually building up their dealer representation.

Since the spring of last year most have been selling the revised 2105 version of the boxy, solid Lada design, adapted from an old Fiat 124 product. Much of their success in selling this car is attributable to the 2105 and its very competitive pricing — which enables the Soviet Union to earn much-needed Western currency.

There is no doubt that Lada importers are also gearing up for the arrival of the front-drive model. This machine, for which Porsche's engineering center is completing much of the development work, was expected in 1983. The latest word is that it will now not arrive until 1984-85 — but that it is this model which will herald a much more serious drive into western European markets.

After all, if dealers can shift the volumes they do of what is by any standards a medieval-style of car, they will be on to a real winner with the front-drive.

Nowhere has the company more models than at the top end, where sales have been hit by the big car recession. It has the older Peugeot 604 and the newer Talbot Tagora. It also has the Peugeot 505.

This diversity of models has meant that Peugeot's advertising and promotion budget has had to be split too many ways. Little has gone into the Matra Murena sports car.

"It's a question of being able to allocate resources to the totality of your product offering. This is a problem. We just had to decide what we could promote, what would get us most results," said Dial.

He pointed out that Peugeot is a shareholder in the Matra auto making division of the defense group. But low sales are causing staff cuts at the Romorantin plant, and the head of Matra has raised the possibility of complete closure.

The other question mark over Peugeot concerns quality. While acknowledging that the company has had problems — like all others — it sees its position differently.

It believes other European auto makers have caught up with Peugeot, rather than Peugeot having slipped. It is now anxious to regain its advantage, and is making big efforts to improve its quality.

A senior company executive says, "We have a Japanese professor who consults with us frequently on Japanese work methods. Now, we've moving towards zero defect systems and zero stock systems.

"We're trying to draw conclusions from the Japanese experience where necessary, in quality as well as manufacturing techniques."

The new Horizon diesel is powered by a completely new engine and uses new transmissions from two recently opened group factories.

These plants, the engine one at Tremery in the Lorraine and the gearbox one at Valenciennes in northern France, will supply products for all future Peugeot group models. They will, for instance, produce components for the new Citroen BX which will be launched in the fall.

The diesel engine has a capacity of 1,905cc and produces 65 HP. It is known as the XUD-9. It is a light unit (with alloy cylinder head) and is said to be very quiet.

Installed in the Horizon with five-speed gearbox, it is good for 97 MPH. — faster than the Golf — and on the ECE fuel consumption cycle produces (in U. S. gallons) the equivalent of 33.1 MPG on the urban cycle, 52.3 MPG at 56 MPH and 36.7 MPG at 75 MPH.

There are improvements to the whole range, and the addition of a Premium version with 1.6-liter, 90-HP gasoline engine.

The new manual gearboxes are produced at the SMAN (Societe Mechanique Automobile du Nord) factory, which has a 95 percent shareholding by AP and 5 percent by Citroen.

The gearbox is known as BE1. Production began last fall, and the daily rate is currently running at 800. But this will rise by the middle of the decade to 3,200, or around 700,000 annually.

Employment, now around 800, will rise to 2,600 by the time the factory is on full song. The highly automated plant, which contains 360 robots and a system of manpower flexibility, represents an investment of $220 million.

3-day event sells 75 GM cars

St. Petersburg dealers draw buyers to sale

ST. PETERSBURG, Fla.—Although they fell short of their sales goal, five General Motors dealers were happy with the sale of 75 new cars during a combined three-day sales effort at the Bayfront Center exhibit hall here.

Adcock Buick, Bert Smith Oldsmobile, Crown Pontiac, Dew Cadillac and Ross Chevrolet displayed 500 new models "for interested buyers only, not sightseers," said Bob Keelean, president of Adcock Buick.

"And that's what we got, buyers," he said. He added that participating dealers were pleased with results even though they fell short of an admittedly "unrealistic goal of selling 100 cars per day."

Keelean said that "a lot of good leads were obtained in addition to the firm sales which should generate subsequent business."

The sale, held in May, was tied directly to GM's 12.8 percent financing plan.

Savings to buyers under the 12.8 percent plan ranged from $850 to $1,350, Keelean said.

Worthy of note was the fact that "a bulk of the cars sold were larger models, full-sized automobiles and station wagons," Keelean said.

The five dealers are expected to stage another combined effort in the future. "They were all pleased, pleased enough to want to try it again," Keelean said.

He hopes they will be able to arrange a weekend showing the next time around, instead of during the week, to bring in more traffic.

4 Chicago outlets added by L-M

CHICAGO. — Lincoln-Mercury Division added four dealers in the Chicago area in the first five months of this year, compared with three in all of 1981, according to William Neil, manager of the division's Chicago district office.

The four new dealerships are: Lombard Lincoln-Mercury; Barrington Sales & Service; River Oaks Lincoln-Mercury, Calumet City, and Capital Lincoln-Mercury, Chicago Heights.

The district currently has 34 dealers in the metro-Chicago area. In 1978, it reached a high point with 42 dealers.

The emblem dealers look for.

To America's used car dealers, it's every bit as prestigious—and represents every bit as much profit potential—as the hood ornaments of the world's classiest cars.

It's the symbol of the Manheim Auctions System.

Why this universal respect? Because Manheim gives buyers the industry's best selection of cars, its most comprehensive support services, and its most proven skills. Because Manheim gives sellers unrivaled expertise and professionalism in the vital inventory regulation process.

Because Manheim has given everyone fair and equal treatment each and every sale day—for 37 years.

Look for the Manheim emblem. That's where you'll find your area's smartest dealers.

marketing & media

By JOSEPH BOHN

Making the deal attractive

Low-interest financing or low monthly payments have proven to be among the better dealer showroom draws to move cars.

In Troy, Mich., a Detroit suburb, Troy Ford ran a 12.8 percent finance offer which "definitely helped," according to Jim Elder Jr., sales manager.

The dealership used factory incentive money, plus some of its own, to work out the offer with a local bank.

Thomas Beauvais, executive vice president of Patten Corp., Southfield, Mich., feels that getting monthly payments down to $175 is a key to moving cars today.

That might be done, said Beauvais, by selling a car closer to sticker and taking the customer's normal discount and giving it to a local bank or finance company to subsidize the interest rate.

The customer ends up paying more in the long run, but at least he's making payments that are affordable, Beauvais feels.

As ways of lowering monthly payments go, Jack Kopec, senior vice president of the consumer credit division of Wells Fargo Bank in Oakland, Calif., sees auto leasing a good alternative in many instances.

Frequently, a monthly lease payment ends up being lower than a comparable car loan payment, and the customer who qualifies requires less money up front. Except for some upfront fees and first-month rental costs, the downpayment doesn't really exist.

Residuals in the leased vehicles are a key to payment size. The higher the residuals, the lower the monthly lease payment is likely to be.

GM dealers say the new GMAC program, offered with a 12.5 percent introductory rate on closed-end leases, offers very attractive residuals. And it will undoubtedly help dealers move cars they wouldn't otherwise have been able to.

At any rate, Kopec is among those who expect the lease market to grow.

"It's fairly hard to come by (good) numbers," he said. "But all of us who are in leasing see a growth in the market."

These days, the average size of a Wells Fargo consumer car loan in California is about $7,000, with contracts typically written over a 48-month period.

GMAC data for 1981 indicates its average finance contract ran 43.7 months, with payments averaging $226 a month.

Which is why many buyers have been looking for alternatives.

Olds maps out '83

As usual, Oldsmobile was among the very first Detroit divisions to commit to fall ad schedules. It has already mapped out space in fall monthly magazines, for example, picking up good space position with its early commitments.

Up-front buying is really hitting record proportions in network TV this year, according to Advertising Age, with car companies among those checking in with bigger early buys.

The only uncertainty is whether they are spending a lot more in '82/'83 or just commiting more of their total budgets up front.

Best guess is the latter. TV rates look like they're going up about 15 percent this fall, a lot more than the modest increases Detroit is talking about for its own products.

Car companies will have to pick up a lot of extra sales volume just to cover inflated TV media costs—let alone increase their TV buys on top of the extra costs.

TV spending up

National and regional spot TV auto advertising increased in the first quarter of 1982, according to the Television Advertising Bureau, which combined the figures in its report.

The TvB data is based on Broadcast Advertising Reports (BAR), with spot TV estimated from data compiled in the top 75 markets.

The following table shows advertising expenditures in thousands of dollars.

	1st Quarter 1982	1st Quarter, 1981
Toyota Motor	$11,712.1	$10,635.0
Nissan Motor	9,676.3	4,262.6
Chrysler Corp.	8,365.3	3,678.5
Datsun Dirs. Assn.	4,516.3	3,150.5
Ford Motor	4,501.6	7,107.2
American Motors	4,432.0	2,665.7
General Motors	4,126.0	5,255.1
Volkswagen	3,619.8	2,472.7
Toyo Kogyo	3,302.6	229.1
Chevy Dirs. Assn.	3,010.1	1,576.0
Olds Dirs. Assn.	2,725.2	1,824.9
Honda Motor	2,634.6	1,025.0
Buick Dirs. Assn.	2,584.9	2,400.7
Toyota Dirs. Assn.	1,822.8	1,918.6

Newspaper ads up

Auto classified advertising in newspapers also showed strong gains in 1981, according to the Newspaper Advertising Bureau.

Classified expenditures in the automotive category reached $1.225 billion in 1981, up 19.4 percent over the year earlier figure of $1.026 billion, the NAB said.

The increase paralleled a similar strong showing for the year in national advertising for new cars, which registered a 24.2 percent gain in 1981 over 1980.

"The increase in classified represents dealers and dealer associations tying in with the many price and incentive promotions staged by manufacturers," said Val Corradi, the bureau's vice president for automotive marketing.

"Another factor was the large number of special auto sections and promotions jointly sponsored by newspapers and dealer groups," he added.

Dealer account moves

The Southern California Chevrolet Dealers Assn. has taken its $3 million account to Cunningham, Root & Craig, ending a seven-year relationship with Carlson, Liebowitz and Olshever.

Burson Detroit office

Burson-Marsteller, public relations/public affairs firm, opened an office in Detroit's Renaissance Center.

The new office is part of the company's international expansion program, which includes recently opened offices in Denver, Cleveland, and Montreal; also, overseas in Oslo, Norway; Hamburg, West Germany, and Adelaide, Australia.

Kenneth G. Trantowski, most recently in the firm's Chicago office, is the new general manager of the Detroit office.

Alfa Romeo's choice

Bran Advertising, Hollywood, Fla., was appointed the agency for the South Florida Alfa Romeo Dealers Assn.

The local ad theme is "Excitement on Sale," a takeoff of the national "Engineered to Excite" campaign.

Albany Chevy dealers

The Greater Albany Chevrolet Dealers Assn. assigned its advertising account to Stone, McCaffery and Ratner, Inc., New York.

The association includes dealers in the Albany, Schenectady and Troy, N. Y., areas. Dealers renamed themselves the Capital Area Chevy Dealers, and also created a new logo.

The agency now handles 10 Chevrolet dealer associations.

Promos

Stone, McCaffery & Ratner is running a July 12-Aug. 13 TV/radio/newspaper campaign, called "Chevy Price Munchers."

The major five-week promotion is supported by Chevrolet Division. The TV schedule will be placed by the division, using a Price Munchers commercial.

Stone, McCaffrey & Ratner will create and place the newspaper and radio portion of the campaign.

Eight new-car dealers in Wilkes-Barre, Pa., joined together for an outdoor tent sale in late June. More than 500 new cars and trucks were offered for sale, with big discounts.

The sale was sponsored by the Wyoming Valley New Car Dealers Assn. Dealership staffs provided on-the-spot appraisals and financing and immediate delivery on most sales.

Radio station KXOK, St. Louis, has been broadcasting 54 spots per week at no charge, encouraging listeners to consider buying a new car.

The announcements feature Ralph Kalberloh, executive vice president of the Missouri Automobile Dealers Assn., explaining current financing, interest rates, new-car value, used-car demand and improved gas mileage.

The Wicomico County (Md.) Auto Dealers Assn. is holding "Delmarva's Largest Used Car Sale" July 16-17.

The event is sponsored by new-car dealers, with prizes and/or cash given away, according to Thomas C. Rose, Good News Oldsmobile-Cadillac-GMC, Salisbury, Md., who is chairing the event.

The Fredericksburg Auto Auction, Fredericksburg, Va., is running a "Fuego Sweepstakes," offering any dealer who purchases an American Motors Leasing Corp. unit through its auction between June 14 and July 23 a chance to win the sporty Renault model.

Personnel

Bruce P. Andrews and **David L. Kerr** were named senior management supervisors and **Lynn Vernon** and **Walter E. Dunne**, were named management supervisors, in a realignment of responsibilities in Kenyon & Eckhardt's Detroit office.

The LeBaron Open

An open, or convertible, LeBaron was the Hole-in-One prize in the 67th annual Simmons Airlines Michigan Open golf tournament in Traverse City, Mich. From left, are Doug Findlay, executive director, Michigan Section of the PGA of America; Doyle Lott, Chrysler ad director; Doug Grove, Grand Traverse Village Host professional, and Tim Lee, general manager of the Grand Traverse Hilton Resort and Conference Center, hosting the tournament.

William J. Shea is a new account supervisor.

In a newly created post, Andrews will supervise the agency's car and truck lines, both on national and dealer advertising levels for Chrysler. Andrews is a senior vice president and director of Kenyon & Eckhardt Advertising, Inc.

Kerr's newly created post includes supervision of the Detroit office's Chrysler Corp., Import Car, International, Fleet and Lease, Service and Parts, Marine, Performance Parts and Interparts accounts.

His new assignment adds responsibility for finance and administration, print production and control, public relations, research administration and product information. He most recently was management supervisor for the ad accounts that remain part of his new responsibilities. He also heads the office's new business committee. Kerr is a K&E senior vice president.

Vernon moved from account supervisor on Plymouth to management supervisor on Chrysler-Plymouth. He remains a vice president.

Dunne went from supervisor on Chrysler's corporate account to management supervisor on all accounts reporting to Kerr. He remains a vice president.

Shea became account supervisor on the Chrysler corporate account. He had been account executive on the Tri-County Metro Detroit, and outstate Michigan and Greater Cleveland Dodge dealer ad association accounts.

P. H. (Pat) Cayce, formerly manager of marketing, product and program planning for Ford's North American Automotive Operations marketing staff, left to open a heavy truck dealership in the Chicago area in conjunction with another ex-Ford employe who already has two successful such dealerships down South.

R. William McNealy Jr., former executive vice president in Kenyon & Eckhardt's Detroit office, returned to a consulting role with K&E.

Reed Chesworth, former Chrysler zone manager in Boston, was transferred to Los Angeles, with a $10 million budget to supervise advertising/merchandising. His title is California marketing director.

He works with **Jack Givens**, Chrysler vice president of marketing, and Los Angeles Zone Manager **Clark Vitulli**.

Under him, **Jerry Bergmoser**, former Western region manager for Chrysler, will work as operations manager, and **Fred Ehlers**, formerly with Ford, as merchandising manager.

Anthony O. (Tony) Weiss joined PR Associates Detroit, as account supervisor. He is a former manager of Chrysler-Plymouth public relations.

Young & Rubicam, Detroit, named three vice presidents: **Robert Paklaian**, who is associate creative director for the Lincoln-Mercury Division and LMDA accounts; **Jan Starr**, who is account executive for Ford's NAAO account, among others, and **Mare Williams**, associate creative director for Ford Parts & Service and NAAO.

Louis M. Schultz, a senior vice president of Campbell-Ewald Co., was promoted to associate director of media services.

He was most recently associate media director, responsible for all media on Chevrolet. Schultz assumed management responsibility for the print and broadcast buying groups and media information services. He is also chairman of the media strategic and forward review board.

Louis M. Schultz, a senior vice president of Campbell-Ewald, was promoted to associate director of media services. He had been associate media director.

Calvin M. Mew was elected a vice president at Kenyon & Eckhardt's New York office and promoted to the newly established position of director of market plans on the Chrysler account.

He had been market analyst and planner on Chrysler for the agency.

Roy W. Edmonds, manager of broadcast, business and production for Ross Roy, Detroit, was appointed a vice president of the company.

Peter Glas has become senior vice president, management supervisor on the General Motors North American Overseas account at McCann-Erickson, Troy, Mich., replacing **Gerald C. Atkin**, who continues as executive vice president and general manager at the agency.

Glenbrook adds Peugeot

FT. WAYNE, Ind.—Glenbrook Dodge has acquired a Peugeot franchise and has become Glenbrook Dodge-Peugeot. Douglas G. McKibben owns the dealership.

Jeep line also was in jeopardy, Majerus says

UAW pact called savior of AMC-Renault link

Continued from Page 3

failed, Richard T. MacCracken, AMC labor relations vice president, said AMC had already tapped all its available capital sources such as suppliers, banks, dealers, salaried workers and Renault. He said both Renault and the banks wanted to know what the hourly workers were willing to do to keep AMC afloat before they dished out any more money.

Without Renault's help, AMC would have been forced to continue selling its "old" cars in the market and, according to Majerus, it would be only a matter of time before the cars would stop selling.

"The old cars can't pay the rent," he said, "but this (the Renault-AMC agreement) will let them pay the rent with the old cars and make some profits with the new ones. They are planning to build 600 a day by September."

Meanwhile, the new contract between AMC and the UAW has been ratified and the company will use the employe investment money. Of that money, $350 million comes from Renault, $150 million from hourly and salaried workers, $250 million from bank credit and $150 million from internal sources.

Under the plan, workers invest six cost-of-living-adjustments (COLA) and all of the 3 percent annual improvement factor (AIF) increases due during the term of the contract. There are two contracts at AMC, one covering the Jeep workers which expires Jan. 31, 1985, and another covering workers in Kenosha which expires Sept. 16, 1985.

Under both contracts, all six COLA raises will be restored to the paychecks on Dec. 3, 1984. Regular COLA payments resume in September, 1983. All but one AIF will be restored to checks on Jan. 7, 1985.

"The bottom line is that this is a better arrangement than anybody else's (Ford or General Motors)," Majerus said. "We get total restoration of all invested benefits and full recovery of most. Also, the company gets to use the money longer.

"The company gets a leg up on GM and Ford in terms of available money during the life of the agreement and the workers get a leg up after the expiration. It's kind of a trade-off and should work well for both AMC and the workers."

At AMC, the company uses the workers' COLA investment for 18 months. At Ford and GM, where "concessions" were also required, COLA payments are restored after nine months. However, the COLA increases deferred for those nine months are not repaid until late 1983.

Workers at the Big Two also lose all AIF increases for the length of the agreements which expire in September, 1984. There is no restoration of the AIF at the end of the agreement.

Ford and GM workers also lose all their paid personal holidays — there were 26 negotiated in the 1979 agreement. Workers at AMC have a certain number of their paid days off "banked" but then restored in 1985. Since Ford and GM workers have given up the PPH days, many observers say it will be difficult to get them back when talks begin again in 1984.

"They (GM and Ford) have to bargain for it and we have it in the bag," Majerus said. "Our settlement got us total restoration and recovery of all but one AIF. It's a bird in the hand versus having to start bargaining from here and trying to move up. Ford and GM will start at a level below us and go up from there."

• According to Majerus, the last AIF increase was not recovered because "we didn't want to get that far ahead (of Ford and GM)."

It is possible that by the end of the current agreement, AMC workers could be higher paid than those at Ford and GM. That contract is rear loaded so the workers get a big jump in pay at the end of the agreement.

An assembler at AMC currently makes $11.44 an hour, including COLA. Assemblers make $11.67 at Ford and $11.76 at GM. Assuming an 7.5-percent inflation rate, assemblers at GM will make $13.63 at the end of the agreement, and the Ford assemblers will earn $13.66.

In January, 1985, when banked COLA and AIF are restored, an AMC assembler will make around $14.17 an hour, assuming the same inflation rate.

However, Ford and GM will have negotiated a new contract before the AMC pact expires and COLA will more than likely continue and some AIF increase will be negotiated. That could bring GM and Ford closer to the AMC hourly figure.

AMC also has the advantage of negotiating a new contract after Ford and GM are finished.

"When 1984 comes, we will be able to make some judgments that the others won't be able to make because of the length of their contracts," Majerus said. "We go until 1985 at both locations. We deliberately put those contracts behind Ford and GM because we obviously have to be aware of what's happening at those two companies."

The AMC agreement also includes a pledge from the company not to close any of its three U. S. plants (Kenosha, Toledo or Milwaukee) for the length of the agreement. At Ford and GM, the company promised a 24-month moratorium on plant closings for outsourcing-related reasons.

Four-wheel-drive winner

Driver John Buffum put his four-wheel-drive Audi Quattro through its paces at the Northern Lights Rally in Houghton Lake, Mich. After 300 miles of dusty forestry roads, Buffum finished first, 6½ minutes ahead of the second-place car in the all-night rally. The Quattro used Goodrich radial mud-terrain T/A tires in a new size intended for mini trucks.

Price increases for 1973-82: Corolla, 148 pct.; Malibu, 139

ROCHESTER, Wis. — In the past 10 years, the price of a popular imported car has increased more than the price of an equally popular domestic auto on a percentage basis, according to a study by Runzheimer & Co., international management consultants specializing in travel and living costs.

The study compared price increases for a Toyota Corolla and a Chevrolet Malibu Classic.

It found that the Corolla has gone up 148 percent from 1973 to 1982 while the Malibu has risen 139 percent.

Both cars were equipped with standard engines (a four for the Corolla and a six for the Malibu), automatic transmission, power brakes, radio, air conditioning and tinted glass. The Malibu had power steering which is not offered on the Corolla.

Runzheimer found that a '73 Toyota Corolla so equipped was $2,839 and an '82 is $7,038. The dollar increase was $4,199. The Malibu rose from $3,773 to $9,011 during the period, an increase of $5,238.

On a percentage basis, the biggest Corolla hike was 21.8 percent between 1974 and 1975. For the Malibu, it was 15.2 percent between 1980 and 1981.

From a dollar standpoint, Corolla's biggest jump was $900 between 1980 and 1981. For Malibu, it was $1,107 in the same period.

The Corolla had a bigger percentage increase in 1975, 1978, 1979 and 1980. The Malibu boost was larger in 1974, 1976, 1977 and 1982. For 1981, they tied with 15.2-percent increases.

The accompanying table shows the year-to-year figures for the Runzheimer study.

CAR PRICE COMPARISON, 1973-1982

Based on Toyota Corolla and Chevrolet Malibu Classic

Year	Import Car Price	% Increase Year to Year	Domestic Car Price	% Increase Year to Year
1973	$2,839	—	$3,773	—
1974	3,029	6.7	4,142	9.8
1975	3,689	21.8	4,552	9.9
1976	3,918	6.2	4,985	9.5
1977	4,136	5.6	5,327	6.9
1978	4,619	11.6	5,840	9.6
1979	5,315	15.1	6,506	11.4
1980	5,938	11.7	7,256	11.5
1981	6,838	15.2	8,363	15.2
1982	7,038	2.9	9,011	7.7

DRI forecasts gloomy '82

A tough year for European trucks

This year will be the most difficult yet in the current recession for the European commercial vehicle industry, warns a new report from DRI Europe Ltd.

The booming export markets for heavy trucks, which have compensated for slow European demand, will weaken sharply as the oil earnings of key customer countries are squeezed.

European sales will remain very near 1981's depressed levels, and softening demand from African and Middle East customers will push exports down.

Total truck production is not expected to vary much from last year, and in some sectors will fall.

All this will result in a further setback to the profitability of the industry. It will place considerable pressure on those manufacturers struggling to maintain a place in the industry, and further restructuring of the European scene can be expected this year.

On a European-wide basis, DRI does not see any real growth this year. It identifies no real recovery of domestic economies until very late in the year. Real interest rates, despite the downward trend, will continue to remain high.

However, through 1983 and 1984 replacement demand will provide a powerful stimulus to registrations. This pent-up demand should be realized as interest rates fall more permanently and as the European domestic economies again stir into life.

The report believes that by 1987 about 50 percent of European truck production will be for export beyond Europe.

"The U. S. market will assume greater importance as Daimler-Benz, Volvo and Renault Industrial Vehicles build up their presence," says DRI.

It adds, "In the longer term the high degree of export orientation may prove a problem for the industry as importers seek higher proportions of local content and eventual local production of trucks."

The market for light commercial vehicles (up to 3.5 tons) is expected to resume its recent growth from next year. But, DRI predicts, European manufacturers will have to share the renewed market growth with Japanese importers, who have been outstandingly successful recently.

Bavarian Village opens

EAST DETROIT, Mich. — Bavarian Motor Village, Ltd. (BMW), has opened new facilities here.

European commercial vehicle demand

	1980	1981	1982	1987
Up to 3.5t	860	829	771	862
Over 3.5t	260	215	219	257

Mitsubishi denies any talks of venture with Peugeot

TOKYO. — Mitsubishi Motors Corp. has flatly denied a report in a Japanese newspaper that it is talking with Peugeot of France about a joint venture.

MMC does admit that Peugeot Chairman Raymond Parayre visited the MMC factory at Okazaki, in central Japan in May. Parayre also met Tomio Kubo, MMC chairman. However, the MMC spokesman said the meeting had been "purely formal," and that no joint ventures had been discussed.

The newspaper suggested that Peugeot wanted MMC to build cars in a joint venture in France. This does not seem too likely, since the Peugeot group has too many models, not too few, and most of these compete directly with MMC products. The possible exceptions are the Mitsubishi Starion and Cordia coupes.

Some months ago, news leaked out that MMC was looking for a partner in Europe to overcome the problems of trade friction in the UK, France and Italy.

As a latecomer to the British market, MMC is particularly badly hit by the "gentlemen's agreement" which was based on sales volume when this agreement started six years ago — just when MMC cars were starting to be sold in the UK.

MMC's British distributor, Colt Cars, had been keen to build Mitsubishi trucks in UK to serve the whole of Europe, but this plan never materialized.

3-month car production 22 pct. below 1981 total

2nd-quarter output lowest since '61

By Patricia Hoffman
Staff Writer

Domestic auto production in June was far below that of the 1981 month, and the second-quarter total was the lowest for the period in 11 years.

In June, the manufacturers completed 568,332 cars, down 20.24 percent from 712,524 built in the same month last year. On the plus side, last month's total was higher than May's.

Production for the second quarter was 1,574,259 units, down 22.53 percent from 2,032,219 in the same period last year. It was the lowest output for the quarter since 1,550,195 units were produced in 1961, but was up slightly from the first quarter of this year.

During the first half of 1982, the auto makers completed 2,661,259 units, down 26.03 percent from 3,597,750 built the first six months of last year.

On a percentage basis, American Motors suffered the largest decline in output last month, dropping 68.56 percent to 4,556 cars from 14,492 in June of 1981.

Chrysler Corp. followed with 57,062 units, down 31.89 percent from 83,784 last year.

Breakdown for June by the other companies was: Volkswagen of America, 9,333, down 24.51 percent from 12,383; General Motors, 361,956, down 19.89 percent from 451,851, and Ford Motor, 134,985, down 9.97 percent from 149,930.

The only gain last month was at tiny Checker Motors with 440 units, compared with 104 in the comparable period last year.

The shortened holiday week and downtime at all Ford facilities and VWoA's Westmoreland point pulled last week's estimated car production down 26.56 percent to 89,292 units from 121,578 in the previous week. Output also dropped 22.69 percent from 115,502 units completed during five days of assembly in the comparable 1981 week.

So far this year, the makers have assembled 2,798,532 cars, down 26.0 percent from 3,783,852 at this time last year.

A two-week vacation began last week at all 10 of Ford's car assembly points. Production is slated to resume at most of the plants July 19.

VWoA's Westmoreland facility was idled June 28 for model changeover. Operations at the plant are scheduled to resume in September.

The final Checker taxicab was built at the company's Kalamazoo (Mich.) plant last Friday (July 9), ending 60 years of production at the plant.

Saturday overtime was scheduled last week at GM's Doraville, Fairfax, Flint (LeSabre-Electra) and Lansing (Oldsmobile) facilities.

Car production in Canada shows 2nd-quarter advance

Canadian auto production in June jumped 5.0 percent from the comparable 1981 month, bringing the total for the second quarter up slightly from last year's period.

The makers built 106,508 cars in June, up from 101,432 built the same month last year. It was the highest output for any month since June, 1978, when 117,848 units were completed.

Output for the second quarter reached 281,590 units, up a fraction from 280,999 built the second three months in 1981. It was the most for second quarter since 328,270 in 1978, and the highest output for any quarter since the first three months of 1979 when 294,832 units were produced.

During the first half of 1982, the auto makers assembled 486,729 units, a 4.52 percent gain from 465,692 built the first six months last year.

The truck manufacturers finished 63,035 units in June, down 11.13 percent from 70,932 last year.

For second quarter, the makers produced only 166,982 trucks, down 15.68 percent from 198,035 last year.

There were 288,121 trucks produced during the first half of the year, down 24.33 percent from 380,764 in the 1981 period.

The auto makers finished 12,501 units last week, up from 12,380 built in previous holiday weeks. Vacation downtime at two Ford Motor facilities and American Motors' Brampton plant cut last week's total. Output was about the same as the 12,526 figure in the comparable 1981 week.

So far this year, the auto manufacturers have assembled 492,824 units, a slight gain from 489,190 in the same period last year.

Truck production last week totaled 6,732 units, down 4.21 percent from the previous week's 7,028, due to vacation downtime at Ford's Oakville facility. The total was also down 23.41 percent from 8,790 trucks in the comparable 1981 week.

Year-to-date, the truck makers have completed 290,559 units, a 6.26 percent decline from 309,971 in the comparable 1981 period.

Ford's Oakville car point began a three-week vacation shutdown last week. Operations are slated to resume July 26.

Also at Ford, the St. Thomas car point went down June 28 for a four-week vacation. The plant is scheduled to return July 26, but will be idled again starting Aug. 9.

AMC's Brampton facility, idled last week for vacation, is expected to return with two-shift operations July 19. The resumption of the second shift will increase output from 122 units a day to 244 units a day.

Chrysler's Windsor car point will close Friday (July 16) for a two-week vacation. The plant is scheduled to return Aug. 2 with production of 1983 models.

Truck production climbs for June and 2nd quarter

The domestic truck makers may have finally found the road to recovery as the June and second quarter production totals jumped substantially from the comparable 1981 figures. Output reached the highest points since 1979.

Last month, the makers assembled 213,209 trucks, up 14.10 percent from 186,857 in June of 1981. It was the most for that month since 292,897 units in 1979, and the most for any month since October, 1979, when 227,853 trucks were produced.

For the second quarter, the truck manufacturers completed 589,031 units, a 16.17 percent gain from 507,028 built in 1981. It was the most for any quarter since the second quarter of 1979 when 887,948 units were built.

During the first half of 1982, the makers produced 1,040,437 trucks, up 8.59 percent from 958,168 trucks built during the first six months last year.

Due to the shortened holiday week plus vacation and changeover schedules at all Ford Motor facilities, Volkswagen of America's Westmoreland plant and International Harvester's Ft. Wayne and Springfield points, the truck makers scheduled only 24,836 units last week, down 46.97 percent from the previous week's 46,834, but up 9.71 percent from 22,637 units built in the comparable 1981 week.

So far this year, the makers have assembled 1,083,803 trucks, a 10.14 percent gain from 973,865 trucks completed this time last year.

All the Ford truck facilities were idle last week, starting a two-week vacation.

Saturday overtime was scheduled last week at General Motors' Lordstown (van) and St. Louis (pickup) facilities.

Chrysler Corp.'s Warren truck plant continued on daily overtime schedules last week.

GM's Pontiac (S-truck) facility will be idle for two weeks starting today (July 12) to adjust inventory. Approximately 600 workers will be put on indefinite layoff.

Import-car inventory climbs to 57 days; domestics to 78½

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. jumped during June, but not nearly as much as the domestic stockpile and the par achieved at the beginning of the month was shattered.

While import stocks moved closer to the ideal 60-day level, the domestic inventory jumped well beyond that.

The inventory of new imported cars totaled 438,113 July 1, a 57-day supply, compared with 399,030 a month earlier, a 52½-day supply. During June, however, the domestic inventory jumped from 1,212,727, a 52-day supply June 1 to 1,364,214, a 78½-day supply July 1.

The inventory of new imported pickup trucks totaled 175,262, a 154-day supply, up from 171,655 a month earlier, a 142-day stockpile.

The combined imported car and truck inventory totaled 613,375, a 70-day supply, compared with 570,685 on June 1, a 65-day supply.

The combined domestic and imported new-car inventory was a 72-day supply July 1.

Honda and Toyota continued to carry very lean inventories, but two German nameplates, Mercedes-Benz and Porsche, opened July with even lighter stocks.

The 26-day supply of Mercedes-Benz was the leanest among the imports and Porsche was not much stronger at 27 days. Honda had a thin 29-day supply, while Toyota opened July with a 31½-day stockpile.

The inventory of Japanese-built new cars in the U. S. totaled 292,293 July 1, up from 270,651 June 1. The July-opening stock was a 48-day supply, up from 44 days a month earlier.

Japanese nameplates and

Attempt to promote passive belts gets slapped down

Why VWoA doesn't advertise safety—Free market vs. FTC

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — NHTSA Administrator Raymond Peck's substitution of the free-market principle for government edict in passive-restraint technology could be in for tough times if the experience of Volkswagen of America is any indication.

A year ago, the company developed a television advertisement to tout its innovative passive belt system. Shown several times in prime time, it depicts a Volkswagen Rabbit traveling down a test track and stopping suddenly.

Richard Peet, head of Citizens for Highway Safety, then explains how the VW passive belt had worked excellently to restrain the dummy driver. The ad closes with Peet walking over to a passive-belt-equipped Rabbit, opening the door and saying that he thinks the system works so well that he owns one himself.

All in all, it is a seemingly inoffensive advertisement, aimed at conveying to the consumer that this passive belt system works very well, is easy to use and that Volkswagen is the only one to have the innovative device (e.g., "Volkswagen does it again").

But the New York office of the Federal Trade Commission took exception to the commercial on the grounds that it might be "deceptive."

Specifically the FTC said: "Our primary concern is that the audio and visual message may have the capacity to deceive consumers into believing that the Rabbit provides excellent crash protection or has performed exceptionally well in safety tests when, in actuality, Volkswagen merely intended to tout the Rabbit for its automatic seat belts."

The FTC said the ad does not make clear "what part or aspect of the Rabbit is being tested and for what reasons the endorser is making his endorsement."

The FTC office said consumers might have trouble understanding the term "passive restraint system" and suggested VW use the terms "air bag" or "seat belt" when referring to a passive restraint system to explain it.

It also challenged Peet's qualifications to endorse the product because he is not an automotive engineer, and suggested VW disclose that.

Lastly, it wanted VW to remove the superimpose of "Washington, D. C." on the ad because it might be improperly construed that the federal government was involved in the test.

VW representatives argued to no avail that the ad was in no way deceptive. They dropped the ad in late 1981, but the FTC wouldn't let the matter go with that.

In an October, 1981, letter, the office advised VW that: "While (the commercial) Safety Belt may have been discontinued by virtue of it being a part of the 1981 advertising campaign, we are concerned that related or similar practices used in the "Safety Belt" ad of this year may recur in future Volkswagen advertising. Therefore, we trust that your company will implement safeguards to promote more accurate advertsing."

In more polite terms VW said "the * * * with that," and has not run an ad showing its passive belt system since. Nor does it plan to in the future.

Controversial venture appears to be in the cards

GM, Isuzu eye Europe truck bid

By Richard Feast
European Editor

LONDON. — General Motors is understood to be planning a major sales drive into the European commercial vehicle market this fall.

Official details are scarce, but it is believed to center around Bedford Division of its wholly owned Vauxhall Motors subsidiary in the United Kingdom and — more controversially—Isuzu of Japan.

Isuzu, in which GM holds a 34 percent share, is the one Japanese vehicle manufacturer with no real representation in Europe. A few of its small pickups are sold as Bedfords in some markets, but its presence is insignificant.

But the twin factors of declining demand in Japan and GM's rapidly developing World Truck and Bus Group make Isuzu's entry into Europe appear inevitable.

It is spurred by the fact that its Japanese counterparts have made enormous sales gains throughout Europe, and that apart from the UK there are few restrictions on shipments.

In the haphazard stampede to place sales restrictions on Japanese passenger car sales in national markets with domestic manufacturing interests to protect, the commercial vehicle aspect was largely overlooked.

It has led to large increases in sales of lightweight vans and pickups from Japan throughout the continent. Even in West Germany, with very strong domestic competition from Volkswagen and Daimler-Benz, Japan's share of the market has grown from 3.5 percent in 1980 to 10.2 percent in the first five months of this year.

By contrast, GM executives will admit that GM's commercial vehicle presence in Europe is very weak. Last year, Bedford's exports to Europe amounted to around 10,500.

This figure is an all-embracing one, ranging from Chevanne car-based vans to heavyweight TM trucks. The bulk comprised medium-weight Bedford CF panel vans and pickups.

This compares with total European demand for commercial vehicles last year of 1,044,000, according to DRI Europe, a subsidiary of Data Resources, Inc. Of this, 829,000 were vans, up to 3.5 tonnes.

DRI predicts a drop this year

breaking news

Make it the Chrysler E Class

DETROIT. — Originally slated to be called the Gran LeBaron, Chrysler Corp.'s new front-wheel-drive upper-midsize entry for the 1983 model year instead will be named the Chrysler E Class. The Dodge version of the luxury four-door sedan will still be named the Dodge 600.

Renault for Renault on AMC board

SOUTHFIELD, Mich.—Pierre Tiberghien, executive vice president of Renault's Automobile Division in charge of technical and product development, has been elected to the American Motors board of directors. He replaces Rudolphe R. Lambert, who resigned from the AMC board and from Renault. Lambert was Renault's vice president for North American operations.

UAW strike fund reaches alltime high

DETROIT.—The UAW's strike fund will reach $450 million this month, an alltime high, according to UAW Secretary-Treasurer Raymond Majerus. It was $436 million in June. Majerus also said the interest earned on investments is keeping the UAW in the black. In 1981, the union earned an average of 14½ percent interest on investment, he said. The UAW has been plagued with economic problems because its cash flow is tied directly to the number of members working,

Fraser predicts profit for firm, gains for workers

No Chrysler concessions—UAW

By Marjorie Sorge
Labor Editor

ROMULUS, Mich.—The UAW will make "absolutely no concessions to Chrysler Corp." during the 1982 negotiations, but it will make some gains, according to union President Douglas A. Fraser.

At a press conference at the Detroit Metropolitan Airport here, Fraser also predicted Chrysler will show a profit for the second quarter and said the workers should "be in on that return to profitability." He said if there should be a slight upturn in the economy, Chrysler could be profitable for the rest of the year.

"We (UAW) are beginning the long road back to equality with Ford and General Motors (workers)," he said.

Contract talks between the UAW and Chrysler open tomorrow (July 20). It has been reported that the gap in labor costs between Chrysler and Ford-GM is $3.50 an hour. A Chrysler assembler earns about $9.07 an hour compared with around $11.76 at GM and $11.67 at Ford.

In three rounds of bargaining in 1979, 1980 and 1981, Chrysler workers made concessions worth more than $1 billion to help Chrysler qualify for federal loan guarantees.

Fraser's comments came at a press conference announcing the union's petition drive to drum up public support for local-content legislation.

UAW Vice President Marc Stepp, director of the Chrysler department, has said the UAW will demand a moratorium on plant closings, a guaranteed income stream (GIS) for high-seniority workers, a company prepaid legal service plan, a resumption of both the cost-of-living adjustments (COLA) and the annual improvement factor (AIF) and the reopening of some plants.

Fraser said that Chrysler has a modern plant in St. Louis that is standing idle. That plant was built in 1966 and was closed in July, 1980. It had been building trucks.

"Hopefully, we will get additional interest in that plant and get it going again," he said.

Restoring the COLA payments will be a major UAW demand in negotiations, but Stepp has said the trigger mechanism might differ from that at GM and Ford. That formula gives workers one cent per hour for every 0.26 percent raise in the Consumer Price Index. A Chrysler official said restoring the COLA and AIF might be possible if workers are willing to make cost-reducing changes in other demands.

Those changes could come in the health care benefits, which both the union and the company agree cost too much, or in the pension plan.

The ratio of retired workers to active workers at Chrysler is currently one to one, which makes it very expensive to run the program. Both Chrysler and the union plan to look at ways to cut the ratio, Stepp said.

Also, according to the Detroit News, the UAW will demand four seats on the board of directors at Chrysler. Currently, the UAW has one board seat. It is held by Fraser.

The company and the union are also planning to introduce

Shay trustee reports feelers on buying firm

BATTLE CREEK, Mich. — There may be investors interested in an outright acquisition of the financially beleagured Shay Motors Corp., according to court-appointed trustee Lloyd Kellum.

"There has been some discussion and some interest—genuine interest—in outlaying areas and other states," Kellum told Automotive News last week. "We haven't sat down to talk about it yet, however, because I haven't got all the information I need about the company."

Kellum said he is anxious to move on the matter because it is most advantageous to the creditors. "I could sit on these things forever, but they'd only turn to mold," he said.

Kellum was appointed trustee of Shay Motors on July 6 when the replica maker's status was converted from reorganization under Chapter 11 of the U. S. Bankruptcy Code to liquidation under Chapter 7.

All in the family

Warren Schoon, right, has expanded his General Motors line to the maximum, by purchasing a Chevrolet dealership from Keith Connell, right center, and David Connell, left. Gary Papik, general manager of Schoon Motor Sales (Pontiac-Oldsmobile-Buick-Cadillac-GMC Trucks), Luverne, Minn., joins the party in a 1914 Ford. Schoon reports that his father, Jake, once sold Fords which he bought as early as 1914 from Keith Connell's grandfather, Henry Bierkamp, a Ford distributor. Both the School company and the Bierkamp-Connell company (which dates from 1908) have continued in their respective families since their origins.

July 1-10 total is second-worst of this year

Domestic sales lowest since 1961

By Jenny L. King
Staff Writer

It was four in a row for the domestic auto makers: Four sales declines in four 10-day periods, and the saddest July 1-10 total since 1961.

All five major companies were at or near their lowest levels of the calendar year, and the year-to-date total of 3,042-742 was 11.47 percent below 3,436,849 through July 10, 1981.

This year's early-July sum was 107,918, down 15.96 percent from 128,417 last year. It was worst for the period since the 99,592 units sold in 1961, and it was the second-lowest reporting period of 1982. Only the Jan. 1-10 figure of 101,199 was worse.

The daily selling rate was the softest of 1982: 13,490. That was down 15.96 percent from 16,052 for the period a year earlier. There were eight selling days both years.

General Motors reported sales of 61,844, down 18.94 percent from 76,296 in 1981. It was GM's worst showing this year. Ford Motor Co. was down 3.68 percent, to 29,071 from 30,182. It was the company's second-poorest total in 1982.

Chrysler Corp. also bottomed out with its lowest 10-day sales of this year: 13,817, down 15.93 percent from 16,435 in 1981. Volkswagen of America continued its losing streak, with sales down 55.35 percent, to 1,386 from 3,104. Estimated sales of American Motors passenger cars were 1,800, down 25.00 percent from 2,400.

GM earned 57.31 percent of the early-July domestic market, down from 59.41 percent a year earlier. Ford sales accounted for 26.94 percent, up more than three percentage points from 23.50 percent. Chrysler held steady at 12.80 percent; AMC slipped to 1.67 percent from 1.87 percent, and VWoA dropped to 1.28 percent from 2.42 percent.

Again, Chrysler, Lincoln and Cadillac were among the few makes to post sales increases for the period. Chrysler more than doubled its '81 sales, to 3,726 from 1,747. Lincoln was up 38.14 percent, to 1,427 from 1,033; Cadillac was up 12.40 percent, to 4,807 from 3,928, and Ford joined the list, up 0.63 percent, to 20,845 from 20,715.

In the minus column were: Plymouth, down 34.82 percent; Imperial, down 54.93 percent; Dodge, down 26.86 percent; Mercury, down 19.39 percent; AMC, down 25.00 percent, and VWoA, down 55.35 percent.

Also behind year-ago levels were: Buick, down 12.39 percent; Chevrolet, down 15.33 percent; Oldsmobile, down 22.73 percent, and Pontiac, down 43.87 percent.

VW pays dealers $200 to $900 for diesel sales

Volkswagen has launched a July 11-Sept. 30 "Summer Performance Challenge" incentive.

One phase pays dealers $200 on '81/'82 diesel-engine pickups, Rabbits and Jettas for 51-100 percent of a retail objective; $400 for 101-150 percent, and $600 for 151 percent and up, non-retroactively.

In California, the amounts are $300, $600 and $900 for the same cars on the same objective basis.

If the dealership hits 51 percent of its objective during July 11 to Aug. 10, a fast-start provision gives sales managers an extra $50 per unit, retroactively.

Another portion of the contest covers Scirocco. There is no payment for the first two unit sales, $300 for the third and $500 for the fourth and up. If a dealership hits four, it receives $300 per unit on the first two sold.

Pep talks, ad blitzes launched by DeLorean

By Edward Lapham
Financial Editor

DeLorean Motor Co. continued its self-resuscitation efforts last week by staging a series of dealer meetings and beginning a two-week "radio blitz" ad campaign in 10 major markets.

DMC Chairman John Z. DeLorean told Automotive News the dealer meetings "are going very well." Last week DeLorean held meetings in San Francisco, Los Angeles, Dallas, Atlanta, Chicago and New York. This week, the series will close out with a meeting in Orlando for Florida dealers.

DeLorean said dealers at the meetings were "enthusiastic," and were placing orders for cars. "Their attitude is very good," he said. "We should be able to clean out the inventory in no more than 60 days."

He also said it now looks like the company will lose only a "handful" of its 340 dealers. Earlier he had predicted that as many as 75 would leave the dealer group.

DeLorean said the CBS Radio campaign, which started July 14, "is to let people know we're still around" and that the UK financial troubles did not alter the U. S. company.

"It's like having a social disease," DeLorean said. "You can go to a doctor who will cure you and give you a certificate saying so, but you're still not going to get many dates."

The former GM group vice president said he intends to proceed with his plan to reacquire the Northern Ireland assembly plant, although he was "quite disappointed" that the consortium of British investors being assembled by the receiver had yet to indicate whether they could put together a deal by July 31.

"If they could come up with even a part of the money, say $15 million, it would help," DeLorean said.

Under the heads of agreement signed earlier this year by John DeLorean and the receivers of the UK operation (Automotive News, June 28), the U. S. operation will begin reacquiring the plant if no British investors can be brought in before the end of this month.

DeLorean also said that David R. T. Wood had rejoined DMC as marketing vice president, replacing J. Bruce McWilliams, who resigned in May.

Wood, who held the same position with DMC from 1974 to 1976, began his automotive career with GM where he served in a variety of marketing-related positions from 1957 to 1974. He was marketing vice president for Renault USA, Inc., from 1976 to 1979 when he left and started his own business as an automotive consultant.

Wood will be based at the company's facility in Irvine, Calif.

False documents on smog bring U.C. probe in L.A.

LOS ANGELES.—As many as 44 Los Angeles-area used-car dealers may be implicated in a counterfeit smog certificate scam which was broken when a West Covina woman was arrested and charged with selling the false documents.

Under California law, cars in certain counties must be certified as having been smog-tested before they can be sold. Although the charge for the test is only $11, in some cases it may take $100 or more to get a car in shape to pass the test.

The DMV has charged Mabel Ann McGill with allegedly selling the fake documents to the dealers for $35 or $40 each.

Records seized by the DMV indicate that as many as 6,500 certificates were sold since January of 1980 for payments totaling $225,000.

The names of the dealers have not been released pending further investigation. A DMV spokesman said the names have been turned over to the district attorney for possible criminal charges.

Meanwhile, the DMV has begun its own proceedings to suspend the licenses of the implicated dealers.

Programs for salespeople, managers and dealers abound

GM, Chrysler, AMC pile on incentives in bid to spur sales

By Joseph Bohn
Marketing Editor

General Motors, Chrysler Corp. and American Motors have heaped fresh incentive money into new programs designed to spur slow-selling models.

GM's program, the subject of considerable speculation over the past few weeks, covers new and unused '81 and '82 X, J and T-body models. They are Chevrolet Chevette, Cavalier and Citation; Pontiac T-1000, J2000 and Phoenix; Oldsmobile Firenza and Omega; Buick Skyhawk and Skylark, and Cadillac Cimarron.

GM is paying dealers $400 on all eligible models retailed and delivered from July 14 to Aug. 31, beginning with the third unit sold in each line. Cimarron is worth $600. Demos and driver-education units are covered, but fleet sales are not eligible.

As is finally worked out, the GM program wasn't as extensive or as rich as some dealers would have liked. It doesn't cover front-drive A-cars, for example. And amounts fell short of a previously speculated $500 per unit.

But it does give dealers a decent amount of wheeling-and-dealing leverage and flexibility in how they want to spend the money.

General Motors did not publicize the dollar amounts involved. And the car divisions, while they're planning to give the program ad support, are similarly shying away from publicizing exact amounts, so as to give dealers a wide latitude in what they choose to do.

Some dealers expected to add to the amount provided by the factory and promote the totals as dealer rebates.

Robert D. Lund, vice president in charge of the sales and marketing staff, called GM's program a very "worthwhile" buying incentive for customers and added: "We are planning no other reduced retail financing rate activities or passenger-car rebates to customers as we close out the model year."

Chrysler's program for sales managers and salespeople is called "Treasure Island Days." It runs from July 1 to Sept. 30.

The sales managers' portion covers all new and unused '81 and '82 import cars, import trucks and domestic trucks, including Rampage.

There are separate objectives for each of the three categories, though the percent-of-accomplishment payoff levels are the same.

Payoff levels are: Nothing for 0-24.9 percent of objective; $10 per unit for 25 to 49.9 percent; $20 per unit for 50 to 74.9 percent; $30 per unit for 75 to 99.9 percent, and $60 per unit for 100 to 114.9 percent. Payments are not retroactive.

If a manager hits 75 percent of his objective by Aug. 31 and 100 percent by the end of the program, he receives an additional $25 per unit in each category, boosting payments to $35, $45, $55 and $85.

Still, he receives nothing for the 0-24.9 percent level.

If a manager hits 115 percent of his total objective, he receives $100 per unit, beginning with the 25-percent-of-objective level. If he hits the Aug. 31 fast-start, he receives an extra $25 or a total $125 per unit, beginning with the 25-percent-and-up level.

There are also trip awards for

$300 million slated for Hydra-matic project

GM spends big on transmission plant

By Roger Rowand

WARREN, Mich. — General Motors' Hydra-matic Division is expanding, modernizing and installing new machinery and equipment in its huge plant here. Project price tag: $300 million.

The company has made no announcement as to what the machinery being installed will produce and will not say. However, it was learned the plant will turn out lightweight transmissions for GM vehicles. It does not now make transmssions.

In its request for 12 years of tax abatement given in Michigan to firms increasing payrolls, or making an effort to maintain them, GM said the plant will produce a small transmission that is more fuel efficient than current types.

Union sources near the plant, where installation of machinery has just been accelerated after a strike-caused delay, said the new transmission will be the THM440.

As previously reported in Automotive News, the THM-440 will be a four-speed automatic. It will be offered on the larger V-6 models.

"These new automatic transmissions will be used on future GM vehicles starting in 1983 and be part of the corporate program to increase overall fleet gasoline economy," the company told the City of Warren.

The plant now covers some 1.8 million square feet with most of it under one roof. GM said 200,000 square feet will be added in the current expansion project.

It now produces wheels, control arms, small-car (Chevette) front suspensions and brakes, rear axles and front axles for trucks.

The firm said production of components for rear-drive cars will be phased out and, without the abatement, the Warren plant would produce only wheels, control arms and small-car front suspensions. The facility would be 50 percent vacant, GM said.

It said control arm usage will be dramatically reduced in future cars.

The city was told that 2,400 jobs will be created or saved by the expansion. Of those 2,400 positions, 1,100 will be filled by people on layoff status and 1,300 will be additional jobs.

Employment at the Hydra-matic factory has dropped sharply in recent years.

At the start of 1980-model production, the workforce totaled 4,300. By the start of 1982-model-year output, it had declined to 1,900.

The payroll dropped $60 million in that period.

Bubbleback for Capri

Lincoln-Mercury Division is calling this rear design for its 1983 Carpi a bubbleback. It said a significant aerodynamic slipperiness improvement in 1983 over 1982 results partly from the new design. There are new headlamp treatments and grilles for Capri in '83 and interiors have been upgraded.

'Bubbleback' styling highlights '83 Capri

The news from Lincoln-Mercury Division on its Capri for '83 centers around performance improvements and a restyling of the car's third door into what the division calls a bubbleback.

Powertrain changes are extensive. New for '83 is a 3.8-liter V-6 with two-barrel carburetion. The 2.3-liter I-four engine gets two-barrel carburetion instead of the single-barrel it had in the 1982 model year, and four-barrel carburetion has been put on the muscular 5.0-liter V-8.

Standard engine for the Capri is the 2.3-liter overhead cam I-four.

No longer available are the 3.3-liter liter single-barrel six and the 4.2-liter two-barrel variable venturi V-8 engine packages.

In the spring, a turbocharged four-cylinder engine with electronic fuel injection will be added to the line.

Tires for the 1983 Capris have been widened. Tires and wheels have been indexed together relative to high and low points for improved rolling smoothness.

Among deleted options are Recaro seats, a slow-moving offering during the 1982 model year.

Capri goes on sale Sept. 23 and will be available in five models—the base Capri, the L, the GS, the RS and the Black Magic. All are three-door sedans.

There is no Capri convertible to run with the Mustang ragtop because of the Capri's bubbleback styling.

2.5-MPH bumper rule challenged in court

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Deregulation, as NHTSA Administrator Raymond Peck is learning, is not such an easy thing to accomplish.

For the second time this year, Peck and the safety agency he heads are being taken to court to protest an action he took ostensibly to help the beleagured U. S. auto industry.

First came an appeal of Peck's decision to void the passive restraint or so-called "air bag rule."

This time the suit protests his recent rollback of the bumper standard from 5 MPH protection to 2.5 MPH.

The petition for review of the bumper rule was filed in the Court of Appeals for the District of Columbia by the Center for Auto Safety and the State Farm insurance company. It follows on the heels of a petition for reconsideration filed with NHTSA in June by the Insurance Institute for Highway Safety (IIHS) on the same action.

State Farm is the company which successfully sued Peck on the air-bag rule, by convincing the Appeals Court here that his reasons for abandoning it were not sufficiently sound.

The company will use the same argument in the bumper rollback decision, utilizing the points made by the IIHS in its petition which seeks reconsderation of the bumper rule.

These include a new public opinion poll conducted by Opinion Research Corp., indicating the large majority of car owners want 5-MPH bumpers even if they cost more. State Farm will also argue that Peck failed to follow Congressional intent or heed the legislative history of the 1972 law that requires NHTSA to develop systems pro-

Controversial change in tire registration rules included

NHTSA money bill a defeat for tire makers

By Miles Moore
Washington Staff Writer

WASHINGTON. — The Senate Commerce Committee, apparently ignoring the pleas of tire industry spokesmen who objected to a controversial amendment on voluntary tire registration, has approved the NHTSA three-year money authorization bill without comment or amendment.

The bill now goes to the Senate floor, where it is expected to be acted upon quickly. It already has passed the House.

If passed, the bill would provide $172,144,000 for NHTSA over the next three years, including:

1. $165.1 million for safety programs, including developing safety programs and doing research.

2. $5.43 million for compiling consumer information, including data on repair costs and crashworthiness.

3. $1.03 million for establishing bumper standards.

4. $590,000 for prevention of odometer fraud.

In addition, an amendment to the bill contains language to "clarify" the rules of states in enforcing federal safety standards which they have adopted as their own.

The truly controversial amendment, however, is the one governing voluntary tire registration, an item which the National Tire Dealers and Retreaders Assn. (NTDRA) has fought for years to put through.

• Under current NHTSA regulations, tire dealers are responsible for mailing to the government the identification numbers of all tires sold so the tires can

508 units, an increase of 19.9 percent over the previous year's 366,534. The June count was up slightly from last year's, 61,761 versus 61,914.

In the first half, LUV sales plunged from 39,404 a year ago to 14,144. The June total was only 1,187 units, compared with 4,128 in the same month in 1981.

Ford dealers retailed 418,849 units in the first half, up 9.7 percent from last year's 381,875. The June total of 76,059 vehicles was almost one percent higher than the year-ago 76,758.

Six-month Courier sales dropped from 34,654 units in 1981 to 17,910 this year, while the June total was down to 4,437, compared with 5,435 last year.

Dodge and Plymouth dealers sold 131,482 light trucks through June, an increase of 29.8 percent over last year's 101,304 units. In June, the count was 23,270, up 31.9 percent over last year's 17,641.

Six-month Dodge Ram 50 sales totaled 18,130 units, compared with 15,846 a year ago. The June total was 2,694, up from last year's 2,127. Plymouth Arrow sales were down for both the half and the month, 3,390 versus 5,319 and 507 versus 638, respectively.

• GMC dealers retailed 124,250 vehicles in the first six months, a gain of 32.4 percent over last year's 93,828. The 1982 count included 20,679 of the compact S-15 pickups. In June, 19,237 units, including 3,141 S-15s, were sold, up 12.9 percent over the year-ago 17,035.

Six-month sales of Jeep four-wheel-drive vehicles totaled 32,156 units, an increase of 4.2 percent over the year-earlier 30,852. In June, 7,080 units were retailed, 12.3 percent higher than the year-ago 6,304.

Sales of the compact Volkswagen pickup in the first half dropped 60.2 percent, from 17,901 units last year to 7,129. The June total of 837 units was down 67.7 percent from the year-ago 2,592.

First-half sales of Mercedes-Benz medium and medium-heavy trucks were down 21 percent to 1,446 units, compared with 1,831 last year. The June total was off 9.7 percent, 262 units versus 290.

Toyota dealers sold 64,344 pickups in the January-June period, a decline of 4.7 percent from last year's 67,487. The June total of 9,578 units was 29.3 percent under the year-earlier 13,540.

Six-month Datsun sales were off 28 percent, from 61,287 in 1981 to 44,197. The June count was 6,718, down 37.7 percent from last year's 10,783.

Mazda dealers sold 18,058 compact pickups through June, an increase of 122 percent over last year's 8,139. In June, sales were up 47.3 percent, from 2,021 in 1981 to 2,976.

Isuzu's six-month sales totaled 6,148 units, a gain of 150.8 percent from last year's 2,451. The June total was 1,146 units, 202.4 percent higher than the previous year's 379.

Compact pickups see 1982 sales soar 46.3 percent

Continued from Page 20

S-10 and the Ranger, sales of the LUV and the Ranger have fallen.

Chevrolet discontinued importation of the LUV 4x2 model after the S-10 reached volume production, and is expected to drop the 4x4 and the diesel models once S-10 versions of these products are available in volume.

Ford continues to import the Courier 4x2 model, and says it has no plans to do otherwise. But the company's marketing efforts in the compact segment has been shifted from the Courier to the Ranger.

• Ford will add Ranger 4x4 and diesel entries in the 1983 model year. There are no such versions in the Courier line.

In the first half, sales of the captive imports dropped 43.7 percent below the year-earlier level, from 95,223 units in 1981 to 53,575. The Dodge Ram 50 was the only captive to show an improvement over 1981, and this was due mainly to a 4x4 model added in the 1982 model year.

Sales of the non-captive imports in the first six months totaled 132,747 units, a decline of 4.7 percent from last year's 139,364.

Mack displays vintage trucks at new museum

Continued from Page 20

to the unique heritage of Mack Trucks," he said.

In 1900, the five Mack brothers built and sold their first commercial vehicle, based on their years of experience as wagon makers and extensive experimentation with self-propelled units.

Since that time, Mack has designed and produced a wide variety of vehicles for virtually all of the roles filled by the trucking industry.

During World War I, Mack built about 5,000 AC models with the snubbed-nose hoods for military service in Europe, and British soldiers dubbed them the bulldogs. The bulldog became the corporate symbol in 1922.

Mack supplied the military in World War II on a much larger scale with more specialized products. About 30,000 units served in that conflict in such applications as prime movers, personnel carriers, wrecker trucks and tank transporters.

Franchise provision criticized

Delaware dealer bill draws FTC objections

DOVER, Del.—Legislation in the state House of Representatives here that would protect new car dealerships from alleged unfair practices of automobile manufacturers has drawn objections from the Federal Trade Commission. The legislation has been passed by the state Senate and is now in the House Administrative Services Committee.

A letter from the FTC set forth the following objections to the proposed legislation:

It would hinder competition in the sale and service of new vehicles in Delaware and areas of neighboring states; it would result in higher new-car prices and service charges through possible reduced competition; it would allow an established dealership to unfairly delay or block a rival's plans to open within his market area, and it would encourage new-car dealerships to open just across the state line in bordering Maryland.

The letter was sent to George Hale, assistant director for small business at the Delaware Development Office. Hale had raised a question about the executive branch's position on the legislation and asked that the FTC put its objections in writing.

Hale said his office, charged with attracting new business to the state, has taken no position on the bill. The measure is supported by NADA and the Delaware dealer association.

The bill would require an automobile manufacturer to show good cause before canceling a dealer's franchise; require the manufacturer to pay for warranty work done by the car dealers; make it easier for a person to pass on his franchise to a spouse or a child, and make the car manufacturer, and not the dealer, responsible for damages from lawsuits by consumers who sue for manufacturing negligence.

Rep. Roger P. Roy, of the House Administrative Services Committee, said that the chances for getting the legislation out of his committee to the House floor are slim.

The FTC took particular exception to the bill's restrictions on granting new-car dealership franchises within a 10-to-20-mile radius of another dealer selling the same make of car.

The commission, in its letter, said that such a restriction would make a dealer's "relevant market area" up to 1,200 square miles, which is over one-half the land area of the entire state of Delaware. Roy's amendment to the bill would reduce the restrictive area to 6 to 12 miles.

Stockpile jumps from 52 to 78½ during June

Sales sag, U. S. inventory swells

By Richard A. Wright
Assistant Managing Editor

The domestic auto makers had no sooner pared their new-car inventory to a healthy 52-day supply June 1 when sales slumped even more. The result: By July 1, the domestic new-car inventory had jumped to a 78½-day supply.

The domestic new-car stockpile totaled 1,364,214 July 1, a 78½-day supply, compared with 1,212,727 a month earlier, a 52-day stock. A year ago, the domestic inventory totaled 1,664,871 July 1, an 83½-day supply.

Only the two smallest producers, American Motors and Volkswagen of America, trimmed their stockpiles during June.

General Motors accounted for most of the increase, boosting its inventory to 79 days July 1, up from a lean 44 days a month earlier. A sharply lower selling pace contributed to the swollen inventory, but GM also added more than 100,000 units to its stockpile during June.

• GM's J-cars and the front-drive A-bodies were both in heavy supply. Shortest in the industry were the hot-selling Firebird, at 29 days, and Camaro at 40 days.

Ford Motor Co. opened July with a 75-day supply, up from 64 days a month earlier. Ford's sales pace was off only moderately, but it added almost 35,900 units to inventory.

Chrysler Corp. had an 83-day supply July 1, up from 68 days a month earlier. Chrysler also had lower sales and a higher unit count — by about 10,000.

VWoA cut its stock to 105 days July 1 from 127 days a month earlier, while AMC opened July with a 65-day supply, down from 66 days a month earlier.

The July 1 domestic inventory was divided this way: GM, 57.53 percent; Ford Motor Co., 25.69 percent; Chrysler Corp., 13.03 percent; VWoA, 2.32 percent, and AMC, 1.43 percent.

A month earlier, the domestic inventory was divided as follows: GM, 55.75 percent; Ford Motor Co., 26.02 percent; Chrysler Corp., 13.81 percent; VWoA, 2.64 percent, and AMC, 1.78 percent.

• By size class, all segments were in heavier supply than a month earlier, but subcompacts continued to be heaviest and standards lightest.

The industry had a 103-day supply of subcompacts July 1, compared with a 75½-day stock a month earlier. Standards had the lowest stock at 53⅓ days, up from 36 days a month earlier.

There was a 74-day supply of compacts July 1, up from 49 days; a 77-day stockpile of intermediates, up from 48 days, and a 78½-day supply of luxury cars, up from 45 days.

The July 1 inventory was divided this way by market segment: Subcompact, 29.04 percent; compact, 22.39 percent; intermediate, 30.44 percent; standard, 11.03 percent; and luxury, 7.10 percent.

A month earlier, the inventory was divided as follows: Subcompact, 31.10 percent; compact, 21.80 percent; intermediate, 29.57 percent; standard, 10.70 percent, and luxury, 6.83 percent.

• The July 1 days-supply figures by market class were:

Subcompact — Eagle SX/4, 48; Spirit, 67; Lynx, 71; Horizon, 72; Escort, 75; TC3, 93; Omni, 93; 024, 97; LN7, 102½; EXP., 103; Rabbit, 105; Cavalier, 143; Chevette, 147; Skyhawk, 150; T1000, 164; J2000, 167, and Firenza, 171.

Compact — Firebird, 29; Camaro, 40; Zephyr, 59; Fairmont, 61; Concord, 66½; Eagle, 70½; Reliant, 74½; Skylark, 77; Aries, 87; Omega, 89; Mustang, 98; Citation, 118½; Phoenix, 120, and Capri, 137.

Intermediate — Cutlass four-door, 46; Cutlass two-door, 50; Gran Fury, 50; Malibu, 51; New Yorker, 56; Regal four-door, 60; Bonneville, 61; Grand Prix, 62; Diplomat, 63; Regal two-door, 65; Cougar, 69; Granada, 73; Monte Carlo, 80½; Cordoba, 91; Thunderbird, 92; XR-7, 93; LeBaron, 97; Cutlass Ciera, 98; Mirada, 99; Century, 116; Celebrity, 134; Dodge 400, 147, and Pontiac 6000, 183.

Standard — Olds 98, 43; Olds 88, 44; Mercury, 51; LeSabre, 52; Ford, 59; Chevrolet, 61; Electra, 63, and Pontiac, 69½.

Luxury — Lincoln, 61; Cadillac, 67; Riviera, 74; Toronado, 79; Mark VI, 81; Eldorado, 83; Continental, 84; Imperial, 110; Corvette, 115; Seville, 127, and Cimarron, 164.

Import inventory climbs in June to 57 day stock

Continued from Page 1

their car days-suppply figures were: Honda, 29 days; Toyota, 31½ days; Subaru, 42 days; Mazda, 52 days; Nissan, 59½ days, and Isuzu, 157 days. Chrysler Corp. had a 132½-day supply of Mitsubishi-built Colts, Champs, Challengers and Sapporos.

The stockpile of West German-built cars totaled 86,185, a 106-day supply, compared with 80,729 a month earlier, a 100-day supply.

German nameplates and their days-supply figures were: Mercedes-Benz, 26 days; Porsche, 27 days; BMW, 47 days; Audi, 146 days, and Volkswagen (German-built), 221 days. VW also had a 105-day supply of U. S.-built Rabbits.

Inventories of other European lines included: Jaguar, 51 days; Volvo, 57 days; Saab, 71 days; Peugeot, 98 days; Renault, 107½ days; Fiat, 137 days, and DeLorean, 308 days.

Inventories of new imported pickup trucks July 1 were: Mazda, 98½ days; Ford Courier, 111 days; Toyota, 118 days; Chrysler Corp. (Mitsubishi), 160 days; Isuzu, 189 days; Nissan, 216 days, and Chevrolet LUV, 326 days.

Ford shows future chic

Anaheim Mayor Ben Bay, left, previews some of Ford Motor Co.'s cars of the future under the expert guidance of Donald F. Kopka, Ford vice president—design, at the company's Southern California headquarters in Anaheim. This Quicksilver model was displayed with Ford's Aerovan, Continental Concept 90 and a methanol-powered Escort.

NHTSA tire-tread proposal draws cheers and brickbats

WASHINGTON. — NHTSA's proposal to suspend the treadwear grading requirements of Uniform Tire Quality Grading has brought comments ranging from "fair" and "appropriate" to "entirely contradictory with the concept of a free market economy."

Earlier this month, NHTSA announced a notice of proposed rulemaking to suspend treadwear grading on an interim basis.

NHTSA said it was necessary "primarily to avoid dissemination of potentially misleading tire grading information to consumers, but also to minimize the imposition of unwarranted compliance costs on industry and consumers."

If the suspension becomes law, NHTSA will use the time to undertake "an extensive testing program" to determine whether treadwear testing procedures can be made more exact and their results more repeatable.

NHTSA based its proposal on an agency study, which in turn hinged on the various complaints tire makers have made about the UTQG system for years.

The agency study, NHTSA said, has led it to believe "that unacceptable levels of variability exist in the present treadwear system and tests conducted under it."

A testing program, the agency added, could "determine whether factors causing test variability can be adequately controlled." Until such testing is completed, however, "continuation of costly testing and grading . . . cannot be justified."

NHTSA estimates the cost of treadwear testing to the tire makers at $9.7 million annually.

Most U. S. tire makers greeted the proposal with optimism, if not with jubiliation. Most echoed the words of Goodyear, the most vociferous opponent of UTQG, which said it "generally agrees" with the proposal "in the long-held belief that such a system misleads and confuses consumers, rather than assisting them, in making informed tire purchases."

Uniroyal, the sole defender of the system among the tire makers, said it was "disappointed" and "surprised" by the NHTSA proposal. The company has long insisted that UTQG "provides consumers with objective and useful information" in the purchase of tires.

Sharing Uniroyal's displeasure was Joan Claybrook, the former NHTSA administrator under whose guidance the current UTQG standards went into effect.

She said that since customers know and care more about treadwear than either of the other two grades — traction and temperature resistance — and since UTQG is mandated by federal law, the Reagan Administration "decided to knock out the system by making it as uninteresting as possible for the consumer."

A hearing on the proposal is scheduled for Aug. 12 in Room 2230 of the Nassif Building here. Interested parties may submit statements to the NHTSA docket until Aug. 26.

K cruiser for Montreal

Montreal Urban Community Police purchased 10 Plymouth Reliants as a potential first step toward downsizing its fleet. Special police equipment package includes heavy-duty suspension, wheels and tires; accessory wiring and hard-service upholstery. Nine of the K-cars are for undercover detectives.

Ken Marks to move

CLEARWATER, Fla. — Ken Marks has become sole owner of Ken Marks Ford. He plans to relocate the dealership from downtown Clearwater to a seven-acre site in the Countryside area north of the city.

94,683 autos assembled last week

Plant downtime trims car output

By Patricia Hoffman
Staff Writer

Despite downtime at several assembly points, the domestic auto makers managed to pull last week's production ahead of the previous holiday week's, but output continued to be far below last year's.

Last week's production was scheduled at 94,683 units, up 11.45 percent from 84,957 built during four days the previous week, but down 15.69 percent from 112,309 in the comparable period last year.

So far this year, the auto manufacturers have assembled 2,888,880 units, down 25.69 percent from 3,887,727 in last year's year-to-date.

Breakdown for last week by company was: General Motors', 87.71 percent; Chrysler Corp., 6.76 percent; Volkswagen of America, 3.82 percent, and American Motors, 1.71 percent.

All 10 of Ford Motor's car assembly plants were idle last week for vacation.

Checker Motors ended production of taxicabs at the company's Kalamazoo facility on July 9. The plant will continue to produce automotive parts.

Model changeover began last week at GM's Linden plant. It is scheduled to return Aug. 12 with production of 1983 models.

Also down last week for changeover were Chrysler's Belvidere and Jefferson points. Belvidere is slated to resume operations today (July 19) and Jefferson is scheduled to return Aug. 2.

Following a two-week vacation shutdown, VWoA's Westmoreland facility resumed production last week, but will be idle for model changeover throughout August. Assembly of 1983 models is scheduled to begin in September.

GM's Bowling Green facility (Corvette) has slated a four-week shutdown for changeover starting today (July 19).

Overtime was scheduled last Saturday (July 17) at GM's Norwood point.

14 plants down, truck output is 25,815 for week

With 14 assembly points down last week, domestic truck production rose only 4.03 percent from the previous holiday week. But output was 39.80 percent higher than in the year-ago week.

The truck makers targeted 25,816 units last week, up slightly from 24,817 built during the previous four-day week, and up from 18,466 in the comparable week last year.

Production so far this year reached 1,109,600 units, an 11.89 percent gain from 991,702 trucks finished in the same period last year.

All 9 of Ford Motor's truck facilities were idle last week for vacation.

International Harvester's Ft. Wayne and Springfield points were also down last week. It was the last of a three-week shutdown to control inventory. Production is scheduled to resume today (July 19).

General Motors' Pontiac (S-truck) facility began two weeks of downtime last week for model changeover.

Also idle for model changeover is Chrysler Corp.'s Belvidere point. Operations there are scheduled to resume today.

Volkswagen of America's Westmoreland line closed for changeover June 28, with assembly of 1983 models expected to begin in September.

Overtime was scheduled last Saturday (July 17) at GM's Lordstown and St. Louis facilities.

GM's Moraine and Shreveport points and Chrysler's Warren facility operated on daily overtime schedules.

Chrysler phases out '82s, Canadian production drops

Canadian auto and truck production was down last week from the previous week's totals as Chrysler Corp. began to phase out production of 1982 models in preparation for vacation downtime slated to begin today (July 19). The Chrysler facilities will return in two weeks with 1983 models.

The auto makers scheduled output last week at 12,021 units, down 8.32 percent from 13,112 the previous week, and the total dipped 10.84 percent from 13,483 units in the comparable 1981 week.

The cumulative total so far this year rose to 505,456, compared with last year's 501,115.

Truck production last week was estimated at 6,735 units, down 3.01 percent from the previous week's 6,944 and down 4.71 percent from 7,068 in the comparable 1981 week.

So far this year, the truck manufacturers have finished 297,506 units, down 5.88 percent from 316,104 built through July 18 last year.

Three car points and one truck facility remained idle last week for vacation.

Ford's Oakville car point (idled July 5) and its St. Thomas facility (idled June 28) are slated to return next week (July 26).

American Motors' Brampton point, down since July 5, returns today (July 19). Approximately 600 hourly workers will be called back from temporary layoffs, and output will be upped from 122 units a day on one shift, to 244 units a day on two shifts.

Ford's Oakville truck facility, idled July 5, will resume operations today.

General Motors' Oshawa (No. Two) and Ste. Therese plants are scheduled to go down July 26.

Vacation closings are slated to begin Aug. 2 at GM's Oshawa (No. One) point and Volvo's Halifax facility.

Petry appointed

VILLANOVA, Pa. — John J. Petry, formerly sales manager for the Automotive Systems Division of Auto Tell Services, Inc., has been named director of marketing services for the division. Auto Tell Services provides computer systems for automobile dealers.

Fiat appoints five to new posts in U.S. operation

HASBROUCK HEIGHTS, N. J. — Fiat Motors of North America has appointed two vice presidents, a national sales manager, a national service manager and a personnel director.

Carlo Predieri, formerly director of technical operations, has been promoted to vice president, engineering and service. He succeeds Frans Donck, who has been transferred to Fiat Auto UK where he will be responsible for the engineering and service functions of Fiat in England.

Sergio Montorsi, who joined Fiat's public relations department in 1970, has been named vice president, corporate and public relations for FMNA.

Bernie J. Silveria, Eastern area manager, has been named national sales manager. He will be responsible for the field sales force in addition to Eastern and Western area distribution.

The service field force and Western area service will be the responsibility of Bruce Mundy, who has been appointed national service manager. This position also includes the operations of the customer relations department.

Dick Rajoppi, personnel services manager, has been promoted to director of personnel. He succeeds Giorgio Donetti, who has been transferred to Fiat Auto S.p.A. in Turin, Italy.

And now, for something different . . .

$6,750-a-foot limousine from Baroque

This Baroque limousine is 20 feet long and costs $135,000. And it's not the biggest Baroque; there is a stretched limo that is longer yet. Built by Knudsen Automotive, Omaha, it uses Cadillac running gear and features such equipment as pushbutton bar and video tape recorder.

Luxury for the urban cowboy

The F. W. Stagecoach is suitable for those who want a vehicle with a Western flair that stands out from the rest. It uses running gear of an International Scout four-wheel-drive unit and is built by F. W. & Associates, Tempe, Ariz. It costs $35,000.

Three-wheeled TurboPhantom

Phantom Vehicle Co., Newport Beach, Calif., claims 50 MPG and 130 MPH for its TurboPhantom three-wheel luxury sports car, built on a custom order basis as a completed vehicle. It is powered by turbocharged versions of the Honda GL 100 or six-cylinder Kawasaki 1300 engine. Body and frame is sandwiched foam and fiberglass-reinforced plastic. Prices range from $19,000 to $25,000.

Local content is gaining over Reagan opposition

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Despite opposition from the Reagan Administration, the UAW is setting the stage for an automobile local-content law: It has managed to pick up support from 217 representatives — more than half the House.

If the bill makes its way to the House floor, it would be almost impossible to defeat.

The latest twist is that the two largest consumer organizations—Consumers Federation of America and National Consumers League—have also endorsed it. The bill seems almost unbeatable this election year because of high unemployment, the union-circulated petitions and its claims that passage could save 800,000 jobs in auto and related industries and bring "fairness" in trade with Japan.

But a new study commissioned by the American International Auto Dealers Assn. and done by the Boston-based firm, Harbridge House, says the UAW bill would mean a surcharge of $3,200 for every buyer of a Japanese car and it would raise domestic small car prices as well.

This figure is a combination of the $1,900 estimated to be added by the "voluntary" quotas put in place in April, 1981, and the local-content requirements in the union bill as introduced by Rep. Richard Ottinger, New York Democrat, in the House and Senator Wendell Ford, Kentucky Democrat, and 17 other senators in the Senate.

Ottinger, a liberal, defended the bill despite charges of its inflationary aspects. He said it would enable consumers to "support and invest in the American economy, regardless of the car they choose to purchase."

He added it is needed to "counteract the incredible transfer of auto manufacturing jobs abroad."

Although consumer groups are usually free-traders, they are also often heavily dependent on union members for financial support.

The bill would apply to all car companies with annual sales of cars and trucks in the U. S. exceeding 100,000 units. Makers would have three years to bring their average local content up to the allowable level. This could be done by either buying U. S.- or Canadian-made components and adding them here or abroad, or by manufacturing here, since labor as well as parts would be counted as part of the wholesale price.

For the relatively low-volume sellers, minimum local content

breaking news

Alliance prices range from $5,595 to $7,470

SOUTHFIELD, Mich. — American Motors has placed a sticker price of $5,595 on the base Renault Alliance two-door sedan. The front-wheel-drive Alliance line goes on sale in September. Other prices are: Alliance L—2-door sedan, $6,020; 4-door sedan, $6,270. Alliance DL—2-door sedan, $6,655; 4-door sedan, $6,905. Alliance Limited—4-door sedan, $7,470. The 49-state EPA fuel-economy ratings for Alliance are 37 MPG estimated and 52 MPG highway with 4-speed transmission, 35/51 with 5-speed and 31/39 with automatic. AMC estimates first-year production of 100,000.

Public Affairs Chief Larsen to leave Chrysler

DETROIT.—Wendell Larsen, group vice-president—public affairs, Chrysler Corp., will leave the auto maker to become senior vice-president—corporate affairs of IC Industries, Chicago. He will also be a member of the company's policy committee.

Protectionist acts self-defeating, new Toyota president warns U. S.

By John Hartley
Staff Correspondent

TOKYO.—"The local content legislation now being debated in the U. S. could not only restrict competition and run contrary to the best interests of American consumers but in the long run could be disadvantageous to the U. S. economy," said Shoichiro Toyoda, new president of Toyota Motor Corp.

Toyoda admitted that he had no idea of the chances of the bill getting through, but said:

"It would stand in the way of competition; it would be unfortunate. More thinking should be placed on giving the economy more vitality. I would ask the people in Congress involved to take this into account."

Basically, Toyoda stands by the views of previous Toyota executives when asked about affairs in the U. S. — that protectionism hurts the industry it is intended to help by fostering inefficiencies and allowing prices to rise.

Over the years, of course, many laws have failed to achieve their intended purpose. Perhaps one of the most recent examples is the "gentlemen's agreement" over limiting the imports of Japanese cars into Britain to about 11 percent of total sales.

The main result of this agreement has not been to increase sales of British cars, but to increase imports from Common Market countries, many imported by companies that do manufacture in Britain.

• Speaking at the Foreign Correspondents' Club in Tokyo, Toyoda had little to say about exports to the U. S. or Europe. He did not attack the "self-restraint" quotas imposed by the Japanese government, nor did he mention the situation in Canada, where Japanese cars are allegedly being held up at the docks.

Recently, of course, there has been a lot of speculation on the proposed joint venture between Toyota and GM.

"I want to see our talks with General Motors succeed," said Toyoda, "and provide American customers with small cars of high quality and good fuel efficiency. We are looking at ways both companies can benefit from the relationship."

GM is keen to use one of its idle factories to build the forthcoming front-wheel-drive Corolla, and recently GM chairman Roger Smith was quoted as saying that because Toyota had spent a lot of money on the project it must be serious.

But Toyota has spent a lot of time over the years considering manufacture in the U. S. It commissioned three feasibility studies from specialist consultants in the U. S. and Japan. These were completed over a year ago. Yet Toyota has never admitted that it has finished studying these reports.

"The surveys almost never

The long and short of it

Seville is stretched, shortened

Sevilles come in all sizes from American Custom Coachworks, Ltd., Beverly Hills, Calif. At top is the company's Cadillac Seville Extended Body Limousine, a four-foot-stretch limo that includes standard rear-facing club seats, color TV, intercom system, ice storage compartment and electric chauffeur divider window. The Seville "Paris Roadster" Convertible, a two-seater, is a Seville that's shortened 16 inches. Wheelbase is 98 inches. Power top with full headliner is standard.

Insurers say agency flouts court order and blocks passive-restraint standard

NHTSA accused of stalling tactics

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — In the latest go-round in the passive restraint litigation, State Farm Mutual and the National Assn. of Independent Insurers accuse NHTSA of flouting the court's order for a schedule and further delaying the standard that has already been 12 years in the making.

Both say NHTSA's response with a proposed supplemental rulemaking to consider only non-detachable passive belts or air bags is precisely the "recalcitrance" that Judge Abner Mikva criticized June 1, when he overturned rescission of standard 208 which NHTSA head Raymond A. Peck announced last October.

Both successful plaintiffs also accuse Peck of acting as though he won the suit instead of lost it.

Predictably, both the domestic industry and the import companies also protest the shortness of response time and, predictably, consumer and physicians' groups join the insurers in protesting what they view as unnecessary delay.

By the end of July, NHTSA must again answer the new charges of failing to fulfill the court's order and thereafter the court will decide whether the agency's response is satisfactory.

Meanwhile, the Justice Department has asked for extra time — 30 days after the court's ruling — to decide whether to appeal to the full nine-judge panel or to the U. S. Supreme Court.

• The federal appellate court for the District of Columbia, in overruling NHTSA's wipe-out of the passive restraint standard, faulted Peck's decision as a "paradigm of arbitrary and capricious" action. It ordered NHTSA to come up with answers within 30 days to questions raised by the court and to produce a "schedule for implementing the standard."

NHTSA's response, defending its decision to rescind, was to propose supplemental rulemaking, asking within 30 days responses to predicted use of detachable automatic belts and alternatives such as mandating non-detachable belts and air bags only.

Then, NHTSA said, it would try to respond within 45 days but might decide more fact finding is needed.

State Farm says NHTSA's proposal is not a schedule at all, since it sets no time limit. Instead, NHTSA suggests a "blueprint for a leisurely, open-ended new rulemaking proceeding while the rule is in a state of suspensed animation."

State Farm says that unless NHTSA comes up with a judicially acceptable rationale for rescission, the auto makers should be put on notice that the standard will go into effect for '84 models.

• In State Farm's view, NHTSA is seeking the kind of 95 percent confidence of accuracy that is needed for a new drug, but one that would only mire the agency in statistical argument for bolts and bags.

State Farm wants the court to order NHTSA to address three questions only: Does the record

Product liability law gets Reagan's blessing

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Federal product liability law that would preempt an area of regulation now belonging to the states has received endorsement from the Reagan Administration which is philosophically in favor of states' rights.

Commerce Secretary Malcolm Baldridge won over President Reagan by arguing that businessmen want and urgently need uniformity instead of the wide differences that have resulted from court decisions and the failure of states to agree among themselves.

While no specific bill was blessed, the leading contender is the Senate measure crafted after several drafts and hearings by Senator Robert Kasten Jr., Wisconsin Republican. It has the backing of the Business Roundtable and the National Assn. of Manufacturers and both the domestic and import auto industries.

The car companies would like to see even more protection offered than would exist in the Kasten bill; they favor using the minimum federal standards as a pressumption of safety—a position rarely accepted by courts and not even by NHTSA in its defect investigations.

But despite strong opposition by some consumer groups and trial lawyers, the Senate bill—representing many compromises—has almost universal business backing. Conceivably, markup could occur next month and Senate passage appears possible.

• What apparently turned the Administration's position around was the broad-based business support. Apparently persuasive were arguments that product liability is a national and even an international problem and that a federal law would help products move across state lines and compete more effectively abroad.

Moreover, the Administration was told that without more certainty of the risks of litigation, less money would be spent to improve products.

The House has not yet drafted a bill, much less held hearings. If it does draft a bill, it is likely to be more consumer-oriented than the Senate version. The House committee that would consider the bill now is backed up with the Clean Air Act, local content legislation and other matters on its agenda.

In addition, a plain political fact of life may militate against any House action this year: Any federal product liability measure is controversial, and no member needs a powerful and rich bunch of local trial attorneys lobbying against him in an election year.

In short, the next Congress may look like a better bet to pass product liability legislation, although passage by the Senate this time around would further its chances.

Buick champs

Woody Wiegandt, left, a salaried employe in Buick's torque converter plant, and Ken Ward, an hourly employe in Buick's gear and axle plant, earned berths in the Buick Pro-Am golf tournament Aug. 18 in Grand Blanc, Mich., as winners of the division's first annual Buick Employe Classic. Wiegandt, who shot a three-over-par 75, and Ward, who scored a 79, topped a field of 88 golfers in the finals. The original field numbered 1,200.

Fraser concedes parity is unlikely, but vows gains for union

Chrysler-UAW contract talks open

By Marjorie Sorge
Labor Editor

Workers at Chrysler Corp. will not get parity with workers at Ford and General Motors in one fell swoop, UAW President Douglas A. Fraser said as contract talks began in Detroit last week.

"Now it is time for the Chrysler workers to begin that long, long road back to parity with the Ford and GM workers," Fraser said.

But, at the same time, he said the union has no intention of making any further concessions to the company.

"I'm exuberant about these negotiations", Fraser said. "When we walk away from here, I know we will have made some gains for the Chrysler workers."

Chrysler was teetering on the brink of bankruptcy when talks were held in 1979. In three rounds of bargaining in 1979, 1980 and 1981, the hourly workers made concessions worth more than $1 billion to allow the company to qualify for federal loan guarantees. The current contract, covering 84,000 hourly and 6,400 salaried workers, expires Sept. 14.

Prior to the first actual bargaining session last week, Chrysler's top executives made a two-hour "State of the Company" presentation to the UAW negotiators. It covered everything from finance to new products.

Making the presentation were Chairman Lee Iacocca, Vice Chairman Gerald Greenwald and Harold K. Sperlich, president of North American Automotive Operations.

In this round of bargaining, the UAW wants:

1. To reinstate cost-of-living-adjustments (COLA) and the annual improvement factor (AIF).

2. To obtain job security.

3. A moratorium on plant closings.

4. Pilot lifetime employment programs at some Chrysler plants.

5. A guaranteed income stream (GIS) for high-seniority workers.

6. Four seats on the Chrysler board of directors—three in addition to the one Fraser now holds. Fraser has said he will resign that seat when he retires from the UAW next May, but Iacocca said he will try to persuade Fraser to stay.

Chrysler wants:

1. To cut the costs of health care and pensions.

2. Changes in some work practices.

3. Reductions in absenteeism.

• It has been estimated that the labor costs at Chrysler currently run about $3.50 an hour behind those at GM and Ford. But at a press conference announcing the company's $107 million profit for the second quarter, Iacocca said the gap is much less.

He said the high cost of pensions has raised the labor cost from $17.50 an hour when the current contact was negotiated to $19.63, about $1.40 away from GM's labor cost. He said the pensions are so costly because "we have one guy on pension for every guy working."

But in wages, an assembler at Chrysler makes $9.07 an hour compared with $11.67 at Ford and $11.76 at GM. Currently, Chrysler trails GM and Ford by more than $2 an hour in COLA alone. According to Fraser, in the last quarter that amounted to about $1,100 per worker.

The UAW wants to reinstate the COLA benefit, and Iacocca said the company "will try and work out some sensible COLA arrangement."

UAW Vice President Marc Stepp, director of the Chrysler Department, told Automotive News in April that the COLA formula might differ from the Ford and GM agreements. In those pacts, workers get one cent

But May total trails last year's

Registrations continue month-to-month climb

By Jenny L. King
Staff Writer

The new-car registration total continued its climb in May, up 5 percent over the April figure and the fifth consecutive month of growth this year. But the May total was lower than its year-ago counterpart, according to figures compiled by R. L. Polk & Co.

The May registration total was 707,869, up 5.30 percent over 672,253 reported in April and down 3.17 percent from 731,059 in May of 1981. It was the lowest May since 1975 when 656,803 new cars were registered in the U. S.

The domestic-car figure was 518,746, up 6.74 percent from 485,992 in April and 2.17 percent ahead of the 507,470 registered a year earlier in May.

Imports were down 15.41 percent from May to May, to 189,123 from 223,589, and their share of the total market dropped to 26.72 percent from 30.58 percent.

Total new-car registrations for the first five months were down 15.99 percent, to 3,060,751 from 3,643,403 last year. The domestics dived 15.61 percent, to 2,187,094 from 2,591,740, while imports plunged 16.93 percent, to 873,657 from 1,051,663.

Imports' share of the five-month market dipped only slightly, though, to 28.54 percent from 28.86 percent.

• In May, General Motors was the only major domestic auto maker to increase its share of the market compared with 1981. GM climbed to 47.33 percent from 42.18 percent, its gain the byproduct of a lowered interest-rate program for customers which ran through the end of the month.

Ford Motor Co. slipped to 16.46 percent from 16.78 percent last year; Chrysler Corp. had 8.33 percent, down from 8.48 percent; AMC stood at 1.10 percent, down from 1.96 percent, and miscellaneous domestics climbed 0.06 percent, up from 0.02 percent.

Imports plunged to 26.72 percent of the month's market this year from 30.58 percent in 1981.

In the domestic-only market, GM cornered 64.59 percent, Ford had 22.46 percent, Chrysler had 11.37 percent, AMC had 1.50 percent and miscellaneous domestics had 0.08 percent.

A year earlier, the domestic-only breakdown was: GM, 60.75 percent; Ford, 24.17 percent; Chrysler, 12.22 percent; AMC, 2.83 percent, and miscellaneous domestics, 0.03 percent.

• For the first five months of 1982, it was three up and three down in shares of the total market. GM was up to 44.69 percent from 43.62 percent in 1981; Ford edged to 16.77 percent from 16.73 percent and miscellaneous domestics pinched off 0.04 percent, up from 0.03 percent.

Imports slipped to 28.54 percent of the five months market from 28.86 percent, Chrysler was down to 8.70 percent from 9.04 percent and AMC dropped to 1.26 percent from 1.72 percent.

In the domestic-only market through May, GM had 62.54 percent, Ford stood at 23.47 percent, Chrysler had 12.18 percent, AMC had 1.76 percent and miscellaneous domestics had 0.05 percent.

Comparable shares in 1981 were as follows: GM at 61.32 percent, Ford at 23.52 percent, Chrysler at 12.71 percent, AMC at 2.41 percent and miscellaneous at 0.04 percent.

New imported cars continued to account for the largest single portion of the market-class analysis in May, though they were down nearly four percentage points, to 26.72 percent from 30.58 percent last year.

U. S. intermediates were second, at 23.18 percent, up from 20.19 percent. Compacts had 18.10 percent, down from 19.79 percent; subcompacts landed at 14.44 percent, and luxury models gained a percentage point, going to 5.82 percent from 4.84 percent.

The domestics-only breakdown this May was as follows: Intermediates at 31.63 percent, compacts at 24.70 percent, subcompacts at 19.71 percent, standards at 16.02 percent and luxury models at 7.94 percent.

A year ago, in May, intermediates had 29.09 percent, compacts had 28.51 percent, subcompacts had 20.87 percent, standards had 14.57 percent and luxuries had 6.69 percent.

23 auto experts to judge Meadow Brook Concours

ROCHESTER, Mich.—A panel of 23 expert judges has been selected for this year's Meadow Brook Concoure D'Elegance. The event will be held Aug. 15 at Meadow Brook Hall on the campus of Oakland University here.

About 120 rare autos are entered.

Trophies will be awarded to about 20 percent of the cars in each of 11 classes or groups. Three "circles" of cars have been added this year — period Rolls-Royces, pre-World War II sports cars and postwar sports cars.

Concours rules specify that cars must enter and leave the field under their own power and climb the presentation ramp unassisted.

Richard A. Teague, vice president of automobile styling for American Motors, is chairman of this year's Concours D'Elegance, and W. Paul Tippett, AMC chairman, is honorary chairman. Teague is also one of the judges.

Other judges are: Zora Arkus-Duntov, noted Corvette engineer; Scott Bailey, publisher, Automobile Quarterly; Ben Bowden, automobile designer, London Custom Coach Builders, 1926-1939; Connie Bouchard, retired executive engineer of advanced engineering, Ford Motor Co., and Gordon Buehrig, designer of the Auburn, Cord and Duesenberg.

Also: Keith E. Crain, publisher and editorial director of Automotive News and publisher of AutoWeek; Alexander A. Cunningham, vice president and group executive, General Motors; Dale Dawkins, product group vice president, American Motors; Don DeLaRossa, product design vice president, Chrysler Corp., and Alfred J. Fisher III, president, General Safety Corp.

Also: Edsel B. Ford II, marketing product plans manager, Ford Division; Richard Hinson, associate publisher, AutoWeek; Lowell James, public relations consultant; Charles M. Jordan, director of design, General Motors, and Paul J. King, engineering director, Chevrolet.

Also: Donald F. Kopka, design vice president, Ford Motor; Alan Loofbourrow, retired engineering vice president, Chrysler Corp.; Alex C. Mair, vice president and group executive, General Motors, and Bill Maypole, styling director, Volkswagen of America.

Also: Heinz Prechter, chairman, American Sunroof Corp.; Jack Telnak, chief design executive, North American design, Ford Motor, and Robert Zokas, director of luxury and mid-size car design, Ford Motor.

Concours chairman

Richard A. Teague, American Motors styling vice president, is chairman of this year's Meadow Brook Concours D'Elegance, which will be held Aug. 15 at Meadow Brook Hall, Rochester, Mich. Teague also is one of the 23 Concours judges.

McDonald promises modern equipment for product quality

Robots galore for GM Detroit plant

HAMTRAMCK, Mich. — General Motors' new Detroit/Hamtramck assembly plant will feature some of the most modern equipment in the world to help the company meet its quality and productivity goals, F. James McDonald, GM president, told the Hamtramck Rotary Club.

The plant is scheduled to open in 1985. GM hasn't said what will be built there, but industry sources report it will be Cadillac Eldorado and Seville, Oldsmobile Toronado and Buick Riviera.

The plant has been a source of controversy because preparation of the site resulted in the razing of homes, businesses and churches in a neighborhood known as Poletown.

"Product quality is the number-one operating priority at General Motors today," said McDonald. "That's why we're giving so much attention to our new production facilities," McDonald said.

"The systems going into the GM assembly plant here are going to be outstanding.

"That includes a Robogate framing system to improve precision in body build. And more than a hundred robots along the assembly line."

Some of the robots will be used with laser probes to verify the accuracy of door and window openings and to check the dimensions of every car going down the line, he said, and there will be a robotized paint system to "ensure quality and improve efficiency of this crucial operation."

McDonald continued, "Throughout this plant we will install statistical monitoring systems which will chart the quality of the products we are building. These electronic watchdogs will determine quickly and automatically that each operation is well within design limits.

"Systems of this kind are powerful weapons in the battle for better quality. They're already being used at many GM plants and they will be expanded to every GM unit . . . both in component plants and in assembly operations."

To create the environment in which employes will be able to work most effectively, McDonald said the plant will undertake major employe training.

"The highly technical equipment and methods we will use here can pay dividends only if they are used wisely," he said. "As we have done at other new GM installations, we will go back to the basics on such things as electricity, hydraulics and control systems.

"Beyond technology, we plan to work with employes to build a people-centered organization —an organization with a specific philosophy about the power of teamwork and employe involvement."

Such training and employe attitudes also are vital to quality. And in today's competitive race, McDonald said, "productivity and quality are critical determinants of who will thrive and who will fall by the wayside."

Earlier in his remarks, McDonald emphasized that the new plant project is "alive and well" and that construction is proceeding "pretty much according to schedule."

"Our goal is to get the site under roof and weather-proofed by this winter so we can go ahead with interior work," he said, adding that GM expects to meet that target if the current construction workers' strike is settled in the near future.

So far, said McDonald, for the assembly plant itself, the deep underground sewers are all in and about half the upper-level sewer work is finished. Virtually all the caissons are in place, and about 25 percent of the structural steel is up.

At the power house, the boilers are now being placed into the framework. Two-thirds of the powerhouse steel is up and construction has been started on the smokestack.

The Detroit / Hamtramck facility is one of three assembly plants GM is building in the U. S. The others are in Orion Township, Mich., and at Wentzville, Mo.

Chrysler honors Armory Garage

ALBANY. — Chrysler Corp. has honored Armory Garage for 50 years as a Chrysler dealership.

Anthony Metzner founded the dealership 64 years ago and has been a Chrysler Corp. dealer since 1931. The firm handles Chrysler, Plymouth and Imperial and also has a Peugeot franchise.

Anthony Metzner now is chairman of the board and is still active in the company. His sons, Robert and Stanley, and James A. Clark Jr. joined the dealership after World War II and now are managing the business.

Unless Western makers can rebuild their profits

Automotive shift to East envisioned

By Marjorie Farge
Labor Editor

There could be a shift in the automotive economic market to the East unless the Western manufacturers can improve their cash flow, according to Maryann Keller, vice president and auto analyst, Paine Webber Mitchell Hutchins, Inc.

She said the Japanese are already dominating the Asia-Pacific basin which has the greatest potential for long-term growth in the auto industry.

In addition, the Japanese are increasing their penetration into the U. S. and European markets, she said. Keller warned that the only way to change the tide is for the Western companies to increase their profits to finance the more sophisticated products of the future.

"If Western auto makers cannot improve their operating efficiencies, continued erosion of their share of auto production can be expected," she said.

"This fact is made even more significant by the fact that product development costs are soaring and the introduction of high technology to the automobile will intensify competition still further, making it easier for wealthier companies to invest in these areas."

In the U. S., the auto makers have already delayed new model and plant modernization plans because of lack of capital.

However, while the Western companies are struggling with their profitability, the Japanese have maintained a good cash flow, Keller said. This could cause a shift in automotive economic power to the East.

• While many have indicated that new automotive powers will develop in the Third World nations such as Korea and Taiwan, Keller said the emerging nations will find it difficult to create multinational, competitive companies in the 1980s because of the cash crunch and the need for sophisticated, high-tech equipment to produce the cars of the future.

"The Japanese experience is unique and not likely to be repeated by the emerging autobuilding nations no matter how tightly they protect their markets," she said. "Few nations have a local market of sufficient size to enable local manufacturers to cover their fixed costs."

In other nations where the American or European companies dominate local production, it is local market development, not exportation, that has been the major objective, she said.

Some of these nations may see their component and completed-vehicle export market increase as manufacturers comply with growing local content legislation. But, Keller said, major export drives from these nations are not likely.

"It must be remembered that multinational entities plan their investments to the best advantage of the corporation, not necessarily the export ambitions of the host country," she said. "Those nations which are trying to develop an export base without investment by multinationals, will find that the rising level of sophistication of future automobiles will preclude their successful participation in these markets."

Instead, many nations will turn to producing and selling component parts for the automotive sector. Keller said she expects to see more links between the U. S. and Europe; the U. S. and Japan, and Europe and Japan geared toward component sourcing.

• Already there are agreements between American Motors and Renault, Chrysler and Mitsubishi, Chrysler and Peugeot, Ford and Toyo Kogyo, General Motors and Isuzu, General Motors and Suzuki, Nissan and BL, Nissan and Alfa Romeo, Toyota and Volkswagen, BL and Honda, Saab and Lancia, and others.

In addition, GM is currently negotiating with Toyota to build in the U. S., a subcompact car designed by Toyota and distributed and built by GM.

Keller said the proposal would "provide GM with a new model that it desperately needs to replace the aging Chevette and simultaneously utilize one or more of GM's idle facilities."

Most sources believe that GM would reopen the Fremont plant in California for the project.

Keller also indicated:

1. The future of Taiwan and Korea as a competitive auto market is limited because it is too small to make up the cost of production. Also, the technology used is so sophisticated that the component manufacturers don't have the capability. And a highly sophisticated car won't sell in that market.

2. Brazil must shed its economic problems if it is to expand its automotive market. It is currently dependent on the U. S. export base, providing transmissions, engines and, in some cases, whole cars.

3. There will be no alternatives to the internal combustion engine before the year 2000.

VW-BMW dealer Brock forming Phoenix bank

SCOTTSDALE, Ariz. — Linda Brock, president of Linda Volkswagen-BMW here is one of the organizers of Commercial State Bank which is expected to open later this year in Phoenix.

The new bank will specialize in low-interest loans to small and medium-sized businesses and their executives.

Registrations in May hit 2½-year high

Registrations of new trucks of all types in the U. S. in May were the highest for any month in almost 2½ years, but light trucks were the only ones showing any improvement.

During the month, according to R. L. Polk & Co. statistics, 226,177 new trucks were registered, an increase of 14 percent over the 198,392 units tallied in the same month a year ago.

The last time that monthly new-truck registrations exceeded the May total was January, 1980, when the count hit 232,409 units. The 1980 total, however, was 17.6 percent under the record 281,967 new trucks registered in the first month of 1979.

Five-month registrations were up 10.6 percent over a year ago to 979,016 units, with light trucks showing healthy gains and the big trucks significant losses. The 1981 count through May was 885,049 units.

During the January-May period, 907,223 light trucks were registered, with increases in all three weight classifications. The total was 13.5 percent higher than last year's 799,071 units.

• Group 1 tallies through May totaled 503,176, an increase of 13.6 percent over the year-earlier 442,788. The Group 2 count was up 12.9 percent, from 350,838 in 1981 to 396,254. Group 3 rose 43.1 percent to 7,793 units, compared with 5,445 a year ago.

Five-month registrations of non-captive imported compact trucks totaled 125,867 units, a gain of 4.7 percent over the year-earlier 120,270.

The Group 1 count was 123,-

Newmar introduces tow van

Newmar Industries, Inc., Nappanee, Ind., has introduced the London Aire tow van which it said is designed to tow almost any vehicle used in recreation, sports or business.

RV business is hot in Minneapolis-St. Paul

By Ken Berglund
Staff Correspondent

MINNEAPOLIS. — Auto sales may be down, but the recreation-vehicle business has risen dramatically in this area in recent weeks. In the Minneapolis-St. Paul market, both sales and rentals have shown a sharp upturn, according to many dealers.

"We have had one of the biggest months (June) ever in sales of rec vehicles," said Paul Iten, sales manager at Iten Chevrolet in Minneapolis. "Of course, a lot of people got out of this business a few years back, and we're probably doing well because there aren't as many dealers anymore.

"Prices of motor homes are up, of course," he added. "But people trading them in on new models today are getting back as much as they paid for their vehicle.

"For example, a 1977 Winnebago 26-foot Brave model, an average-sized motor home, had a suggested retail of $14,439 new without extras. That vehicle is worth in the neighborhood of $13,000 or $14,000 today . . . if the miles are decent and the coach has been taken care of."

Iten's RV units range from converted vans at $13,000 to luxury sport coaches sleeping up to 10 or 11 persons and costing $50,000 or more.

• At the Twin Cities area's largest RV rental outlet, C & J Mini Motor Home Rentals, business has been "real good," according to owner Cliff Peterson.

"We are booking faster than usual," he said. "Right now, I'm booked up until the last two weeks in August."

C & J rents a motor home that can sleep six for $285 a week plus 10 cents a mile. For a 1,000-mile trip, the total cost would be $385 plus gas in a 23- or 24-foot mid-sized vehicle.

The June issue of an RV publication, one dealer noted, reported a survey of its Dealer Advisory Board showing sales volume of recreational vehicles

Cost cuts trim Fruehauf's loss in second quarter

DETROIT. — Fruehauf Corp. lost money again in the second quarter of fiscal 1982, but the company said cost reductions during the three-month period ended June 30 held the loss below that in the first quarter.

Net loss in the second quarter amounted to $7.2 million, compared with a loss of $10.7 million in the first three months. In the second quarter of fiscal 1981, Fruehauf had earnings of $7.6 million.

Losses in the first two quarters of the current year were the first quarterly losses in more than 23 years, the company said.

Net sales in the second quarter totaled $496 million, almost 17 percent below last year's $591 million.

For the first six months, Fruehauf had a net loss of $17.9 million, compared with net earnings of $12.7 million in the like period a year ago. First-half

recreation on wheels

'82 total climbs to 105,900 units

Shipments of RVs up for May, five months

May shipments of recreation vehicles from manufacturers to dealers were up 7.9 percent over the same month a year ago, and the five-month total was higher by 4.2 percent.

The Recreation Vehicle Manufacturers Assn. reported that its members delivered about 23,200 units during the month, compared with 21,500 last year. Shipments were down in one of the three major RV categories.

Through May, RV manufacturers wholesaled approximately 105,900 units, compared with 101,600 in the corresponding period in 1981, and shipments were higher in all three market segments.

An RVIA spokesman said the Index of Consumer Sentiment increased two points to 67.5 during the month. "Improved readings on inflation continue to be dampened, however, by less favorable future income expectations," he added.

"Nearly half of those surveyed expect unemployment to increase during the next 12 months," the spokesman said.

"A strong favorable reading was made on interest rates, though, with a decline expected by more than two-thirds of those polled.

• Shipments of towable RVs were down for the month, but showed a small inprovement for the five-month period.

In May, the number of towable units wholesaled totaled about 9,200 units, a decline of 9.8 percent from last year's 10,200. Through May, they were up 1.7 percent, from 47,600 units in 1981 to 48,400.

Deliveries of conventional and fifth-wheel travel trailers in May dropped to 5,900 units, off 3.3 percent from the year-earlier 6,100. But they were 3.1 percent higher in the January-May period, from 29,000 a year ago to 29,900.

Folding camping trailers, the least expensive towable units and normally considered the ideal RV-entry vehicle, were down 27.8 percent during the month to 2,600 units, compared with 3,600 a year ago.

The five-month total of folding-trailer shipments was down 3 percent, from 16,500 units in the like period in 1981 to 16,000.

Truck campers were higher for both the month and the five-month period. Manufacturers shipped 700 units in May, up 40 percent over last year's 500, and 2,500 through May, an increase of 19 percent over the year-earlier 2,100.

May shipments of all motor

Champion sales, pretax income up in first quarter

DRYDEN, Mich. — Champion Home Builders Co. reported increases in both sales and pretax income for its first quarter ended May 8, and attributed the results to "continuing improvement in manufactured housing operations."

Joseph J. Morris, president, said quarterly sales and revenue were 11 percent higher than a year ago, from approximately $69.5 million in 1981 to $77.3 million.

Net profit for the quarter, including a tax credit of $635,000, amounted to close to $3.4 million. A year ago, the quarterly profit was about $3.5 million, including a tax credit of $1.7 million.

The pretax income this year amounted to a little more than $4.3 million, compared with about $3.5 million in the like quarter a year ago, Morris said.

Champion's 22 manufactured-housing plants, he said, showed a pretax profit of about $5.2 million, up 35 percent over last year's $3.8 million.

"So far this fiscal year," he added, "unit sales of our manufactured homes are continuing to outpace those of our company last year, as well as those of the industry this year."

The firm's two motor-home plants showed both a decline in

Titan is redesigned for 1983

Champion Home Builders, Dryden, Mich., has redesigned its line of Titan Class A motor homes for 1983. The entire vehicle is fiberglass and features an all-new sloped, fiberglass front end with built-in ground spoiler for improved aerodynamics. An automotive-style grille is flanked by quad headlamps, quartz lights and directional lights in two clusters of four.

Truck total is highest in 2½ years

Pickups pace May registrations gain

Continued from Page 16

334 units, up 4.1 percent over last year's 118,501. Group 2 was 4.3 percent higher, from 1,768 units in 1981 to 2,533. There was one Group 3 registration a year ago, but none this year.

Registrations of medium trucks in the January-May period were down 23.7 percent, from 20,882 units a year ago to \$15,935. Heavy trucks were off 14.2 percent to 55,858 units, compared with 65,096 units in 1981.

There were four Group 4 tallies through May, compared with six a year ago. The Group 5 count was down 23.7 percent, from 657 units in 1981 to 534. In Group 6, the total was 15,397 units, off 23.7 percent from last year's 20,219.

There were 25,561 Group 7 registrations over the five-month span, down 8.3 percent from the year-earlier 27,865. The Group 8 total dropped 18.6 percent, from 37,231 units in 1981 to 30,297.

• Chevrolet was No. 1 in registrations through May, but runnerup Ford cut the margin by slightly more than 1,000 units in May.

Chevrolet's five-month total of 321,960 tallies accounted for 32.89 percent of the industry total, an improvement of 1.92 percentage points over last year's 30.97 percent on 274,067 registrations.

Ford had 288,264 tallies through May good for 29.44 percent of the total. Its share, however, was down 2.45 points from last year's 31.89 percent, when Ford was No. 1 with 282,285 tallies.

Chevrolet, Dodge and GMC were the only nameplates to show an improvement in market share over the five-month period.

In the heavy-truck area, No. 1 Ford increased its lead over International during May and had an 828-unit margin at the end of the five-month span.

Ford had 12,685 Groups 7 and 8 tallies, accounting for 22.71 percent of the industry total. Its penetration was 1.80 points higher than last year's 20.91 percent on 13,612 tallies.

International's share was down 4.76 points, from 25.99 percent of the total a year ago on 16,919 registrations to 21.23 percent this year on 11,857 tallies.

GMC had the biggest gain in penetration through May, boosting its share by 6.53 points. Its 11,103 tallies this year accounted for 19.88 percent of the total, compared with 13.35 percent a year ago on 8,692.

Shipments of RVs climb for May, first five months

Continued from Page 16

homes in May hit 4,200 units, a gain of 31.3 percent over last year's 3,200. The five-month total was 17,900, up 15.5 percent over the year-ago 15,500 units.

• During the month, manufacturers wholesaled 1,800 conventional (Type A) motor homes, an increase of 28.6 percent over last year's 1,400. The five-month total of 8,100 units was 28.6 percent higher than the year-earlier 6,300.

Shipments of van campers (Type B) were up 33.3 percent for the month, but unchanged for the January-May period. In May, 400 units were delivered, compared with 300 a year ago. For the five months each year, 1,900 units were shipped.

Chopped vans — minis, low-profiles and compact — totaled 2,000 in May, up 33.3 percent over last year's 1,500. Through May, 7,900 units were delivered, an increase of 8.2 purcent over the year-earlier 7,300.

Shipments of multi-use vehicles during the month were 21 percent higher, from 8,100 units in 1981 to 9,800. For five months, the total was up 2.9 percent to 39,600 units, compared with 38,500 a year ago.

The multi-use vehicle is one designed for the transportation of people and/or property and altered by the RV manufacturer for aesthetic or decorative purposes. These changes may include windows, carpeting, paneling, seats, sofas and accessories.

RV business hot in Minnesota, dealers report

Continued from Page 16

up 35 percent over the same month a year ago and 19 percent higher for the year to date.

New motor-home sales for the dealer were up 11 percent. New travel trailers were 5 percent higher, and used trailers were up 10 percent. New truck campers were ahead 7 percent, but used units were off 21 percent.

"It does look like the dealers are on their way to a good year despite the recession," said Bob Budd, one of the owners of Landey's recreational vehicles in suburban Shakopee.

"This industry is noted for being one of the first to drop in a recession and one of the first to bounce back on a recovery," he added. "It looks like we're bouncing back."

Cost cuts trim Fruehauf's loss in second quarter

Continued from Page 16

sales dropped 10 percent, from \$1.1 billion in 1981 to \$1 billion.

Robert D. Rowan, Fruehauf chairman, said the company isn't anticipating any quick improvement in the economy or in the industries served by Fruehauf.

"We anticipate that sales will improve in the fourth quarter, which, combined with cost reductions, will return Fruehauf's earnings to more respectable levels," Rowan added.

First-half earnings of Fruehauf Finance Co., which reported its 12th consecutive year of record results in 1981, were down slightly from the previous year, but the company expects it will continue record year-to-year improvements for the full year 1982.

The finance company had second-quarter net earnings of \$4 million, down almost 20 percent from the year-earlier \$4.9 million. Revenues totaled \$22.6 million, off 12.4 percent from last year's \$25.8 million.

First-half earnings amounted to \$8.1 million, compared with \$9 million in the same period a year ago.

Champion sales, pretax income up in first quarter

Continued from Page 16

sales and profitability compared with a year ago.

"This reflects the nagging impact of high interest rates and increasing unemployment among potential first-time motor-home installment buyers," Morris said.

Dollar sales of Champion's motor vehicles for the first quarter, representing 14 percent of total revenues, amounted to about \$10.8 million, down 11 percent from the year-ago \$12.1 million.

Unit sales of motor homes and medium-duty transit buses for the quarter totaled 417, a decline of 37 percent from last year's 665.

Challenge Series Update.

Renault on the Go!

Points standing as of June 30:

1.	Renault	135
2.	Mazda	95
3.	Volkswagen	34
4.	Ford	20
5.	Subaru	18
6.	Saab	10
7.	Dodge	3

Champion Spark Plug Challenge upcoming races:

Portland, August 1
Road America, August 22
Mid-Ohio, September 5
Road Atlanta, September 12
Pocono, September 26
Lime Rock, October 9
Daytona, November 28

At the halfway point of the Champion Spark Plug Challenge, Renault is leading the Manufacturers' Points for front-wheel drive cars.

It hasn't been easy and the racing has been fiercely competitive. The number of front-wheel drive entries is increasing. Which indicates the second half should be as fast and furious as the first.

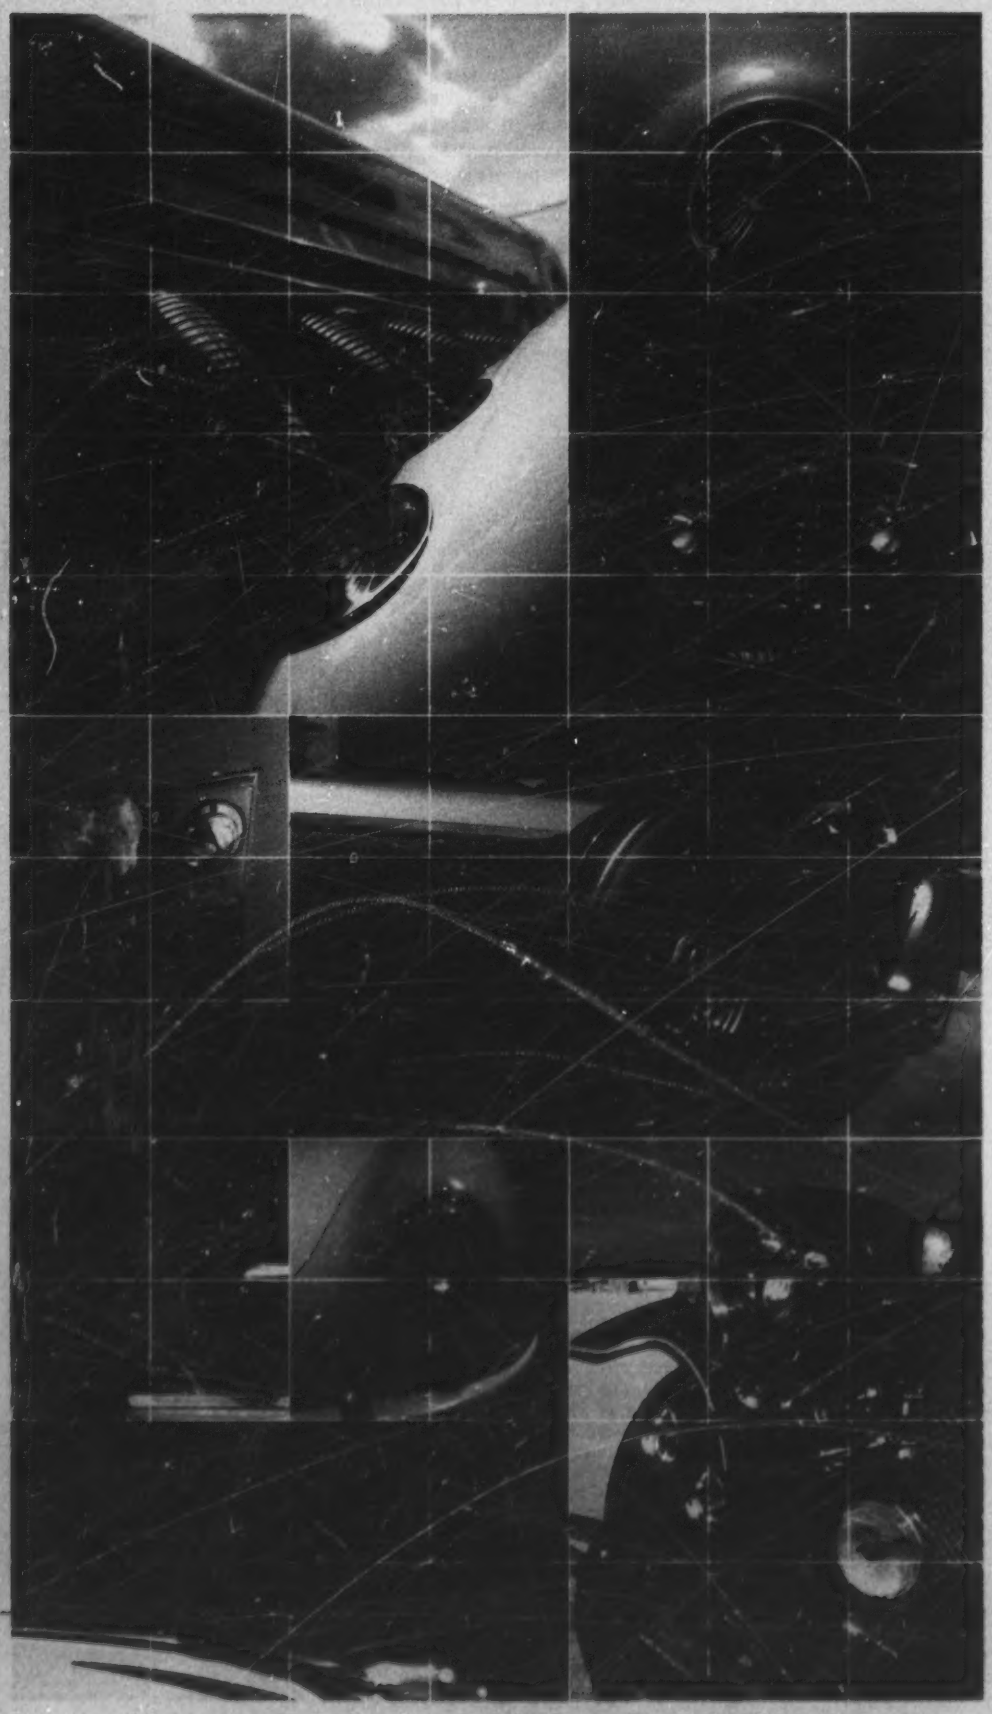
CUSTOM MARKET



Survival is tougher as economy slips

By Jim Plegue
Staff Writer

The Custom Market, land of flash and filigree and cars that can cost as much as a house, is starting to feel the impact of a crumbling economy, interest rates that cause nosebleeds and money that's as scarce as a bank loan.

Business survival under current conditions is at best difficult. Just ask Detroit's major auto makers, who are now intimately acquainted with red ink and the 10-day disappointment.

But survival for smaller specialty makers — those building the shiny neoclassics, replicars, kit-cars, limousines and convertibles — is even tougher. Financial casualties in the specialty field are mounting.

There are a few bright spots in the marketplace, though, namely the kit-car makers — which continue to proliferate — and the add-on and simple conversions market (everything from chromo grilles to whale tails, targa bands to T-roofs).

Always optimistic

Despite the stagnant market, most companies have shown a tenacious ability to survive. And, almost to a company, they remain ever-optimistic about the future, as evidenced by the results of an AUTOMOTIVE NEWS survey of nearly 300 Custom Market companies.

In fact, if optimism were hard currency, the companies that comprise the custom market would be rich beyond compare.

The 300 companies polled represent only a portion of the total number of specialty firms doing business in the U. S. and Canada. It seems virtually impossible to nail down the total number of companies or their total sales. Companies appear and disappear, sometimes in a fortnight. Then, too, there are many markets and sub-markets.

Of the 300 companies surveyed, about one-third responded, and almost all of them said they expected sales increases this year. All told, those companies forecasted sales at between 8,000 and 10,000 units.

The more familiar marques—the popular neoclassic "Gatsybish" cars — gave these sales figures:

	1982	1981
Clenet	50	125
Excalibur	250	235
Baroque	30	—
Moselle	36	20
Phillips	65	85
Bradford	50	—
Zimmer	300	255
Corsair	36	24
Bayliff (Packard)	30	22

Part of what is happening within the custom market can be expected in most young industries: Maturity followed by attrition—growing pains, if you will—among those companies not equipped to bend with the marketplace.

Poor business skills, undercapitalization, inadequate advertising, a narrow product line or substandard product quality can be the death knell for a fledging company, experts said.

"Those people who got into this business on sheer emotion are having trouble," said Joe Molina, an irrepressible public relations agent in Woodland Hills, Calif., who has represented about 25 manufacturers.

"There's going to be a weeding out of the weak, and the strong shall survive. If you don't have the backing of an Excalibur or a Zimmer it's going to be tough going."

An unfriendly economy

Last year's shakeout in the industry is now being exacerbated by an unfriendly economy. Disposable income is down and those people with thousands of free dollars are looking at other uses for their money.

"If a guy's got $30,000 to $50,000 . . . he's got to be thinking twice about buying a car when he can get 15- or 16-percent interest on it someplace else," said a sales executive with an established specialty firm.

"The industry overextended itself and it got caught in the economy," said Bob Wallach, president, Robert Consulting Group, Inc., a management consultant firm in Nassau City, N. Y., that specializes in exotic-car firms.

"What happened was a bit of bad luck. First, high interest

Economy is speeding custom-market maturity

Continued from Page E-1

rates convinced people to put their money in CDs (certificates of deposit). Then the whole economy went bad and people started putting their money into the value imports (BMW and Mercedes, for example) or started leasing cars."

Wallach said the problems will extend through the year and grimly added: "It's going to be enough to kill off a good percentage of the specialty makers."

Other problems facing the custom makers is a market that's flooded with "look-alike" cars, according to Wallach. And some industry observers feel that consumer tastes are shifting away from flashy cars.

"These cars are amusements for people," added Molina. "They're ego gratifications. And these days, $70,000 is a sizeable amount to spend on ego. The car better be built well. They want more than a pretty body. They want a car that works and doesn't creak or groan when they drive down the road."

Quality counts

Quality will make the difference, said Don Brooks, Classic Cars of London, Ont., which builds an Auburn Speedster replica.

"He (the buyer) has to see real quality. The car has to be a quality product for him not to justify investing his money into something else. Disposable income has to be allocated more precisely now."

Brooks, who was involved in both the custom-van and snowmobile markets and observed the shakeout period in those industries, said the specialty market wll survive, but it also will change.

"There will be properly educated business people who will take a good look at this industry, evaluate it and come in and do it right," Brooks said. "The big companies will eat up the potentially good little companies.

"I would guess that within the next year — maybe even the next six months — you're going to see changes. A lot of companies have been hanging on through the winter, hoping for that summer selling season, which is right now. And if they don't get the sales, they won't be able to hang on through another winter.

The key to survival, most have agreed, is in diversification. That is already starting to happen within the industry. Moselle Coach Works, Inc., for example, recently added a line of limousines to supplement sales of its Moselle II neoclassic car.

Royal Coach Division, Clearwater, Fla., builds high-ticket limousines and convertibles — but also builds trolley cars, perhaps as many as 12 this year.

Explained General Manager Mark Doyne: "We're trying to do a lot of different things so that if the market does fall apart, we won't die."

Add-ons are booming

As noted earlier, the lower-priced add-on and conversion market seems to be booming. E & G Classics, Columbia, Md., which specializes in chrome aftermarket grilles, said business has tripled this year.

Cars & Concepts, Inc., Brighton, Mich., has quadrupled its sales volume in the last year, led by its Chrysler and Ford Mustang convertible conversions and sales of a new sunroof installation.

"We're more in the enhancement business, as opposed to building a car from the ground up, said Phil Edwards, vice president, parts and production, C & C. "So you're not locked in on one car. You've got more options available to you."

Some companies keep plugging along, come rain or shine. Elite Heritage Motors Corp., Elroy, Wis., which sells $100,000-and-up Duesenberg II replicas, is sold out for two years in advance (24 cars), claimed President Richard I. Braund.

And Avanti Motor Corp., which sells the Avanti II, a luxury GT with styling that is virtually unchanged from the original Studebaker Avanti I of 1963, had record sales last year of 191 units. This year, the company expects to sell 200, according to David Walton, assistant sales manager.

"The last two years have been the best in our history," said Walton. "And they've been profit-making years."

More roofs in works for Cars & Concepts

BRIGHTON, Mich. — Cars & Concepts, Inc., is vying for future roof projects with Detroit's auto makers.

The company may build a convertible conversion of the '84 Corvette and is looking at a roof program for Chrysler's upcoming G-24 sports car.

Return to sender

As part of its research into the Custom Market, Automotive News sent out surveys to nearly 300 companies. About 10 percent—as shown above—were undeliverable.

THE IRRESISTIBLE ZIMMER. Golden Spirit

"ALL THAT GLITTERS IS NOT GOLD"
Whoever said that wasn't talking about the Zimmer "GOLDEN SPIRIT."

It not only looks *Great*... it performs *Great*... and it's produced by a *Great* Company with solid resources and sound policies.

We may not be Fort Knox, but we'll be here tomorrow and next year! So if you're looking for a GOLDEN opportunity, look at us.

And other legislatures considering increases for road repair

7 states hike fuel taxes this year

WASHINGTON. — Legislatures in seven states have voted to raise motor fuel taxes in 1982, two of them for the second year in a row, according to the Highway Users Federation.

Legislatures in six other states are still considering similar increases, which will be used, by and large, for road, street and bridge repairs and Interstate highway completion and rehabilitation projects.

Drivers will be paying higher taxes on motor fuel in Arizona, Idaho, Kentucky, Maryland, Missouri, Vermont and Virginia. Idaho and Vermont also hiked taxes in 1981. Kentucky and Virginia last raised taxes in 1980.

Bills to increase motor-fuel taxes are pending in Illinois, Louisiana, Massachusetts, Michigan, New Jersey and New York. None of them are among the 22 states — a record number — that raised motor fuel taxes last year.

So far this year, bills to increase taxation on motor fuel have failed in Connecticut, Indiana, Kansas, Maine, Oklahoma, Washington and West Virginia.

Arizona's three-year measure boosted the 8-cents-per-gallon tax to 10 cents on July 1. It will become 12 cents on July 1, 1983, and 13 cents on July 1, 1984.

Idaho's one-cent increase raised the tax on gasoline and diesel fuel to 12.5 cents a gallon and to 8.5 cents for gasohol. Last year, Idaho enacted a 2-cent hike.

• Kentucky taxes motor fuel according to a variable rate formula — 9 percent of the wholesale price adjusted quarterly. But a new state law that took effect July 1 specifies that a minimum 10 cents per gallon tax must be collected. The state had been collecting 9.5 cents a gallon.

Maryland's tax rose 2 cents a gallon to 11 cents on June 1, with another 2.5 cent increase scheduled for 1983. In 1984, Maryland's tax formula will switch to 10 percent of the wholesale cost, with a 13.5-cent-a-gallon minimum.

The Missouri legislature approved raising the fuel tax from 7 to 11 cents a gallon, subject to voter ratification in November.

As of July 1, diesel fuel in Vermont is taxed at 14 cents a gallon—3 cents higher than gascline and gasohol. In 1981, Vermon passed a 2-cent hike for those fuels, but had never taxed diesel on a per-gallon basis.

On July 1, Virginia tacked on a 3-percent excise tax to the state's cents-per-gallon structure. The excise tax is based on the wholesale price of motor fuel. Virginia had levied 11 cents on gasoline and diesel and 3 cents on gasohol.

As a side note, Tennessee passed a law this year allowing cities and counties to impose a one-cent motor fuel tax to raise money for mass-transit systems.

Motor fuel tax hikes are possible this year in a number of states.

Michigan legislators are considering bills to raise the state's cents-per-gallon motor-fuel tax or switch to a percent rate formula. An Illinois bill would increase the state's 7.5-cent tax to 12 cents over the next two years. A Louisiana bill would add 2 cents to the state's 8-cent tax.

Proposals in New Jersey and New York would change state tax rates from cents-per-gallon to variable percentage-of-price structures. Another New Jersey bill would add a 5-percent sales tax.

In Massachusetts, legislators are examining percentage increases to the state's 10-percent wholesale tax rate. The effective cents-per-gallon tax in Massachusetts fell along with fuel costs.

A replica of a rarity

The Laser J2X, a replica kit built by Elite Enterprises, Cokato, Minn., is a copy of the rare J2X Cad-Allard, a sports car imported to North America in limited numbers (less than 100) during the '50s. The Laser can be built with choice of four-cylinder, V-6 or V-8 engines, mounted in the front or rear. Prices start at $3,995.

Pennsylvania still trying to block emission checks

HARRISBURG, Pa.—Ignoring federal sanctions against the state's highway program, the state Senate is moving on two fronts to insure that no state money is spent for a court-ordered auto emissions inspection program.

Senate Minority Whip Eugene Scanlon, Pittsburgh Democrat, said he will push for an amendment barring the state Transportation Department from implementing the program ordered by a U. S. District Court judge.

At the same time, the Senate Transportation Committee approved identical legislation by Senator Clarence Bell, Republican of Delaware County in suburban Philadelphia. At issue is a program that was supposed to begin in May in 12 counties in the Philadelphia, Pittsburgh, Allentown and Wilkes-Barre areas.

Last year, Gov. Richard Thornburgh vetoed legislation blocking state funds for the emissions program, but the Legislature in October overrode his veto by a substantial margin.

When Thornburgh rejected the bill in July, he said it was because of the possible loss of $400 million in federal highway funds. His fears were realized and $260 million remains frozen because of the ongoing litigation.

In January, U. S. District Court Judge Louis Bechtle in Philadelphia found the state in contempt for not abiding by the agreement to begin checking cars annually for auto exhaust emissions

In May, the U. S. Third Circuit Court of Appeals in Philadelphia upheld Judge Bechtle's ruling.

Close marks 25 years as Volkswagen dealer

HAYWARD, Calif. — James R. Close, of Humphrey Motors, Inc., has received an award from Volkswagen of America in recognition of his 25 years as a VW dealer.

Humphrey Motors, which began in a 6,000-square-foot building with 10 employes, now occupies 15,000 square feet and has 50 employes. Close was chairman of VW's National Dealer Advisory Council in 1970.

Milestone car trails 1981 by 6 weeks

Auto output edges above 3 million

By Patricia Hoffman
Staff Writer

The three-millionth U.S. automobile of 1982 was assembled last Friday (July 23), six weeks later than the point was reached in 1981.

So far this year, the makers have finished 3,002,411 cars, down 25.21 percent from 4,014,562 built through July 25 last year.

The return of all Ford Motor's 10 car assembly plants and Chrysler Corp.'s Belvidere facility upped last week's estimated car production 27.28 percent to 116,604 units from 91,610 built the previous week. Output also was 3.48 percent above the 112,686 cars assembled in the comparable 1981 week.

Breakdown for last week by company was: General Motors, 61.61 percent; Ford, 25.57 percent; Chrysler, 8.32 percent; Volkswagen of America, 3.10 percent and American Motors, 1.40 percent.

Following a two week vacation, Ford resumed operations last week at all 10 of its assembly points, with daily overtime scheduled at the St. Louis and Wixom facilities.

The Ford Lorain plant returned with second-shift operations. Approximately 1,150 workers were recalled from indefinite layoff.

Chrysler's Belvidere facility resumed operations last week after one week of model changeover. Still down at Chrysler is the Jefferson plant which has scheduled a three-week changeover period. Jefferson is slated to return Aug. 2.

GM's Detroit and Leeds plants joined the Linden plant last week in model changeover. Detroit and Leeds have slated a six-week shutdown. Linden is scheduled to return Thursday, Aug. 12.

Ford truck plants return, boost U.S. output 68 percent

The return of all but one Ford Motor Co. facility upped last week's domestic truck production a substantial 68.74 percent from the previous week, and output jumped 37.32 percent from the comparable 1981 period.

Last week, the makers planned 43,686 units, up from 25,889 the previous week and up from 31,814 in the same week last year.

So far this year, the manufacturers have finished 1,153,359 units, a 12.59 percent gain from 1,024,394 built by this time last year.

Eight of Ford's nine truck facilities resumed production last week (July 19) following a two-week vacation. Ford's Kentucky point, idled for vacation July 12, is slated to resume today (July 26).

Ford's Lorain (van), Michigan and Twin Cities points operated on daily overtime last week.

General Motors' Pontiac S-truck facility was idle for model changeover last week and its GMC Truck and Coach lines were down for inventory control.

The GM Moraine plant operated a daily overtime shift last week.

Chrysler Corp.'s Belvidere point also worked daily overtime after being idle one week for model changeover.

International Harvester's Ft. Wayne and Springfield facilities were idle for the fourth week last week. Both points will be down against this week.

Volkswagen of America's Westmoreland line remained down for model changeover. VWoA truck production, which stopped June 26, will return with 1983 models in September.

GM unit signed to supply Toyota valve lifters

ROCHESTER, N. Y.—Toyota Motor Co. has signed an agreement with General Motors' Rochester Products Division to purchase hydraulic valve lifters for Toyota engines starting in the 1983 model year.

Rochester Products said the purchase agreement will make the GM unit the first non-Japanese supplier of a critical component in a Toyota engine.

Initial volume will total more than one million units for 1983. The valve lifters will be used in a new four-cylinder engine Toyota plans to use in three taxi and six truck models.

The valve lifters will be made at Plant 1 of Rochester Products' Grand Rapids (Mich.) plant. The lifters will be similar to those used in GM engines.

3 plants idle; car output dips 31 pct. in Canada

Downtime at three car plants pulled last week's Canadian auto production down 31.09 percent from the previous week's total, and output was 36.46 percent below the comparable 1981 figure.

Auto production last week was estimated at 8,089 units, down from 11,738 the previous week, and down from 12,730 units built in last year's comparable week.

To date, there have been 513,262 cars assembled, up slightly from the 512,897 units completed at this time last year.

The truck makers targeted output last week at 6,670 units, about the same as 6,621 the previous week but down 17.90 percent from 8,124 in the same week last year.

So far this year, the truck manufacturers have finished 304,062 units, down 6.12 percent from 323,895 built the same 1981 period.

Ford's Oakville and St. Thomas facilities were idle last week for vacation. Both points are scheduled to return today (July 26).

Also down for vacation last week was Chrysler's Windsor car plant. It is slated to return Aug. 2 with production of 1983 models.

American Motors' Brampton plant returned last week with two-shift operations. Output was upped from 122 units a day on one shift to 244 units a day on two shifts.

General Motors' Oshawa (No. Two) and Ste. Therese facilities have slated vacation downtime beginning today. Oshawa is scheduled to return Aug. 2, and Ste. Therese is expected to resume Aug. 9.

Volvo's Halifax plant will be idled three weeks beginning Aug. 2.

Ford's Oakville truck plant returned last week from a two-week vacation shutdown.

Chrysler's Windsor truck plant and International Harvester's Chatham and Vancouver facilities remained idle last week.

GM to replace fuel valves in Z-28s, Trans Ams

DETROIT. — General Motors is recalling about 26,000 1982 Chevrolet Camaro Z-28 and Pontiac Firebird Trans Am models equipped with 5.0-liter V-8 engines with fuel injection to replace a vent valve and a pressure valve in the fuel system.

GM said it has determined that if the fuel filler cap is removed on these cars when the tank is more than three-quarters full, particularly if there is pressure in the tank as evidenced by a whistling sound from the fuel vent system, gasoline may be forced out of the filler neck.

The cars represent about 12 percent of 1982 Camaro and Firebird production.

GM has received 17 reports of fuel spillage. There have been no reports of injuries or fires, GM said.

Chrysler's G-24

Camera zooms in on '84 sports car

Chrysler's G-24 sports car, due as an '84 model, is shown in full trim in these unofficial photos. The G-24 will be sold by both Chrysler and Dodge dealers with standard 2.2-liter four-cylinder fuel-injected engine and five-speed manual transmission. A turbocharged version of that powerplant, as well as the Mitsubishi-built 2.6-liter four, will be optional. The front-drive four-place hatchback is based on the K-car chassis.

Canada 'goes by the book' to slow Japanese imports

By Roger Rowand
Engineering Editor

Japanese car makers have the advantage over their Western counterparts in terms of labor costs, a favorable yen/dollar relationship and a hand-in-glove government policy.

But when it comes to rolling cars down ship gangways into the Canadian market, the Canadians have the Japanese in an icy grip of undeclared protectionism.

Japanese cars are moving into the land of the maple leaf at a snail's pace.

Keith Dixon, president of the Canadian Importers Assn., said the fact that 10,000 to 12,000 cars are stuck in Vancouver is hurting all importers.

"The number of customs inspectors assigned to this silliness has reduced customs clearance on all sorts of goods, including European cars," he said.

"It is childish and illogical," Dixon said.

The situation stems from the fact Canadian customs inspectors since April have been giving a careful once-over to each and every Japanese vehicle that enters the Port of Vancouver.

The busy blue-uniformed inspectors are checking vehicle identification numbers and safety and exhaust emissions documentation. They're looking above visors and into trunks to see if anything is tucked away there. They're checking options to see if they are on the vehicle as stated in import documents.

Toyota Motor Co.'s most recent ship to arrive at Vancouver was held up by customs for over a month. Only after 34 days was its cargo of 1,708 vehicles discharged.

Other importers have experienced similar slowdowns and shortages of cars are becoming extreme.

• Dealers, who call the Vancouver maneuver harassment, report some layoffs, chiefly of sales personnel.

The alleged harassment has no roots in customs but is a political tactic being used to force Japan to the negotiating table to talk about voluntary restraining its exports to Canada.

Under an earlier voluntary restraint program, Japanese makers limited exports to Canada to 174,000 passenger cars a year. That agreement expired in March.

Canada wants a new agreement with imports reduced by 28,000 to 146,000 units. It also wants a limit on pickup trucks. Previously, there was no ceiling on the number of the popular little trucks brought in.

Canada has about 937 Japanese car dealerships employing some 12,000.

"If you have six or eight salesmen, you obviously can't keep them busy if you're not getting cars," said one importer.

Unemployment is critical in Canada today. It is a major political football, along with inflation and skyrocketing interest rates.

Bill Rowley, of Toronto, is the attorney for the newly formed Canadian Assn. of Japanese Automobile Dealers. He is pragmatic.

"Salesmen tend not to get paid till the car leaves the lot," he said. "Even though demand for the product stays up and orders are written, the dealer can't deliver. That effects not only the customer but the salesman's ability to make a living. The harassment is starting to effect a lot of people."

Lacking an exact figure, Row-

breaking news

Clenet facility padlocked

SANTA BARBARA, Calif. — Clenet Coachworks, neoclassic-car builder, has been padlocked by court order. Minority stockholder S. Prestley Blake, who owns the assembly plant here, sought the action for nonpayment of debts. Company founder Alain Clenet was charged with offering a potential investor inventory owned by Blake as loan collateral.

New $200 million sale by Chrysler Financial

DETROIT. — Chrysler Financial Corp. is selling another $200 million worth of retail receivables (installment contracts) to provide funds for dealer floorplanning and for financing up to 50,000 cars and trucks. The buyer is Associates Corp. of North America, and the receivables will be available for purchase in September. Late in July, CFC sold $500 million worth of retail receivables to Chrysler Corp. and 39 banks, with the funds to be used to finance up to 100,000 new vehicles and for dealer floorplanning.

Current picture called 'bleak,' future 'uncertain'

Auto revolution afoot, study says

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A new study of the competitiveness of the domestic auto industry finds what is happening "akin to a cultural revolution" that needs time to effect a "true reformation."

But while suggesting rather guarded optimism, the report offers no firm conclusions, opting instead for a choice of three scenarios which have quite different policy implications both externally (regulation, taxes and trade, for example) and internally (labor and management, for example).

The report, "The Competitive Status of the U. S. Auto Industry: A Study of the Influences of Technology in Determining International Industrial Competitive Advantage," was done for the National Science Foundation by the National Academy of Engineering's Office of the Foreign Secretary in cooperation with the Commission on Engineering and Technical Systems of the National Research Council.

It is one of six industry-specific studies. The auto panel was chaired by Prof. William J. Abernathy, professor in the Harvard Graduate School of

The '83 models: Survey of what's new shows Ford has lion's share; intros staggered

By Jim Plegue
Staff Writer

The sell-when-they're-ready approach to new-model showings is gradually replacing the traditional fall introduction as auto makers rush to bring competitive products to an ever-changing market.

The 1983-model intros are a further example of the shift away from the fall shows. The model year no longer denotes a span of time as much as it does the set of government regulations that a new car has met.

Though the '83 introductions start in the traditional month of September, most of those products are carryover cars from General Motors and Ford Motor (bowing Sept. 23). The new models from both domestic and import makers will be sprinkled throughout the fall, winter and well into the spring of next year —the staggered approach to introducing cars.

All the upcoming models will be promoted as "new," but here's what's really new for 1983:

Ford has the lion's share of the new domestic products. The company said it has invested $3 billion in its '83-model program.

First of the new Fords will be the downsized Ford LTD and Mercury Marquis, which bow Oct. 14. Those cars, based on the lame-duck Granada/Cougar platform, will be sold as base family sedans alongside the upscale and larger LTD Crown Victoria and Grand Marquis. Sporty Ford Escort GT and Lynx RS models will also bow Oct. 14.

Among the option additions to Escort and Lynx will be a new fuel-injected version of the 1.6-liter engine and a five-speed transmission.

The new Mustang convertible, built by Cars & Concepts, will follow on Nov. 1. The convertible features full rear seat, power top and roll-up rear-quarter windows.

• The all-new Ford Thunderbird and Mercury Cougar are next in line, debuting on Jan. 20.

Sometime next spring—probably in April—Ford will introduce its new front-drive compacts, the Ford Tempo and Mercury Topaz, which replace

Earnings up 8.7 percent from 2nd quarter last year

GM reports $560 million profit . . .

By Edward Lapham
Financial Editor

General Motors said its net income for the second quarter ended June 30 rose 8.7 percent to $560 million ($1.82 a share) from $515 million ($1.72 a share) in the same period last year. Sales in the second quarter declined 4.8 percent to $17.145 billion from $18.015 billion.

The amount of the earnings was generally larger than had been forecast by most Wall Street analysts. It was GM's highest quarterly profit in three years.

In a statement by Chairman Roger B. Smith and President F. James McDonald, the company said the results were due to "success in controlling costs and improving manufacturing efficiency, which helped offset a significant decline in passenger-car volumes."

Wall Street analysts said the company also was aided by a richer U. S. sales mix in the third period.

The better-than-expected showing in the second quarter brought net income for the first half of the year to $688 million ($2.23 a share) on sales of $31.9 billion compared with net income of $705 million ($2.35 a share) on sales of $33.7 billion in the same period last year.

The cost/efficiency improvements were reflected in the income statement. Largely due to the renegotiated contract with the UAW, the total cost of an hour worked by a U. S. hourly employe declined to $20.80 in the second quarter from $21.25 in the first quarter of 1982, for a first half total of $21.05. The comparable second-quarter figure in 1981 was $19.40.

In the April-June period, the cost of sales and other operating charges dropped to 82.4 percent of total sales from 83.5 percent in the year-ago period. However, selling, general and administrative expense rose to 4.3 percent of sales from 3.6 percent of sales.

Depreciation and amortization in the second quarter was $1.43 billion compared with $1.29 billion last year. For the first six months, depreciation and amortization was $2.53 billion compared with 2.42 billion.

• Working capital at June 30 totaled $1.33 billion compared with $1.6 billion at the end of the first quarter, $1.16 billion at Dec. 31, 1981, $1.75 billion at June 30, 1981 and $5.4 billion at June 30, 1980.

GM's current ratio (current assets to current liabilities) at the end of the period was 1.1 to 1, identical to the current ratio at June 30, 1981, although only half of what is generally considered "good" for a manufacturing concern.

Return on sales in the quarter

'Mr. Motivation' seeks way out of tax jam

By Joseph Bohn
Marketing Editor

Dennis Doyle, the "Mister Motivation" of AUTOMOTIVE NEWS classified ads, is hopeful of clearing up a large debt in back taxes with a new joint business venture.

Doyle's Showroom Traffic Builders, Inc., has run countless special sale events for dealers across the country. It specializes in private "by-invitation-only" sales to customers.

However, Doyle reportedly owes close to $250,000 in back taxes to the IRS which he's struggling to repay.

He was forced to close his Southfield (Mich.) office and has worked out of various locations, while trying to negotiate repayment of his IRS debt.

Doyle's problems with the IRS actually go back about 2½ years, according to James Cummins, revenue officer, Collections Division, Pontiac (Mich.) office.

"In some periods there was a truce, and he was paying on what he owed," said Cummins.

• Within the past few weeks, the firm with which Doyle has been negotiating a joint venture reportedly paid a small, indeterminate portion of his debt.

Doyle has not concluded his agreement with the firm, but is hopeful of doing so.

A high-ranking official with the firm confirmed that no agreement had been reached, but he said discussions were still going on.

"As far as we and Showroom Traffic Builders are concerned, there is no story right now. There might be a story later on," he said.

"Some good things are happening for Dennis right now, particularly on a new product he is marketing," added the official.

• Said Doyle, "I'm putting together two of the biggest programs I've ever put together right now."

One is a series of promotional ventures with a major regional import distributor.

Another is an even larger event, involving a considerable number of dealers, held in conjunction with another major import distributor.

And Doyle is negotiating a third deal with a major auto firm that would eclipse the first two.

AUTOMOTIVE NEWS confirmed these sale events were either going on (first distributor), planned (second distributor) or in process of being negotiated (manufacturer).

He added that he is also test-

Total is biggest quarterly profit in three years

Ford earns $204.9 million . . .

By Edward Lapham
Financial Editor

Ford Motor Co. last week said its net income for the second quarter ended June 30 was $204.9 million ($1.70 a share) compared with net earnings of $60.2 million (50 cents a share) in the second quarter last year. Sales declined 2.9 percent to $10.93 billion from $11.26 billion last year.

It was the largest quarterly profit for Ford in three years, although it was boosted by a number of non-U. S., non-operational factors.

Included in the net income for the second quarter was a gain of $56 million from the sale of the fallow Los Angeles assembly plant.

Also, Ford switched to a new way of accounting for foreign currency exchange losses, using Financial Accounting Standards Board standard 52, which avoided $69 million being charged against net income by charging it against shareholder equity. The switch in accounting standards also involved restating the first-quarter loss, reducing it by $53 million to $302 million.

In addition. income from unconsolidated subsidiaries added $69.9 million before taxes.

In a statement by Chairman Philip Caldwell and President Donald E. Petersen, the company said the profit improvement over year-ago reflected reduced operating costs and the "non-recurrence" of the losses associated with foreign currency translations, although lower volume and higher marketing costs in the U. S. partially offset these improvements.

The two executives said that in the quarter, the company earned $23 million after taxes in the U. S., compared with $82 million last year. In Canada the company lost $8 million after taxes, compared with $28 million last year, while overseas operations generated $190 mil-

But AMC suffers 9th quarterly loss in row

By Edward Lapham
Financial Editor

Several factors, including plant shutdowns and an early changeover to Alliance output, caused American Motors to report its ninth consecutive quarterly loss for the three-month period ended June 30.

AMC reported a net loss of $68.8 million ($1.24 a share) on sales of $667 million. One year earlier, the company reported a net loss of $19.9 million (35 cents a share) on sales of $722 million.

AMC Chairman W. Paul Tippet Jr. cited standard problems like the high-finance-rate-caused sales depression for the company's dismal showing but said there were extraordinary factors as well.

"During the period, automotive and Jeep production facilities were closed for up to three weeks to permit an early changeover and preparation for the launch of the new Renault Alliance," he said.

"In past years, close-downs for model changeover occurred during the third quarter. Our second quarter results also reflect extraordinary one-time costs for the Alliance launch," he said.

"In addition, recent devaluation of the Mexican peso negatively affected the performance of the company's international operations."

The net loss for the first half of 1982 was $119.7 million ($2.17 a share) on sales of $1.27 billion compared with a January-June 1981 net loss of $72.6 million ($1.27 a share) on sales of $1.43 billion.

Total worldwide vehicle wholesale sales in the April-June period were off 29.0 percent to 66,393 from 93,541 last year, leaving the six-month total down 25.5 percent at 122,-793 from 164,818 in 1981.

• In the U. S. and Canada, total vehicle wholesale sales dropped 24.6 percent in the quarter to 55,346 from 73,451. Car deliveries (including Renault) plummeted 30.4 percent to 39,075 from 56,121, while Jeep wholesale sales dipped 6.1 percent to 16,271 from 17,330.

The one bright spot was factory sales of imported Renault vehicles, which rose 71 percent

Continuing delays raise doubts about project—and some relief

Nissan UK plant still up in the air

By Anne Hope
Special Correspondent

LONDON. — Nissan Motor, Japan's second largest auto producer, is still undecided about whether to go ahead and set up an $870-million plant in the United Kingdom.

The longer they dither, the more it seems that they won't start up — to the relief of General Motors, Ford, Renault, Fiat and BL, but especially BL, now planning a new range of cars with Honda, still only known as Project XX.

These cars would compete head-on with the two models Nissan wants to make in the UK, while the Nissans, with their 1.6-liter motors, would also clash with Ford's new Sierra which will debut this fall.

According to Masataka Okuma, Nissan executive vice president in charge of overseas operations, "our feasibility study continues. We haven't decided either way. There are still eight sites on our short list."

Meeting the world's media in London, he read a 276-word statement about why no decision had yet been reached, citing the recession and the uncertain state of the auto industry worldwide.

• But that does not mean that Nissan has abandoned all plans to make 200,000 cars a year in the UK. Nissan could act fast, once an upturn comes.

It has a 13-man main executive board which meets each Monday in Tokyo. All that is needed is a unanimous decision either way — and that has not been forthcoming up to now.

Okuma did say, when asked if a decision might be reached in six months, a year or longer, "I hope by next year the world economy will start to pick up and the demand for motor vehicles, too."

So a decision might be made next year? "I hope so — at the latest," he replied.

To assemble cars? "No, to manufacture cars and engines, not merely to be an assembly plant."

A suggestion that the project was being mothballed and post-

Shades of the '60s—he's negotiating with Iacocca

Shelby may build high-performance cars for Chrysler

By Jim Plegue
Staff Writer

Carroll Shelby, who designed and built the legendary Cobra and Shelby Mustang sports cars for Ford Motor Co. during the '60s, may soon be building performance cars again—this time for Chrysler Corp.

Shelby and Chrysler have been negotiating for several months on a proposal that would have Shelby design and perhaps build high-performance versions of both current and future Chrysler Corp. products. The talks are nearing the decision stage.

"I think the decision will be made by the 15th of August," said Shelby, 59, who is currently involved in everything from chili and cattle to sportswear and tires through his Carroll Shelby Industries in Gardena, Calif.

Chrysler's "point man" in the negotiations is Chairman Lee Iacocca, who approached Shelby with the idea. It was Iacocca, who, while serving as general manager of Ford Division, approached Shelby with the idea of building a performance Mustang model nearly 20 years ago.

"I go back a long way with Lee Iacocca," said Shelby. "We've been talking about this for a couple years. I like to work with Lee."

Shelby, a native of Texas who was one of America's premier race drivers during the '50s, said he wants to produce "driving machines" for Chrysler. He would like the cars to bear the Shelby name.

Shelby said he was "optimistic about coming together" on the deal with Chrysler but was also candid about his stipulations.

"It all hinges on one thing—away my dealership. "I wish want," he said. "I want to build cars like I feel they should be built. I want to build cars that are driving machines that I conceive. If I have to work with stripes or mirrors, I'm not interested.

"There are things that can be done in this day and time that are exciting."

Shelby said he was impressed with Chrysler engineering.

"I feel they really have some nice things coming along engineering-wise that are ahead of the other people," he said, "especially their little four-cylinder engine (the 2.2-liter K-car engine). There's a lot of nice things that can be done with that engine."

Shelby did not want to specify which Chrysler cars are being considered for performance packaging under the proposal. The cars would be assembled by Shelby and/or the company, he said. Volume would be based on the market reception. Then, again, Shelby isn't concerned about the number of cars he would build.

"I don't care about volume," he said. "I just want to build something better than what the other guys are building."

Burger will succeed Kennard at Cadillac

Robert D. Burger, 58, will become general manager of Cadillac on Oct. 1, succeeding Edward C. Kennard, 62, who will retire after 35 years with General Motors.

GM announced the change last week, but it had been expected since last February when Burger went to Cadillac as assistant general manager.

Burger had been vice president in charge of the GM Sales and Marketing Staff. In going to Cadillac, he kept his corporate vice presidency, and observers reasoned that vice president was an awfully high ranking for an assistant general manager unless he was assistant general manager with right of succession.

So GM has made the speculation official.

Burger is a 40-year GM veteran, having joined the firm in 1942 as a General Motors Institute student with Fisher Body in Lansing.

After obtaining an industrial engineering degree, he began a 28-year association with Oldsmobile that saw him advance through sales posts in Lansing, Detroit, Cleveland, Buffalo and Atlanta before becoming assistant general sales manager in 1969.

Burger was named executive assistant to the corporate marketing vice president in 1973 and was appointed Buick general sales manager the following year.

In 1977, he was promoted to vice president in charge of the corporate Sales and Marketing Staff. He continued in that job until moving to Cadillac last February.

The latter move was part of a three-way shuffle that brought Robert C. Stempel back from Europe to head Chevrolet and sent Robert D. Lund from Chev-

Only four dozen Limiteds from Moselle

The Moselle Limited, new model manufactured by Moselle Coachworks, Canoga Park, Calif., is based-priced at $39,500. Options for the hand-built specialty car include turbocharged and diesel engines, leather interior, Recaro seats and convertible conversion. Moselle Coachworks estimates production of 50 cars per year.

Deming, the evangelist of the doctrine, stages seminar

Ford pushing statistical control

By Edward Lapham
Financial Editor

Ford Motor Co. has intensified its evangelism on behalf of the W. Edwards Deming statistical process control doctrine.

Ford sponsored a 4-day training program, conducted by Deming and his staff, for "decision makers," that is, senior officers and operating personnel, of 135 suppliers. Ford previously has sponsored one-day lecture programs for supplied executives for about 18 months.

The intensified program intends to "move the executives beyond awareness into understanding" and hopefully, involvement in the statistical control process, according to William W. Scherkenbach, director of statistical methods for Ford's Operations Support Staff.

Scherkenbach, who coordinated the program, said the response has been "very great" and Ford will continue to sponsor the expanded program.

"The Ford philosophy is that we have a responsibility to see that decision makers in supplier companies understand the commitment we're making to try to instutionalize the Deming system," he said.

"We are taking a top-down approach for our own managers as well as for suppliers, because in line with Deming's system it is necessary to get top manage-

Congress hears lament—'Volcker, Volcker, Volcker!'

High interest killing us, dealer says

By Miles Moore
Washington Staff Writer

WASHINGTON. — A lot of automobile salesmen "will have to go on welfare unless someone does something about interest rates, and damn soon," a former Maryland Chevrolet dealer told the Interest Rate Task Force of the Senate Democratic Policy Committee.

Stanley Kaufman, former proprietor of ABC Chevrolet, Owings Mills, Md., told the task force he was forced out of his dealership last December through no fault of his own.

"I was a good operator," Kaufman said, noting he had won several awards for dealer excellence during his years in business. "But I couldn't pay 20-percent interest on an SBA loan or 22 percent on floorplan."

When Federal Reserve Board Chairman Paul Volcker and outgoing Chief Economic Advisor Murray Weidenbaum say nothing is wrong with the economy, he said, "I wish they could have been there with my wife and my brother when I signed away my dealership. "I wish they could have been there when I told my employes there would be no severance pay. I wish they could have been there when I told my creditors I couldn't repay the capital on a $200,000 loan."

The task force meeting, which had the ostensible purpose of inquiring into the effects of the Reagan Administration's tight-money policies, soon turned into an indignation meeting against the Administration in general and against Volcker and Weidenbaum in particular.

• "Businessmen are losing their cars, losing their trucks, losing their livelihoods, and they are getting no response from the Administration," said Senator Riegle, the Michigan Democrat who chairs the task force. Office of Management and Budget Director David Stockman says unemployment is part of the cure!"

Gilbert Ziegler, a Michigan businessman, said all the economy's problems could be summed up in three words: "Volcker, Volcker, Volcker!"

Kaufman, now the general manager of another Maryland dealership, joined in the condemnation, calling on the Senate to "get to these two men (Volcker and Weidenbaum) who are not allowing us to live."

Kaufman soon got half his wish: The day after the hearing, Weidenbaum resigned as the President's chief economic advisor to return to his teaching post at Washington University, St. Louis.

Mid-July sales sag to lowest since 1958

By Jenny L. King
Staff Writer

Mid-July domestic new-car sales dropped to their lowest level for the period since 1958 as buyers took summer vacations from dealer showrooms.

Sales of U. S.-built new cars tumbled 17.51 percent from their 1981 level, but were up 22.72 percent from the first July period.

July 11-20 sales totaled 132,438, down 17.51 percent from 160,544 a year earlier and lowest since 104,655 retail deliveries in 1958. Compared with the preceding period, though, sales climbed 22.72 percent, to 132,438 from 107,918.

The daily selling rate averaged 16,555 compared with 20,068 a year ago. There were eight selling days each year.

Year-to-date sales lagged 11.74 percent behind the 1981 pace through July 20: 3,175,180 compared with 3,597,393.

Chrysler Corp. was the only U. S. auto maker to report a sales gain in mid-July. Chrysler was up 4.82 percent, to 18,698 from 17,839 last year, earning it 14.12 percent of the domestic market, its second best showing this calendar year.

General Motors was down 21.46 percent, to 78,382 from 99,792 a year ago. Ford Motor Co. dropped 16.51 percent, to 30,686 from 36,753. Volkswagen of America was down 21.75 percent, to 2,472 from 3,159, and American Motors was down 26.67 percent, to an estimated

Volume in May down 15 pct. from last year

Import share lowest in 14 months

By Jenny L. King
Staff Writer

Registrations of new imported cars in May accounted for their leanest hunk of the total market in 14 months, according to figures compiled by R. L. Polk & Co.

New import registrations represented 26.72 percent of the market during the fifth month of this year, lowest since their 26.59-percent share in March of 1981. They were, however, part of a steady climb in numbers which began in January, 1982. Import registrations have been up each month this year compared with the preceding month.

Import registrations were 189,123 in May, down 15.41 percent from 223,589 a year ago. They represented 26.72 percent of the market, down from 30.58 percent in May, 1981.

Import registrations for the first five months of 1982 totaled 873,657, down 16.93 percent from 1,051,663. Imports accounted for 28.54 percent of the five-month total, down slightly from 28.86 percent a year earlier.

First-place import Toyota was up 1.10 percentage points in May, to 25.23 percent of the import total from 24.13 percent last year. Nissan was up 1.93 percentage points, to 20.62 percent from 18.69 percent and third-place Honda was up 0.94 percentage points, to 16.17 percent from 15.23 percent.

Mazda took fourth place and Volkswagen was fifth, as each lost ground compared with year-ago shares. Mazda was down 2.29 percentage points, to 7.12 percent from 9.41, and VW dipped 0.59 percentage points, to 6.16 percent from 6.75 percent of the import market.

Subaru was up 0.24 percentage points, Volvo was up 0.52 percentage points and Mercedes was up 0.61 percentage points.

• BMW made it into the top 10 imports in May, taking ninth place with 2.26 percent of the market. Audi was 10th, at 1.97 percent, unchanged from its year-ago share. Fiesta, no longer imported into the U. S., was bumped from the top-10 list, while other imported cars accounted for 8.28 percent of the market.

In the year-to-date column, Toyota was down 0.60 percentage points, to 23.61 percent from 24.21 percent last year. Nissan was up 1.04 percentage points and Honda was up 1.57 percentage points.

Mazda dipped 0.57 percentage points and Volkswagen was off 2.38 percentage points, while Subaru was up 0.91 percentage points, Volvo was up 0.93 percentage points and Mercedes was up 0.71 percentage points.

Japanese-built passenger cars accounted for 77.82 percent of the May import market, up from 73.78 percent a year earlier. German products dropped to 14.19 percent from 17.91 percent and Swedish cars were up to 4.40 percent from 3.59 percent. The remaining 3.59 percent (4.72 percent in 1981) came from Britain, France, Italy and Ireland.

For the first five months, Japanese cars captured 77.56 percent of the import market, up from 75.49 percent last year. Germany was the source of 14.75 percent, down from 17.44 percent, and Swedish-built products earned 4.10 percent, up from 2.96 percent. The remaining 3.59 percent (4.11 percent in 1981) were built in Britain, France, Ireland and Italy.

• Imported-car totals by country of origin in May, 1982, compared with the previous year were:

	May 1982	May, 1981
Japan	147,181	164,953
West Germany	26,845	40,040
Sweden	8,318	8,035
France	4,116	4,256
Italy	1,536	4,145
Britain	922	2,160
Ireland	205	.....

Registrations by country of origin for the first five months of 1982 and their year-ago comparisons were:

	5 mos., 1982	5 mos., 1981
Japan	677,628	793,907
West Germany	126,827	183,409
Sweden	35,833	31,161
France	19,173	19,002
Italy	7,333	15,910
Britain	3,478	8,273
Ireland	1,385	.....

Registrations of imported trucks were down in May compared with the total for the month a year ago. Truck imports numbered 33,410, down 24.87 percent from 44,469.

Truck figures for May, 1982, compared with May, 1981, were:

	May 1982	May, 1981
Toyota	11,631	10,498
Nissan	7,384	10,254
Mazda	3,542	.....
Volkswagen	2,276	.....
Chevrolet LUV	.....	7,500
Ford Courier	.....	5,579
Others	8,577	10,638

Truck imports for the first five months were down 15.86 percent, to 170,038 from 202,090 in 1981. Totals were as follows:

	5 mos., 1982	5 mos., 1981
Toyota	54,359	48,431
Nissan	37,697	45,537
Dodge Ram 50	13,937	.....
Ford Courier	13,609	.....
Chevrolet LUV	.....	32,548
Ford Courier	.....	28,698
Others	50,436	48,876

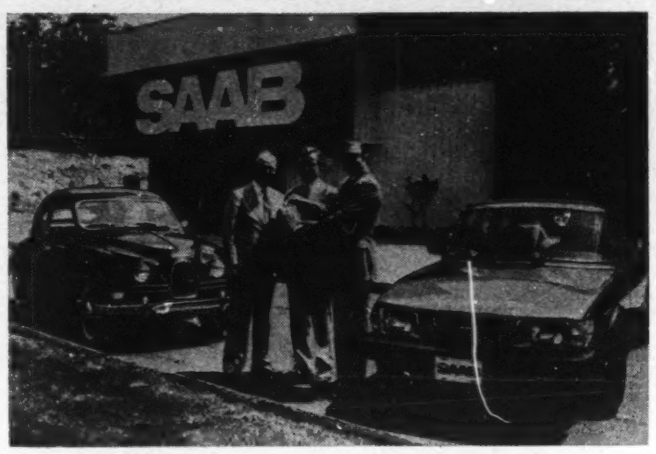
Trip for a V-12

Workers at the Jaguar factory in Coventry, England, lower a V-12 engine into place. This is the powerplant used in the XJ-S luxury sports car sold by the company in the U. S. Increased productivity at Coventry has sparked a 122-percent increase in Jaguar sales in the U. S. during the first half of 1982.



A happy Saab story

Gaston Andrey, center, Gaston Andrey of Framingham, Inc., Framingham, Mass., receives a Swedish crystal vase marking his 25th anniversary as a Saab dealer. Robert J. Sinclair, right, president of Saab-Scania of America, and Ralph T. Millet, a director who was the company's president when Andrey was appointed a dealer, make the presentation. With them is a 1957 Saab 93 sedan as well as the special anniversary edition of the Saab 900 Turbo.

Dealers bring suit to block Illinois Sunday closing law

By Nancy I. Phillips
Staff Correspondent

CHICAGO. — No sooner had the Sunday-closing law been passed by the Illinois House and Senate and signed by Gov. James R. Thompson than a group of auto dealers filed suit in Circuit Court, charging that the law is discriminatory.

Allen Gaines, president of Fireside Chrysler-Plymouth, Schaumburg, a northwest Chicago suburb, filed suit seeking that the law be declared unconstitutional because it singles out auto dealerships for Sunday closing, while other types of retail operations can continue to be open.

Joining Gaines in the suit are Celozzi-Ettleson Chevrolet, Elmhurst; Fencle-Tufo Chevrolet, Glendale Heights; Shepard Chevrolet, Lake Bluff; John Bybee Chrysler-Plymouth, Chicago, and the Illinois Used Car Dealers Assn., Springfield.

The law was sought by the Chicago Automobile Trade Assn. (CATA) and its more than 450 member dealers.

For some years the association has sought legislation to close dealerships on Sundays, since members have said that in no other way would all dealerships be closed.

According to Gilbert Gordon, one of the attorneys for Gaines and his group, a similar law was found unconstitutional by the Supreme Court of Illinois in 1962.

While Chicago-area dealers point out that similar laws are on the books and have stood the test of court battles in neighboring states, Gordon believes that the new law also will be found unconstitutional.

He hopes that the case will come up before the Jan. 1, 1983, effective date of the law.

"If it does not come up in the Chancery Division of the Circuit Court before than," said Gordon, "we will seek a temporary injunction to prevent Sunday closing."

Before Gov. Thompson signed the bill the CATA used its drawing for space in the 75th Chicago Auto Show as an occasion to plead with the press to side with the association in its desire for a means of cutting dealership overhead and giving employes a day of rest.

One observer here believes the strategy which brought about the legislation was meant to ward-off efforts of new-car salesmen to unionize. In earlier union attempts, some as recently as a year ago, one of the items of contention was long hours the salesman worked, including weekends and holidays.

Ed Mathieu, of Bauer Buick Co., Harvey, Ill., president of the CATA, asked the press to understand that salesmen, dealers and managers applaud the new law which they consider "a giant step forward."

Honda reports 33 pct. drop in quarterly profit

TOKYO. — Honda Motor Co., Ltd., said net income for its first fiscal quarter ended May 31 declined 33 percent to $70 million from $105 million in the comparable period last year.

Sales in the quarter rose 13 percent to $2.216 billion from $1.964 billion the previous year, the company said, computing the dollar at 244 yen for both periods.

The earnings decline "reflected a substancial increase in spending for research and development as well as higher inventory carrying costs and other expenses" associated with new-model introductions, the company said.

Total unit car sales rose 4 percent in the period, Honda said, to 275,000 from 265,000 last year. Domestic-market car sales rose 21 percent to 94,000 units while overseas market sales declined 3 percent to 181,000 units. Dollar sales generated by car sales rose 14 percent to $1.192 billion, or 54 percent of total revenues.

Unit sales of motorcycles declined 4 percent in the period to 869,000 from 905,000, although dollar value rose two percent to $586 million, or 27 percent of total revenues.

Unit sales of power products rose 17 percent to 275,000 units in the period.

26-year-old store finds success in keeping employes, customers happy

GMC-Volvo deal goes the extra mile

Continued from Page 16

trucks or less," Perrault says.

Even though he is involved in daily happenings at his large dealership, Perrault delegates many decisions to middle managers.

"I depend a great deal on all my supervisors. They make most of the decisions—as long as they are right," he says.

Service employes handle a hefty volume of truck work, which, Perrault said, can be far heavier and more complicated than cars.

His 18 technicians, service manager, foreman and service clerk handle an average of 22 repair orders a day.

General has its own radiator, paint and body, and the mechanical shops. Perrault tried to farm out some of the work, but found his own facilities more reliable.

The dealership, which opened its doors in 1924 as a leasing firm, uses no special service incentives to attract business, but has an interesting twist in contacting customers.

Perrault encourages his parts and service managers to make calls with salesmen.

"It's very enlightening to them. They can find out about mistakes they've made. Although the remarks aren't overcritical, they sometimes find customers complaining about things they thought they were experts on," Perrault says. "It provides a learning experience, and they usually come away from these visits with new ideas or business.

"Service is becoming more complex as electronics increases on trucks. This puts a burden on our technicians," Perrault notes. "Sometimes the product is in the field before we get all the information."

One way the dealership tries to cope is by extensive use of factory diesel schools. With every new diesel engine or development, General sends service technicians to school to learn about it.

This pays off with continuing diesel work which keeps the service bays filled. General has 3,200-square-feet devoted to motorhome service—the firm sold nearly 300 GMC motorhomes from 1973 to 1978 and continues handling their service—and another 3,200-square-feet in the body shop.

The shop has seven drive-through bays that are up to 80-feet long and can house a tractor-semi combination. In car terms, the space is equivalent to about 22 service bays, Perrault says.

Revenue that service brings in more than covers the dealership's yearly overhead cost of $1.08 million. Although it doesn't claim to be the biggest parts wholesaler around, General averages about $100,000 monthly in parts sales, Perrault says.

Boulevard L-M opens

Facilities of the new Boulevard Lincoln-Mercury, Long Beach, Calif., were the site of a grand opening at which Robert L. Rewey, right, Lincoln-Mercury Division general sales manager, was on hand to congratulate dealership chairman James A. Willingham.

Caterpillar sales, profits plunge in second quarter

Continued from Page 16

construction, mining and petroleum activity worldwide generally continue to be less favorable than previously anticipated," he added. "The company currently sees little chance for improvement in the second half, as economic trends are giving no clear indication that business conditions will improve in the near term."

Profit, however, is expected to improve somewhat from the first half due to company actions to reduce production schedules and costs, the spokesman said, but profit for the full year will be well below the levels of recent years.

"Caterpillar expects some improvement in economic conditions in 1983, contingent on declining interest rates in the U.S. and some strengthening of commodity prices in the developing countries," he added. "When this occurs, profit should recover quickly as sales levels increase."

Sheller-Globe buying Olsonite for cash, stock

TOLEDO. — Sheller-Globe Corp. is acquiring Olsonite Corp., Detroit, for an undisclosed amount of cash and securities.

Olsonite, with annual sales of about $68 million, produces foam auto parts, steering wheels and other plastic components.

6 GM plants, one Chrysler point idle

Changeovers cut week's car output

By Patricia Hoffman
Staff Writer

Another General Motors' facility joined the model changeover lineup last week, bringing the total to seven plants idle for changeover and pulling domestic auto production down 5.77 percent from the previous week's total.

Output, however, jumped 18.60 percent from the comparable 1981 figure when there were eight plants down for changeover.

The makers targeted 111,683 units last week, down from 118,522 the previous week but up from 94,167 built the same week last year.

Year-to-date, the car manufacturers have assembled 3,116,012 units, down 24.18 percent from 4,109,965 completed in last year's comparable period.

Breakdown for last week by company was: GM, 60.15 percent; Ford Motor, 26.20 percent; Chrysler Corp., 8.95 percent; Volkswagen of America, 3.24 percent, and American Motors, 1.46 percent.

GM's Framingham facility was idle last week for model changeover.

Changeover activities continued last week at GM's Lansing, Leeds, Linden, Lordstown and Detroit plants. They will remain down this week (Aug. 2) and GM's Janesville plant will also be idle for changeover this week.

Chrysler Corp.'s Jefferson plant wrapped up a three-week model changeover period last week, with operations slated to resume today. About 3,300 hourly workers will return from temporary layoff. The Jefferson point will produce the new Chrysler E Class and Dodge 600 four-door sedans during the 1983 model run along with its current lineup of Dodge Aries, Plymouth Reliant, Dodge 400 and Chrysler LeBaron.

Daily overtime was scheduled last week at Ford's St. Louis and Wixom facilities.

A second shift will be added at the Ford St. Louis point effective Aug. 11. About 1,200 hourly workers will be added.

GM's Norwood plant worked last Saturday (July 31).

Canadian production rises as Ford resumes assembly

Canadian auto production last week jumped 29.73 percent from the previous week's total as downtime at two General Motors' points was offset by the return of all Ford Motor facilities and the resumption of second-shift operations at American Motors' Brampton plant.

The auto makers scheduled output last week at 10,909 units, up from 8,409 the previous week, but down 8.37 percent from 11,906 in the comparable 1981 period.

So far this year, the manufacturers have completed 524,491 cars, down slightly from 525,437 at this time in 1981.

Truck production last week dropped 8.33 percent to 5,247 from 5,724 built the previous week, and the total fell 17.90 percent from 6,391 in the same week last year.

For the year-to-date, truck output totaled 308,363 units, down 6.69 percent from 330,483 built the same period in 1981.

Idle for vacation last week were GM's Oshawa (No. Two) and Ste. Therese plants. Ste. Therese will be down another week, and Oshawa is slated to return today (Aug. 2).

Ford's Oakville and St. Thomas facilities resumed operations last week following vacation downtime.

Still idle for changeover were Chrysler Corp.'s Windsor car and truck points. Both plants closed July 19 and are slated to return today with production of 1983 models.

International Harvester's Chatham and Vancouver points remained down last week for inventory adjustment / model changeover. The plants have been idle since July 12.

Volvo's Halifax point is scheduled to go down today for a three-week vacation.

Buick dealers elect Miller in Connecticut

NORWALK, Conn. — Paul S. Miller, of Miller Buick, Inc., Bridgeport-Fairfield, has been elected president of the Connecticut Nutmeg Buick Dealers Assn.

Other new officers are Rennie Minchin, New England Motors, Greenwich, vice president; Jack Backus, Wallingford Auto Co., Wallingford-Meriden, secretary, and John Atwood, Atwood Buick, New Haven, treasurer.

Truck production holds steady at 44,650 for week

Overtime at four assembly plants kept last week's domestic truck production even with the previous week's total, and output jumped 61.78 percent from the comparable 1981 period when four plants were idle for model changeover.

Last week, the truck makers scheduled 44,650 units, up from 44,614 the previous week, and a considerable gain from 27,599 built in the year-ago week.

So far this year, 1,198,937 trucks have been assembled, up 13.98 percent from 1,051,913 finished at this time last year.

Daily overtime was scheduled last week at General Motors' Moraine facility and Ford Motor's Lorain and Twin Cities points. GM's St. Louis plant worked six days last week.

Ford's Kentucky point, idle for vacation since July 12, resumed production last week.

Volkswagen of America's Westmoreland plant remained idle for model changeover. The plant is slated to return in September with production of 1983 models.

GM's Pontiac (GMC Truck & Coach) facility is planning to add a second shift Oct. 4 for assembly of compact pickup trucks. The action will add about 750 hourly jobs at the Pontiac plant, and an estimated 1,100 jobs will be added to component operations serving the assembly point.

At about the same time, GM's Chevrolet-Flint facility will initiate a shift transfer to balance its production between regular-size pickup trucks, Blazers and Suburbans. It will result in working two shifts on Blazers and Suburbans and one shift on regular-size pickups, the reverse of the present procedure. No additional employment is expected to result from the move.

Layoff insurance spurs sales for Lada of Canada

AJAX, Ont. — A unique job-loss insurance program, offered by Lada Cars of Canada here as an incentive for both car buyers and banks, is apparently getting results.

Sales of the Russian-made Lada sedan in Canada during June were up 15 percent from May, according to John Wright, Lada national sales manager. The job-loss insurance program started during the last 10 days of June, he said.

Under the program, which expires Aug. 31, buyers of new Lada sedans or Niva 4WD vehicles are insured for one year from the purchase date. If involuntarily laid off during that period, the buyer receives $200 per month for up to one year from the date of the job loss.

"It's raised the morale of our dealers about 20 notches," said Wright. "Our dealers are reporting good showroom traffic."

The program is offered in conjunction was a free 24-month/50,000-kilometer extended warranty. The Lada sedan's price tag of $4,998, lowest in Canada, remains unchanged.

Ford has lion's share of changes

What's new in 1983 model lineup

Continued from Page 1

the carryover '82 Ford Fairmont and Mercury Zephyr. Those cars will be powered by Ford's new 2.3-liter High Swirl Combustion (HSC) four-cylinder engine.

In addition, Ford's spring showings will include the SVO (Special Vehicle Operations) Mustang turbo, propelled by a blown 2.3-liter four-cylinder engine with multi-point fuel injection, mated to a five-speed transmission. At about the same time, a turbo-powered Thunderbird will bow.

A turbo version of the new Cougar is also on the drawing board and will probably debut as an '84 model in the fall of 1983. It will likely carry and XR-7 badge.

Ford's spring products may be certified as 1984 models, though they will debut in what is generally considered the '83 model year.

Finally, Ford will unveil its Bronco II, a small 4WD utility/recreation truck based on the downsized Ranger pickup. That vehicle is slated for a spring introduction.

• Most of GM's products will bow Sept. 23 with several notable exceptions. The '83 versions of the redesigned Chevrolet Camaro and Pontiac Firebird models will debut in November. A five-speed transmission will be added to the powertrain.

Chevrolet's much-ballyhooed '83 Corvette, first all-new version of the car in 14 years, will make its national debut in March, though there may be select West Coast introductions as early as February.

The new Corvette will feature several suspension options, including one that uses unidirectional tires. Those tires, designed specifically for the left and right side of the car, enhance road-holding. In prototype tests, the new Vette has reportedly logged a phenomonal .95 G rating on the skidpad.

Also available on the new Vette will be an optional four-speed manual transmission with an electronically controlled overdrive working on each of the four forward gears.

General Motors will shore up its disappointing J-car line for 1983 with by adding a 2.0-liter four-cylinder engine and five-speed transmission. Buick and Oldsmobile will add station wagon versions to their Skyhawk and Starfire J-cars.

Chevrolet is also prepping its new mini-Bronco S-15 model for the spring. The 4WD vehicle is based on the company's S-10 mini pickup truck.

Buick will broaden its sporty image for '83 with the introduction of T-Type versions of the front-drive Century, Skyhawk and Skylark and its turbo-powered rear-drive Regal model.

Sources report that the convertible versions of the Chevy Cavalier and Pontiac 2000 J-cars are still in the works. The convertibles could bow next February, about the time of the Chicago Auto Show.

• The new E-body Chrysler Corp. cars are due to arrive in early October. The front-drive sedans are based on a stretched K-car chassis and will be called the Chrysler E Class and Dodge 600 and 600ES. A luxury front-drive New Yorker model will bow later in the model year.

New products for American Motors/Renault dealers in '83 are the Renault Alliance models and the new downsized XJ Jeep series. The Alliance, built at AMC's Kenosha assembly plant, will debut Sept. 22. The Jeep XJ series will be introduced next spring.

Volkswagen will hop up its Rabbit line this fall with the introdutcion of a performance GTI version of the front-drive car. The GTI will be powered by a 1.8-liter fuel-injected engine, coupled to a five-speed transmission. The GTI, as well as other Volkswagen models, will debut in mid-October.

Not to be outdone, the Japanese makers are countering with their own fall and spring introductions. Job One for the first made-in-the-U.S.A. 1983 Honda Accord model is scheduled for Nov. 1, with public introduction sometime thereafter.

The U. S.-built Accord will be basically unchanged from those Accords assembled in Japan. Honda's Marysville (O.) assembly plant is geared up to build as many as 140,000 Accord models during the first year.

In addition, Honda will launch a redesigned 1983 Prelude model, probably in the fall of this year.

Nissan will show its new Pulsar line Nov. 1. The Pulsar, which replaces the 310 series, will be available in two-door and four-door hatchbacks and a new sporty four-seat NX model. The front-drive cars will be powered by a 1.6-liter engine. A 1.5-liter turbo will bow later in the year.

At the same time, Nissan will unveil a diesel-powered Sentra model, which the company expects to become the EPA diesel mileage leader. Powertrain will be a 1.7-liter four-cylinder diesel with choice of four-speed (MPG model) or five-speed manual and three-speed automatic transmissions.

Sometime in the spring, Nissan will also unveil a redesigned truck line. Nissan's truck plant in Smyrna, Tenn., is scheduled to begin building Datsun trucks in August, 1983.

Toyota this fall will introduce a redesigned front-drive Corolla Tercel and will supplement that line with a four-wheel-drive station wagon. A new front-drive Corona line is also set to bow after the first of the year.

U.S. car sales in mid-July lowest since '58

Continued from Page 3

2,200 from an estimated 3,000 in 1981.

GM sales accounted for 59.18 percent of the domestic market, down from 62.16 percent last year. Ford had 23.17 percent, up from 22.89 percent. Chrysler drove away with 14.12 percent, up from 11.11 percent. VWoA cornered 1.87 percent, down from 1.97 percent, and AMC had an estimated 1.66 percent, down from 1.87 percent.

Chrysler, Lincoln and Cadillac were the only U. S. makes to beat their year-ago sales in mid-July. Chrysler more than doubled its sum, going to 4,676 from 1,747. Lincoln was up 50.00 percent, and Cadillac was up 21.04 percent.

Plymouth was down 15.83 percent, Imperial was down 61.73 percent and Dodge was off 8.96 percent. Ford slipped 18.61 percent and Mercury was down 18.56 percent.

Buick narrowly missed its year-ago sales mark, down 0.60 percent this time around. Chevrolet was down 40.35 percent, Oldsmobile was down 4.13 percent and Pontiac was down 25.66 percent.

Volkswagen dropped 21.75 percent and AMC was down 26.67 percent.

DeLorean ready to acquire North Ireland plant again

By Edward Lapham
Financial Editor

DeLorean Motor Co. late last week was preparing to begin reacquisition of its Northern Ireland assembly plant, barring a last-minute investment package by British investors.

Last Saturday (July 31) was the deadline for the receivers of the plant to put together an investment group to provide financial backing for the Dunmurry operation, which went into voluntary receivership Feb. 19.

DMC Chairman John Z. DeLorean said last Thursday that he had yet to have any indication from the receiver that such an investment group would be assembled prior to the July 31 deadline.

"As of Monday (Aug. 2), assuming they haven't done anything, their option will have expired and we'll be in a position to step in ourselves," DeLorean said.

"The government will continue to finance the internal operations of the company, like engineering and the changeover to '83 models, and then we theoretically take the plant over Sept. 1."

DeLorean said there "is nothing tricky" about the financial package he has put together to reacquire the plant.

"It's the financing called for under our agreement," he said, "essentially $25 million in export financing and $10 million in cash. We have it and it's ready to go in the minute the deal is legal."

He said that some details of the agreement have to be finalized, in particular the "three-year holiday" on interest and principal payments proposed by one of the receivers, Sir Kenneth Cork.

DeLorean said the sitdown strike by laid-off workers ended last week. He also said that during August DMC officials will have to go in and make sure the plant and equipment are ready to operate.

The company hopes to begin producing '83 models this autumn after the current stock of cars is depleted.

Loss is suffered by AMC for 9th quarter in a row

Continued from Page 2

in the period to 17,557 from 10,275 last year. Renault accounted for 44.9 percent of AMC's car sales in North America.

For the first half of the year, North American factory automobile sales fell 26.4 percent to 70,686 from 96,092, and Jeep factory sales were off 3.1 percent to 30,588 from 31,572. The total of 101,274 was down 20.7 percent from 127,664 in 1981.

Imported Renault vehicles accounted for 41.6 percent of North American car factory sales and rose 55 percent for the January-June period to 29,421 from 18,895.

The international market, without the benefit of Renault vehicles, was worse than the North American situation. AMC automobile factory sales were down 58.1 percent for the quarter and 55.5 percent for the half. Jeep factory sales dropped 35.2 percent in the quarter and 31.3 percent for the half, dropping the international vehicle wholesale sales total 45.0 percent in the quarter and 42.1 percent in the first six months.

Tippett said there were several positive developments in the quarter which portend well for the current and future quarters, including the launch of the Fuego and the new labor pact.

"We expect a substantial improvement in our third-quarter results, since dealer inventories need replenishing, our changeover shutdowns are behind us and our international business should be operating on a more normal basis," Tippett said.

IH restructuring program is presented to lenders

By Edward Lapham
Financial Editor

International Harvester last week unveiled its long-awaited restructuring plan which includes paring domestic and international operations, converting 25 percent of its private debt to equity and lowering its breakeven sales level by $1 billion annually.

IH presented the proposed restructuring plan to its lenders in Chicago last Friday. All of the company's lenders must approve the Financial terms.

Paine Webber Mitchell Hutchins analyst Eli Lustgarten said the tentative restructuring plan "is a first step in stemming the company's hemorrhaging."

The analyst said IH was "bankrupt, whether technically or not" and it was apparent it had to shrink. He said the plan, if approved, will certainly get IH through the current period, but he was less certain about the long-term outcome. "Conceptually, it makes sense," Lustgarten said.

Under the terms of the proposed plan, IH would be a truck and agricultural equipment producer in the U. S. and Canada and an agricultural equipment maker in the UK, France and Germany. Other markets would be serviced by exports.

The company hopes to "consolidate" many of its operations by the end of fiscal 1983. One North American truck plant will be closed, and one engine plant will likely be closed along with several components plants and agricultural equipment plants.

IH also said it is negotiating with potential buyers for its construction equipment business.

News roundup

Tolley heads public affairs for Chrysler

DETROIT.—James L. Tolley has joined Chrysler Corp. as head of the Public Affairs Office. He will be nominated for election as a vice president at the Sept. 2 board of directors meeting. Tolley succeeds Wendell W. Larsen, who resigned to join IC Industries. Tolley has been with American Motors since 1978, first as public relations vice president and, since February, as public affairs vice president. Before going to AMC, he was public relations director for Chevrolet. At Chrysler, he will direct public relations, communications programs, government affairs and the Washington office.

Walter P. Chrysler estate sold

WASHINGTON. — Pokety Farms, Walter P. Chrysler's estate on Maryland's Eastern Shore, belongs to the Chrysler family no more. The 20-room mansion located on an isolated 483-acre tract on the Choptank River was sold to an Arab buyer for slightly less than $3 million. Used by Chrysler in the 1930s as a hunting lodge, it was left to his son-in-law and daughter, Edgar and Bernice Garbisch, upon Chrysler's death in 1940. They turned it into a showplace of art and antiques. The Garbisches died in 1979.

Alfa Romeo chooses Marsteller

ENGLEWOOD CLIFFS, N. J.—Alfa Romeo, Inc., ended a three-month search by choosing Marsteller, Inc., of New York, to handle its $3 million advertising account in the U. S. Marsteller was selected over two other agencies—Mathieu, Gerfen & Bresner and Lord, Geller, Frederico & Einstein. Prior to May 1, Alfa Romeo's advertising program was handled by Laurence, Charles & Free, New York.

Earnings up 8.7 percent from 2nd quarter last year

GM reports $560 million profit

Continued from Page 2

(net income as a percent of sales) was 3.3 percent compared with 2.1 percent for the first half, 2.9 percent in the second quarter last year and 2.1 percent for the first six months of 1981.

Return on investment (net income as a percent of total stockholders equity at the end of the preceding year) was 3.85 percent, which would annualize to just under 8 percent, or less than half of the traditional 20 percent annual corporate target.

The statement by Smith and McDonald said there are "discernable factors," including the U. S. income tax cut and declining interest rates, which "suggest a modest recovery in the global economy and in vehicle sales" for the balance of the year and into 1983.

GM's total worldwide factory sales in the second quarter declined 11.3 percent to 1,833,000 units from 2,066,000 last year, while the first-half total dropped 12.1 percent to 3,303,000 from 3,756,000.

• Factory sales of cars built in the U. S. declined 23.7 percent to 955,000 from 1,251,000 in the quarter and fell 25.7 percent to 1,640,000 from 2,208,000 in the first six months.

Factory sales of trucks and buses built in the U. S. rose 35.6 percent in the quarter to 278,000 from 205,000 last year and were up 21.7 percent to 499,000 from 410,000 for the first half.

Canadian-built-vehicle factory sales declined 18.1 percent in the April-June period to 176,000 from 215,000 last year and for the first six months of the year were off 19.9 percent to 322,000 from 402,000. Factory sales of vehicles built overseas rose 7.3 percent to 424,000 from 395,000 in the second quarter and were up 14.4 percent to 842,000 from 736,000 for the January-June period.

Total worldwide employment averaged 680,000 in the second quarter and 671,000 for the first half of this year compared with 771,000 for the quarter and 764,000 for the half last year.

Total worldwide payrolls in the quarter were $4.5 billion, or 26.4 percent of sales, compared with $5.2 billion, or 28.6 percent of sales, in the year-ago period.

Dealer council chairman previews, reviews

Edward A. Soukup, left center, president of Hempstead Lincoln-Mercury Motors Corp., Hempstead, N. Y., and newly elected chairman of Lincoln-Mercury Division's National Dealer Council, previews the 1983 Mercury Marquis in the upper-crust company of Ford President Donald E. Petersen, left, company Chairman Philip Caldwell, right center, and William Clay Ford, vice chairman of the board. Soukup, helping represent the division's 900 dealers, was in Detroit to meet with Ford management.

Total is biggest quarterly profit in three years

Ford earnings hit $204.9 million

Continued from Page 2

lion after taxes compared with $6 million last year.

The company was quick to note that its cash position improved during the period as the balance sheet entry for cash and marketable securities rose to $2.6 billion at June 30 from $2.0 billion at March 31.

However, the company did not mention that its net working capital (current assets less current liabilities) declined in the period to a negative $269.4 million from a negative $211 million at March 31.

The effects of the cost reduction programs, including the recently negotiated concession contract with the UAW, was reflected in the income statement. Ford reduced its cost of sales to $9.3 billion from $9.9 billion in the year-ago quarter.

The company listed amortization of special tools at $253.3 million in the quarter and $494.4 million for the half compared with $274.1 million for the quarter last year and $535.3 million for the first half of 1981.

Depreciation in the quarter was $286.2 million compared with $280.3 million last year, while the six-month total was $576.5 million compared with $544 million.

The second-quarter results made the first-half net loss $96.6 million (80 cents a share) on sales of $19.8 billion compared with a net loss of $379.3 million ($3.15 a share)on sales of $20.6 billion last year.

Ford's total worldwide vehicle factory sales in the quarter rose 1.0 percent to 1,334,882 from 1,322,063 last year as factory sales of cars and trucks built outside the U. S. and Canada rose 2.3 percent to 532,198 from 520,091. In the quarter, factory sales of U. S./Canadian cars and trucks rose 0.9 percent to 783,888 from 776,630.

For the first six months of the year, total worldwide vehicle factory sales declined 1.6 percent to 2,333,025 from 2,370,759. Overseas car and truck factory sales in the half rose 6.1 percent to 1,052,634 from 992,325 while North American car and truck factory sales in the January-June period fell 6.7 percent to 1,241,037 from 1,330,800.

Burger to head Cadillac; Kennard to retire Oct. 1

Continued from Page 3

rolet to GM's top sales and marketing post.

While Burger has spent most of his GM years with Oldsmobile, Kennard has served with every car division except Oldsmobile.

• Kennard joined Buick in 1947 and became general sales manager of the division 10 years later. He had a setback in 1961 when he was put back to assistant general sales manager, but he resumed his march up the ladder.

In 1969, Kennard became director of the sales section of the GM Marketing Staff, and later that year he was named director of that staff.

He went to Pontiac in 1970 as general sales manager and moved to Chevrolet as general assistant sales manager in 1973. On Nov. 4, 1974, he was named Cadillac general manager and was elected a GM vice president.

Kennard has headed Cadillac for nearly eight years, the longest tenure of any Cadillac general manager since World War II.

Under his direction, Cadillac introduced the Seville and the Cimarron, two new types of cars for the division, and set consecutive sales records in 1977 and 1978. In those years, Cadillac dealers sold 335,785 and 350,813 cars respectively.

Nearly 2.2 million Cadillacs have been delivered during Kennard's term, more than under any previous Cadillac general manager.

Continuing delays raise doubts about project—and some relief

Nissan UK plant still up in the air

Continued from Page 2

poned indefinitely was corrected by Lord Marsh, a former British transport minister and a consultant to Nissan Motor on its UK project.

"I have just had my contract with Nissan renewed for another year," he said. "Would that have happened if Nissan had abandoned its UK plans?"

• Nearly 10 years ago, on Nov. 25, 1972, Nissan announced that it hoped to open a plant in the Common Market. In 1972, it began its first feasibility study. So its UK plans, though announced only 19 months ago, are nothing new.

And Nissan is determined to become multi-national or "really international," which explains its U. S. plans and its moves in Europe including a tie-in with Volkswagen (Nissan is to make VW Santanas at its Zama plant in Japan and also possibly in China), Alfa Romeo (a joint company, Arna, is to produce cars in Italy with a high local content, higher than envisaged in the UK) and Motor Iberica in Spain.

Okuma insisted that Nissan's indecision had nothing to do with British industrial relations or local content requirements.

"We have reached broad agreement with the UK government," he said. The British government wants Nissan to start up. The projected investment, if it goes ahead, will be the largest foreign investment ever made in the UK.

Planned is a plant more than a mile long and a mile and a half wide in an unemployment black spot or development area eligible for generous grant aid.

The day before the press conference, the Nissan team met UK government officials, including Industry Secretary Patrick Jenkin. Local content was not discussed.

Another meeting isn't scheduled, but Prime Minister Margaret Thatcher is due to visit Japan in September and her itinerary includes a visit to Nissan.

'Mister Motivation' seeking way out of financial jam

Continued from Page 2

marketing a new "do-it-yourself" program for dealers on invitation sales and ran 10 of them over the July 23-25 weekend. The biggest reported success was Voss Chevrolet, Dayton, which, Doyle said, used his program to sell 61 cars in four hours. Generally, Doyle added, the program has been netting dealers an average of 25 car sales. It costs $2,500.

AUTOMOTIVE NEWS contacted a number of Detroit-area dealers and found them generally satisfied with past Doyle sales. However, some angry letters, and even threats of lawsuits, have been received from dealers who said they paid for his service, but never received it.

Hammond, Cromer, Jackson & Borgmann, attorneys for Dan Young Chevrolet, Indianapolis, said they were filing a "cause of action" against Showroom Traffic Builders for "failure to provide the agreed-upon sales promotion for which my client paid $6,800," according to Lynn E. Jackson.

He claimed his client received "no benefits whatsoever from Showroom Traffic Builders."

Along with Jackson, Roy A. Smith, president of H. P. Smith Motors, Omaha, sent a mailgram last week in which he said:

"We are experiencing a difficulty in receiving a refund of $8,000 from Showroom Traffic Builders for payment made on June 18 for a sales program to be held in Omaha, but which they were unable to put together."

Similarly, other dealers have phoned to express their anger.

Doyle's comment on Dan Young Chevrolet was that he offered to do the promotion on a different date than originally agreed upon, and that was unsuitable to the dealership.

• Doyle said that any dealer to whom he owed money would get it back, but "obviously this IRS thing has tied my money up."

He said that if his current negotiations with a major manufacturer go through, they would provide him enough money to settle his IRS debt immediately.

Other than that, he was confident of clearing his debt up before the end of the year.

Doyle claims, though, it is really ex-employes of Showroom Traffic Builders, now competing against him, who have stirred up bad publicity to undermine him.

"There are probably five or six of my ex-employes, people I fired or are in business (against him) that started these" reports of his problems, he said.

Doyle claimed many of his ex-employes are doing versions of his successful sales, "copying what I do. I get constant phone calls" from dealers who have been approached by competitors, he added.

Doyle continued to run special sales for dealers and dealer groups after a lien was put against him by the IRS. He says he's negotiating a repayment and vows to pay back "every penny."

Added the IRS' Cummins: "I'm pessimistic. I've been pessimistic from the beginning. Salesmen are optimistic; tax collectors pessimistic."

• How did Doyle fall into the tax soup?

An ex-employe said the lack of enough tent sales may have been his undoing.

"That's where he made most of his money," he said. He couldn't keep it (his business) going with individual sales for dealers, although they represented the bulk of his business last year."

Doyle said simply: "I'm an entrepreneur. A salesman. I'm on the road a lot. There were not enough people watching the backtrail (his business affairs).

"I'm making a lot of money. I'll probably be audited every year for the rest of my life. But the IRS will get every penny. I'll emerge stronger from this than before," he said.

America's sports car

All-new 1983 Corvette bows in March

The 1983 Chevrolet Corvette, first all-new version of America's sports car in 14 years, will bow nationally next March. The new fiberglass-bodied car will feature unique optional unidirectional tires and four-speed manual transmission with electronic overdrive working on each of the forward gears.

U.S. dealer attrition continues at high level; total declines by 556 in first half of 1982

By John K. Teahen Jr.
Managing Editor

The mortality rate of domestic new-car dealerships continued at a dangerous level during the first half of 1982, according to the semiannual AUTOMOTIVE NEWS census.

The latest count found 21,124 dealers handling the products of the five domestic auto manufacturers on July 1, down 556 from the 21,680 outlets in business at the beginning of this year.

This year's decline was much worse than last year's when the first-half dip was 325 establishments.

But it was not nearly so bad as the horrendous first half of 1980 when 930 dealerships bit the dust.

Chrysler Corp. was the only bright spot this year. After losing 29 dealers in the first quarter, Chrysler rebounded with a gain of 10 in the second quarter for a net dip of 19 for the half.

The other makers weren't that fortunate. General Motors suffered a decline of 285 dealers in the first half, and Ford Motor Co. was down 158. There were drops of 39 for Volkswagen and 37 for American Motors.

That's an aggregate dip of 538.

U. S. CAR OUTLETS

	July 1, 1982	Jan. 1, 1982
American Motors	1,510	1,547
Chrysler Corp.	3,665	3,684
Ford Motor Co.	5,527	5,685
General Motors	10,370	10,655
Volkswagen	967	1,006
TOTALS	22,039	22,577
Minus Intercorp. Duals	915	897
NET OUTLETS	21,124	21,680

Copyright, 1982, Automotive News

A change in the number of intercorporate duals brought the industry's decline to 556 for the first half.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

• This year, the industry lost almost the same number of dealers in each of the first two quarters — 276 in the first and 280 in the second.

Last year's numbers were more encouraging — 221 in the first quarter and 104 in the second. The lighter second-quarter decline last year stirred hopes that better days had arrived for the nation's dealers. The hopes didn't pan out.

The 1980 quarterly breakout

Peck, overruled on rescinding the standard, finds deregulating isn't easy

Court orders passive restraints back into 1984 models

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Deregulating, as NHTSA head Raymond Peck is learning, is not always so easy.

The U. S. Court of Appeals for the District of Columbia has overturned Peck's attempt to throw out the passive-restraint standard that would have required U. S. and foreign auto makers to begin installing automatic safety belts or air bags in large and mid-size cars by 1983 model year and in smaller vehicles by the 1984 model year.

In a brief opinion last week, the court said NHTSA had not shown "good cause" to void the standard and that as a consequence it was ordering installation of the devices beginning with the 1984 model year, one year later than the standard had called for.

Additionally, the court gave NHTSA until Oct. 1, 1982, to advise it as to whether the compliance date is achievable, or whether a longer period of time is required.

Safety and legal experts inside and outside the government expect the Department of Transportation to ask the Supreme Court to review the decision.

The court's decision comes in the wake of a recent NHTSA request for more time to address issues raised in the court's June 1, 1982, decision overturning rescission of the standard, but holding it in abeyance pending the delivery of a schedule by the safety agency for resolving questions the agency still had about the efficacy of the devices.

Peck had rescinded the standard last Oct. 29, and his action was challenged in court by insurance and safety groups, leading to the June 1 ruling.

The court said last week that NHTSA's latest request and the agency's accompanying Notice of Proposed Supplement Rulemaking was not inconsistent with its June 1 order but that "at the same time, no party benefits from open-ended DOT decision making, and some dates must be fixed."

You can go ahead with your plan, but Standard 208 is now in effect, the court said.

• Clarence Ditlow, Director of the Center for Auto Safety, one of the parties that had sued NHTSA when it announced the rescission of the passive restraint standard, called it "a victory for safety and consumer groups."

"It means the Reagan Administration, like the rest of us, has to obey the law," he said.

"With passive restraints finally in cars, it means we will be-

Alfa talks with two U.S. suppliers about licensing of modular engine

By John A. Russell
New York Staff Writer

BALOCCO, Italy.—Two U. S. companies are talking with Alfa Romeo to obtain licensing agreements for the Alfa technology involved in the Italian auto maker's modular engine concept which allows a cutoff of two cylinders of the Alfa four-cylinder engine.

The companies, Motorola and Stanadyne, have been meeting with Alfa executives. Filippo Surace, chief of Alfa's research and development, said the talks involve the rights to both the hardware and software of the electronically controlled system.

He added that in Europe, Fiat also has been talking with Alfa about the system. Alfa will begin limited production of cars equipped with the system this fall.

Alfa Romeo is interested in selling the technology to other companies, Surace said, and he indicated that "at this moment Motorola looks best for us."

• The interest expressed in the computer-controlled system by the two U. S. companies probably goes deeper than Surace revealed because of the links both companies have to U. S. auto makers.

Stanadyne produces injectors for General Motors diesel engines and Motorola is closely linked with Ford Motor Co.

General Motors has marketed its modular engine concept in

breaking news

Next transmission: A six-speed automatic?

TRAVERSE CITY, Mich.—The next generation of transmissions will not be the continuously variable transmission, as many expect, but a six-speed automatic, according to Howard Freers, chief body and electrical engineer, Body and Assembly Operations, Ford Motor Co. He told a University of Michigan seminar a six-speed will have each gear mated with the input shaft with gear selection electronically controlled. The torque converter will be eliminated.

Clean Air Act changes proposed

WASHINGTON.—A Senate committee has proposed easing high-altitude emissions standards and a Clean Air Act amendment that would virtually outlaw anyone except a car maker from certifying emissions. The latter provision is designed to outlaw importation of "gray market" performance cars. The high-altitude proposal, backed by the auto industry, would ease diesel particulate standards and set up a proportional HC and evaporative emission standard.

UAW to demand St. Louis reopening

DETROIT. — The UAW will ask that Chrysler Corp. reopen its St. Louis truck plant as part of the current contract negotiations, union sources said. Chrysler has been talking about putting the new front-wheel-drive New Yorker into that plant but no firm decision has been reached, sources said. The

GM's Fremont plant most likely for Toyota assembly, Smith says

By Kathleen Hamilton
News Editor

WARREN, Mich. — General Motors Chairman Roger B. Smith, revealing details of the company's several Japanese connections, confirmed last week that GM's vacant Fremont (Calif.) assembly plant is the most likely candidate for production of any GM-Toyota car.

Smith expressed confidence in the sincerity of Toyota in negotiating to build an auto with GM. He said representatives of the two auto giants will meet again later this month to discuss cost-on-investment studies and sourcing. He expressed confidence that the two will meet their self-imposed fall deadline for project announcement.

Smith also ended the speculation on GM's European truck plans involving its Japanese partner, Isuzu (AUTOMOTIVE NEWS, July 19). Isuzu's medium-weight forward-control trucks would fit especially well into a GM product hole in Europe, Smith said. The trucks haven't obtained a similar popularity in the U. S., so GM will not necessarily sell the Isuzu line here, he indicated.

He said GM's U. S. operations have tentatively won bids to product catalytic converters and some electronics for the Isuzu subcompacts that GM will sell in North America. The Isuzu cars will replace the Chevette in 1984.

The car under consideration for the Toyota-GM project is the new front-drive Toyota Corolla.

• Smith denied published reports that GM has substantially trimmed its fourth-quarter production plans from levels it had forecast early in the model year. Actual production will differ only slightly from those early forecasts, he said, adding that GM "has aggressive plans for the fourth quarter."

"We have the tough things behind us," Smith said, citing at various times the newness of 30 percent of GM's product, labor concessions, slowed inflation rates, GM's ability last quarter to improve profitability despite lower sales volume, tax cuts and recent reductions of the prime interest rate.

"I do look for a good boom—not one of the big jumps up, but a slow, steady increase," he said.

Whether GM will increase its profitability or its dividends will depend largely on the economy, he said. He said both sales projections and 1983 pricing will partially depend on interest rates, and he expressed a hope that the interest rates will continue to fall.

"Some economists are predicting 14 percent" will be the prime rate around 1983 intro time, he said, grinning. "I'd like to believe that."

Smith joined some of the company's top engineering and design men for the unveiling here of Aero 2000, a concept car that will be on permanent display beginning Oct. 1 at GM's Epcot Center pavilion at Florida's Walt Disney World.

GM is invcsting more than $50 million in the Disney project. It is expected to draw 13 million visitors a year.

The Aero 2000 is one step closer to automotive reality than many show cars, because it started life in the GM design studios as an aerodynamic study —not as a mere showpiece—and later was adapted for display at GM's World of Motion exhibit.

Still, the futuristic Aero 2000, fitted with an experimental Buick three-cylinder turbocharged diesel engine, will move only on paper; there are no plans to make a running model.

Smith said the appearance of the engine was not a hint that GM will be bringing out a similar plant: "Even as I sit here, we are looking at maybe 10 three-cylinder engines," he said. This particular one has 68 HP and a displacement of 1.8 liters. Improvements in throttle-body injection are showing more promise at this time, he said.

Smith rebutted a suggestion that the size of the Aero 2000 (its interior space is close to that of the Cadillac Cimarron) is indicative of a GM decision to abandon small-car making to Toyota or its Japanese affiliates —Suzuki and Isuzu. This was just a convenient size to work on, Smith said.

• The four-passenger Aero 2000 comes close in dimensions to today's J-cars, but provides extra interior space because of thin door panels and seats, and a small engine.

Sculpted in the new GM wind tunnel here, it has a drag coefficient of 0.23, compared with the 0.37 cd rating given to Chevy's J-car of today, the Cavalier. GM expects the Aero 2000's sleek lines and 1,800-pound curb weight could double

Shaping GM's future

GM Chairman Roger Smith poses wtih the Aero 2000, a show car to be displayed at GM's $50 million exhibit at Walt Disney World. The show car, described as "the shape of cars to come" from GM in the late 1980s and beyond, was originally modeled as an aerodynamic study at the company's new wind tunnel.

Rolls-Royce to lose U.S. Lotus distribution

Lotus Cars, Ltd., last week said it would withdraw from its two-year-old joint marketing and distribution program with Rolls-Royce Motors, Inc., but left unclear what future plans are for Lotus in the U. S.

Both companies issued brief statements, acknowledging the breakup but making no announcement about Lotus' future. Lotus did say, however, that it would continue certification work on 1983 models, including the Turbo Esprit.

In its statement, Rolls-Royce said the withdrawal would require a three-to-six-month transition period, during which Rolls-Royce would continue to oversee Lotus warranty, parts and accessories.

The reasons behind the split were not announced by Lotus.

In the U. S., a Rolls-Royce spokesman said: "We believe they were satisfied with the program but our arrangement fitted in with their short-term and not their long-term plans."

Rolls-Royce took over Lotus operations in the U. S. in January, 1980, and assumed a 300-car inventory of 1980 models. During 1980, about 100 of those cars were sold. Another 150 were sold in '81. Only a handful of the $35,000 to $40,000 cars are still unsold, the spokesman said.

Lotus sold the Esprit, Eclat and Elite models in the U. S. The sporty Esprit and Turbo Esprit models are seen as likely cars for the U. S. market.

The spokesman said Rolls-Royce spent $250,000 during the first year in advertising aimed at repositioning the Lotus in the marketplace. Lotus has 34 dealers in the U. S., some of whom are dualed with Rolls-Royce.

The future of those dealers and of Lotus distribution in the U. S. has not yet been announced. Speculation centers around three possibilities. One is that Lotus would establish its own independent distribution network; another is that Lotus could pick up some of the U. S. DeLorean dealers if that enterprise fails.

The third possibility is that Lotus may distribute cars through U. S. Toyota dealers. Toyota has a joint car project with Lotus to build 5,000 vehicles per year at Lotus' plant in Norwich, England. The car, set for a 1984 debut, uses Toyota's six-cylinder Supra drivetrain in a Lotus-designed body.

Auto makers set up last round of incentives

By Joseph Bohn
Marketing Editor

It's getting close to new-model introductions, giving auto companies just barely enough time to squeeze in a last round of '82 sales incentives.

Ford and Datsun managed that last week, while Chrysler extended a consumer rebate on trucks to late September.

Ford Division's program is called "Big Buck Bonanza." It runs from Aug. 1 to Sept. 22. There are three separate sales objectives and payment schedules.

A combined objective on Escort/EXP and Mustang pays dealers nothing for 0-35 percent, $300 per unit for 35.1 to 75 percent and $500 per unit for 75.1 percent and over. Payments are not retroactive.

Again, there's a separate combined objective on all F-100 to F-350 series pickups and Bronco. Dealers receive nothing for 0-20 percent of objective; $200 per unit for 20.1 to 80 percent and $350 per unit for 80.1 percent and over. If they hit 100 percent, they get an extra $50 retroactively, making it $250 and $400, instead of $200 and $350, in the payment categories.

Finally, there's a separate objective on compact Ranger pickups. Dealers earn zero for 0-20 percent; $200 per unit for 20.1 percent to 80 percent and $350 per unit for 80.1 percent and over. There is no bonus payment here for hitting 100 percent.

• The incentives cover new '81/'82 units leased or retailed. If a major leasing company were to place a single large order, the rule of 10 would apply. Dealers could count only the first 10 units of the lease deal to earn qualifying payments.

Lincoln-Mercury has a similar incentive running from Aug. 1 to Sept. 22.

It has a four-car combined objective on Lynx/LN7/Capri/XR-7 which pays off in the following way: 0-20 percent, nothing; 20.1-60 percent, $300 per unit; 60.1 percent and over, $500 per unit.

A separate luxury-car objective combines Lincoln, Mark VI and Continental. It pays nothing for 0-30 percent, $500 per unit for 30.1-75 percent and $1,000 per unit for 75.1 percent and over.

L-M also has a separate objective on Continental alone, paying $1,000 for every unit dealers sell or lease during the period. There are no qualifiers.

The "Ford Care" 24-month, 24,000-mile free maintenance and warranty program will continue to be offered on the '81/'82 Escort and Lynx and the '82 EXP/LN7.

• Nissan launched a 49-state incentive to go with an interest subvention program on trucks it is offering in California. It pays dealers up to $900 in combined retail/wholesale incentives.

Nissan's 49-state program is called "Big Bucks for Trucks." It runs from Aug. 1 to Sept. 30.

The incentive covers all trucks retailed during the period. There is a combined objective on all trucks, with a two-unit qualifier before payment starts.

After selling two units, a

Imports slip, too, but penetration sets any-month record

July domestic sales lowest since '61

By Jenny L. King
Staff Writer

There was good news and bad news in the July new-car sales reports.

Unfortunately for the domestic industry, most of the good news came from import offices, while the U. S. auto makers' combined total for the month was the lowest since 1961.

Imports accounted for 31.68 percent of the total July market, an any-month record. The former high was 31.61 percent last December, and the previous July peak was 29.76 percent in 1980.

The import total was down about 5 percent from 1981, but it was weighed against a domestic total that was 13.53 percent away from the comparable 1981 month.

The domestic auto makers retailed 429,908 new cars in July, down 13.53 percent from 497,151 a year earlier, and down 4.77 percent from 451,430 in June of this year. It was lowest total for July since 1961 when 419,969 units were tallied. Best July total was 807,906, recorded in 1973.

Import sales numbered 199,364, down 4.66 percent from 209,105 in July of 1981, and up slightly from 199,093 in June of this year.

Total industry sales in July were 629,272, down 10.90 percent from 706,256 a year ago.

Year-to-date sales for the domestics were 3,364,732, down 11.59 percent from 3,805,620 in 1981. Imports were down 12.30 percent for the first seven months, to 1,300,529 from 1,482,968. The industry total was off 11.79 percent, to 4,665,261 from 5,288,588.

Where auto market was in July

	Total Sales	Pct. of Total
SUBCOMPACT	101,126	16.07
COMPACT	101,270	16.09
INTERMEDIATE	129,538	20.59
STANDARD	67,800	10.77
LUXURY	30,174	4.80
IMPORT	199,364	31.68
TOTAL	629,272	100.00

• Ford Motor Co. was the sole U. S. auto maker to move ahead of its year-ago July sales total. Ford was up 1.79 percent, to 110,988 from 109,031, as its top-selling Escort had its best month ever.

General Motors' 18.59-percent sales decline was most responsible for dragging the industry total down. The leading U. S.

GM's Collier predicts long-term growth

World sales gain seen, but tough market too

By Roger Rowand
Engineering Editor

TRAVERSE CITY, Mich. — Worldwide auto sales are going to pick up and return to long-term trend volume in a couple of years, but competition still will be fierce, said David C. Collier, General Motors vice president in charge of Operating Staffs Group.

Speaking at a University of Michigan management seminar, Collier predicted world gross national product will grow at an annual rate of 2.7 percent through 1985, then jump to 3.7 percent a year through 1990—or at about the boom level of the '70s.

He said regional GNP discrepancies will grow throughout the decade. Some less-developed countries will see growth of better than 5 percent a year, while North America will have a rate below 3 percent, with Europe only slightly better.

"In just two years, free world vehicle sales are expected to total about 41 million units—essentially a return trend volume," Collier said. "Subsequent growth could push sales to a record 50 million units by 1990. That's 25 percent above the record set in 1979."

Competition will continue to be fierce through the '80s, and the prospect of worldwide overcapacity through 1985 will result in intense price competition, Collier said.

He predicted consistent growth for U. S. vehicle sales but said they probably won't establish any records before 1986.

In the past, the GM company line has had a record year occuring before 1985.

Collier warned that younger people lack a strong preference for U. S. cars. Some 38 percent of all new-car buyers under 25 bought Japanese cars in the second quarter of this year, he said. For those aged 25-34, or one quarter of the total new-car market, a full one-third bought a Japanese car, he said.

"Obviously, we face an enormous challenge in getting the younger generation to buy American. To do this, U. S. manufacturers must win back product recognition and respect from the imports," he said.

"In 1990, we predict that quality will be the most critical consumer concern because fuel economy will be comparable and aerodynamic design will constrain styling, accordingly man-

Empty workshop

Only two persons plus guards are allowed in Clenet Coachworks's Goleta (Calif.) plant that built 125 neoclassic cars in 1981. The firm also made aftermarket burlwood panels for mass-produced cars.

Neoclassic builder says he will buy out partner

Clenet evicted, vows he'll come back

By Kathleen Hamilton
News Editor

Evicted from his assembly plant because of unpaid rent bills, Alain Clenet claimed he would buy out his financial partner within two weeks and resume production of his $80,000 neoclassic cars.

As reported by AUTOMOTIVE NEWS last week, Clenet Coachworks, Goleta, Calif., was closed by court order after Clenet failed to meet financial commitments to the company's minority stockholder, S. Prestley Blake.

Clenet now claims he will buy Blake out completely, although he refused to confirm inside reports that he indeed has a potential investor. It is known he has been looking for new money for a year.

In any case, the price tag to buy out Blake is escalating, in accordance with a consent decree reached between the partners one year ago.

But the French designer's financial and legal problems predate that agreement.

Clenet first soared to fame in 1976, a young, good-looking designer who photographed well with his good-looking luxury roadsters, built from MG components and styled in the Gatsby tradition.

• But then, in 1979, the Series II bowed. It was a four-passenger closed car built on Mercury mechanicals that never quite captured the imagination of wealthy buyers who preferred open-air driving in the 1930s tradition.

It also was priced well above its main competition, the Excalibur. Adding to Clenet's problems were the many knockoffs that were springing up, most priced considerably below his $80,000-range cars.

Meanwhile, Clenet moved from Santa Barbara into extravagant assembly facilities in Goleta, owned by Blake. As the economy worsened, Blake pumped money into the company in the form of loans.

Then, one year ago, the partners went to court. Blake said he hadn't been receiving rent. Clenet claimed he owed Blake no interest — that Blake's cash infusions were merely a stockholder's investments and not subject to interest accrual.

The dispute was settled with a court-enforced consent decree. Blake and his son, S. Benson Blake, were given a 49-percent stake in the company and an agreement that if Clenet were to fall behind in the graduated rent payments, Blake could immediately get a court order and regain the $4.5 million building.

He would also get majority control of the company if Clenet failed to pay interest and dividends that were deferred until September, 1982.

• The negotiated settlement provided Clenet with enough money to put an early end to Series II production and launch the Series III.

Called the Asha, after Clenet's daughter, it is a two-seater that held out hope of turning the company around. But it was rushed into production before a convertible was ready. That turned out to be a marketing mistake, for the lure of open-air driving is especially strong among buyers of the neoclassics.

Instead, a T-top bowed first, in November, 1981. Plagued by leaks and squeaks, it was quickly abandoned for a hardtop. By the time the $84,500 convertible arrived — to the applause of neoclassic critics — the luxury-car market was in a severe slump.

And Clenet was facing monthly bills that had been increasing

Chrysler tells UAW: No boost in labor cost

By Marjorie Sorge
Labor Editor

Chrysler Corp. wants to move pennies around, not increase its labor cost, in any new agreement with the UAW, according to Thomas W. Miner, Chrysler industrial relations vice president.

Last week, Miner told the UAW that Chrysler "simply cannot increase its overall labor costs" and the only way to generate money in paychecks is to cut costs in other areas. Labor costs at Chrysler are currently $19.60 an hour, about $1.50 less than at Ford and General Motors when Chrysler's high pension and health care costs are considered.

"We can't agree to a settlement package which increases our labor costs and paves the way to put us out of business in the future," he said.

The current agreement, which covers 58,000 hourly and salaried UAW workers at Chrysler, expires Sept. 14.

The UAW has indicated it wants cost-of-living-adjustments (COLA) and an annual raise reinstated in the workers' paychecks. The UAW gave up those benefits, among others, to help Chrysler qualify for federal loan guarantees almost two years ago.

"Where the union seeks restoration of economic equity for our members who have sacrificed to help Chrysler survive and rebuild, the corporation proposes nothing more than a takeaway shell game," said Marc Stepp, UAW vice president and director of the Chrysler department.

"They would rob dollars from the left pocket in workers' health care and other benefits, and perhaps put a few tokens in the right pocket that holds an ever-shrinking paycheck."

Chrysler's major target for cuts is health care, followed closely by pensions. Other areas

Correction

Stanley Kaufman was incorrectly identified in an article which appeared in the Aug. 2 issue of AUTOMOTIVE NEWS. The article concerned his testimony before the Interest Rate Task force of the Senate Democratic Policy Committee in Washington.

Kaufman currently is general manager of ABC Chevrolet, Owings Mills, Md. He formerly was proprietor of Capitol Chrysler-Plymouth, Annapolis, Md. The article incorrectly said ABC Chevrolet had gone out of business.

Justice Department won't be 'rolled'

EPA emissions deal falls through

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — An elaborate agreement between the EPA, U. S. and foreign auto makers and parts builders that would have settled seven lawsuits against the agency in exchange for substantially eased emission systems warranty liability for the makers has collapsed.

The Justice Department found it illegal.

Not that Justice hadn't warned the EPA and auto and parts makers. More than eight months ago, Justice told the parties it would not go for what they were planning.

But the agency and the auto parts makers went ahead with settlement negotiations anyway, figuring they could "roll Justice" later on, knowledgeable sources told AUTOMOTIVE NEWS.

But, Justice wouldn't be "rolled" and, as a consequence, the parties are now back in court, having wasted 18 months of time and expense.

• Involved here are the EPA's emissions short test procedures, emission system performance warranty regulations and the aftermarket parts certification regulations, which in total constitute the heart of the EPA's Inspection and Maintenance program.

This program was designed to

CARB says visibility threatened by growth in fleet

California considers diesel particulate controls

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — The California Air Resources Board will consider adopting diesel emission control standards for particulate matter as well as changes in passenger-car diesel nitrogen oxide requirements when it meets here Aug. 25.

The board's staff is recommending the adoption of a particulate standard allowing no more than 0.4 grams per mile over 50,000 miles for 1985-model-year diesel cars and light trucks.

That standard would be tightened to 0.2 gpm for 1986-88 and even further to 0.08 for the 1989 and subsequent model years.

The current federal EPA standards are 0.6 gpm for 1982-84 and 0.2 gpm for 1985 and subsequent model years. The 1985 standard for light trucks is slightly higher at 0.26 gpm.

The proposed action would be CARB's first attempt at establishing particulate standards for the state.

The staff recommendations grew out of a two-day informational seminar on diesel emissions held last March. At that meeting, CARB Chairwoman Mary Nichols concluded that in light of efforts to relax federal particulate standards, "we are clearly vulnerable here in California, having no particulate standards of our own."

According to the report issued by the board's staff, increased diesel penetration in the California vehicle fleet may result

Company to 'remanufacture' 1,000 '82s as '83s at Northern Ireland facility

DeLorean, receivers discuss plant

By Edward Lapham
Financial Editor

DeLorean Motor Co. officials will begin meeting this week with the receivers of its Belfast car-building unit to hash out the details of the company's Sept. 1 takeover of DeLorean Motor Cars, Ltd. (1982). DMC plans to resume operations by initially "remanufacturing" 1,000 '82 models as '83 models.

Sir Kenneth Cork, one of the receivers, is due to meet with DMC Chairman John Z. DeLorean in the company's New York offices this week. The two will begin working out the details of the takeover in the wake of the receiver's inability to line up a British investment group to acquire the Northern Ireland operations which went into voluntary receivership Feb. 19.

It is expected that DMC will seek to integrate DMCL (1982) into the corporate structure, eliminating much of the complicated intra-unit structural, financial and communications lattice work.

The company also will further consolidate its North American operations. "We plan to maintain a California facility," John DeLorean told AUTOMOTIVE NEWS last week, "but we will eventually move our key people to the Bridgewater (N. J.) facility."

The Irvine (Calif.) office which had been established as the sales headquarters by former DMC vice president C. R. Brown, will become a zone office, DeLorean said.

David R. T. Wood, new DMC marketing vice president, said last week he believes his field staff will remain essentially intact, "although there might be a few personnel changes."

Wood, who rejoined DMC last month after J. Bruce McWilliams left the company, said he is hopeful DMC can clear out its inventory of remaining '82 models "within 60 to 90 days," opening the pipeline for new shipments from Northern Ireland.

He said the company currently has less than 1,000 units in its inventory while dealer stocks are about 1,700.

The 1,000 cars which have been sitting dockside at Belfast Harbor since spring will be remanufactured as 1983 models, Wood said, eliminating what had been viewed as a potential problem for the company in the form of yet another glut of new cars that will soon be one model year old.

Wood said he hopes the company can begin shipping the remanufactured '83 models to the U. S. "in early October."

Wood also confirmed the company is shopping for a new ad agency to start a "preliminary print" ad campaign in selected publications. The "moderate" cost campaign will be aimed at stressing the product and its unique features, Wood said.

Earlier ad campaigns were handled by Avrett, Free & Fischer, New York.

IH renegotiating agreements with its 200 lenders

By Edward Lapham
Financial Editor

International Harvester last week began the arduous task of renegotiating its loan agreements with 200 lenders as part of the restructuring plan necessary for its survival.

The plan, which would close several facilities, sell the construction equipment group and consolidate the truck and farm equipment groups, also includes a proposal to convert about $400 million in debt to equity and eliminate interest payments.

Although there has been some dissatisfaction reported among the lender group, most analysts and officials close to the negotiations believe the company and its lenders will eventually amend the loan agreement, although perhaps not exactly as IH wants it amended, to facilitate the restructuring plan.

"It's a lot like the Chrysler

T-Type Skyhawk coupe

This Buick Skyhawk T Type is one of five T Types in six body styles which Buick is introducing for 1983, first in California, later in the rest of the U. S. The Skyhawk T Type is offered as a coupe with silver upper body and charcoal lower, with black accent stripes. Fog lamps are mounted below the front bumper. Other T Types will be a Skylark coupe, Century coupe and sedan, Regal coupe and Riviera coupe.

Import fighters slated for '83 lineup

Buick to unveil six T Type models

FLINT. — Buick will offer five of what it calls "balanced performance" cars in six body styles for 1983 — tailored to meet import competition, first in California, then in the rest of the nation.

Called the Buick "T Types," the cars will be available in Skyhawk coupe, Skylark coupe, Century coupe and sedan, Regal coupe and Riviera models.

The Skyhawk T Type coupe has silver upper body, charcoal lower and black accent stripes. The grille has black accents, and moldings, door handles, door locks and mast antenna are black. Marchal high-intensity fog lamps are mounted below the front bumper.

Standard engine on the Sykhawk T Type is a 1.8-liter overhead-cam four-cylinder with fuel injection, aluminum crossflow cylinder head and electronic spark timing. It is rated at 84 HP at 5,200 RPM with 9.0:1 compression ratio.

The Skylark T Type, also offered only in a coupe, features a 2.8-liter high-output V-6, with special camshaft and tuned exhaust system. It is rated at 135 HP at 5,400 RPM. Compression ratio is 8.94:1.

A four-speed manual transmission is standard, with a 3.65 final drive ratio. The optional three-speed automatic transmission with converter clutch has a final drive of 3.06.

The Century T Type is the only one of the five that is available in both coupe and sedan models. Offered only in silver with charcoal lower, it features blacked-out grille, moldings, headlamp and tail-lamp bezels, bumper fillers, door handles and locks, fixed mast antenna and accent stripes.

Standard seats are 45/45 in charcoal cloth with full-length console. Special Lear-Siegler bucket seats with leather inserts and embroidered V-6 logo are available.

Charcoal trim plates replace the standard woodgrain on the instrument panel, console and doors. A leather-wrapped sport steering wheel is included, and voltmeter and temperature gauges and trip odometer are available. The digital instrument cluster available at midyear on other Centurys also will be offered on the T Type.

Standard engine on the Century T Type is the 3.0-liter V-6, which develops 110 HP at 4,800 RPM.

The Regal T Type coupe is offered in either a choice of colors or a special decor package featuring black upper paint and silver lower, blacked out grille, headlamp and tail-lamp bezels and bright rocker panel molding.

Bucket seats have been redesigned to have adjustable headrests and seat-back recliners. A sport steering wheel is standard, and gauges include turbo boost, temperature and trip odometer.

Powerplant is a 3.8-liter turbocharged V-6, developing 180 HP at 4,000 RPM.

A refined electronic spark control system uses a new piezoelectric sensor instead of an accelerometer to detect detonation. Exhaust manifolds are a welded tubular design. The air cleaner adapter is chrome plated, and the turbocharger itself is painted silver.

The Regal T Type has a four-speed automatic transmission with converter clutch. The clutch is engaged in first gear during wide-open throttle operation for maximum torque transfer and acceleration, and in third and fourth gears for good fuel economy.

Riviera T Type is the only model heretofore designated a T Type — in 1981 and 1982.

The 1983 Riviera T Type, unlike its predecessors, is available in nearly every color offered on the standard Riviera. (The 1982 version was offered only with a silver firemist paint and gray interior.)

June Service Index up for 16th straight month

By Francis J. Gawronski
Service Editor

June marked the 16th consecutive month that service and parts business in dealerships showed an increase over the business recorded in the same month the year before.

Although the rate of growth of shop volume in June slipped slightly — 1.3 percentage points — from the May pace, business for the month amounted to 107.2 percent of that recorded by dealers in the same month a year ago. In May, shop business was 108.5 percent of the year-earlier volume.

Despite the dip in June, new-car dealers' parts and service business for the first six months of the year was a healthy 8.4 percent above the same period a year ago.

All but one of the five indicators used in the Service Index increased in June. Repair orders written were down slightly—1.9 percent—from the year-ago figure.

The biggest gainer among the indicators was sales of all parts and P&A with an increase of 13.5 percent, followed by gross profit on all labor, parts and P&A sales, the most important indicator from the dealers' viewpoint, up 7.6 percent.

Shop parts sales, those used on both customer-paid and warranty work, were up 6.7 percent in June, while total labor sales, both customer-paid and warranty, were up 5.4 percent.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealerships.

As in June, all indicators except repair orders written, down 7.8 percent, made strong showings during the January-June period.

The leader at the mid-year point was shop parts sales, up 13.8 percent, followed by sales of all parts and P&A, up 12.5 percent.

Gross profit followed closely behind with an increase of 11.5 percent, while labor sales were up 6.0 percent.

SERVICE INDEX
107.2*

	July, '82 vs. July, '81	6 mos., '82 vs. 6 mos., '81
Gross Profit on All Labor and P&A Sales	+ 7.6%	+11.5%
Repair Orders Written	— 1.9%	— 7.8%
Total Labor Sales (Customer & Warranty)	+ 5.4%	+ 6.0%
Shop Parts Sales (Customer & Warranty)	+ 6.7%	+13.8%
Sales of All Parts and P&A	+13.5%	+12.5%

*—Survey by Automotive News shows that dealers' service and parts business in July, 1982, was 107.2 percent of business in July, 1981. Service business in the six months of 1982 was 108.4 percent of business in the corresponding period in 1981.

V-8-6-4 class action filed against Cadillac in Florida

By Marjorie Sorge

A class-action lawsuit has been filed against General Motors in Florida, charging that the company knowingly sold defective Cadillacs equipped with a V-8-6-4 engine.

The suit was filed Aug. 3 in Palm Beach County Circuit Court by attorney Michael Eriksen on behalf of four plaintiffs.

It is one of 10 class-action lawsuits which charge that cars equipped with GM's V-8-6-4 engine surge and stall out without warning during normal operation.

Other lawsuits have been filed in South Dakota, New Jersey, Illinois, Texas, Ohio, Pennsylvania, New York, Maryland and California. There is also a product liability case in U. S. District Court in Dallas which charges that GM is liable for a death which allegedly occurred when a V-8-6-4-powered car surged forward.

According to Eriksen, the class action could involve more than 10,000 V-8-6-4 owners in Florida. The current plaintiffs are Stephen Gertner, Emery Hapworth, Raymond Nottoli, and Building Products International Corp.

The V-8-6-4 was introduced by Cadillac in 1981 as a fuel-saving device. It runs on either eight, six or four cylinders, depending on the power needed. It was replaced in 1982 by a new V-8. Only the Cadillac limousines have the V-8-6-4 as standard equipment in 1982 and will continue to have it in 1983.

The Florida suit charges that GM knew of the surging and stalling defects in the Cadillac V-8-6-4 before the cars were put on the market but concealed the defects from consumers, Eriksen said. It charges GM with fraud, negligence and breach of warranty.

A dealer service bulletin, issued by GM in mid-1981, advised dealers that some of the problems occurred in the V-8-6-4 engine and cannot be fixed. It said these actions are "normal" with the engine and told dealers not to attempt to repair them.

The Florida suit asks for compensatory and punitive damages for members of the class "in excess of $5,000."

A Cadillac spokesman said GM has no comment on the lawsuit because of the pending litigation. But he said GM has increased the warranty on the V-8-6-4 and fully backs the engine.

The V-8-6-4 warranty was extended to five years and 50,000 miles a year ago after much criticism of the engine.

Six-cylinder cars spark Aussie sales

By John Mellor
Australian Correspondent

Ford Australia and General Motors-Holden's, the only two American car manufacturers left in Australia, recently announced vastly improved results for 1981 following an unexpected swing back to six-cylinder cars.

The two companies, which between them control almost half of the Australian vehicle market, battled neck and neck for outright market leadership most of last year.

GM has been market leader in Australia since 1952. During 1981 Ford overhauled Holden's for five months and looked set to take outright leadership for the year for the first time ever. However, a prolonged strike at Ford's main assembly plant in Melbourne late in the year saw GM slip past to regain its crown.

But when the dust settled on the year, Ford made an all-time record profit of $A87.7 million before tax (compared with a pre-tax profit of about $A400,000 in 1980). The previous best profit by a car maker in Australia was about $A70 million by GMH in 1964 when GM controlled more than 40 percent of the Australian vehicle market.

The XE Falcon was introduced in March.

The Commodore station wagon is popular with Australian families.

Ford's after-tax profit was $A49 million ($A283,000 in 1980) on sales of $A1.1 billion — the first time Ford sales have topped the billion dollar mark. In 1980 total net sales were $A878.8 million.

The main areas contributing to Ford's improved result were:

- Strong public acceptance of Ford's manufacturing mainstay, the Falcon, following the introduction of a more fuel efficient "alloy head" six-cylinder engine and very strong sales of the Toyo Kogyo-sourced Laser which was introduced in March, 1981. Both TK-sourced and U.S.-sourced light trucks also sold well.
- Slashing of inventories to the bone combined with the introduction of a dealer ordering system that amounts to building cars to order at the plant.
- Improved plant quality and productivity methods (many of them picked up from Toyo Kogyo manufacturing engineers working with Ford on the Laser) which means lower warranty costs and less rectification within Ford's plants.
- A lower level of interest costs flowing from reduced inventories and improved cash flow.

GM's Holden's Division also had a remarkably improved result over 1980 with a 1981 profit of $A6.1 million — a $A135.9 million turnaround on the 1980 result.

In 1980 GM did extensive housekeeping on its Australian operation with the closure of an assembly plant in Sydney and the killing off of a number of redundant model lines. The company also incurred heavy losses in building a new 300,000 unit a year four-cylinder engine plant as part of the J-car world manufacturing plan.

The considerable change in the fortunes of both companies in such a short time reflects an Australian car market running at almost record levels and a renewed interest by the Australian car buyer in six-cylinder cars.

The existence of both Ford and GM in Australia has been based on the Australian six-cylinder family car and the health of both companies still depends enormously on six-cylinder car production.

Last year saw their prime six-cylinder models, Ford's Falcon and GM's Commodore, racing for sales leadership, and for the first time since the oil shortage panic of 1979 and the serious slide in six-cylinder sales that followed in 1980, the traditional six-cylinder Australian family car has begun to win back share taken by four-cylinder cars.

At the beginning of 1981 four-cylinder cars were dominating the market in Australia with a penetration of 68 percent. Six-cylinder and eight-cylinder cars had been reduced to a penetration of just 32 percent. But by the end of the year six-cylinder cars were attracting about 36 percent of the passenger market.

It is significant that sales of four-cylinder cars (1.6 liters and under) improved dramatically mainly due to the Ford Laser, so the increased six-cylinder penetration was at the considerable expense of two liter passenger cars dominated by the Mitsubishi Sigma, Datsun Bluebird and Toyota Corona, in that order.

Recovery of the fortunes of the Australian family six follows gasoline price stability in Australia in the last 12-18 months flowing on from the world oil glut, substantial gains in the fuel economy of six-cylinder engines (making two-liter cars only marginally more economical than much larger-bodied six-cylinder cars) and a realization by car buyers, especially company fleet operators (about 45 percent of Australian passenger cars are purchased by company fleets), that the two-liter four-cylinder medium sized car is not all it was cracked up to be during the gasoline panic.

GMH managing director Chuck Chapman says his company believes the six-cylinder engine was written off prematurely: "As long as the rate of increase in fuel prices is at about inflationary levels or not too much above, as long as there are no traumatic supply interruptions, and looking at the overall scheme of operating costs, the transition from six cylinder to four cylinder is going to be very gradual. The six-cylinder market is going to endure much longer than anyone forecast two years ago."

NADA offers advice for office controls

Stopping dealership embezzlement

WASHINGTON. — To prevent employe theft, NADA Dealership Operations Services has recommended a number of safeguards and checks dealers should make in their cash-handling practices.

In some cases, operational practices can indeed be changed, but in small dealerships with few employes, dealers probably will have to settle for careful, inconspicuous checks on employe functions, NADA said.

It is dangerous to have the office cashier also open the mail or list incoming checks because payments received in the mail can be used to cover thefts from office cash, according to NADA.

It recommended three control measures: The dealer or general manager could open the mail. The checks could be listed by someone who doesn't have access to cash. Or spot checks could be made of payments against accounts receivable.

If the cash disbursements bookkeeper also opens the mail or accounts for incoming checks, the bookkeeper could make intentional overpayments to accounts. These would result in refunds, which could be pocketed by the employe.

NADA recommended that all checks submitted for signature be documented with invoice. It also recommended tight control over listed checks. Accounts should be checked to see that funds have been properly credited.

If the same person keeps the daily sales summary, accounts receivable and cash receipts journal, the employe could alter accounting records to cover theft of cash or checks, NADA warned.

It recommended these functions be separated whenever possible. It also recommended spot checks of the three books, comparing them to source documents in each department.

Another control is to allow no one who handles cash to have access to the records which account for it. NADA also recommended that checks for the proper accounts be identified within the office, rather than routed to cashiers or departments.

If the cash disbursements bookkeeper also balances the checking account, checks can be written to fictitious payees, cashed and then destroyed when returned by the bank. Another method of embezzlement can occur if the employe converts checks to cashiers checks at the bank, then cashes these and leaves no accounting.

NADA recommended all canceled checks be accounted for. Checks that are not returned by the bank should be traced. The bank should also be instructed not to draw cashier's checks from dealership checks without specific personal approval from the dealer.

If a single person mails all checks, they can be altered after they are signed. To prevent this, the person who prepares the checks should have no access to them after they are signed.

NADA recommended checks be submitted for signature with envelopes so the dealer can mail them directly.

It is dangerous to have the service cashier check off accountable documents, NADA warned. Theft of payments can be covered by simply checking off repair orders as paid and then destroying the repair order.

To prevent this, no one who handles repair orders, parts tickets and the like for payment should be allowed to check them off.

If a service cashier also compares source documents detail to sales summaries, the employe could change the source documents or sales summary to hide cash thefts.

These functions should be separated, and spot checks should be made comparing documents and summaries, NADA advised. It also recommended use of a cash register which imprints sales totals on source documents and also on a running tape.

If the accounts receivable bookkeeper also mails statements, a payment can be stolen and then covered with later payments. The employe also could fail to mail statements to friends or relatives and carry the balance on other customer accounts.

To avoid these problems, NADA recommended statements be mailed every month to each customer with an outstanding balance. The responsibility of preparing and mailing statements can be rotated. Another control measure is to make sure the accounts receivable bookkeeper has no access to cash.

If the person who delivers payments to the bank also totals the cash, balances source documents, records purchases or keeps the cash receipts journal, thefts from deposits can be covered by alternating the documents or journals.

NADA advised that the dealer spot-check the cash receipts journal, repair orders, parts tickets, other source documents and actual prices of purchases. It also advised dealerships to use a locking bank deposit bag, making sure that the person who delivers the payments doesn't have access to the key.

Imports slip, too, but penetration sets any-month record

July domestic sales lowest since '61

Continued from Page 2

auto builder retailed 247,602 new cars in July, down from 304,135 last year. Chrysler Corp. slipped 5.91 percent, to 55,052 from 58,508. American Motors was down 34.30 percent, to 8,358 from 12,722, and Volkswagen of America plunged 38.00 percent, to 7,908 from 12,755.

GM earned 57.59 percent of the domestic market in July, down from 61.17 percent last year. Ford had 25.82 percent, up from 21.93 percent. Chrysler enjoyed its largest piece of the 1982 pie on a monthly basis in July, capturing 12.81 percent, up from 11.77 percent. Likewise, AMC had its best share, 1.94 percent, down from 2.56 percent a year earlier. VWoA sales accounted for 1.84 percent of the domestic market, down from 2.57 percent.

Chysler, Ford and Lincoln were the only U. S. makes to beat their year-ago sales levels. Chrysler more than doubled its total, climbing to 14,933 from 5,688. Ford was up 1.71 percent, to 78,332 from 77,014, and Lincoln was up 61.72 percent, to 5,670 from 3,506.

July was cause for celebration among several of the imported car companies. It was a best any-month total for BMW and Volvo and a record July for Saab and Jaguar. DeLorean sales were up 46.75 percent and, at 361 units, were their strongest for any month this year.

BMW was up 4.16 percent, to a record 4,608 from 4,424 last year. Jaguar was up 71.88 percent to a record 758 from 441. Saab was up 57.31 percent to a record 1,710 from 1,087, and Volvo was up 14.94 percent to a record 7,716 from 6,713.

Also on the plus side were Renault, up 115.40 percent; Mazda, up 12.75; Sapporo, up 11.77 percent; Challenger, up 32.45 percent; Champ, up 49.81 percent; Colt, up 49.48 percent, and Nissan, up 1.71 percent.

Losing ground in July were: Toyota, down 5.47 percent; Volkswagen, down 27.87 percent; Subaru, down 11.08 percent; Porsche, down 3.40 percent; Peugeot, down 23.68 percent; Mercedes-Benz, down 4.62 percent; Isuzu, down 39.41 percent; Honda, down 9.40 percent; Fiat, down 57.05 percent, and Audi, down 33.88 percent.

Market class breakdown for the total industry in July was as follows: Imports earned 31.68 percent; U. S. subcompacts were 16.07 percent; compacts were 16.09 percent; intermediates were 20.59 percent; standards were 10.77 percent, and luxury cars were 4.80 percent.

A year earlier, imports accounted for 29.59 percent; subcompacts were 16.76 percent; compacts were 20.27 percent; intermediates were 18.47 percent; standards were 10.49 percent, and luxury models were 4.42 percent.

• The July domestics-only market class breakdown was: Subcompacts, 23.52 percent; compacts, 23.56 percent; intermediates, 30.13 percent; standards, 15.77 percent, and luxury cars, 7.02 percent.

Third-period domestic sales were down 7.96 percent, to 188,194 from 204,468 last year. It was, however, the best total since May 21-31, though the drop was the sixth consecutive 10-day decrease.

GM was down 16.14 percent, Ford was up 21.70 percent, Chrysler was down 7.00 percent, AMC was down an estimated 16.67 percent and VWoA was down 37.62 percent.

GM earned 57.06 percent of the market for the period; Ford had 27.22 percent; Chrysler had 11.98 percent; AMC had 1.59 percent, and VWoA had 2.15 percent.

The domestic daily selling rate was 16,535 for the month, down 13.53 percent from 19,121 a year earlier. There were 26 selling days both years. The daily selling rate for the final July period was 18,819, down 7.96 percent from 20,447. There were 10 selling days both years.

Ford sales include Fiesta; VWoA includes VW and Porsche-Audi; Plymouth includes Champ and Sapporo; Dodge includes Colt and Challenger; Fiat includes Lancia. Jaguar-Rover-Triumph includes MG.

obituaries

Charles M. Silaski, 47; was Subaru distributor

LITTLE ROCK.—Charles Michael Silaski, 47, executive vice president and general manager of Subaru South, died July 27. The firm is Subaru distributor for Alabama, Arkansas, Louisiana, Mississippi and Tennessee.

Mr. Silaski joined Subaru Inter-Mountain, Denver, in 1972 and became president in 1974. He remained with that distributorship until it was sold in 1975 and joined Subaru South when it was formed in January, 1976. Mr. Silaski was a speaker at the Automotive News World Congress in 1978.

Jim Hickman

MILWAUKEE.—Jim Hickman, 39, a Datsun dealer in Atlanta and 1982 Rookie of the Year at the Indianapolis 500, died Aug. 1 of injuries suffered in a crash during practice for the Tony Bettenhausen 200 at the Wisconsin State Fair Park.

William E. Mertz Sr.

MILLSTADT, Ill.—William E. Mertz Sr., 87, an early direct-dual Ford dealer (Ford cars and tractors), died July 6.

Ford B. McNaughton

FREMONT, Ind. — Ford B. McNaughton, died at his home in Fremont, Indiana. An Oldsmobile dealer for 50 years, he was 72.

Arnold Oliver Mitchell

ATLANTA. — Arnold Oliver Mitchell, chairman of Mitchell Motors, Inc., of Atlanta and Pensacola, Fla., died July 26. He was a veteran of more than 60 years in the automobile business and was a past president of the Atlanta Automobile Dealers Assn.

Euell Arthur

COMANCHE, Tex.—Euell Arthur, president of Arthur Chevrolet & Olds, Inc., died June 13.

Frank E. McGough Sr.

MONTGOMERY, Ala. Frank E. McGough Sr., owner of Capitol Chevrolet, died July 5. Mr. McGough went to work for the dealership, then McGough Chevrolet, in 1945 and became its president in 1948. The company was founded in 1919 by his father, Thomas D. McGough Jr.

Charles K. Velie

WAYZATA, Minn.—Charles K. Velie, 80, a long-time Oldsmobile dealer, died July 23. Mr. Velie formed Velie Motor Co. in 1934 and operated it under his name until 1975 when it was leased to Bob Ryan Oldsmobile. Mr. Velie was a great-grandson of farm-implement pioneer John Deere.

George Edwin Parslow

BELMAR, N. J.—George Edwin Parslow, 88, who retired earlier this year after 60 years as a new-car dealer, died July 18. Mr. Parslow opened the area's first Ford dealership in the early 1920s. In 1928, he sold it and purchased Park Chevrolet in nearby Asbury Park, N. J. In the 1930s, he formed Belmar Motors, a Chevrolet-Oldsmobile dealership here which he reorganized into two corporations in 1957.

Roy Kircher

MONTVALE, N. J.—Roy Kircher, Mercedes-Benz of North America's business management manager since its formation in 1965, died July 26. Mr. Kircher began his association with Mercedes when he joined Mercedes-Benz Sales, a subsidiary of Studebaker, in 1963.

Total declines by 556 in first half of 1982

Domestic dealer attrition continues

Continued from Page 1

was a loss of 258 outlets in the first quarter and a heart-stopping 672 in the second for a total of 930.

The 1981 and 1980 figures do not include Volkswagen, which was added to the AUTOMOTIVE NEWS domestic dealer count at the beginning of 1982. But VW would have had little effect on the 1981 and 1980 declines since its dealer totals showed virtually no change during the first half of those two years.

This year's first-half decline of 556 outlets was the third steepest in the 22 years that AUTOMOTIVE NEWS has been reporting dealer totals on a half-year basis. Only 1980, with a loss of 930, and 1961, with a drop of 728, were worse.

The quarterly dips aren't any more pleasant to relate. AUTOMOTIVE NEWS began collecting quarterly census figures in 1962. The first-quarter downturn was the biggest in that 21-year span, and this year's April-June fall-off was exceeded only in 1980.

Percentages help illustrate the gravity of this year's losses. The industry's first-half decline of 556 outlets amounted to 2.56 percent of the domestic dealer total.

GM's 285 was 2.67 percent of its dealer body; Ford's 158 was 2.78 percent. Numerical losses for AMC and VW were much smaller, but AMC's dip of 37 dealerships was 2.39 percent of its total, and VW's 39 was 3.88 percent. Chrysler's 19-outlet slip was only 0.52 percent.

It's hardly necessary to dwell on the reasons for the continuing decline. High prices, high interest rates and depressed sales have battered the dealer population. The resulting financial difficulties have forced many to throw in the towel. And many others have simply decided it's time to get out.

Among the Big Three, franchise totals dropped for all GM and Ford Motor makes during the first half, but all four Chrysler Corp. makes were up.

Plymouth reported an increase of 25 franchises for the first half, and there were gains of 21 for Dodge, 14 for Chrysler and seven for Imperial.

Chevrolet and Ford, the two largest dealer organizations, had the biggest losses. Ford was down 138, and Chevrolet was down 130. Elsewhere, there were slips of 56 for Mercury, 55 for Pontiac, 50 for Oldsmobile, 40 for Buick, 15 for Cadillac and 10 for Lincoln.

At midyear, AMC had 1,510 dealers, compared with 1,547 on Jan. 1. Its quarterly declines were 12 and 25. AMC has 748 duals with Big Three makes and 33 with VW. In 1981, AMC lost 28 dealers in the first half.

VW's dealer total on July 1 was 967, down from 1,006 at the beginning of the year. There were dips of 14 in the first quarter and 25 in the second. VW has 105 duals with other U. S. makes, an estimated 72 of them with the Big Three.

The VW dealer total was down only three in the first half of 1981.

Chrysler wound up the first half with 3,665 car dealers, compared with 3,684 as 1982 began. It was the company's best showing since the first half of 1977.

As noted, Chrysler was down 29 outlets for the first quarter but showed a gain of 10 for the second. It was the second year in a row that Chrysler has had a net increase of 10 establishments in the April-June period.

In 1981, Chrysler's dealer total was off 41 for the first half, and in 1980, it was down 413.

Franchise totals at midyear were Chrysler, 2,653; Plymouth, 2,562; Dodge car, 2,474, and Imperial, 428.

In addition to its 3,665 car dealers, Chrysler Corp. has eight that handle only Dodge trucks. They are not included in the corporation's car-dealer total or in the Dodge car-franchise total.

• At Ford Motor, the July 1 car-dealer total was 5,527, a slip of 158 for the six-month span. Quarterly downturns were 78 and 80. In 1981, Ford had a first-half falloff of 141; in 1980, it was 331.

Franchise counts at midyear were Ford, 4,696; Mercury, 2,607, and Lincoln, 1,455.

Ford Motor has 97 outlets that handle only Ford heavy-duty trucks. They are not included in the company's car-dealership total or in Ford Division's car-franchise total.

General Motors' decline was 285 dealerships, its biggest in the 22 years for which first-half figures are available. GM had a dip of 145 outlets in the first quarter and 140 in the second. The July 1 total was 10,370 car dealers, compared with 10,655 at the beginning of the year.

In 1981, GM had a first-half dip of 135 outlets, and its drop was 185 in 1980.

Franchise totals on July 1 of this year were Chevrolet, 5,300; Oldsmobile, 3,140; Pontiac, 2,985; Buick, 2,910, and Cadillac, 1,580.

The current total of 21,124 dealerships handling domestic makes of cars is down 1,229 from 22,353 (including Volkswagen) on July 1, 1981.

In the past year, there have been declines of 555 for GM, 293 for Ford Motor, 125 for AMC, 117 for Chrysler Corp. and 48 for VW. That's a total of 1,138. A change in the number of intercorporate duals brings the net decline for the industry to 1,229.

Talks under way with two U. S. suppliers

Alfa eyes modular engine licenses

Continued from Page 1

the Cadillac V-8-6-4 engine, but this system has been plagued with problems and litigation.

Ford has not introduced such a system, but Motorola produces solid-state ignition systems and electronic engine management systems both of which are an integral part of the Alfa system. Motorola's major automotive business is with Ford.

The Alfa Romeo system has been tested in a fleet of 10 taxicabs, four-cylinder Alfettas, in Milan, from June, 1981 to January, 1982. The results showed an overall 12 percent improvement in fuel economy for city driving for cars equipped with electronic fuel injection and ignition and 24 percent improvement compared with carburetor models.

Alfa engineers said no significant difficulties developed. At the end of the test, two taxi engines, which logged more than 40,000 kilometers of city driving, were disassembled to examine parts which could have been affected by the two-cylinder operation.

According to a report issued by Alfa Romeo, "it was found that the residual driving torque of some of the power train couplings was a bit below standard and combustion chamber encrustations were higher than would be the case for a similar car after 40,000 kilometers."

The report further noted that both problems were due in part to the modular operation and in part to the use made of the car in taxi fleet operations.

However, engineers said they did not view these problems as serious and said they can be solved with minor, low-cost adjustments.

• Alfa Romeo, for this test, used car bodies fitted with safety equipment required in the U. S., including energy-absorbing bumpers, all of which are considered, according to the report, as useful for city driving.

The Alfa system consists basically of the two-liter in-line four-cylinder electronic-fuel-injected engine with electronically controlled ignition and spark advance.

For the cylinder cutoffs, Alfa uses sensors for throttle angle, engine speed, water and air temperature and a microcomputer with 6 K-bytes of memory for engine programs.

The engine always runs on four cylinders when starting and warming up to 70 degrees Celsius (158 degrees Fahrenheit). For a hot engine, idling is on two cylinders except when the engine falls below 680 RPM. The first progression in the sequence goes from stop to 1,600 RPM then the car goes into the cut-off mode.

Changeover occurs at programed cycles, every 200 cycles, alternating in two pairs (1 and 4, 2 and 3). The operation of two or four cylinders is determined by throttle position and engine speed.

Alfa Romeo will start producing the cars for the public this fall with 1,000 units. According to Surace, this will be the Alfetta four-cylinder engine. But it does not stop there since the company is now working on a similar system for its 2.5-liter V-6 engine found in the GTV-6.

Surace said the goal is to have its full line of cars equipped with the system by 1985.

EXCLUSIVE OPPORTUNITY!
"10-SPOT" VIDEO GAMES
MASTER DISTRIBUTORSHIP

If you have been contemplating diversification to offset lagging sales, high overhead and smaller profits, *we have the answer!* Applying your dealership expertise to diversify into the *video game sales/distribution business,* can produce cash flow and net income that could have the tail wagging the dog!

Our *new "10-SPOT"* is revolutionizing the video game industry! Imagine *ten top video games in one cabinet!* Each machine is a *Mini Arcade. It is the hottest money maker that we have ever developed!*

EXCLUSIVE APPOINTMENT

We will appoint ONE Master Distributor for each marketing territory with sub-distributing rights for our *exclusive "10-SPOT"* and other popular video games.

FANTASTIC INCOME

Your potential income is fantastic! One of our Master Distributors *grossed over one million dollars in sales his first nine (9) months* in this *multi-billion dollar, all cash video game business!*

REQUIREMENTS

Your dealership business experience will more than likely meet our requirements. You will also need a $30,000 cash refundable equipment deposit (there are no fees), a low credit line of $120,000 for floor planning, operating capital, and references.

TRAINING

No experience in the video game industry is required. Absentee ownership/supervision is acceptable because you are a dealer and we provide complete training and start-up assistance. We literally put you in business with an almost immediate cash flow!

WHO WE ARE

COUNTER TOP AMUSEMENTS, INC. (CTA) is one of the oldest companies in the video game business. We supply you with impeccable references, names of our Master Distributors and certified financial statements, along with full FTC disclosure documents.

TIME IS OF THE ESSENCE

For a full disclosure, confidential interview, call Mr. T. J. Tepsich, Marketing Director, at (408) 980-8551, or write on your letterhead for information, 2996 Scott Blvd., Santa Clara, Calif. 95050.

Introducing Europe's Top Seller in the 4Wheel Drive Market. The Range Rover is the Ultimate in Style, Comfort and Performance Both ON and OFF Road. Service Oriented Dealers in the Luxury Market are now being sought to handle these vehicles throughout the U.S.A. and Canada. Versions available will include 2/4Door Manual and Automatic Models with Specialized conversions. High Profit Dealerships are available for selected areas.

For Further Information:

RANGE ROVER (NORTH AMERICA) INC.
3171 KASHIWA STREET
TORRANCE, CALIFORNIA 90505

WHAT?

OLDE 'N' BENT

RENT USED CARS?

IT SOUNDS CRAZY, BUT THIS NEW PROFIT CENTER FOR USED CAR RETAILERS BRINGS ADDITIONAL GROSS FROM THE SAME OVERHEAD. IS THAT CRAZY?

- Supplement your sales, service, and/or new car rentals with a small fleet of used rentals
- You don't need big money — two or three car sale grosses will cover your start-up cost
- You already have the cars, the lot, the staff, the expertise, the used car image
- Offer the lowest rental rates in town by renting 7 to 10 model year old cars
- We provide forms, signs, materials, insurance, and if needed, the training
- Forget the late models — they are no more cost effective than new cars
- Recover your initial start-up investment in six months or less
- Begin with a few cars and add more as you need them to grow

GET THE WHOLE STORY — TRACE YOUR LETTERHEAD FOR OUR INTRODUCTORY BROCHURE

Total is 455,558; all makers trail 1981

July auto production drops 12 pct.

By Patricia Hoffman
Staff Writer

With all U. S. auto makers suffering declines, July production fell 12.13 percent from the comparable 1981 month. Output has been below the 1981 total every month this year.

In July, the manufacturers assembled 455,558 cars, down from 518,456 last year.

Losses for the month were: Chrysler Corp., down 40.04 percent to 43,029 cars from 71,760; Volkswagen of America, down 33.74 percent to 10,805 from 16,306; American Motors, down 21.28 percent to 10,805 from 13,732; Ford Motor, down 11.83 percent to 66,691 from 75,637, and General Motors, down 4.88 percent to 324,085 from last year's 340,717.

Checker Motor's finished 138 units last month before ceasing production July 12. The total was 54.61 percent below the 304 units built during a full month of assembly last year.

Downtime at 12 assembly points last week for inventory adjustment and model changeover pulled the estimated car production down 30.10 percent to 76,382 units from the previous week's 109,271, but output was up 9.39 percent from 69,827 in the comparable 1981 period.

Year-to-date, the auto makers have completed 3,189,982 units, down 24.09 percent from 4,202,551 built in the same period last year.

Three GM facilities went down last week for model changeover. They were Janesville, Lansing and Lordstown. Also at GM, the Pontiac home plant ended production after 55 years of operation.

Three GM facilities remained down for changeover last week. They were Detroit, Framingham and Linden. GM's Leeds plant returned to work last week.

Ford's Atlanta, Chicago, Metuchen, San Jose and Wayne points were all closed last week for changeover / inventory control, and Chrysler ended 1982 production at its Belvidere, Newark and St. Louis facilities.

VWoA's Westmoreland plant was also idle last week for changeover.

Truck production for July tops 1981 total by 32 pct.

Although domestic truck output in July was lower than in June, gains at General Motors, Chrysler Corp. and Ford Motor helped push last month's total up 32.79 percent from the comparable 1981 period.

In July, the truck makers finished 161,912 units, up from 121,933 in last year's period, and the most for that month since 1979 when 205,265 trucks were completed.

GM finished on top last month with output reaching 89,110 units, up 76.94 percent from 50,362 in the comparable 1981 period. Chrysler jumped 68.24 percent to 12,036 from 7,154, and Ford rose to 45,830, up 14.21 percent from 40,127.

Other makers showed declines for the month.

Last week's production, marred by downtime at six assembly points, was estimated at 31,413 units, down 32.45 percent from 46,505 the previous week, but output more than doubled the 14,490 units built in the comparable 1981 period when 10 facilities were idle for model changeover.

So far this year, the makers have finished 1,232,205 trucks, a 14.75 percent gain from 1,073,848 assembled at this time last year.

GM's Moraine facility was idle last week (Aug. 2) for model changeover. Operations are slated to resume Aug. 16.

Also at GM, the Shreveport point ended 1982 production last Wednesday (Aug. 4) and is scheduled to return with 1983s Aug. 20.

Chrysler's Belvidere and Warren facilities were idled last week for changeover. Belvidere is due to return Aug. 23 and Warren will resume operations today (Aug. 9).

Ford Motor's Louisville point was also closed last week for changeover.

Volkswagen's Westmoreland facility, idle since June 28, is scheduled to begin 1983 production in September.

GM's Janesville and Lordstown (van) facilities join the model changeover lineup today. Janesville is slated to return Aug. 31, and Lordstown will be back next week (Aug. 16).

July car output in Canada falls 14 pct. below '81

While Canadian auto production in July was the lowest for the month since 1979, falling 14.25 percent short of the comparable 1981 month, output last week nearly tripled the year-ago figure.

The makers finished 50,989 cars last month, down from 59,462 in 1981, and the lowest total for that month since 1979 when 50,846 units were completed. Output was the lowest for any month since last December's 50,799.

Last week, the car manufacturers slated 13,104 units, a 20.34 percent gain from 10,889 the previous week. Operations resumed at Chrysler Corp.'s Windsor facility, offsetting vacation downtime at a General Motors plant. Last week's total compared with 4,485 in the comparable 1981 week when five assembly points were idle for vacation.

So far this year, the makers have finished 537,575 cars, up 1.80 percent from 528,086 in last year's year-to-date.

Truck production last month was 28,406 units, down 35.41 percent from 43,982 in the comparable 1981 month. It was the lowest for that month since 1980 when 21,931 trucks were assembled and the lowest for any month since August, 1981, when the makers finished 16,816 units.

The makers scheduled 7,538 trucks last week, up 36.43 percent from 5,525 the previous week and output more than three times of the 2,276 trucks built in the comparable 1981 period when four plants were idle for vacation.

Year-to-date, the manufacturers have assembled 316,179 units, down 4.90 percent from last year's 332,484.

Pontiac home plant builds its last car

PONTIAC.—Pontiac's home plant assembled its final car last week, winding up 55 years of production at the facility.

The final auto, a Grand Prix Brougham, was the 9,766,159th car built there since production began in 1927. Pontiac said it will now begin to convert the adjacent Fisher Body facility for production of the P-car, which is due to come on line in 1983.

NHTSA delays plan to upgrade side-impact rule

WASHINGTON. — NHTSA has announced termination of the plan to upgrade side-impact protection for cars and to extend it to light trucks, vans and multipurpose passenger vehicles.

This was one of the top priority areas in former Administrator Joan Claybrook's plans for the agency. Raymond A. Peck, current head, called the termination temporary and said that "extensive research still remains to be completed to determine the best approach for upgrading the standard . . ."

The idea was to change the static test method to a dynamic test to set performance criteria for occupant protection and to raise the level of protection to one closer to real-world conditions.

57th year—$40 per year, $1.00 per copy

Outlet count slips only 23 in first half, despite high interest, quotas, recession

Import dealer total holds firm against odds

By Kathleen Hamilton
News Editor

The import-car dealership population held steady during the first half of 1982—a remarkable feat, considering the heavy losses in the ranks of the domestic dealers, a depressed market, quotas and interest rates that hit import dealers especially hard because they generally don't have captive finance companies.

The midyear AUTOMOTIVE NEWS census showed 11,247 dealerships handling imports on July 1—only 23 fewer than when the year began.

That represents a loss of only 0.2 percent in the import-dealership total. By contrast, the domestic dealer population declined 2.5 percent in the first half (AUTOMOTIVE NEWS, Aug. 9).

Adding import and domestic stores together and subtracting the duals, the new-car dealership total in the U. S. at midyear stood at 25,189. That was down 514, or 2.0 percent, from the Jan. 1 total.

An analysis of the import dealer census shows domestic dealers are turning to imports a little less frequently. The number of import-domestic duals dropped by 65 during the first half.

• The decline was evident among dealers carrying both captive imports and non-captives. Captives are the import makes built by companies owned in part by a U. S. maker and whose U. S. distribution is controlled by the U. S. partner.

The cars Mitsubishi builds for Chrysler Corp. (Dodge Colt and Challenger and Plymouth Champ and Sapporo) qualify as captives, but the Renaults distributed by American Motors and the German-sourced Volkswagons don't.

VW dealers are counted as domestics because of the preponderance of their products are Pennsylvania-built Rabbits.

The decline in the number of import-domestic duals was partially offset by an increase in the number of import-only stores. Single-line import dealers numbered 35 more on July 1 than at the start of the year, a gain of 1.3 percent. Import-only duals were up one-half of a percent (7 outlets).

The import-only total was 4,065 at midyear, up from 4,023 on Jan. 1. The rest of the import outlets — 7,182 on July 1

Ford's new look

Slippery new T-Bird, Cougar bow in '83

Sleek silhouettes are replacing the boxy look at Ford Motor Co., as evidenced by the all-new 1983 Ford Thunderbird and Mercury Cougar (below), which debut in January. The cars feature concealed wipers, limousine-type (extended-height) doors, sloping front ends and increased windshield rake. Smaller and lighter than their 1982 predecessors, the new cars will have a standard 3.8-liter V-6 and automatic transmission. Story on Page 6.

Domestic new-car inventory climbs to 83 days on Aug. 1

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory continued to climb during July and the industry opened August with an 83-day supply of U. S.-built new cars, up from 78½ days a month earlier, but still below the 87½-day stockpile on hand on Aug. 1 last year.

The domestic new-car inventory totaled 1,377,130 Aug. 1, which was up slightly from a month earlier, when 1,364,214 units were in stock. The higher days-supply figure was the result of a decline in the selling rate during July.

A year ago, the domestic inventory totaled 1,675,192 units, an 87½-day supply.

While the domestic supply was climbing, the imported-car inventory declined a bit during July, both in days supply and unit count. On Aug. 1, the inventory of new imported cars in the U. S. totaled 429,663, a 56-day supply, down from 438,113 a month earlier, a 57-day stockpile.

• The increase in the domestic inventory during July was almost entirely due to a buildup by General Motors. Volkswagen of America also increased in both unit count and days supply, but the increases were small.

GM added about 70,000 units during the month, however, and its inventory jumped from 79 days July 1 to a hefty 90 days Aug. 1. Front-drive vehicles were generally in heavy supply at GM, while stocks of the new Camaro and Firebird and the older-design rear-drive intermediates were relatively lean.

Volkswagen opened August with a 110-day supply of U. S.-built Rabbits, up from 105 days a month earlier. VW also had a 221-day stock of imported cars.

Ford Motor Co., Chrysler Corp. and American Motors all trimmed their inventories during July. Ford opened August with a 71-day supply, down from 75 days a month earlier.

Chrysler Corp. had a 79-day stock Aug. 1, down from 83 days a month earlier, and AMC had the leanest stockpile of the corporate makers, at 58 days, down from 65 days.

The Aug. 1 domestic inventory was divided this way: GM, 61.84 percent; Ford Motor Co., 22.33 percent; Chrysler Corp., 12.06 percent; VWoA, 2.42 percent, and AMC, 1.35 percent.

A month earlier, the domestic inventory was divided as follows: GM, 57.53 percent; Ford Motor Co., 25.69 percent; Chrysler Corp., 13.03 percent; VWoA, 2.32 percent, and AMC, 1.43 percent.

By size class, subcompacts and luxury cars both opened August with lower supply figures

Some nameplates in very short supply

Import stockpile dips to 56 days

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. dipped a bit during July to a 56-day supply Aug. 1, compared with a 57-day stockpile July 1.

The inventory of new imported cars totaled 429,663 Aug. 1, compared with 438,113 a month earlier. While the domestic industry moved into what used to be the cleanup period with a heavy 83-day supply, import stocks were actually a bit short for that time of year.

The inventory of new imported pickups totaled 170,969, a 132-day supply, which was also off from a month earlier, when it totaled 175,262, a 154-day stock.

The combined imported car and truck inventory Aug. 1 totaled 600,632 units, a 67-day supply, compared with 613,375 on July 1, a 70-day supply.

The combined domestic and imported new-car inventory was a 75-day supply Aug. 1, up from a 72-day supply a month earlier.

• Honda and Toyota continued to carry very lean supplies Aug. 1, as did Mercedes-Benz and Porsche. All those nameplates

breaking news

Electronic control of aero drag nears

CLEVELAND.—Intelligent suspension systems are getting closer. They will change a car's attitude (running angle) as its speed changes for optimum aerodynamics. It all depends on availability of "smart sensors" backed by dedicated microcomputers. "Few actual devices have been realized to date but current development work promises availability of these devices in the near future," an officer of Eaton Corp. said.

Chrysler, Perkins team up for diesels

WINDSOR, Ont.—Chrysler Canada, Ltd., and Perkins Engines Group of Massey-Ferguson last week announced a joint subsidiary, as yet unnamed, to build 2.2-liter four and 3.7-liter turbocharged six-cylinder diesel engines at Chrysler's idle engine plant here, beginning in 1984. Partial funding is coming from Canadian governments for the $367 million project, which will provide 1,000 jobs when the plant reaches planned capacity of 240,000 units in 1988. Maximum capacity is 350,000 units. Some components will come from Chrysler's Trenton (Mich.) engine plant. Plant start-up will be with the 3.7-liter (based on Chrysler's 225-CID slant six) for use in 1985-model light trucks and vans. The 2.2-liter diesel will be used first in 1986-model front-drive cars and the new T-115 vans.

Steel shipments in U. S. lag badly

WASHINGTON.—Domestic steel shipments fell 30 percent from year-earlier levels in the first half, the American Iron & Steel Institute said. The industry's unemployment rate is about 37 percent, the trade group said.

University of Michigan is bullish; Goldman Sachs is not

1983 new-car sales outlook: Good? Bad? (Check one)

Depending upon which survey you read, the auto industry is either going to show considerable improvement next year or it is going to continue plodding along at its current depressed rate.

Two such reports were issued last week. The University of Michigan was quite bullish. Goldman Sachs Research, the research arm of the investment banking firm, didn't see things in so favorable a light.

The U. of M. study sees new-car sales recovering to an annual rate above 8.5 million by the end of this year, and it predicts that new autos will be selling at a rate of about 11.25 million units annually by the end of 1983.

Those aren't sales projections for either year, of course. They're an expectation of the sales momentum at the end of those periods.

The U. of M. car-sales data was part of an overall economic forecast presented by Prof. Saul H. Hymans and Joan P. Crary. They said the current recovery from the 1981-82 recession started more slowly than expected but is expected to accelerate in 1983 and continue at least into 1984.

The behavior of consumer purchasing power and business inventories is clearly signaling an economic upturn, they said, "and the recent behavior of interest rates will strengthen and accelerate the recovery."

• The Goldman Sachs report was devoted strictly to the auto industry. It found that the outlook for a pronounced improvement in sales is not promising, either for the remainder of this year or for 1983.

"Our analysis indicates that basic demand will improve, but the improvement is likely to be relatively modest in absolute terms," the company said.

Goldman Sachs estimates that this year's auto production will be 5.48 million, down from 6.25 million in 1981. The 1983 projection is 6.60 million.

While the 1983 figure is higher than 1981's, it must be remembered that 1981—like this year—was a very bad one for the auto industry.

Domestic new-car sales are estimated at 5.77 million this year and 6.50 million in 1983, compared with 6.21 million in 1981. Again, the 1983 improvement would be in comparison with the depression time of 1981 and 1982.

Import-car sales are projected at 2.10 million this year and 2.30 million next year, compared with 2.33 million in 1981.

The domestic-import total is estimated at 7.87 million this year and 8.80 million next year, compared with 8.53 million in 1981.

"Within the domestic market," Goldman Sachs said, "we expect Ford to gain market share on its new compact and intermediate models. Both Gen-

Industry backers lose key vote in House committee

Hopes fade for Clean Air changes

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Auto maker's hopes for relief from current and pending tailpipe emission requirements are beginning to evaporate into so much thin air.

The latest indication of that trend came last week as the House Energy and Commerce Committee resumed markup of Clean Air legislation supported by the industry and the Administration after a three-month hiatus.

Committee Chairman John Dingell, Michigan Democrat and one of the leaders of a coalition of Democrats and Republicans supporting the industry's approach, had called the session after having rebuilt his coalition following an April defeat on a critical amendment related to "prevention of significant deterioration" provision of the Clean Air Act.

Much to Dingell's surprise, however, his newly rebuilt coalition proved less solid than expected on the very first issue the committee addressed.

It was unable to beat back a measure sponsored by Rep. James Florio, New Jersey Democrat, and Rep. W. J. (Billy) Tauzen, Louisiana Democrat, that would require the EPA to complete studies of 37 substances that the agency has identified as airborne potential carcinogens within four years or have them automatically listed following appropriate hearings.

Perhaps emboldened by that development, Rep. Henry Waxman, California Democrat and leader of a counter group of Democrats and Republicans who want only a "fine tuning" of the act, promptly declared the industry backed bill "dead."

"If the chairman (Dingell) wants Clean Air legislation this year, he will have to begin talking to us," Waxman said, "or there will be no Clean Air legislation this year."

He may well be right for even though Dingell announced he was fully prepared to meet every day and night to get the legislation through, and even though his coalition appears still solid on the critical issues of acid rain control, mobile sources and percent reduction (a requirement for reducing sulfur emissions from coal-fired power plants), time appears to be running out.

Congress recesses for Labor Day on Aug. 20, does not return until Sept. 8 and then meets only until late October.

That is very little time to get Clean Air legislation through the Energy and Commerce Committee, on the House floor and through a conference with the Senate.

• Furthermore, Waxman has said he will use every parliamentary option open to him to keep the industry-backed bill from even getting out of committee. He has more than 400 amendments to offer in that pursuit.

Thus, the conventional thinking here is that Clean Air legislation will not get through Con-

Conversions for BMW coupes

The Germany company Tropic, of Stuttgart, plans to build convertible versions of the BMW coupe series 628/633/635 CSi. The conversion includes an electro-hydraulic-operated pleated top and integrated chassis reinforcement.

Nissan may be first with mini van in U. S.

The Big Three auto makers and at least one Japanese importer are said to be prepping new downsized mini vans, some with front-wheel-drive, for introduction in the U. S. as early as mid-1983.

Chrysler Corp. will be the first domestic maker in the minivan business with its T-115 front - wheel - drive passenger/utility van, which bows in early 1984. The T-115 will be built at the Windsor (Ont.) truck plant, beginning in late 1983.

Chrysler's "garageable" van, as it has been called, will be powered by the 2.2-liter K-car engine (It is based on the K-car platform). The diesel version of that engine, which will be built in Windsor in 1985, will also be offered.

Chrysler, however, may not be the first maker to offer a mini-van. Nissan Motor Corp., it was learned last week, has plans to introduce a small van in the U. S., perhaps by mid-1983.

The Nissan van, which will be introduced soon in Japan as the Prairie (it may not be called that in the U. S.), is based on the front-drive Stanza platform and will be powered by either a 1.5-liter or 1.8-liter four-cylinder engine with choice of manual or automatic transmissions.

The Prairie will have a sliding door and seating for five. Overall length is 165.3 inches, width is 66.5 inches and height is 63 inches. Curb weight is projected at 2,200 pounds. Nissan will build about 8,500 Prairie models per month, with 3,000 slated for sale in the U. S.

In appearance, the Prairie resembles a station wagon more than a traditional van. It will be offered only as a passenger vehicle.

• Ford is said to be developing a smaller van for the 1985 model year that is based on its Sierra-codenamed Ranger platform. Like Chrysler's T-115, it would be offered as both a utility van and passenger vehicle. In addition to a small-displacement Ford gasoline engine, the van would also be offered with a 2.3-liter Mitsubishi-built turbo-diesel four.

Ford recently confirmed its plans to buy up to 75,000 turbo-

UAW threatens 'guerrilla' strikes against Chrysler

The UAW has threatened to call one-day "guerrilla" strikes at selected Chrysler Corp. plants if the company stalls in its contract negotiations beyond the Sept. 14 deadline.

Union President Douglas Fraser said a company-wide strike could endanger Chrysler's financial recovery, but that random one-day plant strikes may be used.

The two sides squared off for negotiations July 20, with Chrysler asking for a break on hourly labor costs and the union seeking pay increases and the reinstatement of some benefits that were sacrificed earlier by workers.

N. Y. sues Polyglycoat over warranty claims

By John A. Russell
New York Staff Writer

Charging that Polyglycoat Corp. has refused to honor consumers' warranty claims on its paint sealant and has engaged in false advertising, New York State Attorney General Robert Abrams filed a civil suit against the corporation, seeking restitution for the consumers and penalties for the advertising.

The New York Attorney General's suit, filed in the state's Supreme Court, charged that Polyglycoat has consistently "discouraged, impeded and improperly delayed" consumer warranty claims.

It also alleged that the corporation rejected approximately 50 percent of all warranty claims for "defective paint" although, according to the suit, this determination was generally made without any tests of the paint and without any inquiry to the automobile's manufacturer.

The action, according to the attorney general's office, culminates a two-year investigation during which the office received nearly 100 complaints.

• In a prepared statement, Gloria Fiveson, president of Polyglycoat World Enterprises, said, "The attorney general's charges are without merit. Our advertising has met all of the requirements. We have repeatedly volunteered to handle and satisfy all justifiable and outstanding complaints.

"The attorney general cannot hold us responsible for the actions of some local auto dealers who make claims beyond our warranty."

The suit alleges the company denies warranty claims blaming road stones or rust for damage to the car's finish. These determinations are made summarily and fraudulently to avoid valid warranty claims, the attorney general charged.

On the false advertising charge, the attorney general alleged the company falsely advertised that its paint sealant eliminates the need for waxing when the warranty stipulates that the consumer must regularly apply a polishing compound to the entire painted surface and then buff it.

According to the attorney general, this is "indistinguishable from waxing." He said that failure to apply this compound every three months voids the warranty.

The suit seeks restitution for the consumers which could amount to $200,000. It is also seeking civil penalties for deceptive advertising and an order barring fraudulent and misleading business practices and a guarantee that the company will provide fair and timely response to warranty claims.

Dealers adopt AUTOCAP in Northern California

SAN FRANCISCO.—Northern California's new-car dealers have adopted AUTOCAP, the complaint-resolving program created by NADA.

Locally, AUTOCAP is sponsored by the Northern California Motor Car Dealers Assn. It has been endorsed by 17 auto manufacturers. More than 11,000 dealers in 35 states participate in the AUTOCAP program, and it is already active in San Diego and Los Angeles.

Winning mechanic gets use of S-10

George Huening, second from left, chief mechanic for Indy 500 winner Gordon Johncock, is shown in front of the S-10 compact pickup which he will have the use of for a year, courtesy of Chevrolet. With him, from left, are Robert B. Haag, Chevrolet's Indianapolis zone truck manager; John N. Capaella, assistant zone manager, and Russ Thomas, general manager, Dave McIntire Chevrolet, where the S-10 was processed.

Huge fuel savings seen with wider 'twin' use

MYRTLE BEACH, S. C.—Richard L. Few, chairman of the American Trucking Assns. has predicted that if the 15 states that currently bar the "proven-safe and efficient 65-foot twin-trailer combinations" were to allow them, the nation would save 80 million gallons of fuel annually.

Few, speaking before the 34th annual meeting of the Multistate Reciprocity Committee here, said, "We are not asking for special consideration. We are asking only for just consideration."

He blamed certain railroads for waging "war against the trucking industry," while creating campaigns against the trucking industry's attempts to seek reasonable improvements in productivity.

"It is ironic that railroad-owned trucks take full advantage of the maximum weight allowances in all states where they operate," Few said. "They also use multiple combinations wherever allowed."

He cited a U. S. Supreme Court ruling—in striking down bans against the 65-foot combinations in Wisconsin and Iowa—that declared them as safe, if not safer, than the tractor-semitrailer units.

• Few said federal legislation has been introduced that would have the effect of mandating the 65-foot twin trailers in every state.

However, he noted, that bill is in limbo at the moment because it also included increases in federal highway-user taxes, which the administration will not go along with at this time.

Few said the 15 states that do not allow use of the "money-saving, fuel-efficient" units are

Feb. 6-10 — Truck Renting & Leasing Assn., fifth annual convention, Doral Country Club, Miami, Fla.

Feb. 6-9 — National Truck Equipment Assn., 19th annual convention, Las Vegas Hilton, Las Vegas.

March 23-25 — International Trucking Show, Anaheim Convention Center, Anaheim, Calif.

April 9-12 — NADA American Truck Dealers, 20th annual convention and exposition, Sheraton Hotel, Boston.

Former IH executive buys Oregon branch

PORTLAND, Ore. — Ralph Nienas, former national fleet sales manager for International Harvester, has purchased the IH branch here, and said he intends to "do about $13 million sales volume the first year." Harvester, in financial difficulties, is selling off many of its outlets.

Nienas has 46 employes in sales, services and parts. Parts inventory is in excess of $1 million, Nienas said, and he added that he plans to keep as many as 50 new trucks on the 6.9-acre site.

truck industry news

July deliveries show gain of 7.3 percent

7-month Big 3 truck sales up 16 pct.

Retail sales in July by Big Three truck dealers were 7.3 percent higher than last year, with Ford the only one of the four makes showing a decline in deliveries from the same month in 1981.

During the month, 156,673 new trucks were retailed in the U. S., compared with 145,973 units a year ago.

The seven-month total was up 16.6 percent, with significant increases by all Big Three manufacturers. The total through July was 1,270,762, compared with 1,089,514 last year.

Sales of Big Three light trucks for both the month and January-July period showed good gains over a year ago, while big trucks—mediums and heavies—continued to decline.

In July, light-truck sales totaled 147,719 units, an increase of 9.2 percent over last year's 135,265. The seven-month Big Three total was 1,211,195, up 18.3 percent over the year-earlier 1,023,958 units.

Big Three dealers retailed 8,954 big trucks during the month, down 16.4 percent from the year-ago 10,708 units, while big-truck sales through July were off 9.1 percent, from 65,556 units in 1981 to 59,567 this year.

• Ford dealers outsold Chevrolet outlets for the second consecutive month in July, and narrowed Chevrolet's lead for the calendar year to less than 20,000 units.

In July, 58,810 Ford trucks were retailed, off 3.2 percent from the year-ago 60,774 units. For the seven-month span, however, sales were up by 7.9 percent, from 442,649 units a year ago to 477,659.

Chevrolet dealers retailed 56,141 new vehicles during the month, a gain of 2.3 percent over last year's 54,865 units. Through July, the count was 495,649, an increase of 17.6 percent over the year-earlier 421,399.

Sales of both the Ford Courier and Chevrolet LUV Japanese-built compact pickups continue

Table on Page 18.

to decline in the face of competition from the two producers' domestic rivals—Ford Ranger and Chevrolet S-10.

In July, Ford dealers retailed 2,785 Couriers, compared with 4,696 a year ago, and the seven-month total dropped from 39,350 units in 1981 to 20,695.

LUV sales in July dropped to 1,300 units, compared with 3,936 a year ago. Through July, only 15,444 units were retailed, down from the year-earlier 43,340.

During the month, Chevrolet

All-electronic dash has big future, Bendix says

ELYRIA, O.—Truckers of the future will guide their rigs cross-country with the help of an on-board computer that will tell them virtually everything they need to know except when to take coffee breaks.

That's the prediction of Guy Rini, project engineer for Bendix Corp.'s Heavy Vehicle Systems Group, which has been developing an advanced computer-controlled system and electronic instrument panel for medium and heavy trucks.

"We expect to have prototypes in trucks and on off-highway equipment within a year, and we would hope to be in production a few years after that," said Rini.

The all-electronic dashboard and its on-board computer will allow the driver to check constantly key vehicle functions and to call back specific information about a trip, the performance of various vehicle systems and the economy being realized under various driving conditions.

"This is an exciting advance and it opens the door to a huge new market within the trucking industry," said Rini. Bendix foresees a $2 billion truck electronics market by the late 1990s.

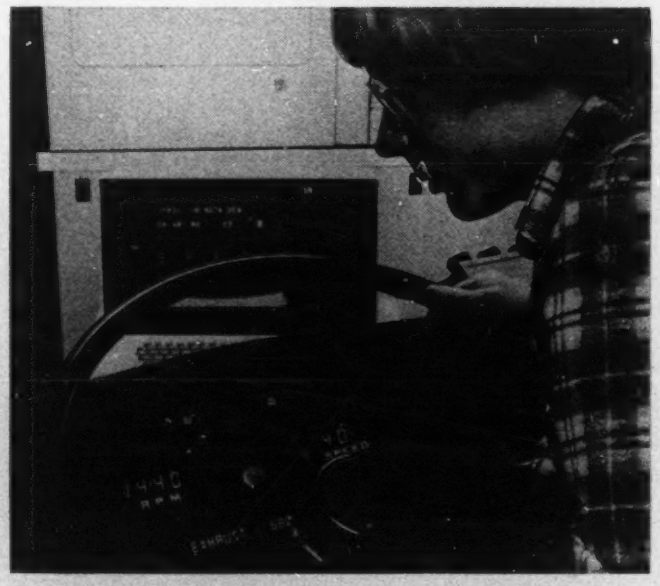
In the experimental Bendix system, the electronic panel features three digital vacuum fluorescent displays capable of presenting data on eight vehicle functions.

In the lab system under development here, engine revolutions per minute and highway speed are monitored constantly on two of the displays. But it's the third display which is the most interesting, said Rini.

The third display performs in the following modes:

Standby, in which data appears on the display only in case of emergency or alert. It has the power to sound an audible

Continued on Page 18, Col. 5



'Smart' truck dashboard

Electronics technician Mark Sabo tests a full-scale mock-up of an electronic instrument panel for heavy trucks being developed at Bendix Corp.'s Heavy Vehicle Systems Group lab in Elyria, O. Digital displays on the instrument panel continuously monitor engine RPM, highway speed and, at the touch of a button, can report the status of 20 or more other functions.

Electronic tach now is offered in Ford mediums

CHICAGO. — An electronic tachometer is now an option on all Ford medium trucks with the Detroit Diesel 8.2-liter diesel.

The tachometer is powered by a non-contact magnetic sensor that detects the movement of flywheel ring-gear teeth on models with manual and automatic transmissions.

Thomas Hitz, Ford product-design engineer, said major advantages of the new tachometer are higher reliability and longer life compared to conventional mechanical designs, plus greater accuracy at low RPMs.

The new tachometer system is being installed on the company's B, C, LN and F-Series trucks.

The 8.2-liter, four-cycle engine has no provision for driving a mechanical tachometer off a cam, blower, or other component, Hitz said.

"All that is provided is a ¾-inch diameter tapped hole through the flywheel housing that is intended for a magnetic or other type of sensor," he added.

The variable-reluctance magnetic sensor selected by Ford was designed specifically for automotive use. Manufactured by Wabash Magnetics, a division of Wabash, Inc., the unit has a tough aluminum housing and internal components that are completely encapsulated against the environment.

The sensor, Hitz said, features a unique magnet-and-coil design that produces a sharp, noise-free, high-voltage pulse when sensing gear teeth, even at low surface speeds.

Automotive News seminar opens Aug. 22

Harbour and Weisel at World Congress

James E. Harbour, co-owner of Harbour and Associates, Inc., Berkley, Mich., and Walter K. Weisel, president and director of Prab Robots, Inc., Kalamazoo, Mich., are among the 34 speakers who will address the 1982 Automotive News World Congress.

The seventh annual World Congress will be held Aug. 22-25 at the Westin Hotel in Detroit. During the four-day seminar, top-level decision makers will gather from all over the globe to exchange ideas on the automotive industry.

The forum will run in tandem with the first annual Automotive News World Expo, an international buy/sell trade fair scheduled for Aug. 24-27 at nearby Cobo Hall.

During a Monday morning session, Harbour will outline the steps that corporate and union management must take in the 1980s to meet the Japanese competitive challenge. On Monday afternoon, Weisel will describe the variety of sophisticated tasks that robots perform in the auto industry.

J. E. Harbour

W. K. Weisel

Harbour has spent 30 years in the automotive industry, 26 years of them as a manager or director in manufacturing, engineering and financial disciplines at Chrysler Corp.

As head of Harbour and Associates, he has been a leader in pointing out the huge advantages that the Japanese auto makers hold over their U. S. counterparts in the area of manufacturing costs.

While serving as director of corporate manufacturing engineering at Chrysler, Harbour directed capacity planning for 42 manufacturing plants, and long-range strategic planning and productivity improvement programs for all plants and divisions in the manufacturing group.

As division controller, Harbour had the responsibility for financial control of design, engineering, manufacturing and worldwide marketing and distribution of commercial products.

Weisel was elected president of Prab Robots in June of this year. Prab is a leader in the field of industrial robots and claims to have the second largest installed base of robots in the world.

He served in the U. S. Navy with responsibility for rocket and computerized warfare systems and served in President Kennedy's People-to-People program for three years.

Later, Weisel joined Cincinnati Milacron, Inc., where for 10 years he held management positions in sales, engineering, service and systems engineering. His last position there was national sales manager of the Electronics Systems Division, which manufactures a full line of NC/CNC controls, mini-computers and peripheral equipment, as well as computer business systems.

In 1972, he went to work for Unimation, Inc., another leading robot manufacturer, as operations manager in charge of sales, application engineering and service. He held that post until joining Prab in 1977.

Weisel is currently president of Robotics International, a society dedicated to the advancement of robotics. In addition, he is first vice president and president-elect (1983) of the Robot Institute of America, the U. S. robot manufacturers' trade association.

One of the highlights of the World Congress will be a Tuesday Evening Gala, to be held Aug. 23. The Gala is open to both non-registrants and registrants. It will feature two speakers, a cocktail reception, a three-course dinner and a cash bar.

The registration fee for the entire World Congress is $490 per person, with a $100 deposit required. Either the full fee or the deposit must accompany the registration.

The fee includes access to 34 sessions, including the Tuesday Evening Gala, a workbook, three dinners, two luncheons, scheduled cocktail receptions and entry to World Expo.

Tickets to the Tuesday Evening Gala are available in advance on a first-come, first-served basis. Individual tickets or tables for 10 people can be reserved at $30 per person.

Exhibitors and visitors at World Expo who wish to attend the World Congress are required to pay the $490 registration fee.

For additional information, contact Cynthia Radom, director of special projects at Automotive News, 965 E. Jefferson, Detroit, Mich. 48207. Phone: (313) 567-9520.

To send a request by TWX call: 810-221-5122 AUTNEW.

Laus appointed Fram president

SOUTHFIELD, Mich. — Andre A. Laus will become president and chief operating officer of Fram Corp., a Bendix Corp. subsidiary, effective Sept. 13.

Laus will be nominated a corporate vice president at the September meeting of the Bendix board of directors. He will report to Fram Chairman, Paul F. Hartz, until Jan. 1, 1983. At that time, Laus will become chief executive officer, and Hartz will continue as chairman.

Laus has been with Federal-Mogul Corp., Southfield, as vice president and group executive, responsible for worldwide automotive aftermarket operations.

New quarters

CONCORD, N. H.—Grappone Subaru has moved into a new sales/service facility.

Ford deal closes

NAPPANEE, Ind. — Bob's Ford, Inc., has terminated its Ford and Mercury franchises and is selling its equipment and furnishings at auction.

July deliveries show gain of 7.3 percent

7-month Big 3 truck sales up 16 pct.

Continued from Page 16

dealers sold 11,313 S-10 compacts, bringing the seven-month total to 111,089 units. July sales of the Ford Rangers totaled 8,386 units, lifting the January-July count to 54,130.

Dodge and Plymouth dealers sold 20,886 new light trucks in July, an increase of 30 percent over last year's 16,070. The seven-month total was up 29.8 percent to 152,368 units, compared with 117,374 a year ago.

Dodge dealers sold 2,018 Japanese-built Ram 50 compacts during the month, up from last year's 1,755. Through July, the count was 20,148, compared with 17,601 in the like period in 1981.

Sales of the imported Plymouth Arrow compact in July dropped from 570 in 1981 to 431 units, while the seven-month total slipped to 3,821 units, compared with 5,889 last year.

GMC dealers retailed 20,836 new trucks during the month, including 3,216 S-15 compacts, an increase of 46.1 percent over the year-earlier 14,264. Through July, the count was 145,086, including 23,895 S-15s, up 34.2 percent over last year's 108,092 units.

Sales of four-wheel-drive Jeep vehicles during the month dropped 16.1 percent, from 6,658 units a year ago to 5,585. The seven-month count, however, was up slightly to 37,741 units, compared with 37,510 in 1981.

Volkswagen compact-pickup sales were down drastically for both the month and the January-July period. In July, dealers sold 807 units, off 67 percent from the year-earlier 2,447. The seven-month total was off 61 percent to 7,936 units, compared with 20,348 last year.

Toyota dealers retailed 12,159 compacts during the month, off 2.7 percent from the year-ago 12,501. Through July, 76,503 units had been sold, a decline of 4.3 percent from last year's 79,948.

Sales of the Datsun compact also were down for both July and the seven-month period. In July, 9,162 units were sold, off 4.6 percent from last year's 9,602. Through July, the total was down 24.7 percent to 53,359 units, compared with 70,889 in 1981.

Mazda dealers retailed 4,170 compacts during the month, up 193.7 percent over last year's 1,420, while the seven-month total of 22,228 units was 132.5 percent higher than the year-ago 9,559.

During the month, Isuzu dealers sold 1,686 compacts, up 16.8 percent over last year's 1,443. Through July, the count was 10,285, a gain of 169.3 percent over the year-earlier 3,819 units.

Alabama, Connecticut, Georgia, Maine, Massachusetts, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, South Carolina, Vermont, Virginia and West Virginia, as well as the District of Columbia.

He congratulated the states of Mississippi and Tennessee, which recently passed legislation allowing the 65-foot twins to operate in those states effective July 1.

He added that the 17 states that joined in the Multistate Reciprocity Agreement, which allows interstate motor carriers to pay fees in one of those member states only, was an example of the cooperation that leads to an efficient transportation system.

Electronic dash has bright future, Bendix says

Continued from Page 16

alarm if the engine overheats, or oil pressure drops too low, for example.

Punch-up, in which finger keys are pushed to order a display of information, such as engine temperature or oil pressure.

Continuous, which offers a continuous stream of data displayed on key functions.

While the experimental panel performs eight functions, future versions are expected to offer 20 or more.

Functions the system currently performs include monitoring primary and secondary pressures in the air-brake systems, oil pressure, water temperature, exhaust-gas temperatures in turbocharged diesels, fuel level and battery voltage.

Among the functions expected to be added are hydraulic pressure in power-steering systems, oil levels, brake-application pressure and fuel-consumption rates.

"Truck drivers and off-highway equipment operators of the future will be able to call up information from the computer on mileage or potential maintenance problems so they can track servicing requirements more carefully and keep track of performance levels for key vehicle systems," said Rini.

The emblem dealers look for.

To America's used car dealers, it's every bit as prestigious—and represents every bit as much profit potential—as the hood ornaments of the world's classiest cars.

It's the symbol of the Manheim Auctions System.

Why this universal respect? Because Manheim gives buyers the industry's best selection of cars, its most comprehensive support services, and its most proven skills. Because Manheim gives sellers unrivaled expertise and professionalism in the vital inventory regulation process.

Because Manheim has given everyone fair and **equal treatment** each and every sale day—for 37 years.

Look for the Manheim emblem. That's where you'll find your area's smartest dealers.

Matrix 3 offers Corolla convertible

Matrix 3, of Costa Mesa, Calif., has introduced a convertible conversion for the Toyota Corolla that includes a 30-second push-button power top and integrated chassis and body reinforcement. It retains rear-seat and luggage space. The conversions carry a 12-month/12,000-mile limited warranty.

Court says negotiated settlement instead of recall is OK

DOT upheld on Ford transmissions

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The decision by former Transportation Secretary Neil Goldschmidt to negotiate a settlement with Ford Motor Co. over millions of vehicles that allegedly slipped unexpectedly from Park to Reverse instead of trying to force the company to recall and repair or replace was within his discretion, the U. S. Court of Appeals for the District of Columbia has ruled.

The Appeals Court upheld an earlier decision by Federal Judge Oliver Gasch.

The Center for Auto Safety, which had sued the government in March, 1981, is not expected to appeal. There remain, however, numerous individual liability suits against Ford and one class action still pending in a D.C. court.

Roger Maugh, Ford auto safety director, said, "Naturally, we are pleased with the Appeals Court's decision.

"As we have maintained from the outset of the investigation, there is no defect in the design or operating characteristics of Ford vehicles equipped with automatic transmissions. Ford has always believed that its settlement with the U. S. Department of Transportation was proper."

The NHTSA investigation started in October, 1977, and involved some 23 million vehicles and five major kinds of automatic transmissions. It lasted 2½ years and resulted in a June, 1980, initial finding of a safety-related defect.

The extensive investigation—over 382 cubic feet of documents—found some instances of similar problems with automatic transmissions from other car makers and involved to some extent human error, but it concluded that the failure for Ford vehicles was much greater than for other vehicles and was the result of unique Ford characteristics.

• Ford changed design of its gearshift lever fastener for 1981 models, but, throughout, the company steadfastly maintained that its earlier vehicles were not defective in this area. The company also claimed that adverse publicity had stimulated reports of alleged slipping and inflated their numbers.

In October, 1980, then NHTSA chief Joan Claybrook wrote a memo to Goldschmidt saying that subject to his approval, she intended to make a final determination of defect. Goldschmidt neither approved nor disapproved, but after the election he asked his general counsel to start negotiating for a settlement with Ford.

Thomas Allison, once general counsel but then acting secretary after Goldschmidt's retirement, did just that, requiring Ford to send letters informing owners of NHTSA's initial finding and enclosing self-sticking warning labels reminding drivers to place the transmission securely in Park, shut off the engine and set the parking brake.

The agreement with Ford also said the government did not agree with Ford's position on the merits and reserved the right to take further action later "if warranted by subsequent developments."

The Center for Auto Safety's court challenge — first defeated last October in District Court — argued that the DOT Secretary lacked authority to settle a defect investigation short of "repair, replacement, or refund of purchase price."

But the three-judge panel of the Circuit Court said the law requires a final determination before the remedy-without-charge section applies. Such a second determination means a hearing and a further evaluation and accepting the center's arguments that these remedies are tolled with the initial determination "would lead to unreasonable results," the court said.

A DOT recall order is not self-enforcing, the court said, and taking Ford to court would mean a trial de novo, and a trial and appeal in such a complicated case "would probably last well over four years and involve huge expenditures of time and money."

The Appellate Court said it thinks it unreasonable to assume that Congress meant to restrict the Department to an "all or nothing" approach—that is, either dropping a case or litigating to the end.

The center also challenged the Secretary's choice of remedy as an abuse of discretion on grounds it would not be effective. But the Appellate Court, agreeing with the District Court, said the Secretary did not act arbitrarily.

First, it noted, the existence of a defect was not "conclusively established" and citing an affidavit of Lynn Bradford, NHTSA's enforcement official, "major new investigative efforts" would have been needed and even then, he could not have been sure of a final determination.

Second, had a final determination been made, Ford would have fought it, the government would have had a hard time in proving the defect because of the factor of driver interaction with the vehicle and even if the government won, it would have taken about four years during which time some six million of the affected vehicles would have been junked.

Third, said the court, the Ford investigation was causing an enormous drain on NHTSA's resources.

In light of those factors, the court concluded, the decision to settle was not irrational or arbitrary.

"Any experienced lawyer can cite cases in which stubborn litigants lost everything when they might have settled for at least part of the relief demanded," the court said.

As for the center's argument that no evidence exists to show the letters and safety labels are effective, the court notes, "No remedy, of course, can be absolutely effective," although in some instances the letters and labels should help.

Besides, the court said, even if a recall were mandated — according to Claybrook's own memo — only about half of them would be fixed. Besides, the agreement with Ford means the government is still monitoring the problem and could take additional action.

Oakleaf offers computer to aid dealer sales staff

LOS ANGELES. — A new computer system designed to aid dealership sales personnel will be introduced by Oakleaf Computers Aug. 18-19 at the Westin South Coast Plaza Hotel in Costa Mesa, Calif. Dealers are invited to attend the showing.

Called the NP-16, the new system is offered with six programs that computerize sales functions previously administered manually. Among the software packages are three that aid management and three that can be used as sales tools.

The management programs are a prospect followup file that lists showroom visitors, an inventory control program that shows all vehicles in stock as well as each unit's floorplan cost and an information program on sales performance and F&I penetration.

The three sales-tool programs are a gasoline mileage comparison that allows the salesman to show the prospect how much in fuel costs can be saved with a new car, a dealer-installed-option program that automatically adjusts the deal to reflect any accessories the customer may want and a leasing package with instant credit checking.

Oakleaf Computers is based in Panorama City, Calif.

Industry has 1,377,130 new cars on hand Aug. 1

Domestic inventory up to 83 days

Continued from Page 1

than a month earlier. But subcompacts were still in heaviest supply among the market segments at 100 days, down from 103 days July 1.

The industry had a 74-day supply of luxury cars, down from 78½ days a month earlier.

Compacts were in 84 days supply Aug. 1, up from 74 a month earlier, while intermediates climbed during July to 86 days from 77.

The leanest segment was still standards at 57 days, up from 53½ days a month earlier.

The Aug. 1 inventory was divided this way by market segment: Subcompact, 28.42 percent; compact, 23.43 percent; intermediate, 31.10 percent; standard, 10.83 percent, and luxury, 6.22 percent.

A month earlier, the inventory was divided as follows: Subcompact, 29.04 percent; compact, 22.39 percent; intermediate, 30.44 percent; standard, 11.03 percent, and luxury, 7.10 percent.

• The Aug. 1 days-supply figures by market class were:

Subcompact — Escort, 58; Lynx, 63; Eagle SX/4, 66; TC3, 88½; Horizon, 92; Omni, 94; 024, 100; EXP, 104; LN7, 108; Rabbit, 110; Chevette, 117; Spirit, 127; Cavalier, 162; T1000, 171; Skyhawk, 195; J2000, 209, and Firenza, 218.

Compact — Concord, 38; Camaro, 44; Firebird, 63; Zephyr, 65; Eagle, 66; Reliant, 75; Fairmont, 82; Aries, 82½; Mustang, 104; Skylark, 105; Omega, 117; Citation, 119; Capri, 135, and Phoenix, 144.

Intermediate — Gran Fury, 26½; New Yorker, 46; Cutlass four-door, 51; Diplomat, 55; Malibu, 57; Cougar, 61; Cutlass two-door, 62; Regal two-door, 71; Grand Prix, 72½; Granada, 73; Regal four-door, 74½; Monte Carlo, 75½; Cordoba, 77; Bonneville, 77½; LeBaron, 91; Mirada, 97; XR-7, 99; Thunderbird, 101; Dodge 400, 122; Ciera, 128; Celebrity, 178; Century, 179, and Pontiac 6000, 253.

Standard — Olds 88, 44; Olds 98, 46; Mercury, 50; LeSabre, 57½; Ford, 62; Electra, 69, and Chevrolet, 70½.

Luxury — Cadillac, 59; Lincoln, 69; Toronado, 70; Eldorado, 71; Riviera, 77; Continental, 88; Mark VI, 95; Cimarron, 112; Seville, 130; Corvette, 142½, and Imperial, 150.

Import stockpile slips to 56 days; some lines short

Continued from Page 1

were in short enough supply to affect sales.

The inventory of Japanese-built new cars in the U. S. totaled 283,566 Aug. 1, a 45½-day supply, down from 292,293 a month earlier, a 48-day supply.

Japanese nameplates and their day-supply figures were: Honda, 27; Toyota, 29; Mazda, 52; Datson, 58½; Subaru, 45, and Isuzu, 167. In addition, Chrysler Corp. had a 97-day supply of Mitsubishi-built cars, including Challenger, 83 days; Colt, 88 days; Champ, 97 days, and Sapporo, 138 days.

The stockpile of West German-built cars totaled 85,597, a 112-day supply, compared with 86,185 a month earlier. The higher July 1 figure, however, was a 106-day supply.

• German nameplates and their Aug. 1 days-supply figures were: Mercedes-Benz, 29; Porsche, 34; BMW, 47; Audi, 168, and Volkswagen, 221. VW sales had a 110-day stockpile of U.S.-built Rabbits, for a total inventory of 156 days.

Inventories of other European lines included: Volvo, 61; Jaguar, 62; Saab, 76; Peugeot, 100; Fiat, 117; Renault, 130, and DeLorean, 264.

Days-supply figures for new imported pickup trucks Aug. 1 were: Mazda, 65; Toyota, 95; Ford Courier, 154; Datsun, 155; Isuzu, 174; Chrysler/Mitsubishi, 209, and Chevrolet LUV, 280.

21 plants affected last week; 69,179 cars built

Changeovers trim auto production

By Patricia Hoffman
Staff Writer

The 1983 model-changeover period is taking its toll on auto production as seven more facilities were idled last week, bringing the total to 21 U. S. assembly points down for at least part of the week. For the fourth consecutive week, output was below that of the prior week.

Last week, the auto makers scheduled 69,179 units, down 8.68 percent from the previous week's 75,756, and down 27.78 percent from 95,785 in the comparable 1981 week.

So far this year, the manufacturers have assembled 3,258,535 cars, down 23.98 percent from last year's 4,286,522.

Breakdown for last week by company was: General Motors, 70.50 percent; Ford Motor, 19.02 percent; Chrysler Corp., 7.01 percent and American Motors, 3.47 percent.

Volkswagen of America was idle last week (Aug. 9) for changeover. The Westmoreland facility, down since Aug. 2, is slated to return in September.

There were five GM assembly points idled last week for changeover.

GM's Wilmington point closed Friday (Aug. 13) with operations scheduled to resume Sept. 17; the GM Willow Run facility was idled last Wednesday (Aug. 11) and is slated to return next week (Aug. 23); Tarrytown, down last week, will be back Aug. 25; Doraville, idled Aug. 11, is slated to return today (Aug. 16), and Baltimore, down last week, is scheduled to return today.

Also idled last week for changeover were Ford's Dearborn and Lorain points. No start-up date was given for those plants.

Downtime — full or partial — continued last week at GM's Detroit, Framingham, Janesville, Lansing, Leeds, Linden, Lordstown and Pontiac points. Framingham, Janesville and Lordstown are slated to return today. Lansing returned last Tuesday (Aug. 10), and Linden resumed operations last Wednesday (Aug. 11). The others will be idle this week.

Ford's Atlanta, Chicago and San Jose points remained down last week. The Ford Metuchen and Louisville plants, both idled Aug. 2, resumed operations last week.

Chrysler's Belvidere and Newark points, both idle since Aug. 2, are slated to return next week.

The Chrysler St. Louis plant, which went down Aug. 2, resumed operations last week.

Canadian output dips again; two more plants finish runs

Canadian auto production last week was down 7.59 percent from the previous week's total as two more car plants were idled for model changeover.

Last week, the makers targeted 12,577 cars, down from 13,610 the previous week, but rose 52.15 percent above the 8,266 built in the comparable 1981 period.

Year-to-date, the car manufacturers have assembled 550,658 units, a 2.81 percent gain from 535,588 built at this time last year.

Truck production last week was planned at 8,943 units, up 25.48 percent from 7,127 the previous week, and a 20.79 percent gain from 7,404 in the comparable 1981 week.

So far this year, there have been 324,711 trucks completed, down 1.12 percent from 328,377 built in last year's year-to-date.

General Motors' Ste. Therese car facility ended 1982 production last Thursday, Aug. 12. Assembly of 1983 models is scheduled to begin today (Aug. 16).

Also at GM, the Oshawa (No. Two) point was down for the second week of changeover last week. Operations are expected to resume Wednesday (Aug. 18). The company's Oshawa (No. One) facility returned last week following model changeover.

Ford Motor's St. Thomas car plant was also idle last week for changeover.

Volvo's Halifax facility, which ended '82 production Aug. 2, is slated to resume operations next week (Aug. 23).

GM's Oshawa truck plant returned last Monday following one day of changeover downtime.

Second-shift operations were idled last Tuesday, (Aug. 10) due to a parts shortage at GM's Scarborough van facility. First-shift operations were also halted Wednesday.

Saab world sales increase 16 pct. for first half

NYKOPING, Sweden.—Worldwide retail sales of Saab cars during the first half of 1982 increased 16 percent, from 37,600 in 1981 to 43,600 in 1982, according to Sten Wennlo, chief executive of the Saab Car Division.

"Following production increases to meet the increased demand, we now expect to sell over 80,000 cars in 1982, which on an annual basis will represent an increase of about 10 percent," he said.

The Saab Turbo models now are responsible for about one-third of all Saab sales throughout the world.

In the U. S., where the Saab Turbos represent just over half of all sales, Saab retail sales set a one-month record in June with 1,707. Six-month sales of 8,713 were also a record.

On the Scandinavian markets, which account for about half of Saab's total sales, heavy increases were reported in Sweden, Norway, Denmark and Finland. In the Swedish home market, Saab sales rose about 25 percent over the same period in 1981, to a total of 14,800.

Sales rose 48 percent in Belgium and 28 percent in Italy.

Truck production rises for week; 32,905 scheduled

The return of two assembly points last week was enough to offset changeover downtime at four more plants and pull domestic truck production up 2.19 percent from the previous week's total.

The truck makers estimated 32,905 units last week, up from the previous week's 32,200, and up a substantial 29.38 percent from 25,432 in the comparable 1981 week.

So far this year, the manufacturers have assembled 1,265,897 trucks, a 15.47 percent gain from 1,096,281 built in last year's period.

Joining the model changeover lineup last week were three General Motors facilities and one Ford plant. They were GM Janesville, Lordstown (van) and Pontiac and Ford Kentucky.

Lordstown and Pontiac are both slated to return today (Aug. 16) while Janesville has scheduled 1983-model startup for Aug. 31.

There was no return date given for Ford's Kentucky plant.

GM's Moraine point, idled July 30, remained down last week. Operations are slated to resume today.

Also at GM, the Shreveport facility, which ended 1982 production Aug. 4, is slated to return this Friday (Aug. 20).

Chrysler Corp.'s Belvidere facility, idled since Aug. 2, is scheduled to return next week (Aug. 23).

Chrysler's Warren plant and Ford's Louisville facility, both down for changeover since Aug. 2, resumed operations last week.

Volkswagen of America's Westmoreland point, which closed June 28 for changeover, is scheduled to return in September.

Only 23 lost in first half, despite all odds

Import dealer total holds steady

Continued from Page 1

and 7,247 on Jan. 1 — handle both imports and domestic cars.

Excluding the Chrysler captives, 27.3 percent of all import-car franchises were single-line dealerships at midyear. That was the highest total for any census in four years.

But the average is deceiving: Only 10.8 percent of the European-car franchises were single-line dealerships, and fully 45.8 percent of the Japanese-car dealerships were single-line stores. Those percentages changed only slightly from the start of the year.

When they do dual, the Japanese makes are most likely to dual with U.S. makes. The Europeans — with the exception of DeLorean and Renault — are prone to dual with other European makes.

About 65 percent of all the import franchises in the U.S. are Japanese cars, the latest census showed.

It also showed the number of import franchises increased by 437 during the half. (Because of dualing, there are more franchises than there are dealerships.)

• One of the big reasons for this increase was a change of policy at Chrysler Corp. Earlier, dealers signed separate franchise agreements for the Mitsubishi products, and not every Chrysler dealer carried the Japanese cars.

Now, there is no separate franchise agreement, and every dealer has access to the Mitsubishi lines. Even so, an increase in dualing of Chrysler-Plymouth and Dodge dealers meant there were actually fewer outlets carrying the Mitsubishi cars than when the year began.

For the first time since Chrysler began importing Mitsubishi cars for its dealers, the number of Plymouth dealers handling the Champ and Sapporo exceeded the number of Dodge dealers handling the sister cars.

That catapulted Champ/Sapporo into the leading spot in franchise totals. The No. 2 spot went to Colt/Challenger, followed by Renault, Datsun/Nissan, Toyota, Honda, Subaru, Mazda, Fiat and Audi.

Six months earlier, Mazda was ahead of Subaru in the rankings.

• Twelve import makes either set new records in franchise totals or tied old records. They are Champ/Sapporo, 2,562, up from 2,247 on July 1, 1979; Colt/Challenger, 2,474, up from 2,300 on July 1, 1979; Toyota, 1,095, up from 1,093 on July 1, 1981 and Jan. 1, 1982; Honda, 802, up from 801 on Jan. 1, 1982.

Also, Mercedes-Benz, 410, up from 409 on Jan. 1, 1980, Jan. 1, 1981, July 1, 1981, and Jan. 1, 1982; Porsche, 328, up from 327 on July 1, 1979 and Jan. 1, 1980; BMW, 398, up from 382 on Jan. 1, 1982; Rolls-Royce, 71, up from 67 on July 1, 1979, Jan. 1, 1981 and Jan. 1, 1982.

Also, Ferrari, 47, up from 43 on Jan. 1, 1982; Maserati, 36, tying a record set July 1, 1981; Isuzu, 198, up from 193 on Jan. 1, 1982, and Subaru, 769, up from 759 on Jan. 1, 1982.

All 12 of those record-breakers increased the number of dealerships since the year began. Four other makes did, too: Peugeot, up 5; Saab, up 3 and Volvo and Lotus, each up 1.

• Ten import makes registered losses during the first half. Lancia is no longer imported, meaning a loss of 141 franchises.

The others with losses were Fiat, down 29; Renault, down 19; DeLorean, down 10; Jaguar, down 9; Datsun-Nissan and Alfa Romeo, each down 4; Audi and Mazda, each down 3, and Aston-Martin, down 1.

Toyota had the most single-line dealerships — 699, or 64 percent of all its franchises. It was followed by Datsun/Nissan, with 662 single-line dealerships, for 60 percent of its total.

Other makes that have a strong single-line dealership network are Honda, 386 outlets, for 48 percent of its total; Subaru, 299 outlets, 39 percent; Mazda, 105 outlets, 13 percent; Fiat, 94 outlets, 20 percent; BMW, 85 outlets, 21 percent; Volvo, 84 outlets, 21 percent; Mercedes-Benz, 79 outlets, 19 percent, and Jaguar, 64 outlets, 30 percent.

Concessions win new V-6 for Ford Lima engine plant

LIMA, O. — Ford Motor Co. will build a new V-6 engine for a new generation of front-wheel-drive cars at its Lima plant, according to John A. Betti, vice president, power train and chassis operations.

The plant could build 500,000 engines a year, providing jobs for 800 to 900 Ford hourly workers and about 150 salaried workers. Production could begin in 1985 for the 1986 car.

Betti said production of the engine depends on final approval of the new-car programs which would use the new V-6.

Workers at the Lima plant voted in late July to make work-rule changes to get the job. Ford had also offered the production to the Cleveland Engine Plant No. 2, but workers there voted down work-rule changes in June, forcing Ford "to look for an alternative," a company spokesman said.

"The work-practice changes agreed to by the union, the workers and the plant management are an important step in becoming competitive here in Lima," Betti said.

"But in one sense even more important than the specific changes agreed to and then ratified by the union membership, was the implicit declaration that this plant has joined together as a team to become more productive and, therefore, more competitive.

"It's clear that there is recognition here, that the only way to secure jobs . . . for workers and management alike — is to meet the competition head on."

Workers at Lima agreed to reduce the number of job classifications at the plant. They eliminated the tool and die welders, the gauge makers and the power tool repair classifications by attrition, according to Richard Ward, president, Local 1219. They also voted to combine the shipping and receiving checkers.

Former Texas GM dealer pleads guilty to mail fraud

WICHITA. — Former General Motors dealer Tony D. Moore pleaded guilty to five counts of mail fraud in U. S. District Court here.

The former Washington (Kans.) Chevrolet - Oldsmobile dealer and two former employes of Moore Motor Co. were indicted in May on fraud charges. They were charged with submitting fraudulent loan applications to General Motors Acceptance Corp. for vehicles already on lease contracts, netting more than $9 million.

One of the other employes, Brad Russell, also pleaded guilty to several charges of mail fraud. A sentencing date for Moore and Russell will be set at the end of August following a pre-sentencing investigation. Each mail fraud count carries a maximum penalty of a $1,000 fine and five years in prison.

Several additional counts of mail fraud and bank fraud against Moore and Russell were dropped in exchange for the guilty pleas.

A third co-defendant, Gregory L. Fell, was given a trial continuation. He was indicted on three counts of mail fraud. A court official said the U. S. Attorney's office is considering deferred prosecution with a one-year probationary program.

In 1981, Moore, 32, was sued by GMAC in an 11-count, $86 million suit arising from the fraudulent loan financing.

GMAC and Moore settled the suit in March this year when Moore admitted liability for a $9.7 million judgment and agreed to transfer all physical assets of Moore Motor Co. to GMAC.

The suit originally charged that Moore, his wife, and other associates defrauded GMAC of up to $35 million. Moore Motor Co., despite its rural location, was one of the largest sales volume dealerships in the state.

Its leasing operation, which extended into four states and touched some 20 others, was said to have been one of the 10 largest lease operations in the U. S.

Moore was the third generation to run the dealership founded by his grandfather 50 years ago.

Cleveland import deal sold to 3 employes

CLEVELAND. — One of the oldest import-car dealerships in the Cleveland area is being sold by Lee G. Seidman to three of his employes, Maurice Berlin, Richard Calder and Leon Sheperd.

Sale of Jaguar-Cleveland Volvo BMW, which had sales of $10 million last year, leaves Seidman, 50, with three other dealerships. They are Bedford Toyota-Volvo, Honda Cars of Cleveland and Porsche-Audi Motors. Seidman said sales last year for his outlets totaled $32 million.

Bob Sharp Datsun adds Ferrari franchise

DANBURY, Conn. — Bob Sharp Motors (Datsun) has added a Ferrari franchise.

The dealership sponsors a Datsun racing team with actor Paul Newman as the leading driver.

NHTSA eases rules for reports on fuel economy

WASHINGTON. — Effective immediately, NHTSA has simplified and shortened its semi-annual reporting requirements for vehicle makers on fuel economy. The agency is adopting the changes it proposed earlier because it believes it is no longer necessary to monitor the industry's progress toward greater fuel economy.

NHTSA will, however, continue to evaluate comments on its proposal — even though it has become a final rule — too see if there are other ways to reduce requirements even more.

But NHTSA disagrees with comments from two consumer groups which argued that the agency should continue to set standards for each model year.

One of the consumer groups, the Center for Auto Safety, has sued the government over its failure to set fuel-economy standards beyond those already in place.

Instead, NHTSA accepted the suggestion made by Ford Motor Co. to put the proposal in effect at once while seeking additional ways to lessen the burden on industry.

Cable not taking other media funds

DETROIT.—Contrary to some reports, Cable TV has not cut into any competing media budgets, Detroit ad managers say.

David C. Martin, senior vice president, broadcast media, Campbell-Ewald, summed up the consensus in saying: "Not one dollar (for cable) has come out of any other media budget."

Currently, it ranks near outdoor and direct mail at the low end of the priority list.

U. S. AUTO MARKET OUTLOOK: A COMPOSITE OF CALENDAR YEAR SALES FORECASTS

(IN MILLIONS)

	1982			1983			1984			1985		
	Car	Truck	Total	Car	Truck	Total	Car	Truck	Total	Car	Truck	Total
Davis	8.2	2.5	10.7	9.0	2.7	11.7	10.0	2.9	12.9	10.5	3.0	13.5
Eisenberg	8.1	2.6	10.7	10.0	3.0	13.0	11.0	3.6	14.6	12.0	3.9	15.9
Hammond	8.0	2.5	10.5	9.3	2.6	11.9	10.4	2.9	13.3	10.8	3.2	14.0
Healy	8.2	2.6	10.8	10.2	3.0	13.2	11.6	3.6	15.2	11.6	3.6	15.2
Heinbach	8.0	2.6	10.6	9.5	3.0	12.5	10.5	3.3	13.8	11.5	3.5	15.0
Jouppi	8.0	2.6	10.6	9.1	2.9	12.0	10.2	3.2	13.4	11.5	3.2	14.7
Keller	8.0	2.6	10.6	9.3	2.8	12.1	10.3	3.0	13.3	.....	....	.....
Pochiluk*	8.2	2.3	10.5	9.8	2.8	12.6	11.1	3.2	14.3	11.1	3.1	14.2
COMPOSITE	**8.1**	**2.6**	**10.6**	**9.5**	**2.9**	**12.4**	**10.6**	**3.2**	**13.8**	**11.3**	**3.4**	**14.7**

*Note: The Pochiluk truck number is light trucks only and is not included in the composite. Totals may not add due to rounding.

Legend: Davis: Arthur G. Davis of Prescott, Ball & Turben Inc.; Eisenberg: David Eisenberg of Sanford C. Bernstein & Co. Inc.: Hammond: John Hammond of Data Resources Inc.; Healy: David Healy of Drexel Burnham Lambert Inc.; Heinbach: Harvey Heinbach of Merrill Lynch Pierce Fenner & Smith, Inc. Jouppi: Arvid Jouppi of Arvid Jouppi Associates, Inc. Keller: Maryann Keller of Paine Webber Mitchell Hutchins Inc.; Pochiluk: William R. Pochiluk Jr. of Chase Econometrics Inc.

Arthur G. Davis: "1983 sales could be 9.3 million if GM cuts small car prices a minimum of $500 by December and others follow."

David Eisenberg: "It will be a smooth recovery for cars. It will be a stretch to 10 million in 1982, I think, but our economist is even higher, he sees 10.5 million."

Forecast panel predicts 1983 auto sales upswing

By Edward Lapham
Financial Editor

It has not been a particularly good year for experts who make a living forecasting the auto market.

The stubborn U. S. economy, like an impudent child who refuses to do chores, has not helped. Crystal-ball gazing indeed has become a shadowy, if not hazardous, occupation.

The second annual AUTOMOTIVE NEWS survey of leading market forcasters finds views about the auto industry and its sales outlook relatively bullish, although there are a number of differences of opinion, as might be expected.

In the first survey one year ago (Marketing '82, Aug. 17, 1981) participants all over-estimated the sales outlook because of unforeseen stagnation of the nation's economy and the havoc it has wreaked in the motor trade.

In fact, for the current year, which the panel now forecasts at a composite 8.1 million car and 2.6 million truck sales, the composite view at this time last year was nearly 10.8 million car and 3.1 million truck sales.

Arthur G. Davis, analyst at Prescott, Ball and Turben, by way of his low-ball estimate last year, was closest. However, his 10 million unit car sales forecast likely will be about 25 percent too high. The high-end forecast for 1982 last year was 12.5 million car units by J. D. Power & Associates, which is not included in this year's panel. That forecast undoubtedly will miss the mark by more than 50 percent.

Even with this sort of distressing experience, the panel again has offered its forecasts for the next three years — confident, or perhaps just hopeful, that the U. S. economy will improve before long.

Six of the eight panelists are Wall Street analysts who routinely deal with issues and topics of greater scope than total sales forecasts. Model mix, market shares and a host of financial considerations generally take precedence over generating a straightforward market outlook.

Maryann N. Keller, Paine Webber Mitchell Hutchins, makes it clear she does not believe long-range forecasts are all that accurate or, for that matter, useful.

"Doing a long-range forecast much beyond the current year can be very dangerous because things can change quickly," Keller explains. "It's all too easy to hang yourself after even only a month.

"Forecasting, particularly economic forecasting, assumes that events in the future will happen like they did in the past, and that isn't necessarily true. We are in a period of change," she says.

In looking at 1983, the panel has a car sales range of 9 million to 10.2 million units with Davis again at the low end. David Healy, Drexel Burnham Lambert auto analyst, proposes the high number. The 1983 composite forecast for the entire panel is 9.5 million car sales.

U. S. auto makers themselves have become leery of public forecasting, except perhaps as year-end ritual. However, as a frame of reference for the AUTOMOTIVE NEWS panel, General Motors Vice President and Chevrolet Division General Manager Robert Stempel recently told a group of reporters he expects 1983 car sales to fall within a range from 8.5 to 9.5 million. Ford planners are working with a forecast of about 9.5 million units, AUTOMOTIVE NEWS sources say, while Chrysler Corp. planners are taking a more conservative approach, working with a forecast of about 9 million car sales.

All the forecasters agreed on one very basic tenet: The long over-due car sales recovery depends on a smooth economic recovery, but it is coming.

David Eisenberg, Sanford C. Bernstein & Co., sees a "smooth recovery" for cars in 1983. "It'll be a stretch to 10 million," Eisenberg says. "Our (company) economist is even higher. He sees 10.5 million."

Eisenberg says "trucks have had a pretty nice recovery already" and he expects "gradual" improvement beyond 1982.

Davis, a perennially cautious forecaster, explains his 1983 forecast this way: "1983 sales could be 9.3 million if GM cuts small-car prices a minimum of $500 by December and others follow. If not, it will be a slow recovery with sales of only about 9 million units." Of that total, Davis estimates 6.4 million will be domestics and 2.6 million imports.

William R. Pochiluk Jr., Chase Econometrics, agrees that pricing is important. "A slow recovery has been built-in by the auto manufacturers," Pochiluk suggests. "A robust recovery is not possible because of the manufacturers' desire to get well quickly by improving their margins through price increases. They've been very sick and they need help."

Pochiluk, one of the two econometricians on the panel, has a higher 1983 forecast than Davis, however, at 9.8 million units.

John Hammond, Data Resources Inc., is the other econometrician on the panel. He agrees there will be a cyclical recovery over the next three years, but his outlook for 1983 is slightly different than Pochiluk's.

"The recovery will be more modest than in previous years," says Hammond, who pegs 1983 car sales at 9.3 million units. "Consumer balance sheets are in incredibly good shape, except as impacted by inflation. The question is not if the consumer will be able to come back into the market but if he has the willingness to come back in," he says.

Hammond believes larger domestic models will lead the auto recovery.

Keller's 9.3 million-unit car forecast for 1983 is in line with Hammond's, although her 2.6 million-unit truck forecast is stronger than Hammond's 2.6 million outlook.

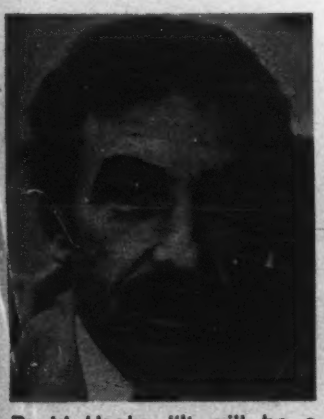
Healy, the high forecaster for 1983 and 1984, is straightforward about his relatively optimistic outlook. "It will be a fairly classical cyclical recovery once it gets started, right through 1985 where there may be a flat spot," he says. "I'm fairly bullish about the prospects for recovery."

While there is general agreement that sales will improve consistently through 1985, Healy's "flat spot" is not a consensus.

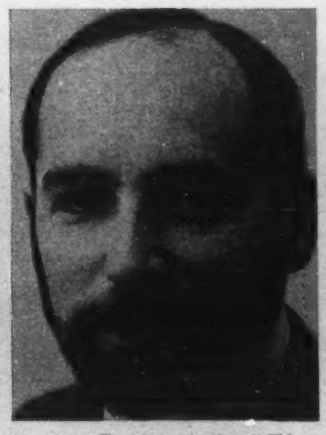
Arvid Jouppi, Arvid Jouppi Associates, at 9.1 million units for 1983, is on the conservative side but still optimistic. "The next five-year period, from 1982 to 1986, will be a good period with total U. S. car and truck sales of about 64.4 million units compared with 66.6 million units in the preceding period," Jouppi says. "It will be a flatter cycle but generally up through 1985. There will be a modest down cycle in 1986, but not a precipitous fall."

Harvey E. Heinbach, Merrill Lynch Pierce Fenner & Smith, at 9.5 million car sales for 1983, expresses a slightly different view: "The U. S. car market is near the start of a three-year up-cycle which will continue through 1985, assuming there is a consistent economic recovery. In 1986 it will drop like a rock. We need a significant drop in real interest rates — that's the

Continued on Page E-6



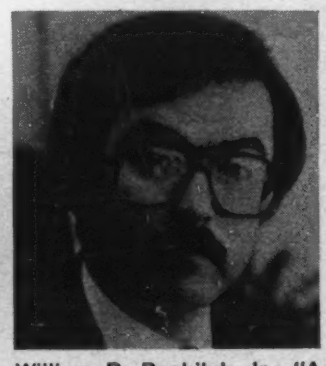
David Healy: "It will be a fairly classical cyclical recovery once it gets started, right through 1985 where there may be a flat spot. I'm fairly bullish about the prospects for the recovery."



Harvey E. Heinbach: "The U. S. car market is near the start of a three-year up cycle which will continue through 1985, assuming a consistent economic recovery."

Arvid Jouppi: "The next five-year period, from 1982 to 1986, will be a good period with total U. S. car and truck sales of about 64.4 million units compared with 66.6 million the preceding 5 years."

Maryann N. Keller: "Doing a long-range forecast much beyond the current year can be very dangerous because things can change quickly. It's all too easy to hang yourself after even only a month."

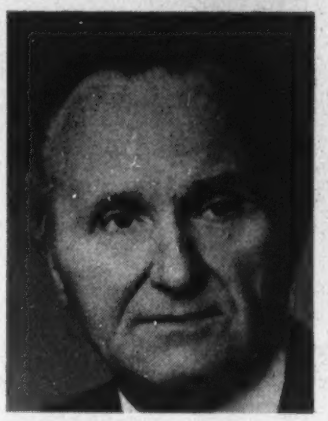


William R. Pochiluk Jr.: "A slow recovery has been built-in by the manufacturers. A robust recovery is not possible because of the manufacturers' desire to get well quickly by improving their margins through price increases."

View from the top

The view from the top of an auto company's marketing organization is far-reaching—scanning sales, advertising and merchandising, as well as marketing. In the following articles, Industry Editor Al Fleming focuses in on that high-level view from the vantage point of five Detroit area-based auto companies and their top marketing/sales executives: General Motors—Robert D. Lund, vice president-sales and marketing staff; Ford Motor Co.—Philip E. Benton Jr., vice president-sales operations, North American Automotive Operations; Chrysler Corp.—John K. Givens, vice president-marketing, sales and marketing group; American Motors—Joseph E. Cappy, vice president-marketing group; Volkswagen of America—Peter Weiher, executive vice president-sales and marketing, and James R. Fuller, vice president, Volkswagen Division.

GM
Robert Lund



Robert Lund

DETROIT.—Problems are opportunities to Robert D. Lund, and General Motors abounds with both as the 1983 model year draws near.

Lund, promoted from general manager of Chevrolet Division to vice president in charge of GM's marketing staff six months ago, hardly has dipped his feet in the corporate waters after years working at the operating level in sales posts, then as general manager of Cadillac and Chevrolet.

From his new position, the renowned super optimist sees things this way as marketing coordinator of the No. 1 auto maker in the world:

• There still is a way to go before Americans gain the confidence to buy cars in numbers that satisfy auto makers. "Overall economic circumstances haven't changed much this year; we still face the problem of generating consumer confidence," he stresses.

• GM has failed to cash in on its huge new-product investments during the 1980s. "It's difficult to understand our not penetrating the marketplace in view of the investment in new vehicles we've brought out," he says.

• The pendulum is swinging toward performance and pizzazz and away from fuel economy. "The automobile business lives a life of cycles. We've swung to fuel economy, now back to performance, and the end result probably will be somewhat of a compromise," he says.

• Trying to outsell Japanese imports by offering fully equipped small cars has proved futile. "I guess the market is just not ready for a fully equipped domestic product," he concedes.

• The auto business ought to return to former marketing practices. "We've got to get out of rebates. They become a habit and the withdrawal pains are severe. Future incentives must be more traditional," he says.

• Lund sees the new-car market improving "in an evolutionary fashion" during 1983. He believes there is a demand for new cars, but conditions still are lacking for a boom. "Put together general economic improvement, lower interest rates, decreased inflation and consumer confidence — all the things we've been talking about for two years—and you'll see Americans buying cars in substantially greater numbers," he says. "There really is such a thing as pent-up demand."

According to Lund, GM has not fully capitalized on new products, even though it has gained a percentage point in the market since last year from about 43.5 to 44.5 percent of the new-car market. "That isn't sufficient growth in view of the new vehicles we've brought out," he says.

He refers to a new compact J-car, midsize A-car, sporty F-car, S-line of compact trucks, and several new engines and transmissions. "Those things should certainly have secured greater penetration. It's disappointing," Lund says.

He also is ready to concede that fuel economy is giving way to performance as a sales lure: "Fuel economy is a given today, people expect and get it. A whole generation of people have never owned a convertible, and since the price of gas has stabilized, a lot of buyers are straining at the bit for performance."

On hindsight, he says, overemphasis on fuel economy and under-emphasis on performance hurt the J-car introduction; but the car was a victim of circumstances. "Fuel economy was an absolute must when the J-car was conceived," he says. "By the time of development, we chose economy, which was the right choice. Now the cycle is changing and people want pizzazz, performance, appearance, excitement. The auto industry is basically a fun business, and we lost sight of that for a time."

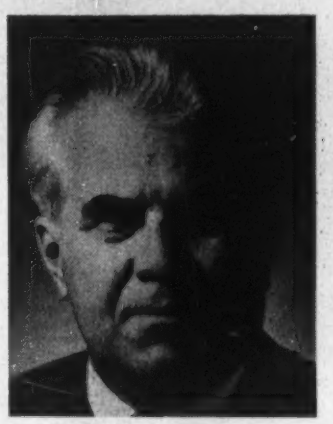
GM came out with equipment-packed J-cars, Lund says, because research proved the Japanese were using the strategy to outsell domestic products. "We thought we could fight fire with fire," Lund says, "but the market changed, and our cars had more equipment than the public wanted. The odd thing is, Americans will buy J-cars and put optional equipment on them; yet they won't buy them standard equipped, even for less money.

"In '83 we'll take a middle of the road policy, give them such things as automatic transmissions, but not window defoggers."

Lund indicates there will be no rebates for new cars in 1983. "Consumers and car dealers constantly wait for the next rebate program, which causes a push-pull effect that's unhealthy and doesn't let normal market forces work," Lund says. "We just have to get out of them."

Instead, he says, GM plans to provide dealers with tried-and-true things such as model-clean-up incentives. "Incentives from manufacturer to dealer work," he says. "Incentives from manufacturer to consumer are not sound merchandising practice."

Ford
Philip Benton



Philip Benton

DEARBORN. — If there is an uplift in the general U. S. economy in 1983, and if the auto market rises with it, the guys at the Glass House here think it couldn't happen at a better time.

The reason: They're in the midst of the biggest new product launch in Ford Motor Co. history, and figure they've got the vehicles to satisfy just about any customer from high-mileage advocates to performance buffs.

That puts Philip E. Benton Jr. right on the hot spot because, as vice president-sales operations, it's his main responsibility to help sell Ford, Mercury and Lincoln products in 1983.

How well he knows.

"For 1983 Ford Motor Co. will have an extraordinarily broad and exciting range of products," Benton says. "You can never give marketers enough new products, but in the year ahead the engineers have come closer than in any year I can recall."

Looking back over his shoulder at three slumping sales seasons in a row for the auto industry, including Ford, he adds: "We need everything the market may demand and there's no escaping that elemental fact. Short term we can market our way through product holes with traditional devices such as advertising, rebates and incentives, but long term the only answer is having the right products."

One of the right products the company has going for it in '83 is Ford Division's Escort, America's best selling car at the moment, and its counterpart Mercury Lynx, Lincoln-Mercury Division's best selling car throughout the '82 model year.

But it's the all-new goodies coming along in the '83 model year that have Benton chomping at the bit. They include a Mustang convertible, a Thunderbird wrapped in a dramatic new envelope, a smaller-size LTD, a bubbleback Mercury Capri, a dramatic Mercury Cougar midsize personal luxury car, an aerodynamically styled Mercury Marquis and lots of new engine, transmission and electronic offerings.

Of all the products, LTD/Marquis and Thunderbird/Cougar well may be the keys to Ford Motor Co.'s success, or failure, in the '83 model period.

Industrywide, large cars are in what's believed to be a short-term period of growth that is offsetting their sharp declines during the fuel-price surge of 1979 and 1980. The question is: How long will people keep buying large cars?

For '83 Ford Motor Co. has elected to build family size cars in two distinct sizes, the new LTD/Marquis and the continued larger Crown Victoria and Grand Marquis.

Benton calls it "bridging the market uncertainty."

The midsize specialty segment of the market, where Thunderbird and Cougar reside, has not received an influx of new products recently. As a result, Benton sees his all-new entries "moving into a segment that's open to and responsive to new designs and sheet metal" in 1983.

Ford marketing strategists have firm ideas about long-term car-size trends. They see three basic patterns: (1) A long-term decline in the large and luxury market. (2) Occasional short-term corrections in the slide of large and luxury cars following excessive short-term fuel-availability and fuel-cost-based declines. (3) Stronger offsetting gains in small cars than in mid-size cars, with smalls overtaking midsize.

Beyond that is the really big question: Has the U. S. new-car market itself reached a saturation point, and has the nation seen the last of its 10-million-unit sales years?

Ford analysts point out that U. S. automotive sales follow short-term cyclical patterns that constantly show upturns following declines caused by depressions, recessions and wars. Combined car and truck sales in 1932 declined 75 percent from the 1929 peak, and the 1958 recession brought a 36 percent decline, yet both were followed by record sales. In 1981 sales were down 30 percent from the 15.4 million cars and trucks sold in 1978, and the recovery still hasn't come.

Benton observes that subsequent recoveries always have exceeded declines, and the trend moves upward: "Today's circumstances — a soft economy, high unemployment, an aging transportation fleet and low consumer purchase rates—are not unprecedented. They're circumstances that have preceded previous upturns in auto sales."

Chrysler
John Givens

HIGHLAND PARK, Mich. — Several years ago Chrysler shaped a product and marketing plan designed to build a new kind of company and product image.

Phase one was introduction of the subcompact Plymouth Horizon and Dodge Omni. Phase two was launch of the K-car, the front-wheel-drive Plymouth Reliant and Dodge Aries. Phase three was debut of Chrysler LeBaron and Dodge 400 front-drive midsize cars.

Phase four comes in the '83 model year with arrival of an E series called Chrysler E-Class and Dodge 600 and 600 ES, fullsize front-drive cars.

"It's all part of our drive for front-wheel leadership," says John K. Givens, vice president-marketing for the corporation. "We also set our sights on leadership in quality, fuel economy and value for the money.

"For '83 our platform will be, 'at Chrysler you get more for your money,' and this will be emphasized in the way we present our cars to the public," he says.

For instance, the '82 Horizon and Omni Miser will be replaced by a car with over $600 in added equipment at very close to the same price as the '82 Miser.

Emphasizes Givens: "In '83 and into the future our marketing platform will be founded on providing cars that offer more value."

He says "Quality engineered to be the best" will be the corporate advertising statement in '83, with each individual brand supporting this position in its own way.

Plymouth brands will offer "Engineered in value" and "The American way to get your money's worth."

Dodge cars will feature "Driving excellence engineered in."

Chrysler brand cars' posture is "Quality and luxury engineered in."

"We're emphasizing the same message on quality and value in our truck marketing programs," Givens says.

"We believe our value for the money position is as good as anyone's, and it will improve significantly in 1983."

The Chrysler official thinks the company has hit the public hot button with its LeBaron and

Continued on Page E-8

Forecast

Continued from Page E-4

biggest caveat."

In the 1984 forecast category, Davis again is low with 10 million cars and 2.9 million trucks, although Jouppi with 10.2 million cars and Hammond with 2.91 million trucks are close. Healy's high number of 11.6 million cars is unmatched, although his 3.6 million truck forecast is equaled by Eisenberg.

The panel composite for 1984 is 10.6 million cars and 3.2 million trucks.

For 1985 Davis stands alone at the low end with 10.5 million cars and 3 million trucks, while Eisenberg's 12 million cars and 3.9 million trucks are by far the highest prognostication for the entire forecast period.

The panel composite for 1985 is 11.3 million cars and 3.4 million trucks.

Keller finally draws the forecast line at 1985. She politely, but firmly, declines to speculate about anything that far over the horizon.

On balance, the panel is optimistic about the future; by 1982 standards, even the lowest forecasts seem bountiful in contrast to current depression-level sales.

Other factors obviously are important, such as what share of total sales will be accounted for by domestic production, how big will the small-car market be and what it all means to that impetuously squirmy trend line which seems to have crawled down the sales page the last few years.

Still, the composite forecast, which reflects an expert consensus about the future, is pretty good.

But then, it was last year too, and that composite forecast for 1982 will miss reality by about 33 percent.

Chevrolet: Media experimentation

By Al Fleming
Industry Editor

Thomas Staudt, general marketing manager of General Motors' Chevrolet Division, the nation's No. 1 seller of cars, is hopped up about advertising costs as marketing plans jell for a new model year. He says, "There is an intense need for greater marketing productivity in our business, and an especially desperate need for mass media to contribute in an all-out effort to avoid further cost escalation."

He adds: "We're unhappy with their (the media's) performance."

As a result, Staudt says Chevrolet is "experimenting with different media in the hope that greater competition will lead to cost reduction."

A victim of that experiment in the '83 model year will be Chevrolet radio sponsorship of Dallas Cowboys football. After nine years of sponsoring "America's team," Chevy is pulling out this fall, Staudt says, "because costs got so far out of line we couldn't justify it."

He calls it "regrettable" because Cowboys broadcasts have been an integral part of Chevy truck market development in the southwest.

"Sports franchises (sponsorship) are becoming a difficult problem for us and the networks because of spiraling costs and fees," he says.

There will not be a radical shift in Chevy's media mix in 1983, although there will be greater use of cable/satellite television. Staudt says, "Cable is becoming a growing media influence, and we want first-hand experience in it. We took a leadership position in (Ted) Turner's cable network with college football. We see more use of cable TV in the future."

A workman puts the finishing touch on Chevrolet's "Pro Football Hall of Fame," a traveling showcase that spotlights pro football's greatest players, personalities and performances. First stop is at the Canton, O., 1982 Professional Football Hall of Fame Festival in August. Six displays will carry a sampling of exhibits from Canton's Pro Football Hall of Fame to more than six million shoppers at 100 shopping malls nationwide during the next seven months.

In marketing plans for the coming year, Staudt says, the division is trending away from "scatter" TV programming and is rifling in on media use.

"We'll go for more sponsorship positions and fewer participations, to increase our market presence," Staudt says. That begins in mid-August with TV sponsorship of world championship women's golf. "It's a premier women's sporting event; we're interested in the women's market and want to do substantially more in it."

That does not mean Chevrolet necessarily will leap headlong into women's media. "It's more than media selection," Staudt says. "Our ads aren't slanted toward females; they're straight-forward product messages.

"Besides that, we're stepping up dealer training and merchandising efforts related to women buyers."

Staudt says Chevrolet in '83 will continue sponsorship of Monday Night Football and Baseball (including playoffs), NBC and CBS basketball (including the NCAA playoffs), and will add sponsorships on NBC and CBS pro football on Sunday and prime time Saturday afternoon and college evening football (a total of 35 games) plus Saturday night college football and PBA bowling on cable TV.

In TV sports sponsorship, Staudt says, Chevrolet will have "four to six commercials per game, for more tightly controlled positions."

Most Chevrolet '83 lines will be introduced to the public Sept. 23, with ads and commercials breaking the preceding Saturday (Sept. 18). Exceptions are Camaro which bows later in the fall and Corvette which arrives early in calendar year '83.

"Also, a Cavalier convertible will come later in the model year," Staudt says, "and is expected to create a lot of excitement and build showroom traffic."

Line for line, the division will stick closely to the images it has been trying to project for its various car models. These are:

Caprice—Fullsize room and comfort in gas or diesel; America's fullsize favorite.

Cavalier—A popular compact size in a wide range of models.

Citation—The most popular front-wheel-drive midsize car.

Camaro—Sporty car continuing a very successful season.

Celebrity—Contemporary size, design, technology and fuel economy, gas or diesel.

Chevette—Subcompact with toughness in an economical package, gas or diesel.

Malibu—Intermediate rear-wheel-drive; practical family transportation.

Monte Carlo—Midsize personal car, elegant, economical.

Chevy will introduce a new line of four-wheel-drive S-10 compact pickups and Blazers this fall, and an extended-cab version in the S line. Says Staudt: "Our truck story is heavy on powertrains, new diesel engine applications, new uses of four- and five-speed manual, and four-speed overdrive automatic transmissions, and new S-10 four-by-fours."

Let your fingers . . .

TROY, Mich. — National advertising by five domestic auto companies in Yellow Pages will run about $24 million for 1983, according to the National Yellow Pages Services Assn.

General Motors and its various divisions are spending about $10 million in Yellow Pages ads. (This does not include dealer spending).

Ford Motor's total outlays are about $6.5-$7.0 million, according to Frederick Smykla, executive director of the National Yellow Pages Services Assn.

Again, Chrysler and its divisions are spending close to $4 million; American Motors (including Jeep and Renault) about $2 million and Volkswagen of America (including Porsche / Audi) about $800,000.

Companies are getting more emphasis in ads, with heavier use of display ads and with different color print, Smykla says.

Factory ad spending: Less bang for buck

By Joseph Bohn
Marketing Editor

Domestic auto companies continued to advertise heavily in 1981, even though they did not get quite the "bang for the buck" that they used to.

Generally, spending was at record levels, according to Advertising Age, as various divisions fought for greater share of an overall smaller market.

However larger each company's bottom-line budget, the actual outlays aren't easily measurable.

Ford Motor and Chrysler Corp., for example, showed fewer expenditures on a division-by-division basis for 1981, even though their overall corporate ad budgets were higher.

This is due partially to more money being funneled into their dealer association co-op matching fund and special market support programs. More money, too, is being chewed up these days in production costs which aren't directly measurable.

Overall, General Motors, Ford Motor Co., Chrysler Corp., and American Motors spent $83,652,446 more for advertising in 1981 than the previous year, Advertising Age estimates.

Industry spending totaled $774,253,009 against $710,600,563 in 1980.

GM spent $335,075,800 against $316,000,000 in 1980, Ford spent $264,175,700 against $243,841,600 in 1980. Chrysler spent $174,500,000 against $150,300,000. American Motors spent $50,150,900 against $45,896,300.

Among car divisions, Chevrolet, Ford, Lincoln-Mercury, Chrysler-Plymouth and Dodge, showed cutbacks in measured expenditures last year.

Buick, Cadillac, Olds, Pontiac, GMC and AMC all were up.

Generally, the total of measurable expenditures for the different vehicle divisions (including a corporate effort at Chrysler) was down to $643,595,200, from $665,177,400 in 1980.

Network TV, followed by magazines, continued to dominate as the industry's primary media.

Newspaper, spot TV and spot radio also figured heavily into industry spending, occasioned by a great deal of sudden and short-term promotions such as rebates, which went on.

Network radio and outdoor garnered more modest shares of Detroit's overall budgets.

*—GM's total expenditures in 1981 were $335,075,800, according to Advertising Age, against $316,000,000 in 1980. However, these included $9.5 million for AC Delco, plus a variety of other measured and non-measured advertising/merchandising expenditures.

**—Ford Motor's total expenditures were $264,175,000, according to Ad Age, against $243,841,600 in 1980. They include corporate advertising, and a variety of measured and unmeasured expenditures.

Mixed bag of ad spending by importers

By Joseph Bohn
Marketing Editor

Import-vehicle advertising spending was mixed last year, with some companies boosting budgets modestly as others cut back.

Toyota and Datsun continued to spend big, with more money put behind the truck side of their operations to protect against encroachments from Detroit in the small-pickup market.

If there was any spending zest by the Japanese, it was on the pickup side. They are under voluntary restriction in car sales and contained spending there.

Toyota topped the list of import ad spenders in 1981 with outlays of $91,186,700, according to ADVERTISING AGE. That was up from $85,128,000 in 1980.

Nissan also was up, but just barely. The No. 2 importer spent $68,884,100, up from a previous $67,365,700 in 1980.

By contrast, Mazda was off sharply. It spent a reported $25,648,400, according to ADVERTISING AGE, down from $39,116,000 in 1980. Company officials reported putting more money behind truck models, however.

Honda was up again, but not by much. It spent a reported $23,149,900, up from $22,286,000 in 1980, according to Joseph Haight, ad manager.

Honda's total spending was considerably more, however, if dealer support spending, ad production costs and miscellaneous such as Yellow Pages are factored in.

Its total expenditures for 1981 were $26,737,200, including $209,600 for yellow pages and $3,377,700 for ad production costs. In 1980 it spent some $7.6 million for dealer support which figures in the accompanying table do not include.

In 1982 Honda expects to spend $27,176,000, including $14,835,000 for spot and network TV, $9,030,000 for magazine, $264,000 for spot radio, $764,000 for newspaper, $150,000 for Yellow Pages and $2,133,000 for ad production costs. Dealer support is not included in these numbers.

"We keep it simple," notes Haight, punning on the company's ad theme, and indicating no great shift in media or change of strategy for this year.

The only importer showing large year-to-year increases is Isuzu, still a relative newcomer.

Isuzu spent $9.8 million for advertising and promotion ($600,000 for the latter), according to Fritz Kern, corporate marketing services manager, American Isuzu Motors.

Of the $9.2 million it spent advertising, $6 million was for direct media and $3.2 million for production and dealer support, such as Yellow Pages.

Kern says in 1982 Isuzu will spend $10.6 million, with $8.5 million in direct advertising and $2.1 million in production and dealer support.

The 1982 budget includes $5.4 million for spot TV, $2.8 million for magazines and $300,000 for newspaper.

A lot of the increases for 1982 had to do with Isuzu shifting from a regional marketer of trucks to a national marketer.

It is just establishing a Northeastern retail distributorship, and expects to be selling trucks in 49 of 50 states (Alaska is excluded) by November.

Car retail will continue being limited to 22 states, Kern adds.

Like many Japanese firms, Isuzu turned up the dial on truck advertising. "We went from a 70/30 car versus truck emphasis to 60/40," Kern says.

"It seems to have paid off. Our share of the non-captive compact truck market increased substantially," during March/July. He adds.

On the European side, Volvo, for one, continued to go along at a modest, steady pace.

High-demographic, luxury-type marketers such as Volvo and Mercedes use more vertical publication print where they can reach narrow, specific audiences, thus saving themselves the considerable cost of TV which higher-volume marketers are forced to choose.

Volvo spent some $11 million in 1981, according to industry sources, up from $10.5 million the previous year.

Mercedes-Benz's budget is now split, with truck marketing operations relocated apart from its car marketing headquarters.

1981 DIRECT MEDIA AD EXPENDITURES BY MAJOR IMPORTERS

(IN THOUSANDS OF DOLLARS)

	Magazine	Net. TV	Spot TV	Newspaper	Spot radio	Net. radio	Outdoor	1981	1980

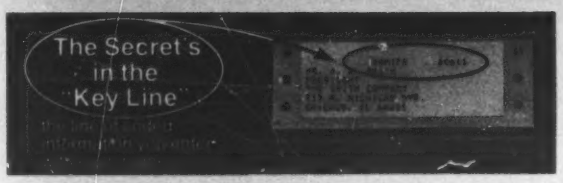
Honda's total car expenditures were $26,737,200, including $209,600 for Yellow Pages ads and $3,377,700 for ad production costs. Dollar amounts are exact, based on direct company reports.

Toyota, Volkswagen, Nissan and Mazda amounts are based on Advertising Age compilations. Subaru and Volvo are Automotive News estimates, based on industry sources.

Isuzu numbers is based on direct factory reports. Isuzu spent $9.8 million in total, including $600,000 for promotion and $3.2 million for production and dealer support such as Yellow Pages.

THE NORCOM™ MAILMASTER™...
it stores, selects and prints mailing lists
and shipping labels
but you'll have to keep your sales and
service managers from fighting over it!



Here's what MailMaster does for you.

You control your customer & prospect lists ... safely ... confidentially ... right in your own office. Every name and address, plus the key information you need on each, is electronically stored on floppy discs: ready for instant selection and print-out on demand.

YOU manage your sales program. MailMaster sorts out the exact customers and prospects you want to reach—based on the "Key Line" information stored with each name—then prints either pressure-sensitive labels or continuous plain paper ... with a carbon copy if you wish. So, you can make a mailing, or assign your sales force to contact just the people you want.

Direct your sales efforts. Don't waste selling time or postage on the wrong people. MailMaster selects exactly the people you want to reach. Instantly. Electronically. At the touch of a button. Then prints out the names you want at one line per second.

Control your operating costs. MailMaster saves you money. First, because it costs only a fraction of the price of even a small office computer. Second, because you don't need a high-salaried computer operator; any office employee can learn to operate MailMaster in just minutes. Third, because you don't need expensive computer software or peripherals; MailMaster is one complete, compact "turn-key" unit. Fourth, because MailMaster keeps your lists targeted to the prospects you select, there's no wasted sales time or mailings.

See MailMaster in action. Fill out the coupon and send it to us. We'll arrange a MailMaster demonstration right in your office, at your convenience. Do it now ... because every day without MailMaster is costing you money!

NORCOM™ Division of MICOM Electronics Corp.
Growing fast in business equipment.

What's the Golden State market really like?

By Matt DeLorenzo
Los Angeles Reporter

"More than just size and geography, California is a state of mind . . ."—Donald E. Petersen, president, Ford Motor Co., speaking before the San Francisco Rotary Club, July 27, 1982.

LOS ANGELES. — The California dream conjures up images of sun-drenched beaches populated by tanned, blond youths who drive imported convertibles.

Although an appealing image —except, perhaps, to domestic car builders—it isn't representative of the lives or car buying habits of Californians.

For many years, auto industry analysts have looked at California as a trendsetter. Although it's true that many new ideas start here, the way cars are used and the reasons people buy them aren't much different than anywhere else in the country.

In a 1980 study of the California market by J.D. Power & Associates, the Westlake Village, Calif., marketing research firm concluded, "Our research indicates that many of the differences that do exist (between California and the rest of the country) are the result of geographical and economic factors rather than a difference in the fundamental nature of the consumers themselves."

The study further pointed out that while there may be demographic differences between consumers in California and consumers elsewhere, these differences are not as great as imagined.

Other findings in the Power study:

- Californians are slightly younger and more likely to have attended college than the typical American.
- Their median income is 15 percent higher than the U. S. average, although the higher cost of living in California tends to act as an equalizer in real purchasing power.
- Their driving habits are very similar to the rest of the country.
- Due primarily to more favorable climatic conditions, Californians tend to keep their cars longer and, as a result, are less likely to be in the new or used car market as frequently as the average American.
- Californians own about the same number of cars as the U. S. average, approximately 540 cars per 1,000 population.
- Family size is slightly smaller in California than in the total U. S.

If Golden State demographics and vehicle use patterns are so similar to the rest of the country, why is the auto industry seemingly preoccupied with California and its importance to marketing strategy?

"One reason is its size," Donald E. Petersen, president of Ford Motor Company, pointed out in a recent speech before the San Francisco Rotary Club. "Within the nearly 160,000 square miles of the country's most populous state are three of the largest car and truck markets in North America — San Francisco, Los Angeles and San Diego. Nearly 17 million of the estimated 160 million cars and trucks on American roads today are registered in California. And in 1981 over 10 percent of all new cars and trucks registered nationally bore a California license plate."

The state's sheer size and diversity lead one marketing executive to refer to California as a country rather than a state—a country that is in essence a microcosm of the total U. S. market.

That microcosm is the result of the high proportion of Californians who have moved to the state from other areas of the U. S., bringing their buying habits and tastes with them.

Even though they retain certain purchasing traits developed elsewhere, these Californians are a bit different than the neighbors they left behind. "Attitudinally, they are different," declares J. David Power Jr., president of Power & Associates. "They picked up stakes and moved out here. As a result, they are more receptive to change and new ideas."

Ford's Petersen agrees: "To me—and to Ford Motor Co.—California represents an openness to new ideas, a willingness to try fresh approaches, a spontaneity and a generosity of spirit—even a little healthy irreverence.

"We also realize that California is a mirror of the future," Petersen says, "a bellwether state for the nation as a whole."

It is the nature of the California market—the willingness to accept change—that makes it important for auto manufacturers to read California as a barometer of what is to come for the U. S. as a whole.

The success of imports in California is a classic example. "Historically, California has led in import car penetration by roughly two to one compared to the total U. S.," the Power California study reported. "For Japanese imports, which have captured roughly 70 percent of California's import market share, California has proved to be the ideal beachhead for further import car penetration in the U. S."

Other	3%	3%

Source: J. D. Power & Associates.

"We should have seen it coming," admits Petersen. "We should have been watching what was happening in California." He notes that in 1965 imports held 6 percent of the U. S. car market, but in California the number was 12 percent. Last year imports took 48 percent of the California market, while increasing their total U. S. penetration to 27 percent.

"One can't argue with results," Petersen says. "In 1965 the domestic producers cornered roughly 90 percent of the California car market. Today we're sharing half of it with the imports."

While domestic manufacturers have a long way to go to win back market share from imports in California, the car companies are closely monitoring the buying preferences of the state's consumers in order to gain an advantage over their competitors and to avoid being aced out of the new or emerging market segments.

As shown in accompanying charts from the Power survey, the model mix of principal cars owned by Californians is wider than that of the total U. S. Californians prefer more two-door and sporty-type vehicles compared to the average U. S. owner, and are skewed slightly more towards pickup and utility vehicles.

In their household fleets, Californians own a wider variety of vehicles, with more emphasis on sports and recreational models than the average U. S. household.

The response to California's, and eventually the nation's shift to more specialized vehicles is evident in offerings by both importers and domestic manufacturers.

American Honda is heavily promoting its ATC (all-terrain cycle), Toyota is readying a four-wheel-drive small wagon and all import companies are pushing small trucks. Minivans are on the horizon from both import and domestic makers.

Among domestic producers, Ford Motor Co.'s Ranger and General Motors' S-10/S-15 small trucks are responses to the success of little import pickups which have sold very well in California. Chrysler Corp.'s Dodge Rampage, a downsized, front-wheel drive version of the Ford Ranchero/Chevrolet El Camino sporty truck genre, was developed as a prototype in California and has done well in all markets.

Domestic manufacturers not only are responding with new models, but are putting product features Californians prefer incorporated into traditional car lines.

The Power study found that California consumers give higher importance ratings to advanced engineering and horsepower/performance when compared to the total U. S. market. They also express greater interest in electronic fuel injection, diesels and turbocharged engines.

In talking about Ford's 1983 model lineup, Petersen says the new cars will combine performance, exciting hardware, style and function.

"They will feature fuel injection, turbocharging, five-speed transmissions, anatomic seating and superior instrumentation," Petersen said during his West Coast visit. "The aim: To capture the upscale, discriminating buyer who wants driving to be an exhilarating experience. They will be high-tech and dramatic, and they will make a clearly defined statement about the people who drive them."

- If California is a precursor of what is going to happen across the U. S., a look at this year's January-May sales pattern may give a hint of things to come. During that period almost 11 percent of all cars sold in the U. S. were sold in California.

According to an analyst using R. L. Polk data, small cars (subcompact and small sporty cars) took 53.4 percent of the market in California compared to 43.5 percent nationally. Both basic small and small sporty were significantly higher than the national average with small sporty models, such as Ford's EXP/LN7 and Chrysler's 024/TC3, taking more than 19 percent of total sales.

In midsize and large segments, California lags behind the national average 32.4 to 39 percent and 4.2 to 10.4 percent, respectively. However, in the luxury car category, California led the nation, 10 percent to 7.1 percent.

Clearly, the trend is toward smaller, sportier cars, and products recently or about to be introduced reflect those findings.

While imports continue to hold an impressive share of the California market, domestic makers may choose to gauge the success of their products by their performance in California.

According to a Ford analyst, the company's 13.4 California share equates to 80 percent of its national 16.8 percent market share.

GM's ratio is 70 percent with a 31.5 percent California share, and 44.7 percent national. Chrysler's 6 percent California and 9.9 percent national share figures out to a 61 percent ratio. American Motors has .6 percent of the California market compared to 1.3 percent nationally for a 46 percent ratio.

Imports, on the other hand, do 176 percent better in California than in the rest of the country, with 50.2 percent here compared to 28.5 percent nationally.

"It is fair to say that we look at California as our 'golden gate' to future successes in the U. S. market," Petersen said during his San Francisco speech. "The lessons of the past couple of decades have painted a very clear picture: To compete successfully in the U. S. market, a company — and its products — must score significant successes on California soil."

Put more succinctly by a Ford analyst: "California only gets 10 percent of the market, but it gets more than 10 percent of the attention."

The Orange County Register, one of California's largest newspapers, launched Operation Cleansweep, a six-week campaign to promote sales of new cars in conjunction with the Motor Car Dealers Assn. of Orange County. Joe MacPherson, president of the dealer group, and Howard Grothe, vice president—sales for the Register, look over promotional materials.

Al Wagner, right, Chrysler's San Francisco zone manager, cautions Ed Barwick, Barwick Chrysler-Plymouth, Napa, before he drives a peppy new Plymouth Turismo 2.2 around Sears Point International Raceway with Bernie Storc, standing left of car. Awaiting their turns to drive are, from left: Ron and Bert Barber, Barber Chrysler-Plymouth, Vallejo, and Gary Berger, general manager, Mike Harvey Chrysler-Plymouth, Burlingame. The special driving seminar at the Sonoma racing facility was sponsored by the zone.

Garageable

1984 Chrysler mini van

Chrysler Corp. will be the first domestic maker to offer a mini van, this T-115, the so-called "garageable" van, which will be introduced in 1984. Production will begin in late 1983 at Chrysler Canada's Windsor plant. It will be the first vehicle offered by Chrysler with a 10-year corrosion protection plan.

U. S. sales per dealer drop; Olds turns in best average

By Jenny L. King
Staff Writer

Oldsmobile dealers continued to lead the domestic makes in average sales per outlet for the first half of 1982, marking their second consecutive year in that position since wresting it away from Chevrolet dealers the first half of 1981.

Chevrolet had been on top for 21 consecutive years prior to 1981, and this time around its sales force found itself tied for second place with Buick.

Average sales of domestic units per new-car dealer in the first half dropped to 139 from 149 a year ago, in spite of the addition of Volkswagen dealers and their VW sales. VW has been included in the domestic sales-per-dealer tabulation since the end of calendar year 1981.

Two years ago, the average per outlet for the first six months was 144. Low in the past decade was 132 in 1975. The best average was 205 in 1973.

With the U. S. dealer population continuing to decline and domestic new-car sales trailing the first half of 1981 by 11 percent, the major auto makers all dropped in averages per outlet.

General Motors slipped to 171 from 182 for the first six months. Ford Motor Co. dealers were squeezed back to 124 from 127 per outlet.

Chrysler Corp. dealers averaged 95 sales per outlet, down from 105 a year earlier. American Motors plunged to 30 from a 46-sales-per-dealer average. Volkswagen dealers averaged 80 sales per outlet in the first half of 1982 (they were not included in the first-half domestic analysis in 1981). The VW average includes sales of German-built cars as well as U. S.-built Rabbits.

• Of the 14 makes, Oldsmobile earned the top spot with 129 sales per outlet, down from 140 a year earlier. Buick tied Chevrolet for second place. In fact, Buick dealers were a few tenths of a unit ahead of the Chevrolet group. Buick was down from 126 to 123 per outlet; Chevrolet dropped from 137 to 123.

Ford continued in fourth place, slipping to an average of 101 from 107. Pontiac was fifth, down to 85 from 93. Volkswagen moved onto the chart in style, capturing sixth place with 80 sales per dealer.

Cadillac climbed to 11th with 31 sales per dealer, followed by Lincoln and AMC tied for the No. 12 spot and 30 sales per outlet. Imperial averaged just four sales per franchise during the first six months of this year, down from 7 in 1981.

The Oldsmobile Cutlass Supreme (coupe and sedan combined) was the top-selling nameplate in sales per dealer during the first half of 1982, with an average of 48 per outlet. Second to Cutlass Supreme was VW's Rabbit, with an average of 47 sales per dealer. Standard Cadillac was third at 45 per outlet, followed by Oldsmobile's 88/98 with 43 per dealer.

Fifth was Buick Regal (sedan and coupe), averaging 39 sales per outlet, followed closely by Ford Escort at 38 per outlet; Plymouth Reliant at 30 per outlet; Buick (Electra-LeSabre) at 28; Buick Skylark at 27, and Dodge Aries at 23 sales per dealer.

• A year earlier the leaders were: Oldsmobile Cutlass Supreme, standard Cadillac, Plymouth Reliant, Chevrolet Chevette, Buick Skylark and Regal (tied for fifth), Oldsmobile Cutlass (sedan), Ford Escort; Plymouth Horizon and Dodge Aries (tied for ninth) and Chevrolet Citation.

Nameplate leaders by market segment this year were: Subcompact — VW Rabbit, 47; compact — Plymouth Reliant, 30; Intermediate—Cutlass Supreme, 48; standard-size — Oldsmobile

First World Expo is the focal point of Automotive News Week in Detroit

Automotive News Week in Detroit activities will reach a crescendo tomorrow (Aug. 24) with the opening of Automotive News World Expo at Cobo Hall.

The World Expo, which is expected to attract thousands of automotive OEM executives from around the world, will be the first international buying-and-selling auto industry trade fair ever held in the U. S.

Automotive News Week got under way Sunday evening with the opening of the seventh annual Automotive News World Congress at the Westin Hotel in Detroit's Renaissance Center. Keynote speaker was F. James McDonald, president of General Motors, who discussed "Gaining the Competitive Edge."

Social event of the week will also be tomorrow when the World Congress will be opened to all the executives attending the World Expo for a Tuesday Evening Gala.

Registrants and non-registrants alike will have cocktails, dinner and hear presentations by Eberhard von Kuenheim, chairman, board of management, BMW, and Charles M. Jordan, director of design, GM.

Von Kuenheim's topic will be "What Will Assure Future Success in the Industry," while Jordan will take a look at "Design in the 1990s."

Price for non-registrants is $30, which includes cocktails at 5:30, dinner at 6:15 and the program, which begins at 7:30.

The gala will be held in the Renaissance Ballroom at the Westin Hotel. For information, call the Automotive News World Congress registration desk at the hotel at (313) 259-9329.

While the Automotive News World Congress has established itself as a unique international forum for the exchange of ideas and information, the Automotive News World Expo will bring together for the first time in any organized way in the U. S., buyers and sellers from around the world.

Thirty-three vehicle manufacturers are staffing offices at the World Expo with buying teams. More than 150 exhibitors from around the world will display and sell components, materials, machinery and services.

A major innovation at the World Expo will be a computerized Match-Maker Service, designed and programmed by IBM Corp. in cooperation with Automotive News. This is the first attempt in the world to match suppliers, distributors and manufacturers' reps by computer at a trade show.

Cobo Hall, site of the World Expo, has been designated an international free-trade zone during the Aug. 24-27 show dates, allowing overseas exhibitors to ship their products duty-free.

The World Expo will also feature an International Business Center, designed to assist participants from more than 16 foreign countries in conducting business. Services include a separate registration area for non-U. S. participants, interpreters, a Telex machine, a directory of hotels and/or booth numbers of international guests and a Department of Commerce trade specialist who will assist visitors in making contacts with American suppliers.

Pontiac 6000 STE set for fall debut

PONTIAC.—Pontiac's new 6000 STE (special touring edition) model, due this fall, will be available as a four-door sedan only, powered by the high-output 130-HP version of Chevy's 2.8-liter V-6 with three-speed automatic transaxle. Other features of the European-type sedan are six headlamps, wide body-side moldings, cast-aluminum wheels, special bucket seats and a programmable driver information center.

'E' bodies roll

Chrysler launches phase four of FWD plans

Harold K. Sperlich, president, North American Automotive Operations, Chrysler Corp., describes the company's new front-drive E-body cars, the Dodge 600 and 600 ES (shown) and the Chrysler E Class, during production launch ceremonies last week at Chrysler's Jefferson Ave. (Detroit) plant. Story on Page 3.

Administration takes a different tack on high-altitude standards

EPA moving to ease clean-air rules

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — There is, as the saying goes, usually more than one way to skin a cat.

The Reagan Administration, its plans for helping the auto industry through changes in the Clean Air Act foundering, is preparing to provide nearly the same amount of aid to the industry by way of administrative fiat.

According to reliable sources, the EPA is nearing completion of a regulatory relief package that should address two of the auto industry's primary sources of concern for the immediate future — the 1984 high-altitude emission standards and the 1985 diesel particulate standards.

The 1984 high-altitude standard requires that all cars and light trucks be capable of meeting low-altitude emission standards at all altitudes. The auto industry claims this requirement will cost it millions and may well jeopardize the future of high-mileage, low-power vehicles.

Clean Air Act admendments being pushed by the Reagan Administration, the auto industry and their congressional supporters in the House would alleviate those concerns by establishing proportional high-altitude standards and allowing an exemption for low-power, high-mileage cars.

As chances of this legislation passing appear to be slimming, however, the EPA has swung into gear.

It will shortly propose, based, according to sources, on a "tortured" reading of the current Clean Air Act, to redefine the high-altitude areas as only those regions located between 4,000 feet and 6,000 feet, ruling out the high-altitude requirements for those areas already in compliance with ambient air quality standards.

EPA also will propose that low-power, high-mileage vehicles be exempted from requirements of the act based on its interpretation of the law that "it never intended that high-mileage cars be eliminated at both high and low altitudes," as would likely happen if the high-altitude requirement were imposed on them.

EPA will also propose to ease significantly the testing requirements for high-altitude compliance for the manufacturers, accepting in many cases engineering analysis in lieu of full tests.

This package is very similar to a proposal accepted by the Senate Environment and Public Works Committee in its amendments to the Clean Air Act.

That provision, offered by Senators Gary Hart, Colorado Democrat, and Pete Domenici, New Mexico Republican, would establish proportional hydrocarbon standards for cars and trucks and exempt 15 percent of a manufacturer's total car and light-truck production from the high-altitude requirement to cover the low-power, high-mileage vehicles.

The later vehicles would still need to be adjusted for high-altitude operation, however.

The House Energy and Commerce Committee, working on its own version Clean Air Act amendments, just last week rejected this proposal for one establishing full proportional standards and a wider exemption for low-power vehicles.

• The EPA proposal to redefine the high-altitude area to 4,000 to 6,000 feet is significant, because it will permit nearly all U. S.-made cars to meet the low-altitude standards at high altitude without modification now

Clean Air Act changes back on House track

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — An industry-backed coalition of House Democrats and Republicans seeking changes in the Clean Air Act got itself on track last week, rolling with ease over a largely Democratic group seeking only a "fine tuning" of the legislation.

At press time, the group had completed final drafting of provisions aimed at easing emission requirements on autos and trucks and had but a few, though "critical," measures yet to deal with before reporting the bill out of the House Energy and Commerce Committee.

Should the committee indeed report the bill, it would mark a stunning reversal of the situation earlier this year when the forces led by Rep. Henry Waxman, California Democrat, pinned the industry group down for three months with surprising victories on issues near and dear to certain key House Republicans supporting the industry and the Administration.

Still, the emergence of the industry backed coalition has not come without its price, particularly in regard to emission requirements on autos and trucks.

Waxman and his supporters forced them to back off from their request for tailpipe standards of 0.41 grams per mile HC, 7.0 CO and 2.0 NOx, elimination of California rights to enforce its own warranty program, changes that would have made recalling cars nearly impossible, substantial easing of anti-tampering regulations, a limit of 5 years or 50,000 miles for recall liability and substantial easing of certification requirements.

• What the industry won is substantial, however. Emissions standards for cars would be 0.41/7.0/1.0 with a 1.5 NOx standard for diesels through 1986 provided the particulate standard remains at 0.6 gpm. Should

BL sends the Mini back to Italy

BL has reintroduced its Mini in Italy—possible because Innocenti lost the rights to the name when it stopped using the BL engine and transmission in its Mini. Innocenti's small car is now called the Innocenti 3 (the 3 stands for the Daihatsu 3-cylinder engine). BL Italia forecasts 4,000 Mini sales in its first eight months.

IH restructures again in new bid to survive

CHICAGO. — In its second major corporate restructuring in less than a year, International Harvester has taken a new approach to survival in the manufacture of trucks and farm equipment.

The company is being reorganized into a Truck Group, an Agricultural Equipment Group and Administrative Services Group. A new Diversified Group has been established to handle the planned disposal of various operations, one of which is its construction-equipment business.

Under changes made last year, Harvester was organized into a Manufacturing Group responsible for all North American manufacturing operations, a Truck Group responsible for truck sales and overseas manufacturing, and an Equipment Group responsible for farm and construction-equipment sales and overseas manufacturing.

Under the current reorganization, J. Patrick Kaine will become executive vice president for truck and agricultural-equipment operations. He had been executive vice president of the company and president of the Truck Group.

Neil A. Springer, who had been vice president and general manager of North American truck operations, succeeds Kaine as Truck Group president.

• Jack D. Michaels, formerly president of the Equipment Group, has been appointed president of the Agricultural Equipment Group.

Jack D. Rutherford, president of the former Manufacturing Group, was appointed president of the Administrative Services Group, and David G. Sadler, business development vice president for the former Equipment Group, becomes president of the new Diversified Group.

All appointments are effective Sept. 1.

Harvester also said it will close a scientific and technical laboratory at Burr Ridge, Ill. About 135 employes will be let go and the remaining 150 will move to its nearby Hinsdale engineering facility, a spokesman said.

The lab shutdown is part of a previously announced plan to cut 1,200 U. S. staff jobs by Sept. 30 for an estimated annual saving of $50 million, the spokesman added.

On another front, officials of Fort Wayne, Ind., where Harvester has a heavy-truck manufacturing facility, submitted a new $22 million aid proposal they hope will persuade the company to continue operations there.

A $30 million aid plan has been proposed by the City of Springfield, O., where Harvester produces medium trucks.

The company said it plans to close one of its three truck plants in Fort Wayne, Springfield and Chatham, Ont.

White reports 3-month loss of $29.9 million

CLEVELAND. — White Motor Corp. has announced that unaudited financial statements filed with the Securities and Exchange Commission disclose a net loss of approximately $29.9 million for the three-month period ended June 30.

In the first quarter, the firm reported net income of approximately $2.7 million. For the first six months of 1982, White had a net loss of about $27.2 million.

The second-quarter results included an estimated $29.4 million loss on disposal of discontinued operations from the proposed sale of the U. S. assets of White Motor Credit Corp. to AB Volvo or its designate.

In September, 1980, White Motor and White Credit filed for reorganization under Chapter 11 of the Bankruptcy Code. Since that time, White, former manufacturer of heavy trucks and farm equipment, has sold substantially all of its operating businesses except that of its finance subsidiaries.

In August, 1981, Volvo White Truck Corp., a subsidiary of AB Volvo, purchased the principal U. S. heavy-truck manufacturing business and assets.

White Credit has continued to provide dealer and retail financing for Volvo White dealers, under an operating agreement with Volvo White Truck Corp.

White Credit no longer is in Chapter 11 proceedings following confirmation of its plan of reorganization in December, 1981.

Completion of the White Credit sale is contingent upon the parties reaching a definitive agreement by Sept. 30, and obtaining certain approvals including that of the Bankruptcy Court.

Domestic total of 113,139 lowest for period since '58

Aug. 1-10 new-car sales decline

By Jenny L. King
Staff Writer

Early August domestic new-car sales were down for the seventh consecutive 10-day period as the U. S. auto makers suffered their worst year-to-year decline since mid-March.

Domestic sales of 113,139 were down 26.80 percent from 154,572 a year earlier. It was the greatest dip since sales fell 43.99 percent last March 11-20, and it was the smallest total for the period since 107,665 units were reported for August 1-10, 1958.

With eight selling days both years, the daily selling average for the period of 14,142 was down 26.80 percent from 19,322 in 1981.

Year-to-date sales through August 10 totaled 3,477,871, down 12.18 percent from 3,960,192 last year.

General Motors plunged 29.10 percent during the period, with sales of 71,473 this year compared with 100,811 in 1981. Ford Motor Co. results of 23,530 were down 21.66 percent from 30,036. Chrysler Corp. dropped 19.60 percent, to 13,676 from 17,009. It was Chrysler's lowest 10-day total so far this year.

Volkswagen of America was down 19.74 percent, to 2,260 from 2,816, and American Motors sales were estimated at 2,200, down 43.59 percent from 3,900 a year earlier.

DOMESTIC SALES

	Aug. 1-10, 1982	Aug. 1-10, 1981
AMERICAN MTRS.	2,200†	3,900†
Chrysler	3,804	1,536
Imperial	24	92
Plymouth	4,691	7,904
Dodge	5,157	7,477
CHRYSLER CORP.	13,676	17,009
Ford	15,263	21,133
Mercury	6,874	7,754
Lincoln	1,393	1,149
FORD MOTOR CO.	23,530	30,036
Buick	14,460	18,250
Cadillac	5,023	4,343
Chevrolet	27,790	38,852
Oldsmobile	15,130	23,188
Pontiac	9,070	16,178
GENERAL MOTORS	71,473	100,811
VOLKSWAGEN	2,260	2,816
INDUSTRY TOTAL	113,139	154,572

† Estimated

GM earned 63.17 percent of the domestic market in the first August period, down from 65.22 percent in 1981. Ford's share of 20.80 percent was up from 19.43 percent. Chrysler sales accounted for 12.09 percent, up from 11.01 percent. VWoA had 2.00 percent, up from 1.82 percent, and AMC had 1.94 percent, down from 2.52 percent.

Of the 14 U. S. makes, only three reported sales increases. Chrysler was up to 3,804 from 1,536 last year, an increase of 147.66 percent; Lincoln moved ahead 21.24 percent, to 1,393 from 1,149, and Cadillac sales of 5,023 were up 15.66 percent from 4,343.

Plymouth was down 40.65 percent, Imperial was down 73.91 percent and Dodge was down 31.03 percent. Ford was down 27.78 percent and Mercury was down 11.35 percent.

Buick dropped 20.77 percent, Chevrolet was down 28.47 percent, Oldsmobile was down 34.75 percent and Pontiac was down 43.94 percent. AMC dropped 43.59 percent and VWoA was down 19.74 percent.

Giugiaro design, other European product plans outlined

ItalDesign working for Ford — U.S. version of Sierra?

By Giancarlo Perini
Special Correspondent

TURIN, Italy.—Designer Giorgetto Giugiaro, of ItalDesign, is working with Ford.

Two bodies in white of the Escort have been seen in the courtyard of the Italian coachbuilder, and insiders report the two are working on a project to bring out a U. S. version of the Sierra.

The Sierra is Ford of Europe's replacement for the Cortina/Taunus — sized larger than the Escort.

Giugiaro has also worked on a prototype of the Escort Cabriolet on behalf of Karmann—the coachbuilder of Volkswagen convertible fame.

Giugiaro is no stranger to American car design. He has done it for American Motors and is now linked to General Motors through work for Isuzu.

A number of model changes are on the way in Europe.

Rumors here call for a restyled Fiat Panda, with a more aerodynamic front end similar to that of the Project Uno (which is to replace the 127).

In the meantime, a new Lancia is in the works, restyled from the Delta. After that, a notchback Fiat Ritmo is scheduled, with a new front end mated to the current body.

Eventually, the Project Uno generation is to replace the Fiat 127 and an Autobianchi-designed car will replace the A-112. Whether this model will be called an Autobianchi or a Lancia is still uncertain.

• The new Uno model will not be at the Paris show, opening Sept. 30 (where the Sierra, the Citroen BX, the Opel Corsa and the new Audi 100 are to be unveiled), but it is likely to be launched late this year or at the beginning of 1983 — a bit after Mercedes-Benz introduces its new 190 series.

The Uno is almost as long as the 127 it will replace, but is to be lighter (1,550 pounds in its basic version) and to get a drag coefficient of 0.4 or lower.

Lancia has apparently decided to drop plans to add power and performance to the Gama range through fuel injection and turbocharging.

This fall, the more powerful Trevi Volumex is slated to go into regular production. And much farther down the pipeline is a turbocharged Delta with permanent four-wheel drive.

The new Audi 100 (Audi 5000 in the U. S.) is said to have a drag coefficient of 0.3. Audi has also developed a turbocharged 200 series with four-wheel drive, designed to be the fastest sedan on the road, with a top speed around 140 MPH.

• At Alfa Romeo, the present Alfasud range is to be replaced by a new model styled like the Giulietta. The change is slated for no earlier than 1984 — at least one year after the lower-line Alfa-Nissan A.R.N.A. car debuts.

Meanwhile, Alfa Romeo is preparing to launch a diesel version of the Giuletta. Alfa also plans to enter the 2.4-liter segment — recently entered by Rover — with a VM engine installed in the Alfetta.

The company has just introduced its top-of-the-line Alfetta Quadrifoglio Oro in Europe. Its 2.0-liter gasoline engine offers electronic fuel injection (installed since 1969 on its U. S. version). The fuel-injection system on this car has a mechanical cylinder cutoff system for fuel economy.

Because production capacity at the company's Spica plant is limited, the Quadrifoglio with the cylinder cutoff system is for sale only in Italy at this time.

The Quadrifoglio's interior has also been refined for 1982 and electric door locks and seat adjustment have been added.

The small diesel engines are doing well, too—notably the 1.3-liter offered by Fiat in the 127 range. It is now available in a light truck derived from the 127 and called the Fiorino.

Renault is also planning a new small diesel that will probably be fitted in the Renault 9 (similar to the Alliance in the U. S.) and perhaps the 5 (Le Car) starting in 1983.

Retail and wholesale programs abound

GM, AMC, Isuzu offering incentives

By Joseph Bohn
Marketing Editor

Retail and wholesale incentive activities continue briskly, both on the domestic and import sides.

Along with General Motors' new retail program, there are retail and wholesale programs on American Motors cars and trucks and a retail incentive on Isuzu pickups.

GM expanded its dealer incentive to include Cadillac Seville, the A-body models and small and full-sized pickup trucks.

The incentive on Seville includes demos. GM is paying dealers a flat $1,275 for each Seville they retail from Aug. 13 to Sept. 22.

GM calls it the "Silver Certificate" program, and is assigning silver certificates to identify the cars, although this is strictly a dealer incentive (not a consumer rebate).

Meanwhile, dealers receive a $400 incentive on retail deliveries during Aug. 12-31 of '82 A-cars — the Chevrolet Celebrity, Pontiac 6000, Oldsmobile Cutlass Cierra and Buick Century.

GM's previously announced program on '82 Chevrolet Chevette, Cavalier and Citation; Pontiac T1000, J2000 and Phoenix; Oldsmobile Firenza and Omega; Buick Skyhawk and Skylark and Cadillac Cimarron continues through Aug. 31 unchanged. It pays dealers $600 on Cimarron sales and up to $400 on sales of the other lines.

Under the new plan, Chevrolet and GMC dealers also receive up to $350 on small pickups, the S-10 and S-15, from Aug. 13 to Sept. 22.

Non-retroactive payments are as follows: Zero for 0-20 percent of objective; $200 for 20-80 percent and $350 for 80 percent and over.

There's also an Aug. 4 to Sept. 22 wholesale/retail incentive on '81/'82 Chevrolet LUV import trucks.

Dealers can earn $400 on each 2-wheel-drive LUV model or $600 on each 4-wheel-drive model they retail during the period; or they can earn those amounts on each purchase of units from the factory.

They can collect double—once for buying, again for selling—only on Series 12 ('82) models. On the '81 models, they can collect only once, either for buying or selling.

Finally, GM has a retail incentive on the half-ton and three-quarter-ton Chevrolet C-10 and C-20 and GMC C-1500 and C-2500 pickup trucks from Aug. 13 to Sept. 22.

Payments are nothing for 0-20

Continued on Page 44, Col. 1

Small diesel in vogue

Fiat's Fiorino, adapted from the 127 range, is offered with a 1.0-liter gasoline engine or a 1.3-liter diesel. The trend toward diesels is continuing strong in Europe, with Renault planning a small plant for its R-9 and possibly its 5-series cars in 1983. Alfa Romeo is planning to put a 2.4-liter VM diesel in its Alfetta.

First data not so good in 35-MPH crash tests

By Helen Kahn
Washington Bureau Chief

WASHINGTON — Preliminary data on the 35-MPH-and-over crash tests on three '82 models show that one exceeded the 1,000 Head Injury Criteria number used for compliance with safety standards at 30 MPH for the driver and the other two exceeded HIC for the front seat passenger.

More than 1,000 HIC is usually read as very serious injury or fatality.

The '82 Volkswagen Scirocco, tested at 35.1 MPH, showed 1,482 HIC for driver and 683 for the passenger. Chest deceleration — using 60 Gs for acceptable level for 30 MPH under standard 208 — was 54 for the driver and 37 for the passenger.

All four femur loads, right and left, for driver and passenger, were well below the 2,250-pound standards. The Scirocco also passed three other standards usually tested at 30 MPH: 212, windshield mounting; 219, windshield intrusion, and 301, fuel system integrity tested frontally.

The '82 Dodge Omni four-door tested at 35.2 MPH, showed HIC 639 for the driver but 1,703 for the passenger. Chest deceleration was a relatively high 58 for the driver but only 43 for the passenger.

Femur loads were well within range but somewhat higher — 1,450 — for the passenger's right leg. The Dodge passed standards 212, 219 and 301.

The 1982 Saab 900 four-door, tested at 35.3 MPH, showed a 734 HIC for the driver but 1,116 HIC for the passenger. Chest deceleration was well below 60 Gs — 39 for the driver and 35 for the passenger — and femur loads were all low. The Saab also passed standards 212, 219, and 301.

Consortium offers to buy troubled Clenet operation

GOLETA, Calif. — Robert Wallach, president of a New York management consultant firm that specializes in specialty-car makers, said he has made a written offer to buy Clenet Coachworks, the low-volume builder of neoclassic cars here.

He said the offer was made to S. Prestley Blake, financial partner in the Clenet operation. Wallach would head a consortium of buyers.

Alain Clenet, the company's founder, could not be contacted for comment: Phones at the plant have been disconnected, after the court shut down the plant for unpaid rent bills due Blake. Clenet indicated earlier he planned to buy out Blake (Automotive News, Aug. 9), hinting of another partner.

Wallach is believed to be one of several potential buyers investigating a buy into Clenet.

Chrysler betting plenty on its new E-bodies

By Jim Plegue
Staff Writer

Harold Sperlich, president of Chrysler Corp.'s North American Automotive Operations, drove a 1983 E-body sedan to the speaker's podium at the Jefferson Ave. assembly plant in Detroit last week, signaling Phase Four of the company's front-wheel-drive program.

Chrysler will build about 90,000 of the front-drive E-body models — the Dodge 600 and 600-ES, the Chrysler E Class and, beginning in December, the Chrysler New Yorker — at the modernized Jefferson Ave. plant during the '83 model year.

Public introduction for all but the New Yorker version is set for early October.

"We've invested $136 million dollars to make these the most exciting and comfortable cars we've ever manufactured," Sperlich said during the official production launch, predicting that the E-bodies "will become the standard family car of the future."

The E bodies are the largest of Chrysler's front-drive cars, riding on a 103-inch wheelbase and based on a stretched K-car platform. Other K-cars have a wheelbase of just under 100 inches.

Sperlich said E-body production will comprise about 60 percent of Jefferson plant capacity; the balance will be Chrysler compact and other intermediate front-drive cars.

Sperlich announced a few details of the new E-cars. The sporty Dodge 600-ES features blacked-out trim, quick-ratio steering and sport suspension using performance tires, high-rate front and rear sway bars and "high control" shock absorbers.

The Chrysler E Class, a six-passenger sedan, will yield an estimated 32 miles per gallon freeway, 23 MPG city, Sperlich said. The E Class will have standard power brakes, the 2.2-liter K-car engine (which has more horsepower for 1983) and three-speed automatic transaxle.

The E-bodies have 17 cubic feet of trunk space, more than Chevrolet Celebrity or Buick Century (GM's new front-drive A-body cars), Sperlich said.

They represent the fourth step in Chrysler's ongoing switch to

First order of business for '83 ad campaign

Pontiac goal: 2000, 6000 awareness

By Joseph Bohn
Marketing Editor

PONTIAC. — Creating awareness for the 2000 and 6000 is the first order of business as Pontiac kicks off its '83 campaign.

It's indicative of the difficulty these days of getting consumer attention that Pontiac, despite previous heavy ad support, is "nowhere near where we want to be or where we ought to be" on public awareness of these cars, said James Graham, director of merchandising.

For '83, print ads, for example, will feature "Pontiac 2000" and "Pontiac 6000" in big, bold headlines, taking nearly one-third of the top of double-page spreads. The 2000 is Pontiac's J-car; the 6000 is its A-car.

The 2000 and 6000, along with Grand Prix and, later in November, Firebird are the feature cars, receiving the heaviest advertising emphasis this fall.

They were chosen because they best exemplify the division's new theme, "Pontiac. We build Excitement."

It's a theme that represents, as Graham said, more of a philosophy statement than a slogan — one that will stay with the division well into the '80s, as it seeks to recapture the glory years of the '50s and '60s.

• Pontiac has been a division in search of an identity ever since the first oil embargo.

It pulled back too far from its performance image, trying to mirror prevailing attitudes of post-1974, and committed the ultimate sin: Blandness.

"We tried to out-value the low end of the market and . . . to out-velour the top end," Graham observed, and in the process it lost its strong suit—performance.

In seeking to "gain back the old aura . . . (we) had when we were a hot division," Pontiac, as indicated, put its promotional weight behind its "excitement" cars.

Grand Prix will become the early '83 feature car, along with 2000 and 6000. By November, the emphasis will shift to Firebird, 2000 and 6000.

Grand Prix print ads, which also feature the name, say, "There's new excitement in our '83 Grand Prix."

Following an action shot of the car, ad copy talks about the new performance of the 305 V-8. The lack of V-8 availability had been a disappointment to luxury sporty buyers, Graham said.

Print for the 6000 will carry the bold banner "Pontiac 6000" followed by a picture, then the keynote theme, "European performance. American technology. World Class."

Print for the 2000 will carry the banner "Pontiac 2000," followed by a picture of the car, then "5-speed overhead cam fuel injection."

• Bonneville ads talk about its six-passenger roominess and comfort, with interior shots of the car.

Indicative of the ad emphasis, in a budget that is roughly 80 percent TV and 20 percent magazine, Bonneville and the 1000 will receive only print ad support. Other lines will get both TV and print.

Pontiac is creating a syndicated musical special for Jan. 23 which will also feature the new 6000 STE (Special Touring Edition).

The syndicated ad-hoc special airs 8-9 p.m. Sunday, Jan. 23, and will feature a tribute to Americans and their cars: "An affectionate look back at what cars mean to people and what they have meant through the history of the country," said Graham.

The special will feature a roster of top Hollywood names and intersplice filmed segments of the '83 dealer show.

Pontiac, along with AC Delco and GM Parts, will co-sponsor four minutes of national commercial time with Pontiac dealer groups being urged to buy into the remaining four minutes of local market spots.

• Pontiac has tried syndication in the past, with limited success. The capability now of literally creating an ad-hoc fourth network, covering 85 percent of the country makes officials confident of success.

Graham noted that in taking "elements that we're producing anyway (i.e., for the dealer show) and using them for another purpose (the syndicated TV), we're maximizing the value of our investment."

Pontiac will promote the show nationally and has employed an outside national entertainment public relations firm for the purpose.

If the show proves as successful as anticipated, "Be assured we'll do it again," said Graham.

In its regular TV buys, Pontiac made "heavy up-front" commitments on prime time shows and in sports, particularly NFL football.

Graham added, "We hope to spend more (in '83 advertising). We're requesting a greater amount of money."

If products at General Motors, for example, have become increasingly alike in recent years, "the difference can be in merchandising them," Graham added. "And with no humility at all, we think we can do it better than anybody else."

D'Arcy-MacManus & Masius, Bloomfield Hills, Mich., is the agency.

New-car total is 717,358 for month

June registrations trail year ago

By Jenny L. King
Staff Writer

Total new-car registrations were up for the sixth consecutive month in June compared with the preceding months of 1982, but they missed the year-ago June total by some 30,000 units. Domestic new cars were down from May, 1982 and from June, 1981, according to figures compiled by R. L. Polk & Co.

The June registration total of 717,358 was an increase of 1.34 percent over May's 707,869. It was down 4.01 percent from 747,305 in June last year. Recent low for the month was 675,964 recorded in 1980.

Domestics totaled 510,985 in June, down 1.50 percent from 518,746 the preceding month and down 2.63 percent from 524,797 a year earlier.

Imports were down 7.25 percent in June, to 206,373 from 222,508 in 1981. Their share of the month's market dropped one percentage point, to 28.77 percent from 29.77 percent.

Total new-car registrations for the first half of 1982 were down 13.95 percent, to 3,778,109 from 4,390,708 last year. The domestics dropped 13.43 percent, to 2,698,079 from 3,116,537. Imports were down 15.24 percent, to 1,080,030 from 1,274,171.

The imports' share of the first-half market was off 0.43 percentage points, to 28.59 percent from 29.02 percent in 1981.

General Motors, Ford Motor Co. and Chrysler Corp. all posted market share increases in June compared with a year ago. GM was up 0.84 percentage points, to 43.92 percent from 43.08 percent. Ford pushed to 17.77 percent from 17.61 percent, an increase of 0.16 of a percentage point, and Chrysler was up 0.28 of a point, to 8.66 percent from 8.18 percent.

AMC dropped 0.28 of a point, to 1.04 percent from 1.32 percent, miscellaneous domestics claimed 0.04 percent of the market both years and imports were down to 28.77 percent from 29.77 percent.

In the domestic-only market, GM had 61.66 percent in June,

Table on Page 20.

Ford had 24.94 percent, Chrysler had 11.88 percent, AMC had 1.47 percent and miscellaneous domestics had 0.05 percent.

A year earlier, the domestic-only breakdown was: GM, 61.35 percent; Ford, 25.08 percent; Chrysler, 11.64 percent; AMC, 1.87 percent, and miscellaneous, 0.06 percent.

For the first six months of 1982, GM, Ford and miscellaneous domestics improved their shares of the total market, as AMC, Chrysler and the imports gave ground.

GM was up 1.01 percentage points, to 44.54 percent from 43.53 percent last year. Ford pinched off an increase of 0.08 percentage points, getting 16.96 percent compared with 16.88 percent a year earlier. Miscellaneous domestics accounted for 0.04 percent, up from 0.03 percent.

Chrysler was off 0.24 percentage points in the first half, to 8.65 percent from 8.89 percent, AMC dropped to 1.22 percent from 1.65 percent and imports were down 0.43 of a point, to 28.59 percent from 29.02 percent.

In the domestic-only market-through June 30, GM had 62.37 percent, Ford had 23.75 percent, Chrysler had 12.12 percent, AMC had 1.71 percent and miscellaneous had 0.05 percent.

Comparable shares in 1981 were as follows: GM earned 61.32 percent, Ford had 23.78 percent, Chrysler had 12.53 percent, AMC had 2.33 percent and miscellaneous had 0.04 percent.

• Of the total June market, the imports' share of 28.77 percent was far and away the largest. U. S. intermediates followed with 22.58 percent, compacts had 17.78 percent, subcompacts had 14.57 percent, standards had 10.91 percent and luxury cars had 5.39 percent.

A year earlier, the month's market-class analysis was as follows: Imports, 29.77 percent; intermediates, 20.16 percent; compacts, 19.99 percent; subcompacts, 15.37 percent; standards, 10.30 percent and luxury models, 4.41 percent.

Of domestics only, intermediates claimed 31.71 percent of the June total, compacts had 24.97 percent, subcompacts had 20.45 percent, standards had 15.32 percent and luxury cars had 7.55 percent.

In the first half of 1982, imports cornered 28.59 percent of the market, intermediates had 21.43 percent, compacts had 18.62 percent, subcompacts had 15.70 percent, standards had 10.29 percent and luxury cars had 5.37 percent.

Slump brings new GM cuts; GMAD and Cadillac affected

DETROIT.—The auto depression took some more bites at General Motors last week.

The company announced the Oct. 1 closing of one assembly plant, an indefinite delay in '83-model production at another and the end of second-shift operations at two more.

Also, Cadillac will lose two of its Detroit activities — stamping and metal plating—and a Rochester Products plant in Tuscaloosa, Ala., will be closed.

The actions involve 11,000 workers. The General Motors Assembly Division cutbacks will place 9,100 on indefinite layoff. There will be 1,600 affected at Cadillac and 300 at Rochester Products.

At GMAD, the Framingham (Mass.) plant will start production of '83 Chevrolet Celebrity and Pontiac 6000 models Aug. 25, but it will close indefinitely on Oct. 1. About 3,400 employes will be laid off.

The Lakewood (Ga.) plant will delay indefinitely the start-up of '83 Chevrolet Chevette and Pontiac 1000 models. Output had been slated to begin Sept. 7. About 1,700 will be on indefinite layoff.

Second-shift operations will be discontinued at GMAD plants at Leeds, Mo., and North Tarrytown, N. Y. The Leeds cutback begins Aug. 30 and involves Buick Skyhawk and Oldsmobile Firenza.

The North Tarrytown reduction begins Sept. 13 and applies to Buick Skylark, Chevrolet Citation and Pontiac Phoenix. Some 2,000 employes will be indefinitely laid off at each plant.

• At Cadillac in Detroit, stamping operations at Conner Ave. and metal plating operations at Clark Ave. will be consolidated with similar activities at other GM plants for economic reasons.

The consolidation will take place during the next three years and will involve about 1,600 employes, 1,150 at Conner Ave. and 460 at Clark Ave.

Most of the stamping activities will be moved to GM facilities in Pontiac and Flint, and the metal-plating work (bumpers) will go to Oldsmobile in Lansing. The Conner Ave. plant produces hoods, fenders and other metal stampings.

Edward C. Kennard, Cadillac general manager, said GM has too much metal stamping and plating capacity, and these operations must be consolidated at other GM facilities if the company is to remain competitive.

The Rochester Products plant in Tuscaloosa is to be closed within six months. Some 300 jobs will be affected.

The Tuscaloosa plant makes carburetors, emission-control parts and carburetor service kits for the aftermarket. Production will be shifted to the division's plants in the Rochester (N. Y.) area.

Gilbert elected FISITA president

WARRENDALE, Pa. — Joseph Gilbert, executive vice president of the Society of Automotive Engineers, has been elected president of FISITA, the International Federation of Automobile Engineering Societies.

Gilbert's two-year term will begin during the XIXth International FISITA Congress in Melbourne, Australia, Nov. 8-12.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report.

Registrations in first half rise 10.9 pct.

With sizeable increases in all three light-truck classifications, registrations of new trucks of all types in the U. S. in the first half of 1982 were significantly higher than a year ago.

According to R. L. Polk & Co. statistics, 1,204,538 trucks were registered through June, an in-

Table on Page 16.

crease of 10.9 percent over the 1,085,915 units tallied in the like period in 1981.

In June, there were 225,522 new-truck registrations, a gain of 12.3 percent over the year-ago 200,866 units.

Light-truck tallies in the first half were up 13.9 percent, from 381,350 units a year ago to 1,117,959. Mediums dropped 23.4 percent to 19,265 units, compared with last year's 25,163. Heavies were off 15.2 percent, from 79,402 in 1981 to 67,314.

There were increases in the first half in only three of the eight weight groups — light trucks were up and the big trucks were down.

The Group 1 count, with the new domestic compact pickups providing the spark, soared to 617,788 units, an increase of 14 percent over the year-ago 542,-037.

• Growth in sales of van conversions and other types of recreational vehicles contributed largely to the gain in Group 2 registrations. The January-June total was 490,467, up 13.3 percent over last year's 432,902.

The biggest percentage in-

Coachmen, Winnebago note sales, profits gains

Substantial improvement in second-quarter sales and earnings has been reported by Coachmen Industries, Inc., while Winnebago Industries, Inc., noted good gains in both net earnings and sales in its fiscal third quarter ended May 29.

Coachmen sales in the April-June period were up 12.4 percent to approximately $70 million, compared with $62.3 million a year ago. Net earnings amounted to about $2.9 million, an increase of 60 percent over the year-earlier $1.8 million.

Thomas H. Corson, chairman, attributed much of Coachmen's rise in earnings to continuing emphasis on cost controls, increased sales and improved capacity utilization.

"Retail demand for our recreational-vehicle products was strong during the quarter," he said. "This demand pulled down dealer inventories to low levels. The restocking of these inventories should augment results in the third quarter."

For the first half, Coachmen sales totaled approximately $126.3 million, an increase of 21 percent over last year's $104.3 million. Net earnings increased to $2.8 million, up 7.7 percent over the year-ago $2.6 million.

Corson said second-quarter earnings last year included a non-recurring gain of approximately $726,492 from the sale of excess manufacturing facilities. A comparable gain of about $72,-755 was included in this year's second quarter, he added.

Winnebago's net earnings in the third quarter amounted to almost $3.4 million, a gain of 89 percent over the year-earlier $1.8 million. Included in the cur-

Industry sales in July, 7 months exceed '81 totals

America's franchised truck dealers and factory outlets retailed 197,823 new trucks of all types in July, an increase of 3.4 percent over last year's 191,400 units.

For the first seven months of the calendar year, the total was 1,536,282, up 10.4 percent over the 1,392,041 units sold in the like period in 1981.

Through July, sales of light trucks were up significantly over a year ago, but the big vehicles continued to decline.

The light-truck total in the January-July period was 1,419,-356, an increase of 13.7 percent over the year-earlier 1,248,639 units.

Big trucks, medium and heavy, were off 18.5 percent, from 143,-402 units in 1981 to 116,926. The medium total was down 43.3 percent to 28,078, compared with 49,514 a year ago. Heavies dropped 5.5 percent, from 93,888 units last year to 88,848.

Sales of the compact pickup trucks were up dramatically for both the month and the January-July period.

During the month, dealers retailed 59,266 compacts, both domestic and imports, an increase of 48.9 percent over last year's 39,798. The seven-month count was up 45.7 percent, from 292,-298 a year ago to 425,926 units.

recreation on wheels

June shipments highest since '79

First-half deliveries of RVs up 9.9 percent

First-half shipments of recreational vehicles from manufacturers to retail outlets in the U. S. were up almost 10 percent over last year, and June deliveries were the highest in more than three years.

Through June, according to the Recreation Vehicle Industry Assn., manufacturer members shipped approximately 135,800 units of all types to their dealers, an increase of 9.9 percent over last year's 123,600 vehicles.

Shipments during the six months were up over a year ago in all three major RV categories — towable units, motor homes and multi-use vehicles.

In June, RVIA members delivered about 29,900 units, a gain of 36 percent over last year's 22,000 and almost 29 percent higher than the May total of 23,200 units.

"Factory sales incentives appear to be responsible for part of this strong (June) showing," an RVIA spokesman said.

The last time that monthly shipments exceeded the June total was May, 1979, when approximately 32,500 units were delivered. The June total that year was 21,700, down 57.6 percent from the pre-slump, year-earlier 51,200 units.

• The Index of Consumer Sentiment in June, however, was not as encouraging as was the sharp rise in shipments. It was down 1.8 points to 65.7 for the month.

"Less favorable business expectations was the primary reason for the decline in sentiment," said Dr. Richard Curtin, the survey's director. Unemployment remained the dominant concern of consumers in the June survey, he added.

Shipments of all towable RVs in the first half were up 1.9 percent, from approximately 58,400 units in 1981 to 59,500. The June total was up 2.8 percent to 11,-100 units, compared with 10,800 a year ago.

Coachmen to buy Midas RV, van and plastic units

MIDDLEBURY, Ind.—Coachmen Industries, Inc., has entered into an agreement in principle with Midas International Corp., an IC Industries company, whereby Coachmen will acquire certain Midas recreational-vehicle operations.

Thomas H. Corson, Coachmen chairman, said the transaction involves the Midas RV, van and plastics operations. These operations are located in Elkhart and Mishawaka, Ind., and New Tazewell, Tenn.

Corson said the addition of the Midas RV operations will increase the company's penetration of motor-home markets by as much as 50 percent and will nearly double Coachmen's share in van conversions.

"This acquisition is part of our planned program for strengthening our participation in the motor-home segments of the RV industry," he added. "We are confident that Coachmen's position in the marketplace will be greatly enhanced."

While the price of the transaction is subject to audits, Coachmen officials said it would be approximately $3 million.

Rupp to succeed Burbank as chief at Freightliner

STUTTGART, West Germany. —Daimler-Benz AG has named Peter E. Rupp vice chairman and president of Freightliner Corp. and Mercedes-Benz Truck Co., both located in Portland, Ore. The move is effective Nov. 15.

Rupp, 52, will succeed Ronald E. Burbank, 53, currently president of the two truck-building firms. Until the November date, Burbank will remain responsible for all Daimler-Benz truck activities in the U. S.

Rupp currently is president of Euclid, Inc., Cleveland, and will be succeeded by Juergen E. Schrempp, 38, a member of the

Truck registrations up 10.9 pct. for first half

Continued from Page 12

crease was achieved by Group 3 trucks, again due principally to the strong demand for motorized recreational vehicles. The six-month total of 9,704 tallies was 51.4 percent higher than the year-ago 6,411 units.

Group 6 suffered the greatest percentage loss in the first half. Registrations were off 23.9 percent, from 24,302 units in 1981 to 18,505.

Group 5's total dropped to 755 units through June, 11.5 percent lower than last year's 853. There were only five Group 4 tallies in the first half, compared with eight in 1981.

In Group 7, there were 30,186 registrations through June, a decline of 10.7 percent from last year's 33,815. Heavies were down 18.6 percent, compared with 45,587 in the first six months of 1981.

In June, Ford had 75,247 tallies to 68,485 for No. 1 Chevrolet and reduced the latter's first-half lead to approximately 27,000 units. Through June, Chevrolet had 390,445 registrations and Ford had 363,511.

Chevrolet's share of total six-month registrations was up 1.79 percentage points, from 30.63 percent a year ago to 32.42 percent this year. The Ford share, on the other hand, was off 1.97 points to 30.18 percent, compared with 32.15 percent in 1981.

Ford was No. 1 in heavy-truck registrations through June, with a lead of almost 1,000 units over International.

Ford's penetration was up 2.14 points, from 20.89 percent in 1981 on 16,585 tallies to 23.03 percent on 15,501 units. International's share dropped 4.18 points to 21.67 percent on 14,589 tallies, compared with 25.85 percent a year ago on 20,528 units.

GMC scored the biggest gain in penetration in the first half. Its 12,717 tallies through June accounted for 18.89 percent, an increase of 5.60 points over last year's 13.29 percent on 10,550 units.

A surge in deliveries of Group 7 trucks since Jan. 1 was responsible for the big boost in GMC's penetration. Through June, GMC's Group 7 count was 8,345 units, a gain of 56.4 percent over last year's 5,334.

Saab appoints 25 U.S. dealers during first half

ORANGE, Conn.—Saab-Scania of America appointed 25 dealers during the first half of this year and had 310 outlets at the end of June, 55 of them Saab exclusives, according to Sten O. Helling, sales and marketing vice president.

Saab had 307 dealers in the U. S at the beginning of this year.

Helling said the company is aiming for 350 dealers nationally as the first step in its long-range planning.

New Saab dealers appointed during the first half are: Fitzgerald Cadillac - Saab, Fort Wayne, Ind.; Saab Country, Scottsville, N. Y.; Moore Cadillac-Jaguar-Saab, Ellisville, Mo.; Zimbrick, Inc., Madison, Wis.; Holiday Saab, Fort Worth; Tradewind Ford - Saab, Corpus Christi, Tex., and Wigglesworth Imports, West Chicago, Ill.

Also: Downers Grove Saab, Downers Grove, Ill.; Plaza Motors, Palm Springs, Calif.; Wolf Import Motors, Inc., Painesville, O.; Autohaus of Asheville, Inc., Asheville, N. C.; Bill Hanna Ford - BMW - Saab, Shreveport, La., and Kelly Saab, Chattanooga, Tenn.

Also: Bob Richards Saab, Augusta, Ga.; Jeffords Motor Car Co., Brookfield, Wis.; Friedman Toyota, Des Moines; Seymour Cadillac-Saab, Detroit; Schaefer Pontiac, Racine, Wis., and Merrill Bean Chevrolet-Saab, Ogden, Utah.

Also: Foothills Saab, Fort Collins, Colo.; Pray Saab, Greenwich, Conn.; Lynch Buick, Chicago; Hanley - Dawson Toyota-Saab, Chicago; George White Chevrolet, Ames, Ia., and Castle Toyota-BMW - Saab, Edgewood, Md.

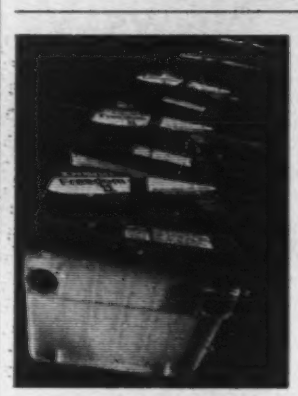
Ford shuts off plant time clock

ST. LOUIS. The Ford Motor Co. car assembly plant in suburban Hazelwood, has abandoned time-clock punching, a direct dividend of the Employe Involvement work group.

The decision to drop the practice for a six-month trial period saves time at the beginning and end of the shift when long lines appear. The plant, which builds full-size Mercurys, employs 1,200 production workers. Another shift will be added in October.

The company says it saves supplies and time. Foremen will report workers' hours on time sheets.

A BATTERY OF EXPERTS.



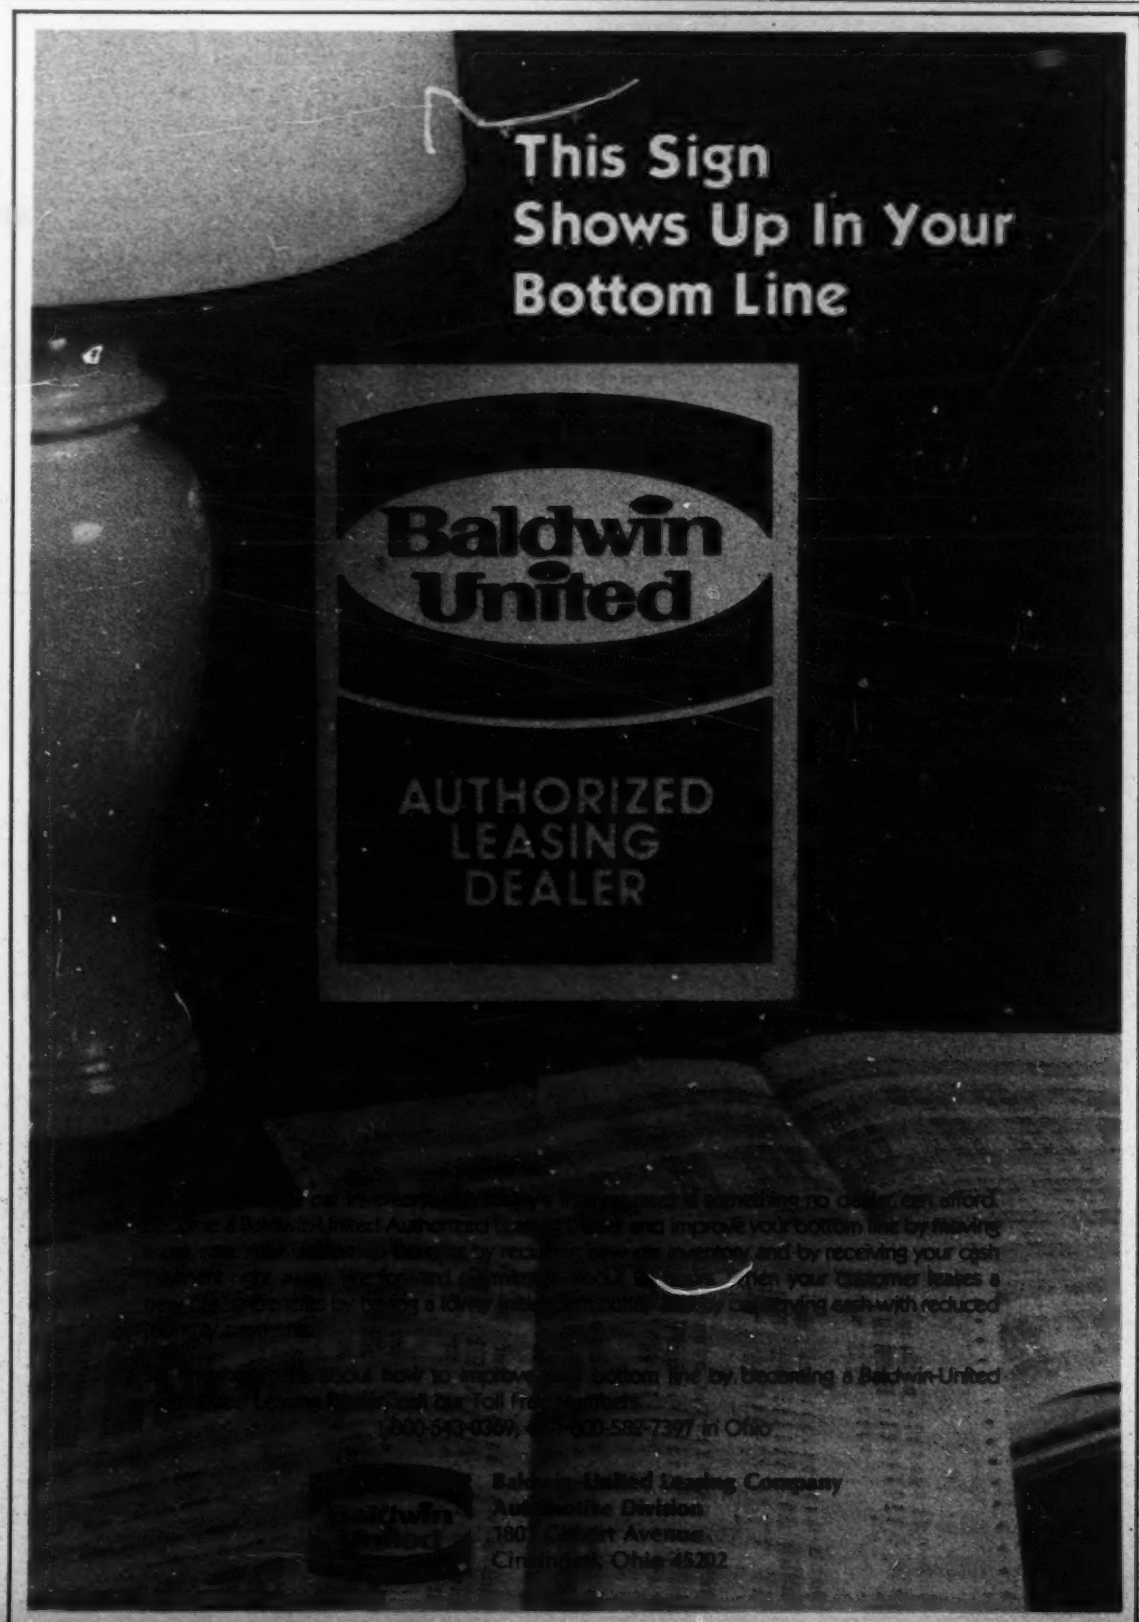
For years Delco Remy has been an acknowledged leader in battery technology.

And you can see that expertise in each Delco Freedom II Battery—the battery that combines the rugged dependability of our original never-add-water, maintenance-free batteries with the construction features of our tough, heavy-duty truck batteries.

So when you make your choice, go right to the head of the class: The Delco Freedom II Battery.

Delco Remy

The leader under the hood



Oil executive sees competitive market

20-year oil prices tied to developing nations

By Roger Rowand
Engineering Editor

TRAVERSE CITY, Mich. — Don't look close at hand, say to the nation's coal fields, for any relief soon from the upward pressure on petroleum prices.

Speaking at an annual University of Michigan management seminar here, Glenn Brown, senior vice president, Standard Oil Co. (Ohio), said distant lands will play a key role in that pricing.

His remarks came in response to a question during a panel portion of the seminar.

"The major driving force in sending up the price of oil over the next 20 years is growth in usage in the developing world," he said.

"That's where demand is going to be. Most of the developed nations will either be holding relatively constant in their energy use as far as petroleum use is concerned, or actually declining.

"By 2000, only two of the OECD (Organization for Economic Cooperation and Development) nations will be in the top 10 in population in the world. There will be just three more in the next 10 and they'll be down at the bottom.

"As a result of this population shift to the undeveloped nations, there will be pressure on us. They'll be competing for the most convenient energy-source," Brown said.

Brown said his company believes oil prices will be set by worldwide competition. Coal prices, however, will be set by the marginal producer.

"They'll be cost-based," he said.

"You'll be seeing an increasing differential on a cost-per-BTU basis between coal and oil and, to a lesser extent, between coal and gas.

"Every time we evaluate where we're headed down that track we have to consider the alternative of turning coal into a product that can compete directly with petroleum.

"Conversion of coal ultimately will be a limiting factor on petroleum prices," Brown said.

Mexico targets U. S., Japan, Europe as engine markets

MEXICO CITY. — The Mexican auto parts industry, despite the country's economic difficulties, has programmed the export of around a million engines next year.

Main markets for the products will be the U. S., Japan and European nations, according to Rene Espinosa Olivera, president of the National Assn. of the Auto Parts Industry.

By 1985, engine production is expected to rise to 3.5 million units, with the bulk of these (more than 2 million) destined for the U. S. Japanese and European sales are expected to absorb a smaller percentage.

The association projects production of one million vehicles in 1985 for the internal market. An unspecified number are expected to be exported, mainly to Central and Latin America.

Three major American automotive firms established in Mexico will be responsible for the bulk of parts production Espinosa Olvera said, thus complying with recent regulations calling for an expansion of the export sector.

Espinosa Olivera, said Ford, in collaboration with the Alfa Industrial Group (which liquidated many of its holdings to avoid bankruptcy), produces aluminum cylinder heads through the Nemark subsidiary in which the American firm has a 25-percent interest.

With the Visa Group, Ford turns out plastic parts, and through Vitroflex (part of the Vitro Group), Ford de Mexico is producing and exporting windshields. In the latter two firms, Ford participation is only 40 percent.

General Motors, through Diesel Allison, has a 40-percent stake in Motor Diesel Mexicana, which produces diesel engines and passenger buses. Espinosa Olivera said this firm will be producing 500,000 engines annually by 1984, mainly for the internal market.

But 60 percent of component parts produced by the plant will be exported.

According to Espinosa Olivera, Chrysler de Mexico, which inaugurated its engine assembly plant in Ramos Arizpe, Coahuila, in 1981, will be producing 400,000 engines annually by 1984.

In its first seven months of operation, this plant produced 270,000 engines, of which 220,000 were utilized by the K-car in the U. S.

Mahin joins Subaru

PENNSAUKEN, N. J.—C. D. Hahin has been named director of market development for Subaru of America.

Engine giant retires

M. R. McKellar, right, 45-year veteran of engineering service with General Motors and Pontiac, is presented with an honorary Doctorate of Engines degree by J. J. Wetzel, Pontiac assistant chief engineer, powertrains. McKellar was with the division during the Pontiac GTO and Super Duty engine days, and he was instrumental in V-8s including the 389, 400, 421, 428 and 455. The racing community nicknames a series of performance camshafts the McKellar Series.

Dealer network growing in preparation for Oct. launch

Mitsubishi adds another 20 outlets

FOUNTAIN VALLEY, Calif. —Mitsubishi Motor Sales of America (MMSA) has appointed 20 more dealers, bringing the total to 56 toward a goal of 70 dealers for the company's new-model launch in October.

Seven of the new dealers are in California and four are in the Chicago area.

In the San Francisco Bay area, MMSA has signed Frederick J. Bowerman and Robert Messamore to operate a dealership in Walnut Creek and Leon C. Felton in Sausalito.

Bowerman and Messamore coown European Motor Cars in Walnut Creek — a Fiat and Alfa Romeo operation. Felton has Volkswagen and Porsche-Audi dealerships in San Rafael and Mill Valley, respectively.

Also in northern California, MMSA has named Tom Price as a dealer in Colma. The new store will be in the Serramonte Auto Center. Price owns Serramonte Oldsmobile as well as an Isuzu store in Colma-Daly City.

In Southern California, MMSA has named Robert D. Kramer in Santa Monica, Steven Cerrito in Irvine, Frank Abbott in Upland and John E. Daley in the San Diego suburb of Kearny Mesa.

Kramer operates a number of L.A.-area dealerships, including Volvo, Fiat, Honda and Chevrolet outlets and is co-owner of a combined Lincoln-Mercury and Subaru store.

Cerrito will co-own the Irvine MMSA point with his brothers Salvatore and Roy and with Jack Hilleary. The Cerrito brothers own Datsun and Toyota stores in San Jose as well as a Datsun outlet in Irvine.

Abbott, who will operate MMSA's Upland point, owns Abbott Ford, in La Puente. Daley owns West Coast Sports and Imports in Kearny Mesa.

• In Chicago, Hanley Dawson Jr., Hanley Dawson III and William C. Shaver each have been named dealers by MMSA. Hanley Dawson Jr. will put his store in downtown Chicago. His son will operate a dealership in Schaumburg. Shaver will be based in Homewood.

Hanley Dawson Jr. owns Hanley Dawson Cadillac-Datsun Co. and a Toyota-Saab dealership in Chicago, as well as a Cadillac-Pontiac combine in Davenport, Ia. Hanley Dawson III owns Patrick Cadillac-BMW-Saab in Schaumburg. Shaver owns J. B. Shaver Motors, in Gary, Ind., and Shaver Chevrolet, in Homewood.

Also in the Chicago area, MMSA has awarded a franchise to Joseph Levy Jr. and Richard Fryman in Downers Grove. Levy owns Shamrock Oldsmobile in Downers Grove, Westmont Toyota in Westmont and Joe Levy's Toyota in Evanston. Fryman has been an executive manager in Levy's orangization.

Elsewhere in the Midwest, MMSA has established points in the Minneapolis suburb of Bloomington; in Kirkwood, Mo., and in Overland Park, Kan.

W. S. (Steve) Bloomer III, president of Village Chevrolet in Bloomington, was given the Minneapolis-area franchise. Joseph Bloom and James Auffenberg will operate the Kirkwood point.

Bloom is founder of Bloom Motors, Ltd., a Mazda and BMW outlet in North St. Louis and he also holds a majority interest in Christopher Chevrolet, also in the St. Louis area. Auffenberg owns Auffenberg Ford.

Fred M. (Marty) Dubowy will operate the MMSA outlet in Overland Park. He owns Metcalf Datsun on Overland Park's Auto Row.

• In the East, two dealerships will open in the Boston area. The dealers are Allen Glick, in Framingham, and Leonard Liebowitz and Earl Weinshel, in Lynn.

Glick owns Crown Chevrolet as well as an Oldsmobile-Toyota dual in Framingham. Leibowitz and Weinshel have operated North Shore Auto Imports, a Fiat outlet in Lynn, since 1976.

Ronald Ciasulli has been given an MMSA franchise in New Brunswick, N. J. He owns a Chevrolet store in Somerset, N. J., and a Chevrolet-Honda combine in Hillside, N. J.

In Fallston, Md., Gerald Statberg will operate the MMSA point. He has held a Chevrolet franchise in the Baltimore area for 25 years.

MMSA has appointed Jeffrey I. Wooley as a dealer in Tampa, where he currently owns and operates Superior Pontiac.

Louis S. Grubb, owner of Lou Grubb Chevrolet, in Phoenix, has been awarded an MMSA franchise in that city. He also owns a Chevrolet-Toyota dual in Poway, Calif. and Frank See Chevrolet in Midland, Tex.

Sheller-Globe names Graham president

TOLEDO.—James A. Graham, 57, has been elected president and chief operating officer of Sheller-Globe Corp. He succeeds John R. Eastman, 64, who becomes vice chairman and chief administrative officer. Eastman had been president since 1977.

Graham had served as executive vice president of operations since 1981. He joined the company in 1980 as executive vice president of the corporation and president of the former Automotive and Truck Group.

VW deal adds Peugeot

COLORADO SPRINGS.—Phil Winslow Volkswagen, Inc., has been awarded a Peugeot franchise. Philip A. Winslow heads the firm.

State capitol roundup

Pace of auto legislation slows during 1982

Continued from Page 10

age four seated in the front seat, by child restraint system; children aged one to four in back seat, by child restraint system or seat belt.

State franchise laws were amended regarding: Reimbursement for warranty work, damage labeling, indemnification, succession, franchise cancellation, repurchase agreement, relevant market area and establishment of new franchise.

Delaware

Drivers must require children under age four to use child-restraint system.

The state is allowed to adopt test procedures and standards for vehicle noise.

Florida

A new law regulates motor vehicle service agreement companies.

Sales tax was increased from 4 percent to 5 percent.

Vehicles purchased or leased by the state must be equipped with all energy-saving devices approved by the EPA.

Parents or guardians are required to restrain children in vehicles as follows: Children under age four, in child restraint; children aged four and five, in child restraint or seat belt.

Georgia

Annual safety inspection program was repealed.

Hawaii

The State Health Department was requested to establish air-pollution standards more stringent than existing federal standards.

A $25 state income tax credit was granted for the purchase of a child-restraint system.

Idaho

Motor fuel tax was increased from 11 cents to 12.5 cents per gallon.

A monthly fee was levied on vehicles which weigh under 16,000 pounds and use propane, natural gas or hydrogen as a fuel. The fee will be based on EPA fuel economy estimates.

Indiana

Written estimates were required on repairs on consumer goods over $750. The law prohibits exceeding the estimate by 10 percent.

Iowa

State sales tax was levied on optional service or warranty contracts.

The gasohol tax exemption will be phased out by Dec. 31, 1985.

All owners of LPG or natural gas-propelled vehicles were required to purchase a fuel use identification sticker from the state.

Kansas

A local compensating use tax was imposed for the privilege of using a vehicle. The amount equals the local sales tax (one half to one percent).

Cities and counties were allowed to use 10 percent of highway funds for public transportation.

Kentucky

A methane fuel demonstration project was established.

A statewide automated registration and titling system was established. It incorporates an intaglio printing process, which is difficult to counterfeit. The law also requires a vehicle's odometer reading to be recorded on certificate of title at the time of transfer.

State membership in the Vehicle Equipment Safety Compact was repealed.

The manufacturer-dealer franchise statute was amended regarding warranty work reimbursement, establishment of new or relocation of an existing dealership, relevant market area and disclosure of damage to consumer.

A Motor Vehicle Commission was created, consisting of 11 franchised vehicle dealers and one member of the public.

The commission will grant, suspend and revoke dealer and manufacturer licenses.

The sale of gasohol was exempted from motor fuel tax.

Provided for the development of statewide, rather than county by county, ad valorem tax system for motor vehicles.

Required resident parents or guardians to restrain children under 40 inches in height in child-restraint while transporting such child in a motor vehicle.

Required motor-vehicle manufacturer to offer comprehensive informal dispute resolution system which will be used to settle disputes during first two years or 25,000 miles. Decision of dispute resolution system will be legally binding on both parties.

Maine

Allowed the state attorney general and private persons to

Coachmen and Winnebago report gains in sales, profits

Continued from Page 12

rent net was a restatement of deferred tax charges, which boosted earnings by $1.2 million.

The year-ago quarterly net included an operating-loss carryover which reduced taxes by $834,000, according to John K. Hanson, chairman.

He said third-quarter sales were up 13.3 percent to almost $46.7 million, compared with about $41.2 million in 1981. For the nine-month period, sales totaled $101.6 million, an increase of 5 percent over the year-earlier $96.8 million.

Net earnings for the fiscal nine-month period totaled approximately $5 million, up 16.3 percent over last year's $4.3 million.

Restatement of deferred tax charges boosted this year's net by $1.4 million, while last year's nine-month total included an operating-loss carryover which cut income taxes by almost $1.9 million.

"At this time," Hanson said, "market conditions for motorhome sales remain stable and we now expect sales and earnings in fiscal 1982 to exceed those in fiscal 1981."

In the fall, Winnebago will introduce new lines of motor homes on a Renault front-wheel-drive chassis with diesel power. They will be similar in size and weight to the Centauri van, which will debut at the same time.

Theory Z author says middle management must change system

Lifetime jobs called Japan's ace

ST. LOUIS. — The author of "Theory Z," which outlines Japanese management techniques, believes American automotive management can snap back from the current recession and heavy unemployment totals.

Here to address an audience at the St. Louis Art Museum, William Ouchi told AUTOMOTIVE NEWS he is optimistic because General Motors has been practicing participatory management for 17 years and Chrysler Corp., for 8 years.

But the new chairman of the Graduate School of Management of the University of California, Los Angeles, believes the lure of lifetime employment makes the principal difference between Japanese and American companies.

The Japanese management concept, he said, differs sharply from that of American firms, which are in a hurry and anxious to meet quotas. The Japanese are more patient, he said. Also, a new Japanese employe knows he isn't going anywhere for 10 or 15 years, so there is no tendency to burn out or to impress his superiors.

In America, when orders drop, workers are laid off or dismissed. Not so in Japan. Workers there are shifted to another department.

"The irrevocable step of a promotion does not come until you've been there for such a long time that people know you are one of the real heavy hitters in the company," Ouchi said. "This system relies on a nearly perfect personnel evaluation system in which you cannot conceal either your good or bad behavior."

• In contrast to the American system of specialization where personnel seldom shift to other departments or disciplines, the Japanese workers are familiar with many areas of the company, he said.

"We set our companies up like Tinker Toys in that the pieces are replaceable," Ouchi said of the American system. "The result is that the pieces fit together very well."

He warned American managers must change their ways of doing business or they will never recoup during this "temporary window of opportunity." He was referring to a new willingness of business and government to work together. This cooperation is practiced widely in Japan.

Ouchi said America can never adopt the exact system that exists in Japan, possibly because of its culture, history and lifestyles.

Japanese people save more than Americans. Even the banks and financial institutions operate differently: Frequently 70 percent of a Japanese company's capital is borrowed and 30 percent is stockholders' investment. The ratio is reversed in the U. S.

Switching to the Japanese system isn't easy in America, since antitrust laws discourage cooperation among companies, even for the benefit of the public, Ouchi said. Ouchi believes American laws should be changed to help companies, some of which are nearly drowning in red ink.

Explaining a "Theory Z" company, he said, "It is the kind of place where the chairman of the board has to fight for a parking place every morning just like everyone else. He goes through the same cafeteria line as the employes and takes off his jacket when talking to a young, new worker."

It is a bitter pill to swallow in the U. S. executive suites, where perks abound and distinctions separate workers and management except at company picnics, he said.

Ouchi said the changes must be initiated by middle-management "because the chairman of the board isn't smart enough to think of these things."

He said that while the U. S. has its Ivy League, the Japanese prepare early to get into the best kindergartens that cost as much as $1,000 a week, so they can qualify for the best schools and later, be hired by the largest companies.

72,547 cars built; 5 plants return, 13 still down

Week's auto output climbs 11 pct.

By Patricia Hoffman
Staff Writer

Although 13 assembly plants were idle for model changeover/inventory control, the return of five facilities helped boost last week's domestic auto production from the previous week's total. But output remained substantially below that of the comparable 1981 week.

Last week the makers scheduled 72,547 cars, up 11.69 percent from the previous week's 64,954, but down 32.49 percent from 107,454 units built in the same 1981 week.

The breakdown last week by company was: General Motors, 65.22 percent; Ford Motor, 23.27 percent; Chrysler Corp., 8.20 percent and American Motors, 3.31 percent.

Volkswagen of America's Westmoreland facility, idle since Aug. 2, is expected to resume production in September.

Seven GM plants remained closed for changeover last week. They were Willow Run, Wilmington, Tarrytown, Lordstown, Janesville, Baltimore and Framingham.

Willow Run and Lordstown are both slated to begin 1983 production today (Aug. 23), and Janesville is scheduled to return tomorrow.

Production of Chevrolet Celebrity and Pontiac 6000 will begin this Wednesday at GM's Framingham facility. Assembly at the plant will be halted again Oct. 1. No startup date has been set. Approximately 3,400 workers will be placed on indefinite layoff.

GM's Tarrytown point, also slated to return Wednesday, will end second-shift operations Sept. 13, indefinitely idling about 2,000 workers. The facility produces Buick Skylark, Chevrolet Citation and Pontiac Phoenix.

On Aug. 30, the Leeds plant (Buick Skylark and Oldsmobile Firenza) will also end second-shift operations placing approximately 2,000 workers on indefinite layoff. GM's Lakewood plant has indefinitely delayed startup on '83 Chevette and Pontiac 1000, which was to have begun Sept. 7. The plant is still building '82s.

GM's Bowling Green (Corvette) point resumed production last week following a two-week strike.

Also back last week at GM were the Detroit and Doraville facilities. Both plants had been idle for changeover.

Ford's Atlanta, Dearborn and Chicago points were idle for the third week last week due to changeover schedules, while production resumed at the Ford Lorain and San Jose facilities after a two-week shutdown to control inventory.

Chrysler's Belvidere and Newark plants, down last week for changeover, are scheduled to resume today.

Year-to-date, the auto makers have finished 3,326,860 units, down 24.21 percent from last year's 4,389,527.

Truck production climbs for week to 34,644 units

Domestic truck output last week rose 4.91 percent from the previous week's figure as 1983-model production got under way at two General Motors facilities.

The truck makers targeted last week's output at 34,644 units, up from 33,022 the previous week when seven assembly points were idle for changeover/inventory control. The total was up 45.02 percent from 23,889 units in the comparable 1981 week.

So far this year, the manufacturers have finished 1,300,691 units, a 16.05 percent gain from 1,120,811 completed in last year's comparable period.

GM's Moraine facility, idled July 30, and its Lordstown (van) plant, down since Aug. 9, returned last week (Aug. 16) following model changeover.

Still idle at GM were the Janesville and Shreveport plants. Shreveport is due back today (Aug. 23), and Janesville is slated to resume operations Aug. 31.

Also down for changeover last week was Chrysler Corp.'s Belvidere facility, which is expected to return today.

Volkswagen's Westmoreland point, which has been idle since June 28, will return in September.

Ford Motor's Kansas City plant remained down for the second week last week to control overstocked inventory.

In October, a second shift will be added at GM's Pontiac truck plant to build the Chevrolet S-10 and GMC S-15 compact pickups.

STP headquarters now in Boca Raton

BOCA RATON, Fla. — STP Corp. has moved its headquarters from Ft. Lauderdale to Boca Raton.

The new address is: 5300 Broken Sound Blvd. N.W., P.O. Box 3070, Boca Raton, Fla. 33431. Phone: (305) 994-1000.

Wagner Electric to give plants to St. Louis

ST. LOUIS.—Wagner Electric Corp., which is expected to leave the St. Louis area in December, has announced that it will donate much of its plant, 47 buildings, to St. Louis County for use as an "enterprise zone."

The donation by the automobile and truck brake manufacturer is expected to ease the unemployment situation in the suburb of Wellston where the jobless rate is 19.4 percent.

A bill approved by the Missouri Legislature and signed by Gov. Christopher Bond allows state tax credits to companies relocating to enterprise zones.

Six vacant buildings will be donated now to the county's Land Clearance for Redevelopment Authority. At the end of the year, the other buildings will be turned over. Wagner has 1.4 million square feet of building space.

GM plant returns; auto production rises in Canada

While four car assembly points remained idle for model changeover/vacation; the return of General Motors' Oshawa (No. Two) facility helped boost last week's Canadian auto production 7.07 percent from the previous week's total. Output jumped 13.68 percent from the comparable 1981 figure.

Last week, the auto makers targeted output at 13,913 units, up from 12,994 the previous week and up from 12,239 in last year's comparable week.

Year-to-date, the manufacturers have assembled 564,988 cars, a 3.02 percent gain from 548,438 built in the same period last year.

Truck production, marred by the steady but slow startup of 1983 models at Ford Motor's Oakville plant, reached only 6,918 units last week. It was down 14.49 percent from the previous week's total of 8,090 and was down 27.05 percent from 9,483 in the year-ago week.

So far this year, the manufacturers have built 330,776 trucks, down 1.86 percent from last year's 337,037.

GM's Oshawa (No. One) facility, idled Aug. 2, remained idle last week for model changeover. Also still down at GM was the Ste. Therese point, which ended 1982 model assembly on Aug. 12.

Ford's St. Thomas facility, idled Aug. 9, remained down last week for changeover.

Volvo's Halifax plant, which closed Aug. 2, is slated to return today (Aug. 23) from vacation.

Diamond jubilee for Silver Ghost

Said to be the world's most valuable Rolls-Royce, this 1907 Silver Ghost was built 75 years ago with the help of Henry Royce and driven on its renowned endurance trials by Charles Rolls before being sold to a R-R employe who drove it about half a million miles. Following his death in 1948, the Silver Ghost was returned to the company and carefully brought up to snuff. It made a recent trip to the U. S. and still is taken out for runs in spite of some 570,000 miles on the odometer.

Judge denies class-action bid in suit by Subaru dealers

BOSTON.—A federal District Court judge here denied a motion by a group of Subaru dealers to have a $6 million suit, alleging illegal tying of transportation of cars against Subaru of New England, certified as a class action.

Chase Parkway Garage, of Watertown, Conn., and seven other dealers sought to have their suit against the distributor considered a class action to represent 101 present and former Subaru dealers in Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont.

Judge John J. McNaught ruled that individual proof of coercion will be necessary to establish the existence of a tie-in. And because of the individual proof needed, common questions of fact, which is a key to granting a class action, do not predominate, he said.

The dealers brought the suit against Subaru of New England in late 1979. They alleged that the distributor illegally tied the sale of its transportation services to the sale of new cars to its dealers.

They alleged that the tie-in is contained in the franchise agreement and that Subaru of New England charged excessive amounts for transportation.

The suit also alleges conspiracy to effect the tying arrangement.

Subaru of New England owns the transportation services by which it delivers cars to its dealers.

The suit also maintains that dealers were required to use Subaru of New England's advertising agency and that the agency charged excessive fees.

The suit was originally filed as a $6 million class action, although the formal certification hearing was held in the spring, the decision was rendered recently.

EPA preparing relief for Detroit on clean air

Continued from Page 2

that Ford has joined the other makers in adopting feedback emission control/fuel management systems on its fleet.

Feedback systems with adaptive memories are capable of holding emissions to set levels through approximately 6,000 feet without modification.

The proposal to remove areas from the high-altitude requirement if they are already in compliance with ambient air quality standards also coincides with a proposal made by Hart and Domenici, which would limit the high-altitude areas to Colorado, Utah, New Mexico and Nevada, states with significant air pollution problems in their larger cities.

EPA has testified that the high-altitude changes it is suggesting could save the industry as much as $4 billion yearly.

Regarding the diesel particulate standard, the agency plans to announce soon a proposal to delay the 1985 standard of 0.2 grams per mile for two years until the 1987 model year because technology is not yet available to control particulates to that level, while also controlling diesel oxides of nitrogen emissions to 1.0 gpm as required by statute.

According to an unreleased EPA study, diesel particulate trap technology will be only half ready by then, the regenerative process not being refined or even proven as yet.

St. Louis dealers schedule auto show

ST. LOUIS.—For the first time in more than 20 years, the Greater St. Louis Automotive Assn. has decided to resume sponsorship of a major automobile show.

The event slated for Jan. 26-30, 1983, will be chaired by Charles Brock, of Charles Brock Oldsmobile. The show will be produced by Cahners Exposition Co., of Boston, and will be held at the A. J. Cervantes Convention and Exhibition Center.

Its product mix gives it an advantage, Lehman Bros. reports

Investment firm cites GM edge

WASHINGTON. — The North American auto industry is not competitive with the Japanese, according to Lehman Brothers Kuhn Loeb research, and until labor cost and productivity are brought more into line, only General Motors, "with its rich mix of vehicles, can show sustained profitability."

But Peter D. Zaglio, vice president of the investment firm, recommended buying GM stock for intermediate or long-term appreciation. He said the company has enough financial strength to develop new products and to automate production facilities at the same time.

GM stock has outperformed the market over the last nine months, but the recent falloff of sales clouds the short-term outlook, he said.

Although Ford Motor Co. has made some meaningful changes, Zaglio thinks Ford does not offer the breadth of mix needed for North American profits. Its "truly impressive" overseas group should mean "consolidated profits in a cyclical upturn," he said.

As for Chrysler Corp., its mix would also be unprofitable were it not for the 1980 cost concessions granted by the UAW—currently worth $400 to $500 per car vis-a-vis GM and and Ford, But the crunch for Chrysler will come in September with union negotiations, Zaglio predicted.

"Should parity be achieved without equivalent offsets (in benefits or productivity), the near-term victory for Chrysler workers could eventually ring quite hollow," he said.

• Lehman Brothers is projecting a 15-percent increase in retail sales in 1983, to 9.25 million units. Zaglio said that although that may appear optimistic, first years of previous auto recoveries (1958, 1962, 1968, 1971 and 1976) were at least this much. Nevertheless, even Lehman Brothers' prediction would put 1983 sales 18 percent below 1978.

If there is a 15-percent rise in U. S. sales, continued restraint of Japanese sales, continuing gains in light-truck sales and constant inventories, Zaglio predicted North American vehicle production will go up 23 percent in 1983.

This rise in production, plus a bigger proportion of larger and more expensive cars, should "generate reasonable levels of profitability," he said.

In outlining market shares for the three major domestics, Zaglio noted GM's domination of the "rich end" and sharing of the "lean end" with Ford and Chrysler. GM's decline in intermediates, he said "reflects the phasing out of several intermediate models and the less-than-wholly-successful introduction of new front-wheel-drive intermediates."

Its recent upturn in specialty shares is because of the Camaro and Firebird, he said.

• Ford's gain in subcompacts is because of the leadership of the Escort and its deterioration in the compact-car market comes from the aging of its models, but the forthcoming Topaz and Tempo should help in that segment next spring, Zaglio said. Since profitability is harder at the low end of the market, Zaglio stressed the need for Ford to reestablish itself at the upper end.

Because of the aging of Chrysler's Omni and Horizon, Chrysler's share of this segment is deteriorating, but the K-body has held the line in the compact arena. But "most notable" in Zaglio's book is the resurging intermediates—the enrichment of its mix that has allowed the company to earn an operating profit.

If Chrysler's planned introductions for late 1982 and 1983 in intermediates and specialty cars are successful, then its overall mix will be further improved, he said.

With Japanese imports restrained through March, 1983, and possibly longer, Lehman Brothers forecasts a stabilizing of market shares for the domestics. They may even regain some share of the total market during the next several years, the firm said.

Innovative buy-sell auto trade show draws enthusiastic response

First World Expo smash hit; '83 return set

By Al Fleming
Industry Editor

The world automotive marketplace came to Detroit last week in the form of a revolutionary new trade show, the Automotive News World Expo.

Held at Cobo Hall in downtown Detroit, Aug. 24-27, it was hailed a rousing success by participants who numbered in the thousands at the first international buying-and-selling auto industry trade fair ever held in the U. S.

World Expo was held in conjunction with the seventh annual Automotive News World Congress, which took place Aug. 22-25, at the nearby Westin Hotel in Detroit's Renaissance Center. The two events made up Automotive News Week in Detroit.

Michigan Gov. William G. Milliken declared Aug. 24-27 as International Automotive Trade Days in the state, coinciding with World Expo.

"The exposition can mean more business and more jobs for Michigan," Milliken said. "The state is getting behind this effort to stimulate sales." The State of Michigan hosted a reception at World Expo.

Industrial agents of the Michigan Department of Commerce's Office of Economic Development participated in World Expo by, among other things, working with a staff of local economic development corporations, utilities, banks and legal and accounting firms to provide on-the-spot counseling to participants. In addition, a computer terminal was made available to provide plant site and community information.

• The basic concept of World Expo proved to be the most attractive feature to participants, because the show brought together, for the first time in an organized forum in the U. S., buyers and sellers of automotive products from around the world.

Thirty-three vehicle manufacturers staffed buying offices in the exhibit area with purchasing, engineering, manufacturing and management personnel. There were 152 exhibitors from around the world displaying and selling components, materials, machinery and services.

"World Expo has proved to be a great opportunity to set up contacts with vehicle manufacturers and even other exhibitors (suppliers). People here under-

A gala event

Jim Piegue

Automotive News Week event packs 'em in

Highlight of Automotive News Week in Detroit was the Tuesday Evening Gala, which attracted 1,500 persons to a banquet and key presentations by Eberhard von Kuenheim, chairman of the board of management of BMW, and Charles M. Jordan, director of design, General Motors.

GM link with imports is essential, McDonald tells World Congress

By Matt DeLorenzo
Staff Writer

While the U. S. auto industry is hard at work regaining a competitive edge through new products, higher quality and a different approach to management, it will continue to rely on captive imports to retain a strong presence in the small-car market, F. James McDonald, General Motors president, said in the keynote address at the Automotive News World Congress.

"As you know, all the American car companies have entered into creative new relationships with foreign companies," he said. "Although some people question these moves, competitive economics at the lower end of product offerings make them mandatory.

"Importing smaller vehicles from abroad is not a new idea. But today, small cars from compact size down are taking about 60 percent of all U. S. auto sales. And imports account for 40 percent of this market segment.

"These arrangements with foreign companies will assure that U. S. auto makers retain a strong and competitive pressure in this growing segment of the car market."

McDonald said he doubts that American car producers prefer doing business this way but said, "I am hopeful that our current research and development work will prove that in the future we can competitively build small cars in this country."

While defending the need for captive imports, McDonald said he feels that import manufacturs with high volumes in this country have an obligation to base some of their operations

Wall Street analyst bullish on Detroit, sees 15.6 million sales in '84

Happy days are here again—almost

By Edward Lapham
Financial Editor

One of Wall Street's more bullish auto analysts dispensed a dose of good old-fashioned optimism last week to attendees at the Automotive News World Congress.

David Healy, auto analyst for Drexel Burnham Lambert, Inc., predicted U. S. car and truck sales will recover to 13.3 million units next year and 15.6 million units in 1984.

This recovery will mean a return to healthy profitability for U. S. auto makers, he said, with General Motors earning $3 billion to $4 billion, Ford earning $1.5 billion, Chrysler earning $400 million to $500 million and American Motors returning to breakeven or even showing a small profit.

Healy's perspective represents a significant turnaround. The four auto makers reported a combined net loss of $1.8 billion in 1981. For this year, with car and truck sales forecast at 10.4 million units, Healy said GM will earn about $1 billion; Ford will lose $250 million; Chrysler will have profits from operations, before including receipts from asset sales, of $30 million to $40 million, while AMC will still "be deep in the red."

Healy's presentation on the final day of the Automotive News World Congress was well-received by the attendees who earlier had been inundated with less-optimistic, dire observations about the state of the industry.

The analyst said he does not believe the industry is permanently recessed, but rather that a normal, fairly robust, cyclical recovery is just around the corner.

"There are lots of pessimists on Wall Street still, and auto stock prices still reflect, as they typically do in recessions, a fair amount of long-term 'death-of-the-automobile' sentiment among investors," Healy said.

"I think I'd like to own auto

breaking news

Nissan Ambivan?

LOS ANGELES. — Nissan's Stanza-based minivan has been tentatively named the Ambivan and is expected to be introduced in the U. S. market next April. The home market version will be called the Prairie and it's expected to go on sale in Japan this fall. The U. S. model will be powered by a 2.0-liter four-cylinder engine, while a 1.8-liter version will be available in Japan.

Consultant Harbour says management systems must change quickly

Time running out for U. S., auto industry is warned

By Kathleen Hamilton
News Editor

A management consultant issued a strong warning to U. S. auto executives that they have little time left to adopt Japanese-style management techniques before the country's industrial base is destroyed.

"Ladies and gentlemen, you don't have five years—much less 10 — to employ new management techniques," James E. Harbour, president of Harbour & Associates, Berkley, Mich., told the Automotive News World Congress.

"In 10 to 15 years, our industrial base will be eroded so much that the only thing we will be exporting is free-enterprise rhetoric."

Technology is not the problem of the U. S. industry, Harbour said, citing the country's capacity to build 5.9 million fuel-efficient, front-drive cars a year.

The U. S. will be able to build 7 million such cars in 1983—yet the capacity has been unused because they have been "a sales disaster," Harbour said.

Meanwhile, high-quality, old-technology (rear - wheel - drive) Japanese cars are capturing the market.

Uncompetitive prices are the problem for the U. S., Harbour said. The way to achieve price-competitiveness is through improved management techniques, he said.

The Japanese could cut the prices of all their cars worldwide an average of $1,200, according to Harbour.

"The price war has not yet started," he said.

The advantage, he said, comes from a management system that has half the middle-management layers of a typical U. S. auto firm; from using production-workers' talents to improve the product and production system, and from a zero-defects system that reduces scrappage, inspection and warranty costs.

Harbour stressed the importance of the just-in-time inventory system used by the Japanese. Some of its advantages are that it reduces interest paid on inventory, reduces plant size and resulting costs, reduces the need for computers and insures that sources of defective components are discovered immediately.

Toyota's inventory per car is $46; Honda's is $60; the North American average is $700, Harbour said.

The system also demands that suppliers be treated as extensions of the auto maker, with design and engineering capabilities, Harbour said.

Statistical process control — while important — will not do the job alone, Harbour said. He singled out Ford Motor Co. as leading the U. S. in this area.

While the North American auto industry has averaged annual productivity improvements of 3 to 4 percent in recent years, the Japanese industry — using these techniques—has averaged 8 to 9 percent, he said.

The result is that it takes Japan 15.3 hours to assemble a small car, and it takes the U. S. makers 33.2 hours to assemble a small car.

Harbour said his analysis takes into consideration the fact that Japanese suppliers make more of their cars' componentry.

The total time to produce a U. S. car (excluding management, sales and engineering) is 145 hours. In Japan, the figure is 84 hours, Harbour said.

He stressed that the Japanese are working with the same level of technology in their plants. The sole exception, he said, is advanced body-stamping capability—and this technology was purchased from the U. S.

Harbour said union-negotiated redundant work rules add $300 to the cost of each U. S. car.

Harbour had other suggestions for the auto executives. Trucking will become increasingly important unless rail service improves, he said. It now takes an average of six days to ship a part by rail from the Midwest to the East — a trip that takes a truck one day.

Harbour also said companies must stop shipping bulky items like floorpans and seats long distances.

The cost of shipping also has made California assembly plants unworkable, he said.

Following up

James E. Harbour, center, president, Harbour and Associates, is interviewed by radio reporters after his Automotive News World Congress presentation.

GM diesel engine complaints mount as consumers gird for legal action

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The used-car market is reflecting problems with General Motors diesel engines, particularly early 350-cubic-inch V-8s used first on the 1978 Oldsmobiles.

GM is facing a major class action suit in federal court, two big ones in state courts in New York and California, and a Federal Trade Commission suit is approaching trial before an administrative law judge.

The Center for Auto Safety here is trying to assess consumer complaints. The Diesel Automotive Assn. has written GM Chairman Roger B. Smith suggesting GM consider withdrawing the engine from the market, extending its warranty, or no longer calling it a diesel.

But what may hurt GM most is rejection in the the marketplace. Reality is what happens when dealers accept the GM diesel cars in trade, what is bid for them at auctions, what dealers can wholesale them for, what prices appear in the Kelley Blue Book and in NADA's used-car guide. Those dollar amounts may be unfair or improperly perceived, but they are real.

The Kelley Blue Book has been using $750-deduct-from-wholesale for '78 and '79 GM diesel cars and $500-deduct for '80s and '81s. The September NADA guide uses a $500-deduct for '78 and '79 GM diesels and just the word deduct for '80 and '81 models. Nothing unusual is being used for '82 GM diesels.

• Informed sources are saying — but GM will not confirm — that the 1983 Chevrolet Chevette with its Isuzu 1.8-liter diesel engine, will carry a three-year/36,000-mile warranty. That is not an indication GM has greater faith in the Japanese diesel than in its own, but is being done to reassure customers.

Warranty policy for GM diesels is the same as for its gasoline engines. A GM spokesman said that means giving customer satisfaction which could mean reimbursing consumers for repair work and expenses — if warranted by the individual situation — but sticking to the usual warranty.

GM has, however, offered to extend the warranty for its '81 and '82 diesel engines to 24 months or 24,000 miles for the modest price of $100.

GM acknowledges water-in-fuel problems with early models and designed a fix for '80 models, a warning light at a $50 cost to the owner. It sent warning letters to owners of earlier models. But GM insists problems occurred mostly with bad fuel.

In February, GM announced a recall of some engine governors because of a possibility of

UAW may forego raises for profit slice—Fraser

By Marjorie Sorge
Labor Editor

The UAW could be willing to give up annual raises in exchange for a more generous profit-sharing fomula, according to UAW President Douglas A. Fraser.

Fraser told AUTOMOTIVE NEWS last week the union might be willing to exchange the traditional annual improvement factor (AIF) for better profit-sharing agreements. That raise is usually 3 percent.

But he emphasized it is not likely the deal would be part of current negotiations with Chrysler Corp. and said the cost-of-living adjustment would not be a part of the exchange.

Fraser, who steps down as union president next May, also said it is likely that his successor will be picked this fall. Current contenders are Owen Bieber, vice president and director of the General Motors Department; Don Ephlin, vice president and director of the Ford Department; Raymond Majerus, secretary-treasurer and Stephen Yokich, vice president and director of the Agricultural Implement Department.

In a speech at the Automotive News World Congress, Fraser said:

1. The UAW would be willing to modify the local-content bill making it more flexible and that a floor vote in the House is expected before the end of the current session.

2. He believes the U. S. is ready to accept wage-and-price restraints.

3. The domestic car makers will sell 5.8 million units in the

Continued on Page 37, Col. 1

UAW chief at World Congress

Toyota, Renault plan passenger-car diesels

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The bloom may be off diesel passenger-car sales in the U. S., but that doesn't mean manufacturers have given up on the oil burners. Indeed, two more are about to join the list.

According to information on file at the EPA, Toyota will be introducing a turbocharged and normally aspirated 1.8-liter four-cylinder diesel in the 1984 model year, and American Motors/Renault will be introducing turbocharged and normally aspirated versions of a four-cylinder 1.6-liter diesel engine to be produced by Renault.

The latter will be offered as an option in the Alliance, the former will likely be available in Toyota's new Corona series.

Both companies are asking EPA to grant them waivers from the 1984 oxides of nitrogen standard to bring the new diesels on line.

Such waivers are available under provisions of the Clean Air Act and have been given previously to all diesel makers asking for them on the grounds that technology does not exist to meet both a 1.0 gpm nitrogen oxide standard and a 0.6 gpm diesel particulate standard at the same time.

The last year in which waivers up to 1.5 gpm are available for the NOx standard is 1984. In 1985, it will be 1.0 for all makers and the particulate standard will go to 0.2 gpm, although EPA is readying a proposal to postpone that until the 1987 model year.

Participants enthusiastic at innovative buy-sell auto trade show

First World Expo hailed as hit

Continued from Page 1

stand it's a back and forth, give and take thing, and personnel staffing the buying offices are very accessible," said Jack Baumgarten, of Kent-Moore Tool Division, which exhibited OEM-approved service tools and equipment.

George MacFarlane, vice president of sales for Creative Industries of Detroit, an exhibitor whose major products and services include tooling and prototypes, product design and manufacturing engineering, and training/merchandising programs, said, "World Expo is the most well-hosted show I've ever been to, and I've been to a lot of them. The buying office personnel are very cooperative. We're also pleased by attendance at the meetings we've held."

Said an obviously pleased sales manager of an OEM supplier firm during the second day of World Expo: "I'm going back to our plant with blueprints I picked up here. We'll have a quote back to them (a potential customer) next week. It's much faster this way than going the usual route of making sales calls."

• To further the World Expo goal of promoting business, free meeting rooms, separate from the exhibit area, were made available to exhibitors to hold seminars, workshops and presentations.

For some of those who took advantage of the opportunity to talk with prospects in the meeting rooms, the effort paid off handsomely.

James J. Badgero, marketing manager for Ralph Shrader, Inc., Detroit-based supplier of petrochemical products to the OEM, said the company used the meeting rooms to present its latest test data and illustrate its ties to the auto industry.

"In no way could we afford to send someone around the world and make these initial contacts (with overseas manufacturers)," he said.

Norsk Hydro Aluminum, Inc., Rockledge, Fla., producer of drawn aluminum tube and aluminum extrusions, had 50 attendees at a meeting on Cobo Hall's third floor.

Norsk had sent invitations to a list of buying prospects, had a poster in its display area and "benefited from word of mouth," according to Thomas G. Hamilton, sales manager, who added, "We're very pleased."

Hamilton said Norsk had an audio visual presentation and a "very valuable question-and-answer session at each meeting.

"We enjoyed the privacy (of the meeting room), and we'll be back next year," he said.

Newnam Foundry Division of Chromalloy American Corp. plans to return to the World Expo in 1983 with double the exhibit space it had this year, according to a company spokesman. The company's major products are gray iron castings.

The foundry firm, located in Kendallville, Ind., used meeting rooms to present its newly developed Vendor Inventory Supply Assurance (VISA) system, a way of doing business that the company says offers advantages over the Japanese "Just-In-Time" or Kanban concept.

• Ken Davies, Newnam account executive, said, "The first thing we're going to do next year (at World Expo) is get two sections (of exhibit space), just one isn't enough. We're also going to change our exhibit design."

Davies added: "There's been a lot of interest in VISA, and in buying from us."

A major innovation at World Expo was a computerized "Match Maker" service designed and programmed by IBM Corp., in cooperation with AUTOMOTIVE NEWS. It was the first attempt ever made anywhere to match suppliers, distributors and manufacturers' representatives by a computer at a trade show.

"It (Match Maker) went well and drew a great deal of interest," said Tony Merpi, managing director of World Expo. "This year was the first step; next year we take an even bigger one."

He said that at 1983 World Expo, in addition to a computerized cross-indexing system matching suppliers and distributors who do business in the same geographical areas and deal with similar automotive products, the computer data base will be expanded to include vehicle manufacturers.

"We'll plug in information on the kinds of products, applications and services the car and truck makers are looking for," Merpi said.

Another World Expo feature that received a lot of attention, Merpi said, was an International Business Center, designed to assist representatives from 18 foreign countries who conducted business at the show.

The service included a Telex machine, interpreters and availability of a Department of Commerce trade specialist who assisted visitors in making contacts with American suppliers.

Cobo Hall was designated as international free-trade zone during the show, allowing overseas exhibitors to ship their displays and products duty-free.

Merpi said exhibitors told him that the "quality of participants and attendees at the show was excellent." He said he heard reports of several transactions being made that involved multi-million-dollar contracts.

According to Merpi, exhibitors already have asked for space at next year's Automotive News World Expo, to be held July 12-15 at Cobo Hall, and some have signed letters of intent to exhibit.

"We've also talked with representatives from various trade associations in England, Italy, South Korea and elsewhere, who came this year to observe and analyze. They tell us they'll be participants in '83," Merpi said.

Mid-August new-car sales off 8th period in a row

By Jenny L. King
Staff Writer

For the eighth 10-day selling period in a row, retail sales of new U. S. cars fell from year-ago levels, bringing the 1982 model year closer to a stagnant ending. New-car sales plunged 35.33 percent Aug. 11-20, the greatest year-to-year gap since a 43.99-percent decline mid-March.

Dealers delivered 132,356 domestic cars during the mid-August period, down from 204,678 in 1981 and lowest since 115,799 in 1961.

With nine selling days this year and last, the daily rate of 14,706 was down 35.33 percent from 22,742.

Year-to-date sales through Aug. 20 totaled 3,610,227, down 13.32 percent from 4,164,870 in 1981.

The major domestic auto makers were down from 19.71 percent to an even 50.00 during the period. Ford Motor Co. held the 19.71 percent decline, its sales dropping to 29,736 from 37,034 last year. Chrysler Corp. was down 29.58 percent, to 16,092 from 22,853.

General Motors bowed under a 39.53-percent sales difference, plunging to 81,597 from 134,949 in 1981. Volkswagen of America reported sales of 2,431 Rabbits, down 49.79 percent from 4,842. Estimated sales of American Motors passenger cars were 2,500, down 50.00 percent from 5,000 in 1981.

• GM earned 61.65 percent of the mid-month domestic market, down from 65.93 percent last year. Ford cornered 22.46 percent, up from 18.09 percent. Chrysler had 12.16 percent, up from 11.17 percent. VWoA dropped to 1.84 percent from 2.37 percent, and AMC stood at 1.89 percent, down from 2.44 percent.

Chrysler and Lincoln were the sole U. S. makes to increase their sales compared with year-ago levels. Chrysler more than doubled its total, going to 4,255 from 1,714, while Lincoln was up 10.03 percent, to 1,766 from 1,605.

At Chrysler Corp., Plymouth was down 44.01 percent, Imperial was down 79.53 percent and Dodge was down 43.56 percent. Ford sales dropped 25.46 percent and Mercury was down 10.10 percent.

Cadillac suffered the lightest blow at GM, its sales down just 5.02 percent from last year. Oldsmobile was down 41.69 percent, Chevrolet was down 40.08 percent, Pontiac was down 53.83 percent and Buick was off 32.73 percent.

AMC was down 50.00 percent and VWoA dropped 49.79 percent.

Dresser to buy IH construction unit

CHICAGO.—Dresser Industries, Inc., Dallas-based manufacturer of equipment for construction, mining and petroleum operations, has agreed in principle to buy most of International Harvester's construction-equipment business. Sources close to IH said Dresser will pay $100 million to $150 million. The Dresser offer doesn't include foreign operations, which IH is expected to sell eventually.

GM picked as strike target in Canada

TORONTO.—The UAW in Canada has picked General Motors as the strike target. UAW Vice President Robert White, director of the Canadian region, said he is "going in (to negotiations with GM) looking for a settlement," but said if an agreement is not reached by midnight Sept. 14 there will be a strike. White also said the decision has the support of the union's International Executive Board which would have to authorize the strike. The strike target decision was made between GM and Ford. The UAW had ruled out Chrysler because of its economic situation.

Low-interest finance rates offered by Chrysler, Ford

By Joseph Bohn
Marketing Editor

Chrysler Corp. uncorked a new low-interest retail financing program which covers some new '81, '82 and even '83 model cars.

Ford Motor jumped in with a competitive 11.9 percent retail finance rate on three selected car lines, almost immediately, and announced it would lower the finance rate offered by Ford Motor Credit on all cars by 1 percentage point.

For Aug. 24 to Sept. 30, Chrysler is offering 12.5 percent financing to purchasers of its '82 LeBaron and Dodge 400 convertibles.

From Aug. 24 to Dec. 31, it is offering similar 12.5 percent financing on '81, '82 and '83 Cordoba, Mirada and Imperial models.

Eligible customers are those who take delivery during the specified time period.

Financing can be handled by any financial institution. Chrysler will reimburse lending institution the difference between 12.5 percent and their normal rate up to 18 percent.

However, because Chrysler is paying the money all at once—rather than over a period of months — it is discounting amounts it will pay lenders.

If, for example, a finance contract is for one to 12 months, Chrysler will pay 90 percent of the difference between 12.5 percent and whatever the bank's normal financing rate.

If it is a 13-24-month contract, Chrysler pays 85 percent, and on 25-to-48-month contracts it pays 75 percent of the difference between 12.5 percent and the lender's normal rate.

Customers can use credit unions, banks or whatever finance source the dealer lines up. There is no participation agreement to be signed by dealers, or enrollment fee or any other dealer requirement in the program.

• Meanwhile, from Aug. 24 to Dec. 31, Ford Motor is offering car buyers 11.9 percent retail financing on '82 Thunderbirds, XR-7s and Lincoln Continentals.

The program is in effect on eligible cars delivered to customers through Dec. 31, 1982, whether they buy out of dealer stock or order from the factory.

Unlike Chrysler, Ford is paying a straight $800 on finance contracts, regardless of size, in states with limited-recourse laws.

Essentially, limited recourse means the dealership is responsible for paying off the car if a customer defaults.

The vast majority of states fall into this category.

In other states, without limited recourse, Ford is paying banks and financial institutions a flat $750 per vehicle.

Ford is also paying a flat $90 finance reserve on the contracts in limited recourse states and $40 in others.

In some states, this could affect the dealers' finance reserve, and might be interpreted as the dealers contributing to the program.

Thus, the company still has to iron out specifics in states like Texas and Arkansas which have rules against requiring dealers to participate in company-sponsored programs of this sort.

Meanwhile, Ford Motor Credit is reducing its finance rate on all Ford products it finances by a full percentage point.

However, because there are some 200 different rate areas around the country, this reduction was not expected to be implemented until around Sept. 1.

Some states have add-on interest rates, such as California, where the rate will be lowered from 10.5 percent to 9.75 percent.

A half-point of add-on interest equals roughly about one point of simple interest.

In simple-interest states, the prevailing rate might be reduced to 16 percent, for example, from a previous 17.

Still again, in some states like Arkansas, where there is a very low capped interest rate, no change may be made.

The complications of figuring these changes as they apply to each area prevented Ford Motor Credit from initiating the reductions immediately last week.

Meanwhile, from Aug. 18 to Sept. 22, Ford Division has a truck program, offering sales people $75 for the sale of any '81, '82 or '83 Bronco, F-100 to F-350 or Ranger pickup.

If a dealership hits 100 percent of an assigned sales manager's objective on these units, the sales manager also gets $25 per unit retailed.

Mann lists factors on both sides

Fleet boss' problem: Lease or buy?

By Francis J. Gawronski

There are no clear-cut factors to indicate that buying fleet vehicles is better than leasing them, or leasing them is better than buying, according to Ilene Mann, director of facilities management for G. D. Searle & Co., Skokie, Ill.

Speaking at the Automotive News World Congress, Mann said there are common advantages and disadvantages to both sides.

According to Mann, there are two basic advantages of company fleet ownership.

"One is total corporate control," she said. "That is, negotiating your own purchasing costs and arrangements which can be substantially less than leasing arrangements.

"Fixed depreciation and interest rates are heavy weighing factors in the decision of buying or leasing," she said, "as are negotiating maintenance and vehicle disposal.

"Second is having a corporate vehicle management staff that has the expertise necessary to manage all of the areas just mentioned," Mann said.

The disadvantages of corporate ownership include administration—the expense of maintaining the appropriate staff and headcount to manage company ownership effectively.

Other disadvantages listed by Mann include capital investment of millions of dollars in vehicles instead of possibly investing in other areas more appropriate to the needs of your business.

Also, company owned vs. leased vehicles affect the organization's balance sheet, and the dollars invested in vehicles would probably not bring as great a return as would other investments, she said.

• "Advantages of external leasing include capital release," Mann said. "The opposite of company ownership, you are not investing capital in vehicles and can, therefore, invest in other areas."

Another advantage in leasing is that lessors have the expertise in all areas of vehicle management and can provide the resources necessary to manage a program effectively.

Procurement and disposal leverage of vehicles is another advantage, Mann said, because leasing companies purchase and sell thousands of vehicles all over the country.

Disadvantages of leasing includes administration because "your company still has to maintain an appropriate staff to administer a program even with utilizing an external leasing source," she said.

Interest and fees are other leasing disadvantages. Because the cost of money has increased substantially over the last few years, Mann said it usually costs most companies a substantial amount over the prime interest rate to utilize external leasing.

"Given all of these factors to analyze, it really comes down to only two major factors for management to consider as a basis for decision," she said.

The first one is your company's financial position," Mann said. "That is, what kind of tax situation is beneficial and can your organization afford to invest the capital necessary for ownership?

"The second major factor is resource expertise," she said. "What resource expertise is available both internally and externally?"

After a careful lease vs. buy analysis has been performed and a decision has been made, Mann said it all comes down to managing that decision.

But year-to-date total is 23 pct. below 1981

9 plants return; car output jumps

By Patricia Hoffman
Staff Writer

Domestic auto production fared considerably better last week than in the previous week as nine assembly points returned from model changeover, leaving only six plants idle.

Last week's car production was targeted at 99,993 units, a 32.96 percent gain from the previous week's 75,207, but the total was 4.40 percent below the 104,600 units completed in the comparable 1981 week.

So far this year, the manufacturers have finished 3,429,513 units, down 23.80 percent from last year's 4,500,830.

Breakdown last week by company was: General Motors 62.91 percent; Ford Motor, 21.76 percent; Chrysler Corp., 12.93 percent and American Motors, 2.40 percent.

GM's Lordstown and Willow Run plants resumed operations last week following model changeover. Also back at GM were Tarrytown, Framingham and Janesville. Tarrytown and Framingham returned Wednesday (Aug. 25) and GM's Janesville plant resumed production Thursday.

Ford Motor's Dearborn and St. Louis facilities and Chrysler's Belvidere and Newark points also resumed operations last week.

The GM Leeds plant, idle since July 14, will resume with one shift operations today (Aug. 30), leaving about 2,000 workers on indefinite layoff. The plant builds Buick Skylark and Oldsmobile Firenza.

GM's Wilmington facility, idled Aug. 13, is slated to return Sept. 7.

Also at GM, the Oklahoma City point began a four-week shutdown last week for model changeover. Operations are expected to resume Sept. 20.

Ford's Atlanta and Chicago points remained idle last week for changeover.

Volkswagen of America's Westmoreland facility, down Aug. 2, is slated to return sometime in September.

AMC announced that beginning Sept. 13, production of the new Renault Alliance at the company's Kenosha facility will be doubled, upping the current rate of 300 units a day on two shifts to 600 units a day on two shifts. Approximately 1,000 workers will be recalled from indefinite layoff.

Sporty rear window

Hammond Mfg. Corp., Lansing, now offers aluminum/stainless rear window louvers for 1982 Camaro and Firebird models. The black satin finish wraparound louvers are designed for installation without body bolting.

Truck production rises 7 pct. on 30,411 assemblies

Downtime at Ford Motor's Louisville facility pulled last week's domestic truck production down 7.29 percent from the previous week's total, but output was 54.71 percent higher than last year's figure when six assembly points were idle for changeover.

The truck makers scheduled 30,411 units last week, down from 32,804 the previous week but up from 19,657 in the comparable 1981 week.

Year-to-date, the manufacturers have assembled 1,329,229 trucks, a 16.99 percent gain from 1,136,169 trucks finished in the same period last year.

General Motors' Janesville facility, idle since Aug. 6, remained down last week for model changeover. Operations are slated to resume tomorrow (Aug. 31).

Also at GM, the Detroit plant, down since Aug. 20, is expected to return Sept. 20 with 1983 production.

The Pontiac heavy-duty and medium-duty facilities also remained idle last week for changeover. The heavy-duty line is slated to resume operations Sept. 20, and the medium-duty line will be back Sept. 7.

Volkswagen of America's Westmoreland plant, which closed June 28, is slated to resume operations in September.

Ford's Louisville point was closed last week for inventory control.

Car output rises 26 pct. in Canada; trucks up, too

Canadian auto production jumped 26.16 percent last week from the previous week's total as Ford Motor's St. Thomas facility scheduled six days of assembly following downtime for model changeover.

Last week's car output was estimated at 17,982 units, up from 14,328 the previous week, and up 12.08 percent from 16,026 units in the comparable 1981 week.

Year-to-date, the auto manufacturers have assembled 583,275 units, a 3.68 percent gain from last year's 562,574.

The return of General Motor's Oshawa truck point helped boost last week's truck production 40.53 percent to 10,423 units from the previous week's 7,417, and output was up 1.10 percent from 10,310 trucks completed in the comparable 1981 week.

So far this year, there have been 341,698 trucks produced, down 1.65 percent from 347,446 units in last year's comparable period.

GM's Oshawa (No. One) and St. Therese facilities remained idle last week for model changeover.

Also still down was Volvo's Halifax point, which has been idle since Aug. 2 for changeover.

Recent stock market boom has little effect on Detroit

The recent Wall Street boom in stock prices has had little effect on Detroit despite the run-up in auto stocks, according to several experts.

Otto Eckstein, chairman of Data Resources, Inc., said the market boom has had no effect "but the falling interest rates which started the activity will definitely help the auto industry."

Dealer finance-and-insurance expert Kark Singer, of Karl Singer and Associates, agreed but added that "to return to the prosperity," the long-term interest rates must start "breaking through 12 percent and head below 10 percent."

Arthur G. Davis, auto analyst for Prescott Ball & Turben, Inc., said General Motors should take advantage of the stock price increases to go to the equity market with a new stock issue. "Given investor enthusiasm for the auto cycle, there is an apparent opportunity for GM in the market," Davis said.

David Healy, auto analyst for Drexel Burnham Lambert, Inc., disagreed. "I hope GM doesn't go to the equity market," Healy said. "GM already is a recipient of benefits of the lower interest rates. Car loans will be cheaper and easier to get.'

European lines fare best in import sales per dealer

By Kathleen Hamilton
News Editor

The first half of 1982 was a washout for dealers selling Japanese cars, but those handling European lines fared pretty well.

Of the 20 most popular import makes, seven — all European — registered gains in sales-per-dealer averages compared with the first half of 1981. Twelve makes — including all the Japanese makes except the Challenger imported by Dodge—took losses.

It wasn't roses for all the European-car dealers, however. Since the first half of '81, five lines have disappeared from the U. S.: MG, Triumph, Ford Fiesta, Lancia and Rover.

Hefty gains in the Jaguar average helped offset the losses incurred by Jaguar-Rover-Triumph-MG dealers. Jaguar dealers averaged a record 21 sales per outlet — 13 more than during the first half of 1981, and well above the previous alltime high of 13 sales, set in the first half of 1970 and repeated in 1975.

Nevertheless, those 21 cars were about half of what a full-line JRT dealer averaged in the first half of '81. There were 108 full-line dealers then. Twice that many now carry Jaguar.

• Another European make that fared well in 1982 was Volvo. Its record 104 sales per outlet broke the old mark of 92, set last year. It was enough to put the Swedish car maker into the No. 4 ranking, below Toyota, Honda and Datsun/Nissan.

Volkswagen, which was in the No. 4 spot at this time last year in import-car sales per dealer, is now tabulated as a domestic car because the preponderance of cars in VW showrooms are Pennsylvania-built Rabbits.

Only two other makes had record sales averages this year: BMW, with a new peak of 63, up 8 from the record set last year, and Saab, whose new record of 29 beat the old mark of 25, set during the first half of 1973 and repeated in 1978.

DeLorean, with a sales-per-dealer average of 4, didn't have an average available at this time last year, when its dealer network was just starting up.

Renault and Porsche were the only other makes that increased their sales-per-dealer averages this year. Each is up by 3 cars—Renault, to 15 sales per dealer, and Porsche, to 21 sales per dealer.

On the other side of the ledger, Toyota suffered its first loss since 1978. What a loss it was: An average of 59 cars per outlet. That brought the import giant's average sales per dealer down to 241 — still good enough for the No. One spot.

Honda dealers lost, too — 26

It's got Flair

Jim Piegue

ASC concept car shown at World Expo

The Flair, displayed at the recent Automotive News World Expo, was created by ASC, Southfield, Mich., with input from Ford Motor's Plastic, Paint & Vinyl Division. Flair is based on the Ford EXP front-drive platform and features fiberglass body, targa top, quad headlamps behind smoked covers, Ford five-speed transmission and McLaren-tuned 1.6-liter engine and suspension. A unique feature is a power backlight that opens inward from a hinged base and pivots underneath the decklid.

CARB tightens particulate standard, rejects NOx relaxation

Calif. action could slash diesel sales

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — In an action that could effectively ban the sale of diesel cars and light-duty trucks in California during 1985, the California Air Resources Board (CARB) adopted diesel particulate emission controls tighter than those required by the federal government.

At the same time adopting its staff's recommendation for the controls, CARB rejected another proposal from the staff that would have relaxed the 1984 1.0 gpm NOx limit to 1.5 gpm for passenger cars weighing more than 4,000 pounds.

Those two rulings, when taken in conjunction, could preclude the sale of some diesel models as early as next year, according to a number of manufacturers who testified at the board's hearing.

The particulate standards adopted by the board call for no more than 0.4 grams per mile of particulate matter over 50,000 miles during the 1985 model year, 0.2 gpm for 1986-88 and 0.08 gpm in 1989 and subsequent model years. The federal standard is 0.6 gpm 1982-84 and 0.2 gpm in 1985.

While the board is confident that particulate trap technology will be far enough along by 1985 to enable the manufacturers to meet the standards, the auto makers themselves are less optimistic.

Traps currently under development, according to testimony presented by the makers, have durability problems, are costly and to date have no reliable means for regeneration or cleaning out the trapped particulates.

• Equally troubling is the tighter NOx standard, which gives the manufacturers of larger and heavier diesel cars less leeway in meeting both the NOx and particulate standards in 1984-85.

"While we have not had time to assess the full engineering impact of the California Air Resources Board action, our initial reaction is that it would be extremely difficult, if not impossible, to sell larger diesel cars in California after the 1983 model year," according to General Motors.

A Chrysler spokesman said "the requirements are beyond

Overall, the '83 fleet is up 1.9 pct.

GM boosts some prices, cuts others

By John K. Teahan Jr.
Managing Editor

General Motors prices moved up, down and sideways last week as the corporation decided upon the stickers for its 1983 models.

When all the deliberations were finished, the price of an average-equipped GM car was up $212, or 1.9 percent. The boost consisted of $160 on the base car and $52 on optional equipment.

It brought the price of the average GM car to an estimated $11,100.

There are no changes in dealer discounts for '83 models, and there is no increase in destination charges for introduction time.

The $212 increase for the full GM fleet does not include Corvette. The Chevrolet sports car is new for '83 and is expected to be several thousand dollars above its present sticker of $18,290.

GM's $212 boost appears stiff in light of the depressed condition of auto sales, but it was mitigated somewhat by the way it was constructed, with some lines reduced and some unchanged.

The $212 compares with an increase of $617, or 5.8 percent, at introduction time last year.

GM's 1.9 percent boost is expected to become the industry's standard for '83, since GM sets the pricing pattern for the rest of the domestic makers.

• GM's '83 price announcement had three parts. The A-cars and the J-cars are down, reflecting the sales problems of those lines. The T-cars and the X-cars are unchanged, and other models are up.

The decreases generally range from $250 to $500, although the Cadillac Seville was cut $1,500 on a comparably equipped basis. The Seville sticker is down $1,993, but some equipment has been removed — Twilight Sentinel, extended-range radio speakers and aluminum wheels.

Price hikes range from a carline average of $357 to $686 (Buick Electra Park Avenue). The boosts involved the rear-drive intermediates, the standard-size and luxury cars and the Chevrolet Camaro and Pontiac Firebird. Camaro and Firebird have been hot this year, and the standard-size cars have been selling better than expected.

So GM is obviously trying to give some much-needed help to the cars that have been the most obvious victims of sticker shock and, at the same time, trying to pick up some extra bucks on those that have met with greater public acceptance.

The A-car and J-car price reductions embraced 37 models. The A-bodies are Chevrolet Celebrity, Pontiac 6000, Buick Century and Oldsmobile Cutlass Ciera. GM said the average base car list price cut on those models was $250.

On the J-cars, it was an aver-

Ford studies Dearborn assembly closing

DEARBORN.—Ford Motor Co. is on the verge of completing plans to close its 64-year-old Dearborn assembly plant. The company is said to be considering moving assembly operations to either its recently closed Flat Rock (Mich.) casting plant or to the partially completed assembly plant in Sterling Heights, Mich., that Volkswagen is trying to sell. Ford executives, it has been learned, favor a move to the modern Flat Rock plant.

Cadillac buyers again go for V-8 power

LIVONIA, Mich. — When the 1982 model year started, Cadillac expected 65 percent of its cars to be powered by a new 4.1-liter digital fuel injection engine made here. The year ended with diesel sales misfiring and with 82 percent of the cars on which it was available being fitted with the new gaso-

AMC claims its 32 MPG tops U.S. cars

SOUTHFIELD, Mich.—American Motors will have a 1983 corporate average fuel economy (CAFE) rating of 32 miles per gallon, making it the highest of any domestic auto maker, the company said last week. The figure includes Renault models.

The company made the announcement at a series of 22 regional press conferences held to preview the '83 Renault Alliance and other offerings.

AMC Executive Vice President Lawrence Hyde told the press conference here that the 32-MPG rating is "better than we expect GM, Ford or Chrysler to report and even better than some of our competitors from Japan."

Hyde, calling the new Alliance an "imoprt fighter," spoke about its many attributes, emphasizing the newest entry, rather than the carryover AMC models.

He said capital investment in the Alliance was $200 million, with another $100 million spent "in addition to tooling" to prepare the Kenosha (Wis.) manufacturing facilities for Alliance production.

Hyde said the Alliance models have 0-to-60 acceleration times of 12 to 14 seconds.

He also said that if the Alliance is "as big a success as we think it will be," meaning 100,000 sales the first year, "we expect a growing need for additional dealers."

Hyde said the dealer discount on the new Alliance ranges from "14 percent on the standard model to 10 percent on leader models."

Public introduction date for all '83 AMC-Renault cars and Jeeps is Sept. 22. The new line of more-fuel-efficient senior Jeeps, which was to have bowed at mid-year, has been pushed back to an intro as an '84 model one year from now.

California passes inspection measure

SACRAMENTO, Calif.—A bill requiring biennial vehicle emission inspections has been passed by the California Legislature and it's expected to be signed into law by Gov. Jerry Brown.

It is hoped the new law would end federal EPA sanctions that froze approximately $83 million in federal funds for California sewer, water and nighway projects.

Awaiting his turn

John K. Givens, right, marketing vice president of Chrysler Corp., waits to make his presentation at Automotive News World Congress. With him are Silvia Simmons, senior vice president of Kenyon & Eckhardt, and his son, Kevin Givens.

Tab is put at $3 per hour

Cost of health benefits too high, Chrysler says

By Marjorie Sorge
Labor Editor

Chrysler Corp. has told the UAW it can no longer afford to shoulder the total cost of workers' health-care benefits.

"Chrysler can no longer tolerate the awful penalty it must pay as a result of being shackled to a health-care benefit plan which drains our limited resources and just plain wastes our labor dollars," said Thomas W. Miner, vice president, industrial relations.

"A greater and greater portion of our labor cost dollar is going to pay for health care and not into the pockets of workers," he said.

The UAW has said it wants more money in workers' paychecks, but Miner said the only way to do that is to lower the cost in other areas. To lower the medical coverage cost, he suggested less-comprehensive coverage, co-pays and deductibles and limiting the choice of providers.

"What we need is both a reduced level of costs and predictability regarding future levels of cost," Miner said. "We'll take it any way we can get it."

According to Miner, healthcare benefits cost the company about $3 per hour and that is expected to rise another $1.33 an hour by 1985 under the current system.

At Chrysler (and Ford and General Motors), both retirees and active workers are 100 percent covered under the major medical plan which is totally company paid. The policy also covers the portion not paid by Medicare after a retiree is 65 years old.

Labor costs at Chrysler are $19.60 an hour, about $1.50 less than at Ford and GM when Chrysler's higher pension and medical costs are considered. Chrysler's costs are higher because it has a one-to-one ratio of active workers to retirees.

• Chrysler's total cost for health care will be about $337 million in 1982, up from $81 million in 1970, according to Miner. The cost of health care at Chrysler is equal to $450 a car. At Ford it is $336 a car and at GM, $370.

"Now, if that's the type of labor cost increase they want Chrysler to chin, if that's the kind of new money they want generated in these negotiations, where zero, none of it, goes in employe pockets, I think we're both in for a big problem," Miner said.

According to Miner, a Health Maintenance Organization (HMO) plan costs $187.43 a month for the same coverage.

About 5 percent of Chrysler workers are currently HMO members. Both Chrysler and the UAW have continually promoted the system. While availability could be a problem with introducing more HMOs, Miner said they could be set up quickly to accommodate a heavier load.

"People who want to have the right to retain all the trimmings of the existing wasteful system should pay for it," Miner said.

It is possible that a program could be negotiated under which workers who elect to use HMOs have full coverage while those who elect to use private physicians would make some payments.

• UAW Vice President Marc Stepp, director of the Chrysler Dept., has said he would "not fight this concept" but "would look at it objectively." (Automotive News, April 26, 1982).

The union has said it wants more money in the paychecks after this round of bargaining, but it has also flatly refused to accept co-pays and deductibles on health care. But Miner said the only way to get more take-home pay is to reduce costs elsewhere.

"If we take the money away from the hospital and put it in the worker's checks, we think they'll want to keep it there," he said.

Rev. Jesse Jackson leads talks with makers

Wider auto role urged for blacks

By Edward Lapham
Financial Editor

The drive to improve the lot of black Americans in all aspects of the auto industry is gaining momentum and has a good chance of succeeding, a national civil rights leader told Automotive News last week.

The Rev. Jesse L. Jackson, founder and national president of Operation PUSH (People United to Save Humanity), said the current economic climate in the U. S. has provided the black community with the economic leverage it needs to open new doors in Detroit.

"We are the margin of salvation or collapse in the economy," Jackson said. "Just as America could not defeat Japan on the battlefield without black soldiers, corporate America cannot defeat the Japanese on the economic battlefield without the use of black minds, black dollars and black talent."

Jackson and other PUSH officials were in Detroit last week to meet with General Motors officials as well as UAW leaders and local businessmen as part of the drive.

Jackson said PUSH intends to press for improvements in all aspects of the industry, including more black dealers, better financial arrangements for black dealers, more black decision-makers and policy implementers in the corporate ranks plus more business for black suppliers.

He and other PUSH officials visited Detroit earlier in the year and were able to get Ford and Chrysler "to declare a moratorium" on foreclosing on black-owned dealerships for the duration of auto industry depression, but he said that GM had yet to make a commitment.

Subsequently, a Ford spokesman said Ford did not commit to a moratorium, but offered to make it a topic at the next meeting with PUSH. "Our principal goal is to assure the success of our existing minority dealers," Ford said. "Happily, there has been no loss of minority dealers in the past 18 months."

A Chrysler official said his company did not commit to a moratorium either. "We can't give a dealer carte blanche under any circumstances," he said. "But we are making every reasonable effort to help any dealership in trouble. Some you just can't keep open."

Although Jackson expressed an interest in securing more positions for black lawyers, CPAs and executives plus securing more business for black ad agencies, manufacturers and insurance companies, it was clear the dealership situation was at the fore.

He said there are 22,500 domestic dealerships in the U. S. and that using a population ratio, blacks should have about 10 percent or 2,200. Jackson said there are currently about 94—eight at Chrysler, 27 at Ford and 59 at GM—and that 64 of these are currently in the red.

"There has been a policy of apartheid, a policy of exclusion," Jackson said.

"Many white dealers are occupying our territory," he said. "They got dealerships we should have had."

He said black dealers at GM are plagued by problems with "floorplanning, GMAC, inadequate advertising and bad locations," but added that the situation at all the domestic companies "is essentially the same."

Jackson said black Americans bought $14 billion in auto products in 1981 and received less than $500 million back in trade. He said that last year, Ford, GM and Chrysler had total procurement budgets of $50 billion and that black businesses should have had 10 percent of the business.

"That means there was a $5 billion trade deficit for the black community," Jackson said.

"We're not aiming for full employment," he said. "We had that under slavery.

"We're not asking for social generosity and aid but rather economic reciprocity and trade."

He also blasted auto company management. "The historical cataracts of racism have blinded corporate America," he said. "We are being victimized by inferior management which does not realize the value of black spending power and stumbles over black talent.

"Until 1967 there was an effective policy of restraint of trade with the black community; since then there has been a policy of ambivalence."

He said the auto industry has done less to develop the black American market than foreign markets because it believes the black market is captive.

"We are not captives," Jackson said. "Our dollars must be competed for. Black Americans have more median education and

Ford reopens its plant in Northville, Mich.

DEARBORN. — Ford Motor Co. reopened its Northville (Mich.) plant last week as the final step in fulfilling the new UAW/Ford contract.

The plant, which closed in 1981, will now produce fuel tanks for Ford-built products and service and repair shipping racks for Ford plants in the Detroit area, according to John A. Betti, vice president, powertrain and chassis operations.

Ford President Donald A. Petersen said last spring that the plant would be reopened "in the spirit of the new labor agreement."

Workers in the plant will have flexible work assignments, need multiple skills and will need to use new technologies and statistical process control. Work rules were also modified and those changes were ratified by 97 percent of the local union's members.

Twenty-five workers were called back last week and about 25 will be recalled when fuel-tank product and rack-repair activities begin in the first quarter of 1983.

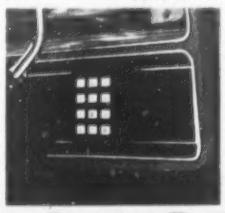
FINALLY A PROFITABLE ANTI-THEFT PROGRAM FOR YOU

PRE-VENT ANTI-THEFT SYSTEMS FOR CARS AND TRUCKS

Now Pre-Vent brings you a computerized theft system that is both easy for you to install and affordable for all your customers.

Retailing for under one hundred dollars, Pre-Vent is backed by an unconditional one year guarantee on parts, labor and towing.

Helping to protect your customers' property can lead to tremendous after sale profits, while providing your customer with an effective anti-theft device. By utilizing insurance discounts, the low cost of Pre-Vent can be covered for most car and truck drivers.



For more information on Pre-Vent, call 216-741-2488 or write: Bodyguard Rustproofing Co., Inc., 4963 Schaff Lane, Cleveland, Ohio 44131

PRE-VENT™

Daytona Beach works.

There's more to Daytona Beach than a fast track and fair weather. Low taxes. One hundred percent industrial revenue bond financing. Low labor rates. Low property maintenance. And an industrial park across the street from the famous International Speedway.

Of course, it takes more than relocating to make a good business. You've got to move to the right place. A place suited to your business needs. And if you're in the automotive business, it's Daytona Beach.

So if your business is dragging, shift to a winner's location. Daytona Beach ... home of the world famous Daytona 500.

Volvo beats Ford in average sales per franchise

Something startling happened in the first half of 1982: Volvo dealers turned in a better sales average than Ford dealers did.

A look at the 10 makes with the best sales-per-dealer totals shows that even though Ford dealers' average for early 1982 was off only six cars from the first half of 1981, Volvo's average was up 12 — enough to put dealers of the Swedish cars in the No. 7 slot.

Volvo is the only make on this year's list that registered a gain compared with last year. It also is the only European make in the lot.

Ford's unit sales, of course, were much higher than Volvo's — more than 11 times greater — but Ford's dealer total is about 12 times that of Volvo. So the Volvo average was higher.

The Japanese-car dealers on the list generally suffered worse average sales losses than dealers of the U. S. makes:

Toyota was down 59 sales per dealer compared with the first half of 1981. Honda was down 26, Mazda down 23, and Subaru down 8. Chevrolet dealers average fell 14. Oldsmobile was down 11, Ford was down 6 and Buick down 3.

The top five slots this year are occupied by the same makes and in the same order as in early 1981: Toyota, Honda, Datsun/Nissan, Oldsmobile and Chevrolet. This year, however, Buick tied with Chevy for the No. 5 slot. Last year, Buick was No. 7.

Volkswagen fell out of the Top 10 this year. In the first half of '81, its 127 sales per dealer had been enough to earn it the No. 6 position. That average fell to 80 — including both domestic and foreign-built VWs— in the first half of 1982.

VW ad agency to open office in Detroit area

Doyle Dane Bernbach will join its clients Volkswagen and Porsche-Audi in moving to the Detroit area next March.

DDB expects to have a full-service operation in Troy, Mich., in March, handling not only its auto clients but "dozens" of dealer groups currently handled out of New York, according to Robert Dunn, management supervisor in the New York office.

DDB currently employs about 100 people on its New York automotive accounts. Its office in Troy will be headed by Robert Rees as president. He will continue to oversee the VW and Porsche-Audi accounts.

Rees is currently executive vice president of the agency in New York.

European lines fare best in import sales per dealer

Continued from Page 1

sales apiece, which brought their sales-per-dealer average to 236. Mazda sales per dealer fell by 23 cars to 100.

Datsun/Nissan sales per dealer dropped by 16 to 209. Isuzu's average was down 11 from last year's estimated total to 33 sales per dealer. Subaru's sales per dealer fell by 8 to 95.

Dodge dealers' average sales of Colts fell by 2, to 8. Plymouth dealers' average Champ sales fell by 3 cars, to 7.

But there were also some European makes that registered declines in the first half of 1982. Fiat was down 13, to 20 sales per dealer. Peugeot dropped 4, to an average of 21 sales per dealer.

Audi also was down 4, to 53 sales per dealer. And Mercedes-Benz was down by 2, to 78 sales per dealer.

The Top 20 import listing used in this semiannual AUTOMOTIVE NEWS analysis excludes makes that sell less than 1,500 cars per half.

The Top 20 accounted for 96.4 percent of all import sales in the U. S. during early 1982. Combined, the Top 20 makes averaged 63 sales per outlet — the lowest average since the first half of 1976.

New-car campaign launched by Automobility Foundation

WASHINGTON.—"Get Into a New Car Now," a two-month public campaign sponsored by the Automobility Foundation, was launched officially Sept. 1, according to Robert P. Mallon, chairman of the foundation.

The public service campaign is designed to make consumers more aware of the added features and values found in today's new cars.

"Get Into a New Car Now" has been endorsed by the Television Bureau of Advertising, the Radio Advertising Bureau and the Newspaper Advertising Bureau as a way to benefit the entire automobile industry. The three advertising bureaus are supporting and promoting the foundation's program, distributing television commercials, radio spots and ad mats to their individual members along with the request that time and space be donated.

"This program creates a positive selling environment at no additional cost to dealers," said Mallon. "Dealers are encouraged to complement this public service advertising by buying time and space with the involved stations and newspapers," he said. "We have been particularly encouraged by the tremendous support received by all the individual bureaus of advertising."

Needham, Harper & Steers, Washington, D.C., is the agency preparing the campaign.

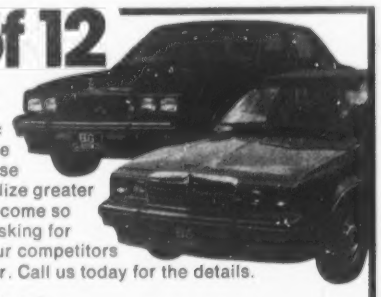
The Automobility Foundation is a nonprofit organization established by NADA.

Bank of America hikes dealers' credit-card rate

SAN FRANCISCO.—The Bank of America has raised the rate it charges members of the Northern California Motor Car Dealers Assn. who accept Visa/Mastercard payments from customers.

The rate for several years has been 1.85 percent. It has been increased to 2.24 percent.

10 out of 12



Are you one of the 10 out of 12 Cadillac dealers offering your customers these Classic Cimarron grilles? If not, you're missing an opportunity to close more Cimarron sales and realize greater profits. These grilles have become so popular that customers are asking for them. Don't lose a sale to your competitors over an option you don't offer. Call us today for the details.

Auto industry revival poses questions

By Arthur Way
Economist Intelligence Unit

The worldwide automotive industry is beginning to awaken from one of its periodic nightmares. After three years of gloom, doom and despondency, some encouraging signs are emerging. Passenger car production in Western Europe's two principal vehicle manufacturing nations—West Germany and France—is rising, while, across the Atlantic, auto companies are starting to see a return to profitability.

The dismal performance of the past few years fits into the cyclical pattern of demand and production which has characterized worldwide automotive activity in the postwar period. The three principal vehicle-producing areas together — North America, Western Europe and Japan — have had eight downturns in passenger-car production since 1946, but each recovery peaked at a higher level than its predecessor, the so-called "ratchet effect."

As a general rule, the steeper the fall, the more impressive and rapid the recovery.

If there was to be a fundamental shift in industry fortunes, it would have occurred after the oil crisis of 1973. This triggered an exceptionally severe downturn. But recovery was so sudden and strong that two years later, in 1977, new record levels of sales and production were set.

The clear message is that the world depends on cars and trucks to move people and goods.

Revival of the auto industry is on the way. The question is, whether its past structure and pattern will remain valid in the future.

A number of developments have occurred which could alter the industry.

The role of government in auto industry affairs is always a consideration, but it assumed growing importance as a result of highly adverse market conditions of the past decade. Faced with potential collapse of individual auto companies, government has provided financial support and, in North America and Western Europe, assumed increasing roles as protectors in cases where domestic auto industries are threatened by imports.

Another factor is the growing global character of the auto industry. Postwar up to the mid-1960s, auto industries in Western Europe went their own ways. The 1970s, though, brought about a European industry in which companies served a European market with common tastes.

Emphasis in the 1980s undeniably is biased toward development of a world industry, with links between Japanese, European and U. S. companies, all serving a market with common demands.

Globalization by vehicle manufacturers has a crucial impact on auto suppliers. A recent survey shows there have been significant changes in international sourcing, particularly in Western Europe.

Japan's auto industry also is changing. The Japanese are the world's most efficient vehicle producers. However, their success comes at the expense of traditional producers in North America and Western Europe. This has resulted in the latter implementing huge investment programs to improve production efficiency without adding capacity.

As the 1980s develop these issues will be important:

- Will the Japanese be able to match the Europeans in technological innovation?
- How successful will U. S. companies be in downsizing cars while keeping prices competitive?
- Will more production shift to Japan, or will Japanese manufacturers be forced to assemble more in their major export markets as national protectionism grows?
- Will ambitious developing countries mount meaningful export drive to the West?
- What will be the financial climate of the worldwide auto industry?

Since the world automotive revival is only a matter of time —and past experience shows the turnaround from recession to prosperity is extremely rapid — how have the industry structure and character changed, and what are the key issues and ingredients of success for the 1980s?

This is the subject of a conference being organized by Kearney Management Consultants and The Economist Intelligence Unit entitled, "The Automotive Industry of the 1980s: Strategy for Revival." The conference is Oct. 21, the second trade day of the 1982 British Motor Show at the Metropole Hotel, Birmingham, England.

Mazda's Luce, above, and its sister Cosmo are entering the emerging sporty-car market in Japan with turbocharged rotary engines. The Hitachi blower and fuel injection are said to boost horsepower 23 percent and torque 40 percent.

Total is $1,080,030, down 15 pct. from 1981

Import registrations dip for 1st half

By Jenny L. King
Staff Writer

Registrations of new imported cars represented 28.77 percent of the June new-car total, down a percentage point from the record 29.77 percent notched a year earlier.

The month's total was down from 1981, but was up from March, April and May of this year, according to figures compiled by R. L. Polk & Co.

Import registrations of 206,373 in June were down 7.25 percent from 222,508 in 1981. May, 1982, import registrations numbered 189,123, giving June a 9.12-percent increase.

Year-to-date import registrations totaled 1,080,030, down 15.24 percent from 1,274,171 the first half of 1981. Penetration this year was 28.59 percent compared with 29.02 percent the preceding year.

Nissan, Honda, Volvo, Mercedes-Benz and BMW increased their shares of the import market in June; Volkswagen suffered the greatest decline among the top 10.

Nissan gained 4.38 percentage points, climbing to 22.57 percent from 18.19 percent; Honda was up 1.64 percentage points, to 15.77 percent from 14.13 percent, and Volvo was up 0.84 percentage points, to 3.82 percent from 2.98 percent.

Mercedes was up to 2.67 percent from 2.52 percent and BMW was up to 2.04 percent from 1.77 percent.

• Top import Toyota dipped 0.40 percentage points in June, to 24.25 percent from 24.65 percent. Mazda, although down 0.60 percentage points, snatched fourth place from Volkswagen which declined 3.58 percentage points to 6.06 percent from 9.64 percent. Mazda claimed 6.60 percent of this June's import market, down from 7.20 percent in 1981.

Subaru was down 0.26 percentage points and Audi was off 0.41 percentage points. Other imports slipped 1.73 percentage points, to 8.87 percent of the total from 10.60 percent.

For the first half of 1982, Nissan enjoyed the greatest growth among the imports, up 1.69 percentage points, to 19.79 percent from 18.10 percent last year, followed closely by Honda, up 1.51 percentage points, to 16.74 percent from 15.23 percent.

Volkswagen lost the most ground, dropping 2.60 percentage points, to 6.71 percent from 9.31 percent. Toyota was down 0.55 percentage points, Mazda was down 0.58 percentage points and other imports were off 1.86 percentage points.

Subaru, Volvo, Mercedes-Benz and Audi increased their shares of the market during the first half of the year.

Japanese-built cars accounted for 78.63 percent of June import registrations, up more than four percentage points from 74.16 percent a year earlier. German products dropped to 13.21 percent from 17.87 percent; Swedish automobiles represented 4.62 percent, up from 3.49 percent, and the French sector increased to 2.22 percent from 1.81 percent.

For the first half, Japanese penetration of the import market advanced to 77.77 percent from 75.26 percent last year. Germany slipped to 14.45 percent from 17.51 percent; Sweden had 4.20 percent, compared with 3.06 percent in 1981, and France was up to 2.20 percent from 1.81 percent.

• Imported-car totals by country of origin in June, 1982, compared with the previous year were.

	June, 1982	June, 1981
Japan	162,267	165,007
West Germany	27,261	39,758
Sweden	9,554	7,755
France	4,573	4,038
Italy	1,402	3,741
Britain	981	2,204
Ireland	335	5

Registrations by country of origin for the first six months of 1982 and their year-ago counterparts were:

	6 mos., 1982	6 mos., 1981
Japan	839,895	958,914
West Germany	156,088	223,167
Sweden	45,387	38,916
France	23,746	23,040
Italy	8,735	19,651
Britain	4,459	10,477
Ireland	1,720	6

Registrations of imported trucks were down in June compared with the total for the month a year ago. Truck imports numbered 33,017, down 20.41 percent from 41,485. Truck figures for June, 1982, compared with the same month a year earlier were:

	June, 1982	June, 1981
Toyota	11,432	11,014
Nissan	7,020	9,482
Mazda	3,227	——
Volkswagen	2,194	——
Ford Courier	——	5,158
Chevrolet LUV	——	5,021
Others	9,144	10,810

Imported trucks for the first half of 1982 dropped 16.64 percent, to 203,055 from 243,575 last year. Totals were as follows:

	6 mos., 1982	6 mos., 1981
Toyota	65,791	59,445
Nissan	44,717	55,019
Mazda	16,371	——
Dodge Ram 50	16,027	——
Chevrolet LUV	——	37,569
Ford Courier	——	33,856
Others	60,149	57,686

Delaware's newest

Michael S. Uffner, center, president, Delaware Motor Sales, Inc., Wilmington, Del., signs a sales and service agreement making him Delaware's newest exclusive Cadillac dealer. Philadelphia zone assistant managers Fred M. Teach, left, and Greg J. Warner, witness the signature.

Police department picks Impala

James Randlett, center, mayor of Warren, Mich.; Chevrolet fleet assistant manager Harry Hammond, left, and Warren Police Commissioner Edward Edwardson display the first nine of a total 26 Chevrolet Impala 9C1 police cars to go into service in the Detroit suburb. Sales of Impala police cars are up more than 60 percent over last year, according to Hammond. Dick Morris Chevrolet, of Walled Lake, Mich., won the fleet bid over 15 competitors. Chevrolet headquarters are located in Warren.

Congressman seeks ouster of Antitrust Chief Baxter

WASHINGTON. — Reflecting at least some of the Congressional concern over statements made by Antitrust Chief William Baxter in a published interview, Rep. Albert Gore Jr., Tennessee Democrat, has asked for Baxter's resignation for not adequately enforcing the antitrust laws.

Baxter was recently quoted as saying he personally disagreed sometimes with the law's per se finding that resale price maintenance — price fixing — is illegal.

Baxter was quoted as saying: "I would permit resale price maintenance for technologically complex products that had been on the market for a short time, and I see no reason on earth why it should not be permitted any time one is sure that it is not being used as a device to facilitate horizontal collusion."

Core said that not only is Baxter wrong in substance, "but he is dangerously wrong in attempting to run roughshod over two branches of government."

Gore not only disagreed with Baxter, but noted that in going against statements made repeatedly by Congress and the Supreme Court about the illegality of price-fixing, his decision not to enforce the law when he disagrees hurts the public.

Said Gore: "He appears to assume that consumers are ignorant, and he wants to force them to pay for additional, possibly unwanted services, such as high-powered promotion campaigns."

Response from the Justice Department spokesman: "We look at every case on a case-by-case basis. In each one, we take a careful look at the economic evidence in light of the law and prosecute when we find a significant anticompetitive effect or damage to consumers."

Ford Credit Equity expands services, changes its name

DETROIT. — Ford Credit Equity Corp., an affiliate of Ford Motor Credit Co., announced it is expanding its operation into new markets and changing its name to Ford Financial Services, Inc.

The expansion of Ford Financial is part of Ford Credit's efforts to diversify.

"We have been a registered broker since 1977, involved primarily in brokering lease financing for other Ford Motor Co. activities and, on a limited basis, brokering participations in non-Ford leases," said George V. Brown III, Ford Financial chairman.

"We are now expanding our brokerage services to a broader sector of the business community. We believe our new name better identifies the corporation with the services it provides and distinguishes us from the lending operations in Ford Credit."

Ford Financial acts as a broker on behalf of its clients and does not loan funds to its clients directly.

"Ford Financial makes a detailed analysis of a client's financing needs, structures the transactions, then locates qualified investors who can provide funds at competitive rates, and brings client and investor together," Brown said.

Ford Finnacial has targeted the Fortune "Second 500" group of industrials as one of the primary candidates for the company's services, including private placement of securities to raise funds for working capital or production facilities, and finding specialized financing for unique business ventures.

NIASE elects Kiple

WASHINGTON. — James S. Kiple, manager - service-operations, American Motors Corp., has been elected a director of the National Institute for Automotive Service Excellence (NIASE).

Week's total is far below last year's 125,699

U. S. auto output rises to 97,739

By Patricia Hoffman
Staff Writer

The return of General Motors' Leeds plant although minus second-shift operations, was enough to offset downtime at Ford Motor's Kansas City point and boost last week's domestic car production 2.05 percent above the previous week's total.

Output last week was slated at 97,739 cars, up from 95,772 the previous week, but down 22.24 percent from 125,699 in the comparable 1981 week.

Breakdown for the week by company was: GM, 65.32 percent; Ford, 17.64 percent; Chrysler Corp., 14.58 percent and American Motors, 2.46 percent.

To date, the makers have finished 3,523,031 units, a 23.48 percent decline from last year's 4,604,227.

The GM Leeds facility (Buick Skylark and Oldsmobile Firenza) dropped second-shift operations upon its return last week (Aug. 30) from model changeover. About 2,000 workers have been placed on indefinite layoff as a result.

Also at GM, the Lakewood (Chevette) point halted production for an indefinite period last Wednesday (Sept. 1) due to a decline in sales of the subcompact car.

Ford idled its Kansas City facility for one week last week to control overstocked inventories.

Only five assembly points remained idle last week for model changeover. They were: GM's Oklahoma City and Wilmington plants, Ford's Atlanta and Chicago facilities and the Volkswagen of America Westmoreland point.

The GM Wilmington plant is slated to resume operations tomorrow, (Sept. 7). GM's Oklahoma City plant is scheduled to return Sept. 20.

VWoA's Westmoreland point, idle since Aug. 2, is slated to return next Monday (Sept. 13) with production of 1983 models.

There was no startup date given for the Ford facilities.

All U. S. assembly plants are idle today (Sept. 6) in observance of the Labor Day holiday.

Ford Credit adds details on new finance program

Ford Motor Credit Co. has provided further details of its recently announced retail finance program.

The program, as reported, offers 11.9 percent retail financing on '82 Thunderbirds, XR-7s and Continentals and on '83 Continentals.

Ford Credit said it was paying $1,300 on '82 and '83 Continentals to dealers who are on a limited repurchase plan; otherwise, dealers on the "without recourse" plan receive $1,250 on Continental.

As indicated, dealers receive $800 on Thunderbird / XR-7 if they are on a limited repurchase plan and $750 if they are on a "without recourse" plan for those car lines.

Dealers have a choice of limited or without recourse in the bulk of states.

Ford Credit also indicated that on Continentals covered with limited repurchase paper, it was paying a flat $140 finance reserve, and on paper without recourse it was paying $90 for Continental.

Again, dealers with limited recourse receive $90 finance reserve on Thunderbird/XR-7 and $40 on contracts without limited recourse.

Ford is offering its program in all states except Arkansas where there is a capped rate.

Finally, Ford Credit is reducing its finance rate by a full percentage point on other models, except in states with restrictive statutory rate ceilings.

Truck production for year exceeds 1981 by 16 pct.

Domestic truck production last week rose 6.01 percent from the previous week's total as the return of General Motors' Janesville facility help offset downtime at Ford Motor's Louisville point.

The makers targeted 32,745 units last week, up from 30,889 the previous week, and a 21.21 percent gain from 27,014 trucks completed in the comparable 1981 week.

Year-to-date, the manufacturers have finished 1,362,452 trucks, up 16.89 percent from last year's 1,165,570.

The GM Janesville plant, idle three weeks for model changeover, resumed operations last Tuesday, (Aug. 31).

GM's Detroit plant was closed for the second week last week due to model changeover. Production of 1983 models is slated to begin at the facility Sept. 20.

Also at GM, the Pontiac heavy-duty lines, both idled Aug. 13, remained down last week for changeover. The heavy-duty line is scheduled to return Sept. 20, and the medium-duty line is due back tomorrow (Sept. 7).

Ford's Louisville plant was closed last week for inventory control. The point is scheduled to return tomorrow.

Volkswagen of America's Westmoreland plant remained idle last week for model changeover. The facility, which closed June 28, has slated an Oct. 25 return.

Starting in October, second-shift operations will be added to the GM's Pontiac point, due to strong sales of compact pickups. About 1,100 additional jobs will be added as a result of the new shift.

All plants will be closed today (Sept. 6) for the Labor Day holiday.

Car output holds steady in Canada; Oshawa returns

The return of General Motors' Oshawa (No. Two) car facility helped boost last week's Canadian auto production 1.22 percent from the previous week's total, and output jumped 89.21 percent from the comparable 1981 week.

The car makers targeted 19,627 units last week, up from the previous week's 19,391 and up from 10,373 units built the same week last year.

Year-to-date, the auto manufacturers have assembled 604,331 units, a 4.69 percent gain from 577,281 built in the comparable 1981 period.

Truck production last week dropped to 11,993 units, a fraction below the previous week's 12,081 as Ford Motor's Oakville plant returned to normal operations following the prior week's daily overtime. The total, however, was up 19.18 percent from 10,063 units built in the comparable 1981 week.

So far this year, the truck manufacturers have finished 355,349 units, down slightly from last year's 358,590.

Operations resumed last week (Aug. 30) at GM's Oshawa (No. Two) car facility following a four-week shutdown for model changeover.

GM's Oshawa truck point also returned last week following four weeks of downtime for changeover.

Ford's Oakville car plant scheduled one hour of overtime last Monday through Thursday. Normal eight-hour, two-shift operations resumed on Friday.

Downtime to control inventory is slated at Ford's St. Thomas point beginning Sept. 13.

New for '83

Ford's LTD downsized for 1983

The 1983 Ford LTD sedan and station wagon have been downsized, with the dimensions virtually matching those of the 1982 Granada, which LTD replaces in the Ford lineup. The new LTDs have five-passenger seating capacity. Aerodynamic improvements highlight the LTD's exterior styling. Story, more photos on Page 52.

Mercury builds a midsize Marquis

Mercury is supplementing its sedan lineup for '83 with the new Marquis models — sedans and station wagons with standard 2.3-liter engine and either a four-speed manual or three-speed automatic transmission. Marquis public introduction is Oct. 14. More on pages 4, 49.

Firenza wagon for Oldsmobile

New for Oldsmobile is the 1983 Firenza station wagon, which joins two-door and four-door sedans in the division's J-car lineup. The Firenza wagon has 64 cubic feet of cargo space when the rear seat is folded down and 34 cubic feet when the rear seat is in use. The sporty Hurst/Olds option is also returned for 1983. More pictures, story on Page 54.

New-car stockpile climbs to 88 days as sales falter

By Jenny L. King
Staff Writer

The domestic new-car inventory climbed to an 88-day supply Sept. 1 from 83 days a month earlier, mainly because of the anemic sales pace during August.

The domestic new-car inventory totaled 1,379,434 Sept. 1, up only slightly from 1,377,130 on Aug. 1 and more than 100,000 below the 1,485,692 units on hand Sept. 1 a year ago. But because of the stronger sales pace last year that Sept. 1 total was a 64-day supply.

General Motors, which a month earlier had racked up the biggest inventory increase, and Volkswagen of America, which has been paring back its stock for several months, were the only makers to cut inventories during August.

By size class, the top and bottom trimmed stocks, while all other segments increased.

• GM cut its inventory to an 86-day supply from 90 days a month earlier. Much of the cutting came in the maker's heavy

Table on Page 6.

inventories of J-bodies and A-bodies, but these lines continued in hefty supply.

Ford Motor Co. also opened September with an 86-day supply, but that was up from its month-earlier level of 71 days.

Chrysler Corp. boosted its inventory during the month to 85 days from 79. The corporation had a little over 4,000 of its new E-series cars in stock, for which no sales pace has been established.

American Motors had a 106-day supply Sept. 1, up sharply from 58 days Aug. 1, reflecting both a buildup in stocks and a decline in sales. The supply figure does not include almost 11,000 Alliances in inventory.

VWoA continued its stock-trimming efforts, cutting its supply from 110 days Aug. 1 to 85 days Sept. 1. Not only did VWoA slice its unit count, it also achieved a higher sales rate and was alone among corporate makers on that score.

The Sept. 1 domestic inventory was divided this way: GM, 61.37 percent; Ford Motor Co., 22.53 percent; Chrysler Corp., 11.56 percent; AMC, 2.50 percent, and VWoA, 2.04 percent.

A month earlier, the domestic inventory was divided as follows: GM, 61.84 percent: Ford Motor Co., 22.33 percent; Chrysler Corp., 12.06 percent; VWoA, 2.42 percent, and AMC, 1.35 percent.

• By size class, subcompacts and luxury cars both opened September with lower supply figures than a month earlier, while the other segments all gained. It was the second consecutive month that this pattern has prevailed.

Subcompacts were down to a 95½-day supply from 100 days a month earlier, but were still the heaviest size segment Sept. 1. Luxury units were in 71-day supply, down from 74 days a month earlier.

The industry had an 86-day supply of compacts, up from 84; an 89-day stock of intermediates, up from 86, and a 70-day supply of standards, up from 57 days.

The Sept. 1 inventory was di-

Softer local-content bill moving through House

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A greatly changed UAW-backed local-content bill has started its move toward passage by the House where the bill now has nearly 250 members (more than half of the 435 total) as sponsors.

At presstime, Rep. John Dingell, Michigan Democrat and chairman of the House Energy and Commerce Committee, was pushing it through his committee where he clearly has the votes although the opposition is angry and vocal. Despite hours of delay and late night sessions, it has a standing-room audience.

The bill then will go to the Trade Subcommittee, where opponents will have their day in court.

But it will not be allowed to languish there because the full House Ways and Means Committee has the votes to send it on its way to House passage before the November election.

Some voting for it may well have doubts—and many may not even understand it — but they will be able nonetheless to tell the voters they are trying to get a "jobs" bill through to help the unemployed auto workers in this prolonged recession.

Senate passage appears unlikely at this point, but old Congress watchers are not even sure of that. Despite the Congress' normal interminable delays, they also know its ability to turn on a dime when the kleig lights are on and the voters on the ready.

The Reagan Adminstration has opposed the bill and hinted at a veto, but Presidents have been known to change their minds when presented with a bill promising jobs shows up at the White House just before election. Whether the Senate acts and the President has a choice, the bill is already a campaign issue and House passage makes local-content a surefire issue next time around.

The original bill was not taken very seriously and some lawmakers probably signed on as sponsors confident it was going nowhere. Generally, local-content laws exist in the underdeveloped countries—never in industrialized and leading trading nations. For years, the domestic automakers with their multinational companies have been free traders; so has the international UAW.

Now, however, Ford and General Motors have declared themselves neutral. Volkswagen of America—although its immediate needs would be accommodated in the revised bill—is opposed to any trade restrictions. American Motors—with its tremendous dependence on Renault is silent.

The UAW — using the battle

Lutz joins Ford board; HF II retires as employe

DEARBORN. — Robert A. Lutz has been elected to the board of directors of Ford Motor Co. He has been executive vice president, Ford International Automotive Operations, since Aug. 1 and before that was chairman of Ford of Europe. The company also announced that Henry Ford II will retire as an officer and employe on Oct. 1. Ford was 65 on Sept. 4. He continues as a director and as chairman of the Finance Committee. In the Finance Committee post, he had been an officer and employe of Ford Motor, but will not be after Oct. 1. Ford retired as chief executive in October, 1979, and as chairman in March, 1980.

Nissan says local content could shut U. S. plant

WASHINGTON. — Nissan Mfg. President Marvin Runyon has written to the Dingell House subcommittee that either UAW local-content bill could cause the company to "seriously consider cessation of operations in Smyrna (Tenn.)." Runyon said Nissan's limited U. S. truck production "cannot cost-justify the manufacture of engines and/or drivetrains at our Smyrna facility" that is near completion.

High-mileage Sentra Diesel coming in '83

Nissan could topple MPG king VW

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Volkswagen of America, perennial "King of the Mountain" in the annual fuel-economy derby, may be dethroned in 1983.

The challenger is Nissan's new Sentra diesel. According to knowledgeable sources, it is going to post a city fuel economy number at or very near 49 MPG, fully 4 MPG better than Volkswagen's winning entry last year, the four-speed Rabbit diesel.

Nissan had served notice of the possible changeover last year when a gasoline-fueled version of the front-wheel-drive Sentra came in with a 43-MPG city average. Diesels are generally more fuel efficient than gasoline-powered vehicles.

Not unexpectedly, the development has VW enginers worried and scurrying for every drop of fuel economy they can find in the venerable Diesel Rabbit. Winning the fuel-economy derby is generally considered to be worth millions in advertising.

"We're adding up every tenth of a MPG we can find," a VW spokesman said, adding "It's going to be close."

• Some of those tenths are courtesy of VW's "upshift light," a device that tells the driver when to shift to the next higher gear in manual-shift cars to keep the engine operating in its most effective range.

AUTOMOTIVE NEWS previously reported this device had boosted fuel economy in the 1982 Rabbit diesel four-speed by more than it actually does. The boost is actually about 3 to 3.5 percent, or 1.3 to 1.5 MPG, and occurs only in the city driving cycle. The 12-percent figure reported earlier (Aug. 23) is actually the average fuel-economy boost for the VW/Audi fleet equipped with the shift light, and is uncorrected for the estimated rate of usage by the driver.

Corrected, the number is 6 percent to 7 percent. The corresponding numbers for the Rabbit diesel are 5 percent, corrected to 3 to 3.5 percent.

Shift lights will show up not only in Volkswagen and Audi manual-shift cars next year, but in Honda and Ford Motor Co. vehicles as well. Nissan is still studying use of the light.

Import share hits peak as domestic sales plunge

By Jenny L. King
Staff Writer

Sales of new cars in August were at the lowest in 24 years for the domestic auto makers, while the imports surpassed their year-ago level by a slim 0.21 percent margin and gorged themselves on their largest segment ever of a U. S. monthly sales total.

As the domestics were tumbling 31.96 percent from their August, 1981, sales, imports pushed ahead to 199,341 from 198,927, a total which accounted for 32.74 percent of the market, highest for any month in any year. It followed the previous any-month record of 31.68 percent set in July, 1982.

Domestic sales in August numbered 409,411, down almost 200,000 units from 601,741 a year earlier, when the auto makers were engaged in rebate programs that succeeded in bringing customers into dealerships. It was the worst August since 1958 when sales totaled 324,969.

Year-to-date domestic sales through the end of August totaled 3,774,143, down 14.37 percent from 4,407,361 in 1981.

Import sales for the first eight months were down 10.82 percent, to 1,499,866 from 1,681,923.

Combined sales reached 608,752 in August, down 23.97 percent from 800,668 last year. Grand total, January through August, was 5,274,009, down 13.39 percent from 6,089,284.

• The U. S. auto makers were down from 23.47 percent to 43.54 percent this August compared with their year-ago sales. General Motors dropped 33.74 percent, to 254,937 from 384,755. Ford Motor Co. was off 23.47 percent, to 81,690 from 119,804.

Chrysler Corp. dropped 32.97 percent, to 48,405 from 72,216. American Motors was off 40.64 percent, to 5,807 from 9,783, and Volkswagen of America sales were down 43.54 percent, to 8,572 from 15,183.

GM earned 62.27 percent of the domestic market in August, down from 63.94 percent last year. Ford climbed to 22.40 percent from 19.91 percent. Chrysler sales accounted for 11.82 percent, down from 12.00 percent a year earlier; AMC had 1.42 percent, down from 1.63 percent, and VWoA had 2.09 percent, down from 2.52 percent.

Chrysler and Lincoln were the only U. S. makes to surpass year-ago sales levels this August. Chrysler was up 140.45 percent, to 13,434 from 5,587, while Lincoln was up 19.58 percent, to 5,637 from 4,714.

Plymouth was down 50.34 percent in August, Imperial was down 77.20 percent and Dodge was down 44.14 percent.

Ford dropped 29.24 percent and Mercury missed its '81 level by 14.11 percent. Buick was down 23.53 percent, Cadillac was down 7.89 percent, Chevrolet was down 34.43 percent, Oldsmobile was down 36.53 percent and Pontiac was down 47.08 percent.

The daily selling rate in August was a modest 15,747, lowest average for any month since 14,726 in January, and down 31.96 percent from 23,144 a year ago.

• Sales of new imported cars maintained a level reached at the beginning of the summer. They were up slightly from

Ford and L-M boost incentives to answer GM

Ford Motor was quick in responding to the hefty dealer cash incentives recently announced by General Motors.

At Ford Division, the "Big Bucks Bonanza" program was upgraded to pay a flat $500 on each '81/'82 Mustang/Escort and $700 on EXP, beginning with unit one, Sept. 3-22.

Previously, there were cut-in levels on Mustang and Escort and only $500 on EXP.

The new program covers cars retailed and delivered during the contest period, and there is a limit of 10 to a customer (for small-fleet buyers.)

At Lincoln-Mercury, payments are a flat $500 on Lynx and Capri and $700 on LN7 for the same period.

The only difference is that XR-7 gets a $500 dealer incentive, plus qualifying for the 11.9 percent financing program.

The same Sept. 3-22 dates are in effect.

High-priced D-Type Jaguar

This 1955 D-Type Jaguar was sold recently at auction for $220,000 during the Sydney (Australia) Motor Show. It was purchased by former racing driver Bib Stillwell, who raced a different D-Type in the late '50s. The acquisition had been crashed twice during its racing career; the second time it was restored in Sydney by Ian Cummins, who spent six years and an estimated 5,000 man-hours returning it to better-than-new condition. Only 67 D-Types were built, with 44 said to be surviving.

A runner's car

A Datsun 280-ZX, provided by Granada Datsun, Granada Hills, Calif., set the pace for nearly 700 runners in the Fifth Annual Northridge Twilight 10K run at the University of California.

Smog-conspiracy case heads for court again

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Next happening in the protracted and checkered drama of whether the domestic auto companies and their trade association will be granted some relief from the 1969 "smog conspiracy" consent settlement is tentatively set for Sept. 27 in the Los Angeles courtroom of District Judge Jesse W. Curtis.

Two provisions—filing of joint statements in safety and other regulated areas and intercompany cooperative research on emission control technology — were set to lapse after 10 years.

But the action—or inaction—has seen the judge ruling first one way and then the other and completely opposite positions being taken by the Carter Administration and the Reagan Administration.

The same Justice Department lawyers who so hotly argued against the change a couple of years ago now argue for it. Only the companies—especially Ford, which has said the exceptions granted to Chrysler and AMC were unfair to it — have been consistently against the decree.

• Four months after the Reagan Administration's April, 1981, announcement of its intention to modify the decree, Antitrust Chief William Baxter quietly filed a stipulation signed by both government and industry with the California court.

But Judge Curtis' agreement was challenged by the Center for Auto Safety, which claimed the Antitrust Procedures Act should apply. The upshot has been to replace quiet legal maneuvers by publicity (including paid advertising in newspapers), publication of a competitive impact statement in the Federal Register and a public hearing.

Despite the flurry of publicity, only one company responded on the side of the companies—a management consulting firm in Toledo called Auto-Tech Strategies, Inc.

This Ohio firm says the domestic firms must be allowed to play by the same rules as the foreign companies, asks for greater relaxation of antitrust laws than the current proposal envisages and predicts that cooperative research could help save jobs, increase volume enough to allow the domestics to become cost-competitive with imports, enhance development of new products and sustain federal and local tax bases.

But opposition came from the Center for Auto Safety, the California Air Resources Board, and Kenneth Hahn, of the Board of Supervisors of Los Angeles County—a man who argued that the current slump of the domestic industry is not due to environmental and safety regulations (look at the "robust" health of the imports which meet the same standards, he says) and urges the Administration not to "give the fox the key to the chicken coop."

• In the latest court filing, the Justice Department now says the three critics share a "fundamental flow: An assumption that modification of the Final Judgment will permit anticompetitive agreement and joint behavior."

This is "totally incorrect," says Justice. "Anticompetitive agreements and behavior would be barred by the Modified Final Judgment, and would in any event be illegal and actionable under the Sherman Act."

The department assures the California Air Resources Board that its practice of conducting individual workshops with each manufacturer would not be changed by modifying the consent decree. Besides, it adds, not every exchange of data is anticompetitive and, in fact, some are procompetitive.

Joint responses, says the government, are natural because the study is often costly and high-risk, especially in addressing technology-forcing standards.

Small firms, it says, may lack resources to do the job alone.

In any case, the government will continue to keep a watchful eye on agreements. After the modified decree expires in five years, the department adds, the Sherman Act should still apply and the penalties are now far greater than they were in 1969 when the original agreement was signed.

Responding to the charge by the Center for Auto Safety that there is "every reason" to expect anticompetitive behavior in the future, the department disagrees and says the "fact that these defendants engaged in anticompetitive activities over 15 years ago should not give rise to any expectation of future illegal behavior on their part."

Instead, they will simply be relieved of the "possibility of punishment for undertaking potentially procompetitive activities," it said.

Measure is softened; it appears to have the votes

House moving on local-content bill

Continued from Page 1

cry of fair trade—has been aiming at the Japanese since the bad times of 1975. First, it filed a dumping suit aimed at VW, Fiat, British-Leyland and the Japanese and caught in its net instead only Ford on its imported Cortina and small margins on the Swedes who failed to hike prices fast enough.

Then the UAW tried an "escape clause" action to get relief from the Japanese and although the UAW lost the suit, enough pressure was generated against the Japanese to create "voluntary" restraints. Although these are now in effect, the Japanese share of the market is still high and growing because sales of American cars have dropped even more than sales of Japanese vehicles.

The current plan—and on this GM, Ford, Chrysler and the UAW agree — is to require a company to build cars where its sales are.

VWoA — which did just that and is suffering with a high-priced product it is having trouble selling—is opposed. So is American Honda—about to start producing in Ohio. So is Nissan, which is building a light-truck plant in Tennessee. So is Toyota, actively considering a joint venture with General Motors in California.

So are the car dealers—both NADA and AIADA. So are the groups that sell to Japan—soybeans, rice, aircraft, hardwood, computers and business equipment—who fear retaliation. And so is the Reagan Administration.

• Every group of economists that has studied the original bill has predicted a steep rise in car prices—that is, except for the UAW economists. Even so, in the brief half-day hearing, UAW President Douglas Fraser admitted the possibility of higher prices but claimed increased jobs would be more than an offset.

Even the highly respected Congressional Budget Office — dealing with the original bill — predicted a 10 percent rise in car prices and a net loss of 150,000 jobs in industries other than the auto sector. Now this is being disputed because the CBO predicted the import companies could not meet the content required and the UAW, in its revisions, has changed the goals.

No reassessments of the revised bill can now be made—and the old ones are obsolete—because there is such great steam for passage that it is being considered practically unpatriotic not to pass the bill sold as creating jobs for a severly depressed industry.

The substitute bill—circulated by Rep. Richard Ottinger, New York Democrat, just before a holiday weekend when Congress was not in session—greatly eases the mandate for the imports but gives little or no flexibility to the big domestic companies—GM and Ford. But at presstime, the bill was being changed and even further changes may be made to assure the continued neutrality of GM and Ford.

"Local-content" — instead of merely being labor and American parts — now means "added domestic value" and thus includes depreciation, taxes, advertising, utilities, interest, etc. This has the effect of giving importers a head start of about 6 percent and perhaps as much as 25 percent for those building here. It also allows companies to add exports while subtracting imports.

Furthermore, instead of applying to the North American market, Canada is now treated as any other country. Under the original bill, more jobs might have been created in Canada than in the U. S. Besides, AMC could have brought in any Renaults through Canada duty-free and so potentially could GM have brought in any Toyotas duty-free through Canada were its joint venture to occur.

Although Canada's UAW might not be happy with that revision of the bill, that union has its own version of local content which it is pushing. A long look at whether the 1965 U. S.-Canada auto pact is breached will probably not be addressed much less settled until after the House has acted and the election speeches made.

• The substitute bill also has a changed schedule: It starts with the 1984 model year and ends with the 1986 model year, and the content requirements are scaled up year by year.

The 90 percent content requirement now applies only for GM, Ford and Chrysler with their sales of over 900,000 units a year, and Ottinger estimates those companies already meet that requirement. AMC/Renault also is said to be all right with 80 percent American content. So is VWoA with 70 percent content for its Rabbits and 40 percent content with its imported Porsches and Audis added in.

Ottinger and the UAW believe Honda will be able to comply with its future requirement, but Honda says it cannot because even with a double shift it cannot make more than 150,000 units—not the 240,000 given it in a footnote in the chart accompanying the revised bill.

Nissan protests it also cannot meet its content requirements, although the UAW says it can if the light trucks from Tennessee by 1986 achieve 60 percent U. S. added domestic value.

Companies with fewer than 100,000 sales would be in scot-free and would not even have to file reports with the Transportation Department. The minimum content ratio would be no less than the higher of either the ratio set in the bill or the ratio achieved in 1983 models reduced by 10 percent, whichever is higher—a provision that limits the flexibility of Ford and GM primarily.

The content for the foreign makers, which are being lured into building plants here, rises each year. It is determined by dividing a company's U. S. sales by 30,000 for '84 models by 15,000 for '85 models and by 10,000 for '86 models.

Thus, if a company sold 250,000 units—cars and light trucks or buses weighing less than 10,000 pounds GVW—the mandated ratio for American content would be 8.3 percent for '84 models, 16.7 percent for '85 models and 25 percent for '86 models.

Just as the demands are somewhat eased in the substitute bill, so are the penalties. Instead of the flat 25 percent reduction in imports for violation in the original bill, the scaling back would now be by the same percentage as a company has fallen short of its content requirements.

Even so, some import companies feel that even their unintentional failure to comply could nonetheless almost force them out of the market and they foresee severe problems in forecasting sales and adjusting their added American value.

Although penalties for violation are eased in the substitute, the penalties for failing to report are added—to the tune of $10,000 a day for failure to report adequately and promptly.

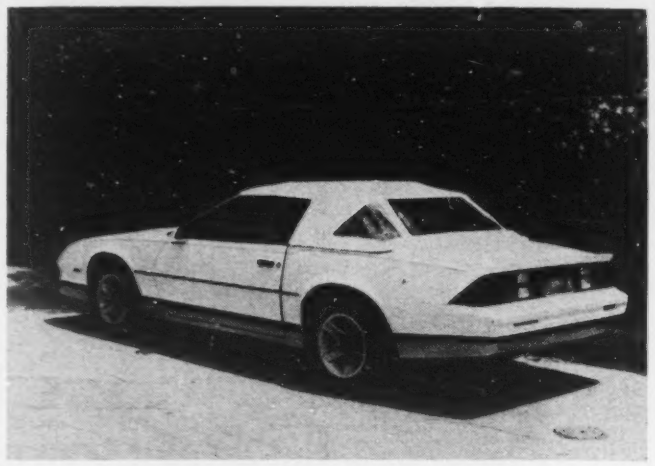
In the new bill, the Secretary of Transportation would have the job of avoiding "double counting" of vehicles and OE parts. He would allocate them in three areas: Sales of automotive products made here from one vehicle manufacturer to another; joint production by two vehicle makers in the U. S., and joint production overseas.

Finally, the controversial Title II of the original bill has been dropped and a study and report to Congress by DOT has been substituted. The original bill was an attempt to open the repair business of imported vehicles to the U. S. aftermarket.

At presstime, a series of amendments was being considered and agreement appeared to be close on how to protect confidential financial data the auto makers would have to provide to the government.

Honda deal to move

PHILLIPSBURG, N. J.—Phillipsburg-Easton Honda in suburban Still Valley Circle plans to move to the former Karen Chevrolet quarters in neighboring Lopatcong Township, N. J. Wayne Vince, president of the Honda dealership, said the new facility is much larger than the present quarters.



Convertible from Camaro and Firebird

American Custom Coachworks, Beverly Hills, Calif., will begin production in mid-September on a convertible conversion for the Chevrolet Camaro Z-28, pictured here, and Pontiac Firebird Trans Am. The conversion includes padded roof, a top that folds flat to the deck and full rear seat. The cars will be retailing in the low to mid-$20,000 range. The company expects to produce "a few thousand" units this model year.

New-car inventory advances to 88-day supply as sales sag

Continued from Page 1

vided this way by market segment: Subcompact, 26.77 percent; compact, 24.98 percent; intermediate, 29.97 percent; standard, 12.23 percent, and luxury, 6.05 percent.

A month earlier, the inventory was divided as follows: Subcompact, 28.42 percent; compact, 23.43 percent; intermediate, 31.10 percent; standard, 10.83 percent, and luxury, 6.22 percent.

The Sept. 1 days-supply figures by market class were:

Subcompact — Lynx, 58; TC3, 68; Chevette, 71; 024, 77; Omni, 82; Horizon, 84; Rabbit, 85; Cavalier, 107; Escort, 111; Skyhawk, 118; T1000, 135; Firenza, 136; J2000, 138; Spirit, 163; Eagle SX/4, 173; EXP, 200, and LN7, 217.

Compact — Camaro, 58; Zephyr, 61; Fairmont, 64; Concord, 79; Skylark, 81; Reliant, 82; Firebird, 82; Aries, 84; Omega, 92; Eagle, 98; Citation, 109; Mustang, 120; Capri, 141, and Phoenix, 154.

Intermediate—Gran Fury, 44; Cutlass four-door, 55; Grand Prix, 61; Malibu, 64; Cutlass two-door, 67; New Yorker, 68; Bonneville, 70; Cougar, 74; Diplomat, 77; Granada, 82; Monte Carlo, 83; Regal four-door, 85; Cordoba, 87; XR-7, 90; LeBaron, 92; Thunderbird, 93; Regal two-door, 95; Mirada, 123; Ciera, 129; Century, 133; Dodge 400, 134; Celebrity, 140, and Pontiac 6000, 176.

Standard—Olds 88, 44; Mercury, 50; LeSabre, 59; Ford, 76; Chevrolet, 87; Olds 98, 95, and Electra, 114.

Luxury—Cadillac, 50; Eldorado, 62; Lincoln, 66; Toronado, 74; Seville, 75; Cimarron, 78; Riviera, 98; Mark VI, 100; Continental, 127; Corvette, 132, and Imperial, 202.

Ridgeway places huge order for car-wash material

CATAWBA, N. C. — Broadway Equipment Co., Minneapolis, has agreed to manufacture $500,000 worth of automatic car-wash and polish equipment for Ridgeway Chemicals, Inc., here, a subsidiary of Frank B. Fuhrer Holdings, Inc.

Ridgeway, the chemical formulary company which manufacturers and markets the 'TekTor System of automotive protection and appearance products, will be supplying the machinery to automobile dealerships across the country, according to Tom Hobby, Ridgeway president.

Foreign cars capture 32.74 pct. of depressed August market

Import share highest ever; domestic sales lowest since '58

Continued from Page 3

year-ago figures and they took an astonishing 32.74 percent of the total market for the month.

Imports climbed to 189,790 in May, then to 199,093 in June, 199,364 in July and 199,341 in August. A year ago (August), they were 198,927, thus this year was up 0.21 percent.

Toyota sales of 50,601 were up 1.85 percent from 49,688 last year; it was the top importer's first increase this year. Second-place Datsun sold 39,283 new cars in August, down only five units from 39,288 in 1981.

Honda was up 3.06 percent, Mazda shot ahead 33.07 percent and Subaru was down 5.89 percent.

Saab reported its best any-month sales in August, with 1,779 new cars being delivered compared with 1,135 a year earlier. Volvo was up 14.55 percent, BMW was up 2.23 percent and Mercedes-Benz was up 7.57 percent.

Jaguar notched another monthly record, with its sales up 81.66 percent, making 21 consecutive months of sales gains for the British make. Porsche sales were up 27.98 percent, DeLorean sales were up 18.78 percent and Audi sales were down 14.72 percent.

With imports claiming 32.74 percent of the total U. S. market, the remaining market class segments were as follows: U. S. subcompacts had 16.07 percent, compacts had 16.75 percent, intermediates had 19.46 percent, standards had 10.09 percent and luxury models had 4.89 percent.

A year ago the divisions were as follows: Imports had 24.85 percent, subcompacts had 18.62 percent, compacts had 20.70 percent, intermediates had 20.61 percent, standards had 10.53 percent and luxury models had 4.69 percent.

In the domestics-only market for August of this year, subcompacts accounted for 23.89 percent, compacts were 24.91 percent, intermediates were 28.93 percent, standards were 15.00 percent and luxury models were 7.27 percent.

Domestics-only in August of 1981 were as follows: Subcompacts, 24.77 percent; compacts, 27.54 percent; intermediates, 27.43 percent; standards, 14.01 percent, and luxuries, 6.25 percent.

Third-period domestic sales were down 32.61 percent, bringing to nine the number of consecutive periods sales have declined. Total for Aug. 21-31 was 165,509, compared with 245,608 a year ago.

GM was down 31.63 percent, to 101,867 from 148,995. Ford dropped 27.14 percent, to 38,424 from 52,734. Chrysler slipped 42.40 percent, to 18,637 from 32,354. VWoA was down 48.43 percent, to 3,881 from 7,525, and estimated sales of AMC cars was 2,700, down 48.15 percent from 4,000 a year earlier.

650 firms plan to exhibit at UK motor show

BIRMINGHAM, England. — The 64th British Motor Show will be held Oct. 22-31 at the National Exhibition Center here.

More than 650 companies will stage exhibits, and the show's organizer, the Society of Motor Manufacturers and Traders, said it has a waiting list.

This will be the third "total" show to be held in Birmingham since SMMT merged the former International Motor Show and Commercial Motor Show and moved them here from London in 1978.

All seven halls of the exhibition center will be used for this year's show. Automobiles from 16 different nations will be displayed on 40 separate stands and specialist body builders and design houses will staff an additional nine stands.

Commercial displays will be staged by 26 bus and truck makers and 37 manufacturers of truck bodies and trailers.

The National Exhibition Center is 60 minutes from London by train direct to the show.

Diesel owners may get refund in Amoco deal

WASHINGTON.—Members of the Diesel Automobile Assn. have standing to receive refunds for overcharges involving more than $6 million, according to the Energy Department, which negotiated a consent settlement with Amoco (Standard Oil of Indiana).

This involved Amoco paying the government $71 million, of which more than $5 million was for overcharges for diesel fuel and about $1.5 million in interest charges.

The association plans to apply for refunds for some 200,000 owners of diesel cars during the period from March, 1973, to June, 1976—the time when prices for diesel fuel were controlled. Although the government estimates that motorists may be eligible for only about $15, the DAA sees refunds as potentially as high as $400 and has offered support for its stand.

But if the refund program fails to reach all claimants, DAA suggests using $2 million for DAA research into diesel emission control.

Public hearings are planned by the Energy Department for Kansas City, Chicago, Atlanta, Dallas and Washington in September. The Diesel Auto Assn. is located at 126 Eames St., Box 367, Wilmington, Mass. 01887.

Restrictions would hurt everybody, Heritage Foundation says

Local-content legislation attacked

WASHINGTON. — Despite increasing congressional and union support for domestic-content laws, a Heritage Foundation analyst said such restrictions would hurt both domestic auto manufacturers and the American consumer.

Catherine England said that the proposed "domestic-content laws," which would, in effect, force manufacturers selling automobiles in the U.S. to conduct specific amounts of production in the U.S., would be a short-sighted help to American auto producers and would severely damage "their ability to compete in a worldwide market."

At the same time, "because foreign manufacturers are unlikely to start operations in the U.S. (under these laws), the costs to American consumers will be substantial," she said.

She mentioned estimates that auto prices would rise from $500 to $1,000 and that hikes of $3,000 may be possible.

Some observers suggest, further, that enactment of this law might lead Americans to conclude that U.S.-produced automobiles are unable to compete in an open market and, therefore, are inferior to foreign-made automobiles.

This would lead to a "scarcity premium" for imported cars and a tendency by consumers to drive their cars longer and buy used cars more often, England said.

According to England, UAW officials who support local-content laws fail to consider that "foreign-built plants might be more automated than U.S. plants or that Japanese producers might decide to reduce imports."

"Either of these situations could significantly reduce the number of jobs created," England said.

"An even more important criticism is that UAW predictions fail to consider the jobs that will be lost as a result of domestic-content requirements."

She said sources predict that 2,000 imported-car dealerships would close, resulting in unemployment for 80,000 workers, and that decreasing imports would endanger more than 90,000 jobs in U.S. ports.

• While proponents of the proposed laws argue that increased imports are the primary cause of the high unemployment and low profitability of U.S. auto makers, England said that American producers "confronted with the enormous cost of capital resources, and the lower production costs in many foreign countries, have sought more foreign sources for components for U.S.-made autos."

"Some industry observers predict that U.S. manufacturers will import up to 25 percent of their parts by 1985 and 35 percent by 1990," she said.

It is unlikely that U.S. auto producers can build those components they now import if the proposed legislation becomes law, the Heritage analyst said.

Foreign manufacturers would likely reduce their U.S. sales rather than produce here, resulting in a closed American market, she said.

"Prices will rise," England said. "Costs for American producers will climb as they are forced to relocate in the U.S. and as the auto workers push for more wage concessions from their monopoly position . . .

"Consumers will suffer not only from considerably higher prices, but also from a much narrower range of selection when choosing a new car."

According to England, perhaps the most significant statement about this legislation is that the U.S. producers "have no official opinion on it."

"They do not oppose it, but neither do they support the proposed law," she said. "Surely if auto manufacturers expected domestic content to be the panacea promised by the UAW, they would be out in full support of the legislation.

"In fact, the only clear winners under this proposal would be the auto workers. With a strong domestic content law, auto workers would have more power in negotiating with manufacturers and fewer worries about losing their jobs to outside competitors," England said.

"And if the domestic content bills are passed for the automobile industry, representatives of other sectors soon will be making similar requests . . . If congressmen continue to lend credence to these arguments, the end result could be a substantial reduction in world trade."

obituaries

Ed Mathieu

CHICAGO.—Ed Mathieu, 53, president of the Chicago Automobile Trade Assn., died Aug. 29 in Amsterdam while on a trip with a group of Porsche-Audi dealers. He headed Bauer Buick Co. and Ed Mathieu Imports (Porsche-Audi and Mercedes-Benz), Harvey, Ill. Mr. Mathieu had served on the CATA executive board since 1975 and had been secretary for three terms. He was elected CATA president this year.

Robert T. Keller

LOS ANGELES.—Robert T. Keller, 70, a retired Chrysler Corp. vice president, died Sept. 4. He joined the company in 1934, became a vice president in 1953 and retired in 1958. From 1948 to 1953, he was president of Chrysler's Marine and Industrial Engine Division, and he later was West Coast vice president. Mr. Keller was a son of the late K. T. Keller, former president and chairman of Chrysler Corp.

John P. Corcoran

OSTERVILLE, Mass.—John P. Corcoran, 71, retired Wellesley (Mass.) Ford dealer, died Aug. 8. For almost 30 years, he owned one of the largest Ford dealerships in the six-state New England region.

Christ promoted to reliability post

SAGINAW, Mich. — John H. Christ has been promoted to director of reliability and quality control at Saginaw Steering Gear Division of General Motors. Christ, formerly chief engineer - steering, replaces Thomas W. Paulson, who will retire upon completion of a disability leave of absence.

In related changes, Gerald L. Enszer was appointed chief engineer - steering. He had been manager, Plant 1 automotive.

Albert K. Mooney was appointed manager, Plant 1 automotive. Mooney had been assistant sales manager. John W. Skelley was appointed assistant sales manager. He had been director, actuator engineering. Harold V. Moldenhauer was promoted to plant manager, Plant 2. He had been factory superintendent, Plant 2.

Olds planner to field

ST. LOUIS.—Dennis M. Ohlweiler, formerly in Oldsmobile Product Planning, has been appointed district manager in the St. Louis zone.

Grand Marquis is Mercury's flagship

The Grand Marquis remains the flagship of the Mercury passenger-car lineup. The six-passenger sedan and station wagon receive minor changes for '83. Only one powerteam is available—the 5.0-liter V-8 fuel-injected engine with four-speed automatic overdrive transmission.

EFI for LN7 in '83

Mercury's sporty LN7 model gets a new optional fuel-injected 1.6-liter engine and optional five-speed manual transmission for the 1983-model year. A larger 13-gallon fuel tank is also standard for '83.

It's a mid-size model for 1983

Marquis in new role for Mercury

Lincoln - Mercury will bolster its image as a builder of family cars with the introduction of the 1983 Marquis line, new mid-size sedans and station wagons with five-passenger seating and efficient aerodynamic shapes.

Midsize Marquis will be offered in four models—Marquis and Marquis Brougham versions of both the four-door sedan and four-door wagon. Public introduction is Oct. 14.

The new Marquis will ride on a 105.5-inch wheelbase with an overall length of 196.5 inches. Curb weights range from 2,988 to 3,099 pounds.

Based on the discontinued Cougar, the new rear-drive Marquis has a shape that stresses aerodynamic efficiency. The sloping front end and grille, front spoiler, 60-degree backlight angle and the rear deck all contribute to optimum air flow.

The Marquis has a drag coefficient number of 0.38.

Standard powertrain in the sedan is the 2.3-liter four-cylinder overhead-cam engine with four-speed manual or three-speed automatic transmission. Wagons are equipped with a standard 3.3-liter inline six-cylinder engine and automatic transmission, a combination that is optional in sedans.

Sedans will also be offered with an optional 2.3-liter propane-burning four-cylinder engine, mated to an automatic transmission. A 3.8-liter V-6 engine and automatic transmission will be optional in both sedans and wagons.

With the standard powerteam, Ford said the new Marquis has posted estimated mileage figures of 26 MPG in the city, 40 MPG on the highway.

Marquis suspension is a modified MacPherson strut design up front, a four-bar link design in the rear. The Marquis ride and handling benefit from the use of nitrogen-pressurized front struts and rear shock absorbers such as those used in Lincoln's Continental model.

• Transmission dampers and braces, body-structure changes and luxury-level sound deadeners are used to achieve a quiet ride.

Standard interior features are new contoured reclining front seats, 16-ounce carpeting and a luxury steering wheel with woodtone accents. Marquis options include an electronic instrument cluster, extended range fuel tank, shift indicator light, sunroof and six-way power seats.

Wagon options include a two-way liftgate and woodtone body trim.

Introdutcion of the new mid-size Marquis will be preceded by the debut of three other 1983 Mercury lines—the Grand Marquis, the LN7 and the Zephyr models. Those cars debut Sept. 23.

The Grand Marquis, which remains as Mercury's fullsize six-passenger car, will be available in two-door and four-door sedans and a station wagon. Six models will be offered — Grand Marquis and Grand Marquis LS in both two-door and four-door, plus Mercury Colony Park and Colony Park LS station wagons.

The '83 Grand Marquis models will be powered by a 5.0-liter V-8 engine with electronic fuel injection. There is no optional engine.

The 1983 Mercury LN7 has a new optional 1.6-liter multiple-port fuel-injected engine, as well as a new optional five-speed transmission. A larger 13-gallon fuel tank is standard. Other new options include a four-way adjustable driver's seat and a shift indicator light.

The 1983 Zephyr will be offered in four models—base Zephyr and Zephyr GS in four-door sedan and Sport Coupe versions. Zephyr will be replaced at mid-year by the 1984-model Mercury Topaz front-drive cars.

Minor changes have been made to the '83 Zephyr line. The 4.2-liter V-8 engine option has been dropped, a one-barrel carburetor replaces the two-barrel unit in the standard 2.3-liter engine, and a new optional shift-indicator light is available.

Mercury for 1983

	Wheelbase (Inches)	Length (Inches)	Width (Inches)	Height (Inches)	Curb Weight (Pounds)

Second location

MIDDLETOWN, Conn.—Town & Country Auto Sales (Lincoln-Mercury-Buick-Cadillac - Mazda) has opened a second downtown location.

Week's total dips 8 pct. to 91,660

Labor Day trims U.S. car output

U. S. car production dipped 8.64 percent last week as all plants were closed Monday (Sept. 6) for the Labor Day holiday.

Output during the four-day holiday-shortened week was 91,660 units, down from 100,334 assemblies during the previous week but up 3.74 percent from the 88,347 built during the comparable 1981 week.

Five assembly plants were down last week.

General Motors' Oklahoma City point, which closed Aug. 23, will return Sept. 20 after model changeover. GM's Lakewood plant remains down indefinitely because of an '83-model startup delay.

Ford Lorain and Atlanta assembly plants were closed last week and will remain down this week. The closings are for model changeover.

Volkswagen of America's Westmoreland assembly site also remained idle last week. The plant has been closed since Aug. 2 for model changeover.

All Chrysler Corp. assembly points were reported open last week.

Saturday overtime was scheduled last week at one plant — GM Norwood, source of hot-selling Chevrolet Camaro and Pontiac Firebird models.

Ford said it would close its San Jose plant this week for model changeover and its Kansas City plant this week for inventory adjustment. In addition, Ford has scheduled overtime this week at Wixom.

American Motors said it would up production of its Renault Alliance at the Kenosha plant to 600 units per day on a two-shift basis beginning next week (Sept. 20).

Year-to-date, the makers have assembled 3,617,286 cars, down 23.26 percent from the 4,713,857 units built during the equivalent period last year.

Japanese vehicle exports decline 12th month in row

WASHINGTON.—Vehicle exports from Japan in July declined for the 12th straight month, according to the Japan Automobile Manufacturers Assn.

The decline, said JAMA's Washington office, was due to voluntary export restrictions and the worldwide economic recession.

July exports, it said, numbered 494,601, down 8.0 percent from the year-earlier count of 537,719.

Vehicle exports to the U. S. declined by 11.6 percent, passenger cars by 6.8 percent, and trucks by 28.0 percent.

Increased July exports to Europe reflect a temporary preshipment of vehicles due to August vacation shutdowns in Japanese plants, and concentration of shipping schedules, JAMA said.

Vehicle output during July declined by 6.1 percent to 973,169 units, compared with 1,036,042 a year earlier. This marks the fourth monthly decline in Japanese vehicle production.

Totals reflect 627,768 passenger cars, down 0.6 percent, and 338,905 trucks, down 14.0 percent.

To date, Japan's vehicle output for 1982 stands at 6,416,775 units, 3.9 percent below the accumulated yearly total as of July 1981.

Japan's domestic vehicle sales during July increased by 4.0 percent to 525,612 units. This reflects a 9.2 percent increase in passenger-car sales offset by declines in truck and bus sales by 3.3 percent and 5.5 percent respectively.

July export totals for passenger cars were: North America, 163,467 (including 150,739 to the U. S.); Europe, 102,317; Middle East, 21,464; Southeast Asia, 19,896; Oceania, 17,999; Central and South America, 9,856; Africa, 5,989, and others, 676.

Montana brothers wind up 65 years as Ford dealers

STANFORD, Mont.—Glen and Rolin Galt have decided that 65 years as auto dealers is about enough. So they are retiring and closing Galt Bros. Garage (Ford).

Glen is 88, and Rolin is 83. They formed the dealership in 1917 with two of their brothers.

The brothers sold Ford cars through their hardware store in Galt prior to World War I. But Ford Motor Co. wanted them to open a garage to service the cars they sold. They established the garage and dealership Aug. 1, 1917.

All four brothers were involved in the company, but Glen was the only one active in the business at first. Rolin taught for three years after returning from service in the war and then went "on the road" for Galt Bros. By 1923, he was a full-time employe.

Glen was manager, bookkeeper and part-time mechanic. Rolin became head of the parts department after he stopped traveling for the firm in 1940.

Truck production for holiday week declines 19 pct.

Downtime for the Labor Day holiday, model changeover and inventory adjustment took a 19.72-percent bite out of U. S. truck production last week.

Truck makers assembled 26,884 units last week, down from 33,490 the previous week and down 1.24-percent from the 26,554 built during the comparable week in 1981.

All truck plants were closed Sept. 6 for the Labor Day holiday.

General Motors' Detroit (Chevrolet) and Pontiac (GMC Truck & Coach Plant #2) facilities remained down last week for model changeover. The Detroit plant and the Pontiac heavy-duty line will return Sept. 20. The medium-duty line at Pontiac is scheduled to reopen today (Sept. 13).

Volkswagen of America's Westmoreland assembly site remained down last week as did Ford's Louisville truck plant.

Saturday overtime was scheduled at GM's Lordstown van plant last week. Ford has scheduled daily overtime this week at its Lorain (vans) and Michigan Truck plants.

Year-to-date, the truck makers have built 1,390,081 units, down 16.34 percent from the 1,194,764 assembled during the equivalent period last year.

Auto output slips in Canada but tops last year

Canadian auto production slipped 8.15 percent last week but remained strong when compared with the same week of 1981.

Manufacturers built 17,806 units last week, down from 19,388 assemblies the previous week but up 67.61 percent from 10,623 in the equivalent week last year.

Year-to-date, the makers have built 621,898 cars, up 5.94 percent from the 586,992 assembled during the comparable period last year.

Truck production increased slightly last week as Chrysler Corp. nearly doubled its output. Truck assemblies last week were slated at 9,651 units, up 5.96 percent from the previous week's 9,108 and a 34.56-percent boost from the 7,172 built during the year-ago week.

Ford Canada will close its St. Thomas assembly site for two weeks, beginning today (Sept. 13), for inventory adjustment, while the company's Oakville point will be down this week because of a parts shortage.

51-day supply of imports is riddled with shortages

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. slipped to a 51-day supply Sept. 1 from a 56-day stockpile a month earlier, resulting in shortages in a number of lines, both Japanese and European.

The inventory of new imported cars totaled 387,780 Sept. 1, compared with 429,663 a month earlier.

The problems of scarcity that many imported-car dealers faced as they moved into autumn was in sharp contrast to the domestic scene, where an 88-day supply of new cars included many heavily overstocked lines.

The inventory of new imported pickup trucks was also down Sept. 1 to 153,032, a 107-day supply, compared with 170,969 on Aug. 1, a 132-day stockpile.

The combined imported car and truck inventory Sept. 1 totaled 540,812 units, a 59½-day supply, compared with 600,632 on Aug. 1, a 67-day supply.

The combined domestic and imported new-car inventory was a 75½-day supply Sept. 1, little changed from 75 days a month earlier.

Strong sales in August ran a number of individual import lines short. Leanest stockpiles were those of Toyota, 22 days; Honda, 24 days, and Porsche, 27 days. Also very lean were Mercedes at 32 days and Volvo at 36 days.

Thus the prospect is that the current sales surge being enjoyed by those lines, plus Saab, Jaguar and BMW, may be dampened by shortages this month.

The inventory of Japanese-built new cars fell to 257,522, a 41-day stock, from 283,566, a 45½-day supply, a month earlier.

Japanese nameplates and their Sept. 1 days-supply figures were: Toyota, 22; Honda, 24; Subaru, 41; Mazda, 55; Chrysler Corp./Mitsubishi, 56; Datsun, 63, and Isuzu, 148.

Interestingly, the Chrysler Corp. stock of Mitsubishi-built cars included a meager 26-day supply of Colts, along with a 52½-day supply of Champs, a 66-day stock of Challengers and enough Sapporos for 101 days.

The stockpile of West German-built new cars totaled 83,262, a 104-day supply, off from 85,597, a 112-day stock, a month earlier.

German nameplates and their Sept. 1 days-supply figures were: Porsche, 27; Mercedes-Benz, 32; BMW, 49; Audi, 154, and imported Volkswagens, 179. VW also had an 85-day supply of U. S.-built Rabbits for a total stockpile of 136 days, down from 156 days a month earlier.

Partly because of production

6000-STE debuts

Leading the Pontiac fleet

Pontiac has appointed the 1983 Pontiac 6000-STE its flagship for the new model year and is pinning its hopes on the highly engineered 6000 to create a different image for the division. Priced at about $13,500, the 6000-STE features six headlamps, special 14-inch wheels with Goodyear Eagle GT 195/70R14 tires, a 2.8-liter two-barrel V-6 with automatic transmission, electronic ride control and an onboard air compressor.

Slippery Sierra

European Ford to bow at Paris show

Ford of Europe will unveil its aerodynamic Sierra at the Paris Auto Salon next week. With a drag coefficient of 0.34, the rear-drive Sierra replaces the sales-leading Cortina/Taunus line in Europe. A performance three-door version and a station wagon are slated to debut early next year.

DeLorean near deal on capital problems

By Edward Lapham
Financial Editor

There were indications late last week that the dilemma facing the sports-car enterprize of John Z. DeLorean was close to resolution, with announcement of a restructuring expected as early as this week.

John DeLorean, former General Motors group vice president who launched the sports-car project, has been trying to arrange a $25 million export financing line of credit plus $10 million in new working capital for the Belfast operation, which went into voluntary receivership in February.

Earlier, DeLorean said he had a letter of intent from the receivers to reacquire the operation. The deadline for putting the necessary financial package together was last Monday, Sept. 13.

Neither John DeLorean nor the receivers were available for comment at press time. However, sources close to the situation said that such a deal was close to consumation but that DeLorean would have a limited role and that Donald Lander, former Chrysler executive who

Automotive News World Outlook projects U. S. car market at 9.2 million for '83

Recovery prognosis guarded; sales forecast cut again

By Edward Lapham
Financial Editor

The prognosis for the U. S. auto industry is guarded.

Several factors, including chronic interest fever, a lack of consumer response to the Reagan Administration's July income tax cut prescription and metastasized consumer pessimism, have combined to prolong the illness.

The combination of these factors has delayed recovery, according to the most recent Automotive News World Outlook, reducing the 1982 U. S. new-car sales forecast to 7.9 million units and the 1983 forecast to 9.2 million units.

It is the third consecutive time the outlook has been lowered due to economic conditions which refuse to improve at an acceptable rate. In the last ANWO in June, prior to the tax cut which was expected to generate additional consumer activity, U. S. car sales were forecast at almost 8.4 million units for 1982 and more than 9.5 million units for 1983. The 1981 total was about 8.6 million.

The Automotive News World Outlook, a joint venture by Automotive News and Data Resources, Inc., also indicated that if economic conditions do not begin to improve almost immediately, there is every possibility that sales expectations for 1983 will have to be lowered yet another time.

"The downside risks continue to be substantial both in terms of probability and magnitude," said John Hammond, manager of DRI's U. S. automotive service. "At the same time, chances for improvement on the upside are small.

Hammond said the outlook will continue to deteriorate "if events continue to unfold as they have" for the past several forecast periods.

"If the recovery doesn't really begin soon, we could lose as many as one million additional units out of the 1983 forecast," he said. "The upside potential is at best maybe 400,000 or 500,000 units."

• Otto Eckstein, DRI chairman, said the most recent macroeconomic forecast "reflects the sudden downturn in interest rates and a reassessment of the financial outlook in light of the enactment of a compromise bill" plus "downward revisions in the financial market's expectations of U. S. economic growth and inflation."

He said that currently "signs of economic recovery are elusive," although the forecast did show "a significant lower pattern of short-term interest rates over the next two years and return of a normal yield curve" in financial markets.

Tempering the unpleasant short-term auto outlook was some other news, at least mildly positive, about the general economic condition.

Eckstein said lower interest rates are "a key factor" in sustaining the economic recovery

Chrysler Corp. joins in experiment which could change the way cars are sold

Dodge dealer opens sales office in shopping mall

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — In a test that could alter the way cars are sold in the U. S., a suburban Dodge dealer is opening a showroom and sales office in a Torrance (Calif.) shopping mall. Torrance is a suburb of Los Angeles.

Del Amo Dodge, owned by James B. Clark, will have a 5,000-square-foot store staffed by five sales representatives in the Del Amo Fashion Center, a 12-year-old mall with more than 350 shops and more than two million feet of floor space. The new facility will be operated as a satellite to Clark's dealership.

"Auto makers have always found it advantageous to display their products in shopping malls, but this is the first time one has planned an actual sales operation in a major shopping complex," said Tom Pappert, Chrysler sales vice president.

Del Amo Dodge's new showroom is the first of two or three similar test operations that Chrysler will be establishing in other major markets.

"With the increasing cost and limited availability of land for dealership facilities, auto makers are going to have to look for new ways to maintain adequate market representation," Pappert said.

"Chrysler feels that the mall concept is certainly one alternative avenue worth exploring."

More important than the cost of opening and maintaining a dealership, the move is viewed as a way for car makers to take their wares to where the people are.

"We can deliver thousands of prospective car purchasers each day," said Guilford Glazer, developer of the Del Amo Fashion Center.

Glazer approached Chrysler with the concept and worked closely with the company to open the new store.

"When people come to the mall to shop for shoes, home furnishings or stereo equipment, there's no reason they can't look at a new car too," he said.

Glazer estimates that as many as 30,000 people pass through his mall each day and that during a typical weekend, 80,000 to 90,000 shoppers may visit the facility.

• "You get husbands and wives shopping together," Glazer said, indicating that it is important to have both in the showroom since almost all high-ticket-item purchases are joint decisions.

By reaching more shoppers, the dealer's overhead per walk-in customer is lower. Pappert estimated that each walk-in customer at a dealership today represents a cost of $76.

Ostensibly, the goal is to sell more cars, although Pappert feels visibility is very important.

"What we're looking for is consideration," he said. "When we get on people's shopping lists, we do better than the national average in sales penetration."

The new showroom is expected to open by the end of October. The outlet will be able to provide on-the-spot delivery of new vehicles and appraisal of used cars.

Clark said demonstrators will be kept in the mall's parking lot so prospects will be able to take test drives. Service work will be done at Del Amo Dodge, which is less than a mile from the mall.

Approximately 10 to 12 cars will be displayed on the showroom floor, and the shopping center's management has made provisions for several additional cars to be displayed elsewhere in the mall with signs directing customers to the showroom.

"It's a cooperative effort," Pappert said. "We've reviewed the project with the National Dealer Council and we're going to keep them (dealers at mall sites) within their census tracts."

Del Amo Dodge sold 1,800 new cars and trucks and 800 used vehicles last year.

First Shelby/Chrysler car

The Dodge Shelby, a specially modified Dodge Charger 2.2, is the first of several performance cars that famed auto racer/designer Carroll Shelby is developing for Chrysler Corp. In addition to the graphics, the Dodge Shelby will have some suspension and powertrain changes. It is due in several months as an '83½ model.

Its 50-MPG city rating noses out challenge from Nissan Sentra

Diesel Rabbit retains MPG crown

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — It looked close for a while, but Volkswagen has again walked off with top fuel economy honors this year, bringing in its trusty diesel Rabbit 4-speed with a new fuel economy record of 50 MPG for city driving.

Challenging the diesel Rabbit for the '83 model year was Nissan's new diesel Sentra. First reports had it taking the title from VW with a 49-MPG number in city driving, but final results showed the diesel Sentra 4-speed at 48 MPG. Impressive, but 2 MPG short of the Rabbit.

Imported cars took all of the top 10 places in the MPG ratings for '83 models.

Had it not been for development of some new technology by VW, there would have been a tie this year.

The new twist is engine shutoff and freewheeling governed by microcomputer, technology shown off earlier in VW's experimental high-fuel-economy Rabbit built under aegis of the West German government.

Activated when the vehicle is braked, freewheeling and engine shutoff is discontinued when the accelerator is depressed. In the EPA test cycle, the system is good enough to produce a 2 MPG fuel-economy improvement, enabling VW to retain the crown in this year's fuel-economy derby.

The EPA also gave VW 2 MPG credit for its upshift light, but this cannot be counted against the performance of the Sentra because the agency credits Nissan with fuel economy resulting from the different shift speeds Sentra owners are likely to use.

• Tying the Nissan Sentra diesel for second is the very same Rabbit diesel 4-speed that took the title last year.

In fourth place is the first gasoline-powered car, the Honda Civic 5-speed with a 46-MPG city average.

Following the Honda are the Isuzu I-Mark 4-speed diesel, Toyota's gasoline-powered 1.3-liter 5-speed Starlet and the Nissan Sentra 5-speed version of its diesel. All had city ratings of 44 MPG.

Next in line at 43 MPG are three Volkswagens — 5-speed versions of the new turbodiesel Jetta and Rabbit models and a 5-speed version of the normally aspirated Rabbit diesel.

General Motors came close to the Top Ten with dieselized versions of its Chevette and Pontiac 1000. They managed 42 MPG, but then it's down to 37 MPG before the "domestics" show up again. The Renault/AMC Alliance and the Chevette/Pontiac 1000 automatic diesels attained that number.

At the bottom of the list for '83 is the Maserati Quattroporte with what now seems an astonishing 8 MPG average. It is barely below the Rolls-Royce Camargue and Corniche which got 9 MPG city averages.

The EPA reports only city numbers from its fuel-economy testing but does generate highway fuel-economy numbers which manufacturers frequently use in advertising their cars.

For 1983, the highest-rated automobile for highway mileage is also the VW diesel Rabbit equipped with freewheeling and automatic engine stop/start.

And the number: A remarkable 67 MPG!

Chairman says car-truck sales could hit 14 million rate late in '83

GM's Smith sees strong recovery

By Jenny L. King
Staff Writer

In a tone of optimism and confidence, General Motors Chairman Roger B. Smith set the autumn pace for Detroit and the country by predicting a greatly improved national economy and combined new-car and truck sales possibly reaching an annual rate of 14 million units in 1983.

Smith told the 1,525 persons attending the first meeting of the Economic Club of Detroit's 1982-83 program year that the recession not only has bottomed out but that a substantial turnaround is in progress.

"There are increasing signs that the economy is poised for an upturn — in fact, it has already begun," he said.

"I predict that the American automobile industry will play a pivotal role in this expected expansion . . . the annual sales rate in the U. S. auto industry has the potential of approaching 14 million cars and trucks by the end of the 1983 model year," Smith said.

The chairman's message was both a kind of keynote for the program year and the 1983 domestic new-car model year, and it came just three days before the beginning of GM's 75th anniversary year celebration, Sept. 16.

New policies taking effect in Washington must be believed by the investment houses on Wall Street before the economic upturn will truly be under way, especially for the auto makers, Smith said. He claimed the auto industry will again be a major player in the game.

• "The trend coming from Washington toward a healthier economy is not just a flash in the pan," Smith said, naming the dramatic drop in the prime interest rate (from 20 percent to 13½ percent in a year), the drop in the rate of inflation, stabilizing of employment and upemployment and tax bills past and present which positively affect the competitiveness of American business.

"I would find it difficult to name a single major industry in the U. S. that is not being seriously challenged by foreign competition today," he said. He enlisted the national effort of the business community, organized labor and government to meet and challenge and maintain U. S. leadership.

Smith said GM is concentrating its energies in several areas including quality control—from the raw materials purchased through the manufacturing process — increased productivity, adoption of the "Just-In-Time" inventory system used by the Japanese and greater cooperation with its labor forces.

Talking with reporters before the luncheon, Smith said, "Our product line and prices are where they should be—the pricing was a dramatic step." The price of an average-equipped GM car climbed 1.9 percent for '83 models, and some models were reduced.

"Everything is in place for us to lead the country out of the recession," he said. "I see things beginning to move by the end of October, when all the (U. S.) products and prices are on the table."

• Smith said the GM-Toyota agreement, in which the two giant companies will cooperate in the design and production of a small car to be built in this country, is forthcoming.

He said GM needs this agreement with the Japanese to "cover the short-term. We can't meet the market and keep our costs down. This is not an unusual move for us — our LUV pickup

Now five-speed is standard

The Renault 18i has a fuel-injected 1.6-liter engine with five-speed manual transmission as standard for 1983. The standard axle ratio has been lowered to 3.44:1 from 3.78:1 for improved efficiency. The Deluxe version of the 18i becomes the standard model and includes some features not previously offered at the base price.

Customers not cooperating—they're buying bigger cars

GM may tap its CAFE reserve

By Roger Rowand
Engineering Editor

General Motors said it may not meet its Corporate Average Fuel Economy (CAFE) requirement in the 1983 model year. It may be forced to dip into its bank account of credits earned in past years to avoid a huge fine.

The problem arises from the fact that large cars are selling at rates far higher than anticipated. Small cars, ones that help with CAFE, are lagging.

Betsy Ancker-Johnson, vice president in charge of the Environmental Activities Staff, indicated CAFE for light trucks will be met without credit withdrawal.

"It may be necessary to draw on past fuel-economy credits to meet the standard for cars," she said.

"GM has made the investments in new products and production facilities to exceed the 26.0 miles per gallon standard for cars, but current market conditions and low fuel prices may alter the product mix as it has done in previous years," she said.

Others in Detroit point to slumping sales of GM's high-MPG J-car and its diesels as major reasons for the problem.

A manufacturer earns a three-year credit account by exceeding the Energy Act standards which started at 18.0 MPG in 1978, ran up to 24.0 MPG in the 1982 model year and go to 27.5 MPG in 1985.

If a maker misses CAFE, it faces a fine of $5 for each tenth of a mile it is short times the total number of cars it made that year.

Conversely, if it exceeds CAFE, it earns credits the same way—$5 per tenth of a mile times production.

A company is not assessed the fine until three years after the year in question, so in effect, there is a carry-forward provision as well as a carryback provision.

Use of that formula would indicate GM earned credits in 1982 of 0.2 MPG, in 1981 of 0.2 MPG and in 1980 of 0.9 MPG.

As recently as early August a top GM officer told Automotive News the company would make CAFE for both cars and trucks. He said it would be close but said he was confident the product mix would allow GM to hit the CAFE requirement.

Ancker-Johnson said fully half of all the 1983 GM models will average 26 MPG and many will exceed that.

It is expected GM will close the 1982 model year with a Corporate Average Fuel Economy figure of 24.2.

There is another type of offset credit for fuel economy available to manufacturers. That one is for installation of shift indicator lights (SILs) which have been shown to boost mileage significantly.

But no firm policy on how SILs will be treated for credit purposes has been formulated as yet in Washington.

SILs are different from other mileage devices because their effect is based strictly on driver choice.

An SIL is a dash-mounted prompter that tells the driver an upshift can be made. Most other fuel-economy boosters — for which policy stands — are mechanical devices and the driver plays a passive role in their use.

Volkswagen began offering SILs late in the 1981 model year in a test fleet. In the 1982 model year, it earned a fuel economy credit of about 7 percent with broad use of the lights.

Ford Motor Co. will offer SILs in 1983.

The EPA is studying alternatives for future policy. Until now, it has been treating SILs and economy credits on a case-by-case basis. Because of a proliferation of devices and interest, EPA officials say they feel the agency can't continue on the case-by-case route.

EPA has asked industry members for help in devising a way of handling credits and new-car window sticker information. It is a tough problem, those involved agree.

Said one EPA official as he spoke with a group of manufacturer representatives: "Regulatory agencies are always accused of deciding what's right and shoving it down industry's throat. In this case, we didn't even see a sensible solution we could shove down your throats."

Eldorado Touring Coupe

Returning for '83 is the Eldorado Touring Coupe, which was introduced last year. The package features special ornamentation and black-finished windshield reveal moldings, quarter window channel holdings and windshield wipers. Headlamp and tail-lamp bezels and wheel opening moldings are body-colored. Aluminum wheels also are included.

UAW local-content bill takes big step forward

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The refurbished UAW-backed bill to require U. S. content in varying degrees for large-volume sellers of cars in the American market won approval and a favorable report from the House Energy and Commerce Committee last week.

Thus, the bill whose aim is to force big importers like Toyota and Nissan to build plants in the U. S. and to limit outsourcing by the domestic makers took a big step toward House passage in the dying days of this Congress.

The report will be filed by midnight today (Sept. 20), and the House Trade Subcommittee (to which the bill was also referred) will probably start hearings almost immediately. Opposition there is expected to be strong and as long drawn out as House speaker Tip O'Neill will allow.

While this may be a "media event," especially if General Motors and Ford Motor Co. can be persuaded—or forced—to abandon their neutral stance — the reality is that a bill promising jobs in the severely depressed auto industry is politically unbeatable.

Opponents include a wide assortment of farm interests and all auto importers and major exporters plus the Reagan Administration. They feel certain the Republican Senate—and, if push comes to shove, a Presidential veto—will stop the bill from becoming law this time around.

But barring an extraordinary recovery in the auto sector, the stage will be set for a major battle in the next Congress. As in all depressions, survival becomes paramount and the difference between job preservation and outright protectionism and diminution of competition becomes wafer-thin.

Opposition in the Energy Committee came chiefly from Rep. William Dannemeyer, California Republican, and Rep. Philip Gramm, Texas Democrat. Both are conservatives.

They had impressive supporters and strong philosophical arguments but lacked the votes. Chief proponents were Rep. John Dingell, Michigan Democrat and committee chairman, and Rep. Richard Ottinger, New York Democrat, who had the unceasing efforts of the UAW

UAW, Chrysler reach tentative agreement

By Marjorie Sorge
Labor Editor

The UAW and Chrysler Corp. reached a tentative agreement last week which provides both cost-of-living-adjustments and wage increases.

"This tentative agreement achieves our principal goal — to start Chrysler workers on the long, long road back to parity with workers at General Motors and Ford," said UAW President Douglas A. Fraser.

Chrysler workers made over $1 billion in concessions in the last contract to help the company qualify for federal loan guarantees.

Thomas W. Miner, Chrysler industrial relations vice-president, said the company is "very, very pleased with the agreement, it was as good as we could make it. For the short-term we have a settlement which will put some dollars into our people's pockets. They deserve it after three rough years."

The contract covers 50,600 hourly and salaried workers and 41,000 workers on indefinite layoff.

It consists of a one year agreement on wages and benefits and a two-year pact on non-economic issues such as work rules, absenteeism, worker representation and seniority.

The tentative agreement was reached 6 hours and 16 minutes after a strike deadline at midnight, Sept. 15. The contract had run out at midnight Sept. 14, but was extended for 24 hours.

However, strikes were not averted at St. Louis, Jefferson Ave. (Detroit) and Newark (Del.) assembly plants. Other Chrysler parts operations also went out.

Fraser said he would recommend those strikes be ended.

Both Fraser and Miner said the contract is "modest" and the best that would be done in tough economic times.

While neither would say how much the new contract will cost, Miner said the company can afford it "based on our profit projection for next year."

However, they both indicated that Chrysler will make a profit in the third quarter. And, according to Fraser, profits for the year should be high enough to generate payments out of the profit-sharing plan negotiated in the last contract. It would be the first such payment. Chrysler made a $106.7 million profit in the second quarter.

Fraser also said, the prospect for greater profit sharing in 1985 is "very promising."

Under the new contract, workers also will get three quarterly lump sum COLA payments beginning in December. Based on a 6 percent inflation rate, that would generate 16 cents in the first quarter and 17 cents in both the second and third quarters for a total of 50 cents.

The UAW would like to fold that 50 cents into the hourly rate when a new economic package is negotiated next September, Fraser said. There is no provision for the fold-in in the tentative agreement, according to Miner.

The COLA formula is based on a one cent increase for every 0.26 percent change in the combined U. S.-Canadian Consumer Price Index. Ford and General Motors have the same formula.

Workers at Chrysler gave up COLA in March, 1981, to help Chrysler quality for federal loan guarantees. The resumption of

Domestic total of 107,423 is 29 pct. below '81 figure

Early-Sept. sales lowest since 1972

By Jenny L. King
Staff Writer

The early-September domestic new-car sales drop was the 10th consecutive down period for the U. S. auto makers and brought to 20 the number of 10-day segments in 1982 in which retail sales did not meet or beat year-ago-levels.

The daily selling rate Sept. 1-10 was only 13,428, lowest so far this calendar year and down 28.99 percent from 18,910 a year earlier. There were eight selling days both years.

Sales totaled 107,423, down 28.99 percent from 151,281, and lowest for any 1982 period since 101,199 reported for the first 10 days in January. This was the poorest early-September since 1972, when 103,697 new cars left dealerships.

General Motors reported a sales drop of 30.29 percent, sliding to 65,883 units from 94,505 last year. It was GM's smallest total since the early-July period when 61,855 new cars were delivered. Ford Motor Co. was down 22.94 percent, to 25,491 from 33,081.

Chrysler Corp. sales of 12,853 were down 29.85 percent from 18,321. It was Chrysler's poorest 10-day total of the year. Volkswagen of America was down 42.97 percent, to 1,696 from 2,974, while estimated sales of American Motors passenger cars numbered 1,500, down 37.50 percent from 2,400 a year ago.

DOMESTIC SALES

INDUSTRY TOTAL	107,423	151,281

† Estimated

GM earned 61.33 percent of the early-September market, down from 62.47 percent in 1981. Ford sales earned it 23.73 percent, up from 21.87 percent. Chrysler dipped to 11.96 percent from 12.11 percent. VWoA had 1.58 percent, down from 1.96 percent, leaving AMC just 1.40 percent of the total, down from 1.59 percent a year ago.

Chrysler and Lincoln were the only domestic makes to show sales gains during the period. Chrysler climbed 68.55 percent, to 3,853 from 2,286 last year. Lincoln was up 35.60 percent, to 1,893 from 1,396.

Plymouth was down 46.43 percent, Imperial was down 17.95 percent and Dodge was off 41.40 percent. Ford was down 29.75 percent and Mercury was off 12.38 percent.

Buick dropped 33.84 percent, Cadillac was down 31.50 percent, Chevrolet was down 24.84 percent, Oldsmobile was down 29.13 percent and Pontiac plunged 39.34 percent.

Year-to-date sales reached 3,881,566 by Sept. 10, down 14.85 percent from 4,558,642 a year earlier.

Light trucks weaken; so do August sales

A softening in the light-truck market in August, coupled with continued weakness in demand for big trucks, resulted in the sharpest decline in monthly retail sales since last December.

During the month, according to preliminary reports, franchised dealers and factory outlets retailed 184,843 units, a decrease of 11.5 percent from the 208,785 sold in the same month a year ago.

For the first eight months of 1982, however, sales were up 7.5 percent to 1,721,021 units, with only medium and heavy trucks running behind the year-earlier pace. Through August last year, 1,600,470 trucks had been retailed.

Light trucks were down 9.8 percent during the month to 170,849 units, compared with 189,471 a year ago. The non-captive imported compact pickups, however, were up 6.4 per-

Table on Page 22.

cent as a group, from 29,430 sales in 1981 to 31,327.

Only 3,876 medium trucks were retailed in August, off 44.9 percent from last year's 7,035, which was a far cry from deliveries made in pre-recession days.

• In August, 10,118 heavy trucks were retailed, a decline of 17.6 percent from last year's total of 12,279.

Through August, sales of light trucks showed an increase of 10.6 percent to 1,590,251 units, compared with 1,437,754 in the first eight months of 1981.

The eight-month medium total plunged 44.2 percent, from 56,549 units a year ago to 31,543. Heavies totaled 99,236 through August, a decline of 6.5 percent from the year-earlier 106,167 vehicles.

Sales of compact pickup trucks were up for August and the eight-month period.

During the month, 67,957 units were retailed, an increase of 46.4 percent over the year-ago 46,429. Through August, the total was 499,122 units, also a gain of 46.4 percent over the 340,818 sold in the like period in 1981.

August sales of the domestic compact—Chevrolet S-10, GMC S-15, Ford Ranger, Dodge Rampage, Jeep Scrambler and Volkswagen — totaled 30,760,

'Finest Sportscoach ever'

Sportscoach Corp. of America, Elkhart, Ind., calls the Sportscoach III "the finest motor home Sportscoach has ever introduced." It features a white exterior with graphics color-coordinated with interior decors. Other highlights are a custom-designed grille incorporating the hood and headlights, custom chrome wire wheel covers and anodized aluminum trim.

RVIA plans workshops at show in Louisville

CHANTILLY, Va.—The Recreation Vehicle Industry Assn. will sponsor five dealer-management workshops and a motivational seminar at its 20th annual national RV show Nov. 30-Dec. 3 in Louisville.

John Casey, president, Shurflo, Anaheim, Calif., and chairman of RVIA's National Show Committee, said "the workshops and seminar will zero in on dealers' needs and interests and are aimed at helping them fine-tune their profit potential and be more successful."

The workshops will be held the afternoons of Nov. 30 through Dec. 2), and are scheduled so dealers can attend more than one.

Topics are Getting and Keeping Wholesale and Retail Credit, Small Business Computers in the RV Dealership, Women in Business, RV Rentals—Opportunities and Pitfalls and Merchandising Parts and Accessories.

The seminar on credit will be conducted by Robert L. Berner, Citicorp executive and RVIA Finance Committee chairman, and Gordon E. (Mike) Gilbert, Coachmen Industries, and Robert R. Rawlings, CIT Financial Services, committee members.

They will give advice on how dealers can start and maintain long-lasting relationships with lenders.

Eric Haas, Raxis International, Indianapolis, will speak at the computer workshop and will instruct dealers on the value and usefulness of business computers in RV dealerships of all sizes. He is expected to focus on using computers to maximize sales leads and implement rapid credit checks.

Speaking on women in the RV business will be Fran Van Pelt, who for the last 10 years has owned and managed Outdoor World, Inc., an RV dealership in Aurora, Ill.

The motivational seminar for dealers, scheduled Dec. 2, will feature Joe Girard, the self-styled "World's Greatest Salesman."

Upturn expected in attendance at RV show on coast

CHANTILLY, Va.—More than 120,000 potential buyers and 3,000 RV dealers are expected to attend the 30th annual recreation-vehicle and manufactured-housing show Nov. 3-14 at Dodger Stadium in Los Angeles.

Kay Toolson, sales vice president, King's Highway Mobile Industries, Inc., Compton, Calif., and show chairman, noted that last year's public gate was 115,000 people.

"We're predicting even more this year because it's been a good year for the industry and because the show is operating with a bigger advertising budget than ever before," she said.

The show is sponsored by the Recreation Vehicle Industry Assn., and the Western Manufactured Housing Institute. There will be about 600 recreational vehicles and 50 manufactured homes on exhibit, and nearly 200 supplier booths displaying the latest in parts and accessories.

Trade days are Nov. 3-5, while the public is invited Nov. 6-14.

A highlight of this year's show will be a dealer-management workshop on financing, scheduled for 9 to 11 a.m., Nov. 4 at the Stadium Club. Speakers will be Robert L. Berner, Citicorp Executive and Chairman of the RVIA Finance Committee, and Gordon E. (Mike) Gilbert, Coachmen Industries, and Robert R. Rawlings, CIT Financial Services, committee members.

The workshop will focus on how dealers can nurture long-lasting relationships with lenders. The seminar will be repeated at RVIA's 20th annual national RV show in Louisville.

Sales not great, but profits hold

Kansas City picture pleases RV dealers

By Grier Lowrey
Staff Correspondent

KANSAS CITY, Mo. — Nobody's dancing in the service bays, but RV dealers around here aren't unhappy as they review the pattern of business rising from spring and summer sales. They've gleaned a few impressions on how to project for fall, winter and next year.

Gross and net profits were up at most dealerships. Tightening overhead expenses, cautious buying and realistic pricing helped boost profits. Grosses soared at some used RV marts.

With an exception or two, demand for new RVs didn't match expectations. Traffic was brisk on the lots and buyers showed interest, but in too many instances they couldn't afford the deal.

The upshot was that they turned their attention to used units. Dealers with a large selection of reconditioned units prospered, especially those who search actively for used RVs and then spend $500 and up to refurbish them.

These dealers, however, are encountering a problem: Good used units are harder to uncover, and they pay more for the ones they find. But then, they simply asked and got more for them.

Dealers with decent service facilities report higher service and parts incomes. This business was fueled by insurance work stemming from an unusual number of spring and summer hail and windstorms.

• What's selling? It depends on your source of information. Seemingly, it's a mixed bag.

At an auto dealer's RV center, van conversions with all the amenities, priced at $21,000, did well. They sold to people-haulers, spectator-sports tailgaters and to companies.

The "sleeper" at another dealership was the wide-body van. One dealer is banking on smaller-sized travel trailers in the 16-to-22-foot range because the towing capability of small-engine autos won't handle larger sizes.

Sales of the big motor homes have been spotty. New mini homes fared better and used minis have been hot. Sales of fifth-wheels edged up at several places. Folddown trailers can't be overlooked. They're priced for the current economy and have a lot of other features going for them, such as convenient storage.

It's hard to rent or lease an RV in Kansas City. Replacement costs forced several deal-

Bentley places stress on safety in Skyview van

ARLINGTON, Tex. — Bentley Corp., producer of Good Times and Venture van conversions, places the emphasis on safety in its new model—the Skyview, which features a fiberglass raised-roof design.

The Skyview interior has an additional 21 cubic feet, providing more storage space and allowing an average-sized person to stand up inside.

"This model will be most popular with people interested in a mini motor home," said Jim McDonald, Bentley general manager. The Skyview will be available on all chassis—Ford, Chevrolet, Dodge and GMC.

"Safetywise, the Skyview is structurally more sound than the typical raised-roof converted van," McDonald said. "We don't completely eliminate the original roof.

"We leave about three feet in the front, over the driver and passenger, and about two feet in the back. The raised section incorporates what essentially are roll bars that are bolted into the roof of the van."

The raised-roof design also includes a high-impact, molded ABS plastic interior.

"It's not just pieced together," McDonald said. "The lighting in the roof is fluorescent and there is storage space on both sides."

Bentley, which expects to reach $30 million in sales this year, anticipates that the Skyview will make up approximately 7 percent of its output, McDonald said.

Red Rangers go to a ball game

More than 100 white-striped Red Rangers stand by at Busch Memorial Stadium for Ford Division's St. Louis district 1983 "Special Driveaway." Many district dealers were "tailgating"—having a box lunch on the back of the pickups—before attending a St. Louis Cardinals baseball game.

Skyview 'raises the roof'

The Skyview van conversion features a fiberglass raised-roof design, providing more interior storage space and allowing an average-size person to stand up inside. It is offered on all van chassis.

Gross and net profits up at most dealerships

RV market rising in Kansas City

Continued from Page 10

ers prominent in leasing out of that ballgame last year.

The year's been good to the few dealers who carry a selection of used units. Bill Roach, Riviera Trailer Sales, Kansas City, is one of them.

"See that 1977 minihome out there at the front?" he said. "We're asking $17,950 for it. That's $3,000 more than it sold for new. We'll get our price. There's no letup in the used market.

"Two years ago, we were earning about $2,000 profit on units we had about $10,000 in," he added. "Last year, our gross profit ran about $3,000 in the same bracket. This year, we've realized a good $4,000 on RVs in that range."

"Along with inflation, the two or three price increases on new units in the past year forced used-unit prices upward," Roach explained. He added:

"We've had to pay 10 to 15 percent more for used RVs we've obtained this year from private owners, car outlets and other sources. And because of the improved price situation, private owners and the car dealers are more likely to do their own selling.

"It's getting tougher all the time to fill out my used selection, and I spend an hour or so every morning checking out 'for-sale' sections in classified advertising and making phone calls," he said.

Roach said his dealership moved 98 new and used RVs in the first six months of 1981. This year, he added, the figure edged up to 115 units, with profits from reconditioned units doubling.

It took used units to haul the volume up at the Olathe (Kan.) Ford RV Center. Jim Frum, sales manager, said sales of new RVs were soft in the first half.

"It happened time after time on our lot," he said. "The couple arrived with the intention of buying a new RV, but when we got all the totals on paper, they had to back off and turn their attention to a used vehicle. Thankfully, we usually had something good to show them. Used minihomes and Class As priced under $20,000 were hot this season.

"But buyers are getting more critical every year," he added. "The used stuff had to look good or it got short shrift. We spend between $500 and $700 on reconditioning.

"We feel good about the business," Frum said. "This is a sturdy RV market. If you don't think people like RVs, get out on the freeways and make a check on the number you see moving around the area."

M. C. McEndree, Jayhawk Camper Sales, in suburban Shawnee, reported a 25 percent increase in sales the first six months of 1982, almost totally in new RVs.

"We've done a good job on new travel trailers because we've got a couple of quality lines with wide acceptance, and we've accumulated a repeat patronage that trades on about a three-or-four-year cycle," he said.

McEndree is a travel-trailer specialist; he's negative on motorized gear because he says he can turn an inventory of travel trailers two or three times faster than he could motor homes. He puts thumbs down on the folddowns, claiming the price tags — $5,000 and $7,000 — have shoved the prime prospects, the young family, out of the market.

• He glows over the number of custom trailers he's moved so far this season for use as classrooms and similar purposes. He engineered one sale of a trailer for use as a computer classroom in Saudi Arabia and another destined for South Africa.

As a whole, McEndree said,

Total sales sag to '82 low

August light-truck market weakens

Continued from Page 10

compared with only 3,444 a year ago. Only the Scrambler and Volkswagen were available at that time, however.

Eight-month sales of the domestics soared to 239,396 units, compared with 27,794 through August, 1981.

• Sales of the Japanese-built small pickups—Toyota, Datsun, Mazda, Isuzu, Chevrolet LUV, Ford Courier, Dodge Ram 50 and Plymouth Arrow — were down from a year ago for both the month and the January-August period.

During the month, 37,197 units were retailed, down 13.5 percent from the year-earlier 42,985. Through August, the total was 259,726, off 17 percent from last year's 313,024.

Although the imports' share of the compact-pickup was down drastically from a year ago, it still was slightly higher than the domestics.

In August, the imports accounted for 54.7 percent of the small-pickup sales, compared with 92.6 percent in the same period a year ago. For the eight months, they had 52 percent of the total, as against 91.8 percent in 1981.

The number of unsold trucks in retailers' hands at the start of September was up substantially over last year. On Sept. 1, there were 621,080 new vehicles in inventory, 29.3 percent higher than the year-ago 480,396.

Light trucks on hand totaled 571,927 units, an increase of 36.6 percent over last year's 418,571. There were only 11,037 mediums in stock, down 49.8 percent from the year-ago 21,973. Heavies were off 4.4 percent, from 39,852 in 1981 to 38,116.

• Big Three truck dealers retailed 141,160 trucks during the month, off 12.8 percent from last year's 161,970. The eight-month count was up 12.8 percent, however, from 1,251,484 units in 1981 to 1,411,922.

During the month, Ford dealers sold 54,362 trucks, down 22.6 percent from last year's 69,330. Through August, the total was 532,021, an increase of 3.9 percent over the year-ago 511,979.

No. 1 Chevrolet reported that its dealers retailed 54,346 units in August, down 13.6 percent from last year's 62,888. The eight-month total was 549,995 units, up 13.6 percent over the 484,287 sold through August, 1981.

Dodge and Plymouth dealers sold 18,454 light trucks during the month, a gain of 16.1 percent from the year-earlier 15,893. Through August, the count was up 28.2 percent, from 133,267 units in 1981 to 170,822.

GMC Truck & Coach reported a one-percent increase in sales during the month, from 13,859 units a year ago to 13,998. The eight-month total was 159,084 units, an increase of 30.4 percent over the year-earlier 121,951.

Sales of the four-wheel-drive Jeep vehicles were down for both August and the eight months. The August count was 4,368, off 17.3 percent from last year's 5,284. Through August, the total was 42,109, down 1.6 percent from the year-earlier 42,794.

• August sales of the Volkswagen compact pickup were down 65.5 percent, from 2,626 a year ago to only 905 units. The January-August total was 8,841, a decline of 61.5 percent from last year's 22,974.

Sales of Mercedes-Benz medium and light-heavy trucks in August were down 41.4 percent to 230 units, compared with 386 in 1981. The eight-month total of 1,778 units was off 28.8 percent from last year's 2,496 vehicles.

Toyota dealers retailed 17,399 units during the month, an increase of 3.5 percent over last year's 16,805. Through August, the total was down 2.6 percent to 93,902 units, compared with 96,397 in 1981.

In August, Datsun dealers sold 8,125 compact trucks, a decline of 16.3 percent from the year-ago 9,713. The eight total was off 23.7 percent, from 80,602 in 1981 to 61,484.

August and eight-month sales of the Mazda compacts were up dramatically over a year ago. During the month, dealers sold 4,532 units, 222.6 percent higher than the year-earlier 1,405. Through August, the count was 26,806, a year gain of 144.5 percent over last year's 10,964.

Isuzu dealers sold 1,271 small trucks during the month, down 15.7 percent over last year's 1,507. But the January-August count was up 117 percent, from 5,326 units a year ago to 11,556.

AUTOMOTIVE NEWS ADS PRODUCE EXCELLENT RESULTS

Recovery prognosis is guarded

Sales projection cut to 9.2 million for '83

Continued from Page 1

and it is likely the U. S. Federal Reserve Board will ease its monetary policy somewhat.

The forecast showed a slight easing in unemployment on an annualized basis in the fourth quarter for a 1982 total of 9.38 percent, with modest quarter by quarter improvement next year, although the unemployment rate for all of 1983 will likely be about 9.14 percent.

Gasoline prices are expected to remain fairly stable in real terms, and the index of production workers' wages is expected to increase only slightly over the next 18 months.

"On an annual basis, the inflation rate improves from 9.4 percent last year to 6.3 percent in 1982 and 5.9 percent in 1983," Eckstein said, as a result of "wage deceleration, lower world oil prices, bumper crops, a strong dollar and a resumption in labor productivity gains."

In the auto sector, import penetration, which has been running at record levels recently, is expected to abate as the recovery progresses, with total import new-car sales penetration now forecast at 27 percent for 1982 and less than 25 percent in 1983.

The finance rate for consumer auto loans is expected to show a third quarter drop to 16.49 percent from 17.20 in the second quarter and 16.4 percent last year, with a further drop to 15.78 percent in the fourth quarter.

However, auto loan rates are not expected to drop substantially next year, with the rate remaining above 15 percent until the fourth quarter of 1983.

The one true bright spot in the current ANWO continues to be the light-truck segment of the U. S. industry, with the forecast for next year upgraded in the current forecast to 2.9 million units in 1983 compared with the 2.27 million units forecast in June.

The improvement in the outlook is based on general economic factors in the "recovery" as well as product availability.

Larger cars are still expected to fare better than the smaller domestic offerings, with retail deliveries of full-size and intermediate-size cars expected to total 4.89 million this year, compared with 4.98 million last year.

However, of the total number of units removed from the 1982 forecast since the last AUTOMOTIVE NEWS WORLD OUTLOOK, 190,000 came from the fuel-efficient segment while 310,000 came from the larger-car segment. The forecast import total for 1982 was not reduced.

For 1983, the larger-car domestic segment forecast was dropped 220,000 units since June while the fuel-efficient segment lost 140,000 units. The import segment remained virtually unchanged.

RV business turns a profit in Kansas City

Continued from Page 22

it's been a good year and next year looks better. The trailer market is steadily making a comeback, he said.

At Shawnee Camper Sales, Shawnee, the folddown units are good sellers, according to Bill Palmer.

"They get young families RV-conscious and create activity on our lot," he said.

Fifth-wheel sales represent about a third of the total volume, while motorized RVs have been losing ground for two years. He said he sees that trend continuing for a year or two.

"The number of people who can afford to pay $30,000 or more for a motor home is dwindling," he explained.

• Sales of folddown units exploded this year at All Seasons Campers, Independence, Mo., and Lee Reid reported heavy business in models priced between $3,500 and $4,000.

"People are catching on to how well these moderately priced RVs fit into their budgets," she said, "You can pull them anywhere. Granted, the gross profit per sale doesn't exactly stagger you, but they're enabling us to keep a toehold in the business and put together a following that will be able to afford higher-priced RVs later on."

• Bert Collard, Bert Collard Chevrolet RV Center, Leavenworth, Kan., said business this year is "better than last." New RV sales, he added, are in a "holding pattern."

Sales of fifth-wheels and travel trailers in 20- and 23-foot lengths took a sharp jump in July. The 25- and 30-foot fifth-wheels, he said, are gaining converts among people taking extended vacation trips and those who live in their RVs for lengthy periods.

He calls his RV operation a "department store" that also includes van conversions, folddowns and pickup covers. Vans are a Collard RV standby. "They're geared to pull trailers and are bought frequently as tow vehicles," he said.

Chrysler deals move, open in St. Louis

ST. LOUIS.—Mid-City Chrysler-Plymouth is moving from its mid-city location to suburban Ellisville, and Jan Mazzuca, the principal owner, is switching to Dodge. The dealership will be Mazzuca Dodge.

A new Chrysler-Plymouth outlet will be opened in the mid-city area by Chris Blumeyer and Mike Sheahan, who own a Volkswagen dealership. Their new point will be called Quality Chrysler-Plymouth.

Shortages mark 51-day supply of import cars

Continued from Page 1

patterns in Sweden, both Volvo and Saab shipments have dwindled while sales held strong last month, resulting in depleted stocks.

Days-supply figures for other European lines Sept. 1 included: Volvo, 36; Saab, 51; Jaguar, 55; Peugeot, 89; Renault, 187; Fiat, 191, and DeLorean, 330.

Days-supply figures for new imported pickup trucks in inventory Sept. 1 were: Mazda, 46; Toyota, 55; Datsun, 159; Chrysler Corp./Mitsubishi, 173; Chevrolet LUV, 214; Isuzu, 235, and Ford Courier, 268.

Kennard sees Cadillac sales rising 13 pct. in '83 season

By Francis J. Gawronski
Service Editor

MILFORD, Mich.—A 13.4 percent increase in sales was forecast for Cadillac as the division's 1983 models were unveiled at a press preview here.

Speaking at the General Motors Proving Grounds, Edward C. Kennard, Cadillac general manager, said, "For the 1983 model year, we are forecasting in the area of 265,000 sales, a 13.4 percent increase over 1982.

"For the 1982 model year, which ends Sept. 30, we project total Cadillac sales of 233,700 units, a 3.2 percent increase over the 1981 model year," Kennard said. "Cadillac sales began a turnaround from depressed 1980 levels early in 1981 and have been upbeat ever since."

The 1983 projections and 1982-model-year results by nameplate are as follows:

Cimarron, 20,000 and 14,800; Eldorado, 60,000 and 54,600; Seville, 28,000 and 21,950, and de-Ville-Brougham-limousine, 157,000 and 142,350.

This is Kennard's last new-model introduction at Cadillac. He will retire Oct. 1, and will be succeeded by Robert D. Burger, currently Cadillac assistant general manager. Kennard has headed the division since 1974.

Kennard said that, with the introduction of the 1983 Cadillac models, "fuel injection will eject the carburetor from our lineup for the first time in our eight-decade history."

"Cadillac will become the only U. S.-based car maker that has fuel-injected engines across the line," he said.

"As far as we're concerned, this is another step in the Cadillac tradition of technological leadership and quality."

Kennard said Cadillac was "very encouraged" with Cimarron's past performance and is "excited about the future" of the car.

According to Cadillac surveys, Kennard said, 80 percent of Cimarron purchases represent new business for Cadillac—"a possible new record for a new car"; 63 percent of the sales have been conquests of other makes; 17 percent of the purchases have been additional cars sold in the household.

Also, only 20 percent of the Cimarron buyers traded in another Cadillac; 54 percent of the buyers never owned a Cadillac before, and 38 percent of the purchasers said they would have bought a foreign car if Cimarron had not been available.

"At Cadillac, we have great confidence in 1983 and the future, because we are making a commitment," Kennard told the newsmen. "A commitment in terms of products, plants, innovative thinking and quality. Our actions are designed to keep Cadillac the luxury car leader for the 36th consecutive year."

Carpentier, McPherson buy Riggs Oldsmobile

REDWOOD CITY, Calif. — Riggs Oldsmobile has been purchased by Jack Carpentier and John D. McPherson. The new dealership will be called Jack Carpentier Oldsmobile. Raymond Riggs is retiring after 20 years.

Carpentier will be president of the firm. He is a past president of the Northern California Motor Car Dealers Assn.

Pontiac makes the P-car official

After years of official secrecy surrounding development of the two-seat P-car, Pontiac has finally announced it will come on line in the fall of 1983 at the Fisher Body plant in Pontiac. Employes hang a new sign in anticipation of the change.

Strikes at Chrysler plants put lid on auto production

U. S. auto makers planned a 13.25-percent increase in production last week but the week's total was likely to be reduced by wildcat strikes at most Chrysler Corp. plants.

Auto makers slated production of 105,789 cars, up from the 93,405 built during the previous holiday-shortened week and a 1.50-percent increase from the 104,223 built during the comparable period last year.

Chrysler Corp. production will be lower than planned because of strikes which started at midweek at most plants after UAW negotiators and the company failed to reach agreement before the midnight Sept. 15 deadline. A tentative agreement was reached hours later, but workers had already left their jobs.

Ford Motor had four plants down last week. The San Jose, Lorain and Atlanta points were down for model changeover, while the Kansas City plant was closed to trim inventories.

General Motors Oklahoma City and Lakewood were down last week. Oklahoma City was to return to work today (Sept. 20), but Lakewood is closed indefinitely. The company said it would close its Norwood plant tomorrow (Sept. 21) until Oct. 7 for model changeover.

Overtime was scheduled last week at General Motors Linden and Lansing (both the full-size B/C and the mid-size G lines) plants.

Volkswagen of America said it has scheduled its 1983-model Job One production at Westmoreland for Oct. 4, though the plant will actually reopen Sept. 27 for "system fill."

Year-to-date, the makers have built 3,724,820 cars, down 22.68 percent from the 4,817,999 built during the comparable period in 1981.

Smith, Morken rise at Chrysler Financial

DETROIT. — Chrysler Financial Corp. has elected Clifford A. Smith vice president and controller and Sidney A. Morken as area vice president — Western U. S. area, Chrysler Credit Corp.

Smith, 39, has been assistant controller since 1979. He joined Chrysler Financial in 1966. Morken, 48, has been Western U. S. area operations manager since 1978. He joined Chrysler Credit in 1966.

Canadian output cut by downtime at Ford, AMC

Canada's car makers slated production of 12,206 cars last week, a 31.44-percent plunge from the previous week's 17,805 units. The decline was a result of downtime at Ford Motor and American Motors.

Last week's output was down 12.14 percent from the 13,894 assemblies of the year-ago week.

Ford's St. Thomas assembly point was down last week and will remain closed this week to trim car inventories. In addition, the company's Oakville plant was down last week because of a parts shortage.

American Motors closed its Brampton plant last week for tooling changes to add production of Spirit and SX4 models to the Concord sedans and wagons already built there. Brampton will reopen Sept. 27.

Volvo production last week was cut by an employe strike at the Halifax assembly plant. The striking workers returned to work after a two-day strike.

As of last week, Canadian makers had built 5.6 percent more cars for the year than during the comparable period last year. The year-to-date total was 634,103 cars, up from 600,452 during the comparable 1981 period.

Last week's Canadian truck production was 8,308 units, down 6.64 percent from the 8,899 built the previous week, but up 20.49 percent from the 6,895 assemblies of the comparable '81 week.

Year-to-date, the makers have assembled 369,671 trucks, down slightly from the 372,024 built during the equivalent period last year.

Truck production climbs; Ford boost a factor

Domestic truck production soared 30.65 percent last week, backed by a substantial increase by Ford Motor Co. and the return of most makers to full-week scheduling.

The manufacturers slated output of 42,078 vehicles last week, up from the 32,305 built during the previous holiday-shortened week, and a whopping 46.37-percent boost from the 28,746 built during the equivalent period last year.

Ford production, bolstered by daily overtime at the Lorain (vans) and Michigan Truck plants, skyrocketed 66.70 percent last week. In addition, Ford Louisville returned to work last week after one week of downtime.

International Harvester closed its plants last week and they remain down this week to balance inventories. Volkswagen of America said it has tentatively scheduled Job One of 1983-model production at its Westmoreland pickup truck line for the first week in December.

General Motors' Detroit (Chevrolet) and the heavy-duty line at Pontiac (GMC Truck & Coach) remained down last week for model changeover. They are scheduled to reopen today (Sept. 20).

The cumulative truck production total continues to run at a level well above last year's output. The year-to-date figure is 1,437,480 units, up 17.47 percent from the 1,223,685 built during the equivalent period last year.

SHOWROOM PROFITS

Dealers predict sales and profit uptrend in 1983

By Al Fleming
Industry Editor

As the automobile industry lurches into the 1983 model year, there is an aura of hope, even optimism, among the nation's new-car dealers.

An AUTOMOTIVE NEWS New-Car Dealer "Showroom Profits Survey" of dealership owners and managers, conducted last month, shows most (71 percent) expect an end to the prolonged decline in new-vehicle sales and even more (80 percent) see the prospect of climbing profits for their dealerships in 1983.

Moreover, the AUTOMOTIVE NEWS poll reveals that an increasingly greater contributor to showroom profits are after-the-car-sale extras — such as financing, insurance, warranties, accessories and rustproofing — that adds to dealer income above and beyond the vehicle sticker price.

Points out a Panama City, Fla., dealer who sold more than 800 new cars last year: "Financing, audio equipment, options, insurance, rustproofing, special paint, extended warranties — they account for a third of my total profits. The decline of new-car sales has necessitated emphasis on these sales."

His is not a voice in the wilderness. It's typical of comments received by AUTOMOTIVE NEWS.

• Dealers responding to the national survey represent every state, and range from relatively low-volume (23 percent sell fewer than 200 new cars a year) to very high-volume operators (5 percent sell more than 2,000).

Of survey participants, 62 percent sell only domestically made cars. 15 percent sell only imports and 23 percent handle both domestics and imports.

Results of the written questionnaire are highlighted by these key findings:

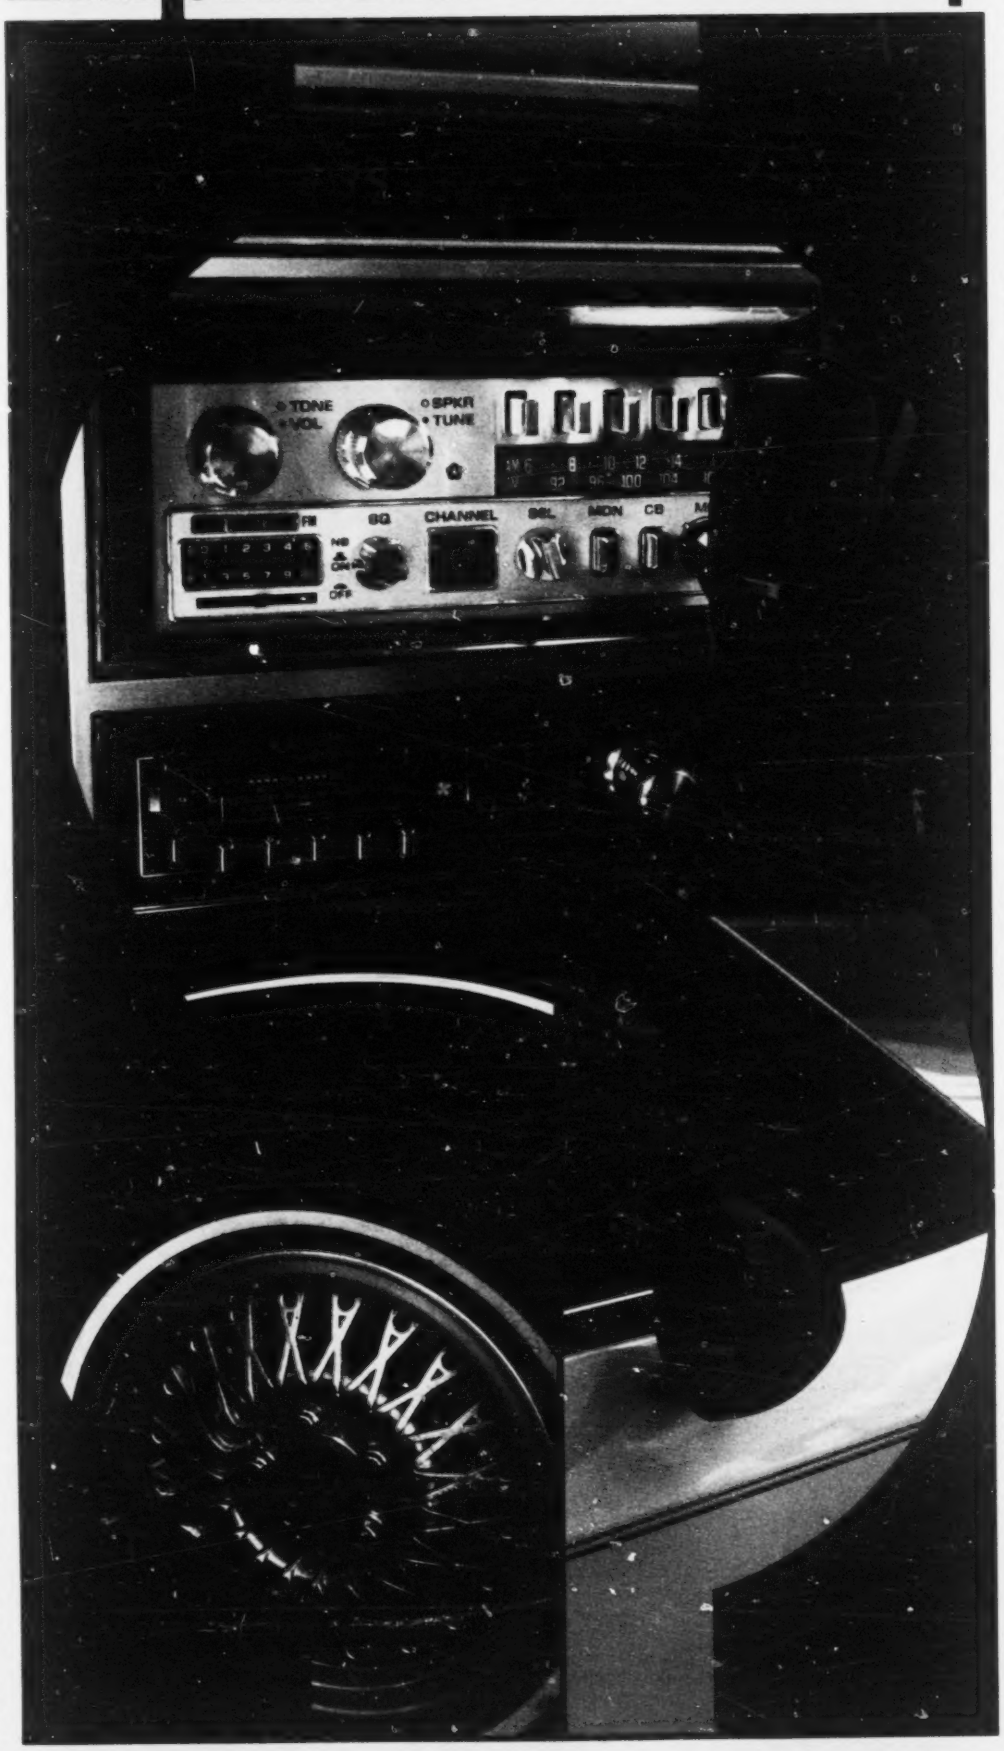
• Among the "extra" contributors to showroom profits, new-car financing is by far the most lucrative, followed in order by extended warranties, insurance, accessories and rustproofing as the top five.

• Half of today's dealers generate up to one-fifth of their profits through extras, and nearly four of every 10 dealers make 21 to 40 percent of their profit that way, with the percentage continuing to grow at nearly two out of three dealerships.

• Just more than half the dealers say financing problems have cost them new-car or add-on sales in the past year.

• Most dealers (55 percent) say women car-buyers are as good prospects for add-on sales as men, but one out of three believes men can be sold extras more easily.

Emphasis on Extra$



• Nearly 60 percent of dealers report their profits in 1982 will top those of 1981, and 80 percent predict profits in '83 will surpass '82.

• Better than 70 percent of dealers think new-car sales (domestics and imports combined) in 1983 will top 1982.

The message comes through clearly in the survey that dealers are benefiting from greater effort in arranging vehicle-financing for customers.

On a scale of one (most important) to 12 (least important), financing is first by far, with a 2.6 average among respondents, as the main contributor to dealership black ink in showroom sales, aside from the new car itself. Extended warranties, insurance, accessories and rustproofing are next highest.

Then come service programs, factory optional equipment, leasing, audio equipment, replacement items, coatings and finishes (special paint jobs) and sealants.

An import dealer in Albany, N.Y., observes that new-car sales, rustproofing, audio equipment, accessories and factory-offered options comprise 93 percent of his profits, with finance and insurance making up the other seven percent.

Says an import seller in Midlothian, Ill.: "Sales of cars and overall grosses are down, so whatever we get in extras is a bigger help than ever before." His top extra is rustproofing.

A Volkswagen dealer in Iron Mountain, Mich., cites a reason for rising "extra" profitability that is seconded by many retailers: "Better marketing effort on behalf of dealership personnel." His add-on leader is rustproofing, not surprising since he's located in a salt-strewn northern climate.

That observation is shared by a dealer in Dubuque, Ia., who declares, "Rustproofing is No. 1 because of high salt-usage and because people are keeping autos longer."

By and large, however, comments written to AUTOMOTIVE NEWS by survey respondents suggest that, more than anything, dealers are stirring up their sales troops:

"Ive demanded increased effort on the part of the sales force," says the president of a dealership in Shelbina, Mo., where financing and insurance are one-two in his after-sale profit making.

A South Dakota dealer, listing financing, leasing and extended warranties one-two-three on his best seller list, says his increase in extra sales is due to "management attitude — we're selling fewer cars but are striving for more gross by selling extras."

In Taos, N.M., a dealer writes that he is discounting new cars to remain competitive, and has "tried to make it up on add-ons by working harder."

Those dealers are part of the

New-Car Dealer Automotive News Showroom Profits Survey

Question 1. How many new vehicles did your dealership sell in calendar year 1981?

1- 199—23% of dealers responding
200- 399—33% of dealers responding
400- 799—21% of dealers responding
800-1,299—14% of dealers responding
1,300-1,999— 4% of dealers responding
Over 2,000— 5% of dealers responding

Question 2. What type of vehicles do you sell—domestic, import or both?

Domestic —62% of dealers responding
Import —15% of dealers responding
Both —23% of dealers responding

Question 3. Besides vehicles, what are items that contribute to your dealership profits—in order of importance from 1 (most important) to 12 (least important)?

1. Financing vehicles —2.6 average
2. Extended warranties —4.7 average
3. Insurance —4.9 average
4. Accessories —5.1 average
5. Rustproofing —5.4 average
6. Service programs —6.5 average
7. Factory options —6.6 average
8. Leasing —6.7 average
9. Audio equipment —7.1 average
10. Replacement items —7.8 average
11. Coatings/finishes —8.3 average
12. Sealants —8.9 average

Question 4. What percentage of your total showroom profits (including vehicle sales) do the extras above (in Question 3) provide?

0 to 20%—50% of dealers responding
21 to 40%—38% of dealers responding
41 to 60%— 9% of dealers responding
61 to 80%— 1% of dealers responding
81 to 100%— 2% of dealers responding

Question 5. Has the above percentage (in Question 4) increased, decreased or stayed the same the past five years?

Increased —62% of dealers responding
Decreased —16% of dealers responding
Stayed the same —22% of dealers responding

Question 6. Have financing difficulties lost you many new-vehicle sales or limited your add-on sales to any great extent in the past year?

Yes —52% of dealers responding
No —48% of dealers responding

Question 7. Are women or men car-buyers better prospects for add-on sales?

Men —33% of dealers responding
Women —12% of dealers responding
No Difference —55% of dealers responding

Question 8. Will profits at your dealership increase in 1982 over 1981?

Yes —59% of dealers responding
No —28% of dealers responding
Stay the same —13% of dealers responding

Question 9. Will profits at your dealership increase in 1983 over 1982?

Yes —80% of dealers responding
No — 6% of dealers responding
Stay the same —14% of dealers responding

Question 10. Will sales of new cars in the U.S. increase in 1983 over 1982?

Yes —71% of dealers responding
No —14% of dealers responding
Stay the same —15% of dealers responding

The innovations keep on coming, and options lists keep growing

By Roger Rowand
Engineering Editor

Sometimes it seems car makers have gone as far as possible with equipment options. Each year's new offerings seem unbeatable in innovation and variety.

But sure enough, another model rolls around and they've done it again. For the coming year the factories have dreamed up everything from rearview mirrors that automatically dim when hit with bright lights to underseat storage trays.

Here's a roundup of 1983 model options, company by company:

• Ford Motor Co. optional equipment changes and additions are not overshadowed by the many major car-line redesigns.

Those include downsized Ford LTD and Mercury Marquis, new Mustang convertible, aerodynamic Ford Thunderbird and Mercury Cougar and come next spring, compact Ford Tempo and Mercury Topaz, replacements for Fairmont and Zephyr.

New options for Escort/Lynx include a remote-control convex right-hand mirror, remote-release fuel filler door and P175/80R 13 tires.

A TRX suspension level is available A TR styled steel and aluminum wheels will be available with Michelin TRX tires and a handling or TR performance suspension.

Another new Lynx option is a sport seat with mesh headrest.

Under the hood options for Escort/Lynx this year include a 1.6 liter high-output engine including an electronic fuel injection version.

EXP/LN7 have two new engine options—a 1.6-liter multiple port fuel-injected version and 1.6-liter high-output type.

A new 13-gallon fuel tank extends EXP/LN7's driving range to nearly 600 miles.

Other new options are the special automatic-dimming mirror, fuel-filler door and special tires offered on Escort/Lynx.

Mustang for 1983 offers what Ford calls the modern 3.8-liter V-6 engine for the first time. It's for the customer who likes speed and rapid acceleration.

A four-barrel carburetor is added to the big optional engine for Mustang—a 5.0-liter V-8. It brings with it a one-second reduction in the car's zero to 60-MPH time, Ford says.

In mid-year, a newly designed 2.3-liter overhead cam turbo engine will become available with multiport fuel-injection and five-speed manual transmission.

A shift-indicator light is an electronically controlled light on Fords with manual transmissions. It tells driver when to shift to higher gear for reduced fuel consumption. In some applications, an electronic "brain" also shuts off fuel during engine deceleration for added fuel economy.

An optional electronic digital clock with stopwatch function and easier operation is available on several Ford and Lincoln-Mercury lines.

Thunderbird options include an inside rearview mirror that automatically dims when it picks up overtaking headlights, pivoting front-vent windows, a keyless entry system, articulated seats, clearcoat metallic paints, a Tripminder computer and, later in the '83 model year, an electronic-voice alert (talking car) system.

The automatic day/night mirror changes from day to night position automatically when bright lights are aimed at the car's rear window, then returns to day position when bright light is removed. It is available on car lines from Thunderbird and Cougar to Lincoln and Mark VI.

Another unusual option for Thunderbird/Cougar in 1983 is an electronic instrument cluster with an automatic dimming feature.

An electronic eye measures the amount of light in the passenger compartment through a clear window beside the speedometer display and maintains brightness of the readouts at a pleasing level under conditions of bright sunlight, overcast skies and darkness.

Ford's Tripminder computer is available on Thunderbird, Cougar, LTD and Marquis. The compact data center displays time, date, average speed, distance and fuel-related information. The unit will continue to

Dealers predict upturn in 1983

Continued from Page E-1

62 percent who report extras accounting for a bigger bite of their profits these days. Among comments by the 38 percent who say extra sales are just holding their own or decreasing are these:

Philadelphia, Pa., dealer: "Add-ons are less important to customers than price and quality. Ability to handle monthly payment is the main incentive to buy."

Phoenix, Ariz., dealer: "The proliferation of factory-installed equipment is a two-fold problem. It minimizes our (dealer) selling of options and raises the cost of cars and monthly finance charges."

Brockton, Mass., dealer: "Because of high car prices, people want to keep (monthly) payments as low as possible . . . they can't afford as many extras any longer."

Has difficulty in getting financing hampered sales of new cars or extras at dealerships? Of those surveyed, 52 percent say yes, 48 percent say no, nearly a toss-up.

A Canton, O., dealer who feels the current credit situation causes as much grief as anything, says, "The bank wants to finance less than the dealer invoice, so if a customer comes in with a minimum down-payment, we can't sell him anything over that."

Lafayette, Ind., dealer says, "It's even difficult to handle what I consider financable people. High interest rates elevate payments to the point where add-ons become prohibitive."

It's often reported that women are responsible for an ever-increasing number of new-car purchases because of their expanding role as income providers. But are women or men car-buyers better prospects for add-on sales?

There is no difference, say 55 percent of those surveyed. But 33 percent of the respondents say men are better prospects, and only 12 percent list women.

"Women won't buy extras," says a dealer in Amarillo, Tex. "They cannot afford the extra burden."

"They (women) are 'payment shoppers and border-line customers,' " says a dealer in Lexington, Ky.

A Spokane Wash., dealer says, however, that "men and women customers are passing up options to keep payments down. The minimum deposit of customers often is limited to financing no more than the base invoice."

According to NADA, average profit level before tax for franchised new-car dealers was 1.2 percent of total dealership sales in 1981. With the exception of 1980, it was the worst level of before-tax profits in 20 years.

Dealers figure to do better in 1982 and better still in 1983, according to the Automotive News survey. Of those polled, 59 percent say their dealership profits will climb this year over last year, and 80 percent say 1983 will be better than 1982.

There are a number of reasons for the optimism, including one from a happy dealer in Denver, Colo., who underlines his comment: "We finally got an import franchise in addition to our domestic line, which hasn't been very good."

Others cite declining interest rates, fewer and smaller price hikes, decreased competition (due to dealership casualties in their areas), greater co-op advertising support from auto makers and a general upswing in the U. S. economy as reasons for potentially improved profitability in the coming year.

A dealer in Rhinelander, Wis., says "dimunition of inflation" will help spur sales and profits, hence his "optimism is returning."

In Sacramento, Calif., an import dealer who sells "over 1,000 cars" a year says, "Just get high interest rates down and finance application approvals up, and I'll show you a record year — you can have the aftermarket sales."

"Customers are ready," declares a dealer in Bangor, Me., who is an advocate of the pent-up demand theory.

Two dealers, however, seem to typify their fellow auto retailers in contemplating the question of whether new-car sales in the nation will finally take an upturn in 1983 after four years of decline.

"God, I hope so," says a dealer in Hammond, Ind. "I hope so, I hope so, I hope so."

The second dealer, in Grand Forks, N. D., exclaims, "How in the hell do I know if car sales will increase next year. Do you know?"

Our answer is no, but, God, we hope so, we hope so, we hope so.

Service contract business buoyed by growing public acceptance

By Marc Stern
Staff Correspondent

There's an interesting phenomenon happening in the service contract side of the automotive business. Even though car sales are down, extended service contract sales are holding their own or even increasing a bit.

The reason, according to spokesmen for both factory-supported and independent companies involved in this growing industry, is public acceptance. "It's gaining in popularity because the public understands it covers things not covered by a factory warranty," says Al Thomas, manager of service legislation and Continuous Protection Plan activities for General Motors. "Our penetration is up over 1981 and our sales are also over 1981 and last year was a record for sale. In fact, this past May was one of our biggest months," he noted.

Perhaps the key word here is penetration. More and more, car buyers see an extended service plan as a type of "major medical insurance" for their autos. Thus, dealers are writing more extended service contracts.

Penetration is up at Ford, too. John Dingens, manager of the Extended Service Plan program for Ford Motor Co.'s Parts and Service Division, notes its penetration rate is up over 1981. In fact, he says, "the whole industry is doing well."

Perhaps the biggest obstacle the service contract industry has had to overcome in the last year is the increasing length of factory-backed warranties. Ford's Extended Service Plan has felt the impact of Ford Care, the nearly complete two-year or 24-month warranty offered by the automaker. And, the industry as a whole has felt some impact from the Chrysler Corp.-backed 5/50 extended coverage plan.

However, it seems these moves have been countered by hard work on the part of extended service contract suppliers, whether independent—General Warranty, American or Minnihoma-ADESCO—or factory-sponsored. Because of this aggressive activity, they are gaining ground among buyers of new cars.

The giants of the industry are competing for a lucrative potential market. According to Jerry Farrar, president and chief executive officer of General Warranty Corp., headquartered in Marina del Rey, Calif., the potential market this year is 2.4 million units of which the independents should get a 41 percent share while the factories reap 59 percent.

Putting this into perspective, they are all competing for a near-$1 billion market this year (based on an average sale of $400 per contract).

This situation is quite a change from nearly 10 years ago when there was no service contract industry. The industry was created by the arrival of American Warranty in 1974, and the market remained largely in the hands of the independent industry for the next six years when the factories began to enter it.

That it's a growth market is seen from General Warranty's growth curve. According to Farrar, the company is growing at a 45 percent monthly rate of increase in the number of dealers climbing onto this year-and-a-half-old firm's bandwagon. It now has 1,500 dealers in 44 states and is awaiting word from New York state as to whether it will be certified for business there. It also did $25 million in business last year and was able to turn its first small profit in May of this year, well ahead of schedule. Such is the potential of the market.

American, for its part, is also on a growth binge with its income also reported increasing. So is GM's.

Such expansion, despite lagging car sales, points to increasing awareness the public has of its investment in cars, according to extended service contract spokesmen. It also points out that the public is keeping its cars much longer, is looking for

Showroom in the living room

TRAVERSE CITY, Mich.—Edward H. Mertz, chief engineer at Buick Division, likes to cogitate factors other than nuts and bolts as he looks ahead. Some of his views on marketing are stimulating, exciting. They were presented at a University of Michigan symposium here.

"Technology will revolutionize how we market our products in the future, through rapid communication of data," he says.

"For example, at Buick, we have a pilot system to explore the possibilities of marketing through technology.

"We have several dealerships on line to a computer at Buick. Through the use of a full color console, a salesman and customer can call up product specifications and information—including comparisons with competitive products.

"But this is just the beginning," he adds.

"In the future, you will be able to shop, and order or buy a new car from dealer stock through your home computer. Holographic technology could even provide the customer with a three-dimensional view of the product.

"I don't know why ordering a new car shouldn't be as easy as ordering a pizza. After all, both are made to order from basic items on the shelf. And, the car could still be warm when you got it home," he said.

Vehicle Service Contract Industry

Total VSC Industry Market Share	Estimated Annual Units	% of Total Market
T. Kearney estimate of 1982 total market including auto makers (GM, Ford, Chrysler)	2,400,000	100%

General Warranty Corp. was selected recently to administer vehicle service contracts for Avis Licensee Assn., the first independent service contract company to be endorsed by a car rental licensee organization. Pictured following the announcement of the selection are, from left: William C. McPike, executive director, Avis Licensee Assn.; Orval W. Story, chairman, Avis Licensee Assn., and Jerry R. Farrar, president, General Warranty.

Goodbye buzzers, blinking lights

The "talking car of the future" is here today in Ford Motor Co. and Chrysler Corp. showrooms.

For 1983 Ford Thunderbird and Mercury Cougar offer an optional Voice Alert "talking car" driver information and warning system. The option consists of a single electronic module capable of producing preprogrammed warning messages in synthesized speech which, although having an impersonal tone, does have a pleasant human quality.

Ford's Voice Alert delivers the following messages: "The door is ajar" (when the key is in the ignition and a door is partially open); "The key is in the ignition" (when the key is in the ignition and the door is open); "The headlights are on" (when the headlights are on and door is open).

In addition, Voice Alert provides the same warning chime sound as the chime module which it replaces.

Chrysler Corp. for 1983 offers an Electronic Voice Alert (EVA) system in the instrument panel which speaks 11 messages and politely says, "Thank you."

Through a speaker in the radio system, the voice advises the driver about 11 separate mechanical or safety functions. The computer-programmed voice acts on information received from sensors which monitor: Key left in ignition, headlamps left on, door ajar, seat belts unfastened, low oil pressure, overheating engine, electrical system low voltage, parking brake on, washer fluid low and low fuel condition.

A typical message would be: "Your washer fluid is low."

The voice also advises that "all monitored systems are functioning" if no problems are indicated after start-up.

"The EVA is the latest word in convenience features in the automobile," says Richard D. Rossio, chief engineer—body electrical.

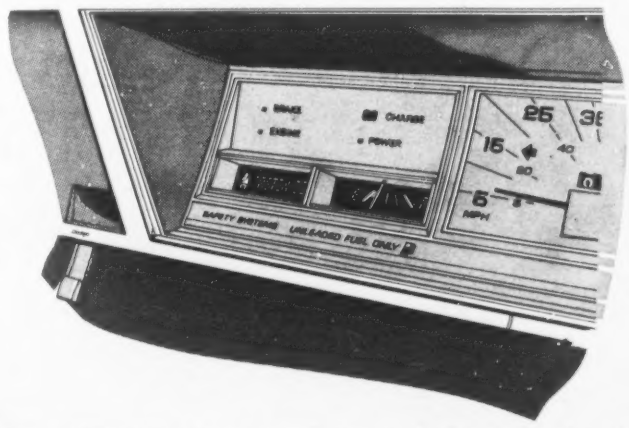
The new feature is standard equipment on 1983 Dodge 600 ES and 400 premium models, and optional on select other models.

The EVA is produced by Chrysler's Huntsville, Ala., electronics assembly plant and was developed in cooperation with Texas Instruments.

The voice delivering the message sounds like a male, but actually is produced by a computer voice synthesizer. "Unlike earlier computerized voice systems, the EVA voice sounds very human," says Jack McDowell, Huntsville project manager. "We began with a professional announcer's voice and recorded and digitized the sounds into an extremely high data rate."

The voice alert controls are contained in an eight-ounce computer center located behind the glove compartment. Measuring four by six by one inches, it includes the computer to survey input sensors and choose the correct message, and the voice synthesizer.

The voice is available in three languages: English (in the U. S.), French or Spanish.



The Electronic Voice Alert Chrysler Corp. option for '83 "tells" the driver when various functions are not operating normally. The EVA lowers the radio volume, sounds a tone and delivers the message in a natural-sounding human voice.

Contracts

Continued from Page E-8

some form of financial protection and is coming to trust the service contract as a low-cost way of protecting a vehicle.

It's also a way the consumer can protect himself against inflation, Thomas believes. For instance, he notes, where else can the consumer have peace of mind for the price of a point-of-sale service contract? Against an investment of about $400 more on the sales contract, the consumer will have extra protection for only a $25 deductible.

"It protects him against the $1,500 repair, even if the car is under warranty," he says.

This type of plan, too, wraps around the normal new-car warranty. It will cover areas that aren't related to manufacturing defects.

"Customer satisfaction is our main aim. We want to bring him back in (to a dealership)," Thomas notes.

Or as Dingens put it, "We try to make our plan as complete as possible by giving the customer more bounce for his buck. It ties him to the dealership and brings him back. We're concerned about a good relationship."

These comments show the service contract industry seems to be stabilizing and maturing following its earlier ups and downs. The industry at one time was characterized by rapid-growth firms and notable subsequent failures. One collapse not only claimed the service contract agent, but also its insurer.

However, the trend seems to have changed, according to General's Farrar. "Much of what happened has changed with the 1981-1982 stabilization of the market. The marginal dealers are out of business," leaving only solidly established businesses, he says.

However, the failures have left their mark. The industry has had to fight attempts in as many as 17 states to prevent legislation tightly controlling it. In those states, legislation tries to equate them with insurance agents. In fact, General picked up the $17.5 million in liabilities from a company which failed. It did so, Farrar says, to help the industry maintain a good reputation.

Dealers, quite rightly concerned with the potential for failure, also have turned to factory-offered programs, which has cut the market share of the independent service contract industry.

One trend that hasn't helped the independent side of the service contract industry is a level of tension and intramural problems between two major firms.

According to Wendell Miller, past president of the National Auto Dealers Assn. and a Binghampton, N. Y. and Florida dealer, "There's no question any type of conflict hurts the general service contract industry as a whole. It can't do it any good whenever dollars are diverted to intramural problems. Then it hurts the industry, especially with rising factory programs. Service contracts are growing and, even though the independents were in it first, as the manufacturers have recognized both the dollar and consumer benefits, they entered the field, and so the independents are going to get more competition. For the industry to grow properly, it must devote time and money to benefiting the consumer. Any diversion has a negative effect."

Miller alludes to a series of legal actions involving American Warranty, with which Farrar was once associated, and General, which Farrar now heads. He also refers to the fact that the independent side of the business no longer has market dominance.

This is something Farrar also recognizes. As he notes, independent service contract providers now account for 41 percent of the market with 59 percent provided by the factories. He hopes independents will claim 45 percent by the end of the year, and he believes independents may be able to hold 60 percent of the market in a few years.

To do this, "the program has to be done properly, it has to gain the confidence and provide better profit for dealers. We use Imperial Casualty, a subsidiary of Standard Oil of Indiana, as our insurer," Farrar says.

A properly administered program, he maintains, is one where "the dealer feels he gets a better deal and where the consumer feels he gets a better deal." If a company in the contract business can't provide confidence and if it's first concern isn't cars, then "it should be in another business," Farrar emphasizes.

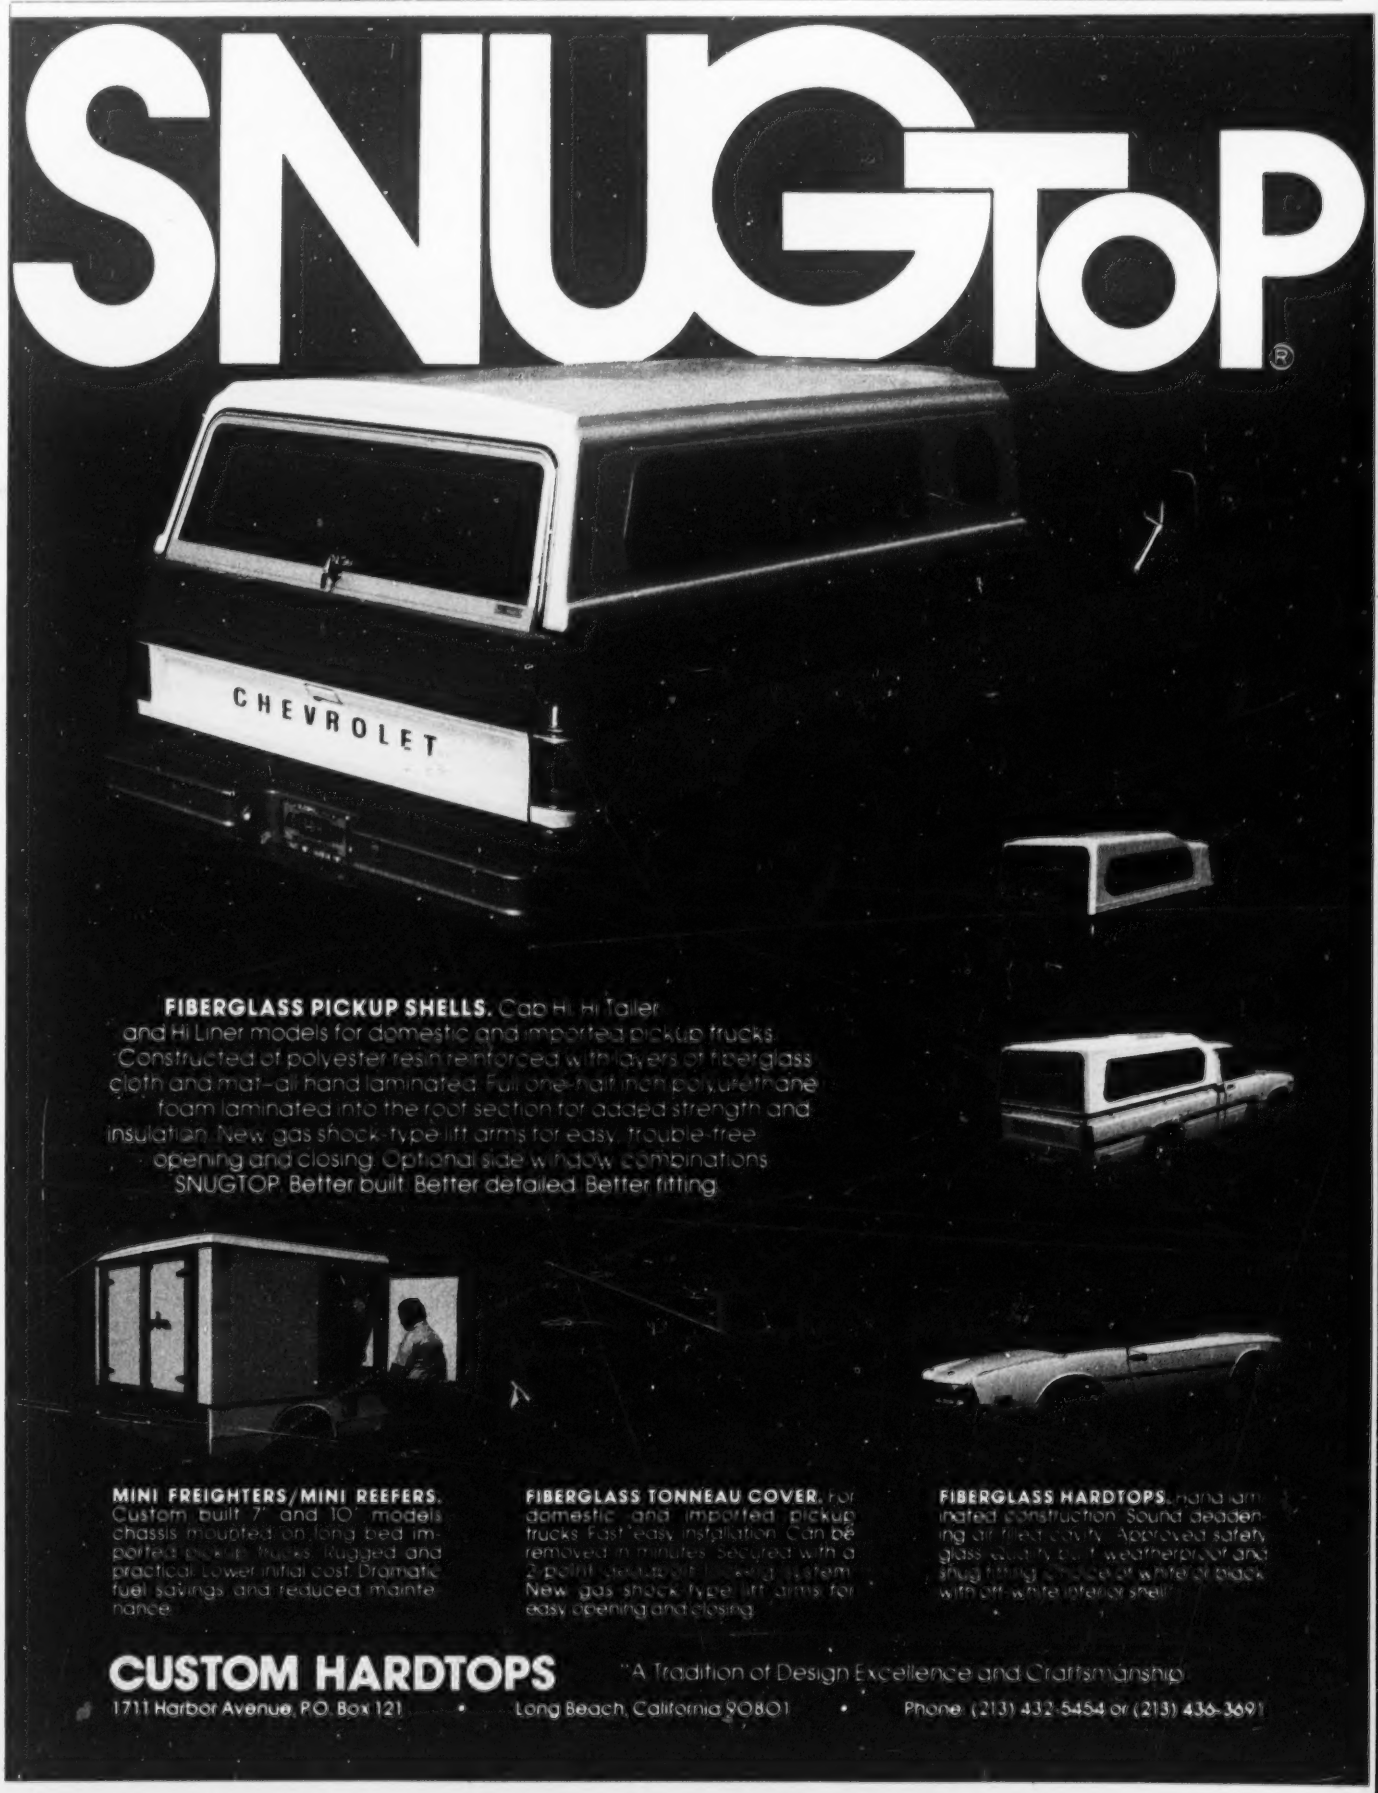
Apparently the major companies are doing a good job. They both inspire confidence in Miller. "I hear positive things about both companies and I wouldn't hesitate to use General or American," he says.

The industry is very viable, he notes, because it provides a consumer service. "The obvious question is to what percentage of the total industry the independents will represent. Ultimately, no one knows what the final market shakeout will look like, he says, but he speculates it may be 50-50.

With all this, a dealer has extra options. However, they are options the dealer must take advantage of. The reason, Miller notes, is that "with decreasing gross profit in cars, after-sale is a necessity. It means you can keep a viable gross profit."

The gross has been further reduced by reduced financial commission opportunities because banks are paying less and less "After-sale is a shining beacon to replace lost grosses," he says.

All in all, however, the service contract market is alive, well, competitive and maturing. In fact, one move General made to further inspire dealer and consumer confidence is to join the Better Business Bureau's consumer mediation and arbitration plan. This way not only the consumer, but the dealer will benefit should a complaint arise.



SNUGTOP®
CHEVROLET
FIBERGLASS PICKUP SHELLS. Cab Hi, Hi Taller and Hi Liner models for domestic and imported pickup trucks. Constructed of polyester resin reinforced with layers of fiberglass cloth and mat—all hand laminated. Full one-half inch polyurethane foam laminated into the roof section for added strength and insulation. New gas shock-type lift arms for easy, trouble-free opening and closing. Ad money tied up on weekly basis during walkout

Auto stake in NFL strike is $100 million

By Joseph Bohn
Marketing Editor

The National Football League strike won't hurt most '83 model car launches initially — but will take its toll if it drags on.

"The longer the strike progresses, the more Detroit will be hurt," observed Eugene J. McCarthy, senior vice president and director - media / marketing services for J. Walter Thompson, Dearborn. JWT handles Ford Division advertising.

The agency estimated that auto firms, including imports, have close to $100 million worth of ad money wrapped up in NFL games, including playoffs and the Super Bowl. All domestic auto makers are involved.

Several offsetting factors help cushion the initial impact of the strike which knocks out games on all three networks: (1) This fall isn't a normal kind of announcement quarter; (2) heavy football viewing doesn't really begin until later in the season; (3) most divisions have alternate sports and prime-time TV.

Generally, it isn't so much the loss of total viewership that bothers car marketers as the loss of upscale male viewers. NFL TV attracts 60 percent male viewers.

All the divisions were studying alternatives at press time, but their big problem is they are committed to each game until it is canceled.

Without knowing when the strike will end, "we can't commit to other TV properties," noted Frank Cadicamo, assistant national merchandising director for Cadillac. "There is no Plan B.

"Our monies are still tied up. It's a matter of having to wait on a weekly basis to go into alternate media . . . My funds are released as each game is missed," Cadicamo said.

"You don't know until the last minute" whether a game's been canceled, added McCarthy. "That puts you in a gambling position. If you go out and buy an alternate property and the game comes off, it's a double dip in the budget."

NBC, ABC and CBS each offered different alternatives in their NFL time slots. ABC, for example, with $32 million worth of Monday Night Football commitments from Buick, Datsun and Chevrolet truck, is planning prime-time movies in that time period.

NBC is offering Canadian football. Last Sunday, it scheduled a Canadian game.

CBS is planning to offer reruns of last year's games, beginning with Super Bowl XVI, and is also considering moving NCAA football into the Sunday spot.

Generally, the alternatve programming isn't expected to pull the same kind of audiences — but networks are giving discounts accordingly, noted Philip Matz, media director, Kenyon & Eckhardt, Detroit. K&E is Chrysler's agency.

"Right now, nobody's said they don't want to stay in" the alternative programming, added Burt Zelden, vice president of sports sales for NBC, New York.

Chrysler, for example, plan-

Did rail tieup reveal flaw in 'just-in-time'?

By Roger Rowand

DETROIT. — The impact of last week's brief railroad strike highballed through the auto industry and forced General Motors to close some plants almost immediately.

Congress ended the nearly nationwide walkout by railway engineers after four days by forcing them to accept contract terms recommended by an emergency fact-finding board and agreed to earlier by other rail unions.

GM began shutting down as early as Monday morning. It shut its St. Louis truck assembly plant then. That facility produces Chevrolet and GMC pickups.

By Wednesday morning, four GM Assembly Division plants were on half days.

Those were the Janesville (Wis.) facility which produces Chevrolet Cavalier, Cadillac Cimarron and pickups; Leeds, Mo., which produces Buick Skylark and Oldsmobile Firenza; Lordstown, O., producing Cavalier and Pontiac 2000—the van line there was not affected, and Wilmington, Del., which produces Chevrolet Chevette and Pontiac 1000. The Wilmington plant went to a two-shift operation of four hours each.

On the strike's third day, Chrysler Corp. Chairman Lee A. Iacocca fired off a wire to the White House urging quick action toward ending the walkout. He said if it continued, Chrysler would be forced to start curtailing operations before the week was out.

Ford Motor Co. President Donald E. Petersen told AUTOMOTIVE NEWS early in the week that his company could get through one week of strike without serious effect. "If it goes into a second week, it will be a different story," he said.

At American Motors, a spokesman said the strike posed no immediate problems. The company monitored the situation closely, however, because about 70 percent of its finished goods move by rail. Most incoming materials arrive at AMC plants by truck.

The immediateness of GM plant shutdowns startled some in the industry. Others said

Dealer discount cut on some subcompacts

Ford posts $39 price hike for '83

By John K. Teahen Jr.
Managing Editor

Ford Motor Co. proudly presented its 1983 prices last week. The company announced an increase of $39, or 0.4 percent, on the average equipped car over comparably equipped 1982 models.

Base stickers went down an average of $26, Ford said, but options rose $65, resulting in the overall hike of $39.

It was a far cry from last year, when Ford posted an increase of $430, or 4.8 percent, at introduction time.

Ford said it reduced prices on 27 models for 1983 (from comparably equipped '82s) and raised 37 other models. The price of an average-equipped Ford Motor auto now is $10,300. The Ford increase of $39 does not include Thunderbird and Cougar, which will be priced later.

Ford truck prices will be up an average of 2 percent for 1983.

Destination charges on cars are unchanged.

Ford's action followed an increase of $212, or 1.9 percent, by General Motors. Like Ford, GM cut prices on some models. GM's average hike is higher because it has more big cars, which bore the brunt of its '83 price boost.

Price cuts at Ford involved the subcompact models that have accounted for 38 percent of its sales so far this year — Ford Escort and EXP and Mercury Lynx and LN7. Ford said the cuts range up to $400 on Escort/Lynx and $300 to $700 on EXP/LN7.

Ford also said the Lincoln Continental is down about $2,000 on a comparably equipped basis. The sticker is down only a fraction of that; the bulk of it is in added equipment and a switch in model designation.

• A reduction in the dealer discount on some models played a part in the small-car price cut. Ford Motor has dropped its base Escort and Lynx models, which had a dealer discount of 12 percent. The Escort L and Lynx L now occupy the bottom rung,

Convertible Specialist, Inc., plans to do 150 such conversions per year.

IH ups loss estimate, but denies bankruptcy

CHICAGO. — International Harvester has denied bankruptcy rumors which sprang up after the company's announcement that its loss in the fiscal year ending Oct. 31 will be greater than forecast earlier.

Harvester, less than two months ago, projected a loss of $900 million to $1 billion. Its revised forecast puts the deficit at $1.5 billion to $1.6 billion, leading to speculation that the increased loss could push the firm into bankruptcy.

"Bankruptcy is not under consideration," said William B. Colwell, Harvester spokesman.

The revised loss forecast, the company said, was based on two facts.

First, it explained, the charge against earnings from the recent sale of its construction-equipment business to Dresser Industries could be about $200 million larger than anticipated.

Second, conversion of debt to equity by Harvester lenders will produce only a gain of $40 million rather than the $300 to $400 million which the company had expected.

• Harvester lenders have agreed to reduce the firm's interest payments on its refinancing plan and to convert $350 million of debt to equity, but only if the company's suppliers and other creditors agree to make concessions, too.

The company is asking suppliers for concessions valued at $50 million by extending payment terms, reducing prices and stocking inventory for the firm.

Also, Harvester wants debenture owners to relinquish half the principal value of their holdings, and it will ask dealers, suppliers, employes and customers to buy Harvester preference shares.

There has been some concern that Harvester's forecast of higher than anticipated losses for the fiscal year could wipe out its shareholders' equity.

Analysts noted that the equity amounted to about $1.5 billion last Oct. 31 and about $856 million on July 31.

If the equity were to drop below zero, they say, it could force the company to seek protection from its creditors under the provisions of Chapter 11 of the Federal Bankruptcy Act.

Opens a 'Pandora's box,' association claims

GMAC blasted on lease rate ads

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—A strongly worded letter protesting General Motors Acceptance Corp.'s advertising of 12.5 percent financing on dealer-provided closed-end leases has been sent to GMAC by Warren Fox, president of the 260-member Western Vehicle Leasing Assn.

WVLA's objection to the GMAC program is that lease finance rate advertising opens a Pandora's box for the leasing industry.

The association feels the move could require rate disclosure by all lessors and may result in the recharacterization of leases as financing as well as providing fuel for IRS audits.

"Mandatory rate disclosure has been a concept which the industry has gone to great pains to persuade Congress is inappropriate, and it was only the efforts of various parties in 1976 which convinced that body that such a requirement was not warranted," Fox wrote in a letter addressed to Gordon Samardich, GMAC's executive vice president, planning.

"Needless to say," Fox continued, "given that background, any advertising campaign which indicates a readily determinable rate to be applicable to a lease would cause concern as to future legal rate disclosure requirements.

"However, the problem is rendered even more pressing with reference to the present deliberations of the Federal Reserve Board as to appropriate revisions of the Consumer Leasing Act."

Asked to comment on the letter, GMAC's Samardich said, "I don't think we have a comment. We're studying the elements of their letter and will consider their concerns."

• Fox noted that there has been a strong sentiment among several key members of the board's staff to require disclosure and that now GMAC's move "has caused these persons' conviction that rate disclosure is appropriate to harden."

Further, Fox feels such action by GMAC in light of industry efforts to battle disclosure undermine the credibility of leasing associations with both the Federal Reserve Board and the Federal Trade Commission.

WVLA sees two results of the GMAC program. The first is that any draft of Consumer Leasing Act revisions is certain to contain rate disclosure requirements and, second, WVLA and other groups fighting rate disclosures will use the GMAC program as an example of why rate disclosures are not a good idea.

"We shall find ourselves inevitably citing . . . your present program to buttress our contention that rate disclosures are not merely unnecessary, but, more importantly, tend to be misleading unless explained fully as to the underlying assumptions," Fox wrote.

"Such explanation is incompatible with the space or time requirements of advertising and, we believe, further suffers from the 'excess information' syndrome which runs counter to the goals of disclosure rule simplification."

If the revisions that include disclosure are defeated, however, Fox said an unfortunate byproduct would be the loss of provisions that would have removed certain problem areas for the industry, such as the attorneys' fee rule and an extension of the statute of limitations for credit transactions.

Yet, if it does pass with disclosure, WVLA sees state courts perceiving that leases, because of rate disclosures, are financings.

"And the potential, of course, exists for the Internal Revenue Service to use rate disclosures to some advantage in tax audits and/or proceedings," Fox wrote.

The letter goes on to challenge the 12.5 percent rate advertised by GMAC, concluding that the rate is actually in excess of 13 percent.

"This, of course, reflects the omission of the allocated service charges from the calculations, an omission admittedly mentioned, but of questionable com-

Suit in West Virginia latest against V-8-6-4

By Marjorie Sorge

A class action lawsuit has been filed in West Virginia against General Motors, charging that its 1981 Cadillacs equipped with a V-8-6-4 engine are safety hazards and are defective.

The suit, filed in Circuit Court in Kanawha County, charges that the cars stall, surge, vibrate and have engine lag. It also alleges that the cars do not shift smoothly, have variations in power output and may have premature brake wear.

The suit was filed by Edward D. McDevitt of Preiser & Wilson, Charleston, W. Va., on behalf of Arthur Lee Williams. It estimates that the class could have 600 members.

It is the 11th class action lawsuit filed against GM concerning possible defects in the V-8-6-4 engine. Other suits have been filed in Florida, South Dakota, New Jersey, Illinois, Texas, Ohio, Pennsylvania, New York, Maryland and California.

There is also a product liability case in U. S. District Court in Dallas in which charges that GM is liable for a death which allegedly occurred when a V-8-6-4-powered car surged forward.

A Cadillac spokesman said GM has no comment on the lawsuit because of the pending litigation. But he said GM has increased the warranty on the V-8-6-4 and fully backs the engine.

The warranty on the V-8-6-4 was extended to five years and 50,000 miles about a year ago.

• The West Virginia suit, like the other 10, charges that GM knew of the problems with the V-8-6-4 before the car went on sale and "knowingly withheld and concealed these facts from the purchasing public."

A dealer service bulletin issued by GM in mid-1981 advised dealers that some of the problems were occurring in the V-8-6-4 engine and could not be fixed. It said these actions are "normal" and told the dealers not to attempt to fix them.

The V-8-6-4 was introduced by Cadillac in 1981 as a fuel-saving device. It runs on either eight, six or four cylinders, depending on the power needed. It was replaced in 1982 by a new V-8. Only Cadillac limousines have the V-8-6-4 as standard equipment in 1982 and will continue to have it in 1983.

The West Virginia suit charges GM with negligence, strict liability, willful misconduct, deceit, fraud and breach of warranty.

Williams, currently the only member of the class, sold the car in early 1981 at what the suit calls "a significant financial loss." He asks in the suit that he be awarded damages measured by the difference in the cost of the car and the selling price.

The suit also asks for exemplary damages, compensation for emotional stress and court costs and attorney's fees.

All sold at Greenfield Village auction

Cars, calliopes, canoes

By Roger Rowand

DEARBORN. — The Henry Ford Museum and Greenfield Village held an auction of duplicate items and things that didn't fit into its exhibit theme. It grossed $1 million and netted $900,000.

The sale, held on two beautiful September weekend days included some 600 objects, all of which were sold. It was an absolute auction, meaning no minimum bids were established.

Items auctioned included a truck-mounted calliope, a stagecoach, a rickshaw, a birch bark canoe and dozens of cars.

Top-dollar item was a 1922 Joswin town car powered by a Mercedes Flugmotor and with an interior of brocade, tapestries and rosewood and gold and ivory fittings. That car brought $90,000.

A mint condition 1905 Martini that had been displayed in the museum was sold for $29,500, and a White House Lincoln limo once used by First Lady Jacqueline Kennedy went for $36,000. Bidding on a near-perfect 1958 BMW convertible climbed to $54,000 while a scale model of that same car moved at $9,700.

The auction was a first for the museum and historical village. Officials called it a resounding success but declined to predict when, or if, there would be another.

One brass and copper model of an 1860 steam locomotive was sold for $11,000. Three old household vacuum cleaners went to a single bidder for $6. A bid of $2 won for another bidder on three handles from electric vacuum cleaners, maker unknown.

Other cars that went at the block included: 1940 Ford GP Pgmy (Army experimental car), 1915 Hudson Coupe, 1930 Rolls-Royce, 1921 Lincoln (Leland) touring car, 1914 Abbott-Detroit Roadster and a brand new 1980 MG-B, the last MG imported to the U. S.

Real heritage

Buick is playing up the 80-year history of Century to talk about modern-day, state-of-the-art engineering in the '83 models. All '83 Buick ads have the Olympiad logo to identify Buick's official-car status. McCann - Erickson is the agency.

Small hike for Honda; Toyota's is bigger; Nissan in between

Imports join '83 price sweepstakes

By John K. Teahen Jr.
Managing Editor

There were surprises on the high side and on the low side as the imports began posting their 1983 U. S. prices last week. First out of the starting gate were Honda, Toyota, Nissan and Mercedes-Benz.

The Honda increase was surprisingly low. It averaged $120, or 1.6 percent, on Civic and Accord models. The '83 Prelude won't be priced until early next year.

On the other hand, the Toyota increase was surprisingly high. It averaged $287, or 3.8 percent, above the '82 stickers.

Nissan wound up right in the middle of its two chief rivals with a boost averaging $205, or 2.6 percent.

Mercedes models climbed an average of 3 percent with the boosts ranging from $612 to $1,614. Of course, price is not that big a factor in the $30,000-plus market where most Mercedes autos are lodged.

At Honda, Civic prices went up $100 over comparable 1982 models. The leader is the Civic 1300 two-door hatchback at $4,899, and the lowest sticker on a Civic 1500 is $5,949 for the DX two-door hatchback with five-speed manual transmission.

Honda Accord stickers rose $50 to $150 with one exception. The hatchback coupe with automatic transmission jumped $350 because power steering has been made standard. The base Accord hatchback is $7,449, up $50.

Toyota's pricing action was more complex because of its tremendously wide model lineup. In general, the more expensive the car, the bigger the price hike.

For example, Toyota held the line on several of its Corolla models, while increases ranged as high as $560 on Celica and $800 on Supra. The Cressida four-door wagon rose $1,030, and the Cressida four-door sedan jumped $1,320.

• It would appear that Toyota is betting on a continuation of the Japanese government's restrictions on exports to the U. S. and that the company plans to put greater stress on cars that carry higher prices and bring higher profits.

The newest Toyotas are in the redesigned Tercel series, and it's difficult to compare them to the '82s because of the change from notchback to hatchback on many models. All the '83 Tercels are hatchbacks (Toyota calls them Liftbacks), and hatchbacks are usually higher priced than notchbacks.

Tercels start at $4,998 for the base two-door hatchback, the same price as the '82 notchback. The Deluxe hatchback at $6,198 is up $180 and the SR-5 hatchback at $6,618 is $190 more than the comparable '82 unit. Other '83 hatchbacks are some $500 more than '82 notchbacks.

The new Tercel four-wheel-drive wagon is $7,398 for the Deluxe version and $8,148 for the SR-5.

The Starlet hatchback is $5,838, up $260.

Corolla prices start at $5,448 for the base two-door sedan with four-speed and $6,018 for the Deluxe two-door with five-speed. Seven Corolla models are unchanged from '82, and five fancier units are up $70 to $100.

The base Toyota Celica coupe rose $140 to $7,299, but the boost was $440 to $560 on four other models. In the Supra line, the hikes were $550 to $800. Supra models start at $14,148.

In the Cressida series, four-door sedan is $13,569 (up $1,320) and the four-door wagon is $13,729 (up $1,030). Both have automatic transmission. A five-speed Cressida four-door sedan has been added at $13,169.

• Toyota said some of its '83 price increase is due to product upgrading. New features include electronic fuel injection on the Celica GT and Starlet; a 1.6-liter engine (down from 1.8) and rack and pinion steering on Corolla, and a digital-control microcomputer for improved performance on the Supra and Celica GT.

The Cressida now has the twin-cam engine formerly used only in Supra, plus Supra's independent rear suspension and a new electronically controlled four-speed overdrive transmission.

Nissan announced prices for its Nissan Sentra, Nissan Stanza and Datsun Maxima models. The 280-ZX and the 200-SX will be priced later. However, a spokesman said the $205 average boost includes the hikes that will be made on two sporty lines.

The base Sentra two-door sedan holds at its '82 price of $4,949, and other Sentra models are up $120 to $250.

In the Stanza series, there were hikes of $200 on the Deluxe two-door and four-door hatchbacks and $100 on the XE two-door and four-door hatchbacks. Stanza models start at $6,999 for '83.

The Sentra models now have a 1.6-liter four-cylinder engine, which replaces the 1.5-liter powerplant used in '82. Power steer-

Mercedes' new-market machine

Daimler-Benz in Stuttgart has released the first official photo of its new W201 model, right, which will be launched in December. The car, initially to be known as the 190 and 190E, is in a lower market segment than the revised W123 series, left—a category which breaks new ground for D-B. The W201 looks like a miniature version of the company's S-class, and is said to be very light, economical and spacious.

Service Index shows tiny advance for month

By Francis J. Gawronski
Service Editor

Despite a sharp drop in the rate of growth, new-car dealers' service and parts service business registered a slight increase in July. It marked the 17th consecutive month that shop volume has shown a gain over the same month a year earlier.

According to the Automotive News Service Index, shop business in July amounted to 100.3 percent to barely top the volume recorded in the same month a year ago. July's gain was the smallest in the last 17 months. In June, service and parts was 107.2 percent of the year-earlier volume.

July also marked the first month in 21 that gross profit on all labor, parts and P&A sales —the most important indicator from the dealers' viewpoint— did not show an increase over the profit made in the same month a year ago. July's profit was down 0.2 percent from the year-ago figure.

Repair orders written were down 6.4 percent in July, marking the eighth straight monthly decline.

The leading indicator in July was shop part sales, those used on customer-paid and warranty repairs, up 4.5 percent from the year-ago figures, while sales of parts and P&A were up 3.4 percent. Total labor sales — both customer-paid and warranty — increased 0.9 percent over the year-earlier figure.

Figures used in the Service Index are averages compiled from replies on shop business from a cross-section of the nation's new-car dealerships.

For the first seven months of the year, dealers' shop volume amounted to 107.0 percent of the business for the same period in 1981.

The leading indicator for the January-July period was shop parts sales, up 12.3 percent, followed by parts and P&A sales, up 11.0 and gross profit, up 9.6 percent.

Labor sales jumped 5.1 percent in the seven-month period, while repair orders written declined 7.6 percent.

SERVICE INDEX
100.3*

	July, '82 vs. July, '81	7 mos., '82 vs. 7 mos., '81
Gross Profit on All Labor and P&A Sales	− 0.2%	+ 9.6%
Repair Orders Written	− 6.4%	− 7.6%
Total Labor Sales (Customer & Warranty)	+ 0.9%	+ 5.1%
Shop Parts Sales (Customer & Warranty	+ 4.5%	+12.3%
Sales of All Parts and P&A	+ 3.4%	+11.0%

*—Survey by Automotive News shows that dealers' service and parts business in July, 1982, was 100.3 percent of business in July, 1981. Service business in the seven months of 1982 was 107.0 percent of business in the corresponding period in 1981.

Word from the Fed

Paul Volcker, chairman of the Federal Reserve Board of Governors, addressed 350 delegates to NADA's Washington Conference. The two-day meeting was attended by NADA directors and state dealer association presidents and managers. Volcker said he is encouraged by recent developments on Wall Street and in financial markets.

Chrysler contract faces rough time in voting

By Marjorie Sorge
Labor Editor

The new contract between the UAW and Chrysler Corp. may be too modest to win rank-and-file approval.

Many Chrysler workers have said the new pact does not go far enough in restoring their parity with workers at Ford Motor Co. and General Motors. The difference in the hourly rates is about $2.50.

But the UAW leadership is working hard to sell the new contract to the dissident membership. Letters have been sent to all Chrysler workers explaining the new agreement and urging them to vote yes on ratification.

Also, UAW president Douglas A. Fraser is planning to visit many locals to try and personnally sell the pact.

At press time, no date had been set for the ratification process to begin, but sources said it would probably be after Fraser has made the rounds to the locals.

But even with Fraser's personal touch, many workers in the Detroit area say they will vote down the agreement.

The leadership of Local 1264, in Sterling Heights, has written a letter to the international UAW, seeking the resignation of the entire Chrysler negotiating committee.

Even so, David Eisenberg, auto analyst for Sanford Bernstein, said he believes the contract will be ratified with about 51 percent of the vote. He said it gives the Chrysler workers a start at catching up with their counterparts at Ford and GM.

The new agreement is two-tiered. It consists of a one-year agreement on economic issues and two years on non-economic issues such as work rules, absenteeism, worker representation and seniority.

According to Fraser, when the economic package is negotiated again next year, the difference between wages at Chrysler and those at Ford and GM should drop to about $2.00 an hour.

Both Chrysler and the UAW agreed the contract is modest but indicate it is the best that can be done in the current economy.

Eisenberg said the pact will cost Chrysler about $100 per unit, but will still let the company maintain a $200 to $300 per unit advantage over Ford and GM. He said $100 per unit cost will be offset by increased productivity.

He said labor costs will rise from $19.63 to $20.43 by the end of the first contract year.

The contract also provides for a $10 million cut in medical care costs in the first year of the contract, which Eisenberg said will amount to a savings of about six cents an hour per worker.

It also gives the workers three quarterly lump sum cost-of-living adjustments beginning in December. Based on a 6-percent inflation rate, that would generate 16 cents in the first quarter and 17 cents in the second and third quarters.

There is also a wage increase tied to the company's profitability. Again, they are lump sum payments. If the company's profit is between $20 and $50 million, $4 million will be set aside to be divided among the workers. If the profit is $50 million or more, $8 million will be set aside.

But some workers say it's not enough and are threatening to

Ford on deadline in Canada; GM contract ratified

TORONTO. — The current agreement between the UAW and Ford Motor Co. of Canada will expire at midnight Sept. 28.

The union will try and negotiate an agreement similar to the one reached Sept. 14 with General Motors of Canada. That agreement was ratified by about 80 percent of the GM workers last week.

The GM agreement gives workers cost-of-living-adjustments, a small wage increase in the last part of the pact, and lump-sum payments to retirees. It also eliminates all paid personal holidays after December and has phased in wages for new hires.

The new two-year contract will give workers a $1.95 an hour increase during its lifetime.

The GM agreement covers 33,600 Canadian workers and the Ford pact covers 12,400.

Clark, Volvo OK long-term finance deal

BUCHANAN, Mich. — Clark Equipment Co., Buchanan, and A.B. Volvo of Sweden have announced a long-term operating agreement between the companies' subsidiaries, Clark Equipment Credit Corp. and Volvo White Truck Corp.

The agreement provides for Clark Credit to finance Volvo White's U. S. heavy-truck dealers and retail customers.

At the same time, White Motor Corp., which is in Chapter 11 proceedings, announced a purchase agreement under which Clark Credit will acquire White Motor Credit Corp. The agreement is subject to approval by the U. S. Bankruptcy Court and certain other conditions.

A. B. Volvo and White Motor signed a letter of intent in June, giving Volvo or its designee the right to acquire White Credit. Volvo has assigned the rights to Clark Credit.

White Credit, with net receivables of approximately $200 million, is headquartered in Beachwood, O., and has six regional offices in the U. S.

Clark Credit has specialized in financing Clark Equipment's dealers and customers. Clark Credit is headquartered in Buchanan, with nine regional offices in North America and assets of $1 billion.

Clark Equipment is a manufacturer of industrial lift trucks, construction machinery, automotive transmissions and industrial drivetrain components around the world.

Army's new 8x8 built by Oshkosh

The U. S. Army has begun taking delivery of new eight-wheel-drive trucks manufactured by Oshkosh Truck Corp., Oshkosh, Wis. A five-year contract calls for 2,140 vehicles with options for an additional 5,350. Value of the base contract without options is $240 million.

Aftermarket to grow for HDs, firm predicts

NEW YORK. — The heavy-truck aftermarket is projected to grow 4 percent a year in real terms between 1980 and 1988, a rate substantially greater than that of the Gross National Product.

According to Frost & Sullivan Inc., sales of motor fuel, lubricants, replacement parts, accessories and tires will escalate from $21.6 billion in 1980 to nearly $30 billion by 1988 (at 1980 end-user prices). Using projected 1988 prices, the market will nearly quadruple to some $80 billion.

"It is important to bear in mind, however, that the heavy-duty aftermarket is a cyclical market," cautions the research organization's study, *Heavy Duty Truck Aftermarket*. "It offers greater growth potential than the passenger car aftermarket, but there can be considerable deviation from average growth rates within any period of four to five years. Also there are considerable differences in real growth rates by product category."

Motor fuel, the largest category by far, is expected to see its share of the overall market drop slightly from better than 75 percent in 1980 to 73 percent by 1988. Figuring behind this decline is the anticipated acceleration in the trend to dieselization, resulting in a market

Ram Tough theme used in radio, TV and magazine ads

Dodge aggressive in '83 truck pitch

By Joseph Bohn
Marketing Editor

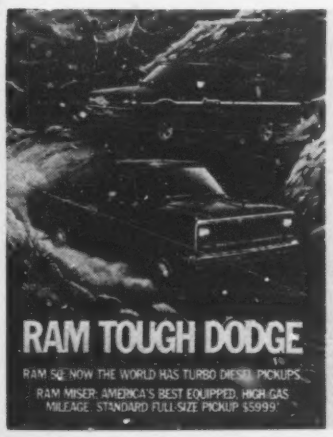
HIGHLAND PARK, — Dodge has been having a good year with its truck lines, and will continue to aggressively promote '83s in TV, magazine and radio.

In TV, Dodge uses some unusual combinations of live product footage and animation —background by classical music from an Moussorgsky adaptation — to capture attention for the "Ram Tough" image.

TV spots open, for example, with a huge Ram backgrounded on an electrically charged mountain, which lead into live footage of trucks moving up a real road up a hand-drawn "Ram Mountain."

The animation process "tested about twice as high as any other type" shown consumer panels, according to Lee F. Farrell, Truck Operations ad manager.

Impact and awareness are the chief aims of the elaborate effort, with officials claiming a 50 percent-plus national awareness for the "Ram Tough" theme as a result of three years of promotion.



RAM TOUGH DODGE
RAM SEE NOW THE WORLD HAS TURBO DIESEL PICKUPS.
RAM MISER: AMERICA'S BEST EQUIPPED, HIGH-GAS MILEAGE STANDARD FULL-SIZE PICKUP $5999*

Turbocharging plus fuel economy

The economy-minded Dodge Ram Miser and the new Power Ram 50 are featured in this '83-model ad extolling the availability of the world's first turbo-diesel and a well-equipped, high MPG, full-size pickup.

Initially, three "Ram Mountain" TV spots are being produced. They feature the full-size Dodge Ram pickup, the new Power Ram 50 turbo-diesel pickup and the Rampage.

Each has a matching 60-second radio spot using the "Ram Mountain" theme music.

The "Ram Mountain" also is featured in three print ads and other 60-second radio spots.

"New Toughness in trucks . . . Dodge Ram pickups go beyond what others call tough," says a TV commercial for the full-size pickup, citing carbon steel frame, galvanized steel for rust protection and other durability features.

"There's a new power in trucks, turbo-diesel power" says the TV spot for the Power Ram 50 model, claiming superiority over Ford Ranger and Chevrolet S-10.

The commercial draws attention to the "biggest payload of all compacts," double-wall steel construction and the uniqueness of the turbo-diesel pickup ("the world's only" such model).

• Magazine ads use the same background as TV to reinforce consumer impressions.

A full-page, four-color ad for the Power Ram 50, for example, proclaims that "Now the world has pickups with the power of a diesel and the punch of turbocharging."

It provides fixed specifications on engine, transmission, steering, fuel tank, payload, suspension and MPG similar to the

truck industry news

196,531 counted, up 3.6 pct.

July registrations show slight increase over '81

In spite of a slowdown in light-truck tallies, July registrations of new trucks of all types in the U. S. were slightly higher than those in the same month a year ago.

During the month, according to R. L. Polk & Co. statistics, 196,531 vehicles were registered in the 49 reporting states, an increase of 3.6 percent over the year-earlier 189,680 units.

The seven-month total of 1,401,069 tallies was 9.8 percent higher than the 189,680 units registered in the same period in 1981.

In July, there were 182,326 light-truck registrations, an increase of 6.7 percent over the

Table on Page 24.

year-ago 170,924 but 13.5 percent below the June count of 210,736 units.

Tallies were higher in all three light-truck weight groups in July versus last year, but in July only Group 3 vehicles topped those registered in June.

Group 1 tallies in July totaled 101,461, up 9.7 percent over the year-earlier 92,526 and 11.5 percent below June's 114,612 units.

• In July, there were 78,565 Group 2 registrations, 2.2 percent higher than last year's 76,908 and 16.6 percent lower than the previous month's 94,213 units.

The Group 3 total in July was 2,303, up 54.4 percent from last year's 1,490 and 20.4 percent higher than June's 1,911 units.

Medium and heavy-truck

Continued on Page 25, Col. 1

7-month tallies of heavy trucks decline 16.7 pct.

Registrations of new heavy trucks in the U. S. were down 16.7 percent from a year ago in the first seven months of 1982, according to R. L. Polk & Co. statistics.

Through July, 77,982 Groups 7 and 8 trucks were registered in the 49 reporting states, compared with 93,615 units in the comparable period in 1981.

Tallies were off substantially in both big-truck groups, but Group 7 fared somewhat better than the heaviest weight class.

In the January-July period, there were 34,721 Group 7 registrations, a decline of 12.7 percent from last year's 39,793. The Group 8 total was down 19.6 percent, from 53,822 units a year ago to 43,261.

In July, 10,668 heavy trucks were registered, a decline of almost 25 percent from last year's 14,213.

During the month, 4,535 Group 7 vehicles were tallied, down 24.1 percent from the year-earlier 5,978. Group 8 was off 25.5 percent to 6,133 units, compared with 8,235 a year ago.

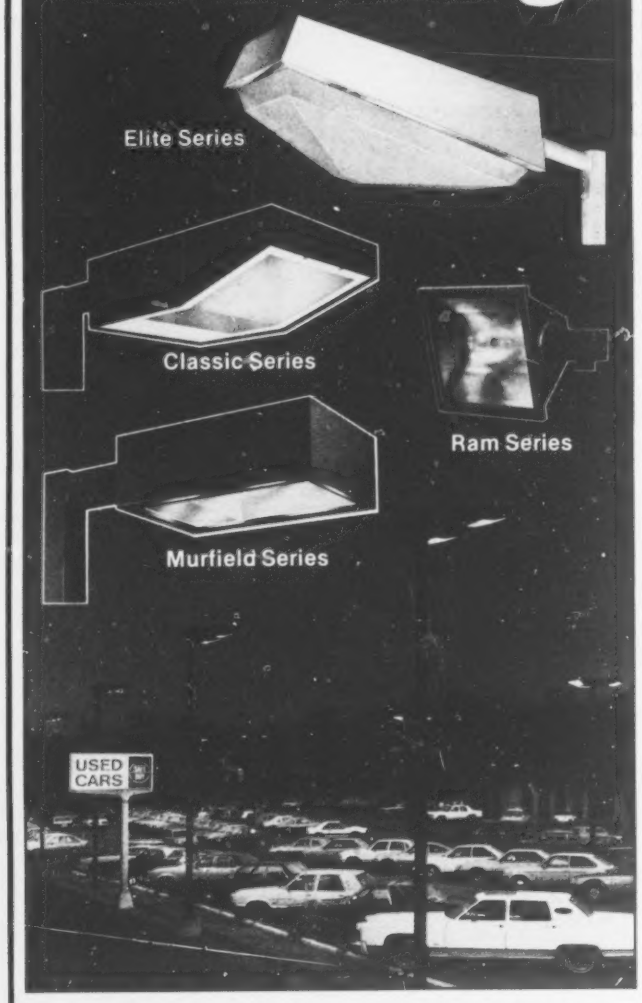
The Sales Edge



LSI specializes in automotive outdoor lighting systems that combine function with elegant design... giving you the 'sales edge'. Whether you're installing new lights or retrofitting an outdated system, LSI's lighting experts will evaluate and recommend a lighting system that's right for you. You'll get straight answers about our wide selection of designs, featuring the latest technology in energy efficient and low maintenance. It's the kind of service our customers have learned to appreciate... and to rely on.

The Lighting Innovators

For more information, call (513) 793-3200 or write for a full-color brochure describing our energy-saving systems.

★—No Oklahoma registrations, 1982 and 1981.
#—Memo units are trucks which are part of the total listed above each entry. Chevrolet memo units are vans, Sportvan, El Camino, Blazer, LUV and S-10; Dodge, vans, Ram Wagon, Ramcharger, Ram 50 and Rampage; Ford, Econoline vans, Club Wagon, Bronco, Courier and Ranger; GMC, vans, Jimmy, Caballero and S-15; Jeep, CJs, Cherokee, Wagoneer and Scrambler. *—Miscellaneous includes imports, Crane Carrier, Oshkosh, FWD, IVECO/Magirus, Diamond Reo, Hendrickson, etc.

—Compiled from R. L. Polk & Co. data.

196,531 trucks counted, up 3.6 pct.

July registrations show slight increase over '81

Continued from Page 20

registrations were down sharply in July. Mediums were off 22.1 percent, from 4,543 units in the same month in 1981 to 3,537. There were 10,668 heavy-truck tallies during the month, down 24.9 percent from the year-ago 14,213.

Through July, all light-truck classifications showed good gains over the like period last year, but the big-truck groups suffered stiff setbacks.

The seven-month light-truck total was 1,300,285 units, an increase of 12.8 percent over last year's 1,152,274. Mediums were down 23.2 percent to 22,802, compared with 29,706 in 1981. Heavies dropped from 93,615 a year ago to 77,982, a decline of 16.7 percent.

Group 1 registrations through July were up 13.3 percent, from 634,563 a year ago to 719,249. There were 569,032 Group 2 tallies, up 11.6 percent from last year's 509,810. Group 3 was 51.9 percent higher, 12,004 this year versus 7,901 in 1981.

• In the medium segment through July, 21,864 Group 6 trucks were registered, off 23.5 percent from last year's 28,595. Group 5 was down 25.3 percent, 1,102 versus 933. Only five Group 4 units were tallied in the seven-month period, compared with nine a year ago.

Group 7 light/heavy trucks totaled 34,721 units through July, a decline of 12.7 percent from last year. The Group 8 heavy count was down 19.6 percent, from 53,822 units in 1981 to 43,261.

In July, No. 2 Ford narrowed Chevrolet's lead slightly. During the month, 61,492 Ford trucks were registered, 3,317 more than Chevrolet's 58,175.

Through July, Chevrolet had 448,620 registrations and Ford had 425,003, a difference of 23,617 units. Chevrolet accounted for 32.12 percent of the industry total, while Ford had 30.34 percent.

For executives from Executive

Executive Coach Builders, Springfield, Mo., builds luxurious 46-inch stretch limousines from the Lincoln Town Sedan, pictured here, and Cadillacs and Mercedes, at a rate of 16 a month. Standard equipment includes electronic bar, crystal decanter, Sony TV, 100-watt stereo, reading lamp, power-operated divider and moonroof.

Deadline set on entries for DANDY awards

DETROIT. — The Newspaper Advertising Bureau announced that the entry deadline for the 10th annual DANDY awards competition, recognizing excellence in automotive dealer display advertising in daily newspapers, will be Nov. 24, 1982.

Awards for best single ad and for best campaign will be given in three categories: For dealer associations, for individual dealers in large metropolitan markets and for individual dealers in smaller markets.

In addition, there will be special awards for the best campaign or single ad by a dealer trade association or multi-line group and for the best use of color in dealer or dealer association display advertising.

Entries may cover any phase of the dealer business—inciuding new cars, used cars, trucks, leasing, service, dealer image, special promotions, or model cleanup—and must have run in any section of a daily or Sunday newspaper from Jan. 1, 1982, through the entry deadline. The 1983 announcement advertising is also eligible.

All DANDY enrties are automatically entered in the bureau's annual ATHENA awards competition for outstanding creative advertising in daily newspapers.

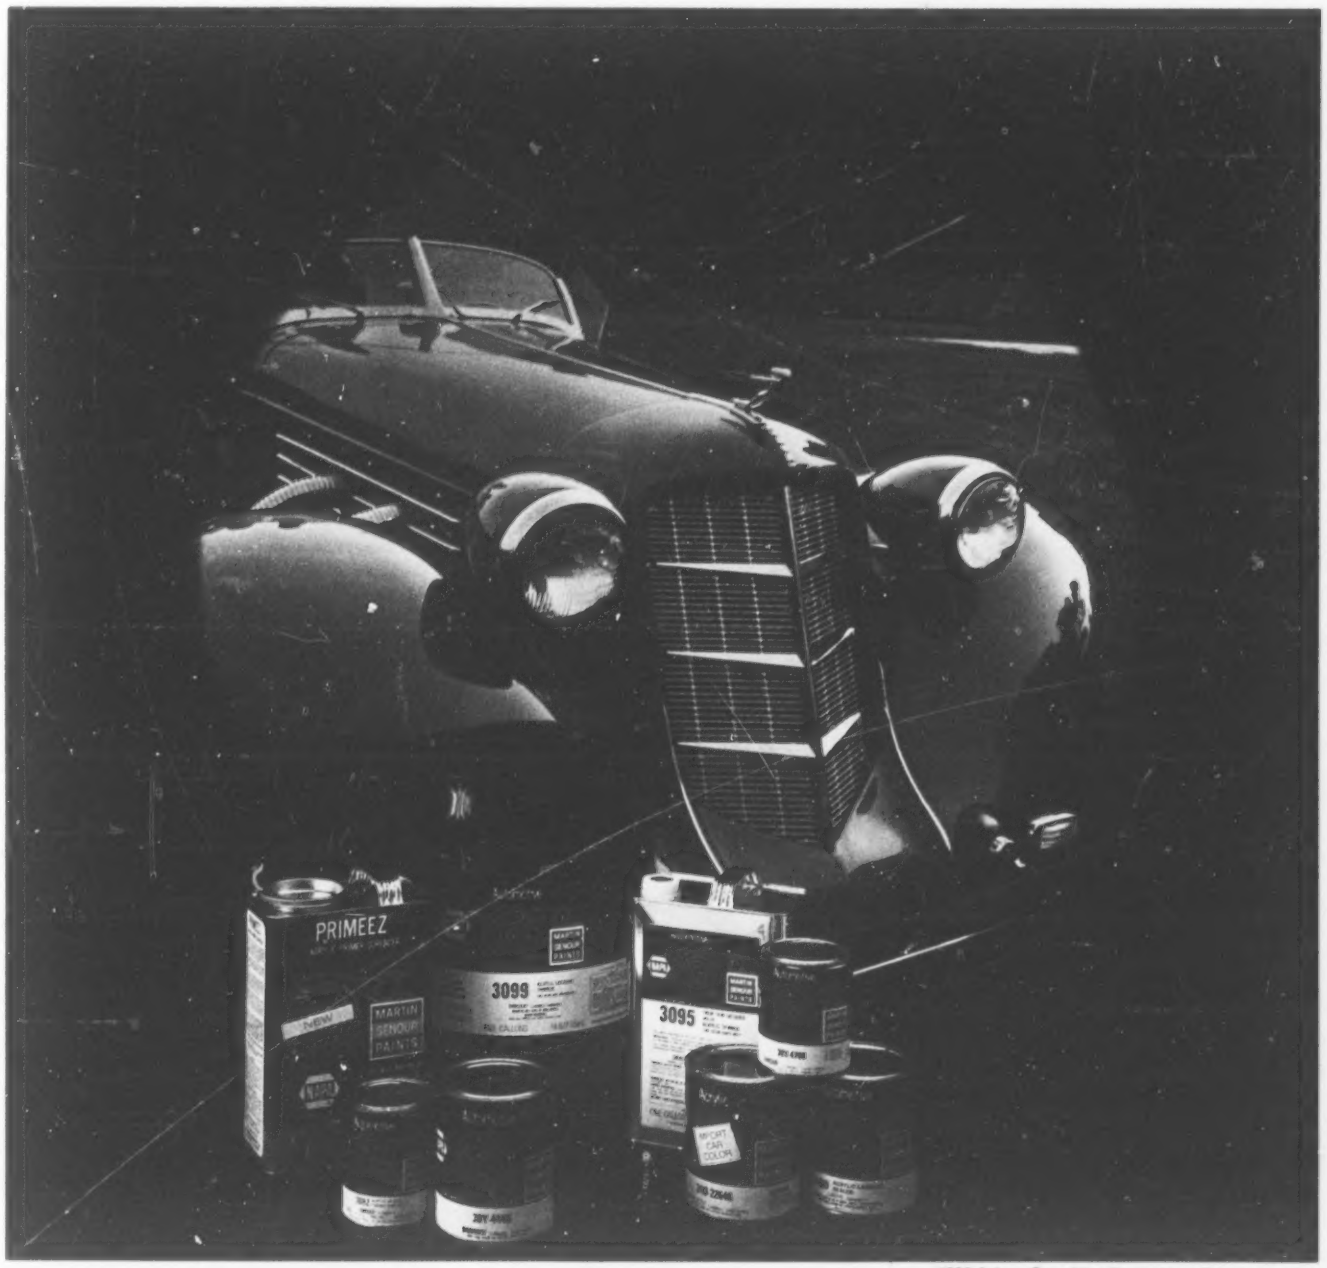
DANDY award winners will be announced Feb. 12, 1983, at the NADA convention in Las Vegas.

Further information and entry forms are available by writing to DANDY Awards, Newspaper Advertising Bureau, 280 N. Woodward Ave., Birmingham, MI 48011, or by calling (313) 642-9200.

Kelsey-Hayes to supply wheels to Nissan plant

ROMULUS, Mich. — Kelsey-Hayes Co. has been awarded a contract to supply 14-inch and 15-inch wheels for Nissan trucks built in the U. S.

The wheels will be supplied from Kelsey - Hayes' Sedalia (Mo.) plant. The 275,000-square-foot facility has an annual capacity of up to 10 million wheels.



1935 Auburn Speedster, Owner Hugo Fischer

The Martin-Senour Difference

Spot and Panel Repairs Made Easy with A Full System of Acrylic Lacquer Products

The majority of the busy shop professional's repairs are of the spot and panel variety. To help make these as fast and cost-effective as possible, the person to see is your NAPA jobber. He offers the complete line of Martin-Senour Acrylic Lacquer products. This superior refinishing system combines acrylic durability with the easy workability of lacquer, while offering an outstanding color match to all OEM finishes. The full line of Martin-Senour Acrylic Lacquer System products includes primer surfacers, sealers, thinners, blenders, clear coats, cleaners, retarders, and additives. See your NAPA jobber. ***He's got it all.***

Week's total rises to 107,978

Chrysler return hikes car output

By Patricia Hoffman
Staff Writer

Domestic car production last week showed some improvement as all but one of Chrysler Corp.'s assembly points returned to normal five-day operations following a mid-week strike which marred the previcus week's total.

There were 107,978 cars targeted last week, up 2.27 percent from the previous week's 101,611, but the total fell 4.13 percent short of the 112,634 units in the comparable 1981 period.

A high rate of absenteeism kept both shifts at Chrysler's Newark facility idle last Monday (Sept. 20) as all other Chrysler plants returned to work following a three-day strike which began Sept. 15. Both shifts at Newark returned Tuesday, Sept. 21.

A railroad strike last week cut production schedules at four General Motors facilities. GM's Janesville, Leeds and Lordstown points operated half a day on Wednesday (Sept. 22), while the GM Wilmington plant worked two-four hour shifts.

GM's Norwood facility was idled last Tuesday for model, changeover. Operations are slated to resume Oct. 7.

Ford Motor's Wayne and Metuchen plants were closed last week due to heavy inventory.

Also at Ford, the Atlanta, Lorain and San Jose facilities remained idle last week to cut inventory.

The Volkswagen of America Westmoreland point, idled Aug. 2 for an extensive model changeover period, plans to reopen today (Sept. 27) for a "systems fill." Job-One production of 1983 model cars is scheduled for Oct. 4.

American Motors' Kenosha point increased production last week of the Renault Alliance. Output was doubled to 600 units a day on two shifts.

GM's Oklahoma City facility operated on daily overtime schedules last week following it's return from model changeover. Also working overtime at GM was the Linden plant which operated six days last week.

Ford's Wixom point worked 10 hours of daily overtime last week.

Beginning Oct. 11, a second shift will be added to the full-size Mercury line at Ford's Metuchen plant. About 1,200 workers will be called back from indefinite layoff.

So far this year, the auto makers have completed 3,828,620 units, down 22.30 percent from last year's 4,927,350.

5 auto giants to be inducted to Hall of Fame

MIDLAND, Mich.—The Automotive Hall of Fame will induct five persons Thursday (Sept. 30).

Drex D. Minshall, hall of fame chairman, will preside, and Zenon C. R. Hansen, retired chairman of Mack Trucks, Inc., will be the guest speaker.

The inductees are: Walter F. Carey, Bloomfield Hills, Mich., who is the first living person to be elected to the Hall of Fame. He is chairman of the ATA Foundation and past president and chairman of the American Trucking Assns.

Horace E. Dodge, who, with his brother John, founded Dodge Brothers Corp. in 1914.

Carlysle Fraser, founder of Genuine Parts Co.

Martin E. Goldman, long active in the aftermarket business and a partner in Aitkin-Kynett Advertising Co.

J. Irving Whalley, a Ford dealer in Windber, Pa., for 50 years.

At the ceremonies, the AOT also will recognize the 1982 recipients of its Distinguished Service Citation. They are:

Russell W. Case, Harvey Cedars, N. J., co-founder of the Automotive Advertisers Council and founder of the Automotive Publishers Council.

E. M. deWindt, Cleveland, chairman of Eaton Corp.

Robert P. Mallon, a Ford dealer in Tacoma, Wash., and 1978 president of NADA.

George W. Merwin Jr., Emporia, Kans., for his contributions to the automotive service industry.

H. Kenneth Tooman, Allentown, Pa., an executive with International Harvester and Mack Trucks for 30 years.

Alex S. Tremulis, Ventura, Calif., for 49 years a stylist with Duesenberg, Briggs Mfg., American Bantam, Tucker, Kaiser-Frazer, Ford Motor Co. and Subaru.

Six plants down, truck output off 19 pct. for week

Six truck plants went down last week, cutting domestic production 19.13 percent from the previous week's total. But output remained ahead of the comparable 1981 period.

Production last week was 33,403 units, down from 41,304 the previous week, but the total was 14.03 percent above the 29,293 trucks built last year.

Year-to-date, the makers have finished 1,470,109 trucks, a 17.38 percent gain from 1,252,439 completed in the comparable period last year.

Two General Motors points and four Ford Motor facilities were idle last week to cut heavy inventories in the field. They were: GM St. Louis and Pontiac (S-truck), and Ford Kansas City, Louisville, San Jose and Twin Cities.

GM's St. Louis plant was closed three days last week because of the railroad strike.

The GM Detroit plant resumed operations last week following a one-month changeover. Also back at GM was the Pontiac (heavy-duty) point which was idled Aug. 30 for changeover.

Ford's Michigan plant operated daily overtime last week, and the Lorain facility worked Saturday (Sept. 25).

Downtime continued last week at International Harvester's Ft. Wayne and Springfield facilities. Both points were idled Sept. 13 for inventory control.

Volkswagen of America's Westmoreland plant, down since June 28, has made tentative plans to begin 1983 production the first full week in December.

Ford plant back; car output tops 20,000 in Canada

The Canadian auto makers made a substantial recovery last week as operations resumed at Ford Motor's Oakville car facility following a one-week shutdown due to a parts shortage.

The car makers targeted 20,465 units last week, a 69.24 percent gain from the previous week's 12,092, and up 54.80 percent from 13,220 in the comparable 1981 week.

Truck production reached 8,296 units last week, up 3.18 percent from 8,040 the previous week, but the total was down 17.93 percent from last year's 10,108.

Downtime continued last week at American Motors' Brampton car facility due to tooling changes. The plant was preparing for assembly of the Spirit and SX-4 models to be added to the Concord sedans and wagons already produced there. Operations are slated to resume today (Sept. 27).

Ford's St. Thomas car point, idled Sept. 13, remained closed last week to cut high inventories. Ford's Oakville truck facility was down for the same reason.

International Harvester's assembly points were idle for the second week last week due to heavy inventories.

Year-to-date, the car manufacturers have assembled 654,454 units, up 6.96 percent from 611,869 finished in the comparable 1981 period.

Truck output so far this year reached 377,699 units, a slight decline from last year's 381,199.

Dealers aren't dancing, but they see better days, survey finds

Gloom and doom begin to fade as '83s arrive

By Jim Plegue
Staff Writer

They aren't dancing in the streets just yet, but many U. S. auto dealers, who started selling their 1983 models late last month, say things are slowly improving.

An AUTOMOTIVE NEWS poll last week of General Motors, Ford Motor and AMC/Renault dealers in the U. S. found a slightly more upbeat attitude than in other recent surveys.

Cautious optimism seems to be replacing gloom-and-doom.

"I see a slow but positive upswing," said a large Chevrolet dealer in Michigan. "It's not going to go in leaps and bounds, but we definitely are seeing a more positive attitude in people."

Although still a problem, high interest rates and new-car prices are not scaring buyers as much as they have in the past, many dealers said. All dealers noted that they have normal or even below-normal stocks of leftover '82 models. None of them anticipated problems in getting rid of those cars.

For the most part, the '83 models that debuted last month were carryovers from '82.

Ford and Lincoln-Mercury dealers, in particular, complained about the lack of product. First "new" models for those divisions are the midsize LTD and Marquis, which bow next week. The lion's share of Ford's new products won't be on the market until spring.

AMC/Renault dealers, on the other hand, were happy as clams, jubilant over the fast start of the new Alliance. That model, the first joint project of AMC and Renault and built by AMC in Kenosha, debuted Sept. 22.

"The Alliance is doing very well," said Tom Daniels, new-car sales manager for Holiday AMC/Renault/Jeep, Fort Worth. "We've had more traffic than we ever thought we would have."

As of last week, Holiday had sold 22 Alliance models, 10 of those before the car even debuted. Combined AMC/Renault sales at Holiday were up 55 percent in September. All of that increase was a result of Alliance.

Rick Wasemiller, general manager of Grosse Pointe AMC/Jeep/Renault in suburban Detroit, said "Our salesmen are amazed. They haven't seen traffic like this in a long time. And the nice thing is that the traffic isn't being induced by factory incentives.

"The Alliance has increased our traffic for the month (September) by 40 percent," he said. "It's generated traffic and when you generate traffic, everything sells."

Wasemiller said his Jeep bus-

Volvo's latest

Swedish innovation

A marked wedge shape, lots of glass and integrated fog lights make the Volvo 760-GLE a different kind of Volvo. But, the distinctive Volvo look is apparent and the characteristic diagonal marking is there. The 760 bows in the U. S. next month as a four-door sedan with either a V-6 gasoline engine or in-line six-cylinder turbocharged diesel. Price tag: Around $20,000. Story, other pictures are on Page 39.

Congress timetable clouds House local-content vote

By Helen Kahn
and Jake Kelderman
Washington Bureau Staff

WASHINGTON.—Whether the UAW's "Made in America" bill will achieve quick passage by the House or be trampled in Congress' rush toward adjournment was not clear at press-time.

In fact, the outlook will be cloudy until the very last minute, for time may evaporate long before the UAW and more than 225 House sponsors give up.

If it gets pushed aside by lawmakers rushing out to seek votes in this election year, the House will certainly take up the auto domestic-content bill during the lame-duck session.

Then, the bill's chances appear less good than if it could have been used on the campaign trail as a "jobs" bill, especially in those states where auto unemployment is high.

Outlook for anything except money bills is always less sanguine in a post-election session and attendance is much more iffy by the losers.

• Senate outlook this year was never good, partly because of the traditional sensitivity of senators to relations with foreign countries and because of the adamant opposition from Majority Leader Howard Baker, of Tennessee—the state that bid high for the Nissan light truck plant and wants to keep it there.

What slowed down the push toward House passage was the lengthy hearings set by Rep. Sam Gibbons, Florida Democrat and chairman of the House Trade subcommittee, who claimed jurisdiction 10 precious days after the House Commerce Committee, chaired by Michigan Democrat John Dingell, pushed the bill a step closer toward passage.

The Trade subcommittee cannot kill the bill, but it can talk while time runs out.

And it has compiled a fascinating record as witness after witness clashed over the problems of the U. S. auto industry in its competition with the Japanese.

• Retiring UAW President Douglas Fraser, defending the domestic-content bill because international trade "bears no resemblance to the textbook world of 'free trade,'" said the revised bill would create or save more than 700,000 jobs in auto or related industries.

Fraser — respected even by Gibbons who described the bill as the "worst piece of economic legislation in 50 years" — predicted only a limited effect, if any, on competition and consumer choice.

He also downplayed fear of price hikes or retaliation. Except for the Japanese, who would be forced to make cars where they sell them, Fraser said, company operations would be undisturbed.

The revised bill would require 90 percent American content for General Motors and Ford Motor Co., but would scale down to 10 percent at sales of 100,000 a year.

The bill was rewritten to keep the big U. S. firms from sourcing more parts abroad while permitting Volkswagen of America's current content, making American Honda reach somewhat, hauling Toyota into the country and making Nissan (which is training its Tennessee workers in Japan and is resist-

Chrysler restructures its marketing force

By Joseph Bohn
Marketing Editor

Chrysler Corp.'s decision to go with a separate ad agency for Dodge car and truck is part of a larger re-grouping of its marketing staffs which will see greater competition between Chrysler-Plymouth and Dodge.

Joseph A. Campana, director of Truck Operations, is Chrysler's new vice president of marketing. He replaces John K. Givens, who resigned. Givens was still under contract at press-time and seeking a position elsewhere.

Reportedly, Campana will have two marketing heads reporting to him — one for C-P and one for Dodge. There may also be a third corporate marketing person to report to him.

Dodge and Chrysler-Plymouth reportedly will also have separate ad managers and merchandising managers.

On the sales side, there would be separate heads — one for C-P and one for Dodge — reporting to Thomas Pappert, vice president of sales.

Asked about the reported restructuring, Chrysler Chairman Lee A. Iacocca, without confirming specifics, told AUTOMOTIVE NEWS, "Yes, we're going to do it eventually.

"We're starting it now by hav-

breaking news

DeLorean project gets a reprieve

BELFAST.—The DeLorean sports car enterprise got a reprieve last week when Northern Ireland's High Court delayed until Oct. 28 an order which would have forced the UK unit into liquidation to pay off $41 million in debt to unsecured creditors. DeLorean Motor Cars, Ltd., has been in receivership since February. Paul Shewell, one of the receivers, told AUTOMOTIVE NEWS "there is a reasonable chance" a group of U. S. investors, which includes John DeLorean, will be able to reacquire the plant, but that the $41 million in debt to creditors is a separate matter. The deal will require ministerial approval from the British government. Cofas, French export insurance company which insured the $17.5 million owed Renault for drivetrains, has joined the suit seeking liquidation.

GM predicts rise in European market

PARIS.—General Motors economists believe the European new-car market will reach 13 million units annually by the end of this decade. Ferdinand Beickler, Opel managing director, said that sales will climb from the current 10 million to 11.5 million by 1985 and 13 million by 1990.

McLouth Steel acquisition deal heats up

DETROIT.—McLouth Steel Corp. here and Tang Industries, Inc., Chicago, have signed a definitive agreement calling for sale of McLouth to Tang. The deal is subject to approval by Bankruptcy Court and McLouth lenders.

A passion for used cars

Buying and selling used cars is a profession and a passion for John Lund, who expects to move 2,200 vehicles this year through his Lund Motors in Royal Oak, Mich. He'll buy any clean car but prefers unique vehicles, like the Excalibur in the background.

Used-car wholesaler John Lund is a chip off the old dynamo

By Jim Plegue
Staff Writer

He is sprawled out—not really sitting—in a reclining office chair, his foot tapping away at the floor, the pencil in his hand slapping randomly on the arm of the chair. In the background, the stereo plays a popular rock tune, but the tapping foot and slapping pencil are totally out of sync with one another and moving at twice the beat of the music.

John Lund does not like to sit still.

He'd rather be on the phone selling cars to one of several hundred buyers, out on his lot inspecting today's purchase of 14 cars, or out on the road driving cars. Anything but sitting still.

"I get off on this," he says. "I have trouble on the weekends because it's so boring. You know, I just can't wait to come back in here on Monday. I come in and say, 'okay, LET'S GO!' "

When he speaks, the words at first come out slowly and carefully. But if he gets excited, sentences quickly become staccato bursts, delivered by an animated voice, punctuated by flailing arms.

He is a human dynamo, a 30-year-old hyperactive stringbean of a salesman. And he loves cars. It's a trait he shares with his father, Robert D. Lund, vice president of sales and marketing for General Motors and former longtime general manager of Chevrolet.

But unlike his father, John Lund's passion is used cars. He buys strictly from the public and sells only to wholesale buyers through his three-year-old company, Lund Motors, of Royal Oak, Mich. Lund moved 2,000 cars last year and expects 2,200 this year. (He handled well over 1,600 vehicles in the first seven months.)

• Lund's lot is the former used-car yard for a nearby Cadillac dealership. His office is on one side of a mobile home, a small cubicle with papers strewn about and a wall that's covered with hundreds of business cards. Above the cards are four clocks, one for each time zone of the U. S.

It looks like the ticket office for a one-man charter flight service.

Things move fast here. Today, he and his buyers (he has seven) have purchased 14 vehicles (the alltime high is 18 in one day). At day's end, Lund has already resold nine of those plus eight from the previous day's buying flurry.

Lund does all the selling. His record is 37 sold in one day.

One of Lund's buyers enters the room to debate the price on a Chevy Blazer. He thinks the owner wants too much for it. Lund makes a phone call, then hangs up and announces he has a buyer for the truck in another state. He has resold it before even owning it. Not only that but he has fetched a price that covers the owner's asking price as well as a profit for his business.

That is the secret to Lund's success. He buys primarily from the Detroit metropolitan area but re-sells products to all corners of the U. S. He matches the vehicle to the marketplace, thereby finding the highest dollar. Consequently, he can offer a

AMC boosts '83 intros with incentive program

By Joseph Bohn
Marketing Editor

American Motors, having some difficulty generating wholesale orders on certain '83 vehicle lines, has launched a new fall wholesale/retail program.

Dealers are paid on retail deliveries of '82 and '83 domestic cars and Jeeps in the form of credit certificates.

The credit certificates earn them discounts when ordering October / November / December wholesale units from the factory.

The new program, called "Fall Sales Festival," is running in tandem with a trip contest for dealers and sales managers.

The retail portion of AMC's contest runs from Sept. 23 to Dec. 22. Dealers get the following credit certificates for units retailed and delivered during the time frame:

'82/'83 Spirit — $100; '82 Concord — $400; '83 Concord — $200; '82/'83 Eagle 30 — $300, and '82/'83 SX 4 — $200.

For Jeep, the figures are: '82 CJ models — $600; '83 CJ models — $300; '82/'83 Scrambler — $300; '82/'83 pickup truck—$200, and '82/'83 Cherokee — $300.

The credit certificates can be applied to new factory wholesale orders during October/November/December in the following amounts: $300 off on Eagle 30; $200 off on SX 4; $300 off on Cherokee; $400 off on Wagoneer, and $200 off on pickup trucks.

• There is a one-unit qualifier in each of those lines which dealers must purchase before they can begin applying the credit/discount certificates.

Interestingly, although they earn credits for selling Spirit, Concord, CJ and Scrambler — dealers cannot apply credit units on those lines but only to lines listed above.

AMC's trip contest for dealers and sales managers runs from Oct. 1 to Dec. 31. It is called "Passport to Excellence."

Dealers are divided into either an open competition, where they simply hit the objective and win, or one of three grouped competitions, in Groups I, II or III. Grouped competitors must hit high-over-objective to win.

There are 100 dealers in open

July total trails June and year-ago

Registrations end string of '82 gains

By Jenny L. King
Staff Writer

New-car registrations in July broke the string of month-to-month gains begun in January, dropping 12.69 percent from the June total and falling 9.23 percent from July, 1981, according to figures compiled by R. L. Polk & Co.

Imports captured 32.41 percent of the total, an any-month penetration record.

July registrations totaled 626,321, down from 717,358 the preceding month and down from 690,025 a year earlier.

Domestic new-car registrations numbered 423,319 during the seventh month, down 17.16 percent from 510,985 in June, and down 12.42 percent from 483,372 recorded in July of 1981.

Imported cars accounted for 32.41 percent of the July total, with 203,002 registrations reported. A year earlier, 206,653 new imports took 29.59 percent of the month's registrations.

Year-to-date registrations totaled 4,404,430, down 13.31 percent from 5,080,733 in 1981. Domestic new-car registrations of 3,121,398 were down 13.29 percent from 3,599,909, while im-

July total trails June and year-ago

Registrations end string of '82 gains

Continued from Page 3

port registrations for the seven months were off 13.36 percent, to 1,283,032 from 1,480,824.

• Ford Motor Co., Chrysler Corp. and the combined imports made gains in their shares of the month's total, as American Motors, General Motors and the miscellaneous domestics gave ground.

Imports were up 3.12 percentage points, to 32.41 percent from 29.95 percent of the market last year. Chrysler was up 0.57 percentage points, to 8.77 percent from 8.20 percent, and Ford gained 1.56 percentage points, going to 17.47 percent from 15.91 percent.

GM plunged 4.23 percentage points, to 40.41 percent from 44.64 percent in 1981. AMC was down to 0.91 percent from 1.26 percent and miscellaneous domestics dipped to 0.03 percent from 0.04 percent.

GM-built new cars accounted for 59.78 percent of July domestic registrations, down from 63.72 percent in 1981. Ford cornered 25.85 percent, up from 22.72 percent. Chrysler was up to 12.97 percent from 11.71 percent. AMC slipped to 1.35 percent from 1.79 percent, and miscellaneous domestics had 0.05 percent this year compared with 0.06 percent in 1981.

In July, shifts in market class went from U. S. subcompacts and compacts toward the remaining categories of larger cars plus the imports. Subcompacts dropped to 14.26 percent from 15.72 percent and compacts were down to 16.13 percent from 19.54 percent.

Intermediates climbed to 21.40 percent from 19.64 percent, standards were up to 11.02 percent from 10.76 percent, luxury models were up to 4.78 percent from 4.39 percent and imports went to 32.41 percent from 29.95 percent.

Of the domestics-only market in July, subcompacts accounted for 21.10 percent, compacts had 23.87 percent, intermediates had 31.67 percent, standards had 16.30 percent and luxury models had 7.06 percent.

July registrations included 89,306 new subcompacts, 101,028 compacts, 134,057 intermediates, 69,020 standards, 29,908 luxury cars and 203,002 imported models. A year earlier the breakdown was as follows: 108,481 subcompacts, 134,828 compacts, 135,551 intermediates, 74,249 standards, 30,263 luxury models and 206,653 intermediates.

Over the seven-month period, GM, Ford and miscellaneous domestics increased their holdings in new-car registration shares. GM was up 0.28 percentage points, to 43.95 percent from 43.67 percent. Ford also was up 0.28 percentage points, to 17.03 percent from 16.75 percent. The miscellaneous domestics gained 0.01 percentage points, going to 0.04 percent from 0.03 percent of the total.

Chrysler was down to 8.67 percent from 8.80 percent, AMC finished the seven months at 1.18 percent compared with 1.60 percent in 1981 and imports were off slightly, to 29.13 percent from 29.15 percent.

International to close its Indiana plant

Continued from Page 18

president, said the decision to shut down the Fort Wayne plant was reached with "deep regret."

"But it was a necessary decision to protect the future of the company and the overwhelming majority of International Harvester employes," he said.

In the statement announcing the decision, the company noted that the "offers of economic assistance in behalf of both communities were so nearly equal that this did not provide an edge to either plant location."

A package of incentives worth about $30 million was presented to Harvester by Springfield and the State of Ohio. It included a commitment to buy the firm's plant and lease it back, a cash infusion, $20 million in private loans and a $10 million direct loan.

Fort Wayne officials said its incentive package had a value of about $50 million, including $10 million in deferred payments promised by hundreds of workers in defiance of a UAW rejection of the concessions.

Closing of the Fort Wayne plant will cost about 2,200 jobs, most of them filled by blue-collar workers. Harvester, the city's largest employer, had 10,500 employes at its peak in 1979. There now are about 4,000 on the payroll.

The company also is Springfield's biggest employer with about 3,200 "active" employes, down from a peak of 7,470 in 1973.

Harvester said the shift of Fort Wayne operations to Springfield could produce about 1,500 new job there, with most of them going to workers now on indefinite layoff.

2 Canadian universities receive $25,000 from GM

DETROIT. — General Motors has awarded grants of $25,000 to McGill University, Montreal, and to the University of Toronto Institute for Aerospace Studies.

McGill is conducting experimental and theoretical studies of fiber-filled polymer melt systems, and Toronto is continuing its research on how drivers react in highway accident situations.

Satellite feed used to launch '83 models

Chrysler's high-tech dealer show

DETROIT. — Chrysler Corp. unveiled its 1983 models for its dealers and their salesmen through simultaneous satellite-fed shows in 21 cities on successive days.

The programs reached 13,000 dealer sales personnel and their spouses, as well as the company's own field sales force.

The 2½-hour show mixed live film and slide presentations with satellite feeds of talks by Chrysler Corp. Chairman Lee Iacocca; John Naughton, executive vice president, sales and marketing, and E. Tom Pappert, vice president, sales.

It was the first time Chrysler —and is believed to be the first time any car maker—has used a satellite link to reveal a new model year's lineup to its dealers and their salesmen.

"The satellite was the quickest way to get their very key executives before so many people at one time and also, particularly in the case of Mr. Iacocca, keep them available for other high priority matters," said John Givens, vice president, marketing.

It also was a monumental logistics problem as well as an artistic challenge to make the program a smoothly synchronized and enthusiasm-building launch for the new models, according to Clark Reid, Ross Roy ad agency vice president and executive producer of the show.

He said the basic challenge of this type of show is to provide some of the pace and excitement that is possible when dealers come to one location such as Las Vegas, to preview the new models.

• Mixing film, satellite and live presentations and integrating slides with each was the way chosen to do this. Accomplishing it was another matter.

Reid worked fulltime on it since spring. He employed eight film crews, one video crew, three still camera crews, a production house, a satellite transmission company, 22 on-site production crews and a company to computer-program the slide portion of the presentation at each site.

With 724 trays of slides averaging 50 slides a tray, Reid estimated they provided "35,000 chances to make a mistake." Splicing in 25 advertised film clips at each location provided "another 500 chances." None were reported.

Following the show in each city, the audience adjourned to an adjoining ballroom where the new models were on display and hors d'oeuvres were served except in the case of the West Coast meetings, which were preceeded by a light lunch instead.

High-tech sound system

This is the electronically tuned receiver component of the $895 Delco-GM/Bose Music System available on the '83 Cadillac Eldorado and Seville, Buick Riviera and Oldsmobile Toronado. There are four speakers, each with an amplifier, a highly unusual feature. The system is designed specifically for those cars, varies from nameplate to nameplate and cost GM and Bose Corp. $12 million to develop. The two are in what John C. Crawford, Delco Electronics general sales manager, calls a handshake partnership.

N. American car-truck sales continue plunge in Canada

By Jenny L. King
Staff Writer

Sales in Canada of North American-built cars dropped 15.07 percent in August compared with the year-ago total, while truck sales plunged 27.76 percent. Sales for both types of vehicles have been down every month this year.

The five major auto makers retailed 38,496 new cars in August, down 15.07 percent from 45,329 in 1981. Year-to-date car sales trailed 1981 by 25.83 percent: 342,238 compared with 461,409.

General Motors reported a 23.97-percent plunge in August, to 21,280 from 27,989. Ford Motor Co. sales of 7,545 were down 10.69 percent from 8,448. Chrysler bucked the trend with a 6.45-percent upturn in sales, going to 7,059 from 6,631.

American Motors sales, including Renault passenger cars, totaled 1,957, up 30.55 percent from 1,449, and Volvo dropped 14.04 percent, to 655 from 762.

In shares of the market, GM slipped to 55.28 percent from 61.75 percent last year. Ford was up to 19.60 percent from 18.64 percent. Chrysler advanced to 18.34 percent from 14.63 percent; AMC was up to 5.08 percent from 3.30 percent, and Volvo edged to 1.70 percent from 1.68 percent.

Truck sales in August tumbled 27.76 percent, to 10,964 from 15,426 last year. Year-to-date truck sales were off even more, down 34.53 percent, to 115,563 from 176,526.

GM truck sales plunged 35.68 percent, to 5,188 from 8,066. Ford sales, including captive imports, totaled 3,814, down 25.83 percent from 5,142. Chrysler truck sales, also including imports, were down 12.34 percent, to 1,670 from 1,916, and AMC Jeep sales of 292 were down 3.31 percent from 302 a year earlier.

GM earned 47.32 percent of the truck market in August, down from 52.29 percent. Ford increased its share to 34.79 percent from 33.33 percent. Chrysler was up to 15.23 percent from 12.42 percent, and AMC earned 2.66 percent compared with 1.96 percent for the month in 1981.

AMC launches wholesale, retail incentive plan

Continued from Page 3

competition, with awards of eight-day/seven-night trips for two to Hong Kong and Peking.

In Group I, some 200 dealers are competing for 50 similar trips to Hong Kong and Peking.

In Group II, 500 dealers are competing for 75 trip awards for five days/four nights to Puerto Vallarta, Mexico.

Finally, in group III, there are 1,100 dealers competing for 110 awards, with a choice of 100 weekend holiday destinations.

Sales managers can win three-day/two-night trips to Las Vegas, and salespeople are eligible to win merchandise.

AMC's contest is based on selling Renault, domestic cars and Jeeps, with some models getting bonus points as special-emphasis vehicles.

St. Louis-area dealer is tops for Ford in July

ST. LOUIS. — Dave Sinclair Ford, South St. Louis County, was Ford Motor Co.'s top sales leader in the nation for July, outselling the runner-up a Washington, D. C. point, by more than 25 percent.

"I'm wholesaling to the public," Sinclair told the AUTOMOTIVE NEWS. "I have very little fleet business but I spent a bundle on promotion, including TV, radio and neighborhood papers."

Sinclair appears on TV, and he does his own commercials, signing off by saying: "I'm Dave Sinclair and here is my address." Apparently, many customers paid him a visit.

Used-car wholesaler John Lund is a chip off the old dynamo

Continued from Page 3

higher price for the used cars he buys.

"Four-wheel-drives in downtown Detroit aren't worth spit," he says. "But you take a four-wheel-drive and plant that little sucker right in the middle of Cedar Falls, Iowa . . . all of a sudden all the boys want that one.

"Nobody knows what a used car is worth. Remember that. If I pay you $200 more than any dealer in this town will offer, did you just get a good deal? Now, if I supply a guy with a car that he can make $1,500 on in 30 days, did I just give him a good deal?

"So, you have two good deals on either end of it. If I cut myself in for a profit in the middle, I'm entitled to it."

• He says he's "moving commodities." But cars and trucks are more than mere commodities to Lund. He describes each as if it were a personal purchase, a valuable heirloom for his collection. He fancies himself an artist. The parking lot is his canvas, each car is a brushstroke.

"A used-car dealer's personality is on his lot," Lund says. "It's a form of expression. See the cars on my lot? To a degree, they're an expression of me."

Lund's "expressions" include two Corvettes, some four-wheel-drive trucks ("Trucks are dynamite right now."), a Porsche 911, a '79 LTD sedan with about 8,000 miles, a 1967 Maserati Quattroporte and two spotless silver Mercedes-Benz 230 SLs that were picked up in Germany.

On Lund's desk are three Panasonic auto dialers which enable him to contact any one of 120 wholesale buyers at the push of a button. Lund met many of his buyers by selling cars at auctions.

"A certain guy would buy a certain kind of car, he explains. "One guy, all he wants is these real creampuffs, doesn't care what he pays. Then you get another guy who just wants to buy average cars and he's price-conscious. Then you get a guy who comes from a real ritzy neighborhood and all he wants are high-end luxury cars with low miles.

"Every lot has its own character. Every dealership has its own neighborhood and its own types of buyers to satisfy."

Lund has built a solid reputation, both as a buyer and a seller of cars.

"We're not going to try to do more cars," he says. "You can't control the quality when you get the quantity up too high. My reputation is at stake constantly. I'm selling all these cars sight-unseen on the telephone. That's like accepting a blind date.

"If a man buys a car from me and let's say something's broken. I just say, 'Send me a bill.' In my business I can never have an unhappy customer."

• In addition to his fulltime staff of buyers, Lund also has about 100 "bird dogs," scouts who earn $50 commission for each good used vehicle they track down. He spends an average of $7,500 to $8,000 per month on radio and newspaper advertisements.

"Sometimes we go in streaks," he says. "Sometimes we'll head more toward imports and sporty stuff. Then the market will start to contract, and it will get more logical. When that happens, you get into family cars; four-door sedans are very hot right now.

"And when the market gets really loose and money's flying around, you start dealing the really wild stuff."

Lund graduated from Georgetown University with a management degree, then left to sell Cadillacs in Los Angeles in 1974 ("That was my grad school," he says.) He returned to the Detroit area to work at Audette Cadillac, West Bloomfield, Mich. He then moved on to become used-car manager for a Cadillac dealer in Indianapolis.

He came back to Detroit in 1979 as new-car manager for Merollis Chevrolet but, by this time, he realized his forte was used cars. He had also grown tired of selling to the public. He quit Merollis and started selling used cars out of his Birmingham (Mich.) duplex.

That decision did not sit well with his father.

"He was furious when I quit Merollis," recalls Lund. "We didn't speak for three months. Then I told him I was starting this. And all I had was a couple thousand dollars and I bought this old car to re-sell.

"His impression was, 'I paid for four years of college and you're going to do this with your life. You're going to become a bum. You're going to become a used-car bum.'"

Now, "he thinks it's great," Lund says. In fact, Lund sold his father a vintage mid-'50s Chevrolet that one of his buyers found.

"You know, I quit this business four times," he says. "You can't quit it. Once you get the disease — it is a disease; it gets into your blood — you can't quit. I get high on the adrenalin. Right now, for me to sit still this long . . ."

He has been sitting for over an hour, perhaps, a new record. It's time to let him get up and go.

Before he bursts.

91,943 cars built last week

U. S. auto production drops 11 pct.

By Patricia Hoffman
Staff Writer

Domestic auto production dropped last week from the previous week's total as nine car facilities resumed normal operations following overtime schedules the prior week, and three General Motors plants were idled for inventory control.

Last week's car output was estimated at 91,943 units, down 11.28 percent from the previous week's 103,638, and down 14.50 percent from 107,538 units in the comparable 1981 period.

General Motors closed its Doraville, Leeds and Willow Run facilities last week to cut inventory. Operations at all three plants are slated to resume today (Oct. 4).

The GM Norwood point remained idle last week for model changeover. The plant closed Sept. 21. Production of 1983 models is scheduled to begin Thursday (Oct. 7).

Also at GM, the Framingham facility was idled indefinitely on Sept. 1, placing about 3,400 workers on indefinite layoff.

Second-shift operations were cut last week from Ford Motor's Dearborn plant.

The Ford Lorain and San Jose points, both idled Sept. 13, remained down last week for changeover. Ford's Metuchen facility, idled Sept. 20, continued down last week for inventory control. Starting Oct. 11, Metuchen will add a second shift to its full-size Mercury line, recalling about 1,200 workers from indefinite layoff.

Ford's Atlanta plant resumed production last week following a two-week model changeover. Also at Ford, the Wayne plant returned after a one-week shutdown to control inventory.

Volkswagen of America's Westmoreland point, idle since Aug. 2, began a "systems fill" last week in preparation for the start of new 1983 model production, slated to begin today.

Saturday overtime was scheduled last week at GM's Arlington point.

So far this year, the auto makers have finished 3,916,223 units, down 22.32 percent from last year's 5,041,674.

Truck production moves ahead to 32,268 for week

Domestic truck production last week jumped 13.32 percent from the previous week's total as normal five-day operations resumed at General Motors' St. Louis plant following the prior week's railroad strike, and two Ford Motor plants returned to work.

The truck manufacturers slated 32,268 units last week, up from the previous week's 28,474, and a 21.58 percent gain from last year's 26,540.

So far this year, the makers have assembled 1,497,448 trucks, up 16.82 percent from 1,281,837 finished in the comparable 1981 period.

GM's St. Louis facility scheduled a normal five-day work week last week after being idle three days the previous week due to the railroad strike.

Also at GM, the Janesville point was closed last week to control inventory.

Operations resumed last week at Ford's San Jose and Twin Cities facilities. Both points were idled Sept. 20 for inventory control.

Also at Ford, the Kansas City and Norfolk plants were down last week for inventory adjustments, while second-shift operations were discontinued at Ford's Louisville point.

Volkswagen of America's Westmoreland plant remained down last week. The plant has been idle since June 28 and is slated to resume production in December.

TV ad bureau seeks entries for dealer awards

DETROIT. — The seventh annual Auto Dealer and Dealer Association TV Commercials Competition sponsored by the Television Bureau of Advertising in conjunction with NADA is now under way, according to Richard A. O'Donnell, TvB Vice President - Detroit sales.

The contest is open to NADA members, state and local dealer associations and agencies with automotive accounts.

Six awards will be presented for the best dealer and dealer association commercials in three categories: Markets ranked 1-50, 51-100 and 101 and over. The award presentation will be held at the NADA convention in Las Vegas Feb. 12-15.

Entries in the TvB/NADA competition should include the name, address and prime contact at the dealer or association and the name, company and address of the person submitting the commercial.

To qualify for the judging, all entries, on ¾-inch videotape, should be submitted by Dec. 10, 1982 to: Walter Vetter, Television Bureau of Advertising, 485 Lexington Ave., New York 10017.

Entry blanks are available from the TvB-Detroit, 3155 W. Big Beaver Rd., Suite 217, Troy, Mich. 48084 or from the Television Bureau of Advertising, 485 Lexington Ave., New York, N. Y. 10017.

Schroeter elected

KANSAS CITY. — Arnold F. Schroeter, president of Diesel Specialties, Inc., Des Moines and Sioux City, Ia., has been elected president of the Assn. of Diesel Specialists.

Canadian makers assemble 19,492 cars for week

Canadian auto production last week rose 43.06 percent from the previous week's total as operations resumed at Ford Motor's St. Thomas point and American Motors' Brampton facility.

The manufacturers slated 19,492 cars last week, up from the previous week's 13,625, and up 39.02 percent from 14,021 in the comparable 1981 period.

Truck production also showed improvement last week as output reached 7,797 units, up 18.60 percent from the previous week's 6,574, and an 18.66 percent gain from 6,571 trucks finished in the same period last year.

After two weeks of downtime to cut inventory, production resumed last week at Ford's St. Thomas car plant.

Also back last week was AMC's Brampton point. The plant was idled Sept. 13 for tooling changes in preparation for assembly of the Spirit and SX-4 models to be added to the Concord sedans and wagons already produced there.

General Motors' Oshawa (No. One) car plant returned to normal five-day operations last week after a railroad strike idled production for two days the previous week. Assembly at the point will be halted for two weeks starting today (Oct. 4) for inventory control.

GM's Oshawa (No. Two) facility closed last week to cut inventory. Operations are scheduled to resume today.

Also at GM, the Oshawa truck plant, idled Sept. 23 due to the railroad strike, remained down last week to cut heavy inventories. Production at the plant is slated to resume Oct. 18.

Ford's Oakville truck facility returned last week following two weeks downtime to control inventory.

International Harvester's Chatham and Vancouver truck points, idled Sept. 13 for inventory adjustments, remained closed last week.

So far this year, the auto makers have finished 667,106 units, up 6.24 percent from last year's 627,900.

Year-to-date, truck production totalled 383,774 units, down 1.10 percent from 388,049 units built in the same period last year.

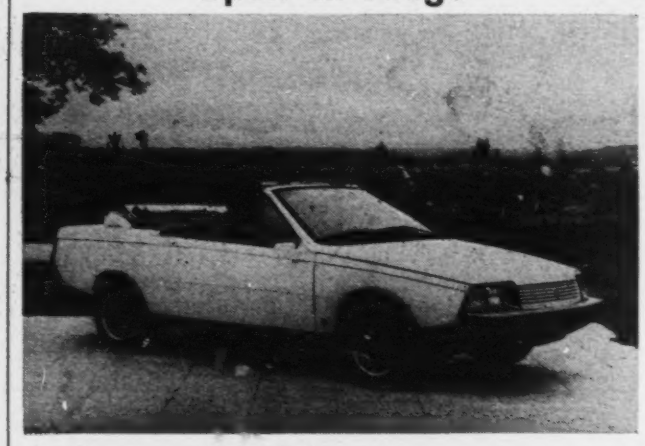
Open-air Fuego



Heuliez takes top off Renault

French coachbuilder Heuliez turned this American version of the Renault Fuego into a convertible for the Paris Auto Show. The conversion was done independently, and Renault says it has no plans for a Fuego convertible.

New 'just-in-time' systems called boon for Midwest

By Roger Rowand
Engineering Editor

Sweeping changes just starting to develop in auto production methods are going to have an unexpected side effect. Because of the changes, it appears likely the U. S. auto industry again will be concentrated in the Midwest.

That is what comes into focus in an AUTOMOTIVE NEWS look at how Detroit and its far-flung suppliers go about the complex, fast-moving business of putting together the 14,000 or so pieces that make up a car today.

A reversal is coming in a 20-year trend that has seen car factories spread from coast to coast and border to border. The reversal will come from changes in how inventories are managed.

Inventories. A dull subject? Not by a long shot in the rough international automotive environment of the 1980s.

The newest developments can be traced directly to Japan — as has been true a lot lately in Detroit.

Car makers say one of the most attractive aspects of Japanese methods is the way they handle in-process inventory — parts going into major component factories and final assembly plants.

Parts aren't stockpiled massively in Japan as they historically have been in this country. They are brought in as they are needed, thus the name just-in-time inventory.

Benefits are immediate from such a system. They come in the form of reduced demands on working capital and in improved quality as defective components are spotted quickly, car makers say.

There are varieties of the just-in-time technique — kanban is one well-known one — but tight inventories are characteristics of all of them.

"Our former tendency to provide for large banks of material between operations must go. We can no longer afford the space such material demands, nor its costs. And, more importantly, poor quality often goes undiscovered if material is allowed to accumulate between operations,"

Chrysler workers torpedoing pact; money is chief gripe; strike looms

By Marjorie Sorge
Labor Editor

The new Chrysler Corp.-UAW contract is all but dead.

Word from the rank-and-file who began voting on the agreement last week is that the contract doesn't give them enough money. They want an agreement which gets them closer to parity with their counterparts at General Motors and Ford. The difference in the hourly rates is $2.50.

At presstime, six major Chrysler locals had rejected the pact. There are 54 locals.

Many UAW officials view this as a trend and are readying themselves for the pact's defeat. The current vote is 65 percent against and 35 percent for, the UAW said.

Thomas W. Miner, Chrysler industrial relations vice president, said he is not optimistic the contract will be ratified.

But, he said, there is no more money to give and the company currently has no ideas on how the contract could be changed.

If the contract is defeated, a strike is possible. UAW and Chrysler officials might be able to negotiate an alternate agreement without a strike, but that is not likely, given the attitude of the workers, observers said.

According to David Eisenberg, auto analyst for Sanford C. Bernstein & Co., a one-week strike would cost Chrysler about $60 million in profit before taxes. In the first half of 1982, Chrysler made a profit of $256.8 million before taxes.

That profit has fueled the workers' resistance. They say they are entitled to a bigger share of that money. Chrysler officials say most of that profit didn't come from the car-and-truck business, but from the sale of the defense operation and other cutbacks.

In a recent AUTOMOTIVE NEWS interview, Gerald Greenwald, Chrysler vice chairman, said that while the company made $107 million in the second quarter, the car and truck business lost money.

UAW officials have also blamed Chrysler Chairman Lee Iacocca for some of the contract's problems. Iacocca has been publicizing the company's $1 billion cash reserve, which the union says has hurt the ratification process. Analysts say Iacocca was trying to boost confidence in the company.

But the $1 billion represents more than confidence to Chrysler. According to Greenwald, it is the equivalent of a line of credit from other companies. He said Chrysler has not had a credit line for two years and needs that money to compensate.

Miner said $1 billion doesn't go very far when vendor payments average about $15 million a week. He said none of the $1 billion reserve came from the auto business.

Even restoring COLA payments is expensive. A 16-cent

Bargain-priced Yugo

Yugoslavian model makes Western debut

Chardonnet, the French auto importer, displayed the new hatchback Yugo 45 at the Paris Auto Show, marking the Yugoslavian car's first Western appearance. Fitted with a 45-HP Autobianchi engine, it retails in France for $3,800. Show story and other photos on Page 3.

Mid-engined power

Alfa Romeo Sprint unveiled

Alfa Romeo's competition unit unveiled the Sprint at the Paris Auto Show. Based on the Alfasud coupe, the Sprint's 2.5-liter V-6 is mounted amidship, produces at least 160 HP and drives the rear wheels. Two hundred are to be built.

breaking news

Domestic new-car inventory dips to 69 days

DETROIT. — The domestic new-car inventory dropped during September to a 69-day supply on Oct. 1, compared with an 88-day stockpile on Sept. 1. The domestic industry had 1,350,366 new cars in stock Oct. 1, down from 1,379,434 a month earlier. The greater part of the decrease in days supply was because of a higher daily selling rate in September.

Harvester admits chance of bankruptcy

CHICAGO. — International Harvester Co. last week alerted its shareholders, via a special-meeting proxy statement, that the firm's future "is in reasonable doubt." It was the first time the company has admitted the possibility of bankruptcy.

Avanti Motor Corp. sold to Blake

SOUTH BEND.—Stephen H. Blake, a Washington businessman, has acquired Avanti Motor Corp. for $5 million. The purchase agreement included a $2.5 million capital loan and a line of credit from a local bank plus a package of state and local government inducements. Blake said existing man-

Three sales incentives launched by Chrysler; Nissan cuts loan rate

By Joseph Bohn
Marketing Editor

Chrysler Corp. has launched a new fourth-quarter program, designed to drum up dealer wholesale orders and push retail sales through rebates.

There are actually three programs — one for dealers, one for sales managers and a third for salespeople.

Separately, Nissan has begun a new 9.9 percent retail finance program, backed with dealer cash, on its pickup trucks.

Chrysler's dealer program is called "Kickoff for Kash." It runs from Oct. 1 to Dec. 31 and has a "one-for-one" replacement feature.

Dealers agree to purchase up front one eligible '83 factory unit for each eligible unit they retail.

By placing '83 orders in specified amounts, dealers receive value coupons, or rebates, assignable to retail purchasers of '82 vehicles in the following amounts:

$600 on Omni-Horizon, TC3/024, Turismo/Charger and Dodge 400.

$500 on Reliant/Aries, LeBaron and Rampage.

$300 on Cordoba/Mirada, Gran Fury, Diplomat, Imperial, New Yorker, domestic trucks (excluding Rampage and Ramcharger) and import cars.

A customer may elect to sign his coupon (or rebate) over to the dealer or receive a check directly from the company.

• Dealers must submit up-front orders, determined by Chrysler, by certain dates.

October allocation orders are due by Oct. 15; November order requirements (equal to October sales) are due by Nov. 15 and December orders (equal to November sales) are due by Dec. 6.

Any remaining orders due Chrysler must be placed by Jan. 6.

At the conclusion of the program, if dealers ordered more vehicles than they sold, they receive an additional $100 in dealer cash for each leftover unit.

There are also a couple of bonuses.

If dealers agree to order 50 percent more than the one-for-one October requirement, they receive $200 extra on all '83 retail deliveries (excluding import trucks).

If they order 75 percent more than the October requirement, they receive $400 per '83 delivery. Orders must be placed by Oct. 15.

Separately, there is a "Touchdown Team" program (Chrysler-Plymouth) and a "Touchdown '83" (Dodge) program for sales managers.

It also runs from Oct. 1 to Dec. 31.

The program covers all '82 and '83 vehicles, domestic and import.

Each dealership is assigned a total program objective for retail sales and a two-month E-body car objective.

Depending on size, dealerships are grouped into Flight 1, 2 or 3.

If a manager achieves a fast-start of 40 percent of the dealership objective by Oct. 31 and 100 percent by the program's end, he receives $1,500 (Flight 1, $1,000 (Flight 2) or $500 (Flight 3). If he hits the E-body objective by Nov. 30 and total objective at the end, he receives an extra $1,500 (Flight 1), $1,000 (Flight 2) or $500 (Flight 3).

Managers also receive double credits toward their overall program objectives for sales of 1982 models and '83 E-bodies.

There are also trip contests for managers.

Sales managers are grouped into one of 300 groups per division.

Within each group, the manager with the highest-over-objective retail sales will win a trip. The top 75 winners per division receive three-day trips for two to the Super Bowl, if there is one, or some alternate destination, if not.

The remaining 225 winners per division each win a trip for one to Las Vegas on Super Bowl weekend.

There are cash bonus awards, available only to those who win trips. The criteria are rather involved, with payments depending on the manager's flight, national ranking in the division, etc. Essentially, 36 awards from $10,000 to $5,000 to $2,500 to $1,250 and $625 will be given.

Finally, a salespersons' contest, also running from Oct. 1 to Dec. 31, provides $50 payments for retail sales of all '82 and '83 L-body models (excluding the derivative Scamp and Rampage pickups).

Separately, Chrysler extended

Good timing for new dealership

General Motors Chairman Roger B. Smith, right, congratulates John Bergstrom at the opening of his new Bergstrom Chevrolet-Cadillac-Buick dealership in Neenah, Wis. Smith spoke at the dedication ceremonies and said the dealer's timing "couldn't be any better" in the face of signs of an upturn in the economy.

Both U. S. and domestic cars slip for model year

Domestic sales dip 5 pct. for month

By Jenny L. King
Staff Writer

After a brief mid-month flirtation with increased sales, the domestic auto makers lapsed into their former bad habit of declines, finishing September with a 5.80-percent sales drop. Imports reported a second consecutive month of improved sales but missed record penetration by less than a percentage point.

September also marked the close of the 1982 model year, which ended on a depressed note for the U. S. auto makers—down 15.89 percent from '81—and a low note for the imports as well—down 9.33 percent.

Domestic model-year sales totaled 5,543,006 for 1982 compared with 6,590,451 for 1981. Import 1982 model-year sales were 2,157,693, down from 2,379,714. The combined model-year total was 7,700,699 down 14.15 percent from 8,970,165.

The five major U. S. auto makers reported sales of 488,452 units in September, down 5.80 percent from 518,522 in 1981. Mid-September sales had been up 14.88 percent, but they were sandwiched between an early-month decline of 28.99 percent and a final-period drop of 3.27 percent.

Import sales in September numbered 182,599, up 8.81 percent from 167,819 a year earlier. Combined sales of 671,051 were down 2.24 percent from 686,413. Imports earned 27.21 percent of the market, up from 24.46 percent in 1981 but missing the record 27.60 percent set in 1980.

Domestic sales for the first nine months totaled 4,262,595, down 13.47 percent from 4,925,889 last year. Import sales through September were 1,682,441, down 9.05 percent from 1,849,755. Industry total for the nine months was down 12.26 percent, to 5,945,036 from 6,775,644.

Third-quarter domestic sales were down 17.91 percent compared with 1981, to 1,327,771 from 1,617,414. Import sales during the July-August-September quarter totaled 581,304, up 0.95 percent from 575,851.

In September, Chrysler and

Survey shows interest rates have little to do with depressed sales

Why aren't new cars selling? In a word, pricesaretoohigh!

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Consumers in all income brackets have listed high car prices as the greatest single deterrent to buying a new vehicle, with high interest rates running a distant fourth, according to a recent study conducted by J. D. Power & Associates.

The study was commissioned by Knapp Communications, which publishes Architectural Digest, Bon Appetit, GEO and Home magazines, in an effort to chart attitudes and buying practices between consumers earning more than $50,000 per year and those who make less.

A third of the consumers in both brackets said current vehicle prices were the greatest deterrent to buying a new car.

About 18 percent in the under-$50,000 bracket cited personal/family financial conditions and 15 percent said strains on the personal/family budget were the greatest obstacle. Only 13.2 percent in the under $50,000 category said financing costs were the greatest deterrent.

In the over-$50,000 range, 14 percent cited personal/family financial conditions, 12.7 percent mentioned strains on the budget and only 10 percent said interest rates were the chief deterrent.

• Despite the unanimity in identifying the leading culprit for sluggish new-car sales, there are marked differences in the attitudes and buying patterns between the two income groups.

Nearly 78 percent of those in the $50,000-plus category plan to buy a new car in the next year, nearly twice the number of those planning to make a car purchase in the less-than-$50,000 group.

The more-affluent consumers keep their cars an average of one year less than the under-$50,000 group, which has an average car ownership of 4.2 years.

The more rapid turnover and higher price intention rate of the upper income consumers has led Knapp to conclude that consumers earning over $50,000 per year will become an important force in the U. S. car market.

According to the study's figures, the number of persons in that bracket has doubled since 1978 and is now more than 11 million persons, or about 5 percent of the population.

"While national sales of new cars continue to drop, the 5 percent segment of the population that represents household incomes of $50,000 or more will account for 18 percent of all new-car purchases this year—three times its proportionate share of four years ago," the company reported.

There are a number of findings in the study that are fairly obvious:

1. The more-affluent expect to pay on average nearly twice the amount for a new car ($9,550 vs. $5,570).

2. The higher bracket drives twice as many sports cars, while the lower bracket drives twice as many pickups (standard and mini), vans and buses.

3. Leasing is more than four times more popular with the over-$50,000 set.

4. The more-affluent look for dependability, styling / appearance and comfort, while the less-affluent rank low purchase price, fuel economy and dependability as important vehicle attributes.

5. Diesels are five times more prevalent among affluent car owners.

At the same time, there were a number of surprises. Although consumers in the over-$50,000 bracket own more import models (23.8 percent vs. 18.1 percent), only 16 percent are planning to buy a new import during the next year.

On the other side, import ownership in the less-affluent group is only 18 percent, yet 19 percent of the total in this bracket are planning to buy an import in the next year.

• On the domestic front, 60 percent of the $50,000-plus category plan to buy a U. S. car, while only 54 percent of the under-$50,000 consumers plan to do so. Domestic ownership in the two brackets is 76 and 81 percent, respectively.

Twenty-two percent of the more-affluent and 26 percent of the lower bracket are undecided on their next purchase.

According to Knapp, "These facts seem to suggest that a major opportunity exists with the uncommited buyer. Further, there is some indication that the affluent segment is giving domestic cars higher consideration for purchase than the under-$50,000 segment."

This conclusion has more ominous tones when taken in context of the average price each of the two brackets expects to pay for a new car.

It was previously thought that imports appealed to more-upscale buyers and, consequently, Detroit aimed for that segment of the market in its latest product offerings.

It may be doing so at the expense of a great number of less-affluent buyers — buyers that have traditionally purchased domestic automobiles. Low-priced imports may be attracting some of these buyers for the first time, and even greater erosion of domestic-car sales is possible.

• Further complicating matters is consumer awareness of various models and who makes them. More than two-thirds of the consumers in both brackets admitted having only fair to poor knowledge regarding the variety of domestic models on the market today.

Only 26 percent of the under-$50,000 group and 30 percent in the $50,000-plus category rated their product knowledge as good to excellent.

According to the study, only

Four makers show vital new models

Products make news in Paris

By Richard Feast
European Editor

PARIS.—Questions, questions, so many questions!

The Paris Auto Show was the setting for a glittering Who's Who of the industry. It was also a gathering of gossips, who posed more questions than they received answers for.

Just how significant are the senior management changes within the Peugeot group?

What would be the result of the court case in Luxembourg between Ford and the European Commission over export sales destined for the UK?

Was the president of Volkswagen of America showed the door, or did he really open it himself?

What will happen in Spain now that VW has finally signed that production deal with Seat?

Can British trade unions really stop Vauxhall from importing General Motors' S-car from Spain?

And which of the crop of new cars will win the important European Car of the Year Award?

In short, it was an exhilarating, tiring show — and frustrating because so many of the questions remained unanswered.

It was a show which saw the public debut of four vital new models which could change buying habits in Europe. The quartet tended to overshadow the important but smaller product changes by other manufacturers.

It also marked the unveiling of the futuristic, energy-saving vehicles developed by the Renault and Peugeot groups with the aid of government finance.

Of the four newcomers, only two will qualify for Europe's Car of the Year award.

Under the rules, the Citroen BX and Opel Corsa will not be on sale in enough European countries (five) by the end of the year. Neither, of course, will the small Mercedes-Benz (debut later this year), BMW 3-series and Fiat Type One (next year).

Which means it looks like a straight fight between the Ford Sierra and Audi 100. Whatever the reaction in the U. S., the Volvo 760 announced earlier this year received only a lukewarm reception in Europe.

(In theory, Japanese and North American cars qualify. In reality they don't.)

These, then, were the cars which the public flocked to see. There is still a great deal of buoyancy in the French market, with year-end sales expected to rise well above 1.9 million.

• Unfortunately for the French industry, demand for foreign vehicles is running at unprecedented levels—29 percent in the first half of this year.

A combination of factors, including strikes and inflation induced price disadvantages, influenced this. The government's economic measures, which included a price freeze until November, may help reduce inflation over the long term. But at present, imports seem destined to edge further upward.

Renault, however, retains a solid 40 percent of the domestic market. It had no really new products to talk about — a hatchback adaptation of the R9 (Alliance) is expected next year—and instead concentrated on reviewing its recent past and previewing its future.

Bernard Hanon, group president, turned in a confident, relaxed performance before a horde of newsmen. He had, one observer thought, the Kennedy touch.

He did not look like a man facing another year of financial losses (1981, some $100 million) but spoke of increasing investments ($1.2 billion this year).

Renault's five-year plan will involve a new model each year, greater automation in the factories and creation of new markets. This year the group's annual production will exceed 2 million units for the second time in its history.

• Jean Boillot, president of Automobiles Peugeot, had a more difficult time in what is believed to be his first general news conference. He stressed the hard work done by the company in the integration of the Peugeot and Talbot networks and the introduction of new models.

This, he said, had taken place against a background of economic recession.

But he had a difficult time fielding questions about the future of the company's Spanish and UK plants.

The UK Talbot facilities are totally dependent on a contract to supply kits of Hillman Hunter (Peykan) models to Iran—a volatile part of the world since the revolution.

In Spain, where the domestic competition is heating up with the arrival of General Motors, the Peugeot group has a small and fragmented presence. It inherited the Chrysler (Talbot) business as well as the Citroen factory, which by an historical quirk also assembles Peugeots.

What this amounts to is too much capacity and too many employes. The company has begun negotiations with unions and local authorities on rationalization, having been nodded through by the government.

• The conference was complicated by the fact that on the eve of the show, the Peugeot group (PSA) announced a management restructuring. It will, Boillot said in attempting an explanation, create a more streamlined management structure between the ruling PSA and its two subsidiaries, Auto-

UAW demands parity at Chrysler Canada

By Marjorie Sorge
Labor Editor

The UAW has set 10:00 a.m. Nov. 5 as the strike deadline for reaching a new contract with Chrysler Canada and is demanding parity with Ford and General Motors.

Currently, Chrysler workers lag behind those at the Big Two by about three dollars an hour. Their base wage is $9.07 (Canadian) an hour.

In order to accomplish parity, the UAW wants up-front money for workers, quarterly increases in cost-of-living adjustments (COLA) and will not accept wage increases tied to profits, as have been negotiated in the U. S.

Workers in Canada have indicated they will not accept an agreement similar to the U. S. Chrysler pact. That contract resumes lump-sum COLA payments and cracks down on chronic absenteeism.

In the U. S., UAW members have voiced strong opinions against wage increases tied to profitability and the more stringent absenteeism system. Ratification of the new U. S. contract is in doubt.

This doubt, is one reason the Canadian UAW has set a Nov. 5 deadline. According to Robert White, UAW vice president and director of the Canadian Region, the Canadians want to know where the Chrysler U. S. settlement is going before they complete their negotiations.

Getting a settlement at Chrysler Canada will not be easy, and White said he is less optimistic that an agreement can be reached without a strike than he was when negotiating at GM and Ford.

In the U. S., Chrysler officials have said the agreement it negotiated with the UAW is the best possible under Chrysler's current economic situation. But union officials in Canada feel Chrysler can afford to meet their demands.

• "They can meet the economic package we are talking about and remain viable," White said. "You can't put money into new plants and technology and not give any to the workers."

Chrysler is in the midst of a major remodeling of its two Windsor plants for production of front-drive cars and a garageable van.

Meanwhile in Canada, a new two-year agreement between the UAW and Ford Motor Co. of Canada has been ratified by 90 percent of the production workers and 73 percent of the skilled trades workers.

The agreement is similar to the GM of Canada pact negotiated in mid-September. The contract provides wage increases and COLA payments but eliminates paid personal holidays (PPHs).

The COLA formula remains the same as in the last contract for the first 18 months of the agreement. That formula gives workers a one-cent increase for every 0.26 percent rise in the combined Canadian-U. S. Consumer Price Index. During the last six months of the pact, the

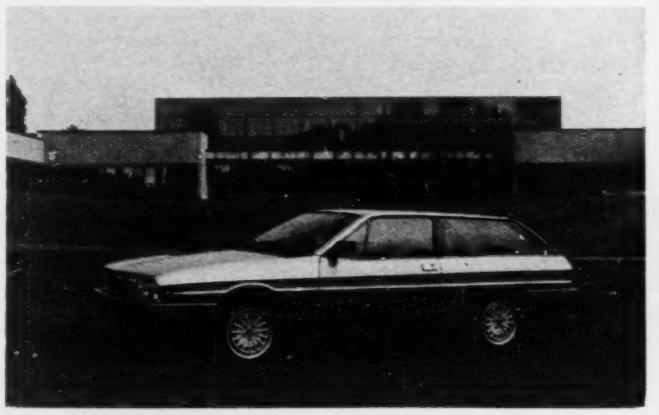
New at Paris

Beefed-up Samba

Peugeot introduced a higher-power engine option for top versions of the Talbot Samba. The Rallye version, new for Europe, is offered with an 80-HP engine.



One-of-a-kind Lancia

Pininfarina showed its one-off Olgiata at the Paris Auto Show. The elegant, wagon-like car is built from the Lancia Gamma.

VW's new Polo coupe

Smaller than the Golf/Rabbit, the new coupe (hatchback) version of Volkswagen's Polo was unveiled at Paris. It is offered with 50- and 60-HP engines as well as in GT version, with a 75-HP engine that propels the car to 104 MPH.

Opel styling study

Opel showed Paris a version of its Monza coupe with a smoother front end. The car is a design study.

Both U. S. and domestic cars slip for model year

Domestic sales dip 5 pct. for month

Continued from Page 2

American Motors were the only domestic auto makers to post sales gains. Chrysler was up 14.16 percent, to 55,237 from 48,384 last year, while AMC blipped a plus 0.38 percent, to 12,343 from 12,296.

General Motors was down 7.48 percent, to 301,692 from 326,089; Ford Motor Co. was down 6.14 percent, to 110,166 from 117,372, and Volkswagen of America was down 37.32 percent, to 9,014 from 14,381.

GM's share of the domestic market in September slipped to 61.76 percent from 62.89 percent in 1981. Ford cornered 22.55 percent, down from 22.64 percent. Chrysler leaped to 11.31 percent from 9.33 percent; AMC edged ahead to 2.53 percent from 2.37 percent, and VWoA dropped to 1.85 percent from 2.77 percent.

For the 1982 model year, GM was down 16.00 percent, to 3,387,607 from 4,032,727 in '81. Ford was down 13.31 percent, to 1,289,983 from 1,487,961. Chrysler dropped 13.84 percent, to 658,720 from 764,535. VWoA sales of 107,396 were down 32.89 percent from 160,022, and AMC sales of 99,300 were down 31.61 percent from 145,206.

GM earned 61.12 percent of the domestic market for the 1982 model year compared with 61.19 percent in 1981. Ford had 23.27 percent, up from 22.58 percent. Chrysler climbed to 11.88 percent from 11.60 percent; VWoA dropped to 1.94 percent from 2.43 percent, and AMC was down to 1.79 percent from 2.20 percent.

In September Chrysler, Lincoln, Buick and Cadillac posted sales gains compared with year-ago levels. Chrysler more than tripled its numbers, Lincoln was up 79.03 percent, Buick was up 6.76 percent and Cadillac was up 7.57 percent.

• Among the imports, Datsun set a record for the month with sales of 41,090 new passenger cars; Jaguar sales doubled; BMW was up 27.52 percent from last year; Audi was up 11.47 percent; Mazda was up 14.98 percent; Mercedes-Benz was up 44.85 percent; Saab was up 21.14 percent; Toyota was up 16.36 percent, and Volvo was up 22.32 percent. Combined Mitsubishi sales by Chrysler were up 47.30 percent on a September-to-September basis.

Of the total September market, imports accounted for 27.21 percent, intermediates had 21.62 percent, subcompacts had 19.10 percent, compacts had 15.42 percent, standards had 10.85 percent and luxury models had 5.80 percent.

The domestics-only market class spectrum was as follows: Intermediates at 29.70 percent, subcompacts at 26.25 percent, compacts at 21.18 percent, standards at 14.90 percent and luxury models at 7.97 percent.

Domestic new-car sales during the final 10 days of the month were down 3.27 percent, to 221,369 from 228,850 last year.

Chrysler was up 39.53 percent, GM was down 7.62 percent, Ford was down 1,47 percent, AMC was down an estimated 12.50 percent and VWoA plunged 33.46 percent.

With 25 selling days in September both this year and last, the daily selling rate for domestic cars slipped 5.80 percent, to 19,538 from 20,741. The third-period rate of 24,597 was down 3.27 percent from 25,428 in 1981; there were nine days both years. Based on third-period sales, annualized domestic new-car sales for 1982 were running at a rate of 5,789,000 units.

Chrysler, Nissan offer variety of incentives

Continued from Page 2

its rebates on '81 and '82 D-50 imported pickups. The two-wheel-drive versions get $300 rebates, the four-wheel-drive versions, $400 rebates, from Oct. 1 to Dec. 31.

Dealers do not have to participate in Chrysler's other "one-for-one" wholesale / retail program to qualify for the import-truck rebates.

A Ramcharger program pays $1,000 customer rebates until Dec. 31, plus up to 50 African trips. There are also payments of up to $500 in dealer cash, up to $100 in sales manager cash and up to $50 in salesperson cash per sale. Dealers must buy one demo to enter the program.

• The latest Nissan program offers 9.9 percent consumer retail financing, along with dealer incentives up to $675 on '82 and '83 pickup trucks.

Essentially, dealers are free to enroll their own credit sources.

On 1-12-month contracts, Datsun pays banks 95 percent of the difference between 9.9 percent and their prevailing rate.

On 13-24-month contracts, Datsun pays 90 percent of the difference, on 25-36 month contracts, Datsun pays 85 percent of the difference. And on 37-to-48-month contracts, Datsun pays 80 percent of the difference.

C. P. King, senior vice president of sales for Nissan, estimated customers would be able to save $1,100 to $1,800 on financing charges on a 48-month contract.

For the past two months, Nissan has been offering 12.7 percent truck financing in California only through Security National Pacific Bank, and its success with that venture prompted the new national finance program, King said.

Datsun is concurrently running a special incentive on pickups.

On diesel pickup trucks, it is paying dealers $500 per retail unit, plus another $125 to salespeople and an additional $50 to sales managers.

On gasoline-engine trucks, dealers receive nothing, but salespeople receive $50 and sales managers $25.

Toyota deal adds Volvo

KEENE, N. H.—Cheshire Toyota Co. has added Volvo. William J. O'Sullivan is president.

State capitol roundup

Bumping into varied usury ceilings

By Mary E. Jones
Special Correspondent

High interest rates continue to plague new-car sales.

In most states, state usury laws limit the interest rate that can be levied on various types of loans—home mortgages, retail installment, consumer credit and motor vehicles.

State usury limits vary considerably. Arkansas has the lowest rate—10 percent—which is set in the state constitution. Two other states set their limits below 17 percent; 16 states between 17 and 18 percent; four states between 19 and 20.8 percent; 10 states and the District of Columbia between 21 and 21.5 percent, and four states between 24 and 25 percent.

Thirteen states permit more than 25 percent. State usury limits are maximum rates that can be charged; actual interest rates can be lower. A list of state usury limits accompanies this article.

Two states approved legislation in 1982 concerning interest rates that can be levied for new-car loans. South Dakota approved a law which repeals its old interest ceiling of 20 percent. The new law sets no ceiling.

Pennsylvania also approved a new law which increased the maximum legal rate of interest on new-vehicle loans to 18 percent.

According to figures compiled by the MVMA, the average cost for a new car in 1981 was $8,710. The figures break down to $8,642 for domestically produced vehicles and $8,884 for imported cars.

The average amount financed by finance companies (including manufacturers' captive finance companies such as Ford Motor Credit and GMAC) was $7,300.

The average length of a vehicle loan has increased in recent years.

According to figures compiled by the Board of Governors of the Federal Reserve System, 75 percent of new-car loans financed by finance companies in 1981 were for more than 42 months. This was up from 45.2 percent in 1978. Last year was also the first in which more than 50 percent of used-car loans were for longer than 37 months.

More than $93 billion was borrowed in 1981 for the purchase of new automobiles, and $84 billion was repaid during the period. Outstanding automobile loans at the end of the year totaled more than $125 billion.

DOT figures show that for the last quarter of 1981, the average interest rate in the U. S. was 17.4 percent for a new-car loan. This was up from 10.9 percent five years earlier, and up 1.6 percentage points from the first quarter of 1981.

High interest rates have been cited as a major factor in the closing of many dealerships in the past few years. From July 1, 1981, to July 1, 1982, domestic new-car dealerships (including Volkswagen) were down 1,229 to 21,124 (Automotive News, Aug. 9).

Sources of automotive credit have dried up in some areas. Some dealerships have indicated they are using company-controlled finance companies as their only source of credit.

Both vehicle manufacturers and lending institutions have tried creative methods to spur automotive loans. For example, banks in Michigan are offering the highest legal rate of interest for new-car loans—16.5 percent. However, at least one credit union is offering 16 percent if the purchaser already has an account at the credit union and a 20-percent downpayment.

Leased Cars of America, in East Detroit, Mich., is offering a rate of 15 percent on two- to four-year leases.

In Pennsylvania, although a new law allows an 18-percent rate, the actual rate of interest can be much less, depending on length of loan, amount of downpayment and other factors.

On Aug. 31, Monticello Banking Co. of Kentucky announced a program which is setting aside $1 million in loans for the purchase of American-made automobiles, homes, farm machinery and appliances. The interest rate is set at 12 percent.

By the second day of the program, the bank had received $700,000 worth of applications.

According to Odis Eades, senior vice president of the bank, applications contained a good mixture of home, automobile, appliance and farm machinery loans.

The bank began the program as part of Gov. John Y. Brown's "Buy-A-Home" campaign. Preliminary reports indicate other banks will offer similar programs. Local retail and grocery stores are also offering discounts on merchandise.

There are six bills pending in Congress which would preempt state usury limits.

Two bills would allow loans to be awarded at a rate of interest higher than states currently allow.

Four other bills would set a national interest rate. Two of these bills would establish a national interest rate on loans over $300 at 10 percent. Two other bills would establish a national, indexed usury limit.

Resolutions were ratified in North Carolina which urge Congress to reject any legislation which would preempt state usury limits. Similar resolutions are pending in Michigan and New Jersey. California has adopted a resolution which requests Congress to enact legislation which would establish a national maximum interest rate selected by Congress and the President.

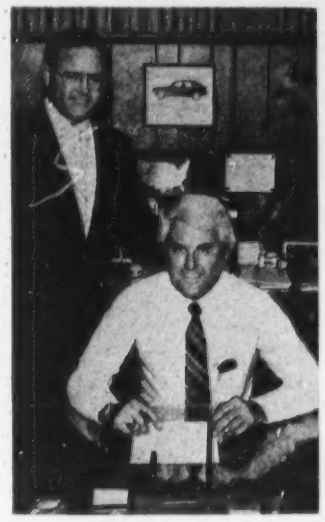
Former dealer gives computer to college

COLUMBIA, Md. — Henry C. Marshall, a former auto dealer in Reading, Pa., donated a Texas Instruments mini-computer, valued at $50,000, to Howard Community College.

Marshall, an auto dealer for more than 30 years, closed Marshall Chevrolet - Volvo - Honda last spring. Relocated in his native Howard County, he is now active in real estate.



Arizona dealer signs

Gary Cropper, right, signs with Chevrolet to become owner of Gary Cropper Chevrolet, Inc., Casa Grande, Ariz. Witnessing is Kelsey Kemp, Phoenix zone manager.

Mikels milestone

Warren F. Mikels, left, president of Mikels Motors, Inc., Stroudsburg, Pa., receives his silver anniversary award from Cadillac representatives L. W. Bowles, center, Philadelphia zone manager, and Rita M. Miller, Allentown district sales manager.

L-M for Ford

Following a $100,000 modernization project, Lloyd Ford, left, has opened a Lincoln - Mercury dealership in Stuart, Fla., along with William A. Chamberlain. The dealership vice president/general manager is congratulated by Harold S. Feder, Jacksonville district sales manager.

PRODUCED EXCLUSIVELY FOR AUTOMOBILE DEALERS

From our research into human behavior we developed this Body Language Cassett titled "THE BODY LANGUAGE OF THE AUTOMOBILE DEALERS CUSTOMER." On this cassett is a complete explanation of body signals to look for that will get you many more sales than you thought possible.

THE ONLY NEW SALES TECHNIQUE TO COME ALONG IN MANY YEARS

NOTHING TO READ, NOTHING TO STUDY

After listening to this Body Language Cassett only once, you'll be amazed how many body signals you've been missing.

FASTER CLOSINGS

Close faster by knowing what Body Signals to look for that can make or break a sale.

HIGHER GROSSES

Can you recognize the Body Signal that can get you that bigger gross?

BUYERS REMORSE

If you know what Body Signal to look for, you can solve the problem of buyers remorse before it starts.

REVERSE BODY SIGNALS

In our research we found that there is a way to reverse your customers Body Signals to your benefit.

Domestics show slight gain

Imported-car TV ads up sharply in first half

By Joseph Bohn
Marketing Editor

Combined TV ad spending by domestic car firms was just slightly ahead of last year during the first six months of 1982 —but import spending showed a big jump.

Domestic auto firms spent $174,931,500 in spot and network TV during January-June, 1982, according to the Television Bureau of Advertising. That compared with $173,018,000 in the first half of 1981.

Interestingly, higher spending by two smaller domestics, American Motors and Chrysler, offset cutbacks by General Motors and Ford Motor to register the narrow gain.

AMC spent $11,567,700 in TV during the first six months against $10,405,500 in 1981. Chrysler spent $42,684,100 against $31,313,800.

GM's expenditures declined to $63,186,200 from $65,721,900, while Ford dropped to $57,493,500 from $65,576,800.

Higher network spending also offset a reduction in spot outlays.

Domestic firms spent $141,730,500 in network TV against $138,616,500 in 1981. Their spot spending dropped to $33,201,000 against $34,401.500 in 1981.

AUTO MANUFACTURERS' TV ADVERTISING

Top Import Totals	$ 47,060,700	$40,234,100	$ 87,294,800	$ 53,873,100	$55,354,100	$109,227,200

Source: Television Bureau of Advertising analysis from Broadcast Advertisers Reports data.

Biggest gains, though, came from the importers. They spent $109,227,200 in TV advertising during January-June, 1982, up from $87,294,800 in 1981.

Only three of the 13 import auto advertisers in the survey reduced spending. They were Fiat, Toyota and Volvo. Fiat almost dropped out of the medium after reverting to a specialty-car market.

On the other hand, Renault, which has been coming on strong as a spender, spent $9,951,200 in TV against $2,605,100 in 1981.

Renault's TV will increase even more sharply because of the Alliance launch this fall.

During the six-month period, Toyota was the top import spender, with outlays of $21,483,100, even though this was a drop from $24,910,000 in like 1981.

3 Plow Choices for Compact Trucks

6½' Compact, 6½' and 7' standard plows, all available with Isarmatic® Mark IIIa and Hydra-Turn® power angling. 6½' Compact also available with the economical Power Lift with manual angling.

Select from 3 plow sizes and 2 power options to fit your snowplowing job.

Power Lift: Electro-Mechanical (manual angling)	YES	NOT AVAILABLE	

*Alternate choice—gives 6" of extra plowing width.

The Most Dependable Hydraulic System Made

The Isarmatic® Mark IIIa—Western's front-mounted, electrically driven hydraulic unit—provides swift, smooth lifting and angling action. Exclusive Hydra-Turn® power angling gives you full control of the plow from inside the cab.

Isarmatic® & IIIa Control

The Power Lift—A Western Exclusive

The Western Power Lift is an electrically driven linear actuator. It's available as a less expensive, non-hydraulic optional power source for the 6½' Compact plow. The Power Lift provides the four-wheel drive compact truck owner with a simple yet dependable raising and lowering action. Manual angling is required.

Power Lift & Switch

Compact 6½' Plow with Manual Angling

GM extends arbitration to New York area

NEW YORK. — General Motors has introduced its third-party arbitration program — which exists in 37 cities — to Connecticut and New York.

The program for unresolved customer complaints is administered by the Better Business Bureau.

O. Robert Pansa, director of consumer relations for GM, said if the consumer follows the normal process of contacting the dealer first, then contacting the GM zone office and finally the divisional home office, and the problem still is not resolved, then the consumer can call the Better Business Bureau and submit the complain to mediation and binding arbitration. If the matter goes to arbitration it is binding on both parties.

Under this plan, GM agrees to arbitrate any dispute with a customer regarding the application, administration or interpretation of the new vehicle warranty or product question arising out of the manufacturer responsibility when the vehicle is out of warranty, up to a five-year period.

The 350 dealers in the New York area are being asked to voluntarily participate.

The introduction in Connecticut came just prior to implementation of the state's tough "lemon law."

GM began launching this arbitration program in cooperation with the Council of Better Business Bureau in June, 1978.

American Sunroof adds facility in Georgia

SOUTHGATE, Mich.—American Sunroof Co. has opened a Southeast regional facility in the Atlanta area. Robert J. Mangan is Southeast regional director.

The new center is at 2350 Sylvan Rd., East Point, Ga. ASC's other marketing and distribution centers are: Northeast region, South Norwalk, Conn.; Central region, Livonia, Mich., and Western region, Los Angeles.

Times are tough, but Conn Smith is doing OK

Dealer's got a 70-hour-week job

ST. LOUIS. — "You have to spend at least 70 hours a week on the job or you're neglecting your dealership," a Ford-Mercury dealer declared at a district sales meeting here.

Conn Smith, of Community Ford-Mercury in Petersburg, Ill., opted to go into business for himself after 21 years of managing other dealerships. He didn't pick the best of times, but within two months his dealership was in the black.

Smith previously had been with Dodge, Chrysler-Plymouth and Ford dealerships in Springfield, 30 miles southeast of Petersburg. Petersburg is a farming community, and this hasn't been a good year.

Community Ford-Mercury needed a new image so Smith decided on a new coat of paint. He noted, too, that every time a dealer sells a big car he has the opportunity to sell a small car and a truck to the same family.

It's 11 weeks behind last year's

4-millionth car of 1982 due today

By Patricia Hoffman
Staff Writer

U. S. auto production is expected to hit the 4-million mark today (Oct. 11), about 11 weeks later than that total was reached in 1981.

So far this year, the auto makers have finished 3,999,024 units, 20.68 percent behind the 5,041,674 cars produced in the comparable period last year.

The manufacturers wrapped up September production with 425,533 units, down 7.03 percent from 457,731 in the comparable 1981 month. It was the lowest total for that month since 355,202 units were assembled in 1961.

The makers built 1,223,906 cars during third quarter, down 10.89 percent from last year's 1,373,521. It was the lowest third quarter output since 1,215,884 units in 1970.

Last week, the manufacturers slated 83,708 cars, down 8.05 percent from 91,036 the previous week, and down 22.16 percent from 107,538 built the same week last year.

Downtime was scheduled last week at four General Motors points and four Ford Motor facilities. GM's Doraville, Willow Run and Wilmington plants, plus Ford's Kansas City, Metuchen and Wayne facilities were idle for inventory control.

GM Van Nuys and Ford Lorain were closed last week due to model changeover.

Sales, marketing execs named in Chrysler restructuring

Chrysler Corp., which is revamping its marketing operations, has made several personnel appointments.

More are anticipated as the company restructures some of its Chrysler-Plymouth and Dodge marketing activities for greater competitiveness.

As part of the changes, more day-to-day authority and long range planning authority has been elegated by John B. Naughton Sr., executive vice president of sales and marketing, to Chrysler's top sales and marketing persons.

Joseph A. Campana succeeded John K. Givens, former vice president of marketing, as Chrysler's top marketing executive. Campana has been elected vice president-marketing.

Campana is restructuring some of the functions reporting to him and naming new people to them. He is responsible for all product and corporate marketing activities, including advertising, merchandising and market research.

Replacing Campana as general manager of Truck Operations is Patrick Keegan, who had been director of sales operations in the truck group.

Keegan reports to E. Thomas Pappert, vice president of U. S. automotive sales, who now has charge of Truck Operations, Import Operations and Sales Planning and Programming, as well as the field sales organization.

Darrell Davis continues as general manager of Import Operations, reporting to Pappert. Previously, Import Operations and Truck Operations reported to Naughton.

T. R. Cunningham, who had been sales manager under Pappert, is now general sales manager in charge of dealer planning and development, vehicle distribution and scheduling.

Givens has been named vice president, sales and marketing programs, reporting to Naughton. He handles special assignments in the sales and marketing areas.

House recesses without voting on local content

WASHINGTON. — Time ran out and Congress recessed before the UAW-backed automobile domestic-content bill reached the floor of the House. But Rep. Richard Ottinger, New York Democrat, expects the bill to be brought up again during the post-Thanksgiving "lame duck" session.

However, much of the campaign thunder will have evaporated. At least some of its 200-plus co-sponsors will not be back, and the pre-Christmas session will have to be used for money bills.

Canadian makers assemble 70,324 cars for month

The Canadian auto makers wrapped up September production with 70,324 units, more than triple the 22,690 built in the comparable 1981 month.

During the third quarter, the auto manufacturers finished 190,249 units, up 88.05 percent from last year's 101,167.

Truck output last month reached 34,835, a 12.73 percent gain from 30,901 built in September, 1981, and the total for the third quarter of 1982 was 102,026, up 11.26 percent from 91,699 trucks completed during the third quarter last year.

Last week, the auto makers slated 5,203 units, down 69.60 percent from the previous week's 17,115, and down 62.89 percent from 14,021 in the comparable 1981 period. Each of the Big Three had plant downtime last week.

The truck manufacturers targeted 4,699 units last week, down 32.05 percent from 6,915 the previous week, and down 28.49 percent from 6,571 built the same week last year.

Truck production shows rise for month, quarter

Domestic truck production in September reached 146,274 units, a 13.27 percent gain from 129,135 built the same month last year. The total for third quarter was 450,571, up 31.59 percent from 342,406 the comparable 1981 period.

Last week, the makers slated 21,823 trucks, down 36.49 percent from the previous week's 34,362, and down 17.77 percent from 26,540 in the year-ago period.

Idle last week for inventory adjustments were General Motors' Flint (pickup line), Janesville and St. Louis facilities; Ford Motor's Kansas City, Kentucky, Norfolk, Michigan and Twin Cities points, Chrysler Corp.'s Warren plant, and American Motors' Toledo facility. Volkswagen of America's Westmoreland point, idled June 28, remained closed for model changeover.

Chrysler contract appears doomed

Continued from Page 1

COLA increase paid in March 1981 for the previous December-to-February cost Chrysler $4.1 million. The total COLA payment of $1.15 for December, 1979, to February, 1981, cost the company $29.2 million, according to a Chrysler official.

Workers at Chrysler made concessions worth more than $1 billion from 1979 to 1981 to help the company qualify for federal loan guarantees.

The new contract is a one-year agreement on economics and two years on working issues. It provides three quarterly lump-sum cost-of-living adjustments (COLA) and wage increases tied to company profitability, and it cracks down on chronic absenteeism.

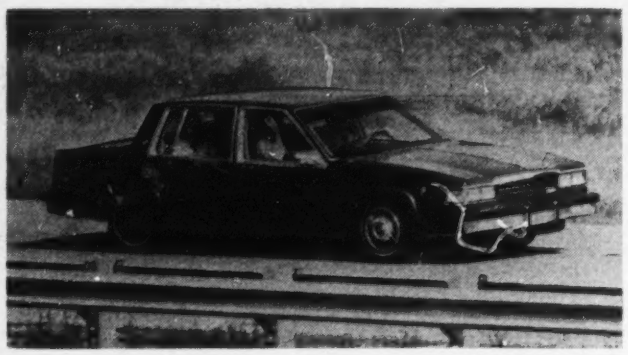
Looking into GM's future

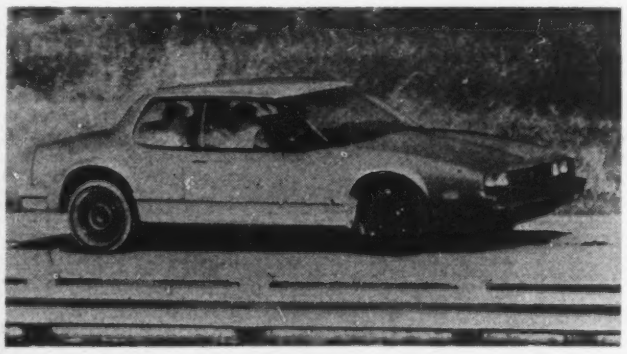


Cruisin' in the C-body

A crew of General Motors proving-ground employes take a test ride in a new Cadillac front-drive C-body sedan prototype. The Cadillac, along with its Oldsmobile 98 and Buick Electra sister cars, will bow as an '84 model. The Cadillac and Olds versions will be built at GM's new Lake Orion (Mich.) assembly plant, beginning next summer. The C-bodies have fully independent suspension. Standard power may be a V-6 engine.

Blazurbanvan?

This unusual prototype, which appears to be a cobbled-up collection of parts from the GM truck lineup, may, in fact, be an early test mule for a new downsized GM van. Reportedly, GM is considering introduction of the new van, codenamed M-van, sometime in 1985. It will compete with similar entries from Ford and Chrysler.



The enigmatic 'E'

Origins of this vehicle are sketchy but sources speculate that it's an early prototype for GM's new front-drive E-body, which will replace the current Cadillac Eldorado, Oldsmobile Toronado and Buick Riviera in '85. The E-cars will be built at the new GM Detroit assembly plant.

Diesel car sales plunge; penetration below 5 pct.

By Jim Plegue
Staff Writer

Sales of diesel-powered automobiles in the U. S. plunged 34.10 percent and accounted for less than 5 percent of the total market during the 1982 model year.

Domestic and import makers sold 353,507 diesel cars during the '82 season, a substantial drop from the 536,440 sold during the '81 model year.

Consequently, the diesel share of the market dipped from 5.98 percent of total domestic and import-car sales during the '81 campaign to 4.59 percent in the '82 model year.

The depressed total came on the heels of a two-year diesel sales bonanza. Sales jumped significantly during the 1980 and 1981 calendar years but the diesel juggernaut fizzled in early '82 as consumers reacted promptly to lower or stabilized gasoline prices as well as the premium price tag on many diesel-engine options.

• "We'll just sit back and wait for gasoline prices to go up again," was the rather cavalier observation by an official of one import company.

Indeed, some analysts feel that diesel fuel may soon regain a large price advantage over gasoline, igniting another buying spree.

Ruzicheimer Reports on Automotive Alternatives, in its inaugural September issue, noted that the diesel-fuel price advantage over gasoline had risen from an average 4.9 cents in April to an average 8.6 cents in August of this year.

And Chase Econometrics last week estimated that the diesel-installation rate in the U. S. could top 14 percent of total car sales and 17 percent of total light-truck sales in 1985. The forecast was made on a probability-weighted basis using what Chase called "the mostly likely scenario."

Hardest hit by the current diesel sales slump was General Motors. GM's sales of 187,823 diesel cars during the '82 model year were down 44.91 percent from the 340,916 sold during the '81 model year.

Likewise, GM's diesel market share was sheared 10.42 percent-

Domestic-car stockpile cut back to 69 days as intros boost sales

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory slid to 69 days Oct. 1 from an 88-day supply a month earlier as several new models hit the showrooms and the sales rates perked up a bit.

The domestic new-car inventory totaled 1,350,366 Oct. 1, down from 1,379,434 Sept. 1. While the Oct. 1 total was well below the 1,426,922 new cars on hand a year ago, both unit counts represented 69-day supplies.

The inventory of new imported cars also dropped during September, but not as dramatically as the domestics. There were 354,500 new imported cars in stock Oct. 1, a 48½-day supply, down from 387,780 a month earlier, a 51-day supply.

All five domestic corporate makers trimmed their inventories during September in terms of days supply, although American Motors and Chrysler Corp. logged increases in their unit counts — which were more than offset by higher sales rates.

• GM chopped its stockpile to 69 days Oct. 1 from 86 a month earlier. Generally, the larger cars were in leaner supply, while X-bodies and A-bodies were still heavy.

Ford Motor Co. opened October with a 67-day supply, down from 88 days a month earlier. Stocks were generally balanced, with the lightest supplies in those lines which will undergo extensive redesigning (Thunderbird and Cougar) or will be replaced with new cars (Fairmont and Zephyr).

Chrysler Corp. had a 77-day supply Oct. 1, down from 85 days a month earlier. Chrysler's inventory included almost 10,000 E-Type Chryslers and Dodge 600s which had not yet gone on sale.

AMC had a 71-day supply of new cars Oct. 1, down from 106 days a month earlier. About one-third of the stockpile was its new Alliance line, which got off to a fast sales start and was in 42-day supply.

Volkswagen of America sliced deeply into its inventory during September and cut it from 85 days to 53 days.

The Oct. 1 domestic inventory was divided this way: GM, 61.64 percent; Ford Motor Co., 21.80 percent; Chrysler Corp., 12.54 percent; AMC, 2.60 percent, and VWoA, 1.42 percent.

A month earlier, the domestic inventory was divided as follows: GM, 61.37 percent; Ford Motor Co., 22.53 percent; Chrysler Corp., 11.56 percent; AMC,

Import inventory dips to 48½-day supply

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. dropped again during September and stood at a 48½-day supply Oct. 1, down from 51 days a month earlier.

The import inventory was riddled with shortages last month, and this month they are even more severe. Some lines are so lean that sales are being affected.

The inventory of new imported cars totaled 354,500 Oct. 1, compared with 387,780 a month earlier.

While an increased sales rate among domestic lines in September helped trim the U.S.-built stockpile from 88 to 69 days Oct. 1, the import sales

breaking news

American steel shipments rise a bit

WASHINGTON.—Shipments of steel from U. S. mills in August rose slightly from the 20-year low reached in July, but they still were 32.7 percent below those of August, 1981, and were off 31.4 percent for the first eight months of 1982, the American Iron & Steel Institute said. August shipments were 4,724,000 tons against 4,514,000 in July and 7,020,000 in August last year.

Bieber enters race to succeed Fraser

DETROIT.—Owen Bieber, UAW vice president and director of the General Motors Department, has entered the race to succeed Douglas A. Fraser as president of the 1.3-million-member union. Bieber said he believes he "has a shot at winning it." Other major contenders are Donald F. Ephlin, vice president and director of the Ford Department, and Ray-

Age discrimination case expected to last a long time

Spaulding's GM suit switches courts

By Roger Rowand

Mention George G. Spaulding in some crowds around Detroit and there'll be an E. F. Hutton commercial response of immediate, attentive silence.

Spaulding, 62, is suing General Motors for $69 million for age discrimination after being summarily pushed out in June, 1981. Interest has been acute in many circles.

A strong rumor spread through automotive offices last week that the case had been settled. Some said under the settlement GM paid $10 million to the former Pontiac executive and 22-year GM veteran.

The rumors aren't true.

The case is very much alive, but one major change may have led to speculation. The case, at GM's request, was switched to federal court in Detroit from state court in Pontiac.

It may go on for a long time if the preliminaries are any indication.

As the opposing sides hassle over the intricacies of pre-trial discovery proceedings, Spaulding's lawyers say they need depositions from 31 individuals, 20 of whom are vice presidents or above at GM.

They told the court they expect it will take 18 months and lots of travel to run through those depositions.

High on the deposition list are William E. Hoglund, Pontiac general manager, and Robert E. Chandler, personnel director at Delco Products Division, Dayton.

Spaulding was general sales manager at Pontiac and Hoglund figured prominently in his removal, Spaulding said. Spaulding was offered a job at Delco Products if he were to step down at Pontiac, GM said.

In addition to age discrimination, Spaulding also is charging defamation of character, breach of contract and breach of good faith.

He recently asked Judge Avern Cohn to order GM to retire him. The company has declined on the ground such a move would have to be based on age and would give Spaulding more age-discrimination ammunition.

• Spaulding was put on layoff-inactive status in September, 1981, and given 8½-months severance allowance at $7,500 a month, or a total of $63,750. Then he had two options. He could retire under a mutually agreeable plan or he could wait until September 1982, and retire at corporate option.

GM said it was willing to retire him at corporate option if he signed an agreement waiving additional allegations of age discrimination.

If he had retired, he would have received about $3,000 a month in retirement pay and kept medical and life insurance.

When his replacement at Pontiac first was discussed, Spaulding was offered full pay for the balance of the year and GM in advance paid a firm called THinc a fee of $40,000 to help him find a job outside GM, documents show.

At one point, in exchange for an amicable settlement, GM offered to add supplementary retirement benefits to the level they would have reached had he remained three more years to age 65—but with a release of all claims.

Spaulding rejected the Delco Products job and its comparable salary, the job-finding help and the sweetened retirement plan and filed suit.

Spaulding's address on court documents is Kiawah Island, S. C. He received no GM pay between the severance allowance and retirement, his lawyers told the court.

He is "unable to acquire another employment position in his field by which to support himself and family" because of the termination and the way in which it was done, Spaulding's lawyer said.

The next round will be at 4 p.m., Dec. 7 in Judge Cohn's courtroom when a status conference will be held.

Different kind of kit car

This Ford LTD is inconspicuously armored with a pre-fab kit made by Custom Armor Manufacturers, Ft. Lauderdale, Fla. The kits, designed for police and security fleets, are said to take about 40 hours to install. Kits are priced between $15,000 and $30,000.

IH reports progress, but situation still grim

By Edward Lapham
Financial Editor

International Harvester Co.'s fight to survive without federal intervention progressed last week through a series of developments, most of which were positive.

The company announced that nearly all of its 200 lenders had agreed to a debt restructuring plan which is crucial to the company's survival and that after only one week of serious negotiating, it already had secured $10 million in supplier concessions, also necessary for survival.

At the same time, however, the company's own assessment of its survival chances were portrayed in dismal, candid terms in a stock offering filing with the U. S. Securities and Exchange Commission.

The filing said the company expects to continue losing money for another year and that reorganization under Chapter 11 of the Federal Bankruptcy Act remains a possibility even if its debt-restructuring and supplier-concession campaigns are successful.

IH also said it anticipates a cash-flow shortfall of more than $100 million through the next few months. It said it will lose $1.5 billion this year.

Eli Lustgarten, Paine Webber Mitchell Hutchins analyst, called the dire statements in the SEC filings made last week and the prior week irrelevant.

"They are just a condensation of all the bleak statements made during the last six months," Lustgarten told AUTOMOTIVE NEWS. "Harvester, really, has been in bankruptcy for two years."

Arvid Jouppi, Arvid Jouppi Associates, Inc., said the statements were made in "protective language to protect the officers and directors from charges later that they overstated the situation."

• Still, there was some valid concern for the company's long-term survival prospects.

"Don't be surprised," said one federal government analyst, "if you see them filing for bankruptcy by the end of the month."

IH has scheduled a special shareholders' meeting on Oct. 28 at which shareholders will be asked to approve another part of the survival plan. It enables increasing the authorized number of common shares to 100 million from 60 million, plus authorizing common stock warrants and preferred stock which will be issued to lenders, note-holders, dealers and suppliers in exchange for concessions.

Under the terms of the survival plan, the 200 lenders were asked to revise, for the third time in less than a year, the company's $4.2 billion debt agreement, this time to convert up to $350 million of the debt

U. S. total down 10.2 pct. from '81, but daily rate climbs

Early Oct. sales fall to 24-year low

By Jenny L. King
Staff Writer

Early-October domestic new-car sales refused to recover from last year's depressed level and were lowest for the third period of a new model year since 1958.

The sales total this year was 132,326, down 10.21 percent from 147,366 a year earlier. On a daily-selling-rate basis, however, they were up 1.02 percent, to 16,541 from 16,374 in 1981. There were eight days in the period this year compared with nine a year ago.

The count of 132,326 was the lowest for Oct. 1-10 since 1958, when 88,254 cars were delivered.

All of the major auto makers were down on a year-to-year comparison; three were up on a daily-rate basis. General Motors dealers retailed 86,703 units Oct. 1-10, down 0.21 percent from 86,887 last year (up 12.26 percent daily rate). Ford Motor Co. sales of 23,086 were down 33.31 percent from 34,618. It was Ford's second poorest 10-day total of the calendar year. The company was down 24.98 percent on a daily-rate basis.

Chrysler Corp. reported sales of 18,071 new cars, down 9.34 percent from 19,932 (up 1.98 percent daily rate). Estimated American Motors sales of 3,300 were down 2.94 percent from 3,400 a year earlier (up 9.26 percent daily rate), while Volkswagen of America reported its second lowest numbers of the year, dropping to 1,166 from 2,529 and down 53.89 percent (down 48.04 percent daily rate).

DOMESTIC SALES

	Oct. 1-10, 1982	Oct. 1-10, 1981
AMERICAN MOTORS	3,300†	3,400†
Chrysler	6,165	1,347
Imperial	39	78
Plymouth	5,278	9,438
Dodge	6,589	9,069
CHRYSLER CORP.	18,071	19,932
Ford	14,034	24,018
Mercury	5,875	8,478
Lincoln	3,177	2,122

Oldsmobile	25,408	21,095
Pontiac	9,149	12,288
GENERAL MOTORS	86,703	86,887
VOLKSWAGEN	1,166	2,529
INDUSTRY TOTAL	132,326	147,366

† Estimate

• GM climbed nearly 7 percentage points to a 65.52-percent share of the early-October domestic market, up from 58.96 percent last year. Ford earned 17.45 percent, down from 23.49 percent. Chrysler sales accounted for 13.66 percent, up from 13.52 percent. AMC edged to 2.49 percent from 2.31 percent, and VWoA had only 0.88 percent of the market, down from 1.72 percent.

Chrysler, Lincoln, Buick and Oldsmobile enjoyed healthy sales increases in early October. Figured on a year-to-year basis, Chrysler multiplied its total by more than four, soaring to 6,165 from 1,347. Lincoln was up 49.72 percent, Buick was up 41.69 percent and Oldsmobile was up 20.34 percent.

Sales decreases by make were as follows: Plymouth, down

U. S. delays printing of fuel-economy guide

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The Department of Energy, ignoring the mandates of a 1975 law aimed at giving car buyers comparative information on vehicle fuel economy, has put a hold on publication of the 1983 Fuel Economy Guide. It may print so few as to leave automobile dealers responsible for distributing them in legal jeopardy.

Under the Energy Policy and Conservation Act, the guides are required to be available to all car buyers.

They provide information to buyers and potential buyers of various classes of cars, light trucks and four-wheel-drive and utility vehicles pertaining to city driving fuel economy, estimated fuel costs for the year, interior volume, engine size, transmission type, fuel delivery system and emission control system.

Congress mandated them so consumers could shop intelligently for the most fuel-efficient vehicle to suit their purpose. Auto dealers must have them available for distribution under penalty of law.

Normally, the guides would have been printed and would be on their way to auto dealers by now, but this year the people responsible for printing them are still waiting to get permission to even begin work.

Sources within the various departments and agencies that are involved in the creation of the guide say they have received hundreds of requests for them but have had to tell those asking to sit tight until "we get the OK to print."

The man apparently responsible for the delay is Robert C. Odle Jr., DOE assistant secretary for congressional, intergovernmental and public affairs. Odle was out of town last week and unavailable for comment.

• DOE usually prints 7 million to 10 million guides each year at a cost of about $1 million, or 15 cents apiece. One printing is done in October, another early the following year.

After being printed, they are shipped to government publication distribution centers from which car dealers order them. Dealers must have them available for potential car buyers or face a $1,000 fine per instance.

Most years, all the guides are used up, indeed in 1978 the government ran out of them, but last year it ended up with an extra million, due in large part to the drastic decline in car sales.

In fact, last year the government did not even print the second edition of the guide which contains many of the imports and late-introduction models.

That situation, along with DOE's long-running questions about the efficiency of its distribution system and the fact that all new cars and light trucks carry fuel economy labels any way, apparently caused Odle to call a halt to things while alternate ways to put the information before the public were analyzed.

One option considered was printing only enough Fuel Economy Guides for each auto dealer in the country. Dealers would then be expected to display it prominently for car buy-

NHTSA sides with makers in court

Passive-belt deadline is called unmeetable

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—In response to a directive from the appellate court in the District of Columbia, NHTSA says no auto company can meet a September, 1983 — or 1984 model-year — deadline for installing passive restraints across the board.

Obviously, the Toyota Cressida and the Volkswagen Rabbit and Jetta — which already have complying automatic belt systems — can, but these are far from the total lineups of those makers.

The estimates of when passive restraints could be installed on cars — from 19 auto makers accounting for some 98 percent of all vehicles sold in the U. S. — are interesting for the differences.

The time estimates are contained in letters and affidavits sent by the companies to NHTSA, which filed them with the Circuit Court of Appeals for the District of Columbia.

None was enthusiastic. Chrysler Corp. and Ford Motor Co. were notable for their outright opposition. General Motors indicated it may be ahead of the others. The "missing" company was Mercedes-Benz — not party to the litigation, since it is not a member of either the import group (Automobile Importers of America) or the domestic organization (MVMA). Neither has acted on its own.

Unanswered at this time is whether the U. S. Supreme Court will review the D. C. Circuit Court's rejection of NHTSA's rescission of the passive-restraint standard. In effect, that upheld the controversial Standard 208, which called for passive belts or air bags in 1984-model cars.

Remaining also is the uncertainty of what will be the effective date — if the standard survives its final appeal — and whether NHTSA will set an effective date after rulemaking or if a court will do so.

Leadtime requirements given by auto makers range from 21 months to 24 months for limited models. According to NHTSA, "Almost all manufacturers also state, however, that for many of their models, compliance will not be possible until September, 1985, and in a few instances, even later.

"Only the largest domestic and Japanese manufacturers, General Motors and Nissan, and two European manufacturers, Volvo and BMW, have said that a compliance date of September, 1984, could enable them to continue marketing many of their models," NHTSA reported.

NHTSA labeled as "credible" the numerous reasons given by the makers for not being able to achieve the 1984-model-year effective date.

One reason cited was that cars with a wheelbase shorter than 100 inches (about 41 percent of current production) were originally given extra time to comply because of greater difficulty in managing energy forces.

Another reason makers say they can't comply across the board by 1984 models is that they originally had differing time frames for various models. When the standard was rescinded, the makers diverted—"properly," according to NHTSA — their resources to other matters.

• Even after reassembling their specialists, the makers say, design problems are still substantial.

"An early, simultaneous compliance date for all models could exacerbate the renegotiation of contracts between the manufacturers and the limited number of passive-restraint parts suppliers, as well as adversely affect those suppliers' delivery schedules," NHTSA said.

Finally, if the 1984-model ef-

A T-top that tilts

Continental T-Top, Ltd., Dallas, has introduced a new T-roof for the Camaro/Firebird models with tinted glass panels that can be either removed or tilted upward. A similar treatment is also offered for the Toyota Celica GT. The roofs are covered by a 12-month warranty.

Petersen emphatic on avoiding 'advocacy'

Ford policy: No union seat on board

By Al Fleming
Industry Editor

WHITE SULPHUR SPRINGS, W. Va. — There is no labor union representation in the future of Ford Motor Co.'s board of directors.

That was made emphatically clear by Ford President Donald E. Petersen following a speech at The Greenbrier resort here, where he addressed a meeting of the Society of Automotive Engineers.

Following his talk, which focussed on Ford's new style of "participative-cooperative" management and employe involvement in the company's decision-making, Petersen was asked by AUTOMOTIVE NEWS about the chance of the UAW being offered a seat on the company's board of directors.

He replied, "The chances are not very great."

He then explained that the company does not believe it is "fundamentally sound" to have "advocates" on the board.

"We believe each member of the board of directors should be representing all the shareholders," Petersen said, "because if you start the process of advocacy, then you'd have each seat on the board representing some faction.

• "Therefore, we don't think it's sound (to have labor represented on the Ford board), we're against it and Don Petersen is against it," he said.

"We think the twice-a-year invitation of Don Ephlin (UAW vice president in charge of the Ford Department) is a good avenue for communication without going all the way to a board membership."

Under the new Ford-UAW contract, Ephlin has an invitation to speak to the auto firm's board of directors twice a year. A similar rule exists in the General Motors-UAW pact relative to the GM board and Owen Bieber, union vice president in charge of the GM Department.

Ephlin informed AUTOMOTIVE NEWS that he will address the Ford directors, "after Nov. 12."

Told of Petersen's rigid position against union participation on the company board, Ephlin said, "One thing you learn in labor negotiations is never say never."

He indicated the UAW would not give up on its drive to sit on the boards of the major auto companies.

Chrysler Corp., with UAW President Douglas Fraser on its board, is the only U. S. auto company with labor represented among its directors.

• Petersen's talk at the automotive engineers' annual fall meeting, Oct. 8, came a day after Ford Chairman Philip Caldwell and Ephlin were interviewed on NBC-TV's Today show on the new spirit of cooperation between company management and labor.

In his prepared remarks, Petersen talked about Ford's new management style and its goal in turning from a "hierarchical-dictating approach" to a "participative-cooperative approach."

He pointed out that Ford is working to foster "people orientation" while "compressing the layers of supervision and broadening the spans of control."

He said that along with changes in management style, the company recognizes the benefits of employe involvement and giving workers a greater opportunity to participate in day-to-day decisions affecting their jobs, worklife and plant operations.

Petersen said that virtually every Ford facility has an employe involvement program and, through some 900 "problem-solving groups," nearly 10,000 workers are helping to shape decisions about their operations and environment.

"Employe involvement is having a significant impact in changing attitudes and producing tangible results from the factory floor to the executive suite," Petersen said.

But that involvement, he stressed, does not include the voice of labor on the Ford board.

Must have more money, workers warn

It's back to start for Chrysler, UAW

By Marjorie Sorge
Labor Editor

The new UAW-Chrysler Corp. contract died last week, but even before the body was cold the two sides were back at the bargaining table.

Officials of the UAW and Chrysler met in a main-table session last Friday (Oct. 15) to begin work on an alternate agreement. Voting on the contract ended Thursday.

According to UAW President Douglas A. Fraser, any new contract must have upfront money for wage increases and cost-of-living allowance payments. He said the workers will not settle for the same contract in a different form.

"It is impossible to rearrange that package to the satisfaction of the Chrysler workers," he said. "We could have arranged upfront money (in the defeated contract), but we would have had to give up COLA for it."

A strike is possible if a new agreement cannot be worked out soon or if the workers, who currently have no contract, decide to walk out until a new one is ratified.

Fraser said he hopes there will be no wildcat strikes, but he is not dismissing the possibility.

The defunct pact called for three quarterly lump-sum COLA payments and tied wage increases to Chrysler's profitability. It was a one-year agreement on economics and two-years on working issues. Fraser said he would like to keep the economic package at one year.

"The contract does not meet the expectations of the workers," Fraser said. "The Chrysler workers are extremely unhappy with the contract they voted on."

Workers voted down the agreement by a 2 to 1 margin, which Fraser said was "overwhelming."

He said he was never confident the agreement would be ratified and even at the bargaining table thought the contract could be defeated. But, he said, when strikes broke out at Chrysler plants when the Sept. 15 midnight deadline passed and Chrysler didn't come forward with any sweeteners for the agreement, he was satisfied the company had reached its monetary limit.

Thomas W. Miner, Chrysler industrial relations vice president, has said the company has no more money to give, but Fraser said Chrysler now will have to shift funds from other sources — marketing, for example — to increase the economic package.

While Fraser said he has an idea how much money will satisfy the workers, he declined to reveal the figure.

Maryann Keller, vice president and auto analyst for Paine Webber Mitchell Hutchins, Inc., said an increase of $1 to $1.50 an hour could make the difference. But, she said, the impact of the defeated agreement is far-reaching, touching the other auto makers.

According to Keller, the Chrysler vote shows that workers have not changed their aspirations, even after they have made concessions. She said their expectations have been fueled by management's optimism and historic wealth.

"The Chrysler vote shows that the industry has not been able to convince the work force it is experiencing a secular decline in its ability to compete," she said. "They cannot convince the workers that they are not yet able to compete with the Japanese."

This attitude will still be around when the Ford Motor Co. and General Motors contracts expire in 1984, Keller said. Workers at those companies made concessions earlier this

Chrysler revises floorplan aid on '83 models

General Motors' and Ford Motor's floorplan assistance programs remain unchanged for '83, and Chrysler Corp. has modified its program a bit.

Chrysler reduced the charge on domestic vehicles by $5 and dropped imports from the coverage.

Essentially, Chrysler cut the charge for supplementary floorplan coverage on domestic vehicles to $95 for cars, $100 for trucks.

This charge against the base wholesale price of vehicles covers Chrysler paying the first 10 percentage points of interest on the total factory invoice price of each vehicle from the 15th day after delivery of domestic cars up to the 90th day.

Dodge D-250, W-250, D-350 and W-350 trucks get coverage from the 15th day (when free floorplanning runs out) to the 130th day on the first 10 percent. That's 15 days' more coverage than last year. All other trucks have a maximum 100 days' extended protection.

Chrysler dropped the $100 charge on import vehicles for '83 because it is no longer giving extended floorplan coverage on them.

This relates to its lowering the price of the Colt last summer to compete with low-priced leaders like Toyota Tercel.

They take only 4.59 pct. of depressed market

Diesel sales plunge during 1982

Continued from Page 1

age points during the period — from 63.55 percent in '81 to 53.13 percent in '82.

• GM's lead diesel division, Oldsmobile, suffered a 45.87 percent drop in sales. Oldsmobile sold 87,015 diesel cars during the '82 model year, down from 160,738 during '81. Olds debuted a new 4.3-liter diesel V-6 for the '82 model year in its Cutlass Supreme (rear-drive) and added that option to the new Cutlass Ciera (front-drive) in March.

The other GM divisions also reported diesel-sales losses, with Pontiac reporting the largest decrease during the period. Pontiac discontinued its B-body standard-size car for '82, its most popular diesel-optioned model.

Only 5.54 percent of total GM car sales during the '82 model year were diesel-powered, compared with a 8.45-percent diesel-installation rate during the '81 model year.

Volkswagen, which has just completed a disastrous '82 model year, recorded a 41.90 percent drop in diesel sales during the period. VW sold 67,153 cars during 1982, down from 115,587 during '81. Audi diesel sales remained constant during the '82 season, buoyed by the company's new-for-'82 4000 diesel and 5000 turbo-diesel models.

Combined, VW and Audi accounted for 20.90 percent of the '82 model year diesel market, down 1.91 percentage points from 22.81 percent of the '81 market.

Diesel models accounted for 38.92 percent of all Volkswagen sales during the '82 model year, compared with 46.15 percent of all sales during the 1981 model year. VW's slump can be attributed to slow Rabbit sales. During the '82 model year, the diesel installation rate in the Rabbit was 51.8 percent, compared with 57.5 percent in '81.

More telling, however, is a calendar-year comparison. To-date, the Rabbit installation rate has been running at 43.5 percent. During calendar '81, it was 59.1 percent.

While heavyweights GM and VW/Audi were losing, most of the smaller import manufacturers were gaining. Only Peugeot recorded a drop in diesel sales during the '82 model year, but it still increased its market share.

Mercedes-Benz sold 50,484 diesel-powered cars during the '82 model year, up 10.60 percent from 45,643 sold during the '81 model year period. More than 78 percent of all Mercedes-Benz sales during the '82 model year were diesel cars, up from 76.64 percent in '81. During September of this year, the Mercedes diesel rate was 80.4 percent.

Year-to-date sales comparisons for Volvo, Datsun and Isuzu are less indicative of the overall trend because Volvo did not have a 1981-certified diesel (it sold 1980 models), and Datsun and Isuzu introduced their diesels partway through the '81 model year.

Isuzu began selling diesel-powered I-Mark models in April of 1981. During its first full model year, 1982, Isuzu sold 12,075 diesel cars and captured 3.42 percent of the market.

Datsun, which introduced its diesel Maxima sedan in early May of 1981, sold 11,600 of that model during the '82 model year, good for 3.28 percent of the market.

Volvo sold 6,618 diesel cars during 1982 and grabbed 1.87 percent of the market.

GM notifies UAW officials of jobs it plans to eliminate

By Marjorie Sorge
Labor Editor

General Motors has sent letters to several UAW locals indicating that jobs in their plants will be eliminated because of outsourcing.

The GM announcement angered UAW Vice President Owen Bieber, director of the GM Department, who said outsourcing has been a "constant irritant" to the union.

Outsourcing is the farming out of work to companies, often non-union, in the U.S. or abroad.

Bieber said some of the situations have been resolved without outsourcing taking place, but others have not. He would not name the plants but said some are in Michigan.

The UAW wants the outsourcing stopped, and company and union officials addressed the problem at a meeting of the 11-member GM bargaining team last Thursday (Oct. 14). Alfred S. Warren Jr., GM labor relations vice president, spoke at the meeting which was held at the GM Tech Center.

Both GM and union officials said it is not uncommon for the union to meet with company officials. A GM spokesman said the meeting was arranged about a month ago so Warren could meet new members of the UAW's GM Council. He said Warren discussed outsourcing and the state of the industry.

• Under the GM-UAW contract, there is a 24-month moratorium on plant closings related to outsourcing. Plants can still be closed for volume-related reasons. The pact also required GM to give a 60-day written notice if outsourcing from a plant will result in the layoff of 10 percent or more of the workforce or 100 employes, whichever is more.

Bieber also confirmed that GM has said it may close its Fisher Body Plants 20, 40 and 41 in Detroit. Plant 20 builds Cadillac limousine bodies and Cadillac parts; Plant 40 makes tooling aids, and Plant 41 is a storage area. About 900 active workers could be affected.

Meanwhile, Bieber also said an announcement will be made before Oct. 27 naming the four GM facilities which would be pilot plants for "lifetime job security." The program was negotiated under the recent UAW-GM agreement and provides that reductions in the workforce be handled by attrition or alternative work assignments either within GM or in external operations.

Graham heads Ford auto components group

DEARBORN.—Robert C. Graham, 57, has been appointed vice president—automotive components for Ford Motor Co.'s Diversified Products Operations. He will direct the Climate Control Division, Electrical and Electronics Division, Casting Division, Glass Division, Plastics, Paint and Vinyl Division and Philco-Brazil. Graham has been on medical leave since June. Before that, he was general manager of Ford Latin America. He has been a Ford vice president since 1979.

Chrysler mum, but BBD&O seems to be Dodge agency

By Joseph Bohn
Marketing Editor

Chrysler Corp. declined to confirm BBD&O as its new advertising agency on the Dodge account last week, although it appears to be a foregone conclusion.

With N. Y. Ayer and Ogilvy & Mather having taken themselves out of the running, there appear to be no other contestants.

A rumor that Gray Advertising was in the contest, sparked by Gray's Bruce McRitchie hiring two top Kenyon & Echkardt Dodge truck account people, was flatly denied by McRitchie.

McRitchie, senior vice president and general manager of Grey's Detroit office, said his agency had had no conversation with Chrysler and was happy with its American Motors account. He hired John Miley and David Meyer away from K&E on the basis of having worked with them before.

If BBD&O has been officially selected, its top executives denied any knowledge of it.

Ogilvy & Mather bowed out from vieing for the $100 million Dodge account by saying it wanted to develop "the current car accounts that we already serve in various countries around the world."

Ogilvy's $10 million Peugeot account in the U. S. wouldn't have posed any conflict. But its $30 million overseas Ford account did.

So BBD&O, which had the Dodge business for 38 years before losing it to K&E in 1979, appears to have been all but officially selected as the new agency.

There were reports that one of its top officials had begun tentative recruiting of talent in Detroit.

BBD&O had 120 employes in Detroit on Dodge and would "definitely" staff a full-service office here again, were it to land the account, said officials.

There has been talk of bringing "the old crew" back together again. It's doubtful that Jim Berline, who now has his own agency (Yaffe Berline), would come back. But Tom Clark, former regional manager of the Detroit office and current executive vice president at BBD&O, would probably return to Detroit.

BBD&O has carefully maintained its contacts in Detroit, waiting for just the present sort of opportunity.

Earlier this year, it rehired Dick Johnson, former executive director on Dodge, who reportedly pitched one Chrysler official as early as several months ago.

But situation remains grim

Harvester reports some progress

Continued from Page 2

into equity and to reduce interest payments.

To achieve that maximum debt to equity conversion, the company also must secure $50 million in concessions from its suppliers, $20 million in concessions from its dealers and an additional concession of nearly $50 million from IH debenture holders who will be asked to swap old debt for a lesser amount of new debt with attached warrants for the purchase of IH stock.

There also is no assurance that IH will not find it necessary to again approach its lender group for another revision at some point in the 1983 fiscal year, which begins Nov. 1, if it finds itself unable to live up to the new, reduced loan covenants which stipulate minimum levels for net worth, cash flow and other financial indicators.

That task would be difficult if not impossible.

"We wanted to get out a year ago," said a vice president of one of the IH lenders. "It is a losing situation. At some point the banks will have to say 'No.'

"It is essential the lender group remain together because if one small bank balks, it would force Harvester into bankruptcy. Either we all hang together or we all hang separately."

Jouppi, who was a court-appointed consultant in the White Motor Corp. Chapter 11 proceedings, said that balance sheet analysis reveals IH is "on the brink of disaster," but that if it can reach an accommodation with its lenders it has certain "supra" balance sheet items, like goodwill, which allow the company to work itself out of the situation.

He said he does not like Chapter 11 as a means of solving problems, but conceded Chapter 11, "or even Chapter 13 bankruptcy" could result as a worst case scenario.

"At some point," he said, "you have to ask if it's 'go' or 'no-go.' I say 'go.'"

Lustgarten, who has been consistently lecry of IH's long-term survival chances, agreed that at some point it must be decided "if the company is worth salvaging."

He said that if the company can't get the necessary supplier concessions or if the shareholders do not approve the plan on Oct. 28, IH "will have no alternative" but to file for reorganization under Chapter 11. That doesn't necessarily mean the end, he said, noting that Penn Central "operated under Chapter 11 for 10 years" and that other companies have survived it.

"We've known for six months that Harvester has a bankruptcy attorney on retainer," Lustgarten said. "The new management would have been foolish not to have put together a bankruptcy scenario."

Symposium scheduled

WASHINGTON. — Experts from the U. S., Sweden, France, Australia and Great Britain will weigh solutions to the problem of drunk driving Nov. 17-18.

They will be attending the International Symposium on Alcohol and Driving at the Shoreham Hotel.

Mack's 'finest achievement'

Years of research and development work and millions in engineering dollars make the new Ultra-Liner Class 8 heavy truck the company's "finest achievement to date," according to Mack Trucks, Inc.

New Mack COE 'bred for the '80s and beyond'

By Jack Walsh
Truck Editor

ALLENTOWN, Pa. — An all-new, high-cabover series, to be marketed as "The Truck Bred for the Eighties and Beyond," has been introduced by Mack Trucks, Inc.

The new Ultra-Liner, which carries the MH model designation, will be available in limited volume starting in January, according to Garner L. Davis, Mack executive vice president of marketing. Production is set to begin next month.

He said the MH series will replace the F-model cabover, phased out of production in 1981 after a 19-year run of more than 70,000 units. Mack will continue to offer its Cruise-Liner high cabover until a phaseout scheduled for completion in 1984.

The Ultra-Liner's cab design is its most notable feature, according to Robert F. Zalokar, senior vice president of product and engineering.

For occupant protection, he said, an inner structural cage of galvanized steel, aluminum and high-strength fiberglass reinforces the Maxi-Glas outer cab shell.

• Zalokar described Maxi-Glas as a combination of specially formulated glass-reinforced composites specifically tailored for heavy-duty truck-cab applications.

"Not only does Maxi-Glas defy rust and corrosion," he said, "but it also provides excellent thermal and acoustic insulation, is easily repaired if damaged and has enabled Mack engineers to keep overall weight to a minimum."

The cab has a definite upward slope of its roofline for improved aerodynamics. The cab is four or five inches higher than the Cruise-Liner's and is somewhat heavier due to added features to improve occupant safety.

Zalokar said a simplified and fully illuminated entry/exit system combines extra-large traction-grip steps and ladder-type grab rails, with an additional grab rail at the rear of the cab.

Other highlights are a floodlight mounted on the rear cab wall for nighttime trailer connections, large glass areas for greater visibility, and exterior

Jacobson elected RVIA chairman; 8 directors named

CHANTILLY, Va. — Norm Jacobson, vice president, Contempo Enterprises, North Hollywood, Calif., has been elected chairman of the Recreation Vehicle Industry Assn. He succeeds Elden Smith, RV Group vice president, Fleetwood Enterprises, Inc., Riverside, Calif.

Gene Stout, Coachmen Industries, Inc., Middlebury, Ind., was elected first vice chairman, and John Casey, president, Shurflo, Anaheim, Calif., was elected second vice chairman.

Charles Willibrand, president, Play-Mor Trailers, Inc., Westphalia, Mo., was re-elected secretary, and Warren Jones, president, Hehr International, Inc., Los Angeles, was renamed treasurer.

These officers, along with David J. Humphreys, RVIA president, and Smith, ex-officio chairman, form the Executive Committee for 1983.

Eight industry officials were either elected or re-elected to the national board, including Jacobson to fill an at-large seat,

Comfortable by design

Mack Trucks, Inc., says the all-new cab of the Ultra-Liner Class 8 heavy diesel is "quiet, spacious and comfortable by design." This is the top-of-the-line interior decor.

truck industry news

Domestic compacts spark increase of 4.6 percent

'82 model-year sales up

After a slow start in the first three months, retail sales of new trucks of all types in the U. S. gained momentum in the second quarter with wide acceptance of the new domestic compact pickups and ended the 1982 model year with a slight advance over the previous year.

According to preliminary reports, the nation's franchised dealers and factory outlets retailed 2,422,506 trucks during the model year, an increase of 4.6 percent over the year-earlier 2,315,571.

It was the first time since 1978 that model-year truck sales have exceeded the year-earlier total. In the 1978 model year, retail deliveries hit an all-time high of 4,028,294 units.

Unlike a year ago, when sales were down in all three market segments, there were impressive gains in one of the three—light trucks — and a relatively small drop in the heavies.

In the period starting Oct. 1, 1981, and ending Sept. 30, 1982, light-truck sales totaled 2,228,815 units, a gain of 7.2 percent over the previous year's 2,315,571. Compact pickups set the pace throughout the year.

• During the model year, dealers retailed 684,353 compact pickups — both domestic and Japanese imports — an increase of 43.1 percent over the 478,241 units sold in the 1981 model year.

Although the imports had a greater share of this market for the 12-month span, their dominance has ceased since the introduction of the domestic compacts.

During the model year, 386,224 imported compacts — Toyota, Datsun, Mazda, Isuzu, Ford Courier, Chevrolet LUV, Dodge Ram 50 and Plymouth Arrow — were sold in the U. S., a decline of 12.5 percent from the previous year's 441,454.

On the other hand, sales of the domestic small pickups —

Champion MHs for '83 redone 'from ground up'

DRYDEN, Mich.—Champion Home Builders Co. says its line of Champion Class A motor homes for 1983 has been "re-engineered from the ground up," featuring an all-new sloped, fiberglass front end for improved aerodynamics.

Other exterior highlights include an automotive-style grille and a new, large curved windshield. Sides and rear end are made of aluminum with a baked-on enamel finish that color-matches the front end.

David C. Struck, recreation-vehicle sales vice president, called the new exterior design "a real departure from our previous models" and said dealer reaction "has been extremely positive."

The 1983 Champion is "a mid-priced full-size motor home with the exterior look of more expensive models," he added.

The interior has a number of modifications, Struck said, including a redesigned instrument panel, engine cover and overhead console. The console features a built-in optional weather station, generator hour meter and AM/FM stereo with tape deck.

Use of interior paneling with a wood-grain look has been minimized. Instead, vinyl-covered wall areas in the front lounge are pastel-colored to give a brighter, roomier look to the living area, Struck said.

Cabinet-door fronts also are pastel-colored to match interior walls, and floor plans in all Champion models feature larger baths with full showers, he added.

Champion motor homes are built on Chevrolet chassis with a 454-cubic-inch V-8 engine with bodies in lengths of 25, 27, 30 and 33 feet. An 8.2-liter or 6.2-liter diesel engine is optional.

Shipments of RVs rise in August, eight months

August shipments of recreational vehicles from manufacturers to retail outlets dropped slightly from the July level, but were higher than the total for the same month in 1981.

During the month, according to Recreation Vehicle Industry Assn. statistics, manufacturer members delivered approximately 22,100 units of all types, an increase of 3.8 percent over the year-ago 21,300, but 3.1 percent below July's 22,800.

For the first eight months, shipments totaled approximately 180,700 units, an increase of 8 percent over the year-earlier 167,300. Towable units were the only market segment to show a decline from 1981 for the January-August period.

The Index of Consumer Sentiment in September, the RVIA reported, was 69.3, an increase of 3.9 points over the readings for both August and July. In September, 1981, the Index was 73.1.

In August, the number of all towable recreational vehicles shipped to dealers dropped 9.2 percent to about 7,600 units, compared with 8,300 in the same month a year ago.

The eight-month total was 75,700 units, off less than one-half a percent from last year's 76,000.

• Deliveries of travel trailers and truck campers were up for both the month and the January-August period, while folding camping trailers were down for August and the first eight months.

In August, manufacturers shipped 5,100 conventional and fifth-wheel trailers, an increase of .02 percent over the previous year's 5,000 units. The count through August was 1.5 percent higher, 46,800 versus 46,100.

Dealers received 500 truck campers during the month, up 25 percent from last year's 400 units. Through August, there were 4,300 truck-camper ship-

Continued on Page 46, Col. 1

Chevrolet tops Ford in model-year sales

WARREN, Mich.—Chevrolet simultaneously broke Ford's grip on the top spot in total truck sales and the foreign dominance of the small-truck market during the 1982 model year.

With the new S-10 compact pickup making the difference, Chevrolet dealers sold 758,387 trucks during the 1982 model year, up 8.6 percent over the 1981 total of 698,100, and 3,846 more than Ford reported selling.

S-10 sales totaled 152,965, making Chevrolet the No. 1 nameplate in the small-truck market. Ford had been No. 1 in total model-year truck sales since 1979.

Champion gets all-new front end

Champion Home Builders Co., Dryden, Mich., says its new line of Champion Class A motor homes for 1983 has been re-engineered from the ground up, with an all-new sloped, fiberglass front end for improved aerodynamics.

Domestic compacts spark increase of 4.6 percent

'82 model-year truck sales climb

Continued from Page 14

Chevrolet S-10, Ford Ranger, GMC S-15, Dodge Rampage, Jeep Scrambler and Volkswagen — soared to 298,129 units, compared with only 36,787 the previous year. In the 1981 model year, however, only the Scrambler and Volkswagen were available.

The imported pickups accounted for 56.4 percent of the compact total in the 1982 model year, compared with 92.3 percent the year earlier. Through the first nine months of 1982, the imports' share was 52 percent. In the like period a year ago, it was 92 percent.

Sales of heavy trucks declined 8.3 percent during the model year, from 156,270 units a year earlier to 143,268. The mediums were down 37 percent to 50,423 units, compared with 80,003 the previous year.

After a small decline in August, retail sales rebounded in September with a sharp rise in light-truck deliveries. Dealers sold 219,338 trucks during the month, up 23.8 percent over last year's 177,125.

September deliveries of light trucks soared to 204,722 units, an increase of almost 29 percent over last year's 158,906 units. Heavies were off 17.1 percent, from 12,668 units in 1981 to 10,506. Mediums totaled only 4,110 units, down 26 percent from last year's 5,551.

Nine-month sales of all types of new trucks rose to 1,940,352 units, a gain of 9.3 percent over last year's 1,775,456. Light trucks were the only market segment to show an increase over 1981.

Through September, 1,794,972 light trucks had been retailed, an increase of 12.4 percent over the year-ago 1,597,017 units. Heavy trucks were down 7.4 percent to 109,400 units, compared with 118,086 last year, while the mediums were off 40.4 percent, from 60,353 units in 1981 to 35,980.

• In September, dealers sold 68,174 compact pickups, up 60.1 percent over the year-ago 42,590. The nine-month total was 567,296, a gain of 47.8 percent over the 383,765 units retailed in the like period in 1981.

Ford dealers sold 78,224 new trucks during the month, an increase of 29.1 percent over the year-earlier 60,574. The nine-month count was 610,245 units, up 6.6 percent over last year's 572,553.

September sales by Chevrolet dealers were 35.3 percent higher than a year ago, 65,344 versus 48,293. The January-September total climbed to 615,339 units, a gain of 15.5 percent over the year-earlier 532,580.

Dodge and Plymouth dealers retailed 19,766 units during the month, up 83.8 percent over the year-earlier 10,757. For the nine-month period, sales were up 32.3 percent to 190,588 units, compared with 144,024 last year.

GMC reported 14,962 retail sales in September, an increase of 23.5 percent over last year's 12,114. Through September, the total was 174,046, up 29.8 percent from the year-ago 134,065 units.

During the month, Big Three dealers retailed 178,296 trucks, a gain of 35.3 percent over last year's 131,738. The nine-month total was up 15 percent, from 1,383,222 last year to 1,590,218 units.

• Sales of four-wheel-drive Jeep vehicles during the month dropped 13.4 percent, from 5,796 units in 1981 to 5,021. Through September, the count was 47,130, a decline of 3 percent from the year-ago 48,590.

Volkswagen compact pickup sales were down sharply for both the month and January-September period. During the month, 1,210 units were retailed, a decrease of 54.4 percent from last year's 2,654 units. The nine-month total was 10,051, off 60.8 percent from the year-ago 25,628.

Datsun was the only non-captive import to show a decline in volume in September, while both Datsun and Toyota had fewer sales through September than a year ago.

Toyota dealers sold 12,809 small pickups in September, up 16.8 percent over last year's 10,969. The nine-month total of 106,711 was down almost one percent from the year-ago 107,723.

There were 9,928 Datsun sales during the month, off 23.6 percent from the year-earlier 12,987. Through September, the count was 71,412, a drop of 23.7 percent from last year's 93,589 units.

In September, Mazda dealers retailed 2,908 pickups, up 52.7 percent from last year's 1,905. The nine-month total of 29,714 units was 130.9 percent higher than the 12,869 sold in the like period in 1981.

Isuzu dealers sold 1,555 pickups during the month, an increase of 49.7 percent over last year's 1,039. Through September, the count was 13,111, up 106 percent from the year-earlier 6,365.

New Mack COE is 'bred for the '80s and beyond'

Continued from Page 14

access to wiper motors, coolant, oil and washer-fluid check and fill.

Inside the cab, a large overhead console provides open and lockable storage space, plus space and power leads for radio, CB and dual speakers. Triple cam-pivoting sun visors are multi-adjustable and there is a right-door peep window.

• The driver-engineered instrument console incorporates extensive use of plug-in gauges and switches for improved serviceability. The two-spoke, soft-feel steering wheel is mounted on a tilting and telescoping column.

The environment-control system, Zalokar noted, is also a new design which combines heating, defrosting, fresh-air circulation and optional air conditioning in a compact unit located under the passenger seat for easy access.

He said all electrical-system components are conveniently located in a central control panel for greater diagnostic capability, with the master circuit breaker chassis-mounted.

A "breakaway" shift mechanism is another major feature, according to Zalokar. The shift control is isolated from the cab in the driving position, but stays with the cab during tilt.

"It connects positively to the transmission with a single point," he explained, "and delivers smooth, crisp shift action with no shifting stress transmitted to the cab. This new design permits use of a short-throw shift lever located for optimum driver convenience."

Zalokar said the Ultra-Liner will share many common parts with new conventional models scheduled for introduction in the future.

Export considerations also have received high priority, he added, with the Ultra-Liner and upcoming models being easily adaptable to various international markets.

Ranger is sweepstakes prize

Margaret Mitchell, center, accepts keys to her 1983 Ford Ranger pickup truck as winner of the Ford Ranger/Famous-Barr Department Customer Roundup Sweepstakes. Presenting the prize is Earl L. Campbell, left, Ford Division St. Louis assistant district sales manager, and Jack Anderson, light-truck merchandising manager. Mitchell beat out 600,000 entrants to win the St. Louis-area contest.

Equipment additions modify AMC price boost for 1983

American Motors announced that prices of its 1983 AMC cars are up an average of $137, or 1.4 percent, over comparably equipped 1982 models. The figure consists of $78 on the cars and $59 on optional equipment.

The Spirit DL two-door hatchback is unchanged at $5,959 and eight other models rose $234 to $330, but AMC said additional standard equipment held the boost to $137 on a comparably equipped basis.

The company said an average of $198 in standard equipment has been added to its cars for 1983.

In the Concord line, the DL four-door sedan is $6,995, compared with $6,761 for '82, but AMC said $264 worth of standard equipment has been added for '83, including a six-cylinder engine and wire wheels. Spirit models also have six-cylinder engines for '83.

Base models of the Spirit and Concord have been dropped, which increases the spread between the lowest-priced '83s and '82s. For '83, the Spirit DL hatchback at $5,959 is well above the '82 base hatchback at $5,576.

The Concord DL four-door for '83 is $6,995. For '82, there was a base Concord four-door at $6,254.

The Eagle SX-4 hatchback is $7,697, up $246, and the Eagle DL four-door sedan is $9,162, up $293. Those increases are before allowing for additional standard equipment.

AMC reduced the dealer discount on the Spirit DL and Jeep Scrambler for '83. The margin dropped to 14 percent from 15 percent on each. Destination charges on AMC, Renault and Jeep vehicles are unchanged from the final '82 figures.

• Equipment price increases include $23 on Spirit air conditioning (now $670) and $6 on Concord air (now $725). Power brakes rose $12 to $112, cruise control jumped $6 to $170, and power door locks went up $10 to $120.

The company said prices of '83 Renaults are up an average of $20 over comparably equipped '82s.

The price break on the Renault Le Car, in effect since May 20, has been made official. It amounts to $200 on the base three-door hatchback and $300 on the Deluxe three-door and five-door.

Previously, there were refunds to dealers upon sale of the cars. Now, the stickers reflect the lower prices with Le Car models starting at $4,795.

Renault 18i DL models are up $498, and five-speed transmission, power steering, bigger tires and tinted glass have been made standard. The 18i DL four-door sedan is $8,395. For '82, there was a base 18i sedan at $7,398. It has been dropped.

The Renault Fuego carries an '83 sticker of $8,695, up $200, and the Fuego Turbo is $11,095, up $391.

AMC said Jeep prices are an average of $184 lower than comparably equipped '82 models and that its full line of AMC, Renault and Jeep vehicles is an average of $6 lower than comparably equipped '82s.

Other officers are Conrad Hawkins, Conrad Hawkins Chevrolet, and Bill Nimnicht Jr., Nimnicht Chevrolet, secretary-treasurer.

32.41 pct. of July registrations despite slight volume dip

Import share hits any-month peak

By Jenny L. King
Staff Writer

Registrations of new imported cars in July scooped up their greatest penetration of the U. S. market for any month in history and advanced to 32.41 percent from 29.95 percent a year earlier.

Figures compiled by R. L. Polk & Co. revealed new import registrations of 203,002 for the month, compared with 206,653 in 1981, a dip of 1.77 percent. The total market was down 9.23 percent in July, to 626,321 from 690,025, with the domestics skidding 12.42 percent. Thus the import loss became its gain in terms of market share.

Year-to-date import registrations totaled 1,283,032 through the end of July, down 13.36 percent from 1,480,824 last year. Market penetration for the 1982 period was down just 0.02 percentage points, to 29.13 percent from 29.15 percent.

Of the top 10 imports, five increased their share of the market in July and five were off. Nissan climbed 2.75 percentage points, to 21.49 percent from 18.74 percent, for the greatest individual gain. Honda was up 0.22 percentage points; Volvo was up 0.82 percentage points, Mercedes-Benz was up 0.02 percentage points and BMW was up 0.25 percentage points.

Volkswagen lost the most ground in terms of market penetration in July as well as slipping into fifth place from fourth. VW dropped 2.78 percentage points, to 6.26 percent from 9.04 percent. Mazda was down 0.16 percentage points, to 6.69 percent from 6.85 percent.

Subaru was down 0.06 percentage points, Audi was down 0.39 percentage points and first-place Toyota was off 0.17 percentage points.

For the first seven months of 1982, Volkswagen again suffered the greatest defeat, its penetration down 2.63 percentage points, to 6.64 percent from 9.27 percent. BMW joined the top 10, replacing Ford Fiesta. Nissan enjoyed the single largest gain, up 1.86 percentage points, to 20.05 percent from 18.19 percent. Other risings and fallings were less conspicuous.

Japanese nameplates accounted for 78.45 percent of July import registrations, up from 75.29 percent a year earlier and up from 73.83 percent in July of 1980. They captured 77.87 percent of the year-to-date market, up from 75.26 percent in 1981.

Registrations by country of origin in July were:

	July, 1982	July, 1981
Japan	159,248	155,599
West Germany	27,027	34,761
Sweden	9,489	7,161
France	4,826	3,275
Italy	1,278	3,901
United Kingdom	848	1,861
Ireland	286	95

	7 mos., 1982	7 mos., 1981
Japan	999,143	1,114,513
West Germany	183,115	257,928
Sweden	54,876	46,077
France	28,572	26,315
Italy	10,013	23,552
United Kingdom	5,307	12,338
Ireland	2,006	101

Registrations of imported trucks in July totaled 34,305, down 13.80 percent from 39,795 in 1981. Registrations were as follows:

	July, 1982	July, 1981
Toyota	11,327	11,724
Nissan	7,298	9,266
Mazda	3,477	.....
Ford Courier	3,297	4,385
Chevrolet LUV	.....	4,335
Others	8,906	10,085
TOTAL	34,305	39,795

The truck import total for the first seven months of 1982 was 237,360, down 16.24 percent from 283,370 a year earlier. Registrations by company were as follows:

	7 mos., 1982	7 mos., 1981
Toyota	77,118	71,169
Nissan	52,015	64,285
Mazda	19,848	.....
Ford Courier	18,941	38,241
Chevrolet LUV	.....	41,904
Others	69,438	67,771
TOTAL	237,360	283,370

K&E appoints top executives to new posts

NEW YORK.—A group of senior Kenyon & Eckhardt executives have been appointed to new positions.

Ronald DeLuca, executive vice president, was named vice chairman and executive committee chairman of Kenyon & Eckhardt, Inc., the parent company.

John B. Balson, executive vice president, was promoted to president and chief operating officer of Kenyon & Eckhardt Advertising, the company's main operating unit, and John J. Morrissey, chairman of Kenyon & Eckhardt Advertising, was appointed chairman of the agency's management committee.

Ronald J. Moss, chairman and general counsel, Kenyon & Eckhardt, Inc., continues in those capacities. Stephen O. Frankfurt, president of Frankfurt Communications, a K&E division, continues as chief creative officer of Kenyon & Eckhardt, Inc.

As the new president of K&E Advertising, Balson succeeds Leo-Arthur Kelmenson, who continues as president and chief executive officer of the parent company.

Kelmenson said that because of K&E's growth and expansion, "I have decided that the responsibility for running this company should be shared by more of our senior executives."

Dealer in Slidell

A Chevrolet sales and service agreement is signed by Robert J. Levis, who heads Robert Levis Chevrolet, Inc., Slidell, La. Witnessing the signature is J. W. Croft, New Orleans zone manager.

Chevrolet chief predicts a competitive 1983

Stempel sees critical period ahead

By John A. Russell
New York Staff Writer

NEW YORK.—With the consumer in the driver's seat, the U. S. auto industry is facing critical marketing quandaries, centering on federal regulation and the economy, while attempting to increase productivity to keep prices in line.

According to Robert C. Stempel, Chevrolet general manager, January and February will be critical months for auto makers. That is when they will come to grips with federal regulations on passive restraints and particulate emissions for diesels.

Stempel said decisions will be made at that time on the future of certain diesel cars and trucks.

Speaking at a meeting of the International Motor Press Assn. here, Stempel said decisions must be made on these issues. Passive retraints—currently in the courts although slated to be required for the 1984 model year — mean added cost for the industry, he said. Unless diesel particulate standards are lowered, some cars will be dropped, Stempel said.

While not revealing which cars and trucks are in jeopardy, he did say they would be those using larger diesel engines.

Reducing costs is another problem, Stempel said. He noted that Chevrolet had a 5-percent productivity gain this year, but said he hoped for more from the new recent UAW contract talks.

Part of the division's and GM's problem will be solved by marketing small Isuzu cars which can be produced more economically in Japan, as well as by jointly manufacturing a small car with Toyota.

By the end of the '80s, Stempel said, it will be necessary to reduce the time it takes to build a car and to outdo the Japanese in this area.

With the market being what it is, he said U. S. manufacturers really do not have the time now to accomplish this goal. This makes it a "time for partnership," he said.

When asked after the meeting whether this proposed joint manufacturing plan with Toyota will be subject to renegotiation in the future, Stempel would say only that "I didn't come here to sell some other car."

He said the reason for such an arrangement would be to furnish the dealer body with products while GM closes the productivity gap with the Japanese.

Stempel said Chevrolet will be competing in a buyers' market in 1983. The division has no plans to discontinue its popular Chevette, he said. A diesel version reaching 60 MPG will be announced within a few weeks, he said.

Camaro is going strong, although production is still below capacity. Stempel noted that 40 percent of Camaro sales are Z-28s—the performance version—and he expects more interest in performance in the future.

As for Chevy's J-car, the Cavalier, Stempel said he is convinced the division could double its sales, saying this is the fastest-growing car class in the world.

A hot market for Chevrolet has been small trucks, where its S-10 garnered the No. One spot in terms of market share, with 25 percent of this market, Stempel said. He noted this was the market that Toyota and Datsun used to lead.

He stressed that this market is "heating up" for '83.

When asked whether Chevrolet will abandon its mass-market appeal to concentrate on luxury and performance models, Stempel said flatly that for his division, "the mass market is the backbone."

He also said that because of the market, and the fact that the industry has 30 percent more capacity than sales volume, it is clear the buyer is in the driver's seat. Chevrolet's advertising is therefore shifting to invite the customer to compare its product.

Service Index jumps sharply to 113.8 percent in 1982

By Francis J. Gawronski
Service Editor

After dipping to its smallest gain of the year in July, service and parts business in new-car dealerships in August recorded its second best showing in 1982.

According to the Automotive News Service Index, August shop business amounted to 113.8 percent of the volume for the same month in 1981.

In July, service and parts business dropped to 100.3 percent of the year-earlier volume after recording an increase of 7.2 percent in June. March posted the biggest increase of the year, up 14.6 percent.

August also marked the 18th consecutive month that the Service Index has shown a gain over the same month a year earlier.

All indicators, including repair orders written which have been on the negative side of the ledger for eight consecutive months, registered healthy gains in August.

The leader was gross profit on all labor, parts and accessories sales — the most important indicator from the dealers' viewpoint — with an increase of 18.4 percent over the year-earlier figure. In July, gross profit was down 0.2 percent, the first decline in 21 months.

Shop parts sales, those used on customer-paid and warranty work, were up 17.8 percent, while sales of all parts and accessories increased 17.3 percent. Total labor sales—both customer-paid and warranty—increased 11.7 percent over the 1981 figure.

Repair orders written, which dipped 6.4 percent in July, rebounded for a 4.1 percent increase over the year-ago figure in August.

Figures used in the Service Index are averages compiled from replies on shop business from a cross-section of the nation's new-car dealers.

For the first eight months of 1982, dealers' shop volume amounted to 107.9 percent of the business for the same period in 1981.

The leading indicator for the period was shop parts sales, up 13.0 percent, followed by parts and accessories sales, up 11.8 percent, and gross profit, up 10.8 percent.

SERVICE INDEX
113.8*

	Aug., '82 vs. Aug., '81	8 mos., '82 vs. 8 mos., '81
Gross Profit on All Labor and P&A Sales	+18.4%	+10.8%
Repair Orders Written	+ 4.1%	— 6.1%
Total Labor Sales (Customer & Warranty)	+11.7%	+ 6.0%
Shop Parts Sales (Customer & Warranty	+17.8%	+13.0%
Sales of All Parts and P&A	+17.3%	+11.8%

*—Survey by Automotive News shows that dealers' service and parts business in August, 1982, was 113.8 percent of business in August, 1981. Service business in the eight months of 1982 was 107.9 percent of business in the corresponding period in 1981.

'83 Saab prices up $50 to $750; equipment added

ORANGE, Conn.—Saab prices for 1983 have been increased $50 to $750. Saab-Scania of America, the importer, said much of the boost is the result of added content.

The Saab 900 models rose $100 and now carry stickers of $10,750 for the three-door hatchback and $11,050 for the four-door sedan. Protective exterior moldings and extra body sound insulation have been added.

The 900 Turbo three-door hatchback went up $310 to $16,510, reflecting the addition of power windows, protective side moldings and a central locking system for doors and trunk. Moldings were added to the 900 Turbo four-door sedan, and the price is now $16,910, up $50.

The biggest hikes were applied to the 900-S models, which have the same new standard features as the Turbo units. The 900-S three-door hatchback is $13,550, up $750, and the four-door sedan is $13,950, up $450.

Automatic transmission went up $20 and is $370 for all models.

NHTSA sides with makers in court

Passive-belt deadline is called unmeetable

Continued from Page 3

fective date were to stay, those unable to meet it would have to stop production. Chrysler, for example, said it could not survive such an event.

NHTSA said the makers have shown "convincingly" that the '84-model deadline is impossible. It said that without further court action and rulemaking, it cannot be exact, but it feels "practicable" compliance could not be achieved before 1986 models. There is "considerable doubt" whether uniform compliance could be reached even then, NHTSA said.

• Court documents list the earliest dates makers say they can install passive restraints:

Volkswagen of America — Quantum, Audi 4000, Audi Coupe, Audi Quattro and Scirocco, July 1, 1985; Audi 5000 and Rabbit Convertible, January, 1986.

Alfa Romeo—1986 models.

BMW—Wants to install air bags in three of its models and automatic belts in its most popular model. It would need 22 months of leadtime without a supplier problem. To deviate from this schedule, even for one model, would require it to change a supplier, redesign a major component and renegotiate contracts.

BMW projects it could install air bags in this one model line by the 1985 model year. It could have automatic belts in another model at the same time. By the 1986 model year, BMW could put air bags in two other models, it said.

Volvo—By '85 models, it could have passive restraints in all models, but it would be more comfortable waiting an extra model year (1986 models) in case of unforeseen events. Volvo is looking at a later-generation passive belt. The motorized belts would use a spool-out instead of buckle-type emergency release.

Volvo did not say whether it has any plans for air bags — which it once engineered into a test fleet for Allstate Insurance. It has told NHTSA separately it may have problems finding suppliers for air bags.

Toyota—Wants a phase-in over several years because of the number of models and because it has scrapped molds, attachments, and tools. Model-year 1985 might be possible for cars with wheelbases over 100 inches except for the Cressida, which already has a passive belt, Toyota said.

For the smaller Toyotas, none would have automatic belts earlier than 1985 models and "not even then for some car lines."

Subaru—Needs 36 months as an "absolute minimum" and it cannot start consideration until January, 1983. Subarus have sashless doors which complicate problems with passive belts.

Saab—Passive belts by 1987 models and air bags by 1989 models.

Renault—30 months after a court decision for passive belts.

Rolls-Royce—31 months.

Nissan—23 months for current models and 30 months for new models.

Mitsubishi—24 months for current models and 3 years for vehicles produced after September, 1983.

Mazda—31 months after introduction of a model.

Jaguar—Says the effective date should be deferred until at least January, 1984.

Isuzu—3½ years' leadtime is needed, since more than one model is involved. For one model only, three years would be enough.

Honda—36 months (1986 models) if one effective date is set for all models, or 24 months (1985 models) if a phase-in is allowed.

"Automatic restraints could be provided on 100-percent of our production for the U. S. by the 1986 model year under Honda's phase-in program," it said.

General Motors—21 months for detachable passive belts for current models. GM stressed these must be detachable, and it assumed outside engineering and tooling capabilities would be available and that there would be no significant work stoppages.

Ford—After inveighing against passive restraints in general, Ford said theoretically it might be able to make it for current small cars with a minimum of 84 weeks plus another 4 to 6 weeks, but as a practical matter, it could not do it by the start of 1985 models. Moreover, because of substantial uncertainty, Ford said it might have to abandon its current thinking and start all over again.

A 1986-model-year date is better, it said. But certain models—such as convertibles and bench-seat cars that would require air bags—would be prohibitively expensive.

"We estimate, for example, that at volumes of about 50,000 vehicle sales per year, the cost to Ford of a two-occupant air bag system would exceed $1,450 per vehicle at 1985 economics," it said.

Chrysler—1985 for detachable automatic seat belts—and then only for its E-body and a portion of one other line of vehicles.

For the rest, the earliest installation date is the '86 model year, Chrysler said. Chrysler said it could not survive with either a 1984-model-year or 1985-model year effective date.

"Requiring compliance on vehicles with a wheelbase over 100 inches would force Chrysler to delay the scheduled introduction of a new line of vehicles for one model year," it said.

American Motors—24 to 36 months.

American Seat Belt Council—Nine months to start supplying the vehicle makers once they are committed to a firm design.

Alliance of fraternity brothers

American Motors markets the new Renault Alliance as a passenger car with room for up to five persons. But the brothers of Duquesne University's Zeta Beta Tau fraternity proved that in a pinch the subcompact can accommodate as many as 17, during the recent Fraternity Stuff contest on campus in Pittsburgh. Alliance, unstuffed, features front-wheel drive, fuel injection and a base price of $5,595.

Nelson, Bill Nelson Chevrolet, Richmond, Calif.; Cecil B. Willis, Peninsula Pontiac, Torrance, Calif., and Roosevelt V. Robinson, Robinson Cadillac, Atlanta.

DOE delays publication of '83 fuel-economy guide

Continued from Page 2

ers entering the showroom or copy it and give it to consumers.

Another was to publish the 1983 and 1984 guides together in a similar limited quantity, but in any case to use no more money than that made available when DOE did not print the second edition of the 1982 Guide, and cheapened the first version, or approximately $498,000. DOE does not have a budget for printing the guide this year.

Barbara Fleming, a spokesperson for DOE, defended the department's action saying, "The public never asks for them. We'd got a million of these things filling the shelves at our distribution center."

Apparently consumers are getting the information elsewhere and at a time when budgets must be looked at. DOE feels justified in taking the action, she said. "Sending one copy to each dealer meets the law," she added.

Limited printing of the guide was shot down by attorneys at the EPA and the Department of Transportation, however, so the guide now is effectively in limbo.

"What we've got here is policy people pushing for printing and the political types saying no," a DOE source said.

Meanwhile, consumers have no information with which to do comparative shopping and little prospect for help this year.

Said one EPA source in the fuel-economy program, "If they hold this thing up much longer, it won't be worth much to anybody when we finally do get it out."

Meanwhile, Clarence Ditlow, director of the Center for Auto Safety, has written to Odle questioning Odle's right to hold up publication of the guide. Ditlow threatened to sue Odle if he does not publish it.

Early October sales plunge to 24-year low

Continued from Page 2

44.08 percent; Imperial down 50.00 percent; Dodge down 27.35 percent; Ford down 41.57 percent; Mercury down 30.70 percent; Cadillac down 5.39 percent; Chevrolet down 27.29 percent; Pontiac down 25.55 percent; VWoA down 53.89 percent, and AMC down 2.94 percent.

Annualized 12-month sales based on the Oct. 1-10 total figured to 4,991,000. Year-to-date sales totaled 4,394,921, down 13.37 percent from 5,073,243 last year.

All corporate makers trim stocks during September

Domestic inventory dips to 69 days

Continued from Page 1

2.50 percent, and VWoA, 2.04 percent.

By size class, all segments were in leaner supply Oct. 1 than a month earlier, with subcompacts recording the biggest cut.

The industry had a 65½-day supply of subcompacts, compared with a 95½-day stockpile a month earlier. The compact segment changed the least, opening October with an 83½-day supply compared with 86 days a month earlier.

Stocks of intermediates also thinned out, as the industry had a 69-day supply Oct. 1, down from 89 days a month earlier. The industry had a 58½-day supply of standards, down from 70 days, and a 55-day stock of luxury cars, down from 71 days.

The Oct. 1 inventory was divided this way by market segment: Subcompact, 25.21 percent; compact, 25.62 percent; intermediate, 30.04 percent; standard, 12.69 percent, and luxury, 6.44 percent.

A month earlier, the inventory was divided as follows: Subcompact, 26.77 percent; compact, 24.98 percent; intermediate, 29.97 percent; standard, 12.23 percent and luxury, 6.05 percent.

The Oct. 1 days-supply figures by market class were:

Subcompact — Alliance, 65½; Rabbit, 53; Cavalier, 54; Chevette, 57; Skyhawk, 63½; Turismo/TC3, 65½; Firenza, 66½; J-2000, 67; Lynx, 67½; Escort, 70; Horizon, 71; Charger/024, 71½; Omni, 77; Pontiac 1000, 87; Eagle SX/4, 95; EXP, 113½; LN7, 129, and Spirit, 161.

Compact — Zephyr, 30; Fairmont, 58½; Reliant, 66; Skylark, 73; Omega, 74; Aries, 82; Camaro, 82; Mustang, 93; Concord, 98; Eagle, 98; Citation, 101; Capri, 121; Phoenix, 130, and Firebird, 131.

Intermediate — Cougar/XR-7, 29; Thunderbird, 38; Marquis/Cougar, 48; Cutlass four-door, 55; Cordoba, 57; Gran Fury, 58; Regal two-door, 58; Regal four-door, 59; Bonneville, 62½; New Yorker, 63; Cutlass two-door, 65; LeBaron, 68; Malibu, 69; Century, 69½; Grand Prix, 70; Mirada, 72; Diplomat, 75; Cutlass Ciera, 77; Monte Carlo, 81½; Celebrity, 87; LTD/Granada, 88; Dodge 400, 105, and Pontiac 6000, 107.

Standard — Olds 88, 38; Grand Marquis/Mercury, 48; LeSabre, 50; Olds 98, 61; Electra, 63; Crown Victoria/LTD, 67, and Chevrolet, 76.

Luxury — Lincoln, 39; Continental, 41½; Seville, 42; Cadillac, 43; Eldorado, 55; Toronado, 65; Mark VI, 70; Riviera, 76; Cimarron, 83; Imperial, 103, and Corvette, 151.

Imported-car stockpile slides to 48½-day supply

Continued from Page 1

rate declined during September, mainly because of inventory shortages.

Nissan, for example, which had an adequate stock of 49½ days, outsold Toyota during September to take the number one spot among imports. Toyota sales were undoubtedly held back by its anemic 26-day supply.

The Toyota stockpile was lowest among the imports Oct. 1, but a number of lines were in that same ballpark, including Honda with a 27-day supply and Mercedes-Benz with a 28-day stock.

The inventory of new imported pickup trucks was also down Oct. 1 to 138,417, a 98-day supply, from 153,032 a month earlier, a 107-day stockpile.

The combined imported car and truck inventory Oct. 1 totaled 492,917, a 56½-day supply, compared with 540,812 a month earlier, a 59½-day supply.

The combined domestic and imported new-car inventory Oct. 1 was a 60-day supply, down sharply from 75½ days a month earlier.

• The inventory of Japanese-built cars dipped to 234,331 Oct. 1, a 39-day supply, compared with 257,522 a month earlier, a 41-day supply.

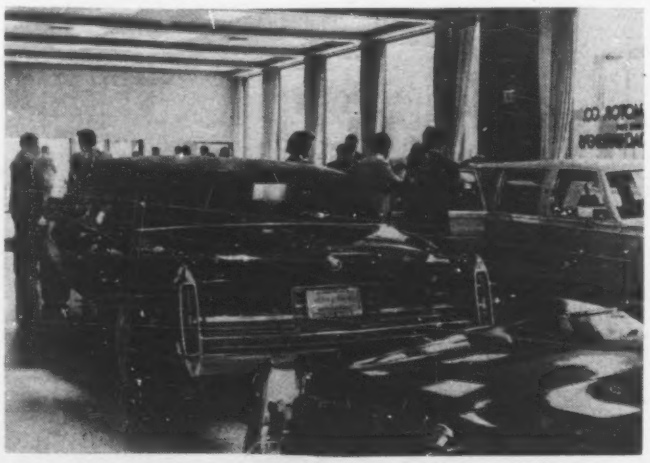
Japanese nameplates and their October days-supply figures were: Toyota, 26; Honda, 27; Subaru, 37; Nissan, 49½; Mazda, 57, and Isuzu, 116. In addition, Chrysler Corp. had a 43-day supply of Mitsubishi-built cars, including Plymouth Colt, 44 days; Dodge Colt, 36 days; Sapporo, 38 days, and Challenger, 71 days.

The stockpile of West German-built new cars totaled 74,569, an 88-day supply, down from 83,262, a 104-day stockpile, a month earlier.

German nameplates and their Oct. 1 days-supply figures were: Mercedes-Benz, 28; Porsche, 38; BMW, 43½; Audi, 113, and Volkswagen, 162½. VW also had a 53-day supply of U. S.-built Rabbits in stock, for a total 102-day supply, down from 136 a month earlier.

Days-supply figures for other European lines Oct. 1 included Volvo, 55; Jaguar, 56; Saab, 63; Peugeot, 114; Renault, 148; Fiat, 230, and DeLorean, 273.

Days-supply figures for new imported pickup trucks in inventory Oct. 1 were: Mazda, 47; Toyota, 61½; Chrysler Corp./Mitsubishi, 91; Nissan, 124; Ford Courier, 169; Isuzu, 176, and Chevrolet LUV, 179.



Strictly for limos

Hillcrest Cadillac, Beverly Hills, Calif., has opened a showroom devoted strictly to stretch limousines produced by Maloney Coachbuilders, Schaumburg, Ill. The showroom has 8,000 square feet of floor space and 12,000 feet of display area outside. Sixty-one-year-old Hillcrest Cadillac sells 31-, 45-, and 48-inch stretched Cadillac and Lincoln limos priced from $30,000 to $55,000.

Overtime, plant returns boost total to 98,313

Car production climbs for week

By Patricia Hoffman
Staff Writer

Overtime schedules at four plants and the return of four assembly points from inventory-control shutdowns helped boost last week's domestic car production from the previous week's total.

The auto makers slated 98,313 units last week, a 19.61 percent gain over the previous week's 82,197, but output fell 19.97 percent from 122,842 units built in the comparable 1981 period.

Year-to-date, the manufacturers have assembled 4,095,826 units, down 22.32 percent from last year's 5,272,492. The makers assembled their 4-millionth automobile on Monday (Oct. 11), eleven weeks later than the total was reached in 1981.

Only two facilities remained idle last week for model changeover. They were General Motors Van Nuys and Ford Lorain. Production at Van Nuys is slated to resume today (Oct. 18).

GM's Willow Run plant is also slated to resume today following a two-week shutdown to control overstocked inventory.

Due to a parts shortage last Monday (Oct. 11) at GM's Detroit point, assembly was halted after four hours of work on the first shift. Production resumed on the second shift Wednesday (Oct. 13).

The Chrysler Belvidere and Jefferson plants were both idle last week for inventory control.

Back last week from inventory adjustments were GM's Doraville point and Ford's Kansas City, Wayne and Metuchen facilities.

Operating six days last week were GM's Arlington, Baltimore and Linden points, plus Ford's Wixom facility.

U.S. truck production jumps 49 pct. to 36,832 for week

U. S. truck production last week jumped 49.61 percent from the previous week's total as nine assembly points returned from inventory-control shutdowns.

Last week's truck output was estimated at 36,832 units, up from the previous week's 24,619, but down slightly from 37,191 units produced in the comparable 1981 period.

Year-to-date there have been 1,560,993 trucks produced, a 16.33 percent gain from 1,341,892 units completed in the same period last year.

The General Motors Pontiac (heavy-duty and medium-duty) truck lines were closed for inventory control last week. Production of heavy-duty trucks is slated to resume at the plant today (Oct. 18), and medium-duty assembly is scheduled to resume next week (Oct. 25).

Also idle for inventory adjustment last week was Ford Motor's Louisville facility. The point has been operating on alternating-week schedules since Sept. 27.

Chrysler Corp.'s Belvidere point was down last week due to heavy inventories in the field.

Back last week following inventory adjustments were GM's Janesville, St. Louis and Flint (pickup) facilities. Beginning Oct. 25, second-shift operations on the Flint light-truck line will be dropped indefinitely.

Ford's Kansas City, Kentucky, Norfolk, Michigan and Twin Cities truck facilities plus Chrysler's Warren truck point all resumed operations last week after downtime to control overstocked inventory.

Volkswagen of America's Westmoreland plant, idle since June 28, remains closed for model changeover. Production is slated to resume in December.

Dealer's petition to quash subpena denied by FTC

WASHINGTON. — A New Jersey Toyota dealership will have to answer its amended subpena from the Federal Trade Commission in the investigation of whether it and other new-car dealers sell credit life, health or accident insurance as a prerequisite for extending credit.

The New Jersey dealer, Toyota Town of Point Pleasant, Inc., moved more than a year ago to quash the subpena. But the office of the Secretary of the FTC and the commissioners never received the letter sent in November, 1981. Now FTC is denying the petition for reconsideration of the move to quash.

While the FTC has simplified some subpenas, it has continued the nationwide investigation. Motions to quash have been filed by various dealers and finance companies on grounds the McCarran Act prevents the FTC from inquiring into the "business of insurance."

FTC responded that an "investigation of misrepresentations by lending institutions and automobile dealerships which deprive potential borrowers of the ability to assess the terms and costs of obtaining credit falls outside the judicially defined parameters of that business."

It referred to a 1975 case successfully brought against Peacock Buick, a Virginia dealer. That case was upheld by the Fourth Circuit Court.

Recyclers elect

GRAND RAPIDS, Mich. — Larry G. Smith, an owner of Calhoun Auto Parts in Battle Creek, has been elected president of the Automotive Recyclers of Michigan.

2 plants return, auto production doubles in Canada

Last week's Canadian auto production more than doubled the previous week's total as operations resumed at General Motors' Oshawa (No. One) car facility and Chrysler Corp.'s Windsor car point following downtime to control overstocked inventories.

The auto makers targeted output last week at 10,961 units, compared with 5,128 the previous week, and up 26.63 percent from 8,656 in the comparable 1981 period.

The return of three truck facilities helped boost last week's estimated truck production to 9,325, a gain of 148.73 percent over the previous week's 3,749, and about the same as the 9,391 units built in the comparable week last year.

Operations resumed last week at GM's Oshawa (No. One) car facility following one week of downtime to control inventory. The plant will be idled again today (Oct. 18) for another week of inventory control.

Also at GM, the Oshawa truck point returned last week after being idled Sept. 27 for inventory control. Starting Oct. 25, production at the facility will be cut from 720 units a day on two shifts to 360 units a day on one shift. About 1,250 workers will be placed on indefinite layoff.

Ford Motor's Oakville truck point and Chrysler's Windsor car and truck facilities resumed production last week following downtime to control overstocked inventory. Still down at Ford are the Oakville and St. Thomas car points. Oakville is slated to resume today, and St. Thomas is expected to return Oct. 25.

Year-to-date, the car manufacturers have assembled 680,318 units, a 4.60 percent gain over last year's 650,879.

So far this year truck production has totaled 395,966 units, down 2.52 percent from 406,215 finished in the comparable 1981 period.

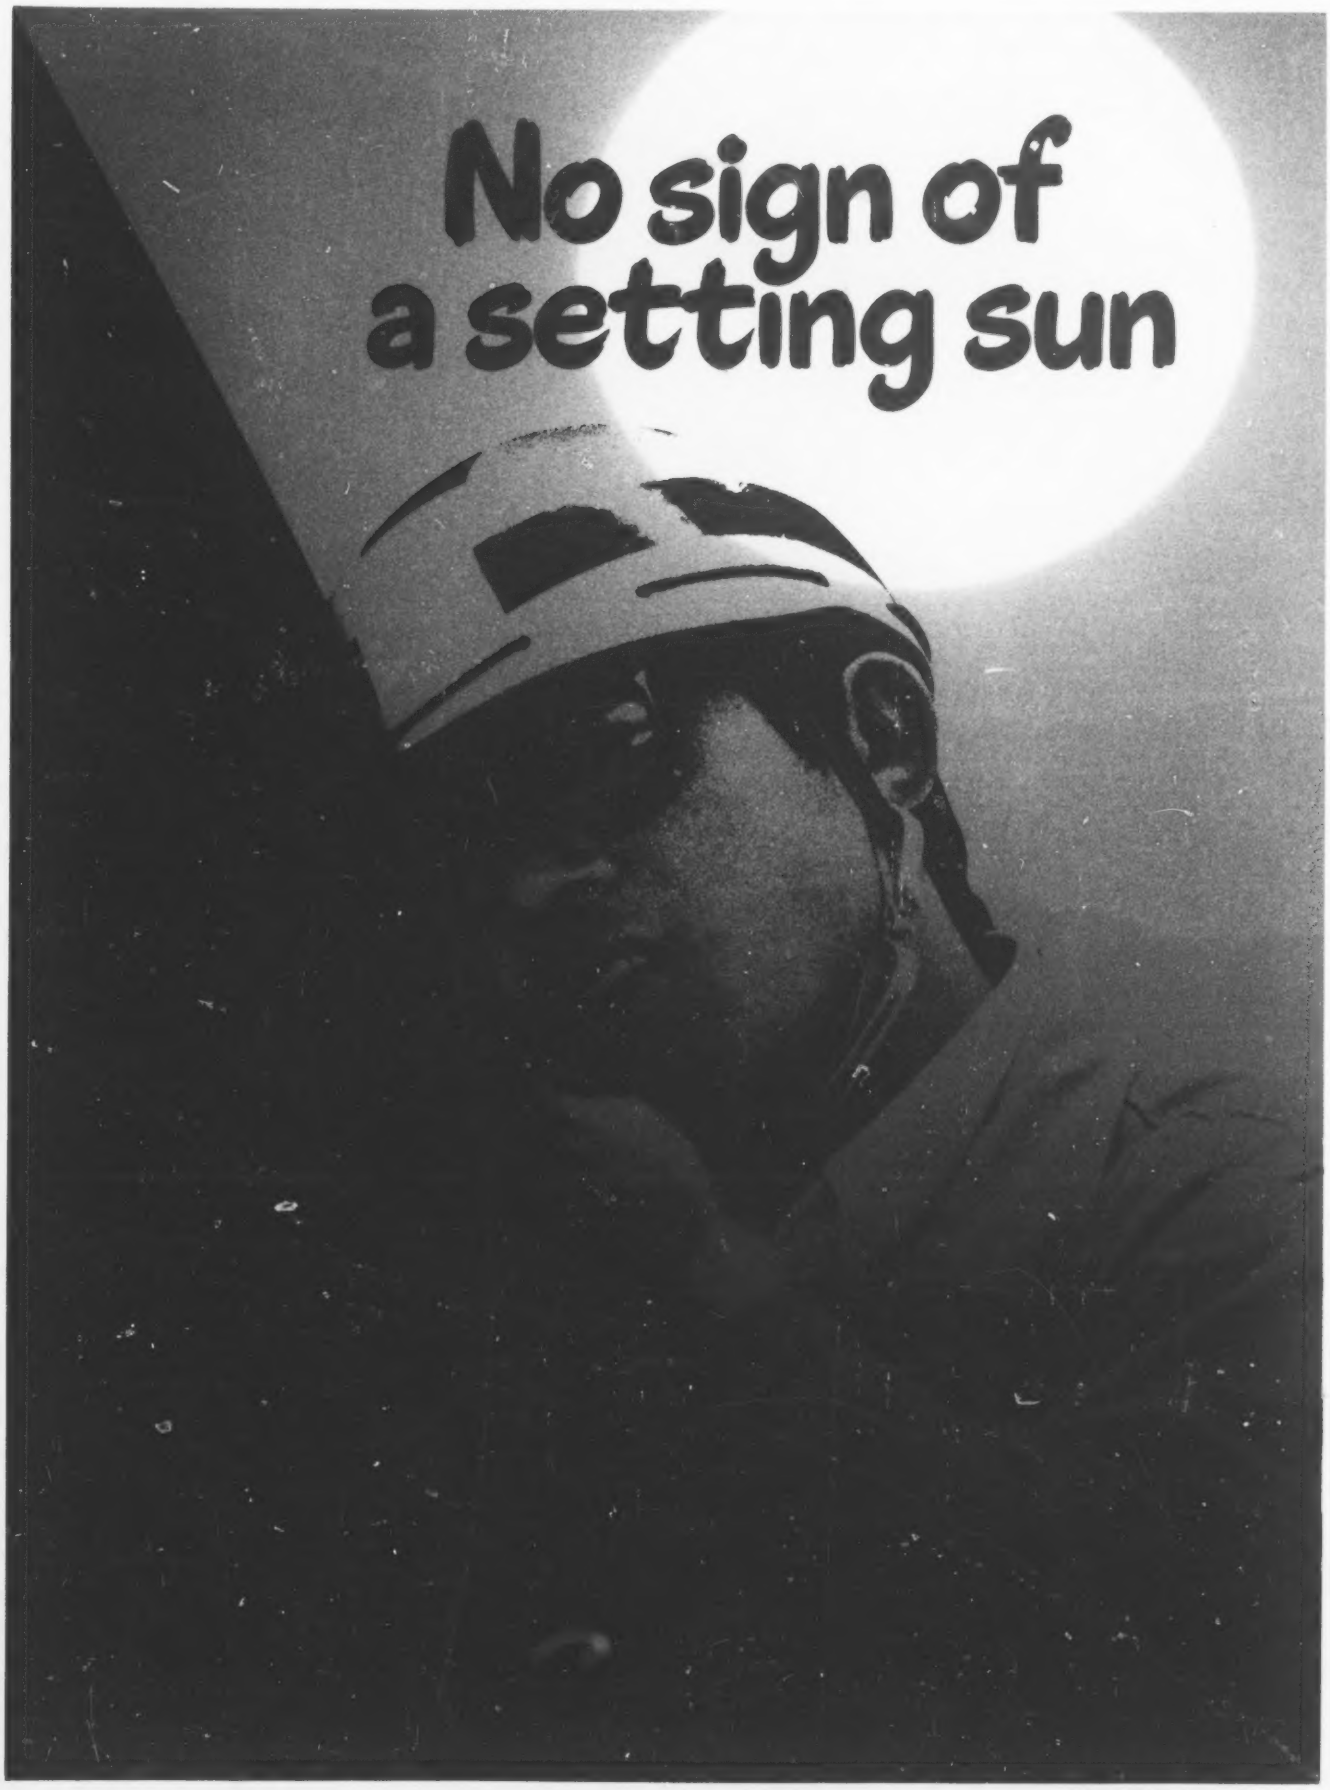
THE JAPANESE



By Al Fleming
InJustry Editor

The island nation of Japan is but a speck in the land mass of the world. Yet the Land of the Rising Sun casts a shadow that stretches from its shores in the coastal waters of northeastern Asia to the streets of Europe, the highways of North America and the back roads of Third World countries.

It is a harsh shadow that falls upon the U. S., whose vehicle manufacturers produced three out of every four of the world's cars and trucks in the 1950s but now account for one of five.

The role of the Japanese in America's wavering automotive fortunes cannot be understated. Japan, which turned out only 20,000 cars in 1955, zipped by the U. S. as the world's largest auto producing nation in 1980, built 31 percent of the world's cars in 1981 (the U. S. share was 27 percent) and sends more than half its vehicle output abroad for marketing.

Although General Motors and Ford Motor Co. remain first and second, respectively, among the world's biggest auto producers, Japan's Toyota Motor Co. Ltd. and Nissan Motor Co. are third and fourth, respectively, ahead of No. 5 Volkswagen of West Germany.

With more than 40 percent of Japan's car exports shipped to the U. S. (some 1.7 million last year), Japanese nameplates account for about one in every four new cars sold here, resulting in a U. S. trade deficit with Tokyo last year of $13 billion in autos alone.

How the Japanese auto industry achieved this phenomenal growth has captured the attention of people the world over, involving as it does a complex web of international social, economic and political factors.

Indeed, analyzing the reasons for Japan's success has become an industry in itself, although Ford Motor Co. president Donald Petersen declares matter-of-factly, "It's no secret or mystery. Japanese producers brought to the U. S. market products that delivered on quality, fuel economy and price. They also had a sizeable labor cost advantage and a full complement of cars designed for their own fuel-stingy home market, at a time when U. S. producers were caught short by the energy crunch."

Petersen believes it will take the rest of the 1980s for the American auto industry to become fully competitive again.

Less charitable in his appraisal of Japan's good fortune, Chrysler Corp. board chairman Lee Iacocca, among others, charges the Japanese government with subsidizing companies by giving them low-interest financing for products they export to the U. S. and rebating commodity taxes paid in other countries, while manipulating

Continued on Page E-20

Decline in foreign demand poses serious problems for Japanese steel industry

The extraordinary growth experienced by the Japanese steel industry in the 1950s and 1960s slowed considerably in the 1970s, with annual raw steel output growth under one percent since 1970-'74 versus double digit rates of the preceding two decades.

The reason is declining demand from both domestic and foreign customers. Growth in Japanese consumption of steel mill products has slackened due to slower growth in gross fixed capital formation, and a shift in investment capital away from the more steel-intensive industries to the high technology and services sectors, according to Predicasts, Inc.

More damaging to the Japanese steel industry, however, has been the decline in foreign demand. Although still the world's leader, Japan's steel exports have fallen 17 percent since 1976 due to a combination of recession-induced declines in demand from industrialized nations, the development of formidable domestic steel industries by many of Japan's traditional trading partners and emergence of South Korea as a major competitor for the large Chinese market.

Unlike most industrialized nations, however, the Japanese steel industry has remained profitable in the face of world recession as new, efficient production facilities and high labor productivity keep production costs low and permit Japanese steel products to remain competitively priced.

In addition, Japanese producers are able to maintain tight profit margins due to easy access to external bank financing on favorable terms, and close cooperation with the central government.

Accompanying tables indicate that four Japanese companies—Nippon, Nippon Kokan, Sumitomo and Kawasaki—rank among the world's top eight steel producers, with another, Kobe, in 18th place, and that Japanese steel production is expected to climb from 111.4 million metric tons in 1980 to 117.5 million in 1985 and 139 million in 1995.

Another table shows use of metal in Japanese cars dropped from 86.1 percent of the typical car's total weight in 1975 to 83.6 percent in 1980, with nonferrous metals climbing slightly.

High-strength sheet metal, known in Japan as High-Ten, has been the greatest beneficiary of automotive weight reduction in the country. Reportedly it comprises nine to 10 percent of new Toyota Celica and Nissan Sentra models, while Honda's new 1,440-pound City mini-car contains nearly 70 pounds. The Japanese credit their innovative steel companies with developing the product.

Toyo Kogyo's new assembly plant is one of world's most advanced

HUFO CITY, Japan.—One of the world's newest technologically advanced car assembly facilities started producing Mazda automobiles here September 20.

The plant, located 56 miles west of Toyo Kogyo Co.'s primary manufacturing facilities in Hiroshima, incorporates "a physical representation of the company's primary philosophy in building the plant — creating harmony between human and material elements," according to Toyo Kogyo officials.

Located on a site of 198 acres, the 1.5 million square-feet plant is devoted to stamping, body assembly, painting and final assembly. Construction of the plant was completed just 18 months after ground breaking, at an approximate cost of $150 million.

Opening of the facility marks the end of Mazda's 51-year history of single location vehicle production in Hiroshima.

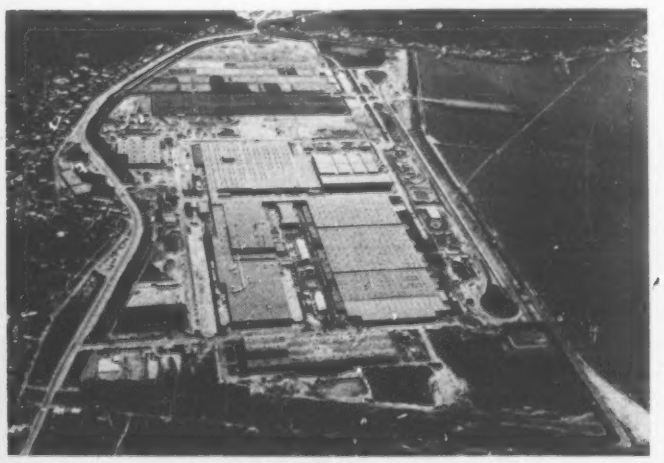
Among work environment improvements are automated and robotized handling of heavy welding, body paint spraying, and other heavy or uncomfortable jobs; well-lighted and brightly painted work areas; a tilt-hanger conveyor belt on the final assembly line that eliminates the need for under-the-line pit; and a wide slat-type conveyor belt elsewhere on the final assembly line that allows workers to stand on it while working on a car, rather than having to walk down the line as they work.

Dust prevention measures in the paint shop include a two-door entrance with an air shower in between, higher atmospheric pressure in the shop to keep air flowing out to other parts of the plant, and a steel net floor with water underneath to trap falling dust.

Any worker along the three-section 4,600-foot final assembly line can stop a section of the line to correct defects or get extra help simply by pulling the string which runs along the line.

The plant can run nine body types in a total of three entirely different model lines simultaneously on one assembly line. This permits quick change of the production model mix according to shifts in market tastes, and reduces the downtime of the plant required for new model start-up.

The Hofu plant's 1,800 workers and 155 robots will build 20,000 completely assembled and 7,000 complete knocked-down passenger cars per month.



The Hofu plant is 56 miles from Hiroshima.

Yokohama seeks niche in U.S. high-performance tire market with two new radial entries

By Matt DeLorenzo
Los Angeles Reporter

RIVERSIDE, Calif — Yokohama Tire Corp. has two major goals in the U. S., says president Toshikiko Hiyama: To make a name for itself in this country ... to become prominent in the high-performance tire market.

To that end, the company, here in late summer, introduced two new performance tires designated Y352 and AX320. Soon after the first of the year an even higher-performance tire, called the Advan, is scheduled for unveiling.

According to B. H. "Andy" Anderson, director of sales for Yokohama in the U. S., the first pair of products are positioned in the performance market "with different categories in mind." The Y352 is aimed at "serious enthusiasts" and will compete against such products as Goodyear NCT, Pirelli P6 and Bridgestone Potenza. The AX-320 is intended for "those looking for good ride characteristics."

For now the Y352 is the company's top-line performance tire, a 60 series available in seven sizes. The steel-belted radial uses bead apex filler technology to increase sidewall stiffness.

While the Y352 uses a single steel belt, the AX320, offered in five sizes, has two belts, one steel the other Kevlar. Called duo-dynamic construction, the steel belt provides rigidity for high performance, while Kevlar provides flexibility for a softer ride. The Kevlar belt, laid on top of the steel belt, is folded at both edges to increase the strength of the belt edge. As a result, tread deformation is kept at a minimum, reducing rolling resistance and uneven wear.

The Y352 is offered as original equipment on some vehicles coming from Japan, but to date there is no OE application of the AX320.

Anderson says the tires will be marketed through independent tire dealers and the company isn't contemplating a network of company-owned stores. "Sixty-five percent of the tires sold in the U. S. are sold through independent dealers," Anderson says. "We have 300 dealers nationwide, and our goal is to increase sales by 30 to 40 percent over the next year and in three years double its market penetration."

According to Hiyama, the company accounts for 24 percent of OEM tire applications in Japan, and a similar share of OE tires on Japanese models imported into the U. S. Toyota, Nissan, Isuzu, Mitsubishi and Honda use Yokohama tires on some models.

The Y352 is used on Mitsubishi's new Starion sports coupe, but carries the Goodrich name due to a license agreement between the companies.

Hiyama says the company is moving away from that arrangement and eventually the tires will bear the Yokohama name.

"We did it (used the Goodrich name) initially because the brand acceptance was much better," Hiyama says. Now, however, Yokohama is out to make a name for itself in the U. S. "First we must build up the image of Yokohama tire," he says, adding that the company wants to become a leader in high-performance tires.

The two new tires were introduced earlier in Japan and have helped Yokohama take 35 to 40 percent of the high-performance segment of its home market. Yokohama hopes to transfer that success to the U. S., and its forthcoming 50 series Advan tire will be an important part of that push.

Seven Japanese importers in U.S.

By Matt De Lorenzo
Los Angeles Reporter
John A. Russell
New York Staff Writer

Sales of imported makes take more than one out of four new-car sales in the U. S. market, and Japanese brands account for eight out of 10 import sales — well over a million units a year.

The seven importers of those Japanese nameplates are profiled in this article.

•

American Honda Motor Co. Inc.

Although American Honda has been selling cars in the U. S. for only a dozen years, it ranks third in volume among import nameplates. Last year the company sold more than 300,000 vehicles with only three basic models—Civic, Accord and Prelude—in its lineup.

The company had a headstart in brand recognition by playing a dominant role in the rapidly expanding U. S. motorcycle market during the 1960s.

Honda's car fortunes still are tied closely to the motorcycle business. Although the company maintains separate sales and service staffs for cars and cycles, its general administration and parts distribution network are shared by the automobile and motorcycle divisions.

Just as motorcycles preceded cars for Honda in the U.S., the company's Marysville, O., motorcycle assembly plant was a precursor of the automobile factory that is to follow.

The motorcycle plant alone represents an investment of $35 million and employs 400 workers. Situated on 864 acres, the facility not only builds motorcycles for sale in the U. S., but units that are exported to Europe as well. Adjacent to the Marysville site, Honda next month begins to assemble Honda Accords in a $200 million plant that has taken two years to construct. When fully operational, it will employ about 2,000 persons and by May 1984 is scheduled to be producing Accords at the rate of 150,000 a year.

The two plants administered by Honda of America Manufacturing Inc., represent a $36 million annual payroll for the combined workforce of 2,400.

American Honda, headquartered in Gardena, Calif., was established in 1959 to handle sales and distribution of all Honda products in America. The first products were motorcycles and power products. It wasn't until 1970 that Honda began selling cars here. Today American Honda has more than 800 car dealers, 1,780 motorcycle dealers and 3,000 power product dealers in the U. S.

As Honda's success in the U.S. car market grew, the company began branching out into other areas. One subsidiary, Honda International Trading Corp., was established in 1972 to utilize car-carrying ships returning to Japan. HIT, as it's called, exports American-made items such as golf clubs, coffee makers, towels and toys to be sold to company employes in Honda company stores.

California Honda Air Conditioning Inc. (CALHAC) was formed in 1978 to assemble and install air conditioning units at the port, and exports partially assembled units for installation on cars sold in the home market.

Toyota Motor Sales U.S.A. Inc.

Toyota Motor Sales U.S.A. marks its silver anniversary in the U. S. this fall, holding the preeminent position as the nation's leading auto import nameplate. In 1981 the company sold more than 700,000 vehicles, a far cry from the 300 cars retailed in 1957, its first full year of operation here.

The present leadership position also contrasts sharply with 1961 when Toyota actually withdrew from the U. S. car market, maintaining its only presence here for three years with its Land Cruiser utility vehicle. The first Toyota, called Toyopet and later renamed Toyota Crown, fell short of the mark in performance, styling and equipment in the eyes of U. S. buyers.

Toyota literally returned to the drawing board to come up with the successful Corona, and the rest is history.

With headquarters in Torrance, Calif., Toyota Motor Sales, its subsidiaries and distributors, employ 2,887 persons. The dealer body consists of 1,098 franchises employing an additional 31,145 workers. On annual company sales of more than 700,000 vehicles, an average Toyota dealership retails 528 units per year, more than three times the industry norm.

In expanding its sales network in the U. S., Toyota relied heavily on independent distributors located in various regions around the country. Although Toyota Motor Sales has a regional sales and service organization of its own, three independent distributors still exist: Mid-Atlantic Toyota, Southeast Toyota and Gulf States Toyota. The rest of the country is served by Toyota's 10 regional offices.

Facilities and land owned or leased by Toyota are valued at over $148 million and cover 603 acres. Toyota's independent distributors have an additional 178 acres and facilities valued at $32 million. Dealers have property and land in excess of $1 billion. A new $50 million Toyota national headquarters building, nearing completion in Torrance, is expected to open this fall.

Toyota Motor Manufacturing, Long Beach, Calif., produces truck beds for Toyota's line of pickups. More than 600,000 truck beds have been produced at the plant since its start 10 years ago. In 1980 the plant was expanded at a cost of $50 million and output was boosted to 150,000 units per year. About 400 workers are employed there.

American Isuzu Motors Inc.

Japan's oldest car manufacturer, Ishikawajima Shipbuilding Co., which became Isuzu Motors Ltd. in 1949, is one of the newer auto import companies in the U. S.

Its subsidiary, American Isuzu Motors Inc., was established in the U. S. in June 1980 with headquarters in Whittier, Calif. The company is owned 80 percent by Isuzu Motors Ltd. and 20 percent by C. Itoh & Co. Ltd., one of Japan's largest trading companies.

With authorized capital of $20 million, the American company has been able to establish 205 full-line dealers in 28 states and 120 truck-only dealers in 21 additional states, for market representation in the entire continental U. S.

American Isuzu employs 190 persons and has a 233,000-square foot building on 12 acres in Whittier that acts as national headquarters, Western regional office and master parts depot. Outside Atlanta in Norcross, Ga., the company's Southeastern regional office is located in a 57,000-square-foot building on seven acres. Isuzu's Central regional office is in the Chicago suburb of Elk Grove Village. The company plans offices in the New York/New Jersey and Dallas areas.

American Isuzu is headed by Yukio Itagaki, who joined the parent company in 1952. Itagaki spent four years in the U.S. during the early '60s in Isuzu Motors' Los Angeles liaison office, and upon returning to Japan was named general manager of the Export Division of Isuzu Motors Ltd. When the U. S. company was formed, Itagaki was tapped to become its first president.

American Isuzu's senior vice president and general manager, John E. "Jack" Reilly, is a 25-year auto industry veteran who worked for GM, Volkswagen of America and its Porsche-Audi Division, and later for two Toyota distributors.

Also at the senior vice president level are Masafumi Yamagiwa and Sadao Matsumura. Yamagiwa is senior vice president - manufacturer relations, while Matsumura holds the post of senior vice president and chief financial officer. Robert McClure is American Isuzu's vice president-parts & service.

Senior managers include: Paul Barnum, national service manager; William Bucher, national parts manager; Thomas Conley, national sales manager, and E. Fritz Kern, national marketing manager.

Department managers include: Taizo Azabu, data processing; Michael Brescini, dealer development; Rolf Meyer, administration; Gerard Murphy, product quality / development; Gregor Sedoff, vehicle supply; Ken Tremayne, advertising; Thomas Weaver, personnel; Hisao Yasuda, finance; Leon Rosen, merchandising; and Glenn Howell, public relations.

Nissan Motor Corp. in U.S.A.

After more than two decades of selling cars in the U.S., Nissan soon moves into a new phase, that of manufacturer through its Nissan Motor Manufacturing Corp. U.S.A. (NMM) subsidiary.

However, it is Nissan Motor Corp. in U.S.A. (NMC), distributor of Nissan and Datsun cars and trucks, that made the company's mark in this country, now ranking second in volume among import nameplates.

Founded in 1960, NMC began in earnest what two independent distributors had tried two years earlier: Introducing the Datsun nameplate to an untapped U.S. market. The company's first president, Takashi Ishihara, is now chairman of the parent company in Japan, Nissan Motor Co. Ltd., and president of the Japanese Automobile Manufacturer's Assn.

Along with selling the small Datsun 1000 Bluebird car, NMC helped pioneer a new U.S. market segment, the mini-pickup truck. Two decades later, the company is preparing to open its first U.S. manufacturing plant in 1983 to produce—ironically—mini-pickups.

Located on 825 acres in Smyrna, Tenn., the plant, with 3.2 million square-feet of floor space, represents a capital investment of $500 million. An additional $160 million will be spent making the plant operational.

The factory is expected to employ 2,600 workers and produce 156,000 trucks a year. Annual payroll will amount to $90 million. The facility, now 75 percent completed, is scheduled to begin production next August.

It represents the largest investment Nissan has made outside of Japan, and with 220 robots will be Nissan's most automated plant. The complex includes a stamping plant, body and frame assembly area, and paint, trim and chassis line.

While the plant is under the auspices of NMM, Nissan's 1,093-member U.S. dealer body remains the responsibility of NMC. The distributor employs 1,874 persons operating out of the company's headquarters in Gardena, Calif., and 12 regional offices throughout the country. NMC has 10 other facilities for parts and service, and eight ports of entry.

Mitsubishi Motor Sales of America Inc.

The latest import entry in the U. S. market from Japan is Mitsubishi Motor Sales of America Inc. (MMSA). Although Mitsu-

Isuzu will sponsor San Diego golf tourney

SAN DIEGO. — Next year's San Diego Open golf tournament will be a mouthful — the Isuzu-AWSDO. Translation: The Isuzu-Andy Williams San Diego Open.

Mayor Pete Wilson and executives of the automobile importer announced that Isuzu will be the 1983 tourney's major financial angel, with a year's expenditure of an estimated television coverage Feb. 19-20.

Datsun deal celebrates with champagne, orchids

PORTLAND, Conn.—Marking its 14th anniversary, Route 66 Datsun served champagne and other refreshments on a Friday and Saturday.

There were orchids for the ladies, and the dealership offered free car washes "by experts, on the house, while you party."

Cars most free of troubles in Germany is made in Japan

Mazda 626 is the most trouble-free car among all 78 models sold in West Germany, according to the West German Technical Inspection Assn. (*Technischen Uberwachungs Vereine*) on the basis of that nation's mandatory auto inspection program which requires owners to have their vehicles inspected inspected every other year.

The 3,450 Mazda 626 units tested had a "trouble ratio" of 2.9 percent. That measures the number of vehicles inspected that have to be rechecked due to serious repair problems.

Following Mazda 626 in order among top 10 finishers are Audi 100, 3.4 percent; Toyota Starlet, 3.7 percent; Peugeot 305 and Toyota Corolla, 3.9 percent; Audi 80 and Toyota Celica, 4 percent; Mercedes-Benz 200-280E, 4.2 percent; Volkswagen Passat and Opel Commodore, 4.5 percent.

Average odometer reading of the Mazda 626s inspected during the period covered by the report was 30,000 kilometers.

Mazda 626 is a winner in Germany.

With limits on U.S. imports, Japanese makers shift effort to higher-priced luxury lines

By Matt DeLorenzo
Los Angeles Reporter

As U. S. import restrictions enter their third year, Japanese auto manufacturers will continue to concentrate their efforts in larger, more expensive cars, while carving out new niches in the North American market.

Virtually all entries except Toyota's new Tercel will be positioned outside the traditional import stomping ground of high-volume, low-priced models.

Many of the 1983 model introductions will begin next month and continue through the spring with most of the action centered around Nissan Motor Corp.

• Nissan will begin replacing the Datsun 310 with the Nissan Pulsar series beginning in November. Pulsar NX, a sporty two-door notchback, will bow first, opening a new market segment for Nissan.

Equipping Pulsar NX with retracting headlights, standard sunroof and numerous other amenities, the company hopes to attract a slightly upscale, predominantly female market.

Pulsar NX will be positioned against Ford EXP, Mercury LN7 and the current Honda Prelude. The new model is being counted on to retain sales levels that may be lost due to soft demand for the 200SX.

The Pulsar debut will extend into spring when two- and four-door hatchback versions are offered. More conventional in appearance, they will carry a high level of equipment compared to the Sentra series and will be priced accordingly.

The two-stage intro of Pulsar will allow dealers time to clear out stocks of 310s.

Also scheduled for mid-year introduction is a turbocharged NX model to be positioned against sport coupes of the Volkswagen Scirocco genre.

Midyear will be especially busy for Nissan since a new truck also is scheduled to debut. The truck, initially brought in from Japan, eventually will be built at Nissan's new Smyrna, Tenn., assembly plant. Another midyear entry will be a notchback version of the Stanza.

In the area of new market segments, Nissan had planned to import the Ambivan, a van-like vehicle built off the Stanza platform, at midyear. However, those plans for the vehicle, called the Prairie in Japan's home market, recently were shelved due to uncertainty over import restrictions. Both import and domestic competitors were anxiously waiting for Ambivan to bow in the U. S., to see if mini-vans can live up to the potential shown in consumer clinics.

• The only truly low-priced high-volume entry in the small car market offered by Japanese makers this year is Toyota Tercel. Even this economy car is offered with a market-niche twist, however, with introduction of the four-wheel-drive Tercel wagon.

Although the regular Tercel line will carry the banner for Toyota in the volume segment, interest in the wagon as an innovative product will add to Toyota's image as an industry leader.

Corona, a mainstay in the middle of Toyota's lineup, was dropped this year. However, the company is preparing a replacement, the front-wheel-drive Camry, slated for mid-'83 intro. This model will appeal to upscale customers, a segment that is still buying cars. These more profitable products are an important factor in the face of import restrictions.

• A Mazda revamped 626 line follows the trend towards bigger, more luxurious cars among Japanese manufacturers. The new Mazda model, featuring front-drive, will be targeted at Honda Accord-type buyers.

In addition to two- and four-door notchbacks, the 626 also will be offered in hatchback, giving it a one-up on Honda. Nissan's addition of the notchback Stanza will further increase the competition.

In keeping with the philosophy of maximizing profits under import ceilings, talk has surfaced that Mazda is considering U. S. import of the high-line Cosmo/Luce series, giving Mazda a car that could go head-to-head with Nissan Maxima and Toyota Cressida.

• A new Prelude equipped with a V-6 engine is being readied by Honda with introduction scheduled possibly as early as the start of the calendar year. The bigger engine indicates Honda is setting its sights on the Datsun 280ZX/Supra market segment. Prelude, with boxy styling, front-drive and four-cylinder engine, was unable to crack that market, but the infusion of more horsepower and new sheetmetal may give Honda an image-building performance car.

As Honda unveils the image car, the company also will build Accord production capacity at its Marysville, O., plant. A major challenge facing the company is convincing U. S. buyers that the American-built Accord is as good or better in quality than its Japan-made counterpart.

U. S. production of Accord will take some pressure off the company imposed by import restrictions. With added capacity to play with, Honda could conceivably pioneer the minicar market in the U. S. by importing its City model. If so, there would be an element of irony in the move, since the N600 minicar introduced by Honda in 1970 initiated the company's involvement in the U. S. car market.

• American Isuzu has been in a holding pattern since import restrictions were imposed, offering I-Mark two- and four-door sedans in 22 states and trucks throughout the country. Next spring the company will introduce its long-awaited Impulse sport coupe. Impulse was introduced early this year under the Piazza nameplate in the Japanese market.

• With Nissan's Ambivan on hold, speculation is Mitsubishi may be one of the first Japanese companies to enter that market with its Super Space Wagon (SSW) in 1984. This cross between a station wagon and van would complement the wagonless lineup of Starion, Tredia and Cordia.

Introduced in Japan as Piazza, this sporty two-door will bow in the U.S. next spring as the Impulse.

Toyota's Tercel 4WD Wagon has full-time front-wheel-drive that converts to four-wheel-drive with the shift of a lever.

28.4 million '82 sales worldwide are forecast

Worldwide auto sales are forecast at 28.4 million for 1982, according to Otto Eckstein, chairman, Data Resources Inc. This is well below the all-time peak of 30.5 million in 1979, but up 2.6 percent from 1981.

Figures for the seven major markets (accompanying table) show the U. S. will account for 29.6 percent of all new cars sold in the world this year, followed by Japan (11 percent).

Eckstein predicts that while new car sales in the U. S. climb from a 32.8 percent share of the world total by 1984, Japan's share will fall to 10.3 percent.

Another table, however, showing growth prospects for auto sales in major markets worldwide (1979 to 1983-'85 moving average) shows that growth in Japan of unit new-car sales and stock of cars on the road will lead other major markets.

A table on car production in major producing countries shows output in the U. S. climbing to 8.2 million units in 1984 (32.1 percent of the world total) and Japan reaching 7.6 million (29.8 percent).

High prices, not laws, block entry to Japan

Claims by European and U. S. auto makers that they cannot sell in Japan on account of discriminatory legislation and complex type approval procedures are unfounded, says an investigation by the Economist Intelligence Unit.

The main reason that volume imports do not sell well in Japan is that foreigners can rarely compete with Japanese models on price, since the latter's productivity is significantly higher.

The report brings together the areas of safety and consumer protection law and regulations under one cover for the first time.

The tariff wall which protected the industry in its infancy has long since been removed.

"Japanese safety standards are less demanding than those of the U.S.A. and there is very little danger of product liability litigation and the award of excessive damages," says the report.

"There are stringent emission control regulations, but these are necessary for a small but heavily industrialized and densely populated archipelago."

It does not foresee much change in this area. And while the Japanese are less inclined to go to law over shoddy goods than Europeans or Americans, there are signs that the attitude is changing, particularly where the offending article is a food or a drug.

The report makes the point that the only foreign volume manufacturer to have made any progress in Japan is Volkswagen. But luxury car makers who do not compete on price have less difficulty in Japan.

Japan's Ministry of Transport has now authorized four centers in Europe—in France, West Germany, Italy and the UK — to carry out type approval tests on its behalf.

Japanese auto industry a post-war phenomenon —It's short on tradition, but long on vigor

Updated reprint from Automotive News, *Sept. 1, 1980.*

By Richard A. Wright
Assistant Managing Editor

"Made in Japan."

In earlier days — before the Korean War—"made in Japan" connoted a "cheap imitation" and second rate quality. But during the Korean War, American photographers who needed replacements for their expensive German cameras and lenses found that the less-costly Japanese products were as good or better.

Old concepts die hard and when Americans began getting interested in little foreign cars during the '50s, they thought in terms of German, British, Italian or French, not Japanese.

The first Japanese cars were sold in the U. S. in 1958, when Toyota sold 274 Toyopets and 52 Datsuns were registered. Almost all of these cars (264 Toyopets and 37 Datsuns) were sold in California.

In those days, Americans knew the Japanese made good cameras and electronic equipment, but there was still enough of the old "made-in-Japan" doubts to keep most from seriously considering purchase of something as important as a car that was made in Japan.

Now, with Japanese nameplates taking about one out of every five sales in the U. S., the major reasons advanced for the success of the Japanese cars are fuel economy and, most importantly, higher quality.

• A Japanese nameplate, Mazda, is the only car in the world to be successfully marketed with a Wankel rotary-piston engine. The Germans, famed for their engineering, tried it and failed. General Motors, also no slouch at engineering, gave up on it before ever getting close to the marketplace.

Another Japanese car, Honda, is the only car in the world being marketed with a stratified charge engine. Ford Motor Co. has been working on its PROCO engine for years, but is still far from marketing it.

Japanese cars have sold well in Europe against European cars, so it is not just a weakness of American cars that accounts for Japan's amazing success in the U. S. They obviously have an attractive product to sell.

Even American automotive people admit that the quality of finish on Japanese cars is very high. They are less expensive than many European cars. Their technology is advanced. "Made in Japan" is now a stamp of quality.

The Japanese auto industry has now surpassed the U. S. industry in auto production. This is impressive progress for an industry which really did not take shape much until after World War II.

And Japanese imports in the U. S. have come a long way since the Toyopets of the late '50s and early '60s, which were built for Japanese roads and driving habits and did not hold up under the high-speed, long-distance driving characteristics of the U. S.

In fact, Japanese firms were building cars in the early part of this century, but its industry could not be compared with that of the U. S. or Europe.

The first car built in Japan was put together in 1902 by two engineers named Uchiyama and Yoshida. Yoshida later became president of Tokyo Jidosha Seisakusho, which was the first auto maker in Japan. It produced the conventional four-seat Takuri from 1907 to 1909.

There were a few other early car builders, but most of the major Japanese makers of today began producing cars in the '50s and '60s.

The exceptions are the two biggest makers, Toyota and Nissan. Nissan builds the Datsun car, but the car name is much older than Nissan. In 1912, Kwaishinsha Motor Car Works began work on an experimental car, which was put into production in 1914. It was called the Dat, derived from the initials of the partners, Den, Aoyama and Takeuchi.

In 1926, Kwaishinsha merged with Jitsuyo Jidosha Seizo to form Dat Automobile Mfg. Co., at which time the company quit making the Dat. JIS had also been producing a car called the Lila, but that production ceased also. Dat produced trucks exclusively until 1930.

Dat returned to car assembly in 1931 with the son-of-Dat, or Datson. Datson was changed to Datsun in 1932 in order to make use of the Rising Sun emblem.

The company underwent a couple more name changes, then became Nissan Motor Co., in 1933. The Datsuns of the '30s were built in a full range of body styles and were based closely on the British Austin Seven.

• Many Japanese cars of this era were copies of U. S. or European models. After the war, the 1948 Datsun looked like an American Crosley and a British-looking sports car was added in 1952. In the '50s, Japanese makers began to develop a more Japanese look.

Toyota Automatic Loom Works began experimenting with cars in 1935. Its first six-cylinder cars looked remarkably like the Chrysler Airflow. During World War II, Toyota built a car that was a dead ringer for the last pre-war Plymouth.

The Toyota company was owned by the Toyoda family. The slight change in name was made because the family thought Toyoda was more difficult to pronounce than Toyota. Americans, of course, pronounce both the same.

After World War II, Toyota began building a quite unusual-looking four-cylinder car which was the first to bear the name Toyopet.

Both Toyota and Nissan began exporting cars to the U. S. in 1958. In 1958, sales of Datsun totaled 1,003 and Toyopet 919. Both nameplates drifted along without making much of a dent in the U. S. market.

In fact, the cars were not right for the U. S. market and the Japanese pulled back to study the situation and retrench. They studied U. S. marketing techniques, built up sales and service networks, designed cars to appeal to U. S. buyers and began to move up the sales charts in the late '60s.

The Japanese were not the only makers to come into the U. S. market only to get booted back out. The most popular imports in the early pre-war days were Volkswagen, Renault and MG. VW had a product that captured the U. S. imagination. It had a Model A-type personality and it prospered beyond anyone's wildest dreams. And the MG appealed to a hardy band of sports-car nuts who would put up with pretty much anything.

But the Renault Dauphine had not been designed with the U. S. in mind and people who drove them at high speeds for long distances found that they couldn't take it.

A wide range of foreign cars, from English Fords to German Borgwards to Czech Skodas met similar fates. For many years, the only imports that built up a following in the U. S. were the VW Beetle, sports cars and high-priced luxury cars.

The Japanese changed that in the '60s and '70s, when they made the small, economy sedan a big seller against the Beetle and, later, the VW Rabbit.

The Japanese clearly learned their lessons in the U. S. market well and other nameplates followed Toyota and Datsun across the Pacific.

In 1960, there were registered in the U. S. 73 Princes. The Prince was introduced in 1952 and named in honor of Crown Prince Akihito. It was built in the former Tachikawa Aircraft works, which started producing an electric car called the Tama after World War II, then switched to the gasoline Prince. Prince Motors became a division of Nissan in 1966.

Prince sales never amounted to much in the U. S. Prince sold for example, 42 cars in 1963 and 13 in 1964, hardly a growth pattern. That was its last year in the U. S.

In 1966, Daihatsu and Isuzu made their first appearances in the U. S. market. The Daihatsu company was formed in 1907 to produce internal combustion engines, but did not build its own cars until 1954, when it introduced the three-wheeled Bee. In 1963, the Compagno line of four-wheel cars appeared, powered by 797-cc engines.

Daihatsu had a short run in the U. S. market, with not quite 100 cars registered from its introduction in 1966 to 1968, when it faded from the scene.

The Isuzu didn't fare much better in its first venture into the U. S. It, too, faded in 1968, with registrations of 148 in 1966, five in 1967 and seven in 1968.

But Isuzu returned to the U. S. market in 1976 in the guise of General Motors' Opel. GM had halted import of its German-built Opel and in 1976 began marketing a smaller Isuzu under the Opel name through its Buick dealers until 1979.

Isuzu motors is the result of the 1937 merger of Jidosha Kogyo with Toyko Gas and Electric to form Tokyo Jidosha Kogyo. T.G.E. had earlier, 1932-35, produced a car called the Chiyoda, mainly for the military.

The name Isuzu predated that

Mazda GLC sedan gets sporty
Mazda has added this Sport Sedan to its front-drive GLC lineup for 1983. The Sport package includes a five-speed manual transmission, 175/70SRX13 radial tires, tachometer, suspension modifications and special interior.

Mazda's popular RX-7 sports car returns for 1983 in three models — the S, GS and high-line GSL version. The GSL (shown) has standard four-wheel disk brakes, cruise control, power windows, rear window wiper/washer and six-speaker stereo radio and cassette deck with graphic equalizer.

Mazda upgrades GLC, adds '83 Sport Sedan

Mazda has honed its front-drive GLC models with several improvements for 1983, as well as adding a new Sport Sedan model to that line.

Other refinements have been made to the company's RX-7 sports car and its truck line. An all-new 626 series will bow later in the year.

The GLC Sport Sedan has many of the features of the Sport hatchback model, including front and rear anti-roll bars (no front bar on automatic transmission model) and tuned shock absorbers. Standard tires are 175/70SR13 steel-belted radials.

Other Sport Sedan features are special upholstery with accent stripes, "lounge-type" rear seats, tinted glass, halogen headlights, black trim, tachometer, sporty steering wheel and multiple-adjustment bucket seats.

Sport Sedan options include air conditioning, electric sliding moonroof, styled aluminum wheels and power door locks. Power steering is a new option for all '83 GLC models.

New grilles and rear lamps have been incorporated on all '83 GLC models. Hatchbacks have a two-fin design while sedans have a three-fin grille. Hatchback models now have black trim on the rear panel.

Under the hood, the '83 GLCs have a carburetor with a new feedback design for precise metering of the air/fuel mixture, and a radiator subtank that lengthens the coolant service interval.

Mazda said improved ride comfort in the GLC is a result of using softer rear trailing link bushings and fine-tuning the tension/compression ratio of the rear shock absorbers.

Improvements have also been made to reduce interior noise levels.

Refinements made to the RX-7 line for 1983 include a standard maintenance-free battery, improved seats, a redesigned temperature/ventilation control panel and standard pop-out sunroof and better sound systems for GS and GSL models.

Mazda's B-2000 Sundowner and B-2200 (diesel) pickup trucks benefit from a number of changes for 1983, including more sound insulation, a stronger air-conditioning unit, improved ride, a new heavy-duty alternator and standard P205/75R14 steel-belted radial tires.

Other detail improvements that are standard for '83 are remote fuel-filler door, standard maintenance-free battery, full wheel covers, black trim, dual side mirrors and tie-down bars that run the full length of the cargo bed.

Japanese auto industry post-war phenomenon —It's short on tradition, but long on vigor

Continued from Page E-16

merger, however. Both companies had built trucks to government standards with the Isuzu name since 1934. After the merger, the Isuzu name was retained and used in place of Chiyoda and Sumida, a car built from 1933-37 by Jidosha Kogyo.

Isuzu is related by merger to Datsun, as Jidosha Kogyo was formed in 1933 by the merger of Ishikawajima and Dat Automobile Mfg. Co. Dat became a division of Tobata Imono Co., which sold Dat's Osaka plant to Ishikawajima in 1933. Jidosha Seizo Co. was formed from the remainder of Dat and its name was changed to Nissan in 1934, as noted earlier.

In 1942, Hino Motors was spun off from Jidosha Kogyo as an independent truck maker and the remainder of the company was revamped as Isuzu Motors in 1949.

Trucks had been Isuzu's major business, but in 1953 Isuzu acquired a license to build the Hillman Minx. In 1961, it replaced the Minx with cars of its own design.

In the '70s, General Motors acquired an interest in Isuzu (now 34 percent) and after it quit importing its German-built Opel it began importing Isuzus into the U. S. and marketing them under the Opel name. The first Japanese Opels went on sale in the U. S. in 1976.

In 1981, Isuzu began marketing cars and trucks in the U. S. under its own name.

In late 1969, a new (to the U. S.) Japanese nameplate appeared, the Subaru. It was a front-wheel-drive car with aluminum engine and was not an overnight success. Subaru branched out into four-wheel-drive cars and station wagons and its sales have grown gradually through the '70s and it is now the fifth largest selling import in the U. S.

Subaru is built by Fuji Heavy Industries, which was formed after World War II out of Naka-Jima Aircraft Co. Fuji has been building Subaru cars since 1958.

In late 1970, two more nameplates joined the Japanese ranks in the U. S., Honda and Mazda. These two makes were particularly interesting because of the technology they brought to the U. S. market. Honda is the only car on the market powered by a stratified charge engine, and Mazda is the only car nameplate to successfully market a Wankel-powered car.

The Honda is built by Honda Motor Co., a relative latecomer to the automotive scene. Honda, of course, was better known for its motorcycles when in 1962 it began building cars.

The first Honda brought into the U. S. was the small 600 model, which carried a list price of $1,395.

Late in 1972, Honda grabbed the attention of Washington — and gained numerous champions in Congress and in the bureaucracy — by announcing that it could meet the tough 1975 exhaust emission standards without catalyst or afterburner with its new CVCC (Compound Vortex Controlled Combustion) engine.

The CVCC engine, which powered the Honda Civic, is a type of stratified charge engine. Its basic structure is the same as that of a conventional four-stroke engine, except that a small auxiliary combustion chamber around the spark plug and connected to the larger combustion chamber, is fitted to each cylinder. This auxiliary chamber has a small intake valve, in addition to the larger valve which feeds into the main chamber.

A small amount of rich mixture is supplied to the auxiliary chamber, while a large amount of very lean mixture is being fed into the main chamber. The overall mixture is very lean.

At the end of the compression stroke, there is a rich mixture around the spark plug, a moderate mixture at the connection of the auxiliary and main chambers and a lean mixture in the main chamber. Thus, the charge is stratified into three different conditions.

The rich charge around the spark plug is easily ignited and the burning of the moderate air-fuel mixture around the outlet of the auxiliary chamber insures combustion of the lean mixture in the main combustion chamber. The larger, lean mixture burns more slowly and keeps the temperature of the burnt gas relatively high for a longer duration, burning hydrocarbons and carbon monoxide, but the temperatures do not peak at levels which cause formation of nitrogen oxides.

The Honda Civic had a Beetle-like look to it — rather unpretentuous and even silly — and it was "good" environmentally. It also had a high level of quality — when Pontiac ran a quality study of the imports in the mid-'70s, it rated Honda first.

The result was that Honda climbed in the sales charts, particularly after introduction of the larger Accord, displacing Volkswagen in 1978 in the Number Three spot behind Toyota and Datsun.

• With the Mazda, Toyo Kogyo did what NSU-Prinz, Mercedes-Benz and mighty General Motors were unable to do—it developed a workable car powered by a Wankel-type rotory-piston engine.

Toyo Kogyo seems an unlikely company to beat the automotive giants in development of the Wankel. The company was originally involved with cork products, then started manufacturing three-wheel trucks in 1931. It did not produce cars until 1960.

Most of the early Mazdas were powered by four-cylinder engines. In 1967, it introduced a sports car powered by a twin-rotary Wankel engine capable of 120 MPH. The following year, a Wankel-powered sedan and coupe were added.

Mazda sales in the U. S. soared rapidly in the early '70s, but then collapsed after the Wankel engine was branded a gas-guzzler by EPA. Defenders of the Wankel say the label is unfair, because it compared Mazda rotary mileage with four-cylinder units of similar size. It should be compared with bigger engines, perhaps V-6s, they say, because its performance is comparable to larger powerplants. Indeed, performancewise, the Wankel is to a four as a V-8 is to a six.

After its disastrous U. S. sales slide in the mid-'70s, Mazda turned to more conventional engines. Introduction of its four-cylinder GLC started sales on a steep upward slope again and the line was spiced by introduction of the RX-7, a rotary-powered sports car which won high acclaim from the motor press.

Mazda is now firmly in fourth place behind Honda. Ford Motor Co. now owns 25 pct. of Toyo Kogyo, but Ford is not involved in the Mazda import operation.

• One of the first commercially manufactured Japanese cars was the Mitsubishi Model A, built from 1917 to 1921 and modeled after a Fiat of that period. After 1921 the company's plants were devoted to production of trucks, buses and, later, tanks.

In 1959, the company was reorganized as Mitsubishi Heavy Industries and began producing a small car powered by a two-cylinder engine. Mitsubishi later expanded its automotive offerings, including Jeeps, which it manufactured under license.

Mitsubishi entered the U. S. market in 1971—not as Mitsubishi, but as Chrysler Corp. Chrysler had purchased an interest (15 percent) in Mitsubishi and there was even talk of a merger of the firms. It began importing the Mitsubishi Colt in 1971 and marketed it under the Dodge name.

The Colt sold well for Chrysler and in later years it introduced other Mitsubishi cars and marketed them under Chrysler names—the Plymouth Arrow in 1976, the Plymouth Sapporo and Dodge Challenger in 1977 and the Plymouth Champ and Dodge Colt Hatchback in late 1978.

Mitsubishi is now setting up its own organization in the U. S. and will soon commence marketing cars under its own name. But they are different than the cars Chrysler Corp. is still selling.

So Mitsubishi will become the first importer to market its cars under its own name and another competing corporation's.

Currently, the top four imports in registrations are Japanese and five of the top six are.

In the first seven months of 1982, Japanese makers accounted for 78 percent of import sales in the U. S. (and imports accounted for 29 percent of all U. S. sales).

The Japanese assault on the U. S. import market which began in the late '60s was basically an assault on VW, which totally dominated that market. And it is true that total VW sales, domestic and import, do not come close now to Toyota, Datsun or Honda sales.

VW peaked in 1970, when it sold 582,569, still the highest total ever for an import in the U. S.

Toyota came within a hair in 1981, when it sold 582,204. If it were not for the restrictions on imports since then, Toyota probably would have beaten the record.

Nissan Motor Corp., U.S.A., has named Dixie Auto Transport Co., Jacksonville, Fla., its Carrier of the Year for 1981. At the award presentation, from left, are Dave F. Cowan, Dixie board chairman; Frank Jacobs, Nissan national transportation manager; Norman W. Collins, Dixie president, and Eugene Quinn, Nissan distributor director.

Mitsubishi appoints

WASHINGTON. — Mitsubishi Research Institute, Inc., has named Yoshio Osada chief representative, Washington liaison office. He succeeds Yukinori Okamoto, who is returning to Japan.

IMPORTED NEW-CAR SALES IN U. S. SINCE 1974

No sign of a setting sun

Japanese auto industry —good competitors or?

Continued from Page E-1

the yen to give Japanese companies an export advantage.

"Some people see Japan's comeback from World War II as an awesome achievement," says Iacocca. "But look how the Japanese government has manipulated markets and what it costs the Japanese worker to be that productive — he's not allowed to have a real union, he's paid far less than his American counterpart and he's forced to subjugate his lifestyle to his company."

Warns the Chrysler chairman: "What we face from Japan is a twofold threat to our industrial base. By manipulating the market and regimenting their workers, they're subverting our free enterprise system.

"We can stand by and let them take our markets away or we can tell them to knock off their unfair practices, or we'll be forced to retaliate to protect our industrial base," he says.

GM president F. James McDonald differs with Iacocca, saying, "I salute the Japanese as good allies and competitors. Wide cultural differences separate our two countries, but our commonalities far outweigh our differences. Japan and the U. S. share a commitment to political democracy and individual freedom, our two economies are based on private ownership and highly competitive market systems, and we share the most important bilateral trade relationship in the world."

Ford's Petersen: It's no mystery.

McDonald adds: "But I'm tired of hearing people say American industry should take a back seat to the Japanese. Japanese auto producers didn't discover creativity and innovation."

The Japanese themselves never claimed to be innovators, but do acknowledge that two shocking political events — the Korean War and the OPEC oil embargo — ignited their automotive rocket.

An economic boom, spurred by a surge in demand created by the Korean War and accelerated by a timely, economic expansion program by the Japanese government, created for the first time a consumer market for cars in Japan.

That in turn encouraged Japanese auto companies to introduce small, inexpensive cars to meet demand.

In 15 years from 1955 to 1970, car production jumped 150 times to more than 3 million units, and in 1968 car output topped truck and bus production in Japan for the first time in history.

During the 1960s, Japan's traditional car makers, Toyota, Nissan and Isuzu, were joined by Toyo Kogyo, Honda, Suzuki, Fuji, Mitsubishi and others who entered the auto market, building new mass-production facilities.

In the late 1960s and early 1970s, the Japanese auto industry decided to consolidate into larger, fewer firms and to promote cooperative ties with U. S. auto giants including ventures between Mitsubishi and Chrysler Corp., Toyo Kogyo and Ford, and Isuzu (and more recently Suzuki) and GM.

The West initially was disappointed with its first encounter with Japanese cars which were not oriented to highway performance. The 1973 OPEC oil embargo, however, created a demand for fuel-efficient small cars, and in 1974 Japan became the top exporter of cars in the world.

While most major markets became sluggish due to economic recessions, Japanese auto exports kept soaring into the 1980s, eventually provoking trade issues and conflicts. Whereas Japan's car makers over the years had been able to expand their overseas sales almost at will, they now faced a rising wave of protectionism.

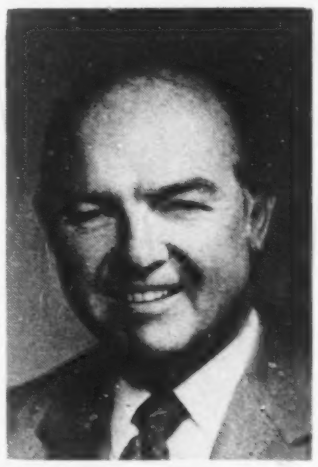
Last year Japan still was able to produce 11.1 million vehicles including 6.9 million cars, 4.1 million trucks and 100,000 buses. But today the Japanese economy is hit, like many elsewhere, with slack personal consumption, a decline in housing starts and a drop in capital expenditures by business and industry. This is hindering Japan's economic recovery, and is further aggravated by a weakening in exports, on which the U. S., Europe and even some Asian countries have put at least temporary ceilings.

Japanese government attempts to reduce a large budget deficit by raising taxes and cutting spending have resulted in an economy that is stagnated and without prospect of an early turnaround since none of the causes of the downturn is likely to change in the near term.

Noted economist Otto Eckstein, chairman of Data Resources Inc., nonetheless, forecasts that new-car registrations in Japan will climb 1.7 percent this year to 3.1 million and rise another 1.7 percent in 1983 to 3.2 million.

Japan's exports, according to Eckstein, will not collapse. Although car exports are running below a 3.9 million rate this year, down by 2.8 percent from 1981, Eckstein says that next year, with the world economy projected to show at least a moderate improvement, auto exports should rise 5.9 percent to 4.1 million units, although less than one-third of the 1983 rise is projected to enter the U. S.

There's the twist, notes Eckstein: "The enormous cost advantage which Japan enjoys over all other countries at current exchange rates would lead to a continuing rapidly rising share of world production, but other governments will not allow it to occur. Japan's gains will be confined to third markets; but they are small, many of them will continue to be very weak and Japan already is totally dominant there."



GM's McDonald: Good competitors.

Eckstein assumes that protectionism against Japanese products will worsen, dropping the nation's share of world car production from 31 percent in 1981 to below 30 percent in 1984. "The share of the Japanese industry in world production won't increase," he predicts. "Yet Japan's cost performance is so superior, particularly at current ridiculous exchange rates, that its share of world markets would rise very substantially if market forces were allowed to sway.

Chrysler's Iacocca: Forced to retaliate.

"While we don't project passage of import content legislation (in the U. S.) or even reciprocal treatment proposals, we do project, at the very least, an extension of voluntary agreements which limit Japanese exports to the U. S. and Western Europe."

The Japanese are still edgy about the possibility of content legislation in the U. S., which has been bandied about in Congress. Nissan Motor Mfg. Corp. U.S.A., subsidiary of the Japanese company, which expects to produce light trucks for the American market starting next August in Tennessee, says it may not be able to do so if domestic content legislation were passed.

According to Marvin T. Runyon, president of the Nissan subsidiary, domestic content of trucks made in Tennessee initially will be 38 percent and will rise gradually, and he contends that no domestic content legislation yet proposed is economically feasible.

Japan's view is that local content and export ceilings and other such measures are temporary blips that will fade away as health of the world economy is restored. Meanwhile, its auto makers are moving ahead with overseas projects — new business tie-ups and production facilities around the world — that will strengthen their positions in increasingly competitive international markets.

There is the proposed joint venture between GM and Toyota that would result in production of small cars in California. There is the deal by Toyota affiliate Daihatsu to produce cars jointly with Chrysler in Peru. There is the pact between Fuji and a Lisbon manufacturer to assemble Subarus in Portugal. There is Honda's launch of car assembly in Ohio next month.

None of these and similar ventures in themselves will light up the automotive world. But they indicate that Japan's sun is not yet ready to set.

DeLorean dream in ruins; UK receivers pull plug

By Edward Lapham
Financial Editor

The DeLorean sports car enterprise lay in ruins last week.

The London-based receivers of the bankrupt Northern Ireland car-building unit decided to close the plant doors permanently.

John Z. DeLorean, progenitor of the enterprise, was languishing in a federal penal institution in California following his arrest on charges he tried to finance a $24 million cocaine and heroin deal.

Paul Shewell, one of the receivers of bankrupt DeLorean Motor Cars, Ltd. (1982) told AUTOMOTIVE NEWS the decision to end the DeLorean enterprise was not a hasty one.

"It was the culmination of several weeks of attempts to get assurances that what we regarded as the necessary working capital for the new venture was available, and not being able to get them," Shewell said.

John DeLorean had been trying for several months to raise $10 million in working capitul from new investors in the U. S. and to secure $25 million in export financing, in order to reacquire the plant.

Shewell said the receivers had been approached by three investor groups which expressed an interest in acquiring the works as a "going concern," but that by press time they had yet to determine if any of the expressions of interest were genuine. One such offer was known to have come from a New York auto parts concern.

He also said the receivers are preparing for liquidation, or sale by "break-up," of the plant, equipment and inventory.

DMCL (1982) owes the British government $34.0 million in secured loans and $17 million in unsecured debt. In addition, Shewell said, there are claims in excess of $51 million from other unsecured creditors, primarily suppliers.

"In the event of a sale by break-up, it is highly unlikely there will be any material assets for the unsecured creditors

End of car line

In happier times

A triumphant John Z. DeLorean peers from underneath the gullwing door of the car he designed, parked in his Northern Ireland plant. Last Tuesday, the British government announced it was pulling the plug on the shuttered plant. Hours later, DeLorean was arrested in Los Angeles for allegedly conspiring in a $24 million cocaine deal—apparently in an attempt to save the car company. Photo history on Page 8.

Arrest overshadowed plant shutdown in UK

By Richard Feast
European Editor

BIRMINGHAM, England.—The shocking news of John DeLorean's arrest in Los Angeles eclipsed the announcement a few hours earlier that the DeLorean sports car factory in Belfast is to be closed.

The latter move was fully expected after the search by the official receivers dragged on for eight months without any tangible evidence of a qualified buyer for the assets coming forward.

The most likely source was John DeLorean himself, who as late as 6 p.m. last Monday—only four hours before the deadline set by Sir Kenneth Cork and Paul Shewell, the receivers—assured the BBC that the necessary financing would be in place in time.

On Tuesday, the Northern Ireland Office announced its decision to close the car plant. It was seen as the unfortunate, inevitable end to a very unsatisfactory episode.

The closing leaves about $50 million in debts to suppliers and a total deficit of around $110 million.

Ben Wilson, who represents creditors of the failed company, estimated that secured and preferential creditors will receive no more than 75 pence in the pound. He believed that around 20 companies, half in Northern Ireland and half in the UK, will go out of business as a result. Among them, they employ more than 2,000 people.

The Belfast company owes money to nearly 350 suppliers, some of which wrote off the debts when the receivers went in.

One company took the precaution of insuring itself against

UAW polls Chrysler rank and file on whether to strike or negotiate

By Marjorie Sorge
Labor Editor

DETROIT. — The UAW will poll the rank and file to see if a strike against Chrysler Corp. is the will of the majority.

The referendum will be held tomorrow (Oct. 26) and the workers will decide whether to strike Nov. 1. The workers will decide whether to walk out Nov. 1 or to stay on the job and recess negotiations until after the first of the year.

Returning to the table will be a complicated situation since Chrysler has already told the union it simply has no more money to give its workers and would stick with the contract negotiated on Sept. 16.

That agreement gives workers three lump sum cost-of-living-adjustments (COLA) worth a total of 50 cents (if inflation runs at 6 percent) during its one year length. Also, wage increases are tied to Chrysler's profitability.

Thomas A. Miner, Chrysler vice president, industrial relations, said the company has no intention of making a settlement which raises the labor cost above the Sept. 16 agreement.

But, UAW President Douglas A. Fraser has said the union will not simply rearrange the rejected contract. He said the workers rejected that agreement soundly and any new pact must have upfront wage increases and COLA payments.

Miner said the company told the union in the last round of bargaining that cuts in health care costs could provide up front money, but the UAW rejected any methods of co-pays or deductibles in those programs.

"I don't think the UAW knowingly wants to damage Chrysler," he said. "But the reasonable thing to do would have been to take the agreement. The rank and file have proven they're unreasonable."

A strike in the U. S. against Chrysler would cost the company between $40 million and $45 million a week, Eisenberg said.

Some analysts have said Chrysler could withstand a short strike without permanent damage, because of high inventories

Air suspension to return on '84 Lincolns

DETROIT.—Air suspension will show up on 1984 Lincoln, Mark VII and Continental cars. The flexible air-filled containers, supplied by Goodyear's General Products Division, will be promoted as premium suspensions in the Ford Motor Co. luxury cars. A Goodyear spokesman predicts air springs will replace coil, leaf and torsion-bar suspensions on a "substantial number of cars" by 1990.

Riviera convertible to pace Indy 500

INDIANAPOLIS.—A Buick Riviera convertible has been selected as the pace car for the 1983 Indianapolis 500-mile race, which will be held May 29. The car will be powered by a twin-turbocharged 4.1-liter (251-CID) V-6 that will develop more than 350 HP. It will be the first convertible to pace the Indy 500 since a Cadillac Eldorado was chosen in 1973. The Riviera will be driven by Duke Nalon, former Indy 500 racer.

Did Peck suppress dissent on air bags?

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A House subcommittee may be asking NHTSA head Raymond A. Peck whether he knew about or tried to suppress a staff document that disagrees sharply with what he told an appellate court was the earliest time auto makers could meet a passive-restraint standard.

NHTSA, under court order to assess capability to meet Standard 208 by '84 models, said that date was "impossible" and concluded that the '86 model year was the first "practical" effective date and even then there is "considerable doubt" whether "uniform compliance could easily be achieved by Sept. 1, 1985."

But last week, Rep. Tim Worth, Colorado Democrat and chairman of the House subcommittee overseeing NHTSA operations, sent a memo to its members suggesting taking a look after the election and after Peck's return from Japan to see whether any hanky-panky was involved.

The staff domument estimates that by '85 models, 85.3 percent of total production sold in the U. S. could comply and by '86 models 98 percent could comply. Only two models — Saab and Isuzu — would need longer, the document said. This is based on affidavits and letters filed by auto makers producing 96.9 percent of the cars sold in the U. S. — the same data base used by NHTSA — in a filing made by Peck, approved by NHTSA chief counsel Frank Berndt and accompanied by an affidavit filed by Courtney Price, NHTSA as-

Product development chief raises hackles at ASBE meeting

Ford's Ross calls body engineers laggards on quality

By Al Fleming
Industry Editor

BLOOMFIELD HILLS, Mich. — The message delivered by a Ford Motor Co. executive vice president at an engineering convention here was about as welcome as a leaky windshield on a luxury car.

"An analysis of customer problems reported on U.S.-industry new cars indicates body engineers are not performing as well as other engineering groups," Louis R. Ross, head of Ford's car product development group, told the Oct. 14 annual convention and technical seminar of the American Society of Body Engineers (ASBE). The talk raised the hackles of many of the attendees, representing auto manufacturing and supplier companies.

Referring to the customer-problem report, Ross told the body engineers they must improve the quality and reliability of body systems because it is "equally if not more important than reducing product costs."

"Body engineers are not performing as well as other engineering groups," he said, adding that while significant improvement has been noted over several years, they are lagging behind other auto systems groups.

In delivering his zinger, Ross said that on an industry-wide basis, studies show improvements for body systems and engine components have climbed 11 percent over several years, compared with improvements of 22 percent in chassis areas, 43 percent in electrical and 70 percent in transmission systems.

• "This is particularly important to American body engineers, because body-systems problems constitute 50 to 60 percent of all customer problems experienced," Ross said.

He cited major problem areas as water leaks, window regulator and door mechanisms, squeaks and rattles, wind noise and fit and finish items.

"Improving body systems will prove more difficult than other components on the car due to the high dependence on operator ability and dedication. We're more people-dependent," Ross said.

Ross said automation will be a key to improved quality and reliability in auto-making plants, to make sure that "quality that's designed into vehicles will be built in at manufacturing and assembly plants."

He said Ford has 1,100 robots operating today and expects to have 5,000 to 7,000 by 1990.

"All of our new cars are being designed so the body shop can install at least 90 percent of the welds automatically," he said.

Ross called squeaks and rattles "a key customer annoyance problem which needs action," and he said Ford's '83-model cars are being evaluated at assembly plants via a new engineering test which has significantly reduced such problems.

Ross said a portable microcomputer called Unimet — used for checking electrical and air-conditioning systems of a car through a single connector to the cigaret-lighter socket—helped cut the company's electrical warranty cost about 30 percent during its first year of operation.

A new Unimet design is being developed and installed which allows detection of defects prior to vehicle completion, he said.

Ross told the ASBE group that Japanese cars enjoy a cost advantage of $1,500 to $2,200 per car, depending on the value of the yen, and added: "Of this deficiency, about $50 to $100 per car results from higher body-engineering costs to design, engineer, test and release American cars for production."

9-million '83 predicted by Nissan's King

CARSON, Calif. — C. P. (Chuck) King, senior sales vice president for Nissan U.S.A., believes new-car sales in the U. S. during the 1983 model year will reach nine million, a 17 percent improvement over the 1982 season.

But he said it would be "1985 at least before the industry returns to pre-recession sales levels."

King spoke at a preview of the 1983 Nissan and Datsun cars. His sales prediction calls for 6.5 million domestic cars and 2.5 million imports.

AUTOMOTIVE NEWS figures for the 1982 model year were 5,543,006 domestics and 2,157,693 imports for a total of 7,700,699. Thus, King's projections amount to an increase of 17.26 percent for U. S. cars and 15.86 percent for imported autos.

"It will be a slow trip back from this year's total sales of 7.7 million to the 11-million level of 1977," King said. "The recent strengthening of the stock market and lowering of interest rates signal some improvement, but nothing dramatic.

"A sustained economic recovery is not in the cards until the middle of 1983, when the GNP is expected to show some recognizable improvement."

King said his company has projected roughly a 10 percent improvement in sales of Nissan and Datsun cars and trucks in

Avanti car works changes hands again

Arnold Altman, who with his late brother Nathan Altman and the late Leo Newman, acquired Avanti from Studebaker-Packard in 1964, and Stephen H. Blake held a press conference to announce the sale of Avanti to Blake. Altman will stay on as president. Blake becomes chief executive officer.

Blake outlines his plans; convertible due in 1984

New owner sees growth for Avanti

By Edward Lapham
Financial Editor

SOUTH BEND. — When Stephen H. Blake, new Avanti Motor Corp. owner and chief executive officer, approached New York and Chicago banks about a loan to acquire the company, he met with a lot of resistance.

"One banker even told me I had insulted his intelligence by asking for a loan to buy this place," Blake told AUTOMOTIVE NEWS. "That made me angry."

Blake, 38, was undeterred. For two years, he worked on putting together an acquisition package which culminated in the $5 million purchase of Avanti. He bought out the interest of several investors including Avanti President Arnold Altman, who with his late brother Nathan Altman and the late Leo Newman, acquired the rights, plant and tooling for Avanti in 1964 from the defunct Studebaker-Packard Corp.

Blake is not related to S. Prestley Blake, stockholder in the shuttered California specialty-car maker Clenet Coach-Coachworks.

When the big banks scoffed at Blake, he went elsewhere. South Bend's 1st Source Bank made a $2.5-million asset-based loan for the acquisition of the machinery, $1.875 million of which is guaranteed by the State of Indiana.

The bank also provided a "seven-figure" working capital line of credit and the City of South Bend has authority to issue up to $3.5 million in tax-free municipal bonds for Avanti expansion, if required.

Blake does want to expand output and sales of the Avanti II. This year, sales should reach about 200 but next year, he said, an additional 50 or 75 units are possible. "Studebaker used to build 15,000 units a year in this plant," he said.

The plant itself is more than 100 years old and once was used to produce wagons for the Civil War. The car is hand-made, with the exception of the General Motors 305-CID V-8 engine and 200 4R automatic transmission. The only real automation in the plant is the hand-operated overhead hoist used to mount drivetrains on the frame.

The Avanti II has a 1982 base price of $22,995.

Blake told AUTOMOTIVE NEWS he has some priorities. "The first place I went when I got here was to the engineering department," he said. "We are going to build an engineering department."

He said Avanti already is considering some minor product changes which will enhance performance, like four-wheel

Paris III for '83

American Custom Coachworks, Beverly Hills, Calif., has introduced its 1983-model Paris III — a Cadillac stretched 4½ feet to accommodate such luxuries as hot and cold running water, electronic bar, TV with Betamax and Persian carpets. Prices start at about $65,000.

Chevy saves NFL ads for January makeups

By Joseph Bohn
Marketing Editor

WARREN, Mich. — Campbell-Ewald is saving about 25 percent of what it would have spent in NFL football—where it had six spots each Sunday for Chevrolet alone — for later in the season and games it hopes will be rescheduled.

"We have to have something to cover those games they're bringing back in," said Paul John, agency vice chairman and chief executive, referring to two games expected to be played in January if the strike ends in time to continue the season.

Chevrolet and other C-E clients have been holding their own with alternative sports programming. But, like other auto sponsors, they will begin feeling the pinch if the strike drags into November.

So far, Chevrolet's been covered by baseball playoffs and spots around the World Series. And it has college football on three networks — Turner, CBS and ABC — where the viewership has been high, the agency executive said.

But the really big games for auto sponsors are those in November, culminating around Thanksgiving Day.

"If things haven't changed by then, we've really got to do some noodling," John said. "You rely on pro football through December."

Chevrolet is scheduled for the Super Bowl for the first time this year, with Jan. 30 expected to remain as the date, because of prior reservations.

It won't back Ted Turner's all-star games.

"We backed Turner in almost all his other enterprises. We put up the seed money to make the bid to get the NCAA games," John observed. "But it's a decision on many people's part to stay out of this," because it could influence NFL strike negotiations.

• Chevrolet has been buying extra TV spots to make up some of the NFL loss. It can get the same reach with combinations of other programming, but not the same frequency, John added.

A combination of shows delivering the same number of desirable male prospects as an NFL game turns out to be cost-inefficient by comparison. And so Chevrolet is holding onto some of its money for later.

Chevrolet has a couple of unique situations on which the NFL strike could put a damper.

Short term, it is currently running a cooperative promotion with Eastern Airlines, offering free flights to car buyers.

An even greater concern is that this fall signals the start of Chevrolet's allout drive against the competition, imports in particular.

A couple of years ago, Chevrolet couldn't have gone out and convinced the public it was eyeball to eyeball with imports on technologically advanced products and quality. All the front-

But August totals tops July count

New-car registrations trail 1981 by 13 pct.

By Jennie L. King
Staff Writer

U. S. new-car registrations were up some 1,000 units in August compared with the preceding month — a difference of 0.17 percent — but they plunged

Table on Page 16.

12.96 percent compared with August, 1981, and brought the year-to-date total to just over 5 million, down 13.27 percent from the first eight months of 1981.

According to figures compiled by R. L. Polk & Co., new-car registrations totaled 627,374 this August, up from 626,321 in July and down 12.96 percent from 720,804 a year earlier. Imports accounted for an any-month record share of the market: 34.16 percent, compared with 28.51 percent in August of 1981.

The August domestic total of 413,084 was down 2.42 percent from 423,319 in July, and down 19.84 percent from 515,297 the preceding August. The import total in August was 214,290, up 4.27 percent from 205,507 in 1981.

The registrations total through Aug. 31, 1982, was 5,031,804, down 13.27 percent from 5,801,537 last year. Domestic new cars registered during the first eight months numbered 3,534,482, down 14.11 percent from 4,115,206 in 1981. The import figure was 1,497,322, down 11.21 percent from 1,686,331 last year.

For the month, imported models and Ford Motor Co. passenger cars increased their shares of the market at the expense of American Motors, Chrysler Corp., miscellaneous domestics and General Motors, which lost 6.51 percentage points from its August, 1981, share. A year ago, GM had offered generous rebates on its products and had enjoyed healthy late-summer sales.

• This August, imports climbed 5.65 percentage points, to a record 34.16 percent from 28.51 percent last year, while Ford was up 2.07 percentage points, to 16.12 percent from 14.05 percent.

AMC dipped 0.35 percentage points, to 0.71 percent from 1.06 percent in 1981; Chrysler was off 0.85 percentage points, to 8.01 percent from 8.86 percent; miscellaneous domestics were off slightly, to 0.03 percent from 0.04 percent, and GM fell back to 40.97 percent from 47.48 percent.

In the domestics-only market, GM earned 62.22 percent in August, down from 66.42 percent last year; Ford had 24.49 percent compared with 19.64 percent; Chrysler had 12.16 percent compared with 12.39 percent; AMC had 1.08 percent compared with 1.49 percent, and miscellaneous domestics accounted for 0.05 percent compared with 0.06 percent a year earlier.

The market-class shares in August, 1982, were as follows: Imports were up to 34.16 percent from 28.51 percent a year ago; intermediates slipped to 20.08 percent from 20.11 percent; compacts dropped to 15.82 percent from 19.57 percent; subcompacts were down to 14.70 percent from 16.21 percent; standards dropped to 10.65 percent from 10.85 percent, and luxury models slipped to 4.59 percent from 4.75 percent.

Of the domestics alone, 30.50 percent were intermediates, 24.03 percent were compacts, 22.32 percent were subcompacts, 16.17 percent were standards and 6.98 percent were luxury models.

August new-car registrations included 214,290 imports, 125,933 intermediates, 99,254 compacts, 92,220 subcompacts, 66,811 standards and 28,806 luxury cars. A year earlier the numbers were: 205,507 imports, 144,961 intermediates, 141,026 compacts, 116,877 subcompacts, 78,220 intermediates and 334,213 luxury models.

During the first eight months of 1982, Ford Motor Co., the imports and miscellaneous domestic makes improved their standings compared with the first eight months of 1981. Ford was

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report.

"In times like these, Pennzoil's Follow-Up System helps us sell Fords."

ED BARTLETT
OWNER
SUN VALLEY FORD
CONCORD, CALIFORNIA

"We've proven to ourselves we have a better chance to sell a new Ford to a man or woman who stays with our service department. Pennzoil's Follow-Up System helps keep these people coming back!"

"Pennzoil helps keep our new car department in contact with the service department, so we know which customers are in for what service; which cars and trucks have hit 50,000 miles. This helps keep new cars and trucks moving!"

"Pennzoil helped us get the service increases that gained us Ford Motor Company's Gold Medallion Award. The whole Pennzoil operation is quality—not only their products, but their sales representatives as well!"

FOR DETAILS ON PENNZOIL'S FOLLOW-UP SYSTEM, WRITE: FRANK TURNER, SR., VICE PRESIDENT, PENNZOIL PRODUCTS COMPANY, PENNZOIL PL., P.O. BOX 2967, HOUSTON, TX 77001 • (713) 236-7878.

Supreme Quality

Gift from Shepard

LAKE FOREST, Ill.—Chevrolet dealer George Shepard has donated funds to allow this village to purchase bulletproof vests for all its police officers.

But stylists are predicting trend to lighter colors in '83

Charcoal gray tops Chrysler's chart

DETROIT. — For the first time, charcoal gray topped Chrysler Corp.'s color popularity chart for exterior paints.

The trend toward the subtle, more sophisticated gray tone was clear by mid-1982 model year as nearly 12 percent of new-car buyers chose charcoal gray cars.

White, the second most popular choice, represented 9 percent of sales. Red, blue metallic and cream rounded out the top five colors, which accounted for nearly half of all new cars sold, Chrysler reported.

Buyers of Imperial and Omni/Horizon exhibited a preference for blue. Light blue was chosen by 26 percent of all Imperial customers and blue by more than 24 percent of the Horizon four-door hatchback owners.

Top color choice for car interiors was red, followed by tan, silver and blue. These represented 89 percent of all sales.

In the 1983 model year, Chrysler expects light metallic colors to increase in popularity.

"A new beige metallic exterior with a sable, brown or a beige/sable brown interior as featured on both the Imperial and Omni is expected to be a favorite," Dudley Smart, of Chrysler's Design Office, predicted.

A close second is expected to be silver "inside and out" on the Dodge 600-ES entry. "It's a perfect color for that model," Smart said. He also sees light blue metallic and the ever-popular white remaining in demand.

• Another '83 favorite is expected to be a new crimson red, on the Chrysler LeBaron convertible (with white-and-red interior) and Plymouth Turismo, Smart projected.

Designers work with color and fabric organizations in the years leading up to each model introduction and anticipate what colors will be in fashion.

Color judgment isn't everything; different materials accept certain colors differently. Color decisions are also influenced by what looks good on a particular model. As many as 100 persons from design, marketing and other departments are involved.

"The way a car is featured in ads and dealer brochures can influence which colors sell well," Smart said. For example, the 1981 Mirada was put on the market with a dark blue exterior, white convertible-look top and a combination white and blue interior.

"The color combination ordinarily doesn't do all that well," he said, "but when it was simultaneously featured and displayed in dealerships, it did very well."

What is most important is that color combinations fit each car.

Designers are able to forecast some preferences. Small-car buyers generally select lighter colors. Larger-car owners lean toward darker colors.

Climate also plays a role. In Southern and Western states, lighter colors are popular because they reflect the sun's rays. Interiors in these areas also tend to be light.

Volvo prices up $240 to $580; 2.7 pct. average

ROCKLEIGH, N. J. — Prices of '83 Volvo models in the U. S. have been increased $240 to $580 over the final stickers on the '82 units. Volvo of America said the hike averages 2.7 percent on a sales-weighted basis.

The $240 boost is on the GL four-door sedan and station wagon. The $580 hike applies to the GLT Turbo models with automatic transmission. GLT Turbo units with overdrive are up $555.

Destination charges were raised $15 per car and now stand at $295.

Still to be priced is the new GLE-760 four-door sedan, which is scheduled to be introduced Nov. 15. It is expected to carry a sticker of about $19,000, making it the highest-priced Volvo.

In the DL series, the two-door sedan is $10,650, up $340. The four-door sedan is $11,085, and the wagon is $11,585, up $300 each.

In the GL gasoline-engine line, the four-door is $14,495, and the wagon is $14,995. As noted, the increase is $240 on each.

GLT Turbo prices start at $16,050 for the two-door sedan. The four-door is $16,360, and the wagon is $16,860. All models are up $555.

The GL diesel four-door sedan and wagon are up $350 at $14,980 for the sedan and $15,480 for the wagon.

Automatic transmission is $390 on DL, GL (gas) and GLT Turbo models, up from $365 for '82. The GL diesel offers automatic transmission at $260, up from $190 last year.

Aug. registrations trail 1981 level by 13.27 percent

Continued from Page 6

up 0.51 percentage points, to 16.92 percent from 16.41 percent; imports were up 0.68 percentage points, to 29.75 percent from 29.07 percent, and miscellaneous domestics were up 0.01 percentage points, to 0.04 percent from 0.03 percent.

For the same period, GM was down 0.57 percentage points, Chrysler was down 0.22 percentage points, and AMC was off 0.41 percentage points.

Mack offering new family of transmissions

ALLENTOWN, Pa. — Mack Trucks, Inc., has announced a new family of heavy-truck transmissions, consisting of five high-torque capacity triple countershaft units which utilize overdrive gear ratios needed with new fuel-efficient, low-speed engines.

The new T-200 models will be available in nine-and-10-speed versions, with production set for January startup, and five-and-six-speed units, which are scheduled to go into production next April.

Robert F. Zalokar, senior vice president of product and engineering, said the nine-and-10-speed models are Mack's first range-type units, and represent the company's first significantly new transmissions since the Maxitorques were introduced in 1966.

The range design allows sequential shifting of the main gears, and then repeats those shifts after a single compound range shift is completed. In contrast, the current splitter-type 107 series alternates gear selection between the main and compound through the entire gear-shift sequence.

A standard "H" shift pattern is featured with single stick control. The T-2060 (six-speed), TK-2060 (six-speed with extra low gear), T-2090 (nine-speed) and T-2100 (10-speed) units all have an air-shifted compound section with a stick-mounted selector.

• The nine-and-10-speed versions, Kalokar said, utilize a long-life synchronizer for rapid and smooth range selection. All models use a new one-piece aluminum main case with integral bell housing and cast iron bearing retainers.

Zalokar said the new transmissions are lighter, shorter and stronger than their predecessors, and that the 1,700 foot pounds of torque capacity shared by all

Disassembling a 300,000-mile diesel

A technician at Detroit Diesel Allison, Romulus, Mich., disassembles an 8.2-liter Fuel Pincher diesel for an inspection of its parts after 300,000 miles of service in a medium truck used to haul newspapers 450 miles a day in Texas over the last two years.

8.2 liter 'Intercity' joins Detroit Diesel's lineup

By Jack Walsh
Truck Editor

ROMULUS, Mich. — The "Intercity," a new model of its 8.2-liter Fuel Pincher diesel, has been announced by Detroit Diesel Allison for medium trucks.

Donald C. McMillan, the division's diesel-engine sales director, called the newcomer "an engine that meets the imports on their own terms and beats them at their own game."

The Intercity is a 156-HP, turbocharged Fuel Pincher with smaller injectors than earlier models.

"In one 2,000-mile test," McMillan said at a press conference at which the durability of the 8.2-liter diesel was demonstrated, "the Intercity delivered 12.9 percent better fuel economy than our 165-HP naturally aspirated engine doing the same job."

Advertising for the new engine, he added, will say: "It's the only engine that gets better fuel economy than the Fuel Pincher."

The Intercity brings to five the number of HP ratings available in the 8.2-liter series. It is designed for medium-duty trucking applications from pick-up and delivery to line-haul operations, McMillan said.

• "This new model will give us a fuel-efficient 8.2 diesel for virtually any application in medium-duty trucks and buses that anyone could ask for, and they're all the same basic Fuel Pincher design," McMillan said.

All 8.2-liter engines carry the same warranty — 24 months or 50,000 miles, including the full

Cummins acquires Bendix big-diesel controls operation

SOUTHFIELD.—Bendix Corp. and Cummins Engine Co. have announced that Cummins has obtained the heavy-duty portion of the Bendix diesel-engine controls operation and that Bendix has licensed Cummins to produce a new Bendix-patented electronically controlled fuel injector.

The new injector is being used by Cummins in its development of electronically controlled diesel engines which could be produced in the mid-1980s or later.

Cummins fuel-systems engineers have been working with the Bendix diesel-engine controls group over the past two years in the development of an electronically controlled fuel system, including the electronically controlled injector.

Under terms of the license agreement, Cummins will have exclusive rights to the Bendix injector system for diesels with displacements of 5.5 to 55 liters.

Bendix retains rights to engines up to 5.5 liters for passenger cars and light trucks, and all sizes above 55 liters.

Bendix developed the single-solenoid unitized injector as part of a family of electronically controlled injector systems for direct-injection diesel engines.

The new injectors have appli-

GM Truck & Bus Group names key executives

A number of executive appointments have been announced by the General Motors Worldwide Truck & Bus Group and its Truck & Bus Manufacturing Division. They are:

Charles E. Weitz, truck and bus business planning manager for the group. Since last year, he has been operations manager of Terex Corp. in Hudson, O. Terex was acquired by IBH Holding AG, a West German company, from GM in 1981.

Robert G. Shannon, group comptroller, and **Frank L. Schweibold,** assistant group comptroller responsible for product pricing and forward program activities.

Shannon had been comptroller of the former GMC Truck & Coach Division, which has been merged into the truck/bus group. Schweibold was formerly assistant comptroller at Cadillac.

Thomas A. Maxwell, reliability director, and **Ernest C. Moser,** materials management director for the manufacturing division, which operates plants in seven cities. Both held similar positions with the former GMC division.

Bill J. Carroll, manufacturing division comptroller. He also

truck industry news

August dip is first since January

Registrations decline with light-truck sag

August registrations of new trucks of all types in the U. S. were down slightly from a year ago, marking the first month since January that they failed to exceed the year-earlier count.

During the month, according to R. L. Polk & Co. statistics, 192,666 vehicles were registered, a decline of 0.8 percent from the 194,175 units tallied in the same month in 1981.

Table on Page 26.

For the first eight months of 1982, however, the total was 8.4 percent higher than last year, from 1,469,770 to 1,593,735. Light-truck registrations were up significantly for the period, but big trucks continue to lag.

The decline in August was due to the softening in light-truck sales late in the second quarter.

Light-truck registrations during the month totaled 176,872 units, down 3 percent from July's 182,326 and 16.1 percent below June's 210,736.

Group 1 was up 2 percent from July—103,519 versus 101,461—but was down 7.9 percent from June's 114,612.

Group 2's August total of 72,026 units was 9.4 percent under July's 78,565 and 23.5 percent below June's 94,213.

Group 3 had 1,327 tallies during the month, 42.3 percent off July's 2,300 and 20.6 percent below June's 1,911.

However, light-truck registrations in the first eight months were 11.3 percent higher than a year ago — 1,477,157 versus 1,327,135—and there were good gains in all three weight classifications.

The Group 1 total of 822,768

HD registrations off 17.5 percent; Ford still is No. 1

Registrations of new heavy trucks in the U. S. in the first eight months of 1982 dropped 17.5 percent below last year's total, with Ford clinging to a slim lead over International.

Through August, according to R. L. Polk & Co. statistics, there were 88,108 Groups 7 and 8 registrations, compared with 106,821 in the comparable period a year ago.

The Group 7 count for the eight months was 39,243, a decline of 13.6 percent from last year's 45,400 units. Group 8 tallies were down 20.4 percent, from 61,421 units through August, 1981, to 48,865.

Ford's big-truck registrations climbed to 20,904 units and accounted for 23.72 percent of the industry's eight month total. Its share this year was up 2.71 percentage points from a year ago's 21.01 percent on 22,447 registrations.

No. 2 International had 19,134 tallies through August, good for

UNITED STATES DISTRICT COURT
NORTHERN DISTRICT OF INDIANA
SOUTH BEND DIVISION

UNITED STATES OF AMERICA, Plaintiff,	**CIVIL No. 8**
vs.	
FORD MOTOR COMPANY, UNIVERSAL CREDIT CORPORATION, et al., Defendants.	

TAKE NOTICE that FORD MOTOR COMPANY ("Ford"), a defendant in this action, and C.I.T. FINANCIAL CORPORATION, as the successor to defendants Universal Credit Corporation, Universal Credit Company (a Delaware corporation), Universal Credit Company (an Indiana corporation), Universal Credit Company, Inc., Commercial Investment Trust Corporation and Commercial Investment Trust, Inc., have filed motions for an order terminating the "Final Decree" in this action, which was entered on November 15, 1938, and subsequently modified. The plaintiff, the United States of America, has consented to the entry of such an order, but has reserved the right to withdraw its consent for at least seventy (70) days after the publication of this notice.

The complaint in this action, which was filed in 1938, alleged that Ford had combined and conspired with its affiliated finance companies to restrain trade and commerce in the wholesale and retail sale and FINANCING of Ford AUTOMOBILES by requiring dealers in Ford cars to patronize only the finance companies affiliated with Ford. The Final Decree, as modified, requires, among other things, that Ford:

1. accept payment from any finance company selected by a dealer;
2. provide, upon request, substantially equivalent office space in its manufacturing and assembly plants to all finance companies that extend wholesale financing to dealers if it furnishes such space to any finance company;
3. provide information concerning its dealers to all finance companies, if it provides such information to any finance company;
4. not enter into any contract with any dealer that requires the dealer (a) to patronize any particular finance company, or (b) to observe any plan or rate for financing automobiles established by any finance company owned or controlled by Ford;
5. not terminate any dealer, or threaten to do so, because of the dealer's failure to patronize any particular finance company;
6. not attempt to influence any dealer or prospective dealer to patronize a finance company owned or controlled by Ford by sending an agent of Ford and an agent of the favored finance company to visit the dealer at the same time; and
7. not pay any money to any finance company with the purpose or effect of inducing or enabling such finance company to offer to Ford dealers a lower finance charge than it would offer in the absence of such payment, unless Ford offers equivalent payments to every other finance company offering such lower finance charge.

Interested persons may submit comments concerning this matter by sending them to John W. Clark, Chief, Special Trial Section, Antitrust Division, Department of Justice, Washington, D.C. 20530 (telephone: 202-724-6335). Such comments must be received by the Division within sixty (60) days.

Copies of the complaint, Final Decree (as modified), motion papers, all comments submitted and all further papers filed with the Court will be available for inspection at the Legal Procedure Unit of the Antitrust Division, Room 7416, United States Department of Justice, Tenth Street and Pennsylvania Avenue, N.W., Washington, D.C. 20530 (telephone: 202-633-2481), and at the Office of the Clerk of the United States District Court for the Northern District of Indiana, South Bend Division, 305 Federal Building, 204 South Main Street, South Bend, Indiana 46601. Copies of any of these materials may be obtained from the Legal Procedure Unit upon request and payment of the copying fee set by Department of Justice regulations.

Light-truck sag drags down Aug. registration total

Continued from Page 20

units was 12.2 percent higher than last year's 733,101. Group 2 was up 9.5 percent, from 585,325 units in 1981 to 641,058. There were 13,331 Group 3 tallies, 53.1 percent higher than last year's 8,709 units.

Medium trucks were down 20.5 percent through August, with decreases in all three weight groups. The eight-month total was 28,470, compared with 35,814 in 1981.

Only seven Group 4 mediums were registered in the first eight months, compared with 11 last year. Group 5 was off 15.4 percent, from 1,295 units a year ago to 1,096. Group 6's total of 27,367 tallies was 20.7 percent lower than the year-earlier 34,508 units.

Heavy-truck registrations for the eight months dropped 17.5 percent to 88,108, compared with 106,821 units a year ago, and there were sharp declines in both weight groups.

Group 7 had 39,243 tallies, off 13.6 percent from the year earlier 45,400, while the Group 8 count was down 20.4 percent — 48,865 versus 61,421.

HD registrations off 17.5 percent; Ford still is No. 1

Continued from Page 20

21.72 percent of the total. Its penetration was off 4.01 percentage points from 1981, when its 27,482 registrations accounted for 25.73 percent.

International continues as the leader in Group 8 registrations, while Ford is No. 1 in the Group 7 count by a wide margin.

Through August, International had 11,103 Group 8 tallies, accounting for 22.7 percent of the total. Mack was in second place with 8,609, good for 17.6 percent. No. 3 Ford accounted for 12.4 percent with 6,079 units.

Ford had 37.8 percent of the Group 7 registrations through August, with 14,825 tallies. GMC was No. 2 with 9,930 units and 25.3 percent, while International placed third with 8,031, good for 20.5 percent.

Cummins acquires Bendix big-diesel controls operation

Continued from Page _

cations for passenger cars, light, medium and heavy trucks and off-highway equipment, according to George H. Siegel, general manager, Bendix Diesel Controls Division.

Cummins said the Bendix injector is fully compatible with the Cummins four-cycle direct-injector system and that the system holds the promise of providing greater engine efficiency, while meeting exhaust-emissions requirements.

The diesel-controls operation will continue to be located in the Detroit area, and will be known as Diesel Controls Technology, Inc., a wholly owned subsidiary of Cummins. Cummins also has agreed to purchase laboratory equipment from Bendix for use by the new group.

National pay scale for service chiefs tops $50,000

CHICAGO.—The 1982 annual survey of compensation in the service field conducted under the direction of the National Assn. of Service Managers (NASM) by Abbott Langer & Associates shows that senior service executives in major companies in the U. S. generally earn salaries in excess of $50,000 per year with a good many exceeding $60,000.

In most cases, the survey shows, field service engineers and representatives and regional managers who are supervised by the national managers are earning from $24,000 to $34,000 per year in major firms.

All of these figures, according to Marvin Lurie, NASM executive director, indicate that wages in the service field are rising slightly better than the current rate of inflation. Average salaries earned are lower than those mentioned which represent the top people and the top companies in the field.

The annual survey includes job descriptions and salary ranges for national service managers, assistant national managers, regional service managers, local service managers, field service supervisors, field service engineers, senior field service representative, field service representatives, bench service repairmen, national parts managers, service training instructors, technical writing supervisors and warranty managers.

Virtually all types of manufacturing firms are covered by the survey; direct service firms and merchandising firms are included as well.

The survey shows that approximately two-thirds of all firms pay 100 percent of all types of insurance that is provided directly to employes. Somewhat fewer but still a significant percentage pay dependents' premiums as well.

Sentra derivative slated to replace Datsun 310

Nissan introduces sporty Pulsar NX

CARSON, Calif.—Nissan Motor Corp. in U.S.A. has introduced the Pulsar NX, first of the series that will replace the Datsun 310 in the company's lineup.

Pulsar NX is a sport coupe powered by a 1.6-liter SOHC four-cylinder engine. The front-wheel-drive car's powerplant is similar to the E-series engine used in the Sentra.

The entire Pulsar line, which will include three-door and five-door hatchbacks to be introduced after the first of the year, is built off the Sentra platform. Company officials said the staggered introduction, with the NX bowing first and the hatchbacks later, will give dealers time to clear out stocks of 310s.

The small, sporty model competes with such domestic models as the Ford EXP and Mercury LN7. It is hoped that sales of the NX will offset some of the softness in 200-SX sales.

Pulsar NX is offered in one trim level only and the base price is $7,399.

Standard features include a sunroof, AM/FM stereo with four speakers; cloth interior; tinted glass; full instrumentation including clock, tachometer, coolant gauge and trip odometer; split fold-down rear seat; adjustable steering column; concealed pop-up headlights, and remote trunk, hood and fuel-filler door releases.

The NX is also equipped with power rack-and-pinion steering, five-speed manual transmission with fourth- and fifth-gear overdrive, independent suspension, power front disk/rear drum brakes and flush-mounted glass.

Options include alloy wheels, air conditioning and three-speed automatic transaxle with lock-up torque converter.

Other changes in Nissan's lineup for 1983 include the addition of a 1.7-liter diesel powerplant as an option in Sentra; a three-speed automatic transaxle with lock-up torque converter as a new option for Stanza, and a minor facelift on the Maxima, which includes a new grille and tail-lamp treatment.

First replacement for Datsun 310

Nissan Pulsar NX, the first of the series that will replace the Datsun 310 line, is built from the Sentra platform and fitted with a 1.6-liter SOHC four-cylinder engine. The sporty front-drive Pulsar has a long list of standard equipment for the base price of $7,399. Hatchbacks are to debut in calendar 1983.

113,398 cars scheduled for week

4 plants return, car output rises

By Patricia Hoffman
Staff Writer

The return of four assembly points, plus overtime schedules at two facilities, helped boost last week's domestic car production from the previous week's total.

The auto makers targeted 113,398 units last week, a 16.42 percent gain over the previous week's 97,403, but down 12.88 percent from 130,168 units built in the comparable 1981 period.

General Motors' Bowling Green (Corvette) facility remained idle last week for model changeover. Assembly of 1982 Corvettes ended at the plant on Oct. 13, placing about 1,000 workers on indefinite layoff. Operations are slated to resume Dec. 1.

The GM Janesville and Lordstown plants were idle last week for inventory control. Production is slated to resume at the points today (Oct. 25).

Ford Motor's Lorain plant, idled Oct. 13, remained closed last week for changeover.

Operations resumed last week at GM's Willow Run point and Chrysler Corp.'s Belvidere and Jefferson plants following downtime due to overstocked inventory.

Also back last week was GM's Van Nuys facility. The plant was idled Oct. 4 for model changeover.

To compensate for the previous week's downtime due to a parts shortage, GM's Detroit facility operated 48 minutes of overtime on each of two shifts last week, plus two eight-hour shifts on Saturday (Oct. 23).

The Ford Wayne plant also operated six days last week.

So far this year, the manufacturers have assembled 4,208,314 units, down 22.16 percent from last year's 5,406,562.

UAW polls Chrysler workers on whether to strike or talk

Continued from Page 1

of cars in the field, currently 77 days, and sluggish sales.

But Minor said there are other problems. He said buyers who have special-ordered cars won't wait and will substitute other makes. Fleet owners will also be substituted since those buyers can't afford to wait out a strike. Another problem is the fixed costs which will chew the cash flow "to death," he said.

Chrysler currently pays out $15 million a day to suppliers and must meet a $28 million weekly payroll. That would, of course, be cut if the 90,000 UAW-represented workers were on strike.

The union has blamed the pact's rejection on Chrysler Chairman Lee Iacocca's financial bragging of the $1 billion cash reserve. The UAW said this boosted the workers' expectations.

"I'm afraid it's the sentiment of the rank and file that the $1 billion is a pot of gold that should be tapped," Miner said.

In reality, he said, the $1 billion is a cushion for the company since it can no longer borrow and is faced with a debt of $1.2 billion in federal loan guarantees.

According to Miner the rejected agreement would cost the company $80 million for union-represented workers. He said it gave the workers a raise of 75 cents an hour in wages and benefits during its one-year length.

But the Chrysler workers soundly rejected the pact.

UAW President Douglas A. Fraser said it is the view of the bargaining committee that they extracted everything from Chrysler that was possible in the rejected agreement. But, he said, the "membership has spoken on this agreement" and "we have to abide by the will of the majority."

But even in the face of the resounding rejection, Chrysler would not offer more money. According to Miner, the current labor cost at Chrysler is $20.40 an hour, including fringe benefits for active and retired workers. The average hourly rate is $9.80 including overtime and shift premium.

"In the U. S. today, you can't pooh-pooh a job which delivers into your paycheck over $20,000 a year, and we are going to increase that in the first year by another $20 a week," Miner said.

Westport Volvo opens

WESTPORT, Conn.—Westport Volvo has opened here. Felix F. Callari is president of the dealership, and Al Torre is general manager.

Truck production falls for week; 35,716 assembled

Domestic truck production last week fell 3.62 percent from the previous week's total as assembly of light-duty GMC and Chevrolet trucks was idled at General Motors' Flint plant. This offset overtime schedules at two facilities and the return of Chrysler Corp.'s Belvidere point.

The truck makers slated 35,716 units last week, down from the previous week's 37,058, and down 5.79 percent from 37,913 trucks built in the comparable 1981 period.

So far this year, the manufacturers have completed 1,596,935 units, a 15.95 percent gain from 1,377,229 finished in the same period last year.

The GMC and Chevrolet truck line at GM's Flint facility was idled last week for inventory adjustment. About 1,500 workers were placed on indefinite layoff.

Also at GM, the Pontiac (GMC truck and coach) line was closed last week for the second of a two-week shutdown to control inventory. Operations are slated to resume today (Oct. 25).

Full-week output in Canada trails holiday period

Downtime at General Motors' Oshawa (No. One) facility and American Motors' Brampton point pulled last week's Canadian car production 5.90 percent below that of the previous holiday-shortened week.

Car output last week was estimated at 11,001 units, down from 11,691 built during four days the previous week due to the Thanksgiving Day holiday. The total also fell 27.41 percent below last year's 15,155 units.

So far this year, the auto makers have completed 692,549 units, a 4.50 percent gain from 662,746 finished in last year's comparable period.

Truck production last week fared considerably better than the previous short week's as the makers targeted 11,641 units, up 24.85 percent from the prior week's 9,324, and up 1.26 percent from 11,496 trucks built in the comparable 1981 period.

Year-to-date, the truck manufacturers have assembled 407,906 units, down 2.39 percent from last year's 417,891.

The GM Oshawa (No. One) car facility and AMC's Brampton plant were idle last week for inventory control. Both points are slated to resume production today (Oct. 25).

Also scheduled to return today is Ford Motor's St. Thomas car facility. Operations at the plant were halted Oct. 4 for inventory control. The Ford Oakville plant, also closed due to high inventories, returned last week.
